Abstract: This paper examines innovation and its effects on organizations, with a focus on product innovation and aims to advance the understanding in the related innovation implications. In the current highly competitive environment, with product life's cycles getting shorter, firms need to turn to innovation as means to survive and grow. Investment in innovation is recognized as a source of profitability for the firm and the means to create a competitive advantage and achieve sustainable growth. However, Investment decisions for innovation and product development are complicated as the failure rates for such efforts are high and the resources constrained. In respect of these restraints the firm should continuously engage in investment and divestment decisions, which are necessary for the firm to effectively allocate its resources and become flexible to improve its innovation activities. This should be done with a focus on the long-term results of the company and quality reporting, with valuable accounting information can help to this direction.

Through literature review, we additionally investigate the current main drivers for innovation, the process of developing new products and the key characteristics that they need to embody to have a successful market reach. Innovation efforts can add a great level of complexity in the business and its management. Different parts of the firm can have conflicting views on the innovation characteristics so, a clear strategy to manage the innovation process is necessary to direct them. The firm needs to evaluate the environment and its capabilities to find the strategic approach that will be the most suitable for its needs.

Overall, the importance of innovation is evident in the literature and essential for the economic growth and survival of the firm. However, there are many issues with the development process ,the successful market launch and the management of innovation activities with the firm having to evaluate many different factors in order for its innovative activities to be successful.

Key Words: Innovation, Innovation Investments, Innovation drivers, New product Development

1. Drivers for product innovation

In the current highly competitive environment, firms that strive to be successful, turn to innovation, as they attempt to meet the changing demands of their customers. In the literature one can find a wide range of determinants that drive innovation. There are “positive” factors such as market demand (changes in customer needs), advances in knowledge, development of new technologies, market opportunities, the entity's search for improvement (Mendoza-Silva, 2020) and “negative factors” such as decline in sales volumes and profits, intense local and international competition, or drastic environmental changes (Pradhan et al 2020).

Governments and countries also play an important role to innovation (Sossa et al, 2021). Public funding is needed to support R&D funding of private firms. According to OECD (2015) innovation supports the growth of all economies, with innovation being responsible for up to 50% of total GDP growth, depending on the country. This growth is derived from different aspects of innovation including a) Investment and innovation in processes that are internal to the firm b) product innovation and c) the effect of creative destruction, when new firms enter the market taking the place of ineffective ones (Kogan et al, 2020).

Oslo manual (OECD/EU, 2018), which issues guidelines for reporting on innovation, distinguishes two broad types of innovation, while identifying more sub-categories. 1)Product innovation that changes the

company's products and 2) Business process innovation that alters a process of the firm. Product innovation satisfies market needs, while process innovations improve, internal capabilities and processes of the firm. These types may affect differently firm performance. Product innovation is assumed to have a positive effect on sales volumes and revenues while, process innovation effects can be more diverse, for example it could lead to cost-cutting, or it could improve product quality leading once again to product innovation (Zhang et al, 2020). In the case of services, the process and product innovation are intertwined. For both types, there is evidence to support that innovation can improve the position of the firm to the market and create value (Huang et al, 2021). Firms that are efficient in innovation are found to have a superior future operating performance, market valuation and stock returns (Hirshleifer et al., 2013)

Product innovation is recognized as a source of profitability and growth for the firm (Li et al, 2007). It can increase the market penetration for both local and foreign markets (Lentz & Mortensen, 2016). Academic research supports that innovation is a source of superior performance for the firm (D'Aveni et al., 2010) and a way to create the desired competitive advantage (Porter, 1992. Falahat et al, 2020). Without product innovation firms can fail in markets they used to be successful, exemplary is the case of KODAK that directed its innovation efforts, in improving film quality and not to the development of digital cameras which proved to be the customer trend, out of fear of cannibalizing its film products. This gradually led the firm to bankruptcy. Therefore, product development with a strong focus on customer needs, is important for survival and renewal of the firm (Zhou et al, 2020)

The customers' demand for product variety is also a key driver, to turn management to product innovation (Li, 2021). Theories for product variety, have been developed in various aspects of economics, management, and marketing. In the neoclassical economics view of customer choice, people are rational in making choices, they identify the product characteristics they value in accordance with their price, they focus on maximizing utility. When given the choice among similar products, it is assumed that the customer would consume all the products available for a certain range of prices. However, these views do not take into consideration product positioning, or design. From the marketing point of view, each consumer has their own preference for product specifications, so an increased variety is needed to fulfill that need. Marketers find that consumers may change their preferred product to a similar one simply to fill their need for variety (Gourville and Soman 2005). However, product variety can have negative effects as well, it can increase costs and consumer confusion. Supply chain management, preferer a smaller range as variety can create inefficiency in supply chains and reducing in economies of scale (Wan & Sanders, 2017).

1.1 Current need for innovation

It has been suggested that innovation happens as a response to economic downturns as, it can generate resilience and economic development (Nah and Siau, 2020). Specifically, product innovation has been identified as the most important to improve company performance (Hernandez et al, 2009). Crises caused form wars, natural disasters or pandemics like COVID-19 are shocks that disrupt normal economic activity, rising uncertainty and reducing available resources. The current pandemic and the ongoing quarantines that governments have used worldwide, have resulted in business closure, rise in unemployment rates, with the first estimations for GDP in Euro areas showing a decrease by 6.8% compared to 2019 (Eurostat,2021). Although governments have developed schemes to assist firm survival, these seem insufficient and companies need to turn to innovation, to alter their offering in accordance to the needs of the customer during the pandemic. Video conference innovation for example has seen a boost during this period, as it has responded directly to the drastically changed customer needs. Innovation can be a source of survival in such events, even with the optimization of the production processes with the use of Internet and communication platforms that can be very helpful in this direction(Caballero-Morales, 2021).

In these cases of economic distress, contrary to the normal product development we assume that the environment resources are restrained, so the product development has the following characteristics (Liu et al 2020). 1) Innovation process uses resources economically to create a more affordable products 2) Supply of resources focuses on easily available and of lower cost ones 3) a better fit between price and

performance is pursued to reduce production costs 4) Products are designed to be marketed to lower income customers.

2. Products and innovation

The efforts for new products require a previously designed Innovation Strategy. It is vital for the firm to have a constant flow of new products that must be resilient for the firm to survive (Ortiz-Villajos & Sotoga,2018). The need for product innovation and product differentiation is also evident from the product life cycle concept, according to which every product will reach a decline stage when sales drop.

New products can be radically new (involving new technologic developments), or they could be an expansion to an existing product with the alteration of certain features (line extension), with changes in quality, in its design or its marketing. A new product could be new either to the company or to the customer. New product developments could simple be a differentiation in the price, features, channels of distribution, after sales service or a re-launch of an existing product.

The process of launching new products is time and resource consuming while on the same time involves high risks and failure rates. According to Clayton Cristensen every year 30.000 new products are launched and 95% of them fail (HBR, 2011). Nielsen statistics presents that 80-85% of new CPG products fail (Nielsen, 2018). Consultant Jack Trout has found that American families, on average, repeatedly buy the same 150 items, which constitute as much as 85% of their household needs; making it hard for new products to be successful (KPMG, 2019). Other empirical studies show that new product failure rates much lower and varying among industries between 35%-48% (Webb, 2016), in any case the conveying message is that new product development success is not an easy task.

Dozens of ideas for new products need to be developed to result in one successful new product. During this process of evaluating new ideas, most of them will be rejected by the firm, to ultimately decide on the products most likely to be successful and for which the expected earnings will exceed the involved development costs.

Every Year producers overwhelm their customers with thousands of new products, putting them under stress, with the paradox of choice taking effect, according to which more options make choices harder, and the choices taken, create less satisfaction. Johnson and Fornel claim that the more experienced the consumer is on a certain product type the less difference in his expectations and the actual product qualities, so the company should easier satisfy the targeted market. Reality shows, that this is not always true as great number of the offered products fail. Causes of the failure vary. Often new products fail to meet customer needs-the new developed product might even have better features from the existing products, but their price is too high, or the established competitors might take aggressive counter actions (Kim & Lee, 2020). The expected market demand may never happen (Cheng et.al 2010), or the information on which the innovation was based could be faulty.

Even when the innovation leads to a successful product marketwise and gives to the company a competitive advantage, it still might not lead to an improved performance for the firm as the value is appropriated by firm stakeholders (MacDonald and Ryall,2004). There are studies that identify a negative relationship between innovation and performance (Thornhill,2006).

3.Accounting for Innovation

Accounting information is an important tool for managers of innovative companies, it is used in resource planning and in the evaluation of innovative activities. Research claims that when the firm produces high quality accounting information, this will have a positive impact on the company's innovation performance outcome (Latifah ,er al 2021)

To understand the benefits and the motivation of the firm to innovate it is necessary to measure the costs involved and the output of the innovation. The innovation efforts of an institution are often evident in their R&D efforts.

The relationship between firm performance and R&D intensity is a subject of research with many challenges and inconclusive results. There is research showing both positive (Gunday et al. 2011) and a negative (Knecht, 2013) relationship. Research shows that firms that invest in R&D have higher growth rates, productivity, and profits (Manogna & Mishra 2020). We can find that leading companies have large R&D accounts; for example, Amazon only in 2017 spent \$22,6b to develop new technologies, or Pfizer during 2020 expended \$9.4b in R&D increasing by \$1b, compared to 2019 mainly due to development of COVID-19 vaccine.

The account R&D expenditures is the most used and available measure for innovation. However, there are issues arising with its usage, as the ways that R&D is reported and more broadly the choices of financial reporting can have an impact on innovation. Often, to the difficulties in financial reporting of innovative firms, they are likely to be of lower quality (Lobo et al,2017)

First there is the suggested lag effect, R&D may not influence company performance on the same year. Since the benefits of innovation are often uncertain, accounting standards require all R&D to be expensed at the time they occur and not to be capitalized. Such a reporting that highlights past and current performance may create barriers for innovation (Baranchuk et al.2014).

Not capitalizing R&D expenses could have an impact on the ROA (return on assets) and ROIC (return on invested capital),as total assets will not include the total amount invested in them. Both IFRS and GAAP require R&D to be expensed on the time of occurrence, however with IFRS if the firm can prove that the development will become viable and will generate revenue, then the involved costs can be capitalized, and some R&D expenses can be reported on the balance sheet instead of the P&L. However, R&D budgets can be very different from year to year and this effect will be evident in net income making more difficult to calculate the outcome of the innovation efforts, this could feed misleading information to management for decision making and to external investors (Breuer et al, 2020).

With this expensing approach that focuses on short term results, the “Management myopia” takes effect, as managers with the pressure of counterparts and capital markets to achieve performance targets, they inflate earnings by cutting expenditures such as R&D, not investing in the long-term firm value with innovation (Fu et al 2020, Huang et al, 2021)). Kraft et al 2018 find that US listed firms decrease investments, following a reporting frequency increase. Mizic and Jacobson HBR,2007, have found that firms that did such expense adjustments for the appearance of improved prospects they ended up losing profits in the long term, with their market value to fall even to more than 20% after four years

On the other hand, even the attempt to capitalize R&D expenses would be challenging as we need to estimate the life span of the new product, to use it for amortization. R&D in most cases are investments that expand in more than one year and can influence revenues for many years. Not capitalizing them also seems to differ from one of the accounting principles, that is the matching principle, which requires companies to use the accrual basis of accounting, where expenses need to be matched with revenues.

Another issue arises, if the adopted reporting involves disclosures, this will also create difficulties in measuring and may prohibit external financing, harshening innovation activities. In this case comparability becomes more difficult (Roychowdhury et al, 2019). Studies document a positive relationship between accounting comparability and innovation efficiency (Chircopet al. ,2020). This seems to happen because accounting comparability with competitors from the same industry facilitates a learning process from those firm’s investments when they are successful innovators. Although this may also increase chances of information leakages to competitors.

4. Investment –Divestment relationship for innovation

Economic theory has stressed the importance of investments and innovation in growth. To achieve growth, companies need to invest in innovation to expand into new markets and customers (Carbonni & Medda,2021). Investment decisions in regard of the developing and launching new products are essential for the firm to survive (Schumpeter, 1942) However, Investment decisions are difficult due to their uncertainty, with the main barriers being the financing and knowhow involved.

Any new development requires investments in technology, know-how, employees, capital equipment, R&D which are necessary for the new production activities. However, the resources of the firm are not infinite, innovation processes compete with other parts of the business for the same financial resources (Szutowski, 2019). To deal with this, companies should evaluate their developments, products and other innovative activities and engage in divestments of those that are unnecessary, or do not yield the expected results, to free up funds and allocate them in more promising innovative activities (Carnes et al 2017).

Divesting, even though it has been seen as a negative thing, since it is often connected with survival plans, it is an opportunity for the firm to reevaluate its activities and remain flexible, respond to market changes, and allocate their resources in an efficient way (Kim et al, 2021). To do so they should continuously engage investment and divestment decisions, the one is needed for the other to happen and is necessary for the innovative efforts of the firm. To improve innovation performance divesting is equally important to investing for example in technological assets (Kim et al, 2021).

Divestments happen for various reasons and they lead to business restructures. The firm might have diversified in a way that is costly to the firm. Haynes et al (2003), claims divestment to be the way for the company to return to an optimal level of diversification. Another reason is that the firm might have invested in a new product that has failed, so divestment should follow. Divestment is also a choice for declining markets where future profits are uncertain (Silva & Moreira, 2019).

When deciding on a divestiture the firm should evaluate if the involved investments are essential for the positioning of the firm, so not to damage its branding and whether they should have more value for other companies in order to get the most value by selling them.

5.Designing new products

Designing the innovation process of the production will gradually acquire a certain autonomy. The company's ability to innovate, requires an innovation system which is a set of intertwined processes that guide the innovation activities and gradually develops an innovative culture (Dziallas, Bliand 2019). Production planning will not be adequate if it does not involve innovation planning. However, even if the firm has a stock of innovations planned for production this does not necessarily mean that these innovations can be put into production straight forward.

The process of designing, creating, and launching a new product has three main stages:

- The choice of the ideas that will turn to products (Idea screening).
- Product Design. This will include Concept development and testing, marketing strategy development, Business analysis, product development, Test marketing.
- Market launch and Distribution

Each of these stages will take certain periods on its own respect. The more substantial and time consuming will be the design of the product and its market entry (Kootatep et al 2020).

The company's innovation as a function, will pursue the timely launch of a product with high quality, on the least possible manufacturing and marketing costs in accordance to the target market. The whole new product development project should focus on the market (Cooper, 2019)

The desired traits of the innovation process and products are identified and accounted for during the designing stage, when a study for the product innovation is developed from the inception to the market distribution. Until though the innovation is considered successful by creating profits, increasing sales volumes and market penetration, the company to evaluate management activity takes into consideration the unit cost of the developed product or the materialized designing efforts.

6.Design, creation, and market launch of the new product

The process of product innovation could be viewed as structured in two parts “motivation for product innovation” and “the production of the new product”. The motivational part is not directly translated to innovation management but: First, to processes which include – market research to discover the target market and the shift of customer demand, analyzing the competition and the market segmentation. Second, designing the ideas for new products, in accordance with the market trends. Third forming the criteria to evaluate the achieved results from the market’s point of view (Salmen, 2021).

While creating a new product Marketing, production and supply chain management have conflicting views in product development and especially in respect to an extended product line. Of paramount importance is, how they can better coordinate those decisions. Understanding the cost and value of the suggested product developments is of paramount importance. The innovation needs to be managed in accordance with the innovation strategy.

7. Success factors of new products and innovation

The majority of great ideas and technological invention does not make it to successful products. This “innovation paradox” is frustrating for everyone involved. For example, in pharmaceutical industry the current estimate is that less than 10% for those that reach the startup stage are turned into a product (Cunningham S. ,2020)

Researchers have identified five factors that effect on the success of the new product. These determinants are:1) product superiority 2) Integration 3)Complexity 4)Easiness to test 5)Replenishability

1) Product superiority. The company needs to answer the question; Does the new product has advantages over existing similar products, and does it satisfy better the targeted customers need? The product must differentiate from the competition at least in one feature (Cooper ,2019)

2) Integration. With the term we mean the level that the new product preserves the qualities and the customers’ experience on using the product. The new product should fit the brand and its values .For example while software changes continuously and the level of complexity in usage increases, the end user can adapt his acquired experience from previous versions.

3) Complexity. The degree of difficulty in understanding and using the novelty from the consumer. For example, microwave ovens are continuously incorporating new technologies, but the simplicity of usage helps for market spread.

4) Easy to test. The new product will have a better chance at success if the customer can try it, to understand the benefits that the product has to offer. Many methods are used to achieve that, such as presenting prototypes or offering free samples at the beauty and FMCGs.

5)Replenishability. The ability to replace parts of the product. It reduces the consumer skepticism . ex The replacement of car seat covers or of household appliances

8.Innovation and new product development Strategies

Innovation processes can add a great level of complexity in their management. Therefore developing strategies is a necessity for the firm to effectively use its resources. Developing a strategy will help the firm in many ways; to better identify the targeted market and its needs, to define of the product and its features so that it will make a better fit in its market and to help in avoiding unnecessary costs in development. For the company to choose as strategy, management should account for the environment and the market attractiveness: the size of the market, its growth rate, the competitors in the market, the margins and pricing trends (Garcia-Manjon, 2020).

Without a clear innovation strategy, the innovation process can become very confusing, since different parts of the organization can have conflicting views and priorities. R&D may choose to focus into new technologies as the driver for the innovation, sales may want to focus on targeting large clients needs, marketing might identify opportunities in a specific market niche, CEOs might focus on their specific

targets in P&L. All of them need to be aligned by the strategy for innovation. This should provide guidance by clearly defining the goals of the project up to the point of the expected return on investment.

The innovation approach for strategy of the firm can be proactive or reactive. A proactive approach involves a commitment in investing in R&D, so that the firm can be ahead of its competition in developing new products, however this involves higher costs. A reactive approach, is more defensive of its existing products and their differentiation stems from responding to the competition and market changes.

Strategies for developing new products include:

- Investment in R&D. In 2019 investments worldwide in R&D were \$2,3 trillion (Mc Kinsey, 2020), around 2% of world GDP. Firms expect to develop a radical new technology product to stay ahead of competition and capture markets.
- Outsourcing product development. This can have benefits such as reduced costs and time frames. On many occasions the firm might not have developed the important parts of R&D to develop the wanted products, so they choose to outsource them. Again, there are involved risks for example the interaction between the managing team and the designing team they might have communicating problems to clearly convey the message of the goals. (Doran et al., 2020)
- Alliances. Cooperation between competitors is an increasingly discussed strategy (Yami and Neme, 2014). Firms can pool resources without taking the full risk of developing a new product. The joining companies need to agree upon a set of rules of behavior, obligations and benefits, co create trust and work closely to the common goal. A typical example are companies in automotive industry. However, differences in the culture and capabilities of the joining company can create issues as well as the decision making process can become more complicated.
- M&As. A firm can acquire new products, customers, and technology. However there are many issues that can arise which has led many M&As to failure These include difficulties in Integrating due to incompatibility or overpaying for the acquired firm. Companies increasingly use M&As to get the disruptive innovation growth opportunities. In 2012 globally companies spent \$78 billion in M&A deals in 2016 this rose to \$291 billion. Large corporations in the fear of staying behind acquire smaller firms with promising technologies or products(Li and Wang, 2020).
- «Second but better». The product enters the market later from competition but with improved characteristics. This could even lead to disruptive innovations since the new products offered could be less complex and offer more convenience at a lower cost (Gobble, 2016).
- Crowdsourcing. An approach with increasing interest over the last decade. The idea is to open the process of innovation to everyone instead of relying to experts. Research has found that this approach can lead to faster and more efficient problem solving (Acar et al 2020). The vast majority of the literature focuses on crowdsourcing for the idea development of new products. This approach helps to engage customers, get instant reactions for customer satisfaction at an early stage (Vignieri, 2021).
- Blue ocean strategy. Theory of innovation by Kim and Mauborgne(2005) where there are opportunities in every market to move away from intense competition by creating a new market space and focus on the customer needs of that niche (Yunus et al., 2021).
- Imitation. Copying products of competitors. Products are usually of lower quality and at lower prices. To be successful with this approach, firms need to actively look for ideas that can generate revenues and for those ideas that the firm has the capabilities to produce a cheaper product (Wang &Chen, 2020)

9. Innovation and irrational product variety.

It is a trend over several years, especially in the food industry, for companies to innovate by diversifying products that are traditional to the country. Product characteristics that are unconventional to those products are incorporated into them. Marketeers turn to this type of “modernization” of products to increase the market share in modern food products retailing in less developed markets such as in Bulgaria. Food industries alter traditional products such as yogurt, cheese, butter by replacing milk with plant-based fats.

Market segmentation is a helpful tool in dealing with “imitator” products. The brand has to take a certain position in the customers’ mind regarding the specific quality and characteristics that its products resemble to separate from competition. Imitation products could be seen as misleading when the customer assumes that the product has the traditional approach.

This approach of altering and assuming the positioning of a certain product is related to market launching modified products in existing markets. Brands promote these ‘new products’ in an attempt to expand the market for this type of product. In many cases they target a market share that is more sensitive in lower prices. For example

10. Conclusion

The aim of this paper is to examine the innovation processes of the firm and especially product innovation and understand the drivers behind it, the processes and the risks involved. We find that companies turn to innovation to meet the changing needs of their customers, survive, and grow. The company needs to continuously invest in such efforts while also divests from unsuccessful or unnecessary developments to remain flexible. Investments in innovation can produce a competitive advantage and profits for the company, however innovation investments have high risks and failure rates, so the firm needs to focus its efforts with a strategy that is appropriate for its environment, target market and capabilities.

Leadership and Ethics. A Systemic Approach of the Leadership Phenomenon in the Management of Changes

Sofia Manoutzopoulou¹

Panagiotis Serdaris²

¹Dr. Candidate, University of Western Macedonia, Department of Management Science and Technology, sophiamanoutzopoulou@gmail.com

²Professor Dr., University of Western Macedonia, Department of Management Science and Technology, pserdaris@uowm.gr

Abstract: The objective of this study is to examine the question of leadership and the leader in the light of its ethical dimension in the field of the management of changes, which take place in the Organizations as a necessary condition of their adaptation to the modern socioeconomic developments. The ethical political philosophy of Aristotle ("Rhetoric" and "Nicomachean Ethics"), which is orientated towards connecting leadership, as a political guiding art and power which aims at happiness (eudaimonia), with rhetoric, as an art of persuasion, is the main theoretical background which leads the research to the systemic approach of the leadership phenomenon and the analysis of characteristics which compose the personality of the leader. Leadership as power and influence focuses on the personality of the leader, the Aristotelian "orator", who knows the art and theory of "rhetorics", ethics, politics, and education, that is a fundamental methodological tool to achieve change. The orator, through his skill of persuasion (logical and psychological) and his ethical, mental and stylistic virtues, wins the reliability and trust of people and in combination with his knowledge of human passions and the characteristics of people also wins their commitment, "heart" and "mind". The orator through his political thought and action is, according to Aristotle, a modulator and regulator of the rules of civic virtue which aim at the common welfare and at what is useful and beneficial for the community.

Leadership means change and based on the methodological approach of changes and their management, when examining the Organizations as open dynamic systems which are subject to changes due to their need to adapt to the socioeconomic developments, the dynamic relation between the power of politics, the socioeconomic changes, knowledge, and learning emerges. The change of culture is a basic condition in order to comprehend the logic of change, and the work of leadership is to form a mature environment for its accomplishment through the multilevel, analytical thought, perception and interpretation of the progress and the individuality of the spirit of the leader, skills that remind us of the Aristotelian orator.

The purpose of this study is to highlight how the ethical political philosophy of the Aristotelian Orator has contributed to the way of thinking and the actions of the modern leader based on the dynamic relation of his power and influence and the power of advancements.

For the study, primary and secondary sources have been used in comparative analysis and the concepts under examination were analyzed in the framework of reflective reasoning following a methodological, systemic approach.

Keywords: Leadership, ethics, Aristotle, orator, management of changes

1. INTRODUCTION

This study examines the question of leadership and the leader in the light of its ethical dimension in the field of management of changes which take place in the Organizations as a necessary condition for their adaptation to the modern, global socioeconomic developments. The ethical political philosophy of Aristotle, as depicted in the two works of the ancient Greek philosopher, the "Rhetoric" and the "Nicomachean Ethics", is orientated towards connecting leadership, as a political guiding art and power which aims at "eudaimonia" (happiness), with rhetoric, as an art of persuasion. Thus, it constitutes the theoretical background which leads research to the systemic approach of the leadership phenomenon and the analysis of characteristics which compose the personality of the leader. Leadership as an expression of power and influence, focuses on the personality of the leader, who, as an Aristotelian "Orator", is asked to modulate and regulate rules of civic virtue using his political thought and action, in a constantly evolving and developing environment, an environment that is constantly changing. On the basis of the power of socioeconomic developments and the power of knowledge and learning to change the culture, seen as the basic condition of management and ethical control of changes, the objective of

this study is to spot the influences of the ethical political philosophy of Aristotle and of the personality of the "Orator" in the thought, action, personality and power of the modern leader and highlight their timeless contribution.

Following this direction, the first part introduces the theoretical ethical philosophical approach of the matter, in accordance with which the dominant position of the political leader in the society and the political action, as a power of influence towards the ultimate good, the "eudaimonia" (happiness) of all mankind, is embodied in the Aristotelian "Orator". Based on the power and the influence of the leader, the second part attempts a systemic approach of the leadership phenomenon with a view to highlight the traits that contribute to achieving its results in a dynamic and constantly changing environment and to examine their interconnection with the corresponding results of the ethical Aristotelian reflection. In the third part, the dynamic of the socioeconomic reformations in the understanding of the logic of changes directs the study to the systemic methodological approach of their management, particularly to the systemic thought and perception of the leader for their accomplishment, this way leading to the conclusions of the study.

2. LEADERSHIP AND ETHICS

2.1. The Ethical Leadership of Aristotle

The ethical political philosophy of Aristotle, as depicted in the "Nicomachean Ethics" and the "Rhetoric", addresses ethics as a science and treatment to the behavior and actions of people (Lipourlis, 2006) and in this regard "the intention of the deliberative orator is to persuade or dissuade"¹ and he shall know "about which good or evil"² so as to give his advice. According to the spirit of the Aristotelian ethics, leadership is a power of guiding to the right conduct through the power of influence it has, thereby making these two traits, attributes of the leader. Leadership, according to Aristotle, has a dominant position in society and the political action, since as a power of influence aims at the ultimate good, the "eudaimonia" (happiness) of all people. This "ultimate good"³ is the subject of the political art/science, which occupies the first position in the hierarchy of arts/sciences, and according to Aristotle "sets the rules of what we shall and what we shall not do, the end... that should be the good for the man"⁴. And as long as "what this art/science mostly ensures is giving citizens a certain quality: make them good and capable of making good actions"⁵, this direction plausibly connects leadership, as a political - guiding art, with rhetoric, as an art of influence.

According to Aristotle, the practice of the ethical political leadership focuses on:

- the character of the leader - politician, who, according to Triantari (2020), shall be "thinking and acting as a wise legislator, thus creating virtuous political circumstances"⁶, defending with prudence and fairness - basic Aristotelian virtues (Aristotle, Rhetoric A', 1366b) -, the legal goods of the citizen and the people (Aristotle, Rhetoric A', 1368b),
- his knowledge and regular training on the city issues (Aristotle, Rhetoric A', chap. 4, 1359b, 1360a) (knowledge on every issue, experience, information), in order to be able to negotiate a common

³ True translation of the original text: «υπέρτατο αγαθό», Αριστοτέλης, Ηθικά Νικομάχεια, Α', 1094b.

⁴ True translation of the original text: «ορίζει με τους νόμους της τί πρέπει να κάνουμε και τί όχι, το τέλος, ... το οποίο θα πρέπει να είναι το αγαθό για τον άνθρωπο», Αριστοτέλης, Ηθικά Νικομάχεια, Α', 1094b

⁵ True translation of the original text: «αυτό για το οποίο κυρίως φροντίζει αυτή η τέχνη/επιστήμη είναι το να προσδώσει μια συγκεκριμένη ποιότητα στους πολίτες: να τους κάνει καλούς και ικανούς να πράττουν ωραίες πράξεις», Αριστοτέλης, Ηθικά Νικομάχεια Α', 1100a.

⁶ True translation of the original text: «...οφείλει να σκέφτεται και να πράττει ως φρόνιμος νομοθέτης δημιουργώντας μία ενάρετη πολιτική συνθήκη», Τριαντάρη Σ., 2020:71

agreement, in the framework of a code of moral values, a balance between the personal good and the common good, the “eudaimonia” (happiness) of all people, as the moral end result (Aristotle, *Nicomachean Ethics A’*, Chap. 4),

- his virtuous behavior and the quality of his character, on his ethos, the turning unifying point between the logical and psychological persuasion (Aristotle, *Rhetoric A’*, 1356a),
- his knowledge on the human psyche in relation to the passions, the addictions, the ages and the fates (Aristotle, *Rhetoric B’*, 1377b-1391b), in order to be able to bring people to a certain state using prudence and good spirits by projecting himself as a person who has certain qualities, which are of great importance for persuasion (Aristotle, *Rhetoric B’*, 1377b),
- his experience, in order to be able to influence the choices and actions of people through his attitude and his personality (Aristotle, *Rhetoric A’*, Chap. 8, 1366),
- the knowledge of rhetorics, the ability of the logical and psychological persuasion, which is achieved, according to Aristotle "sometimes by the character of the orator, other times by the specific mood he created at the soul of the listener and other times by the proving or seemingly proving arguments that his speech consists of"⁷ and
- the Art of Rhetoric, which, according to Aristotle "is a combination of the analytical science and the political science that relates to the ethical issues"⁸.

In the ethical work of Aristotle, the "*Nicomachean Ethics*", the ethical teaching of the ancient Greek philosopher reaches its main point, the definition of “eudaimonia” (happiness) as the perfect virtue: "eudaimonia is a principle; it is for its sake that we all do what we do... eudaimonia is the activity of the soul, in accordance with the perfect virtue"⁹. Thus, “eudaimonia” (happiness) is an activity and not a state, an activity of the human soul in accordance with the rules of the perfect virtue, the end and the perfection in every aspect and politics is a practical science, based on the personality of the political orator and his power of influence towards the reassurance of unity and harmony.

2.2. The Aristotelian Orator

The "*Rhetoric*", according to Triantari (2020), is a future-proof, structured handbook which refers to the multifaceted, spiritual, and ethical, education and culture of the orator, so that «he can lead his people, as an ethical and spiritual leader and act as a compass of personal and social change"¹⁰. The "*Rhetoric*" analyses, in a theoretical and practical level, the art of rhetoric, the use of the language and the techniques of the verbal style, the formation of arguments to achieve the logical persuasion and more generally the persuasive ethical rhetoric speech, which rises from the character and the personality of the orator, the mood he chooses to provoke and the knowledge of forming logical arguments.

The Aristotelian Orator

- has the four ancient Greek virtues: “wisdom”, “prudence”, “justice” and “courage"¹¹ and the abilities of self-awareness, self-control of his feelings and his thoughts as well as self-management and regulation of his desires, choices, and actions.

⁷True translation of the original text: «άλλοτε μέσω του χαρακτήρα του ρήτορα, άλλοτε μέσω της συγκεκριμένης διάθεσης που δημιουργεί στην ψυχή του ακροατή και άλλοτε με τα αποδεικτικά ή φαινομενικά αποδεικτικά επιχειρήματα που περιέχει ο λόγος του", Αριστοτέλης, *Ρητορική Α’*, 1356a.

⁸ True translation of the original text: «είναι ένας συνδυασμός της αναλυτικής επιστήμης και της σχετικής με τα ηθικά θέματα πολιτικής επιστήμης", Αριστοτέλης, *Ρητορική Α’*, 1359b.

⁹ True translation of the original text: «η ευδαιμονία είναι αρχή για χάρη της πράγματι κάνουμε όλοι όλα τα άλλα... η ευδαιμονία εστί ψυχής ενέργεια τις κατ’ αρετήν τελείαν», Αριστοτέλης, *Ηθικά Νικομάχεια*, Α’, 1102a5.

¹⁰ True translation of the original text: «να καθοδηγήσει το λαό του ως ηθικός και πνευματικός ηγέτης, να λειτουργήσει ως πυξίδα προσωπικής και κοινωνικής αλλαγής», Τριαντάρη Σ., 2020:325

¹¹True translation of the original text: «σοφία», «φρόνηση», «δικαιοσύνη» «ανδρεία», Αριστοτέλης, *Ρητορική Α’*, Κεφ. 9, 1366b, 1367a.

- By knowing the human passions, - “rage”, “mildness”, “friendship (=love)” and “hate (=rivalry)”, “shame” and “shamelessness”, “grace (=kindness, nice behavior)”, “mercy”, “frustration”, “envy” and “jealousy”¹² as well as the ethics, namely the characters of the people in comparison with the passions, the habits¹³(virtues and vices), age and fates (Aristotle, Rhetoric B’, chap. 2-17), the orator has the ability to penetrate into the psychology of people, handle their feelings and through his passion and ethical, persuasive and qualitative speech, motivate and inspire them.
- He inspires the credibility and trust of people through his “ethical virtues”, as “a result of ethos”¹⁴, of his «intellectual virtues» which “owe their genesis and their increase mostly to teaching (and that is why what is needed for it is experience and time)”¹⁵ and his «virtues of style»¹⁶. His intellectual virtues relate to the ethos and pathos of the orator, which, in combination with the virtues of style (hypocrisy), the tension, the harmony and the rhythm of the voice, enhance his persuasiveness by provoking the mood, passions and emotions of people (Aristotle, Rhetoric C’, Chap.12 ; Triantari,2020:25-26).
- He is driven by empathy, one the most basic ethical virtues with psychological dimensions in the interpersonal relations and a basic characteristic of the modern leader, since, according to Triantari(2020:27-32,235) this is the background of persuasion, an extremely important tool of promoting communication relationships, where the power of speech meets the power of ethos and soul, of passion (Aristotle, Nicomachean Ethics B’, 1104a, 1104b).

In his work "Nicomachean Ethics", Aristotle tried to define “emotional intelligence” by examining the definition of the "golden mean"¹⁷, as an «excellent ethical virtue» concerning the moderation of the expression of passions and actions in the context of interpersonal communication. "One may feel scared or show courage, may feel desire or rage or compassion, may generally feel content or discontent, in a greater or a lesser extent, and none of these is good. But if all of these are felt at the right time, regarding the things that they should be felt for, regarding the people that they should be felt for, for the reason that they should be felt for and in the way that they should be felt, then that is in a sense, the mean and the best”¹⁸.

The framework of the conduct of the orator and his communication skills is set in the Aristotelian model of emotional intelligence. By exercising and developing his “ethical virtues” (“prudence”, “fairness”, “honesty”, “wisdom”, “respect”, “goodwill”)¹⁹ and his “intellectual virtues” (“ethos” and

3. SYSTEMIC APPROACH OF LEADERSHIP

3.1 Leadership, Power and Influence

Having as a theoretical background the philosophical current of the ethical leadership of Aristotle, the modern definitions for leadership and the leader focus on the power and the influence relation for the handling of changes in the modern, complex, and constantly changing environment.

Thus, according to Mpourantas (2005), leadership is change and "it could be defined as the process of influencing the thought, emotions, attitude and conduct of a large or small, typical or atypical group of people or even a people by one person (leader) in such a way, that they voluntarily, willingly and with the right cooperation do their best to meet their goals that stem from the group's mission and their ambition to achieve progress or a better future"²⁰. It constitutes the most representative definition, in which two of the most fundamental traits of leadership and the leader are found. Firstly, the ability of the leader to exert influence on other people. Secondly, according to Aristotle (Nicomachean Ethics C', chap.1), the voluntary will of people to strive for the accomplishment of goals that have to do with ambitions or ideals for progress or a better future.

Leadership, according to Mpourantas(2005:199,200), is a process that is exercised through power and influence. The meaning of power is referred, according to Weber(1980), as "the ability of a man to impose his wishes to other people by influencing their behavior through a social relationship despite their opposition"²¹. The meaning of influence refers to the change of thought, ideas, emotions, attitudes, abilities, and expectations and mostly to the conduct of a person or a group or a people through the impact of the power of another person (leader). Thus, the power (legitimate power - authority, of the knowledge and abilities - of the specialists, of information) and the influence (of the attitudes, emotions, and conduct) of people, are the means used by the leader to direct, guide and encourage to exercise leadership.

3.2. The Systemic Approach of Leadership

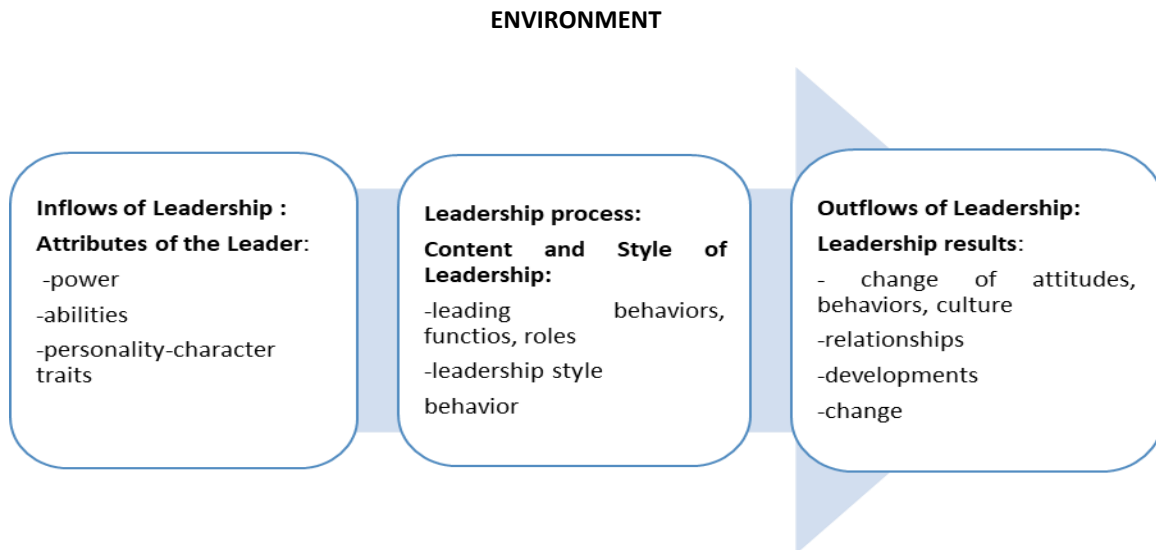

Leadership means influence and based on its systemic approach, the promotion of its fundamental aspects is pursued both in the dynamic relationship of interaction between them and the constantly changing, dynamic and complex environment of change in which it takes place. Under the systemic logic, leadership is studied and analyzed as an open system which consists of its inflows, the process, and its outflows. According to Mpourantas(2005:206),

- the inflows of leadership have to do with aspects - characteristics that the leader should have, namely the power, abilities, values and personality traits, his character.
- The process of leadership includes the leader's conduct, his actions, and roles as well as the way he exercises his leadership (style).
- The outflows of leadership refer to its results, the change of attitudes, conducts, culture, and developments.
- The environment includes the context in which the leadership is exercised (culture, nature of the work, climate, structures, opportunities, complexity, uncertainty, changes etc.).

²⁰ True translation of the original text: «η ηγεσία θα μπορούσε να ορισθεί ως η διαδικασία επηρεασμού της σκέψης, των συναισθημάτων, των στάσεων και των συμπεριφορών μίας μικρής ή μεγάλης, τυπικής ή άτυπης ομάδας ανθρώπων ή και ενός λαού από ένα άτομο (ηγέτη) με τέτοιο τρόπο, ώστε εθελοντικά και πρόθυμα και με την κατάλληλη συνεργασία να δίνουν τον καλύτερό τους εαυτό για να υλοποιούν αποτελεσματικά τους στόχους που απορρέουν από την αποστολή της ομάδας και τη φιλοδοξία της για πρόοδο ή ένα καλύτερο μέλλον», Μπουραντάς, Δ., 2005:199

²¹ True translation of the original text: «§16 Macht bedeutet jede Chance, innerhalb einer sozialen Beziehung den eigenen Willen auch gegen Widerstreben durchzusetzen, gleichviel worauf diese Chance beruht», Weber, M.,1980:28.

Figure 2: The systemic approach of leadership

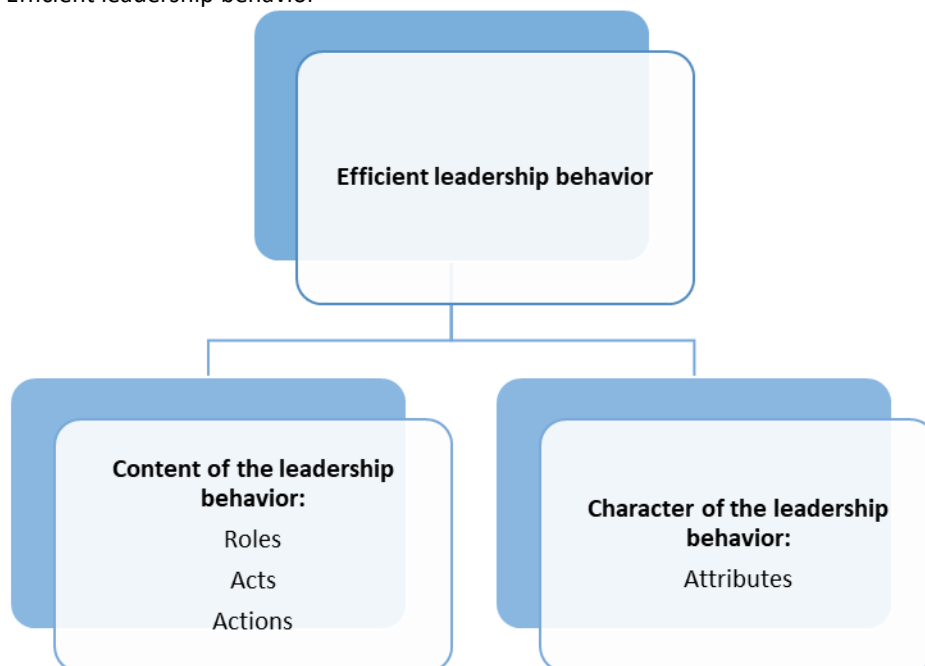

Source: Mpourantas (2005:206)

Based on the aforementioned systemic logic, the effective leadership is characterized by the achievement of the results of the leader, which is defined, according to Ulrich D. and Jenger J. (1999), as the product of the leadership behavior (content - character of the leader) and the results of the leader, "efficient leadership = leadership behavior x results" and not as their sum, thus, if one of the coefficients is zero then the product is also zero. Namely, the leader does not actually lead (Mpourantas, 2005:206).

Therefore, the achievement of the results of the leader merely depends on his leadership behavior, which is further defined by the quality of his character, the ethics of his speeches and his actions, his values and attitudes, his abilities and virtues, his personality as a whole, in order for the Aristotelian "Orator" to influence, persuade, inspire, motivate, encourage, guide, lead, challenge the status quo, bring change.

Figure 3: Efficient leadership behavior

Source: Mpourantas, 2005: 214

4. MANAGEMENT OF CHANGES AND LEADERSHIP

4.1. The Systemic Approach of the Management of Changes

"There is nothing harder than study and design, nothing more ambiguous than success and nothing more dangerous than management, administration of new institutions", states Machiavelli (1991) in his work "The Prince", attributing resistance to change "to all those who profit from the old institutions", and the tepidity to change "partly to the fear and partly to the disbelief of people, who do not truly believe in innovations, before gaining experience"²².

Change means transition from a given situation to a new one (Mpourantas, 2005.:691; Papoulias, 2016) and its achievement requires a scientific approach, supervision and interpretation of things, the knowledge, and the political will as a process of negotiation, to the understanding of complexity and conflicts.

Figure 4: Conditions for change

Source: Papoulias, 2016

The scientific way of thinking has to do with the systemic perception of the dynamics and evolution of human systems, which, just as biological systems based on the wisdom of nature, consist of the external and internal environment (Papoulias, 2016). Thus, according to the reflective logic, the business reality is evolving in a global state of complexity, conflicts, uncertainty and instability, elements that attribute to it a sense of flux "everything flows"²³ according to Heraclitus. The same reflective logic sees modern organization as a dynamic system, which goes under constant changes of its internal and external environment and, as in the natural world, a constant development takes place, a constant qualitative transformation, "the genesis and the decline" according to Aristotle (Lipourlis, 2004.:34). All these are accompanied by endless potentials and choices, making the future development of the system unpredictable. However, the system must adapt, based on the dynamic image of the natural world, attributing a sense of adaptability to it (Papoulias, 2016).

Modern organizations, as open dynamic systems, go under these constant changes of the internal and the external environment and their changes, especially in innovation, in education, in their social and intellectual capital, constitute a necessary condition of adjustment to the constantly changing socioeconomic changes (Mpourantas, 2005:174; 2015:687-688), showcasing the dynamic relationship of the society and governance, the dynamic relationship of interaction between the power of politics and the socioeconomic changes with the power of knowledge and learning.

From the content of the scientific field of the Management of Changes, which consists of the scientific supervision, knowledge, concepts, theories, models and techniques (Mpourantas, 2005.:690-713), the importance of understanding the complexity and the conflicts, of understanding the logic of change (culture) is showcased as the basic condition and process of negotiation in order to comprehend the introduction and institutionalization of general strategic changes (structures, systems, processes). So, in the phrase coined by Drucker P. «culture eats strategy for breakfast»²⁴ (Papoulias, 2016), the

²² True translation of the text: «...δεν υπάρχει πράγμα πιο δύσκολο από τη μελέτη και το σχεδιασμό, πιο αμφίβολο από την επιτυχία και πιο επικίνδυνο από τη διαχείριση, εισαγωγή των νέων θεσμών...για το λόγο ότι ...έχει εχθρούς όλους εκείνους που επωφελούνται από τους παλιούς θεσμούς ...Και η χλιαρότητα προέρχεται εν μέρει από το φόβο ..και εν μέρει από τη δυσπιστία των ανθρώπων, οι οποίοι, πριν αποκτήσουν μια καινούρια εμπειρία, δεν πιστεύουν πραγματικά στις καινοτομίες», Μακιαβέλλι, Ν., 1991:40,41.

²³ True translation: «Τα πάντα ρει» κατά τον Ηράκλειτο.

²⁴ <https://www.managementcentre.co.uk>

reorganization of perceptions and mentalities, the moral relocation, the development of organizational education (culture) are showcased as the basic conditions for the institutionalization and accomplishment of broader changes.

Thus, the work of management of changes, according to Bennis (1989), primarily has to do with the complex, educational and strategic change of knowledge, beliefs, attitudes, values, mentalities and conduct of every person at first with a view to adjust to the new technologies, the new facts and the new challenges. It has to do with the political will for change, the leadership of changes.

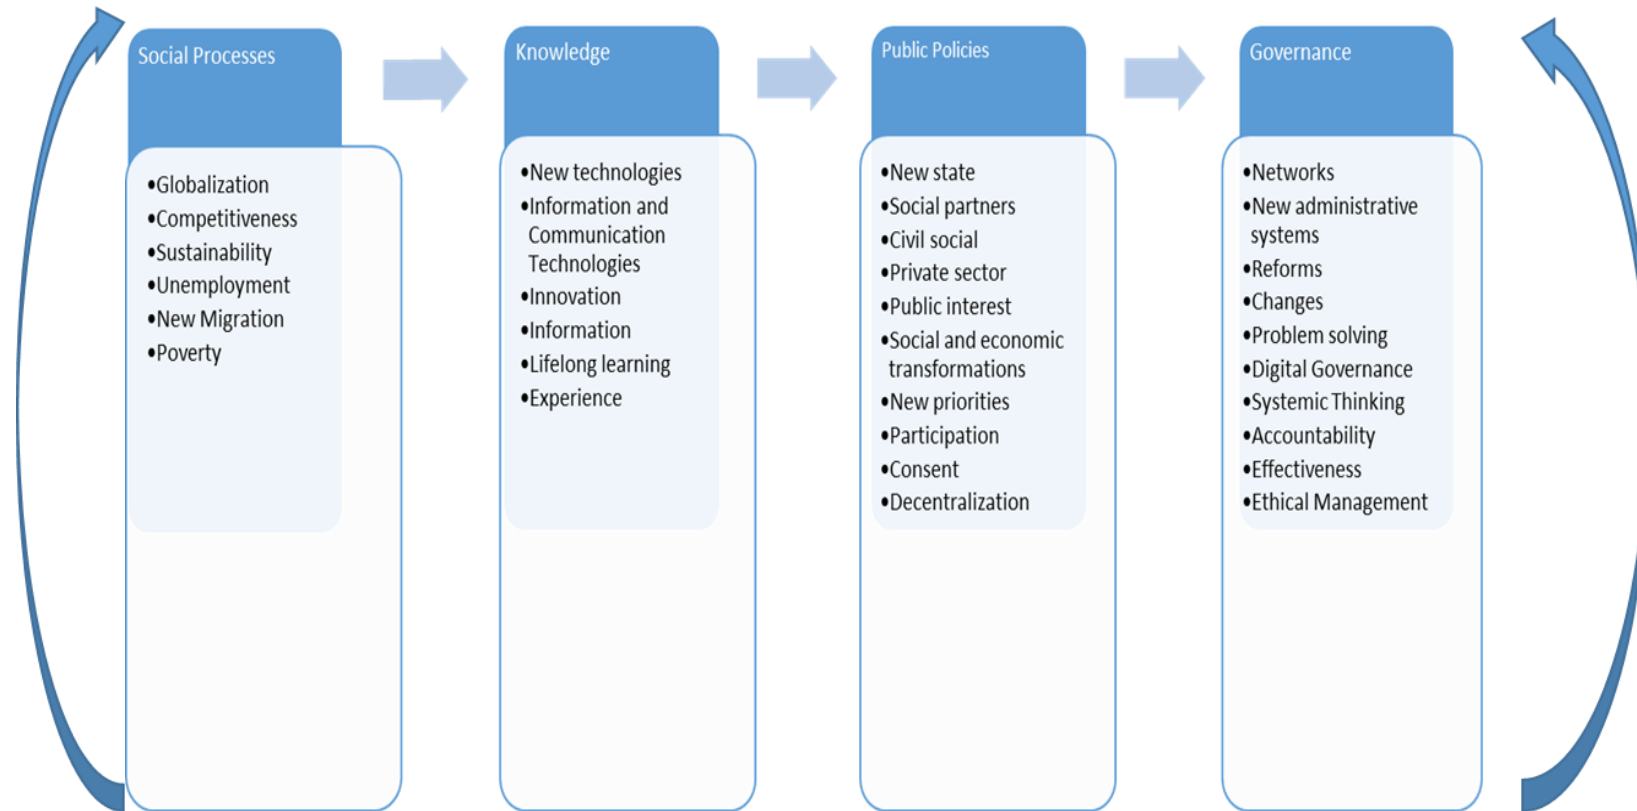

4.2. Leadership and Management of changes

According to Morgan (2002), achieving changes requires the ability of multilevel analysis, systemic thought, and interpretation of the several angles that constitute modern organizations. Approaching organizations from eight different, in a figurative way, angles, as a machine, as a biological organism, as a brain, as a political system, as a mental prison, as flow and transformation and as an instrument to dominate which correspond to a specific doing of things (limited angle), to an expansion of the limits of thought like the natural evolution, to the step by step evolution of the human science, to the attitudes and perceptions, to the political dimension and analysis, to the lock-in to a specific view, to the most important and most powerful angle of flux of things, to the state of natural and social dominance respectively, the understanding of organizational phenomena (for instance, of the failure to change, of the incitement of the workers) requires, according to Morgan, the ability to recognize the above-mentioned angles and their complex interpretation. Thus, changes are based on observation, on analytical thought and interpretation of things, on repetition and drawing of conclusions, on evolution.

Having approached the concepts and the content of leadership and changes systemically, the conclusions of this study can be summarized as follows:

- Leadership is a process of influencing the thought, the emotions, the attitudes and conducts of a small or large, typical, or atypical group of people or a people in such way that they voluntarily, willingly and in cooperation with each other do their best for a better future (Mpourantas,2005).
- Leadership is exercised through the power and the influence of the leader.
- The effective leadership focuses on the personality of the leader, the power, the abilities, the values and the character of the leader, aspects that further define his leadership behavior, a basic variant regarding the achievement of his results.
- The accomplishment of change requires political will, scientific approach and interpretation of things and knowledge.
- The changes in Organizations constitute a basic condition for their adjustment to the modern socioeconomic transformations and their conservation on the basis of the natural flux and evolution of things.
- The management of changes requires the change of culture, the reorganization of perceptions and mentalities, the moral relocation, the development of organizational education (culture) of every individual in order for them to adapt to the new circumstances.
- The modern leader, in the context of complexity, of the dynamic of the socioeconomic reformations and the ethical management of developments, should have the ability of multilevel, systemic analysis, thought and perception of things, should be characterized by an independence of mind on the basis of a system of values, by intellectual and moral maturity, thus reminding of the qualities of the Aristotelian orator, the Aristotelian ethical political thought, analysis and action.

5. CONCLUSION

"There is nothing better than a good theory. And that is because a good theory successfully turns action to knowledge for wisdom" states Lewin (1951) and in this study, the Aristotelian ethics, the ethical political philosophy of leadership and the leader, as shown in the two works of the ancient Greek philosopher, the "Rhetoric" and the "Nicomachean Ethics", makes its influences obvious to the modern approaches of the leadership phenomenon and the way leadership is exercised in a dynamic changing environment. In the context of the modern socioeconomic developments and the complexity of things, of the conflicts and disputes, the power of politics and its dynamic connection with the power of knowledge and learning is showcased as a necessary condition of adjustment to the new circumstances, as a need for action and change of state. Thus, according to the Aristotelian ethics, leadership as a guiding power of influence towards the right conduct and having as an ultimate goal to pursue the personal and social happiness, focuses on the personality of the political leader, who, as an "Aristotelian" orator is asked to inspire, motivate and guide the actions for change, learning and new knowledge based on a negotiating and mediating spirit.

On the basis of the comparative analysis of the Aristotelian current and the systemic approach of leadership and the changes based on their dynamic connection, the contribution of the Aristotelian ethics is showcased in the modern reflective logic for the thought and action of the modern leader, summarizing the most basic influences of ethical and political philosophy of leadership and of the political orator on the personality of the political leader at the following:

- Leadership is a guiding political art/process of influencing the thought, the attitudes, the emotions, and the conducts of a group of people or a people by an individual (the leader), in order for them to voluntarily do their best for a better future, for the achievement of "eudaimonia"(happiness).
- Leadership is exercised through the power and the influence of the leader.
- Leadership focuses on the personality of the leader, on his character and his behavior, his values and attitudes, his knowledge and his abilities, his intellectual and ethical maturity as a whole.
- Leadership is based on rhetoric, on the knowledge of forming logical arguments and the intellectual, according to Aristotle, virtue of the emotional intelligence for the accomplishment of logic and psychological persuasion.
- Leadership is an art of rhetoric "a combination of the analytical science and the political science that relates to the moral issues"(Aristotle, Rhetoric A', 1359b)

More specifically, in the context of the modern socioeconomic developments and reformations, the complexity of things, the conflicts and disputes, the modern leader should have the ability of multilevel, systemic analysis, thought and perception of things, should be characterized by an independence of mind on the basis of a system of values and by intellectual and moral maturity, thus reminding of the qualities of the Aristotelian orator and the Aristotelian ethical political thought, analysis and action, in order for him to be able to:

- Inspire by adopting a code of ethical values and independence of spirit.
- Gain the credibility and trust of people through his ethics, culture, and maturity.
- Understand the complexity of things through his systemic and analytical thought.
- Captivate "the heart" through his empathy and knowledge of the human psyche.
- Captivate "the mind" through his ability to form logical arguments.
- Act in a negotiating and mediating way through his right conduct and the moral quality of his personality.
- Know what the common welfare is, what is useful and beneficial, and which is his final objective.

Comparative Analysis and Mutual Relation between Dynamic Methods for Selection and Evaluation of Investment Projects

Stefana Risteski¹

Margarita Janeska²

¹PhD student, ”, e-mail: stefana.risteski@uklo.edu.mk , Faculty of Economics–Prilep, University “St. Kliment Ohridski-Bitola

²Ph.D., Associate professor, e-mail: mjaneska@yahoo.com , Faculty of Economics–Prilep, University “St. Kliment Ohridski-Bitola”

Abstract: Investments are an important determinant for the development of enterprises, but they are also one of the factors of economic and innovative development of one country. They are a necessary condition for making progress as a whole. From that aspect, investment projects should be a priority for all companies that want to be successful on the market scene. In the process of managing investment projects, choosing the optimal option (the most useful alternative) between several projects is one of the most important phases for ensuring stability and development of the enterprise. For this purpose, there are several methods for evaluating and selecting projects. In this paper the emphasis is put on dynamic methods for evaluation of investment projects. The research is conveyed on the basis of systematic analysis of the existing scientific literature, inductive and deductive method, comparison method and mathematical methods.

The advantages and disadvantages (limitations) of each of the dynamic methods will be presented in the paper and comparative analysis will be made. Also their interdependencies through mathematical formulas, which are equally important for the success of the investment process will be presented. The general purpose of the research in this paper is to see the methodological problems in the application of individual dynamic methods for evaluation and selection of investment projects, i.e. the conflict in the ranking of projects in the use of different methods and the need for multi-criteria analysis to understand all factors which influence the adoption of an investment decision to give priority to the realization of one of several alternative investment projects.

Keywords: dynamic methods, investment project selection, project evaluation, comparative analysis, interdependencies

1. INTRODUCTION

When making an investment decision, the investor has opportunities for many alternative investment options. The task of the investor is to choose an investment that will best meet the objectives of the investment project. In order for an investment to be realized, it is necessary to create a document that plans and especially outlines the form of the investment project. Many methods and techniques have been developed, tested and modified to best assess the value of investment projects. The results given by these methods are usually contradictory, making it difficult for the investor to make decisions. Due to the fact that the results of assessment methods are often different, it is necessary to take into account that there are a number of criteria that need to be examined in order to make the best investment decision. The literature often states a method of project efficiency that is superior. However, that choice is usually based on the assumption of perfect and efficient markets, project independence, safety of the project's life, without capital rationalization, etc. Most of these assumptions are not valid in real life. In the real world, different risk factors and market inefficiencies require managers to focus on both risk and the profitability and liquidity of capital investments. Multi-criteria analysis can be used to rank potential investment projects and improves the decision-making process needed to meet investment objectives. In this paper the emphasis will be put on the dynamic methods, as well as their efficiency for the realization of investment projects, which are an important part of an organization in the process of making investment decisions. In order to see which method is most optimal to apply in appropriate conditions, this paper will develop the criteria, as well as the advantages and disadvantages of dynamic methods with critical review, the relationship between individual methods and their comparative analysis.

2. IMPORTANT CHARACTERISTICS OF INVESTMENT PROJECTS

Basically, the project is a series of complex, unique, non-routine and interrelated activities that are limited in time, budget, resources and specifications for realization. In general, the goal of projects is to achieve some desired individual, corporate or social change. Characteristic of the projects is that they focus on solving certain problems or needs of a specific group, i.e. meeting certain requirements and expectations by using new ideas and techniques, but also upgrading the constant possible potentials. According to (Lock, 1977) the project is a special attempt that can not be repeated. It usually means achieving the planned results within a certain period of time and the available financial resources. Each project is unique and therefore its outcome can not be predicted with particular certainty. Therefore, projects are ventures that cannot be predicted. Each project contains two important elements: uniqueness and risk. Uniqueness can be two-sided, as originality, i.e. it is not identical with other projects, but also as an inability to repeat the same project, because the goal has already been achieved. Risk is also an important element of business ventures, especially in investment projects. The essential elements of an investment project are:

- The project is an venture that will take place in the future;
- The project is limited in time and for single use;
- The project is a unique and unrepeatable venture;
- The project is aimed at achieving the defined goals;
- The project engages resources: costs, time and resources;
- The project is a venture, which requires coordination of activities;
- The project is a risky venture;
- The project is realized if it is justified to realization;

Investment projects are a special type of business ventures, which refer to the construction of plants, business buildings, energy facilities, traffic facilities, introduction of new equipment and all other types of investment of financial resources intended for creating various types of fixed funds, as well as introducing innovations, improvement trainings of the staff and the organization, investments in research work etc. Starting from the general characteristics and elements of the project, the investment project is a system of activities undertaken by a subject, in a certain space, at a certain time, under certain conditions and assumptions for realization, which are aimed at achieving programmed effects in the future. As elements of the investment project are: system of activities, subject, space, time, conditions and assumptions, effect and risk.¹

2.1. EFFICIENCY OF THE INVESTMENT PROJECTS

The assessments for Investment efficiency can be performed using static and dynamic methods for assessing investment efficiency. The static rating assesses the profitability of the investment project by implementing numerous so-called "simple" static criteria. These criteria are calculated taking into account the parameters of the single period of exploitation in a normal year, claims (Jovanovic, 2000). As a standard or normal year in the period of exploitation, i.e. as a representative year, (Bendekovic, 2008) considers that this year reflects or provides:

- Maximum possible use of the project capacity is achieved;
- The project still has ongoing loan repayments.

This method of examining investments can offer a wrong image, because only a certain period of time of the entire economic life of the investment is taken into account. These indicators do not follow the dynamics of investments. A particular disadvantage of this method of assessment is that it does not

¹ Lock, D., (1977). Project management, Grower Press, London

provide information on reducing the effects of investments in the initial and last period of exploitation, and therefore does not offer the opportunity to plan interventions and improvements, claims (Nicin & Pusara, 2011). In order to eliminate this problem of static indicators, a reduction process is performed. Accelerating static indicators involves reducing individual annual costs and the effects of investments (income, expenditure and total investment) to the present value or calculating the average annual value for the entire economic life of the project. These methods are also divided into:

- Methods that do not use discounted cash flows (NDCF techniques);
- Methods that use reduced cash flows (DCF techniques).

Decision makers are not able to reach the maximum value of the shareholder using NDCF techniques because these methods do not combine or meet all three basic conditions for their claim (Volarevic & Davosir Pongrac, 2010). The disadvantage is that they do not include the discount factor in the calculation and, therefore, do not assess any risk associated with future cash flows. Methods that do not use current cash flows include the following indicators:

- Return period;
- Accounting yield rate;
- Cumulative cash flows;
- The rate of return.

For the investment management system the choice of the optimal option between several available investment projects is one of the most vital stages of ensuring the steady operation and development of an enterprise. Because of that, the efficiency of investments largely depends on the application of appropriate methods for selecting an investment project.^{2 3 4}

3. CLASSIFICATION OF SELECTION METHODS AND ASSESSMENTS OF INVESTMENT PROJECTS

Project selection methods refer to measuring the advantage and benefits of a particular project of the organization implementing it. In other words, selection methods measure the total value of certain products, services, or other project results that an organization may have. The amount to be measured when selecting and ranking projects is represented by factors such as market share, financial return, return on investment, customer relations and public opinion. There are two types of selection methods: benefit measurement methods and mathematical models. These methods are more commonly known as decision models and calculation methods. Decision-making models examine the various criteria used in the decision-making process, while calculation methods allow the calculation of the value of the project during selection. Mathematical models, better known as limits optimization methods, use linear, dynamic, multipurpose, and integral programming in the form of algorithms, that is, they have predefined steps in solving certain problems. In the investment decision-making process, classical investment performance assessments are most often used. These estimates can be classified according to the dynamics of calculating the parameters of static and dynamic methods. The static methods last only one representative year and for it the parameters for individual investment studies are calculated. They are usually used in the pre-investment period, as their calculation is quite easy and simple. Dynamic methods take the effects of investment into all years of the economic age and are used with

discounted cash flows. They are applied after a short list choice is made between the investments that can be realized. The reason for this is the complexity of the calculation process. Due to the difference between these estimates and the coverage period, dynamic methods for assessing the return on investment are most commonly used. In addition to the classical methods for assessing the return on investment, modern methods are used, which take into account a wider range of factors for analysis. Usually these factors are risk, uncertainty, social acceptability, optional approach, opportunity costs, etc. Modern methods are much more complicated to calculate than classical methods and they are used when reducing a project. When making investment decisions, all factors that can affect the positive outcome of investments should be taken into account, and not just consider cash flow projections

4. TYPES OF DYNAMIC METHODS

The dynamic approach, i.e. the method for assessing the efficiency of investments, takes the entire economic life of the project and calculates the parameters using discounted cash flows. That is why in the world literature these methods are called "Discounted cash flows techniques" (DCF).

According to (Volarević & Pongrac, 2010), the application of dynamic methods for assessing the return on investment maximizes the wealth of shareholders because, as a rule, these methods meet all three basic assumptions.

When applying these methods, it is necessary for the decision maker to define in advance the discount rate that he will apply in the calculation. The discount rate needs to be determined precisely as it can greatly affect the results obtained by using dynamic methods to assess the return on investment. Methods that are classified as dynamic are:

1. Net present value (Net present value - NPV)
2. Internal rate of return (Internal rate of return - IRR);
3. Modified internal rate of return (Modified internal rate of return -MIRR);
4. Profitability index (Profitability index – PI);
5. Discounted payback period of the investment (Discounted payback period – DPP).⁵

4.1 Net present value (NPV)

This is a classic method that is most often used in the evaluation of investment projects. The most important assumption for using this method is the objective selection of criteria on the basis of which the selection of investment projects is performed, i.e. selection of criteria as a lower limit of profitability. It can be assumed that the limit is expressed by the average cost of capital in the enterprise. The average cost of capital is used as a discount rate by which the expected annual revenue, i.e. the net cash flow from the operation of the project in the economic life of its duration is reduced to present value and thus becomes comparable to the amount of capital cost in the project, which is also expressed in present value. Considering the abovementioned, the method of net present value of the project can be defined as the difference between the present value of expected net cash receipts of the project discounted at a rate that approximates the cost of capital of the enterprise and the present value of capital expenditures in the project. NPV is the sum of all future net cash flows reduced by present value using the discount method. In addition to future net cash flows, the initial investment is included. When all net cash flows are reduced, the initial investment is deducted from their amount. If the net income varies by years, which is usually the case in the economic life of the project, the net present value can be calculated as follows:

⁵ Gordon M. Dividends, Earnings and Stock Prices. Review of Economics and Statistics. 1959; 41 (2): 99-105.

$$NPV = \sum_{t=1}^n \frac{NP_t}{(1+i)^t} - I_0 \quad (1)$$

Where:

NPV - Net present value

NP_t - Cash inflows

n - Duration of the project (the number of periods)

i - Discount rate

I_0 - Cash outflow in time 0 (initial investment)

The criteria for a NPV investment decision are:

- $NPV > 0$ – the project is efficient;
- $NPV = 0$ – the project is neutral;
- $NPV < 0$ – the project is ineffective.

If the NPV result is greater than 0, it means that the investment is justified. The reason is that if the company invests in a project whose NPV is zero, the company will achieve a return on the cost of capital during the operation of the project, and if the NPV is greater than zero, the company will achieve a rate higher than the cost of capital. The NPV indicator can usually be "improved" in the following ways: by increasing the length of the investment exploitation period, by increasing the investment time (investing funds), by reducing the amount of invested funds and by reducing the rate at a discount. This method, like all other methods, is accompanied by certain positive and negative features.

Advantages of this method are:

- shows whether the investment increases the value of the company;
- considers cash flows;
- considers the variable time value of money;
- considers the risk for future cash flows (through the cost of capital).

Disadvantages of this method are:

- an estimate of the cost of capital is required to calculate the net present value;
- is expressed in value, not as a percentage;
- does not sufficiently consider the length of the exploitation period (only the mass of discounted net income is significant, regardless of the period for which it is realized).

4.2. Internal rate of return (IRR)

The internal rate as a method for assessing the economic effectiveness of investments is the annual rate of return on capital investments in a project. This rate of return is equal to the interest rate where the present value of the net cash receipts from the project under consideration equals the present value of the capital expenditures on that project. Internal rate of return means the interest rate at which the present value of all payments and payments relating to any period of time is equal to zero. When determining the internal rate, it is necessary to find the discount rate that reduces the current value of the project to zero. This discount rate is the internal rate of return on the investment project.

If P_1, P_2, \dots, P_h are cash income (payments) in the moments t_1, t_2, \dots, t_h and if C_1, C_2, \dots, C_k are expenditures (payments) in the moments t_1, t_2, \dots, t_k . According to the definition the internal rate is:

$$p_1(1+i)^{-t_1} + p_2(1+i)^{-t_2} + \dots + p_h(1+i)^{-t_h} = c_1(1+i)^{-t_1} + c_2(1+i)^{-t_1} + \dots + c_h(1+i)^{-t_1} \quad (2)$$

Therefore the formula for the internal rate can be performed i.e.:

$$i = {}^{t_p-t_c} \sqrt{\frac{p_1 + p_2 + \dots + p_h}{c_1 + c_2 + \dots + c_h} - 1} \quad (3)$$

$$i = \frac{p}{100} \quad (4)$$

$$p = IRR = 100({}^{t_p-t_c} \sqrt{\frac{p_1 + p_2 + \dots + p_h}{c_1 + c_2 + \dots + c_h} - 1}) \quad (5)$$

Where:

$p = IRR$ - internal rate of return

$$t_p = \frac{P_1 \cdot t_1 + P_2 \cdot t_2 + \dots + P_h \cdot t_h}{P_1 + P_2 + \dots + P_h} \quad (6) \quad t_c = \frac{C_1 \cdot t_1 + C_2 \cdot t_2 + \dots + C_k \cdot t_k}{C_1 + C_2 + \dots + C_k} \quad (7)$$

Or Internal Rate of Return is the discount rate that causes the net present value of future cash flows from an investment to equal zero:

$$NPV = \sum_{t=1}^n \frac{NP_t}{(1+i)^t} - I_0 = 0 \text{ where } i = IRR \quad (8)$$

Or

The internal rate can be obtained via interpolation according to the following formula⁶:

$$p = IRR = p_1 + \frac{NPV_{p1}(p_2 - p_1)}{NPV_{p1} - NPV_{p2}} \quad (9)$$

p_1 - discount rate with a positive net present value,

p_2 - discount rate with a negative net present value,

NPV_{p1} - positive net present value (with discount rate p_1)

NPV_{p2} - negative net present value (with discount rate p_2)

The criteria for an IRR investment decision are:

- IRR > r_{min} - the project is efficient;
- IRR = r_{min} - the project is neutral;
- IRR < r_{min} - project is ineffective.

If the IRR exceeds the cost of capital, the project may be considered and eventually accepted, and vice versa if the IRR is less than the cost of capital, the project should be rejected. It sometimes happens that in some years the net cash flows from the exploitation of the project are negative or consequently significant capital investments have to be made, so the cash flows become "unusual". In such cases more IRR can be obtained, so it is impossible to decide whether to accept or reject the project. When such cases occur, the IRR should be modified or the NPV method used. The IRR method sometimes does not allow ranking of investment projects, while the NPV method always allows ranking. This method, like all other methods, is accompanied by certain positive and negative characteristics.

Advantages of this method are:

- shows whether the investment increases the value of the company;

⁶ Ednota Stevi S. (2010), *Finansijska matematika, osnovi i primjena*, Brko: Ekonomski fakultet

- considers the cash flows of the project;
- considers the variable time value of money;
- considers the risk for future cash flows (through the price of capital according to the rule of decision);

Disadvantages of this method are:

- an assessment of the cost of capital is required to make a decision;
- a correct decision for maximizing the value may not be made when used to compare mutually exclusive projects;
- a decision may not be made to maximize value when used for project selection when there is capital rationalization;
- can not be used in situations in which the fluctuation of the cash flows of the project changes more than once during the life of the project.

4.3. Modified internal rate of return (MIRR)

If the IRR is significantly higher than the cost of capital and is, for example, 25% or more, the question arises as to whether there is sufficient opportunity for the extras generated in the project to be further invested with such high returns. (Bendeković, 2008) claims that, when this is unlikely, it is useful for the investor to determine the rates of return expected to be achieved through reinvestment and thus to make the project more objective, allowing for a modified internal rate of return.

MIRR is a rate that equates the discounted positive cash flows at the end of the project life cycle with the discounted negative cash flows at the beginning of the period. It is calculated using the following form:

$$MIRR = \sqrt[n]{\frac{FV}{PV}} - 1 \quad (10)$$

Where:

MIRR - Modified Internal Rate of Return

FV - Future value of the net cash inflows from investment assumed to be re-invested at the re-investment rate

PV - Present value of the net cash outflows incurred using the investment period discounted at the cost of capital (at the financing rate)

n - Duration of the project (the number of periods)

MIRR is used in cases where there is a clash of rankings using various indicators to assess the profitability of investment projects. The MIRR investment decision criteria are:

- $MIRR > r$ - efficient project;
- $MIRR = r$ - neutral project;
- $MIRR < r$ - inefficient project.

r - discount rate (cost of capital).

The decision is the same as for IRR except that instead of the minimum acceptable price, a reinvestment rate is used. The main disadvantage of using the MIRR criteria for investment in relation to the IRR criterion is the fact that in this case there is no possibility of obtaining more than one value for the MIRR. MIRR calculates the return on investment based on the more prudent assumption that the cash inflows from a project shall be re-invested at the rate of the cost of capital. As a result, MIRR usually tends to be lower than IRR.

This method also has its own characteristics, so that:

Advantages of this method are:

- shows whether the investment increases the value of the company;
- considers the cash flows of the project;
- considers the variable time value of money;
- considers the risk for future cash flows (through the price of capital according to the rule of decision);

Disadvantages of this method are:

- an assessment of the cost of capital is required to make a decision;
- a correct decision for maximizing the value may not be made when used to compare mutually exclusive projects;
- the decision to maximize value when used for project selection may not be made when there is capital rationalization;

4.4. Profitability index (PI)

The project profitability index is the ratio of the present value of future cash inflows to the starting price. It has to do with the starting price of the investment. This method shows the relative profitability of the project.

This method is calculated in the following way:

$$PI = \frac{NPV}{I_0} + 1 \quad (11)$$

Where:

PI - Profitability index

NPV - Net present value

I_0 - Initial cost (initial investment)

Or

$$PI = \frac{PV_{FCF}}{I_0} \quad (12)$$

Where:

PV_{FCF} - Present Value of Future Cash Flows

PI is a relative measure of value because it is a numerical amount that shows the ratio of two absolute quantities, namely net present cash flows and initial investment. When the PI is one or more, the investment proposal is acceptable. When calculating the profitability index, the net index is calculated, not the aggregate index. Criteria for investment decision with PI indicator is:

- $PI > 1$ - the project is efficient;
- $PI = 1$ - the project is neutral;
- $PI < 1$ - the project is not efficient.

A value of profitability index greater than 1 indicates that the project does not produce a loss and it can be accepted. Conversely, a profitability index of less than 1 indicates that the project will produce a loss. The aggregate index is the ratio of NPV to the present value of cash costs. Although it shows a relative measure of value, this criterion is used less than the NPV criterion. (Van Horne, Wachowich Jr., 2002)

claims that the reason is that the NPV shows whether the project should be accepted or not and expresses the absolute contribution that the project makes to the wealth of shareholders. In contrast, PI expresses only relative profitability. This method, like all other methods, is accompanied by certain positive and negative characteristics.

Advantages of this method are:

- shows whether the investment increases the value of the company;
- considers the cash flows of the project;
- considers the variable time value of money;
- considers the risk for future cash flows (through the cost of capital);
- is useful in the selection and ranking of projects when the capital is rationalized.

Disadvantages of this method are:

- it is necessary to estimate the cost of capital to calculate the profitability index;
- a correct decision may not be made when used to compare mutually exclusive projects.

4.5. Discounted payback period (DPP)

The indicator for the return of the investment tells us the time for which the return on initial investment is made. (Volarević & Pongrac, 2010) claim that DPP is the time required to repay the original investment by applying discounted future cash flows. This indicator is calculated by first making discounted values of cash flows, and then forming their cumulative values and determining between which two years the cumulative cash flows of discounts have been positive. If it is for example between 5 and 6 years means DPP is 5 years and something. And it is calculated more precisely with the following formula:

$$DPP = (n - 1) + \frac{I_0 - CPV_{CF}^{n-1}}{PV_{CF}^n} \quad (13)$$

Where:

DPP - Discounted Payback Period

I_0 - The initial cost of investment

CPV_{CF}^{n-1} - Cumulative Present Value of the Cash Flows from investment at the end of the Year (n - 1)

PV_{CF}^n - Present value of Net cash flow in Year n

n - Year in which the cumulative present value of cash flows from investment exceed the initial cost.

$n - 1$ - The year prior to n.

The question is whether this indicator should be included in the dynamic methods for assessing project effectiveness. The reason for this is that he does not use the net cash flows from the entire economic life of the project, but only those flows to which the initial investment returns. Based on this, he uses only part of the net cash flows. If the result of the return on investment is the period from the penultimate to the last year of the economic life of the project, then this indicator covers the entire period of work and can then be fully classified into dynamic methods for assessing the efficiency of investments. Namely, from the table in part 6 it can be seen that in terms of some features it exceeds the NPV method, and therefore this method can be used to supplement it.

Advantages of this method are:

- considers the variable time value of money;
- considers the riskiness of the cash flows of the project (through the cost of capital).

Disadvantages of this method are:

- there are no specific decision criteria that indicate whether the investment increases the value of the company;
- an estimate of the cost of capital is required to calculate the payback period;
- ignores cash flows outside the discounted payback period.

5. MUTUAL RELATIONS AND DEPENDENCES ON DYNAMIC PROJECTS EVALUATION METHODS

Both in theory and in practice, it has been proven that there are strong relations between the values created in the enterprise. One of these core values is the NPV which determines the increase in the value of the enterprise from the implemented project. At the same time, thanks to the NPV method, it is possible to determine how much the increase in value of the enterprise is due to the implementation of several projects at the same time. A feature of the NPV method is the ability to aggregate individual NPV values for project results. This is also directly related to the type of investment decision made, which usually distinguishes the division of investment decisions into individual projects, which are mutually exclusive or as a whole. Since, in the company, all the investment decisions made create a complete picture of its investment policies, then it would be assumed that the level of implementation can be measured by the results of the NPV method of total undertaken projects. In other words, the selected investment policy framework followed by the projects will distinguish the maximum or minimum possible for the total NPV score of all projects in the enterprise. Among the methods elaborated in Table 2, the NPV method has only advantages. Other methods, including MIRR and PI (profitability index), have limitations that have already been identified. There are close dependencies and relationships between the methods, which follow directly from the definition of IRR, which is the discount rate at which the result of NPV is 0. This relation is described by the following formula:⁷

$$NPV = \sum_{t=1}^n \frac{NP_t}{(1 + IRR)^t} - I_0 = 0 \quad (14)$$

An IRR is a result that is expressed in the form of an interest rate on the return on investment that is estimated, or can be defined differently, namely it is the discount rate of present value of cash flows (investment income) equal to the present value of cash costs related to the construction and operation of the project investment, which can be illustrated as the following equation:⁸

$$\sum_{t=1}^n \frac{NIP_t}{(1 + IRR)^t} = \sum_{t=1}^n \frac{NOP_t}{(1 + IRR)^t}$$

(15) Where:

NIP_t - the present value of cash flows (investment income)

NOP_t - the present value of cash expenditure related to the construction and operation of the project investment

⁷ Pike R., Neale B. Corporate Finance and Investment. Harlow: Pearson Education Limited, Inc. 2003.

⁸ Tworek P. Capital budgeting in enterprises: mutual relationships and dependencies between discount methods used in project evaluation. Bratislava: Ekonomická Univerzita v Bratislave. 2014, pp. 278-287.

Because IRR is expressed as a percentage, it corresponds to the rate at which the project allows a return on investment costs. Therefore, another connection occurs here, i.e. between IRR and DPBP, which can be written as follows:

$$DPP = \frac{1}{IRR} \quad (16)$$

However, in order to eliminate the assumptions for the reinvestment rate equal to IRR, the internal rate of return is modified in the form of MIRR (Modified Rate of Return) which shows the following mathematical notation:

$$MIRR = \sqrt[n]{\frac{\sum_{t=1}^n NIP_t (1 + r_i)^{n-t}}{\sum_{t=1}^n NOP_t (1 + r)}} - 1 \quad (17)$$

Where r_i is the rate of capital reinvestment. It is clear from the equation that MIRR, like IRR, is defined as a discount rate that equates the updated residual value of the project with the updated value of the incurred investment costs. For a project to be financially viable, the PI ratio must be at least equal to or greater than 1. This ratio, together with its modified form, informs investors how much money will be generated from the project as a result of the investment costs incurred, which in mathematical form is expressed by the following formula:

$$PI = \frac{PV}{I_0} \quad (18)$$

Where:

PV - Present value

When PV is in simpler formula for NPV follows:

$$PV - I_0 = NPV \quad (19)$$

In the case of a typical investment, the IRR can be represented by a universal linear interpolation formula, namely:⁹

$$IRR = r_0 + \frac{NPV_0}{NPV_0 - NPV_1} (r_1 - r_0) \quad (20)$$

Where r_0 is the lower discount rate accepted for calculation, and while r_1 is the higher discount rate accepted for calculation, NPV_0 is the result of NPV calculated for the lower discount rate, NPV_1 is the result of NPV calculated with the higher discount rate. The application of this equation is common in the practice of investing and the essence of using this formula lies in the calculation of the NPV results for a given investment with two rates r_0 and r_1 , as long as the mathematical function that reflects the NPV and the result changes from positive to negative, namely NPV changes its sign from positive to negative or from negative to positive. Generally, an IRR estimate is to find the zero value of a function. On the other hand, there are projects that have two parallel IRR rates, but may have three or more, as the investment life can extend to $+\infty$). This means that the IRR method has a major drawback, namely, it is not reliable in case of investments with unconventional cash flow and should not be used in practice for this type of projects. In addition, it is not credible to establish a hierarchy of projects that differ in investment size and lifespan. Theoretically, there is a situation in which the IRR for a given investment can not be estimated at all. However, the NPV and IRR for different projects are calculated differently,

⁹ Pike R., Neale B. Corporate Finance and Investment. Harlow: Pearson Education Limited, Inc. 2003.

i.e. there are appropriate modifications to the formulas. Financial effectiveness is calculated differently for investments in the real estate market and differently for large industrial and commercial enterprises, and yet quite differently in the case of public sector projects. There is always a need to adapt the method to a particular situation, including investor expectations.

6. COMPARATIVE ANALYSIS OF DYNAMIC METHODS FOR EVALUATION AND SELECTION OF INVESTMENT PROJECTS

When selecting a project from a group of investment projects, the investor uses methods that assess the effectiveness of these projects. At the same time, there may be a ranking conflict between these methods. In order to make the right decision, it is necessary to take into account all the criteria. Before determining the ways to do this, it is necessary to establish the relation between these criteria. If one of the criteria is not related and gives contradictory results compared to the other criteria, its impact should be reduced, but it is still used in making a final decision. The methods for analysis of multiple criteria are an excellent tool with which it is possible to insert all the criteria in the final decision, which is why in this paper a comparative analysis of the dynamic methods for evaluation and selection of investment projects is done. These methods are a way to invest when a decision is made by including all the criteria. Making a decision with only one criterion implies a question of correctness because through the work it can be seen that the results contradict the other results of the criteria and such a decision is incomplete and incorrect. Starting from the previously presented characteristics of the dynamic methods for evaluation and selection of investment projects, it can be concluded that each of the methods has a different focus and application. So the first of the five dynamic methods elaborated is net present value (NPV) which as a classical method is most often used in the evaluation of investment projects. The most important assumption for using this method is the objective selection of criteria on the basis of which the selection of investment projects is performed, i.e. selection of criteria as a lower limit of profitability. The method for internal rate of return (IRR) is a method for assessing the economic effectiveness of investments, i.e. it is an annual rate of return on capital investments in a project. This rate of return is equal to the interest rate which equals the present value of the net cash receipts of the project under consideration with the present value of the capital expenditure on that project. The third method elaborated in this paper refers to the modified internal rate of return (MIRR), where MIRR is the rate that equates the discounted positive cash flows at the end of the project economic life with the discounted negative cash flows at the beginning of the period. The next dynamic method elaborated in this paper is the ROI, which is a relative measure of value because it is a numerical quantity that shows the ratio of two absolute quantities, namely net present cash flows and initial investment. The last method that is presented is the method of discounted period of return on investment. This dynamic method shows us the time for which the return on the initial investment is made, i.e. the time required to return the original investment by applying discounted future cash flows.

Starting from the previously developed theoretical part for different types of methods for selection and evaluation of investment projects, it can be concluded that each method has a different focus and perspective for its application. The focus of the methods is usually on investments and projects. From the presented characteristics of each of the dynamic methods, a comparative analysis can be made as to which of these methods would be universal, i.e. could be used in each organization. In order to better understand the advantages and disadvantages of using dynamic methods in investment projects, the following table is prepared, which illustrates when the values of the methods are one, less than one or zero and how the project is appropriately accepted, the project is rejected or the investment project is neutral.

Table1. Criteria for efficiency of the dynamic methods in investment projects

Type of dynamic method	The project is effective	The project is ineffective	The project is neutral
NPV	$NPV > 0$	$NPV < 0$	$NPV = 0$
IRR	$IRR > r_{min}$	$IRR < r_{min}$	$IRR = r_{min}$

MIRR	MIRR > r	MIRR < r	MIRR = r
PI	PI >1	PI < 1	PI = 1

Source: Authors own research

From the sources of different authors, characteristics are defined according to which the dynamic methods for investment projects can be evaluated.¹⁰ As there are several criteria in this paper, fourteen criteria defined by different authors will be taken and a synthesis will be made to analyze the following criteria: a criterion that is simple to understand, a criterion that takes into account the whole life cycle of the project, a criterion that takes into account the variable time value of money, a criterion that takes into account the goals of the company, a criterion that measures profitability, a criterion that consistent with the wealth maximization goal, a criterion that takes into account the risk of the project, a criterion that determines the net profit as net cash flows, a criterion for the possibility of building an objective criterion for decision making, a criterion for how easy the method is to calculate, a criterion according to whether the method provides liquidity a criterion that take into account company's objectives and finally whether it can be presented as a unique number. With the help of these criteria, an assessment will be made to determine which of the previously elaborated dynamic methods meet the selected criteria and how many of them meet them. For that purpose, a table has been prepared which presents some of the dynamic methods that have been previously theoretically elaborated and the criteria previously defined by different authors, in order to explain the inclusion of the selected criteria in the methods.

Table2. Comparison of dynamic methods for evaluation and selection of investment projects

Feature \ Method	NPV	IRR	MIRR	PI	DPP
Simple to understand	N	Y	Y	Y	Y
Easy to calculate	?	N	?	?	?
Take into account entire project lifecycle	Y	Y	Y	Y	N
Determines net gains as net cash flows	Y	Y	Y	Y	Y
Measures profitability	Y	Y	Y	Y	Y
Ensures liquidity	N	N	N	N	Y
Can adjust for risk	Y	Y	Y	Y	Y
Considers all cash flows	Y	Y	Y	Y	N
Adjusts for time value of money	Y	Y	Y	Y	Y
Is unique number	Y	?	Y	Y	?
Assumes realistic reinvestment of intermediate cash inflow	Y	N	Y	Y	Y
Consistent with the wealth maximization goal	Y	N	N	N	Y
Take into account company's objectives	Y	N	N	N	N
Possibility of constructing an objective decision-making criterion	Y	Y	Y	Y	N

¹⁰ Rogowski W. Rachunek efektywnosci przedsiwziec inwestycyjnych. Kraków: Oficyna Ekonomiczna, 2008.

The entry (Y) means yes, the entry (N) means no and the question mark (?) means that the criterion may not meet the requirement under certain conditions.

This table will summarize the overview of dynamic methods for assessing the investment success of a company, while the comparison of methods is carried out according to the criteria for evaluating investment projects. It can be concluded that there is no single method for assessing effectiveness that would be most appropriate for all organizations, but still the choice depends on organizational needs and goals. It is noted that all dynamic methods for evaluation and selection of investment projects are based on quantitative assessment. From the table, the dynamic method meets all the set criteria by which the evaluation and selection of investment projects is performed. This means that the NPV takes into account the entire life cycle of the project, the goals of the company and the risk that the project carries with it, takes into account the variable time value of money, as well as the ability to make the right decision and determines net profit as net cash flows and is a unique number, but not easy to understand does not provide liquidity to the investment project and is not easy for understanding. Also for this criteria we can't summarize is easy or not for calculating. From the table it can be summarized that this type of dynamic method does not meet all the set criteria in the selection and selection for evaluation of investment projects. Like the NPV, the IRR does not meet all the criteria for a positive evaluation when choosing this method for evaluating investment projects. This method does not provide liquidity and is not easy to calculate, and not assumes realistic reinvestment of intermediate cash inflow and not take into account of company's objectives, unlike the NPV method does not meet the requirement under certain conditions. Also for this method we can't say that this is a unique number or not. Apart from these two methods that meet most of the set criteria when selecting investment projects, for the third type of method that was previously theoretically elaborated, this is not the case. This is a modified internal rate of return (MIRR), where it does not meet the criteria that take into account the goals of the company, does not provide liquidity and just like the NPV method, this criterion does not meet the requirement under certain conditions. In fact, this is a major drawback of a method that should elaborate on all the elements of choosing an investment project. The profitability index (PI), just like the previously elaborated method, which is the modified rate of return, does not meet the requirements for the company's goals, and thus does not realize the set strategy and mission for the future, and does not provides liquidity. The last of the dynamic methods that was elaborated in this paper is the method of discounted period for return on investment. For this method it can be freely confirmed that it is not so useful, because it does not meet four of the presented fourteen criteria, and two criteria do not meet the condition under certain conditions, which means that this dynamic method does not take into account the life cycle of the project, the set goals of the companies are not achieved and is not an objective criterion for decision making. Therefore, when selecting and evaluating investment projects, it is best to consider more than one method and elaborate so that there is a positive outcome for the investment project of the organization.

7. CONCLUSION

It is an indisputable fact that quality feasibility studies are done must be the basis for investment decisions. Otherwise these decisions would be subjective and would carry a huge risk of investment failures, which have been common in our previous investment practice. Financial feasibility is a key to the final decision on feasibility of the project, which means that the realization of the project can only begin if, on the basis of relevant methods, it is assessed that it is financially justified, that is, feasible.

When making an investment decision, the investor has more alternative investments available. The task of the investor is to choose an investment that suits him best way to realize the investment goals. Namely, an integral part of corporate financial management are the pre-investment analyzes made in companies around the world. As part of the capital budgeting process, the final outcome for enterprise projects is estimated. These calculations refer to the future and are therefore subject to risk. Therefore, the literature often emphasizes the difference between investment decisions made under conditions of uncertainty and risk. Therefore, every decision about the future is associated with taking risks. Numerous analyses of the literature indicate that individual authors, although differing in details, are unanimous in the nature and purpose of capital budgeting in the enterprise. In particular, the purpose of capital budgeting is, on the one hand, to ensure that the available capital resources of the enterprise are distributed among the projects with generated value, because they best contribute to achieving the

goals of that enterprise, and on the other hand, to gain trust that good investment ideas will not stop and unfavorable or poorly defined ideas will be rejected or harmonized.

For evaluation of investment projects, investment methods are available to the investor to assess the efficiency of the investment. The results given by these methods are usually in conflict, which makes it difficult for the investor to make decisions. Because the results of investment efficiency assessment methods are different, in order to make a decision it is necessary to consider as many criteria as possible in order to make the best possible decision.

Based on the 5 models covered in this paper, the following observations can be made:

- Net present value (NPV) is economically sound and properly ranks projects across various sizes, time horizons, and levels of risk, without exception for all independent projects.
- Internal rate of return (IRR) provides a single measure (return), but has the potential for errors in ranking projects. It can also lead to an incorrect selection when there are two mutually exclusive projects or incorrect acceptance or rejection of a project with more than a single IRR.
- Modified internal rate of return (MIRR) in general corrects for most of, but not all, the problems of IRR and gives the solution in terms of rate of return. The reinvestment rate may or may not be appropriate for the future cash flows, however.
- Profitability index (PI) incorporates risk and return, but the benefits-to-cost ratio is actually just another way of expressing the NPV.
- Discounted payback period (DPP) incorporates the time value of money but still ignores cash flow after the cutoff date.

In general, it should be noted that, first, regardless of the financial method used in capital budgeting, attention should be paid to all possible outcomes, i.e. not only the results of the methods, but also the results of the application of simple methods; second, all the dynamic methods that were elaborated in this paper should be used in a complementary manner and only on that basis should the right investment decisions be made; third, the lack of flexibility of the methods is not an obstacle, which excludes their use in business practice on a large scale; fourth, when making appropriate investment decisions in the enterprise, other than key financial operations measures, investment risk should always be assessed; fifth, in the process of capital budgeting, the advantages and disadvantages of each method should always be taken into account. Finally, the implications of wrong investment decisions need to be considered, which in the worst case scenario could even push the company to the brink of bankruptcy. Because, bankruptcy is the worst consequence of bad investment decisions made in the company. In addition to the characteristics listed in the last table, the choice of method (s) for selecting an investment project is certainly influenced by other factors, such as: project dependence, project time dimension, project scope, project structure, level of risk of each of the projects, the activity in which the projects are realized, etc. So, it is necessary: 1. to compile a complete list of features that can be taken as criteria, 2. to make a priority list of criteria that will be in function of the realization of the company's goals and 3. to choose those methods that meet the priority criteria.

The general conclusion from the research done in this paper is that more methods should be applied for evaluation and selection of investments and with the help of multi-criteria analysis to rank potential investment projects, and thus make a decision that will best meet investment goals.

Skills gap, education and ICT SMEs in Kosovo

Valdrin DERVISHAJ¹

Uran RRACI²

¹Lecturer at Universum College

²Lecturer at Universum College

Abstract: The research aims to reveal important information about specific skills needs and gaps in ICT start-ups in Kosovo. Given that Kosovo has a very young population¹ it remains very worrying that the highest unemployment rate among young people aged 15-25 is 55.6%, which is also our target group in this research. Therefore, this research has tried to make an important contribution to identifying the problem and market needs. Research intended to identify whether specific needs demanded by employers meet the needs that the young population think are important and necessary for access to the labor market.

The data are collected through interviews with 64 senior level representatives from 64 companies. The second survey instrument was used questionnaire with 322 Kosovar citizens who were either unemployed, under-employed, or individuals who are seeking to make changes to their current employment status, randomly picked, representing all seven regions of Kosovo.

The results of the study show that in order to reduce the skills gap and provide better services that will improve the employment of the target group, general skills trainings should be substituted with specific hands on trainings that are tailored to the needs of individual sectors. This is due to the fact that only 15% of the respondents found trainings to be very useful. Because of the high unemployment rate amongst females in Kosovo, more focused should be given to provide trainings to this demographic. Trainings should be organized in conjunction with local businesses, preferably employing trainers and facilitators who have industry experience. It is recommended to develop co-op courses where companies develop courses tailored to their needs, thus, allowing students to acquire transferable skills while at school/university.

1. Background Information

1.1. Introduction

Labor markets in the Western Balkan countries in which Kosovo belongs are characterized by high unemployment. A 2017 study from World Bank Group shows that Western Balkan countries have increased the rate of employment by creating approximately 300,000 jobs since 2010, from an estimated 5.5 million in 2010 to 5.8 million in 2016.² However, regardless of these attempts, the situation in this area is still very concerning. Kosovo is the country with the youngest population in the Europe. According to the latest report of Kosovo Agency for Statistics³, Kosovo has 1,793,466 inhabitants and 28% of the population are of ages 0 to 18. The working age population are 1,200,165, including the inactive people. The labor force who are active, working and looking for a job, are 513,678 from age 15 to 64. From those, 394,561 are male and 119,027 are female. This shows that females are underrepresented in the labor market. This underrepresentation of women, as mentioned in World Bank Group study, is a result of several religious and cultural factors which have given the women a kind of a traditional role and have limited her mainly in the role of the mother.⁴

³All the data are referred to Kosovo Agency of Statistic, except otherwise stated.

⁴Western Balkans Labor Market Trends 2017. (n.d.). Retrieved from <http://www.worldbank.org/en/region/eca/publication/western-balkan-labor-market-report>

Currently, in Kosovo there are 357,095 people employed. From those 281,561 are male and 75,514 are female, respectively from those employed 79% are male and 21% are female. Thus, in total, there are 29.8% employed from the working age population.⁵ The youth, age 15 to 24 faces a much greater challenge in this direction. Their participation in the labor market is 81,979, respectively 16% of labor force. Currently there are 38,736 people who are employed and from them 30,160 are male and 8,575 are female. Whereas, youth unemployment is 43,243, respectively 53%.⁶ These rather worrying indicators of youth unemployment are created by the overall difficult situation of Western Balkan labor markets. The high unemployment encourages the emigration of Kosovo youth which recently has started to become a national problem. It must be mentioned that the youth consists an important part of the overall population of Kosovo. According to Eurostat, Kosovo is the only country in the Balkans that has experienced a significant population increase. Moreover, from the youth who are employed, 46% work without formal contracts.⁷ Thus, this group of society is most affected by informal employment, and discrimination is unavoidable discouraging the youth to participate in the labor market.

Employment according to the activities is quite dispersed. The trade, construction, education and manufacturing industries employ almost half of the employed persons. Trade leads with 14.7%, manufacturing 13.2%, construction 12.9% and education 9.5%. The biggest employers for women are health, education and trade which employ 48.8% of women. On the other hand, the biggest employers for men by activity are construction, manufacturing and trade which employ 45.9% of males. Most of the employed persons reported that their wages varied from 400 to 500 euro with very little differences between males and females.⁸ Labor market problems are also challenging the educational system. Currently, the education is considered as very much focused on academic skills rather than on the labor market needs. Thus, the skill gap is expected to be reduced by reforms on formal and informal education.

2. Literature review

2.1. Social Context

Kosovo is one of the poorest countries in Europe, with a 3,661 \$ GDP per capita⁹. Many factories from the Yugoslavian time were not able to recover after the war and were privatized. Thus, the industry of manufacturing basically vanished. Many people remained unemployed and there was limited perspective for the youth that entered in the labor market. According to the Kosovo Agency of Statistics (AKS) most people who emigrate are young, age 18 to 32. There is reason to believe that emigration released the steam of the dissatisfaction of population regarding the Kosovo economic development which may have jeopardized the stability. Age structure of the population is 0 to 14 which are 25.8%, 15 to 64 are 67.2% and 65+ are 7%. The fertility rate is 2.09 for children born/women, one of the highest birth rates in Europe, although this rate is diminishing comparing with previous years. Life expectancy is 71.3 year old in general, 69.2 years for males and 73.6 years for females.¹⁰

2.2. Economic Context

Kosovar entered transition as one of the poorest economies in the region. The nominal GDP growth is 4.2 for the year 2019.¹¹ GDP per capita growth from 2000 to 2019 is from US\$1,088 to \$4,458. Beside to that, Kosovo remains the third-poorest country in Europe in terms of GDP per capita¹². The contribution of various sectors to GDP is divided in this way: 12.9% agriculture, 22.6% industry and 64.5% come from services.¹³ Since the declaration of independence, Kosovo's economic growth has been positive. Even during the global financial crisis on 2007-2008, Kosovo's economy has grown. Kosovo's economy is largely dependent on remittances of its Diaspora. The remittances account about 14% of the GDP and most of the remittances are used for consumption.¹⁴

Kosovo have a negative trade balance with low exports which has resulted to very high trade deficits. This has certainly led to several challenges which require strong action from several actors. According to a recent report from 2017 by the Government of Kosovo, the country is attempting to prepare the conditions for self-sufficient growth by increasing the domestic productivity and export competitiveness. The main goal of such actions is the reduction of the high unemployment and poverty.¹⁵ Despite to other sectors, ICT remains one of the most rapid growing sector with the positive trade balance, where 78% of already existing companies export their services.¹⁶

After the war, Kosovo's economic development has started to take place in the trade, retail and construction. The manufacturing sector remained weak and most ex-Yugoslavian factories that were socially owned enterprises were not able to restart the production. Thus, the government started privatization. In the beginning it was thought that the privatization process will attract foreign investments but in reality that was not the case because most of the purchases were done by domestic investments. Therefore, the source of growth mainly was due to demand rather than production. This is reflected from the current account deficit by about 20% of GDP.¹⁷

According to a study from Heritage Foundation, Kosovo's economy is considered to be moderately free and trade is important to Kosovo's economy. Generally, foreign and domestic investors in Kosovo are treated equally before the law. The financial system is consistently evolving while capital markets are underdeveloped.¹⁸

The banking sector of Kosovo is solid. The assets of the banks have reached 60% of its GDP. The interest rates on loans were very high (around 16%) until very recently with the clime of risk taking and blame of court effectiveness. However, since the start of bailiffs system, the process of recovering the collateral has shortened and banks have started to reduce the interest rates on loans.¹⁹ Nowadays, the interest

rate on loans for businesses varies from 6% to 9%. This had a huge effect on the demand for loans. Banking sector improved the payment system substantially and in this way it facilitated the exchange of goods.

One of the main challenges that Kosovo economy faces is grey economy. This problem damages the government’s ability to collect more revenues and it deforms the principal fair play in the market. The grey economy accounts around 32% of GDP.²⁰ Many businesses do not report all their activities because they want to evade taxes. Many employees do not have regular contracts in order to avoid social contribution and income tax. The informality is also maintained by weak institutions that should deal with this challenge.

2.3. The relevant national and international stakeholders involved in skills gap training and financing start-ups

In Kosovo there are several stakeholders that are working and having influence on the employment enhancement.

Organization’s name	British Chamber of Commerce Kosovo
Kosovo Business Registration Agency	EXPORTERS’ ASSOCIATION
Kosovo Investment and Enterprise Support Agency (KIESA)	Kosovo Banking Association
BUSINESS ALLIANCE OF KOSOVO	INDUSTRIAL PROPERTY OFFICE OF MTI
Tax Administration of Kosovo	The Kosovo ICT Association
Kosovo Customs	Women in Business
Kosova Chamber of Commerce	British Chamber of Commerce
German-Kosovo Chamber of Commerce	Universum College
American Chamber of Commerce in Kosovo	Gjirafa Inc.
Innovations Lab Kosovo	Innovation Center Kosovo
Bone Vet	Jakova Innovation Center

Many of these stakeholders are engaged in activities that promote entrepreneurship. These stakeholders contributed differently on the employment, some provide trainings and grants for SME. Based on the Global Entrepreneurship Monitor report conducted by Universum College²¹, it has been reported that 6.3% of the population are willing and able to engage in entrepreneurial activities.

3. Methodology

In order to identify the main factors effecting the exclusion of youth from the labor market, this study employs a mix methods approach, including a desk-research, a survey with employers and a survey with prospective employees within the target group. The desk research was mainly focused on macroeconomics data regarding the overall economic, social and political environment in Kosovo. The second type of method used to gather data focused on employers, where the interviews were conducted in conjunction with Kosovo Business Alliance who provided the research team with an exclusive access to their database. In total, 64 senior level representatives from 64 companies were interviewed, where each interview lasted between 12 and 17 minutes. This research method proved to be superior to focus group discussion, as it provided more specific data that relate to skills gap and could be used in developing the best strategy for the inclusion of youth in the labor markets. The second survey with Kosovar citizens who were either unemployed, under-employed, or individuals who are seeking to make changes to their current employment status. In total, 322 citizens representing all

²¹ Global Entrepreneurship Monitor report conducted by Universum College. Retrieved at <https://www.universum-ks.org/en/research-projects/>

seven regions of Kosovo filled the survey providing insightful information on what are the main challenges they face in the labor market, skills gap and how could be creating an environment where the skills gap are reduced.

3.Results

3.1 Assessing Youth Needs

In order to understand the main obstacles youth face in achieving their career goals, respondents were given five different statements and they were able to answer from 1 to 5, where 1 means completely disagree and 5 means completely agree, depending on how much they agreed with the statement. It is worth noting that the majority of respondents (54.30%) agreed they do not know how to write a CV and motivational letter. Respondents either agreed or definitely agreed (64.35%) that they do not know what skills employers seek. Moreover, more than 60% of the respondents either agreed or definitely agreed they do not know how to look for a job. On the other hand, the majority of respondents (65.60%) do believe they have the right education to get the job. The survey also shows that respondents are aware of what they want in career, however the data suggest that they should be given a training that helps them develop a CV and also provide them with necessary information to understand what employers seek in potential employees.

Regarding the question about obstacles, respondents were also able to identify fields in which they need help the most. Not surprisingly, the most requested field (87.45%) was acquiring skills necessary to get a job. The second most sought out field (75.67%) was learning how to start their own business. Furthermore, respondent also agreed they need help in learning about existing opportunities and learning about their abilities..

We wanted to test whether there is a correlation between fields the responded needed the most help and their previous trainings. The data shows there is a correlation. Respondents who said they need help in learning how to start their own business also stated that they did not attend similar trainings previously. In addition, those who agreed they need help in acquiring necessary skills to get a job also stated they never received trainings on the same topic. Similarly, respondents who felt they do not need to learn how to write a CV or Motivational Letter also stated they have attended similar trainings before. Thus, we find that tailored training instead of general training is necessary.

Regarding the level of participating in trainings, in total, 23% of the respondents stated that they did not attend any training related to professional development or job seeking skills, which suggest that this might be one of the reasons why they find it difficult to look-for or find a job. On the other hand, 14.9% of the responders believed trainings have a high positive impact, 50.7% medium beneficial effect, and 11.4% of the responded found trainings to have little or no impact in their professional lives. The team of experts sees this as a great opportunity to provide hands-on trainings that are focused on skills employees find necessary to obtain a job.

For the research team it was imperative that we asked the respondents about the way they financed their trainings. In total, 42.9% of the responded attended trainings that were free of charge, while 6.1% stated that trainings were financed by third party affiliates. Only 4.4% of the trainings were financed by employers whilst a whopping 23.6% of respondents stated that they self-financed their trainings. The high number of self-financed trainings is very encouraging as it shows that individuals are willing to pay for trainings which they see as an opportunity to grow and/or possibly find employment.

There are many reasons why respondents did not attend trainings or were unable to attend additional ones, however, the majority cited not being informed on time (32.4%) as the main reason for their absence. As it has been stated in the previous question, financing is an important aspect of attending trainings, thus, 27.7% of the respondents cited high cost trainings as the main reason why they did not attend trainings or are unable to attend additional ones. A quarter of respondents did not attend trainings because they were organized far from home, while 6.1% were unable to attend because

trainings lasted more than the time allowed. Fortunately, only 8.8% of respondents think trainings are not necessary.

Often, the willingness to attend a training is not enough to ensure a clear career pathway that could lead to employment. That is why it is necessary to also choose the right professional field that matches one's skills and also provides one with an opportunity to grow. Respondents had the opportunity to choose between 30 different professional courses that they find interesting and think will improve their career prospects. Because the respondents were allowed to choose up to three professional courses, the results were mixed. More than 51% of respondents would like to attend trainings in foreign languages, while 36.5% of them would like to attend trainings in accounting. In addition, 35.8% of respondents would like to learn more about marketing, while 22.3% are interested in hospitality. Graphic design (18.2%) and Plumbing (16.2%) also scored high.

Drop-out rate of students is a challenge. Thus, the length of a training session is one of the main factors to be considered when designing trainings for the trainings to be successful. The majority of respondents (39.20%) believe that a training up-to four weeks would be the most appropriate, while 8.75% of them are willing to commit 5-8 weeks. Almost 30% of the respondents would not like the trainings to last more than two weeks, while 23% of them are willing to commit more than two months. Therefore, findings suggest that trainings should last no longer than 6 weeks in order to maximize their effect.

3.2. Assessing and identifying the deficiency of skills

Research team designed and conducted a survey research tailored to assess and identify the deficiency of skills and professional profiles among the job seekers in Kosovo. The survey consisted of four major parts. In the first part of the questionnaire employers were asked to provide general information about the company and the industry. In the second part of the survey, skills and competencies of the current employees, companies were asked to provide information about the set of skills that current employees lack and the types of interventions the companies typically undertake to overcome these challenges. The third part of the survey is designed to shed light on the practices that employers in Kosovo utilize to recruit new staff and the skills and competencies that these companies value the most on the job applicants. The fourth part of the survey consisted on questions that are intended to collect information on the types and availability of professional development trainings that these companies provide to their staff to remedy the skill gap.

3.2.1 The barriers and concerns that employers face while recruiting new staff

Our respondents were subjected to questions which aim to identify the barriers and concerns that businesses in Kosovo face while recruiting new staff.

The most prominent concern that our sampled companies have while recruiting new staff is the unsuitable qualification level of the labor force. The unsuitable qualification in the survey is used to describe the skills that workers lack that were ought to be acquired by the education system, working experience, or the in-house professional development trainings. The second major concern that was identified throughout the research is the attitude of jobseekers and work culture. The quarter of our respondents believe that the behaviors of the employees in terms of work norms and rules, relations with other employees, managers, supervisors is a major concern. The third major concern that is identified on our research is the low salaries in the company. The increase of the salaries in the public sector has made the private sector less attractive for jobseekers. Almost all of the companies on our research represent the private sector and it seems that these companies struggle to attract talented and professional workers due to the low paying salaries.

3.2.2 Skills and competencies of the current employees

Respondents were asked about the skills and competencies of their current employees. This part of the questionnaires intended to identify what are the areas and the professional profiles, if any, in which their workers lack the skills and competencies and whether these companies have any program or initiative in place to address this issue. Almost half of the companies (45%) believe that they have current employees that are not able to implement or are not able to implement well enough their duties due to lack of relevant skills. This is furtherly investigated to get more in-depth data. 55% of the respondents confirm that they do not have currently employed anyone who lacks the skills to perform well. These companies are mainly very small family-owned businesses who are not able to afford staff that do not perform well and generate income.

Please list the type of professions where the skills' shortages are more noticeable for your company.	
1.	ICT
2.	Interior and Exterior Designer
3.	Production line machinist
4.	Food technologist
5.	Accountant

Respondents who employ staff that are do not perform well due to the lack of skills were asked to list the type of professions where the skills' shortages are more noticeable. Most of the companies listed the profession that maintain companies' computer software, hardware, and internet network. When follow-up questions were asked about the reasons that this type of professional profile came up so often is that the highly qualified individual with ICT background are on high demand by the growing ICT and outsourcing industry in Kosovo. The companies that do software development in Kosovo attract highly qualified and experienced ICT professionals with high salaries and is very hard for other companies to recruit these professions.

The second professional profile that was mentioned often in the questionnaire is the interior and exterior designer. Surely, companies from the construction and architecture industry are increasingly hiring designers and due to the lack of qualified individual, these companies are forced to recruit employees that do not possess the proper skills and competencies to perform well.

The production line machinist and food technologist are the professional profiles that came third and fourth on our research for not performing well due to the skill set. Companies from food and dairy production often hire employees that lack the necessary skills to perform properly. When asked the follow-up questions, these companies claim that these professions are highly deficient in the workforce. The accountant is the fifth most common hired profession despite the skills' shortages.

Regarding the professions that our respondents labeled above with skills shortages we asked about the leading causes that the staff if not enough qualified to carry out their jobs. According to the companies, the leading cause is the lack of experience and that these employees are recently recruited. Typically companies that have more than 50 employees believe that the lack of experience is one of the leading causes for the employees not being enough qualified.

The lack of the on job training (16%) and the insufficient knowledge already at the time of recruitment (16%) are the second leading causes for the employees not being qualified enough to carry out their jobs. The high frequency of changing jobs (13%) is also a significant cause that hinder employees to be highly qualified for a professional profile and carry out their jobs properly. Some of the employers (10%) believe that their employees simply lack the motivation to work and have insufficient ability to learn and consequently it hinder their ability to perform well. Whereas, the majority of the businesses on our sample believe that they do the right recruitment, except for the companies with high rate of part-time employees that claim that the wring recruitment that they do is one of the leading causes that some of the employees are not enough qualified.

In order to understand what typically companies and businesses in Kosovo do to address skills shortages of existing staff our sampled respondents were subject to a follow-up question. Our respondents could choose up to three options. The majority of the respondents (35%) increase trainings for their employees to address the skills shortage of existing staff. 26% of the respondents improve their recruitment procedures to assure that they employ the right employees for the position. This improvement of recruitment procedures is an action that companies with over 200 employees commonly undertake. Only few companies (5%) replace the staff that is now qualified enough as an action to address skills' shortage.

3.3 Recruitment for new vacancies

This part of the questionnaire intends to collect information on recruitment practices that companies in Kosovo utilize to recruit new staff. More importantly, this part of the survey identifies the skills and competencies that employers look for at the job applicants. The majority of our sampled businesses and companies utilize acquaintances, relatives and friends (38%) to recommend individuals for their vacancies. This practice is typically common for small and medium businesses. The findings suggests that networking skills are very important for the young job-seekers to possess in order for them to be successful in job hunt since the majority of the employers do not use conventional channels for advertising their vacancies. Announcements in newspaper, job portals, company's website etc. is the second most common method that our sampled companies utilize to recruit new staff. A significant number of the companies (17%) promote other existing workers in the enterprise to fill the vacancies for more senior staff.

Employers in Kosovo need to be assured that job applicants possess the professional skills needed to carry out their job. 20% of companies on our sample believe that the most important skill that they look for when recruiting new staff are the professional skills. SMEs in particular highlighted professional skills as important criteria. The reason for this is supported by the fact that most of the companies do not have in place job trainings and cannot trade soft or personal skills for the professional ones. However, employers also think that professional skills are the most deficit among the job applicants. In the question, which our sampled companies were asked to list the specific skills and criteria are difficult to be found in applicant, 47% chose professional skills.

In line with the above findings that the lack of creativity is a cause for current employees not performing well enough their duties, for employers in Kosovo, the ability of employees to be creative and perceive the world in new ways is the second most valuable skill that they wish to see among the applicants (14%). However, employers in Kosovo (30%) also believe that creativity is hardest skill to find. Employers on our sample prefer to hire candidates that have the ability to communicate effectively in writing and speaking. 12% of our respondents think that communication skills are very important for the job applicants to have, however, only 8% of the respondents believe that communication skills are hard to find among the applicants. This finding suggests that unexperienced job seekers in Kosovo lack more for creativity and job experience rather than communication skills.

For which professions do you anticipate recruitment in the next 12 months?	
1.	Sales
2.	Costumer Service
3.	ICT
4.	Designer
5.	Food technologist

For the next 12 month after the research date, employers subjected to our research anticipate to hire the following positions: Sales, Computer Service, ICT, Designers, and Food technologist. However, 77% of the employers believe that it is going to be challenging for them to find the right people for the abovementioned vacancies.

3.4 Trainings

This part of the research intends to collect information about the practices that our sampled businesses and companies use to address the skill and personal profile mismatch.

Most surprising is finding that almost 19% of the employers believe there are no barriers to providing continuous job training, and these companies simply choose not to provide such resources for their employees. However, it is worth mentioning that most the companies who believe there are no barriers to providing training are small companies that have less than 20 employees. Major barriers identified by our sampled respondents is the lack of funds. Many of the companies in Kosovo do not have the financial capacity to provide job training. More than half of the respondents (57%) did not collaborate with other organizations in the past to provide job training, however, more than 74% of the sampled businesses and companies state that they would do if such an opportunity arises.

4. Problems effecting the exclusion of youth from the labor market

Based on three research methodologies employed, the following are the main problems effecting the exclusion of youth from the labor market:

4.1 Lack of Entrepreneurial Education

Entrepreneurship in Kosovo is experiencing an upward trend and is becoming an important factor of economic development. Being a developing country, Kosovo initially has worked towards building an entrepreneurial community through campaigns, incentives, competitions, and open discussions. Along this way, many organizations, institutions, and companies have contributed in integrating entrepreneurship as a concept in different spheres such as education and public administration. Currently, Kosovo has entered the second phase of developing entrepreneurial skills and competences among the youth by providing programs dedicated to establishing successful SMEs. However, engaging in entrepreneurial activities in Kosovo is still discussed as a necessity rather than as opportunity, thus, the main focus has been on building the ecosystem instead of providing a comprehensive entrepreneurial education that will foster innovation and encourage employment of the youth.

Until 1999, only 5.6% of the population in Kosovo were equipped with an undergraduate degree, however, this number almost doubled (10.8%) recently. This is a result of higher education becoming available to more than 70% of incoming high school students. Moreover, the number of higher education institutions in Kosovo has increased¹. As a result of this massive expansion, the competition between higher education institutions in Kosovo has become fierce, thus, they are constantly evolving in order to gain a competitive advantage. One of the main advantages they promote is the ability to find employment for their students, once they graduate.

Almost every higher education institution in Kosovo offers business, economics, and computer science programs. Within these programs, students are able to take entrepreneurship courses, however, they are general and mainly theoretical which leaves students unaware of the possibility of engaging in entrepreneurial activities. Therefore, the team of experts suggest that entrepreneurial education in HEIs strengthen and becomes more practical, by allowing professionals rather than academics teach these courses.

4.2 Lack of ICT Skills amongst youth

According to a nation-wide survey regarding skills gap conducted by Kosovo Association of Information and Communication Technology, 36% of businesses suggested there is a lack of ICT skills amongst youth. More specifically, lack of network development and software development were cited as the main

¹ Kosovo Accreditation Agency <http://www.akreditimi-ks.org/new/index.php/sq/2015-09-16-11-39-57/2015-09-16-11-54-07>.

problems within the business community.² The skills analysis survey conducted by Kosovo Association of Information and Communication Technology finding are similar with our research, where the majority of companies stated that the lack of ICT skills is one of the reasons why potential employees could not get the job or keep the job. Moreover, because of the lack of ICT skills, the demand for this profession will continue to increase, unless there are specific trainings or in-job trainings that could be offered to prospective beneficiaries.

4.3 Lack of In-job Trainings

According to Oxford University, 47% of the current jobs will disappear in 25 years as a result of automation and/or changing economic needs.³ Even currently, companies in Kosovo are struggling to fill open positions not because there are fewer workers looking for employment, but because they do not have the necessary skills and competencies to get the job. Working environments have become very specific, thus, general trainings are not able to reduce the skills gap. One way to overcome this obstacle is in-job training, which allow companies to develop trainings that are specific to their needs. Through these trainings companies are able to increase the productivity of their workers and also contribute to lowering the turnover. Data shows that only 4.4% of the trainings were financed by their employers. This shows lack of investment in Human Capital by private sector in Kosovo.

5. Conclusions

Based on a deep analysis with specific research instrument and a wide respondents number, we have come to certain conclusions which may help the stakeholders to take policy decisions and also provide scientific contribution in relation to the context of skills gap and labour market in developing countries.

Related to the main obstacles potential beneficiaries face in achieving their career goals, we conclude that majority of respondents do not know how to write a CV and motivational letter, they lack the knowledge about the skills employers seek, and how to look for a job. Trainings should address the acquiring skills necessary to get a job and start the business. We found that there is a correlation between fields the respondents needed the most help and their previous trainings.

The most prominent concern that our sampled companies have while recruiting new staff is the unsuitable qualification level of the labor force. The second major concern that was identified throughout the research is the attitude and work culture of jobseekers. The quarter of our respondents believe that the behaviors of the employees in terms of work norms and rules, relations with other employees, managers, supervisors is a major concern. The third major concern that is identified in our research is the low salaries in the company. The increase of the salaries in the public sector has made the private sector less attractive for jobseekers.

Almost half of the companies (45%) believe that they have current employees that are not able to implement or are not to implement well enough their duties due to lack of relevant skills. The majority of our sampled businesses and companies utilize acquaintances, relatives and friends (38%) to recommend individuals for their vacancies. It is concerning the fact that almost only few of the companies that were subject to our research cooperate with education institutions when it comes to recruiting new staff. We conclude that jobseekers are aware that they need more training, and companies agree that their employees lack qualifications and skills to perform their duties successfully, it is important for educational institutions and companies to collaborate in designing study programs, while taking into account the needs identified on the employees' part. The length of the training influences the dropout rate. Trainings should be tailored.

Possibilities for organic agriculture and production of organic products in the territory of Tutrakan Slivo Pole LAG

Valentina Marinova¹

¹University of Agribusiness and Rural Development, vim09@mail.bg

Abstract: Organic farming, the production of organic products and the application of agri-environmental activities by farmers is established as a global trend in agriculture, which protects nature, on the one hand, and provides safe and healthy food for the population, on the other. The territory of Tutrakan Slivo Pole LAG will have up-to-date information on the opportunities for organic farming, production of organic products and implementation of agri-environmental activities by farmers.

The development of sustainable and competitive agriculture and adding value to local agricultural products is supported by the CLLD Strategy, by supporting labor-intensive agricultural production /fruits, vegetable production, production of essential oils and medicinal crops, animal husbandry/.

Priority support for small farms and assistance for diversification of agricultural production, for the purchase of new equipment, introduction of new technologies.

Supporting young people through opportunities to develop their own business in the field of agriculture.

Need for investments for processing of agricultural products / fruits, vegetables, bee products / in order to add value to agricultural production.

Key words: local initiative group /LAG-Tutrakan-Slivo Pole/, potential, opportunities, business, analysis, organic farming, organic products, priority support

Part I. General information about organic agriculture:

In the last few years, there has been a lot of talk about the development of organic agriculture/farming in Bulgaria.

Organic farming¹ is one of the pillars of the Common Agricultural Policy (CAP) of the EU for the period 2014 – 2020 and an important priority in the policy for agricultural development in Bulgaria.

In “The national strategy for sustainable agricultural development in Bulgaria for the period 2014-2020” is written that “The encouragement of agricultural producers to change to or sustain organic farming, contributes to:

- environmental protection – strengthens agroecosystems, protects biodiversity and provides a chance for future generations to take advantage of the remaining nature;
- production of healthy foods – this form of agriculture answers the needs of the growing number of users, because it uses safe and clear methods of production;
- social effect – creates employment in rural regions and more working places in comparison to conventional agriculture”.

For the development of organic agriculture, it is important to know what is meant by this term – this is a comprehensive system approach, founded on a system of processes that lead to sustainable ecosystems, preserve food, good nutritional values, humane attitude towards animal welfare and social fairness.

Characteristics of organic agriculture are the responsible use of energy and natural resources, maintaining biodiversity in the local ecological balance, the conservation and improvement of the soil fertility, humane attitude towards animal welfare and attention towards their specific behavioral needs.

¹ “The national strategy for sustainable agricultural development in Bulgaria for the period 2014-2020”

Organic farming is the cultivation of agricultural products in a natural and native way without the use of all sorts of artificial supplements and enhancers, chemistry or genetically modified organisms. The producers have to guarantee, that the agricultural products have been raised or produced without the use of synthetic substances such as – synthetic fertilizers, pesticides, antibiotics, hormones, regulators for growth, as well as food additives such as preservatives, colorants, artificial sweeteners and other auxiliary substances in processing. The production of this type of products is achieved in accordance to the requirements of specific European and national standards and is a subject of control by certified authorities that can be public and/or private.

Organic production² is a collective system for management of agriculture and production of food which combines the best practices in respect to environmental protection, keeping a high degree of biodiversity, protection of natural resources, the application of high standard of humane attitude towards animals and methods of production, compliant in part with the preferences of the consumers towards products, produced by the use of natural substances and processes”.

Organic agriculture is a method in plant growing and animal husbandry in which there isn't any use of pesticides, artificial fertilizers, genetically modified organisms, antibiotics and growth hormones but it isn't exhausted by that. In fact, the organic production is a holistic system, which aims to create harmonious relationships just like between people and the environment, also between agriculture and agrarian ecosystem and to ensure the protection of organisms in the soil, plants and domestic animals. The main goal of the organic production is to create farms and enterprises, which are created on the principles of resilient development and contribute to the natural development and preservation of flora and fauna in the environment as a whole.

Main principles and methods according to the definition of organic agriculture is a production system, that is managed in such a way that it can answer specific local needs by integrating cultural, biological and agricultural practices that allow the renewal of resources, strengthen ecological balance and keep biological diversity. Organic agriculture is based on the following principles:

- the farm is perceived as an individual system or “organism” that exists in context of the local ecosystem;
- in organic agriculture, the balance is kept in terms of the relationship inside the system of the farm just as the farm and the local ecosystem;
- in the framework of the farm is maintained a large range of biological diversity to stimulate the battle with parasites and pests;
- the natural biological cycles are used with specific attention been paid to biological cycles and organic substances with a goal to stimulate the formation of humus in the soil;
- maximal use of sunlight energy and a reduction to minimal use of chemicals and compounds.

Organic production in the economic sector, contributing at the same time for reaching the goals of the three UN conventions – on climate change³, biological diversity⁴ and combating desertification⁵, and favorable resilient management in 5 out of the 7 ecosystems (arable land, forestry ecosystems, mountainous and hilly ecosystems, dry and arid ecosystems, meadows and pastures).

Organic agriculture implies:

- the use of intermediate cultivation, cultivation with green fertilizers, manure, fertilizers from other farm animals, seed rotation, for the improvement of the fertility of the soil, to increase the biological activity, to keep a good and healthy condition of the soil in the long term scale;

² Regulation (EO) № 834/2007

³ UN Framework Convention on Climate Change

⁴ Convention on Biological Diversity

⁵ Convention by the UN for combating desertification – European Convention for landscape

- the use of biological control, seed rotation and other techniques to control weeds, insects and diseases;
- steering the attention towards biological diversity in the agrarian system and the environment;
- the use of rotation (taking turns) on pastures and pastures with mixed fodder for animal husbandry, as well as veterinary methods for treatment and the provision of good conditions for the animals;
- the reduction of the imported from abroad substances and compounds and eliminate the use of synthetic pesticides and fertilizers and/or other substances such as hormones, antibiotics and genetically modified organisms;
- steering the attention towards renewable resources, saving the soil and water and similar practices that maintain the ecological balance.

Apart from that organic agriculture encourages a high standard of humane attitude towards animals and the farmers are required to comply with the specific behavioral needs of the animals.

The provisions of the European Union regulation for organic agriculture aim to provide a clear structure for the production of organic products within the entire EU. The aim is to satisfy the consumer demand for reliable organic products, at the same time to provide a fair market for producers, distributors and merchants.

At the moment in The Register for organic agriculture have been registered 3134 operators, which is 50 % of all operators in the system for control⁶.

Bulgaria is on second place in the European Union in terms of relative growth in percentages of certified areas for organic agriculture, although our country remains among the last in the Union in proportion of certified areas compared to the total agricultural areas, followed in this index only by Romania, Ireland and Malta. However, for the same period the certified agricultural areas in Bulgaria have increased 4.6 times to 118 552 hectares. This represents 2.4% of all agricultural areas. In 2010, the share was only 0.5%⁷.

Part II. Production of organic products:

Organic production is a notion in which the agricultural product meant for consumption is produced by organic means. Organic production excludes the use of all types of artificial supplements, enhancers and genetically modified organisms. Unlike the so called natural products for which is enough to be produced from natural resources, the requirements towards organic products are much stricter: the exclusion of all sorts of artificial enhancers and ingredients, not only in the processing of the products but in the cultivation of the raw materials, special requirements for the growing environment for the products and others, defined in the relative legislation.

Organic products are divided into two main groups - foods and non-foods. Organic food is a product of organic agriculture, which is raised and processed without the use of synthetic substances in the cultivation such as synthetic fertilizers, pesticides, antibiotics, hormones, regulators for growth just like food additives such as preservatives, colorants, artificial sweeteners and excipients in processing. It is forbidden for organic food the use of genetically modified organisms and their derivatives.

The production of this type of product is performed according to the requirements of specific standards and is a subject of control by certified authorities, which can be public or private (independent). The requirements towards organic products, which are non-foods are the same as towards the foods.

These products can be produced by processing organically raised products, but in this processing has to be avoided the use of artificial compounds. Wide use of these type of products are essential oils, organic cosmetic products, clothes made from organic materials and others. In relation to the economic

6 According to data from <http://cap.europe.bg>

7 Data from Eurostat, for the period 2010-2015.

direction in which the bio-product is produced, the terms organic and ecological can be used. These terms are completely equivalent.

The main focus in production of organic products in Bulgaria is placed on perennial crops – apples, strawberries, raspberries, plumbs, hazelnuts and rose oils, they are the products which make up the main portion of exports of organic products in the country.

The market for agricultural products is one of the fastest growing markets in the world with a yearly growth of around 15%. The biggest consumers of organic products are North America and Europe. A characteristic of these markets is that the supply is falling behind demand and imports are required, mainly of meat and dairy products from South America, Asia and Australia.

In Bulgaria, the market for organic products although growing rapidly is still very small, with a big portion of production being exported and the more exotic organic products being imported from abroad. The main part of organic marketing is being done by specialized shops and specialized stands in the large chain grocery stores and even some pharmacies.

Certified organic products are marked with special signs which distinguish them from products that are produced by traditional methods.

Organic products are the products of the future – clean of chemicals and fertilizers, tasty, healthy and environmentally friendly.

- The supply of these products on the European and World markets is falling behind the demand. This means there is a niche market for successful implementation on the international market.
- The Bulgarians are becoming more and more concerned and responsible about their health and the health of future generations, just like environmental protection. This means there is a niche market for the successful implementation of organic markets on the internal market.

Strategic documents in Bulgaria, such as The National Agro-ecological Program, The Plan and Development of organic Production (OP) and others, set goals and tasks for the promotion of environmentally friendly methods for agricultural production and organic farming is indicated as a prioritized activity. One of the six practical goals listed there, regarding organic agriculture, is precisely the increase the competitiveness of the products from Bulgarian organic farming, which has a clear priority for organic agriculture on a national level. Key priority in policy for the development of agriculture in the Republic of Bulgaria and one of the accentuations of the CAP for the period 2014-2020 is organic farming. The encouragement for agricultural producers to transfer to or maintain organic agriculture contributes at the same time towards environmental protection, production of healthy foods, creating employment in rural areas and more jobs in comparison to conventional agriculture.

For the agricultural owners to be able to draw benefits from the methods of organic production, the consumers have to trust that the rules for organic agriculture are abided. This is why the EU maintains strict system for control and application of the provisions for organic production in order to guarantee that the rules and are performed properly. As the organic agriculture is part of a larger chain of supply that covers the food industry, distribution and retail industry these activities also are subjected to inspections.

Every country in the EU appoints control authorities that check the engaged people along the chain of organic production. The producers, distributors and merchants of organic products have to register in their local control authority before they receive permission to sell their products as organics.

Part III. Territory Characteristics:

Plant growing is dominated by production of cereals and industrial crops. The cultivation of vegetables, fruits, essential oil crops, orchards are less than (0.1% of the workable land planted with vegetables, 4.6% perennials and 0.5% with essential oil crops). The CLLD Strategy can support the laborious agricultural productions (vegetable production, orchard production, production of essential oil crops), prioritized to support small agricultural farms and to assist in the diversification of agricultural production, the purchasing of new equipment and the implementation of new technologies.

- The need for assistance has been identified for small livestock farms, breeding large and small sized horned animals and bees, which can be achieved with the CLLD strategy.
- The need for investments towards processing of agricultural crops (fruits, vegetables, bee products) with a goal to add value toward agricultural production.

There are conditions for the development of resilient and competitive agriculture including farms with sensitive sectors with difficult access to the markets and organic production, implementation of energy-saving technologies, improvement of the pre-market preparation and storage of the production.

- Main agricultural indicators of the municipality of Slivo Pole⁸:

According to the information from the municipality of Slivo Pole the workable land in 2016 is 18349.2 hectares. 50 % of the workable areas in the territory of the municipality of Slivo Pole is yearly sown with cereal-grain crops and 40 % with technical crops with a tendency for this trend to continue over the years. The increase in the areas occupied by technical crops is a result of the consumption as a resource by “Astra Bioplant” for the production of biofuel. The areas sown with vegetables are just 0.1% of the workable land. Permanent plantations and orchards take up an area of 738.4 hectares. From 2013 in the town of Ryahovo functions the first farm for cultivation of medicinal essential oil crops – mint 30000 sq. m. and Lemon balm 2000 sq. m. A depo is being built for the collection and drying of herbs with the dryer being built resembling a type of “greenhouse”. As a disadvantage of the economic growth can be determined the fact that the processing manufactory hasn’t been developed and the cultivated crops are being sold without further processing. To be able to get added value, which would be able to reflect positively towards the profits of the producers, would be appropriate to create processing plants for the processing of the goods produced. Animal husbandry in the region is developing in two ways: on one hand in the conditions of small semi-market farms and on the other – in the conditions of industrial cultivation. In the municipality of Slivo Pole are located three large livestock enterprises in which grow around 70000 pigs. In the private livestock farms the main livestock being raised are large horned animals, small horned animals, poultry and bee families. Beekeeping is well developed with (5758 bee families), but has low added value because it is sold as a raw material and the selling price is very low. The development of animal husbandry in the period under consideration has a characteristic with optimization on the number of enterprises and the animals within them, just like the restructure and modernization with a view on covering the standards of production for quality and safe raw animal materials.

During the past period, continued the re-equipment, consolidation and modernization of dairy farms in relation to the need for compliance with the requirements imposed by the application of the Common Agricultural Policy (CAP). The efforts are focused on increasing the number of farm categorized in the first group. The animal husbandry in the region is developing in two ways: as small semi-market farms and as farms for industrial cultivation. In the municipality of Slivo Pole three large livestock enterprises are located breeding around 70000 pigs. These enterprises discharge wastewater after mechanical cleaning directly into the Danube river and have the largest negative effect on the environment due to the lack of built treatment facilities. However, they are structure-determining for the economy of the municipality of Sivo Pole.

The private livestock farms raise mainly large horned animals, small horned animals and bee families. In the villages of Ryahovo, Golyamo Vranovo, and Borisovo are raised the largest number of animals in family farms.

- Main agricultural indicators of the municipality of Tutrakan⁹:

The area in Tutrakan and its surroundings is on rich and fertile black soil. Nowadays large yields of cereal and industrial crops are produced – wheat, barley, corn, sunflower, beans, sugar cane, tobacco, hemp, soy and vegetables; from orchards – grapes, apricots, peaches and apples.

⁸ Data from the Municipality Plan for Development.

⁹ Data from the Municipality Plan for Development.

The agricultural production in the municipality is provided by corporations, associations and individual farmers. The agrarian sector has a plant growing - animal husbandry structure. In regards to realized profits from sales of agricultural produce, it has the largest relative share.

The yield from cultivated crops in the municipality of Tutrakan is under the average medium for the region. The average yield in the municipality for wheat is 450 – 500 kilograms from 0.1 hectares, for barley – 470 kilograms from 0.1 hectares, corn 400 – 500 kg. and for sunflower 140 – 150 kg. From the technical crops is cultivated tobacco from the sort “Burley 13 -17” and the yields from it amount to around 150 kilograms from 0.1 hectares.

According to The Yearly Activity Report from municipality department of agriculture – Tutrakan, during 2019 the agricultural fund for the municipality if Tutrakan amounts to 47584.6 hectares from which workable are 28388.5 hectares. The entire forestry fund is 13871.85 hectares.

The data shows, that the main portion of agricultural enterprises in the municipality cultivate under 1 hectare of land. 267 agricultural enterprises cultivate between 1 and 2 hectares, 404 enterprises cultivate between 2 and 10 hectares (average 4 hectares), 130 enterprises cultivate between 10 and 50 hectares (average 19.7 hectares) and 62 agricultural enterprises cultivate over 50 hectares (average 327.7 hectares).

The main agricultural crops that are cultivated in the region are cereal-grain, oil-bearing crops and tobacco. In the municipality represented the perennials.

- Total areas with organically cultivated crops in the territory of the LAG: 12 321 hectares.
- Total number of organic bee families on the territory of the LAG: 6371.

With the made reference in the Register for organic agriculture on the territory of the LAG, there are only 78 organic operators.

It gives the impression that on the territory of the municipality of Tutrakan there are registered under 50 from the 78 organic producers.

85 % of them are producers of organic honey and occupied with organic beekeeping.

75 % are registered organic producers on the territory of the municipality of Slivo Pole and are occupied with the cultivation of organic apricots, walnuts, peaches, cherries, sour cherries, apples, hazelnuts, raspberries, green beans, onion – young and mature plants, carrots, garlic, tomatoes, cucumbers and pears.

- The predominant sown and cultivated areas are filled with organic peaches and apricots.

The natural, climate, geographic conditions, proximity to large cities (Ruse and Silistra) are convenient markets for the agricultural production and the good infrastructure connection determine the agriculture as a sector with serious traditions and possibilities on the territory of LAG – Tutrakan-Slivo Pole mostly in the region of plant growing and orchard growing.

In the last decade of the last century agriculture just like everywhere in Bulgaria was undergoing a serious crisis. From the beginning of the 21st century and especially with the introduction of the European co-financing from CAP, agriculture has stabilized and is entering a period of growth. During the last few years there has been an increase in the subsidies for the agricultural enterprises.

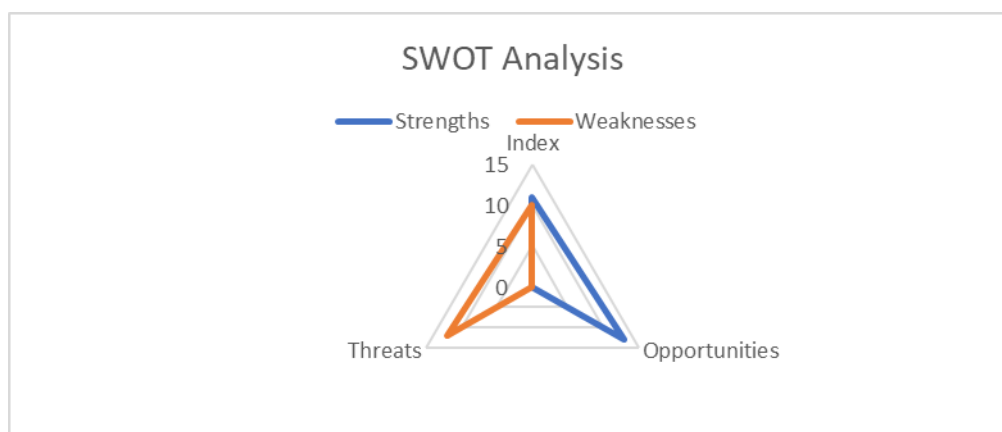

The qualities of the workable agricultural land, which takes up more than 70 % of agricultural land in the territory, the favorable climate conditions and the use of irrigation create a framework for the development of successful plant growing.

There is a trend for a gradual overcoming the fragmentation of the workable areas and increase in the size of the individual enterprises. If this trend is kept in the future, then it will allow agriculturalists to adhere to stricter and better agricultural practices, to uphold agro-technical requirements for rotating the crops and sowing practices just like environmentally friendly fertilization with the use of vegetable waste.

SWOT Analysis:

Strengths	Weaknesses
S +14	W -10
<ol style="list-style-type: none"> 1. Availability of ecologically clean territories, favorable climate, rich biodiversity; 2. Favorable climate conditions, lack of large industrial polluters, just like in agriculture founded on traditional environmentally friendly practices; 3. Favorable climate for the development of orchards and plant growing production.; 4. Multiple increase in areas with orchards after the year 2010; 5. Strong raw material base for the food industry; 6. Base for development of similar productions in the agrarian sector, conditions for renewing and development of traditional productions and activities; 7. Leading role in traditions in the areas of pig breeding, grain production, orchards and vegetable production – automated pig farms and cattle breeding farms; 8. Base for development of coinciding productions in the agrarian sector, conditions for renewable and development of traditional productions and activities; 9. The availability of territorial resources with high agro-biological qualities; 10. Experience and traditions in agricultural farming – agriculture and animal husbandry; 11. Leading role in traditions in the region of pig breeding, grain production, orchards and vegetable production – automated pig farms and cattle breeding farms; 12. Increase in the areas from which are received subsidies; 13. Development of intensive plant growing, increase of the portion of perennials and gardening. 	<ol style="list-style-type: none"> 1. In the conditions of everlasting climate changes towards dry areas and the lack of a suitable prescriptive system that can activate the creation of associations for aggregation, not applied commonly and the alternative agriculture; 2. The lack of interest towards organic farming; 3. The lack of enterprises for processing of agricultural production; 4. The lack of company structures for connection with agricultural farming for processing of fruit and vegetables; 5. Contamination of agricultural lands, used for intensive agriculture mainly with nitrogen and phosphorus fertilizers and compounds for plant protection; 6. Contamination of soil from contaminated waters in floods; 7. Violation of the soil from erosion; 8. Monoculture in the area of agriculture with the cultivation of only cereal-grain and technical crops, small areas with perennials and vegetables; 9. Poorly developed logistics infrastructure (markets, exchanges); 10. In the plans for development for the municipality of Tutrakan and the municipality of Slivo Pole, nowhere within them was included as a priority or opportunity organic agriculture or organic products.
Opportunities	Threats

The conditions for development of the processing industry; 7. Diversification of agricultural crops and the promotion of development of organic agriculture; 8. Support in the development of resilient and highly efficient agricultural farming; 9. Support in the modernization of agriculture and agricultural production; 10. The local environment is saved and has a potential for development for organic agriculture and organic products; 11. Maintenance of the built irrigation systems and an opportunity to build more with a view of creating more efficient and productive agriculture; 12. Assistance from the LAG for providing funding for agricultural producers; 13. The increasing understanding of the community about organic products and their demand. 	<ol style="list-style-type: none"> 4. Pollution of the environment from anthropogenic and other factors; 5. Barriers for development on organic agriculture in the investigated region; 6. High costs for certification; 7. High costs for organic compounds and fertilizers; 8. High risk and losses; 9. Limited market for production; 10. Lack of organic agriculturalists; 11. Unwillingness of financing from banks for unestablished organic producers; 12. The absence of industry for processing of agricultural production keeps the purchase prices at a low level, “encourages” intermediate trade and will continue to deny the municipality’s economy from extra domestic product and work places.
--	--

Agricultural farming is one of the structure-determining industries in the regional economy on the territory of Tutrakan and Slivo Pole municipalities.

The favorable combination of fertile soil types, climate conditions and geographic characteristics are prerequisite for development in the region as an intensive agricultural zone and the longevity of history tradition in plant growing and animal husbandry determine agricultural farming as a prioritized industry.

The favorable combination of the nature and climate conditions determine the high degree of development. It is overlapped in a large part by the populated areas in the territory and it has a very important role and meaning in the entire development.

Organic agriculture has an important contribution for achieving resilience not only on a national, but on a regional level of development. It preserves in a high degree the natural resources, strengthens agroecosystems, protects bio-diversity and gives the opportunity to future generations to take advantage of the preserved nature. This form of agriculture answers the needs of the growing number of consumers, because it uses safe and clear methods in production and at the same time creates more working places than conventional agriculture.

In our day to day lives the more frequent use of terms such as “biological/organic food” and biological/organic agriculture”, behind which actually stands what always was called only “food” or “agriculture”.

In the territory of the LAG just like in Bulgaria, the need for development in organic agriculture is faced with the following problems within the modern Bulgarian agriculture:

- Concentration and specialization of production – disruption of biological equilibrium in nature;
- Lower biological diversity and the destruction of beneficial types;
- Resilient pests towards chemical agents and deepening of ecological problems;
- Fragmentation of the land;
- Outdated equipment and buildings, not matching the requirements and standards of the EU;
- Lack of or too much use of compounds for growth defense without regarding the soil and climate features of the region;
- Inability to assimilate funds from the EU for assistance towards agricultural producers – lack of information and learning.

On the territory of the LAG there should be assistance towards diversification of organic productions by including towards them a tourist component, trusting the gained experience in Bulgarian rural tourism, local producers can learn the positive sides of these productions and a base can be created for increasing their consumption. This also can help the increase in employment in rural regions and it will make it more attractive for young people to join the sector.

The organic productions hold potential to help the development of the territory of the LAG, including bring to life the smallest populated areas in it.

The necessity of a clean environment for production in organic agriculture coincides with the offered possibilities of the region. This allows us to conclude that organic agriculture could play an important role in the development of rural areas in the future, with adequately directed industrial support and sector politics.

Part IV. Good European practices in the field of organic agriculture:

Over the last few years, the questions about ecological and social-economical aspects have turned organic agriculture into the main direction for resilient development of rural areas. The growing concern about depopulation of rural areas, widespread poverty amongst the rural population and the un-argued use of natural resources bring forth the key question – to provide at the same time environmentally saving and economically effective agricultural production.

“Good practices” is a term from the European legislation that is used as a process or methodology, providing the most efficient ratio in action/result and the highest achievement of set goals.

In the region of organic farming exist methodologies and activities defined as “good” which can be popularized and implemented by all countries that are members of the EU together with their personal experience.

➤ Applicable good practices, suitable for the territory of the LAG:

- Project for organic agriculture in Belgium: www.west-vlaanderen.be/leader

Even before that beginning of the program Leader+, the local agricultural producers had begun to cooperate so they can launch their organic products. Due to their ideas potentially being able to help achieving the strategy for diversification of activities in agricultural farming and ecological resilience, the group received subsidies by Leader+ for the implementation of their ideas.

Producers of organic agricultural products and gardeners on the territory of the LAG, created a cooperative for the encouragement of sales of regional organic products. Apart from periodical meetings for the exchange of good practices, the agricultural producers undertook some collective marketing strategies like the creation of a calendar with all agricultural producers in the project, the creation of a common market stands and the organization of a cycling tour with stops in the participating farms. Every activity is the responsibility of a member of the group.

The main achievements are:

- Common market brand (logo) for regional organic products
- Internet page www.biobrugssommeland.be
- Preparation of billboards for advertisement at fairs, markets and other marketing events. Advertising materials, brochures and calendar
- Collaboration in the purchasing of environmentally friendly packaging

The common result being that organic agriculture and the local organic products are now more famous in the region. Increased cooperation exists between bio-producers and gardeners with more and more agricultural producers using environmentally friendly packaging.

- The French experience - AMAP

In the foundations of every AMAP is a contract between one farmer (most commonly vegetable producer near a city zone) and a group of 80 - 150 consumers/families. The most important element for the functioning of the system is the common trust. The consumers buy in advance all or part of the production from the farm for the season at a fixed price, agreed with the farmer. The paid price includes all expenses on the farm (seeds, fertilizers, water, maintenance of inventory and machinery, staff and etc.) – fair price for the vegetables, guarantees a decent life for the farmer and their family. The consumers are obliged to support the farm during the season, to share the risks and benefits from production of organic vegetables. The farmer is obliged to produce organic products (fruits, cheese, meat) and to offer maximally large diversity of products and also to cultivate with priority old and local sorts. The farmer is obliged to deliver once a week, freshly picked vegetables for the group of consumers to the previously organized place (in the farm, in a shop, in the school yard).

Meeting of the group participating in AMAP contract – once a week. Every week the farmer meets the group of consumers at the allocated for delivery place. The farmer delivers the production from the week agreed upon the contract (for example the potatoes are not to be washed and the carrots to be with the leaves). The families divide the vegetables, delivered in crates from the farm.

- Resilient local development for providing employment and prosperity Greece through Organic agriculture and animal husbandry: www.anavra-zo.gr/en

The village of Anavra in southern Greece accepted a program for green development in the middle of the 1990's, when the multitude of small animal breeders formed a cooperation.

At the moment in the village, there are three large farms with 25 thousand heads of livestock, sheep, goats, cattle and pigs. The village has opened its own slaughter house and sells organic meat that meets all the requirements. Apart from that, the people collectively invest in wind turbines, they have already 20 "fins" with a combined power of 17.5 megawatts. Only one of them earns the village 60 thousand euros in yearly income.

The residents of Anavra have constructed their own ecological and cultural park spanning 100 hectares, which also attracts tourists and creates working places. Common funds have been used to build a medical center, sports grounds, a shelter for homeless, aged care building. The unemployment in the village is at zero, the number of residents in Anavra has increased from 300 to 550 between the years 2000 and 2010.

Zero unemployment, increase in the population, extra income for the village in the amount of 60000 euros a year, new infrastructure and better standard of living.

- Organic farm for laying hens – Oberger in Austria: <https://noe.lko.at/?%20Bio-Eier-statt-Milchkuehe-Landwirtschaftskammer-Betriebsr...>

An Austrian family, after it sees better opportunities for market realization, converts its farm for milk into a farm for laying hens so it can produce organic eggs.

The Oberger family in Austria decided to convert their milk production into a production for organic eggs, because of the low purchasing prices of the milk and the growing demand for organic products. They also aim for lesser physical and labor-intensive production methods.

The family built a modern barn (hall) for organic production of eggs that can fit 6000 organic laying hens during the year 2015. They also create a covered outside area and implement measures for better conditions for the chicken such as dust baths.

Results:

- A built organic barn that can fit 6000 laying hens and also an outside area, undertaken measures for the better conditions of the laying hens.
- The family delivers 5500 organic eggs a day to the company "Schlögl Ei", which sells them.
- The family expects the barn to be paid off after 20 years, after an investment of 830000 euros (from which around 740000 euros are gross costs for the project, including 120000 euros from the EU and national level).
 - The concept LSPPC (Local and Solidarity based Partnership between Producers and Consumers):

Local and solidarity based partnership between producers and consumers or otherwise known as "solidary agriculture". This is a form of production and sales of organic foods, widespread in all economically developed countries in our days. This conception includes – a new working method for farmers; - new consumption trend towards consumers; very tight cooperation between farmers and consumers.

The core of the partnership usually is a vegetable farm with 2-3 hectares of workable land. Around the farm is formed a constant group of consumers (60 – 80 families). Gradually the consumers self-organize into an association on a voluntary principle, receiving the whole produce from the farms vegetable production, dividing it amongst themselves. The farmer only has to cultivate it, to gather and deliver it (once or twice weekly) at the allocated place. At the beginning of every year, a representative from the consumers together with the farmer plan the production for the year ahead.

The farmer presents their budget to the association in which are included all of their expenses during the year (seeds, fertilizers, compounds, machinery, fuel, water, income for the farm and so on). The association signs a contract with the farmer and collects in advance the required money. Gradually towards the vegetables are added other organic products from other farms in the region – fruits, milk, meat, bread, wine. This way the families that are members of these associations are able to procure almost all foods with organic quality from local producers at low prices.

Part V. Producers on the territory of the LAG to commence organic agriculture – possibilities and resistance:

- Requires less investments and respectively is easier for starting and making a business.

Organic agriculture really needs a much smaller initial capital and smaller patches of land, which makes it financially more available, especially for the novice farmers.

- Productional expenses are lower, because the funds for mechanization and outside resources are reduced to a minimum. The use of chemicals that are unbearable for a large part of small producers are forbidden.

In many of the organic farms, there is a closed circle of production – they make their own fertilizers and fodder, or they use the animals for a specific type of plowing, or cleaning of the plots from decaying plants by which they save entirely from outside expenses. So in practice organic agriculture contributes economic resilience to the smaller agricultural farms, also to the small enterprises from the food-taste processing industry that use as resources the production from organic farms.

On the other hand, this business also requires investments, more serious organization and production, better qualifications for the owners and a larger work force. The output from organic productions are lower, the profit is lesser and the prices of the goods are higher.

- In regards to the business with organic products, it has to be noted that on the market for organic food for the time being, there is less competition and less intermediaries, which is favorable for the bio-producers – very often they sell the production by themselves in special shops, at farmers' markets or directly to the consumers.

Another factor to consider is the smaller investments and the better positive image of the organic production which needs less advertising in comparison to conventional food products.

- The plots and the terrains for organic agriculture are very small

The organic producers need their own land to a much greater extent in comparison to conventional agriculture, but at the same time, workable areas and the holdings are very small, rather of the type of family farms, which are in abundance in the region. The properties for organic agriculture have to be in environmentally clean regions, far from industrial enterprises, which pollute the soil, the water and the air, which are also plenty in number on the territory of the LAG.

- Creating more work places

The nature of the organic agriculture, transforms it into a factor for the creation of work places for a number of reason: - by principle the organic enterprises are smaller than the conventional ones and develop existentially when most commonly they don't have a lot of mechanical equipment, but rely on hand labor; - the methods of organic production require more physical and mechanical processing, because it is forbidden to use herbicides and pesticides; - the harvesting of the crops is also done by hand and this also creates seasonal work; - uses the resources of unqualified laborers, which aren't employed in the other economic sectors.

Part VI. Economic perspectives in Bulgaria and in the EU for the years 2021 – 2027:

Organic agriculture is a perspective niche for the development of the Bulgarian economy.

The only competitive sector in Bulgaria, in respect to quantity on the world agricultural markets is the grain production, which isn't enough.

The remaining sectors of agricultural farming in the country are subjected to sharp competition from the countries in the EU, including price suppression on ready produce which is usually imported.

With the unique climate features and the preserved in environmental terms regions, also the fragmented ownership of the land, Bulgaria can still strive towards a more boutique production on

organic foods and resources for export and to satisfy the local needs. Organic agriculture can become a profitable business on a national level.

It is important to note the fact that for the first time in the history of the EU, organic agriculture has been put forth as a main priority in the Common Agricultural Policy (CAP) 2014 – 2020 and it will be prioritized with assistance in financial respect with different programs and subsidies.

The market for organic foods is also growing in Bulgaria and around the world.

The consumer trust towards the organic production is growing, which predetermines the growing markets. The consumers become more literate, better informed and more cautious in regards to their health and the food that they eat. More and more people avoid produce that has been processed with harmful substances – pesticides, nitrates, antibiotics. The harms on the health of the people can be short term – allergies, poisonings, but can also be long term – developing more serious illnesses subsequently, growth impairment or reproduction abilities. The consumers become more concerned about environmental protection for future generations.

Organic agriculture assists resilient growth for rural regions.

Organic agriculture represents a profitable alternative for local economic growth and resilient agricultural farming, because the producers of organic production on the one hand have better conditions to start a small business and on the other are more willing to sell more on the local markets. Organic agriculture creates local business, stimulates the food-taste and other processing industries, interacts with the development with tourism especially in alternative forms, expands the local market, creates additional working places and saves the villages from depopulation. Mono-cultural agriculture isn't allowed in organic agriculture and there isn't a risk of overproduction of a certain crop, which is observed in many parts of the developed agricultural farming in the country. This realizes competitiveness and diversity of the markets.

It is expected on the 1st of January 2022¹⁰ to enter into use the new legislation in the region of organic production. The aim for the new regulation is to guarantee loyal competition between agricultural farmers. With the implementation of the CAP after the year 2020, there is an expectation for a transition towards completely resilient agricultural sector and the development of viable rural regions, providing certain, safe and high quality foods:

- Introduction to conservational agriculture
- Choice of suitable sorts, adaptable towards changing climate
- Management of the elements of the landscape, pastures and agroforestry, as well as the conservation and restoration of biological diversity.
- Introducing high standards of humane attitude towards the animals.
- Cooperation between plant growers and bee keepers.

Uluslararası Gerilimin Artmasında Bir Faktör Olarak Silahlanma

Professor Vaskhanim Orujova

Doctor of Philosophy Ulkar Imamaliyeva

Baku State University, Imamaliyeva_ulker@mail.ru

Özet: Uluslararası siyasetin acil sorunlarından biri olan silahlanma, dinamik bir süreçtir. Silahların yayılması politikasında ekonomik faktörlerin rolü büyüktür. Şu anda, silah üretimi ve satışı birçok ülkenin ekonomisinde önemli bir rol oynamaktadır. Silah satışından elde edilen gelir, bazı ülkelerin milli gelirini şekillendirmede güçlü bir faktördür. Artan askeri harcamalar ve silahlanma ihtiyacı birçok faktöre bağlıdır: jeopolitik hırslar, sıcak noktalar ve dünyanın dört bir yanındaki donmuş çatışmalar, rekabet ortamı ve savaş riski; küresel ekonomik krizler vb. Silahlar yasal ve yasa dışı olarak yayılır. Silahlanma genel gerilimleri, silahlı çatışmaları, nükleer savaş tehdidini artırıyor ve dünyadaki sosyo-politik süreçleri yavaşlatıyor. İkinci Dünya Savaşı'ndan sonra, devletler arasındaki güvensizlik, silahlı kuvvetlerin güçlendirilmesine olan ilgiyi artırdı. Savaşın sona ABD, Sovyetler Birliği'ne karşı tam avantaj elde etmek için onu hedef aldı ve Soğuk Savaş silahlanma yarışına ivme kazandırdı. Bazıları silahlanmayı devlet yapıları tarafından düzenlenen bir politika olarak yorumluyor. Askeri harcamalar, ekonomik geri kalmışlık ve açlıktan muzdarip insanlara sağlanan yardımın yüzlerce katıdır. Dünyada askeri harcamaların % 8-10'u açlık, cehalet ve salgın hastalıkların önüne geçmeye yetiyor. Silahlı devletler, siyasi stratejilerinde ciddi değişiklikler yapmaya teşvik edilmektedir. Modern zamanlarda, bölgesel ve yerel anlaşmazlıklar devletler ve halklar arasındaki askeri çatışmaları artırmaktadır. Silah üretimi sırasında ortaya çıkan zararlı atıklar, nüfus ve çevre sağlığı üzerinde olumsuz etkilere sahiptir. Dünyadaki 10 silah şirketinden yedisi Amerika Birleşik Devletleri'ne aittir. Dünyanın en güçlü 20 teknoloji şirketi Amerika Birleşik Devletleri (% 75) ve Çin'de (% 25) bulunmaktadır. Uluslararası Bilim Komisyonu'na göre, dünyadaki nükleer silahların % 90'ı Avrupa, Asya ve Kuzey Amerika'da, % 10'u Afrika, Latin Amerika ve Okyanusya'da patlayarak 1,15 milyar insanı öldürdü ve 1,1 milyar tedavi edilemez hastalığa neden oldu. Nükleer savaşta kazanan yoktur. Modern silahlar, insan varoluşu için büyük bir tehdittir. Bu nedenle dünya halkları ve devletleri, barışı, sükuneti koruyarak, karşılıklı ilişkileri güçlendirerek ve sağduyuya dayalı olarak gezegenin fiziksel bütünlüğünü sağlayabilir.

Anahtar Kelimeler: silahlanma, silah üretimi, askeri harcamalar, nükleer silahlar, nükleer test

Arming As A Factor In Increasing International Tension

Abstract: One of the urgent problems of international politics, arming is a dynamic process. The role of economic factors in the policy of arms expansion is great. Today, arms production and sales play an important role in the economies of many countries. Proceeds from the sale of weapons are a powerful factor in shaping the national income of some countries. The increase in military spending and the demand for arming are due to a number of factors: geopolitical ambitions, presence of hotspots and frozen conflicts in the world; competitive environment and risk of war; global economic crises, etc.

Weapons are spread legally and illegally. Arming increase general tensions, armed conflicts, the threat of nuclear war and slow down the socio-political processes in the world. After the Second World War, mistrust between states increased the focus on strengthening the armed forces. After the war, the United States targeted the USSR in order to gain full control over it, and the Cold War gave impetus to the arms race. Some interpret arming as a policy regulated by state structures. Military spending is hundreds of times greater than the amount of aid provided to people suffering from economic backwardness and starvation. 8-10% of military expenditures are enough to prevent hunger, illiteracy and epidemics in the world. Arming urged states to make serious changes in their political strategies. In modern times, regional and local disputes increase military conflicts between states and peoples. Harmful waste generated during the production of weapons has a negative impact on the health of the population and the environment. Seven of the world's 10 Arms-producing companies belong to the United States. The 20 strongest technology companies in the world are located in the United States (75%) and China (25%). According to the International Scientific Commission, 90% of the world's nuclear weapons explosion in Europe, Asia and North America, and 10% in Africa, Latin America and Oceania, could kill 1.15 billion people and may cause 1.1 billion incurable diseases. There is no winner part in nuclear war. Modern weapons are a great threat to human existence. Therefore, the peoples and states of the world can ensure the physical integrity of the planet by maintaining peace, tranquility, strengthening mutual relations and based on common sense.

Keywords: arming, arm-production, military spending, nuclear weapons, nuclear testing

GİRİŞ

Acil bir sorun olan silahlanma dinamik bir süreçtir. Silahlanmanın genişlemesinde ekonomik faktörlerin rolü büyüktür. Şu anda, silah üretimi ve satışı birçok ülkenin ekonomisinde önemli bir rol oynamaktadır. Silah satışından elde edilen gelir, bazı ülkelerin milli gelirini oluşturmaktadır. Silahlar yasal ve yasa dışı olarak yayılır. Yasal yol, devletler arasındaki askeri anlaşmalara ve modern silahların takas satışına dayanıyor. Yasadışı yol, küresel bir işletme türü haline gelen ve kısmen devlet kurumlarıyla ilgili olan grupların faaliyetleriyle ilgilidir. Ne yazık ki, bu tür işler eyalet düzeyinde ticaretten daha fazlasıdır. Silahlanma genel gerilimi, silahlı çatışmaları, nükleer savaş tehdidini artırıyor ve dünyadaki sosyo-politik süreçleri yavaşlatıyor.

İkinci Dünya Savaşı'ndan sonra, devletler arasındaki güvensizlik, silahlı kuvvetlerin güçlendirilmesine olan ilgiyi artırdı. H. Kissinger bu konuda şunları yazdı: "Daha önce hiç bu kadar fazla güç birikmemişti ve şimdiye kadar bu güç bu kadar az kullanılmamıştı."

Şu anda askeri harcamalar, ekonomik geri kalmışlık ve açlıktan muzdarip insanlara sağlanan yardım miktarından kat kat fazla. Dünyada askeri harcamaların% 8-10'u açlık, cehalet ve salgın hastalıkların önüne geçmeye yetiyor.

Her devlet, yabancı askeri tehditleri önlemek, askeri müdahaleye karşı korumak, modern askeri güçlere hakim olmak için savunma sistemini güçlendirmeye ve silahlanma yoluyla askeri güç elde etmeye çalışır. Askeri güç, toplumun siyasi sistemine ve dinamik gelişimine, siyasi karar alma mekanizmasına ve diplomasinin gücüne bağlıdır.

1. SİLAHLANMA İHTİYACINI BELİRLEYEN FAKTÖRLER

İkinci Dünya Savaşı'ndan sonra ABD, SSCB'ye karşı tam avantaj elde etmek için onu hedef aldı. Soğuk Savaş silahlanma yarışına ivme kazandırdı. ABD'nin 1946-1948'de hazırlanan "Totaliti", "Pincher", "Broiler" ve "Sizl" planlarına göre SSCB'nin 70 şehrine 133 bomba atılacaktı. Bu amaçla, ABD askeri-sanayi kompleksi 200 atom bombası üretmek zorunda kaldı, bu da sanayinin% 40'ının ve 7 milyon insanın yok edilmesi anlamına geliyordu. 1948 ile 1987 arasında ABD askeri harcamaları 7.62 trilyon dolara ulaştı. Ancak, Birleşik Devletler bu maliyetlerle yeniden inşa edilebilir. Amerika Birleşik Devletleri 1945'te bir atom bombası, 1952'de kıtalararası bir bombardıman filosu yarattı ve nükleer silahları test etti. 1980'lerin başında, 132 bombardıman uçağından oluşan ABD Donanması yaklaşık 22 milyar dolara mal oldu, ancak 1990'ların sonunda 80 milyar dolara ihtiyacı vardı. 1946'da ABD Atom Enerjisi Yasası, nükleer silahları askeri cephaneliğinin önemli bir bileşeni olarak listeledi.

SSCB'nin 1949'daki ilk nükleer testi, iki süper gücün silahlanmasını hızlandırdı. Brejnev iktidarının son yıllarında SSCB'de bulunan silahlarla dünyayı 18-20 kez yok etmek mümkündü.

Kasım 1991'de ABD'nin Houston kentindeki Petrol Enstitüsü'nün yıldönümü etkinliğinde "SSCB'yi Nasıl Yıktık" başlıklı konuşmasında Thatcher, Sovyetler Birliği'nin Batı dünyası için ciddi bir tehdit olduğunu kaydetti. Batılı ülkelerin bütçelerinin% 5'ini silahlanmaya ve% 15'ini SSCB'ye harcadıklarını, Batı silahlanmasına ilişkin bilgileri kasıtlı olarak abarttıklarını ve SSCB'nin silahlanmaya daha fazla fon ayırmasını sağladıklarını söyledi. (<http://www.168.az/news/analyties/7478>)

Bazıları silahlanmayı devlet yapıları tarafından düzenlenen bir politika olarak yorumluyor. 2020'de, dünyanın tüm ülkeleri tarafından silahlanma ve diğer askeri amaçlara yapılan harcamalar 1.8 trilyon doları aştı (dünya GSYİH'sinin% 2'sinden fazlası). 10 ülkede askeri harcamalar toplam dünya harcamalarının yaklaşık% 75'ini oluşturmaktadır (Tablo 1).

Tablo 1

No	Eyaletler	Askeri bütçe (dolarla)	ÜDM-də hərbi büdcənin payı (%-lə)
1	Amerika Birleşik Devletleri	649 milyar	3.2
2	İblis	178.8 milyar	1.9

3	Suudi Arabistan	67.5 milyar	8.8
4	Hindistan	66.5 milyar	2.4
5	Fransa	63.7milyar	2.3
6	Rusya	61.3 milyar	3.9
7	Büyük Britaniya	49.9 milyar	2
8	Almanya	49.7 milyar	2
9	Japonya	46 milyar	2
10	Güney Kore	43 milyar	2.6

Not: Bu rakamlar 2020 için geçerlidir

ABD, Sovyetler Birliği'nin dağılmasının ardından 1990'larda askeri bütçesini 400 milyar dolara düşürse de, 2000'li yılların başında artan küresel terör tehditleri ve Orta Doğu'da yaşanan gerilimler, askeri bütçesini 650 milyar dolara çıkarmaya zorladı. ABD ile Çin, İran ve diğer ülkeler arasındaki gerilimlerin bir sonucu olarak, 2020'deki askeri harcamaları küresel askeri harcamaların% 30'undan fazlasını (649 milyar \$) oluşturdu.

Çin, 2007 yılından bu yana askeri bütçesiyle 10 ülke arasında ikinci sırada yer almaktadır. Askeri bütçesinin büyümesi, ekonominin hızlı gelişmesinden kaynaklanıyor. Çin'in GSYİH'sindeki askeri harcamaların payı% 1,7-1,9 (250 milyar) ile sabit kaldı. 2020'de Çin'in askeri harcamaları dünya askeri harcamalarının% 14'ünü karşılayacak.

1998-2000 arasında Orta Doğu, Suriye, Ürdün, Suudi Arabistan ve İsrail'deki askeri harcamalar% 12'den% 35'e yükseldi. Bu dönemde bölge ülkeleri GSYİH'nin% 13-29'unu askeri amaçlara harcarken, Suudi Arabistan askeri harcamalarda dünyada üçüncü sırada yer almaktadır. Stockholm Uluslararası Barış Araştırma Enstitüsü'ne göre, ülke 2015'te 87 milyar dolardan fazla ve 2020'de 67.5 milyar dolardan fazla harcadı. 30 milyonluk bir ülke için bu rakam militarize bir devlet olduğunu kanıtıyor. 18 Şubat 2019'da Amerika Birleşik Devletleri ile Birleşik Arap Emirlikleri arasındaki 33 anlaşma, 3,3 milyar dolarlık silaha erişim sağladı. Öte yandan Türkiye, İran, Pakistan ve Suudi Arabistan arasında Ortadoğu'da ve Müslüman dünyasında liderlik için şiddetli bir mücadele var. IŞİD'in Suudi Arabistan'a yönelik tehditleri de onu askeri yeteneklerini artırmaya teşvik ediyor.

Gelişmiş ülkelerde, askeri harcamalar GSYİH'nin% 3,7'sini ve gelişmekte olan ülkelerde% 7'den fazlasını oluşturmaktadır. Uluslararası kuruluşlara göre ülkeler bu amaçla yılda 130-150 milyar dolar harcıyor.

I ve II Dünya Savaşları arasında, dünyada yaklaşık 60 çatışma vardı. İkinci Dünya Savaşı 4 trilyon dolara mal oldu ve 1.38 trilyon dolardan fazlaya mal oldu.

Modern zamanlarda, bölgesel ve yerel anlaşmazlıklar devletler ve halklar arasında askeri çatışmalara dönüşür (1983'te Falkland Adaları (Malvinas) üzerinde Britanya-Arjantin Savaşı, 1990'da Irak-Kuveyt, 1990'da Yunanistan-Türkiye, Kıbrıs, Kıbrıs, Cemma ve Keşmir) Hindistan-Pakistan, Güney Çin Denizi'ndeki Spratly ve Paracel Adaları üzerinden Çin-Vietnam, Çin-Hindistan, Çin-Tayvan, Rusya-Japonya Kuril Adaları konusunda anlaşmazlık, 1994'ten beri Yemen'de silahlı çatışma ve dini, etnik Hindistan, Sri Lanka, Bangladeş, Afganistan, Lübnan, Kamboçya, Laos, Myanmar, Endonezya, Filipinler ve Türkiye, Irak ve İran'daki Kürdistan konusunda anlaşmazlıklar).

2007-2011'de silah arzı önceki 5 yıla göre% 24 arttı. Asya, küresel silah ithalatının% 44'ünü ve Orta Doğu% 17'sini oluşturuyor. Hindistan, Kore Cumhuriyeti, Pakistan, Çin, Suudi Arabistan ve Venezuela önde gelen silah ithalatçılarıdır.

Hindistan'ın ekonomik gelişimi ve Pakistan ile gergin ilişkileri nedeniyle askeri harcamaları 66,5 milyar dolara ulaştı.

2013-2014'te Rusya askeri bütçe açısından üçüncü sıradayken, 2020'de savunma bütçesi azaldı (61,3 milyar oldu). Batılı uzmanlar bu gerçeğe şüpheyle yaklaşıyorlar. 2020'de Rusya Savunma Bakanlığı, stratejik nükleer kuvvetlerin arazi, hava ve deniz bileşenlerinin yeteneklerini artırmaya odaklanan çeşitli ölçeklerde 4.800'den fazla tatbikat ve 9.000'den fazla pratik muharebe eğitimi gerçekleştirdi.

Güney Kore ile komşusu Kore Demokratik Halk Cumhuriyeti arasındaki gerilimler ve Asya bölgesinde artan savunma harcamaları, Güney Kore'nin askeri harcamalarını 43 milyar dolara (gayri safi yurtiçi hasılanın% 2.6'sı) koydu.

2020 yılında Azerbaycan'ın askeri bütçesi 3 milyar 853 milyon manat, Ermenistan'ın askeri bütçesi ise 625 milyon dolardı.

2. SİLAHLANMANIN OLUŞTURDUĞU TEHDİTLER

1980'lere kadar, araştırmacılar, silahlanma maliyetinin yılda 1 milyar insanı besleyebileceği veya 500 milyon insana barınma sağlayabileceği sonucuna vardılar. Trident-1 denizaltısı, Amerika Birleşik Devletleri'nde 400.000 kişiye ve bir bombardıman uçağı için 250.000 öğretmene konut sağlayabilir. Silahlanma ve dönüşüm, kitlesel işsizliğe katkıda bulunan faktörlerdir. ABD Kongresi bütçe bürosuna göre askeri sanayiye 10 milyar dolar harcanarak 40 bin istihdam yaratılabiliyor.

Silahlı devletler, siyasi stratejilerinde ciddi değişiklikler yapmaya teşvik edilmektedir. Büyük orduları tutmayı reddeden İsviçre ve Danimarka, potansiyellerini ekonomik toparlanmaya odakladı. Japonya, son yedi yılda askeri harcamalarını 10 kat artırdı. II Dünya Savaşı'ndan sonra, demokratik güçlerin savaşa ve nükleer silahlara karşı kitlesel hareketi, Japonya'yı nükleer silahlardan, bunların üretiminden ve konuşlandırılmasından vazgeçmeye ve tarafsız bir pozisyon almaya sevk etti. Tek maddelik bir anayasa olan Bölüm II (Madde 9), uluslararası anlaşmazlıkları çözmenin bir yolu olarak Japonya'nın savaştan kalıcı olarak vazgeçmesini sağlar. Japonya, Birleşik Krallık ve Almanya son yıllarda askeri harcamalarını azaltmış olsalar da askeri harcamalar açısından hala ilk 10 ülke arasında yer alıyorlar.

BM, Ekim 2020'de İran'a yönelik 2007 silah ambargosunu kaldırdı. Silah üretimi sırasında ortaya çıkan zararlı atıklar, nüfus ve çevre sağlığı üzerinde olumsuz etkiye sahiptir. Kimyasal, biyolojik ve nükleer silahların üretimi ve depolanması için ayrılan geniş alanların kirlenmesi, bunların yok olma riskini artırmaktadır. Öte yandan şimdiye kadar üretilmiş milyonlarca ton eskimiş silah ve mühimmatın imha edilmesi gerekiyor. Bir bombardıman uçağından atılan bomba ile oluşan 3.000 derecelik ısı, flora ve fauna ile birlikte toprağa o kadar zarar verir ki, 100-7400 yıl sonra toprağın yenilenmesi mümkün olur. Kimyasal silahlar ilk olarak Dünya Savaşı'nda kullanılmıştır. Bu silahlar insan sağlığına ciddi zararlar, geçici körlük, sağırılık, felç, cilt ve gözlerde ciddi yanıklar ve ölüme neden olur.

Dünyadaki 10 silah şirketinden 7'si Amerika Birleşik Devletleri'ne aittir (Dünyanın en büyük silah şirketleri. <https://www.interhaber.com/the-dünyanın-en-iyi-silah-sirketleri-photo-gallery-1201396-htm>). Bazı uzmanlara göre ABD de yasadışı silah satıyor. Amerikalıların% 40'ının kişisel bir silahı var. Türkiye, bireysel silahlanma açısından 178 ülke arasında 14. sırada yer almaktadır. 2016 yılında, Amerika Birleşik Devletleri'nde 11.000'den fazla kişi, Birleşik Krallık'ta% 4.5, Kanada'da% 30.5 ve Avustralya'da% 13 silahlı saldırılarda öldürüldü.

Dünyanın en güçlü 20 teknoloji şirketi Amerika Birleşik Devletleri (% 75) ve Çin'de (% 25) bulunuyor (ABD ve Çin'de Bulunan Dünyanın En Büyük 20 Teknoloji Şirketinin Tamamı / 23.06.2018. <https://pazarlamasyon.com/dünyanın-en-büyük-20-teknoloji-firmasının-tamamı/>). Amerika Birleşik Devletleri'nde silahlar zaten bir yazıcıya basıldı ve 1 Ağustos 2018'den itibaren Autocad'de geliştirilen 3D silahları gerçeğe dönüştürmek mümkün.

Churchill'in Soğuk Savaş'ın temelini oluşturan konuşmasından 50 yıl sonra (5 Mart 1946), bu tarihi mekandaki öğrencilere yaptığı konuşmada (Fulton, 5 Mart 1996), Thatcher dünyaya yeni bir tehdit, nükleer tehdit ilan etti.

1950'de ABD Başkanı D. Eisenhower'ın "Atom İçin Atom" konuşması nükleer programa ivme kazandırdı. Bazı eyaletler enerji reaktörlerini artırdı ve nükleer silahlar geliştirdi. 1953'te İngiltere ve Fransa, 1960'ta nükleer silah stokları oluşturdu. 1964'te SSCB'nin yardımıyla Çin nükleer silah stokunu artırdı. Hindistan, 1974'te bir nükleer test gerçekleştirdi (Spector, Leonard S. Nuclear Proliferation Today New York: Vintage Books, 1984) ve Pakistan, 1980'lerin ortasında bir nükleer silah aldı. Kuzey Kore'nin 2006'daki nükleer testi başarısız olmasına rağmen, 2009'da nükleer programında başarı gösterdi (Ferguson, Charles D. Nuclear Energy, Du Vedat Çelik, Fatih Güdük 1. Ankara: Buzdağ, Mayıs 2015).

Modern silahlar, özellikle nükleer silahlar, büyük yıkıcı güce ve kısa menzilli yeteneklere sahiptir. Tüm nükleer silahlar atom bombası olarak bilinir. İki tür nükleer kitle imha silahı vardır. En son termal nükleer savaş başlıklarında, şimdiye kadarki tüm maddelerden daha fazla güç biriktirmek mümkün. Teknik tahminlere göre dünyadaki nükleer savaş başlığı sayısı 50.000'i aştı. Bu nükleer silahın kapasitesi kişi

başına 10 ton TNT'ye eşittir. Küçük bir kısmının patlaması, dünyanın doğal dengesini bozabilir ve dünyayı yok edebilir. Uzmanlara göre, atmosferde bir roketin ortaya çıkması, canlıları yok etmesi 100-300 saniye sürüyor. Uluslararası Bilim Komisyonu'na göre, dünyadaki nükleer silahların% 90'ı Avrupa, Asya ve Kuzey Amerika'da,% 10'u Afrika, Latin Amerika ve Okyanusya'da patlayarak 1,15 milyar insanı öldürdü ve 1,1 milyar tedavi edilemez hastalığa neden oldu. Nükleer savaşta kazanan yoktur. Einstein'a III Dünya Savaşı'nda hangi silahların kullanılabileceği sorulur. Cevap, bunu ifşa edemeyecem.

ABD Stratejik ve Uluslararası Çalışmalar Merkezi tarafından elde edilen uydu verilerine göre, Kuzey Kore nükleer tesislerdeki (Yenbyon nükleer kompleksi) faaliyetlerini artırdı.

44 günlük Karabağ savaşı sadece insansız hava aracı savaşının ve askeri teçhizatın avantajlarını dünyaya göstermekle kalmadı, aynı zamanda silah alıcılarının sayısını da artırdı. Ukrayna, Türkiye'den satın aldığı Bayraktar TB2 insansız hava aracını Karadeniz'de test etti.

İsrail'in beşinci nesil silah üreticisi Meteor Aerospace, darbeli insansız hava araçları (darbe-700), insansız hava araçları (ORCA), hassas güdümlü füzeler ve hava savunma sistemlerinin geliştirilmesinde uzmanlaşmış, Azerbaycan'ın en büyük silah alıcılarından biridir.

SONUÇ

Askeri harcamalardaki artış ve silahlanma talebi bir dizi faktöre bağlıdır:

- dünyadaki jeopolitik hırslar, sıcak noktalar ve donmuş çatışmalar;
- rekabetçi ortam ve savaş riski;
- global ekonomik krizler vb.

Modern silahlar, insan varlığı için büyük bir tehdittir. Günümüzde propagandayı yoğunlaştırmak, sağlam bir ideolojik ve politik temel oluşturmak, silahlanmaya son vermek, kitle imha silahlarını yok etmek ve yenilerinin yaratılmasını yasaklamak bölgesel savaşların önlenmesine yardımcı olabilir. Dünyanın halkları ve devletleri, gezegenin fiziksel bütünlüğünü ancak barışı, huzuru, bağları ve sağduyuyu güçlendirerek sağlayabilir.

Opening the Black Box or Confirming the Obvious?! A Review of the Most Significant Findings in Neuromarketing over the Last Decade

Veronija Nolcheska, PhD¹

¹University “St. Kliment Ohridski”, Faculty of Economics - Prilep, Republic of North Macedonia

e-mail: veronija.nolceska@gmail.com, ORCID: <https://orcid.org/0000-0002-9150-2262>

Abstract: Aiming at understanding and targeting the consumer mind, neuromarketing studies are becoming more frequent and popular. Moreover, there has been a major upsurge in use of sophisticated neuromarketing tools and techniques in conducting market research and building marketing strategies among several successful companies and top brand names. Neuroscience has certainly helped marketers in gaining deeper insights into the complex consumer mind and provided both consumer behavior scholars and marketing practitioners with significant findings and valuable data on human subconscious mind, decision-making patterns and cognitive processes. As a result of thorough examination of the existing literature comprising various neuromarketing studies, published articles and academic research conducted in the last ten years across the globe, this paper offers a review of the most significant findings in the emerging field of neuromarketing and leads us to the answer of the question: Are we finally really opening the black box of consumer behavior, or are we just confirming the already known and obvious?! The observed findings are presented in several categories based on the main purpose and objectives of each study, as well as the nature of the research problem: senses / sensory neuromarketing; emotions and feelings; cognitive process (attention, perception and memory); consumer attitudes, wanting, liking and preferences; consumer decision-making; social influences and social behavior. The paper also identifies the neuroscientific methods, techniques and neuroscience tools employed in the reviewed neuromarketing studies and gives implications for future research. The author concludes that neuromarketing techniques will soon be more broadly applied and integrated with the traditional marketing research and will become an important element of the branding strategies. Furthermore, with the continuous exponential technological growth, the constantly increasing number of innovation-led companies and the persistent academic interest in consumer behavior and decision-making process, it is expected that neuromarketing tools will become even more sophisticated, advanced, precise and reliable, which would lead to greater understanding of consumer mind, building predictive models of consumer behavior, making optimal marketing decisions and ultimately creating more value for the customers and providing better consumption experience.

Keywords: neuromarketing, “black box”, consumer behavior, neuromarketing tools, literature review

1. INTRODUCTION

Probably one of the most significant paradigm shifts in the few last decades is the abandoning of the rigid idea of homo economicus and replacing it with the new conception of homo sapiens: emotional and highly sensitive social animal whose decisions are mostly unconscious, but whose actions always rationally explained. This realization that maybe our choices are not completely rational and our decisions are rarely driven by conscious calculation and thorough planning led to the emergence of new disciplines such as consumer neuroscience and neuromarketing, whose main objectives are to dig deeper into the consumer mind and reveal the underlying processes of decision making. Based on neuroscience knowledge and employing neuroscience tools and methods, neuromarketing aims at assessing consumer responses to marketing stimuli and using the obtained findings as valuable data in creating and implementing effective marketing strategies and predicting consumer behavior. Related to the implementation of knowledge for marketing purposes and specific goals, it is broadly considered as the more practical interdisciplinary field compared to consumer neuroscience. On the other side, consumer neuroscience relies on the neuroscience findings and techniques in order to generate deeper insights into consumer cognitive processes, preferences, judgements and decisions, so more than hitting the “buying button” it is interested in understanding and describing the “buying process”, or as Reimann et al. (2011, p. 610) define it, consumer neuroscience is the study of neural conditions and processes underlying consumption and their psychological meaning and behavioral consequences.

Over the last ten years, research has shown that the old model of human being characterized by an infinite capability to make rational and optimal decisions (initially challenged by Kahneman and Tversky in 1979) is certainly flawed and consumer decisions are driven by at least two dominant processes – the conscious experiences of making a choice; and the unconscious, instant, ad hoc valuation of immediate options. Could this explain why the results obtained with the traditional research methods (surveys, focus groups, etc.) and based on consumer self-reported attitudes, preferences and intentions to buy, significantly differ from the real situation and the actual consumer behavior and why the intention to purchase rarely results with actual purchasing? Do respondents, thinking rationally, really intend to buy the product, but the final decision is unconscious and results in different behavior; or do they say what they think it is expected from them to say? Recent studies of decision making came up with perplex findings: brain activation predating the experience of the actual choice making accounts for most of the actual choice (Ramsøy, 2014).

Although neuroscience has certainly helped us in gaining deeper insights into the complex consumer mind and provided both consumer behavior scholars and marketing practitioners with valuable data on human subconscious mind, decision-making patterns and cognitive processes, still remain the questions: Are we really opening the ‘black box’ of consumer behavior, or are we just confirming the obvious?! Do we finally have an access to the unconscious mind?!

In order to gain a broader perspective on what has been achieved in the field of neuromarketing and consumer neuroscience over the last ten years, this paper examines the existing literature comprising various studies, published articles and academic research papers and offers a review of the most significant findings from 2010 to 2020. The observed findings are presented in several categories based on the main purpose and objectives of each study, as well as the nature of the research problem: senses / sensory neuromarketing; emotions and feelings; cognitive process (attention, perception and memory); consumer attitudes, wanting, liking and preferences; consumer decision-making; social influences and social behavior. This paper also identifies the neuroscientific methods, techniques and neuroscience tools employed in the reviewed studies and gives implications for future research.

Reviewing the academic journals from this particular period, it is apparent that the academic studies in the field of consumer neuroscience have become more frequent and prominent and the technological advancement enabled significant improvement of neuromarketing tools regarding their accessibility, attainability, adaptability, cost-efficiency, portability and maneuverability. Moreover, there has been a major upsurge in use of sophisticated neuromarketing techniques in conducting market research and building marketing strategies among the successful companies and top brand names.

But, is currently neuromarketing at the point where at the beginning it intended and promised to be regarding its achievements and disclosures? Despite the scientific advancement and commercial expansiveness of neuromarketing, many academics and practitioners are still quite skeptic or pessimistic regarding its heretofore achievements and future potential (Addie, 2011), arguing the heterogeneity of the applied methods (Solnais et al., 2013), the inconsistency and uncertainty of the metrics and interpretation of the obtained findings (Jordao et al, 2017), the fragmentation of academic research and general sub-par publication level, industrial over-promising and under-delivering, and the non-existing validation of the offered metrics (Ramsøy, 2019). Meanwhile, some scholars perceive neuromarketing as a refined additional tool to the traditional research techniques, with a potential to predict consumer behavior (Stanton et al., 2016) and other affirm groundbreaking studies, indicating neuromarketing potential to create value for consumers, boost marketing ROI and generate profit for companies. Looking on the bright side, one of the most prominent neuroscientists nowadays, Brian Knutson, is astonished of how far the science has come in the past 15 years, and yet it is still just scratching the surface (Harrel, 2019, last para.).

2. LITERATURE REVIEW

2.1. Senses - Sensory neuromarketing

Sensory neuromarketing has emerged from the attempt to understand unconscious sensory influences on consumer attitudes, preferences, memories and choices in order to appeal to them more effectively and create memorable, valuable and enriched consumer experience. Many studies conducted over the last ten years have focused on the possible role of subliminal sensory cues in stimulating and enhancing brand recognition (Norsgaard and Rasmussen, 2013) or motivating consumers to approach brands and products (Veltkamp et al, 2011). Today, academics and neuromarketers are strongly interested in how and to what extent can simple contextual events affect preference, brand memory and purchase decision. Ohme and Matukin (2012) investigated the ad moments with greatest viewer attention and emotional response, concluding that the right combination of sound and image is fundamental in obtaining favorable result in the creation of a positive memory.

2.1.1. Sight - Visual neuroscience and visual neuromarketing

It is already known and again confirmed by recent studies (Milosavljevic et al., 2012; Orquin et al, 2012; Bialkova and van Trijp, 2011) that salient attributes attract more attention and affect consumer decision in favor of the particular alternative. Navalpakkam et al. (2012) reveal similar effect of the saliency of website elements. Several studies provided solid evidence for the existence of visual saliency bias under the conditions of cognitive load and rapid decision making and confirmed that more salient stimuli are always fixated on longer suggesting that the way in which the brain processes low-level visual and value information might lead to decision-making biases (Krajbich & Rangel, 2011; Krajbich et al, 2010). Interested in the size of the visual saliency bias and how it changes with cognitive load and decision speed, Milosavljevic et al. (2012) utilize experimental design from visual neuroscience in three real food choice experiments, revealing that at rapid decision speeds visual saliency influences choices more than preferences do, the bias increases with cognitive load and is particularly strong when individuals do not have strong preferences for any of the available options, concluding that it can mostly translate to large profits in competitive marketplaces when the profit margins are tight and participants have the opportunity to choose among various highly liked options. Moreover, recent series of neuroeconomic studies have shown that the values assigned to stimuli at the time of choice depend on the amount of attention that they receive during the decision-making process (Krajbich et al., 2010), thus more visually salient options are more likely to be chosen due to the specific way in which the brain processes visual information. When it comes to the speed of decision-making in in-store food purchasing, Krajbich and co-authors (2010) reveal that these purchases are usually made in 500 milliseconds – 2 seconds, while Reutskaja et al. (2010) confirm that when in front of displays that include 16 different items consumers are able to make accurate choices in less than 3 seconds.

Interested in how unpredicted circumstances affect preferences for novel visual items, in 2012 Ramsøy and his colleagues conducted a study on the effect of contextual unpredictability on the first impressions of brand logos during exposure to simple and sudden unpredictable sounds, showing that brand logos coupled to unpredictable sounds were rated less favorably than the others and the negative effect of unpredictable sounds on preference is associated with a stronger arousal response, noted by pupil dilation response. Important part of the brain involved in the regulation of bodily responses such as pupil dilation or facial expression, pulse, respiration, sweating, is the amygdala. Suggesting that unpredictable sounds engage an emotional response that affects the first impression of a concurrently presented visual object, Ramsøy et al (2012) confirm several previous studies on the effects of contextual factors on emotions and cognitive performance (De Martino et al, 2010; Steinmetz et al, 2010).

Another interesting finding obtained in the last decade is that repeatedly imagining the consumption of a food leads people to habituate to it. The imagery induction on food consumption reduces the actual consumption, as well as the wanting (the appetitive, desire or motivational drive), which reveals that the

difference between the actual human experience and the mental representation of the experience may be smaller than previously assumed (Morewedge et al, 2010).

Using eye-tracking equipment (SMI-iView XTM HED-eye-tracker) in investigating the effect of package design on visual attention, Clement et al. (2013) revealed a relationship between abundant in-store stimuli and limited human perceptual capacity. According to the results, physical design features such as shape and contrast dominate the initial phase of decision-making. Design features like contour/shape, contrast, and ratio have significant advantage in the initial product search and semantic design features (text-elements) are not suitable for getting consumer first eye-contact in-store. Label clutter negatively affects consumer attention. Visschers, Hess, and Siegrist (2010) concluded that participants pay less attention to nutrition labels in more cluttered products, which suggests that in general, visual clutter creates a competition for attention between an increased number of visual objects resulting in decreased attention to individual attributes. Packages perceived as attractive or aesthetic activate brain regions related to reward processing, namely MPFC and nucleus accumbens (Reimann et al., 2010).

2.1.2. Smell - Olfactory neuroscience and olfactory neuromarketing

It is well known that pleasant scents enhance and stimulate buying and a brief odor can retrieve long-lost memories in less than a second, which can be explained by the fact that the olfactory bulb is a part of the brain limbic system closely associated with memory and emotions. Norsgaard and Rasmussen (2013) conduct a study on olfactory brand enhancement on brand recognition, confirming that scents provoke significant emotional reactions and there is a serious possibility of enhancing brand recognition through odors, but personal hedonic perception strongly influences consumer ability to recognize brands through scents. Investigating the effect of scent valence on eliciting emotions and measuring the high emotional response reflected in the enhanced LPP, Lin et al. (2016) revealed a negativity bias, where unpleasant scents induced stronger emotional effects compared to the pleasant scents. The study also revealed that emotional processes between individuals with high sensitivity to smell and individuals with normal sensitivity to smell significantly differ.

2.1.3. Sound – auditory neuromarketing and auditory neuroscience

Prominent example of a study on the ability to predict subsequent market level impact in form of commercial success based on human neural responses to music is the experiment conducted by Berns and Moore in 2012, who concluded that neural response (brain activation within the nucleus accumbens) correlates with future sales data, while subjective liking measure through explicit personal rating of the songs has no correlation to future sales data.

Providing the first direct evidence that the intense pleasure experienced when listening to music is associated with dopamine activity in the mesolimbic reward system, including both dorsal and ventral striatum, Salimpoor et al. (2011) revealed that music can arouse feelings of euphoria and craving, similar to tangible rewards that involve the striatal dopaminergic system. Using the neurochemical specificity of [¹¹C]raclopride positron emission tomography scanning, combined with psychophysiological measures of autonomic nervous system activity, they found endogenous dopamine release in the striatum at peak emotional arousal during music listening. Using fMRI in investigation of time course of dopamine release, Salimpoor et al. (2011) found a functional dissociation: the caudate was more involved during the anticipation and the nucleus accumbens was more involved during the experience of peak emotional responses to music. The study shows that anticipation of an abstract reward results in dopamine release in an anatomical pathway distinct from that associated with the peak pleasure itself and this anatomical dissociation between the anticipatory and consummatory phases suggests involvement of distinct mechanisms. Zald and Zatorre (2011) suggest mapping this distinction onto the 'wanting' and 'liking' phases of reward in an error prediction model.

Similarly, through eye-tracking, facial expression and galvanic skin response techniques Cambra et al. (2018) analyze the effect of music on advertising effectiveness, concluding that commercials

accompanied with music cause higher GSR level, which indicates higher degree of arousal or emotion. Moreover, facial expression indicated significantly higher liking, enjoyment and personal engagement in the ads accompanied with music, confirming the effect of sound on consumer behavior.

2.1.4. Position, presentation, size

Interested in how position affects attention, choice and decision Chen and Pu, 2010; Huang and Kuo, 2011; and Navalpakkam et al., 2012 revealed that items positioned on the top attract more attention and decision makers usually prefer to read from top to bottom and from left to right. Several studies conducted over the past decade provide solid confirmation of the “central position effect” revealing that centrally positioned items attract more attention and as a consequence affect the entire decision-making process (Atalay et al, 2012; Navalpakkam et al., 2012; Reutskaja et al, 2011; Krajbich and Rangel, 2011; Huang and Kuo, 2011; Glaholt et al, 2010; Chen and Pu, 2010). In 2012, Krajbich et al. showed that in choice sets with high decision difficulty (when the difference between price and value is relatively small) the last fixation is less likely to be driven by the utility effect and ultimately predicts the choice. According to Reutskaya and colleagues (2011) items located in the center of the screen are 60% more likely to be chosen, while Hernandez et al. (2017) reveal that information and items placed at the bottom right corner receive less visual attention.

Regarding the way of presentation, van Herpen and Trijp (2011) conclude that once fixated, verbal attributes produce longer fixation durations than pictorial attributes.

Surface size is another critical attribute and an increase in the size of a product, item or element could make it more distinguishable (Wischniewski et al., 2010).

2.2. Emotions and feelings

In 2010, Pessoa and Adolphs once again confirmed that a key brain structure mediating the interaction between perception and emotion is the amygdala. The following studies revealed brain structure’s ambivalent nature, or more particularly, showed that several emotional structures are identified by bi-valent response pattern and can be engaged by both positive and negative events and triggers (Gelskov et al., 2015; Ramsøy & Skov, 2010), so the ventral striatum cannot only be seen as a “reward” structure and the amygdala cannot be seen as a specifically “fear” structure, but can also be seen as “reward” structure (Kühn et al, 2016; Balderston et al, 2011). Ramsøy and Skov (2010) confirm that the amygdala plays a pivotal role in computing emotional responses to perceptual expectedness and its activity is sensitive to environmental contingencies, therefore changes in amygdala activity influence preference formation.

Reflected in hemispheric alpha wave asymmetry, the frontal alpha wave has been used to indicate the affective responses to TV commercials (Venkatraman et al., 2015; Ohme et al., 2010). Adopting EEG techniques able to capture fleeting emotions and observing LPP levels, Lin et al. (2016) confirmed the relationship between scents and emotions. Interested in how emotions affect brand preferences, Ma et al. (2010) revealed that emotions have a significant impact on brand extension preferences, but only for certain product categories (clothing) particularly modulated by negative emotions. These underlying mechanisms were reflected in an enhanced N200 once unfamiliar brand was introduced. In an investigation on consumer behavior regarding luxury items, Pozharliev et al. (2015) revealed that emotions significantly influence purchase decisions, especially in social context and during the presence of others. The effect of the emotions was indicated by the enhanced LPP.

The anterior insula - brain region known to process aversive emotions such as anxiety, disappointment or regret - is also consistently correlated with risk processing. The study of Mohr et al. (2010) provides additional evidence that risk processing is influenced by emotions. The findings reveal risk-related activity in the dorsolateral prefrontal cortex and the parietal cortex in choice situations, while the anterior insula is predominantly active in the presence of potential losses, indicating that potential losses modulate risk processing.

When it comes to application of neuromarketing research instruments in the film industry, one of the most intriguing studies was conducted in 2012. Investigating the effect of emotional engagement. Using eye-tracking technology and measuring heart rate, breathing, sweat and motion responses of around 1,000 people while they were watching 40 different film trailers, several researchers from Innerscope Research came up with significant findings that could easily predict box office hits: if movie trailer fails to reach a specific emotional engagement threshold of 65, it will very likely generate less than \$10 million in revenue on opening weekend, but it exceeds an engagement threshold of 80, the film will very likely earn more than \$20 million during the first weekend. Three years later, Boksem and Smidts conduct a qualitative study of the response of individual preferences in relation to movie trailers to determine which neural measures highlight what the consumer is interested in from a particular movie. Findings show that some components measured by EEG (beta and gamma waves) indicate preference, in particular beta waves demonstrate individual preferences, while gamma waves population preferences (Boksem and Smidts, 2015). In a more recent EEG study conducted in the same industry, Barnett and Cerf (2017) in order to predict movie recall and movie ticket sales used alpha oscillations to calculate neural similarity, demonstrating that alpha oscillations enhance later recall.

2.3. Cognitive processes

For years, consumer neuroscience has been interested in the extent to which humans are aware of the reasons for their purchasing behavior and in control of the external and internal factors and various influences on their choices? Fortunately, new discoveries in neuroscience and fast development of neuroscience tools and methods have provided the opportunity to reveal unconscious consumer reactions and acknowledge direct measures of cognitive constructs and processes, such as attention, memory and perception.

2.3.1. Attention

Studies conducted over the last ten years investigated the correlation between occipital alpha band oscillations, which are regular cyclic voltage changes originating from the occipital lobe, and cognitive processing of attention (Venkatraman et al, 2015; Klimesch, 2012) indicating that the occipital alpha wave is an indicator of enhanced allocation of attentional resources in response to marketing stimuli and the attention increases when the alpha wave decreases. Moreover, Jones et al. (2012) attempt to understand consumer processing of pricing and discount information, revealing that P300 is enhanced in high math anxiety individuals, which suggests that high emotional and motivational processes are involved during pricing and discount-related tasks.

Recent study adopting EEG and eye-tracking techniques examines consumer attention and preferences regarding different packaging attributes as isolated features (Madariaga et al., 2019), showing that texts and images on the package increase the level of attention, while color modifications have no significant effect on the attention level. Moreover, the study provides additional solid evidence that the implicit neurophysiological effects and reactions do not necessarily coincide with explicitly declared subjective evaluations of preference.

Research shows task-specific effects on attention by manipulating task instructions (Kim et al, 2012; Kable, 2012; Huang and Kuo, 2011; Glaholt et al., 2010), while confirming the effects of learning on attention indicated by reduction in the number of fixations during the course of repeated decision tasks (Fiedler & Glöckner, 2012; Mueller Loose & Orquin, 2012; Toubia et al., 2012; Bialkova and van Trijp, 2011).

2.3.2. Perception

Regarding perception and decision speed, magnetoencephalography (MEG) study showed that female participants viewing shoes, compared to motorcycles, had stronger activity in occipitotemporal regions

between 130 and 180 milliseconds after image presentation (Junghoefer et al., 2010), while Milosavljevic et al. (2011) demonstrate that consumers are able to identify two different food brands and choose the one they prefer in just 313 milliseconds. Additionally, time pressure reduces the amount of information fixated (Reutskaja et al., 2011; van Herpen and Trijp, 2011) and increases down-stream effects of visual saliency on choice (Milosavljevic et al., 2012). Kowler (2011) shows that semantic or contextual cues about a visual scene, feature based attention, object representations, task demands, and rewards for task performance override attention capture by visual saliency. Later, Nordfang et al. (2013) confirm that visual saliency predicts attention capture and affects encoding to visual short-term memory.

Glaholt et al. (2010) show that consumers are selective in the processing of stimulus information when asked to choose 6 most expensive items, achieving greater differentiation between individual stimuli via higher number of fixations and longer duration of total fixation compared to when asked to choose which of the two sets of three items is more expensive, indicating that gaze selectivity increases with the number of alternatives presented (Glaholt et al., 2010). Moreover, Reutskaya et al. (2011) reveal that time pressure induces people to shorten fixation duration and search longer to increase the number of options that are considered before making a choice.

Intending to obtain a physiological perception of brand stimuli processing in the brain and to identify how to create a brand name which arouses higher attention, Hillenbrand et al. (2013) found that brand suggesting the main product benefit are more effective. Another study examined the effectiveness of product endorsement focusing on neural correlation between evaluation of a product and the fame of the person advertising it (Stallen et al., 2010). Results showed increase in orbitofrontal cortex activity with the pairing of a celebrity with products during testing, confirming the transfer of affection and admiration from the person to the endorsed product.

Regarding perception and emotional responses to stimuli, Viniegra et al. (2020) employ eye tracking and galvanic skin response to determine the cognitive perception that young people have of the stimuli transmitted by influencers on Instagram, suggesting that adolescents place greater attention and emotional intensity on the nude body appeal of influencers compared to young adults and are less interested in brands. Investigating the activation of particular brain areas responding to different stimuli, in 2010, Sescousse et al. revealed the existence of both reward-specific and nonspecific brain networks, challenging the existing assumption of a unique reward system for all reinforcers. They show that OFC is functionally organized along a postero-anterior axis regarding reward type: the anterior part responding exclusively to money and the posterior part responding exclusively to erotic stimuli. Additional specific activations were also found in the bilateral amygdala and medial OFC where the brain activity only scaled with the hedonic value of the reward specifically encoded. The study supports the idea of a core reward system processing experienced rewards regardless of their nature. The functional activity in this specific network comprising ventral striatum, ACC, anterior insula and midbrain, correlates with hedonic value and prediction error for monetary gains, as well as for erotic pictures.

Madariaga et al. (2020) assess neurophysiological responses to print advertisements that include visual metaphors, using electroencephalogram, eye tracking, and galvanic skin response methods. The study reveals that regardless of metaphor type, ads with metaphors evoke more positive reactions than non-metaphor ads. EEG results reveal positive relationship between cognitive load and conceptual complexity that is not mediated by comprehension, suggesting that the cognitive load index could be a suitable indicator of complexity, as it reflects the number of cognitive resources needed to process stimuli. ET results points significant differences in the time dedicated to exploring the ads; however, comprehension does not mediate this relationship. Moreover, GSR indicates no cognitive load. ET and GSR results suggest that these methods are not a suitable measure of cognitive load in the case of visual metaphors and are more related to the attention and emotional responses to the stimuli.

2.3.3. Memory

In attempt to examine and analyze human cognitive processes in marketing-related topics, most of the experiments studied N200 and P300 components, as well as theta and beta waves. Another component, known to be associated with meaningful information (N400), represents access to the semantic memory (Kutas and Federmeier, 2011). At the beginning of the past decade, Cook, Warren, Pajot, Schairer and Leuchter (2011) used EEG technique to investigate print advertising effect on declarative memory, revealing that logical persuasion messages were associated with significantly higher levels of neural activity in the hippocampus, suggesting a stronger acquisition of declarative memory. In the study of memory processes, a signal of familiarity is reflected in the decrease of the N400 component. Wang et al. (2012) and later Jin et al. (2015) show that when familiar or famous brand symbols are presented, categorization processes reflected in the N400 are triggered, which in turn lead to a preference for that specific brand.

Rajagopal and Montgomery (2011) come up with interesting findings which suggest that consumer exposure to an imagery-evoking advertisement creates false memory of prior product exposure, ultimately causing alterations in product attitude. Several studies investigated implicit cognitive processes, such as working memory (Daugherty et al., 2016; Milosavljevic et al., 2012) showing that utility differences and working memory load moderate the down-stream effect of saliency on choice (Milosavljevic et al., 2012). The preference for pair-wise over more complicated multi-way comparisons suggests that participants minimize working memory load by relying on re-fixations (Glaholt and Reingold, 2011).

Moreover, research shows that familiar brands activate the hippocampus, interpreted as the use of memory to recall previous experience with the brand including advertising messages, product trials and peer recommendations (Santos et al, 2012). Different task instructions and individual traits moderate the utility effect (Glaholt et al., 2010), which has been revealed during the retrieval of information from memory and demonstrated by prolonged gaze at empty locations where important attributes were previously presented (Renkewitz and Jahn, 2012). Investigating differences in neural responses between male and female participants watching perfume ads, appreciation and spontaneous memories evoked higher responses in women, but there were no differences between genders regarding memory (Vecchiato et al., 2014).

2.4. Consumer attitudes, wanting, liking and preferences

The distinction between wanting and liking isn't new, and what people want is not always similar with what they like. Research has shown that the wanting system operates unconsciously, reflecting the operation of separate deep brain system, such as basal ganglia, while the liking system is assumed to be based on the prefrontal regions like orbitofrontal cortex and is associated with an overt conscious experience. Berridge and Robinson (2016) posit that brain circuitry mediating the psychological process of 'wanting' a particular reward is dissociable from circuitry that mediates the degree to which it is 'liked'. Incentive salience or 'wanting', a form of motivation, is generated by large and robust neural systems that include mesolimbic dopamine, while 'liking', or the actual pleasurable impact of reward consumption, is mediated by smaller and fragile neural systems, and is not dependent on dopamine (Berridge and Robinson, 2016, p. 670).

According to Plassmann et al. (2012) and Thomsen et al. (2011) to appeal to consumers and stimulate purchase intention, brands must engage several mental systems, including perception, awareness, memory, cognition and emotions. Perceived brand value expressed overtly in verbal reports are reflected in a specific engagement of the OFC, denoting that what feelings accompany brand perception, indicating interconnection between affective processing and consciousness. For years, consumer neuroscience has been interested in how the attractiveness of marketing stimuli might be inferred based on the regional activity within the brain reward system. Levy, Lazzaro, Rutledge and Glimcher (2011) show that when viewed individually, preferred consumer goods are associated with activation of

the striatum, and Telpaz, Webb and Levy, (2015) found how EEG measurement of neural activity can be used to predict rank-ordered preference ratings and actual choices in a subsequent behavioral task.

Berns et al. (2010) conducted a study in which behavioral measures of adolescents' preferences and neural responses were collected while the young participants listened to 15-s clips of songs, showing that likability ratings of songs were highly correlated with activity in the caudate nucleus, area implicated in valuation and reward. Moreover, the tendency to change subjective evaluation of a song in line with its popularity among peers, was positively correlated with activation in the anterior insula and anterior cingulate (ACC). Two years later, Berns and Moore showed that the individual neural responses in OFC and NAcc in their initial study predicted purchase decisions by the general population measured through the total number of sold units. Wang et al. (2012) found that strong associations with famous brand names trigger enhanced amplification of N400, signaling processing of familiar information, further increasing the preference of extended brand name.

In 2011, Vecchiato and colleagues monitored brain hemispheric asymmetry, noticing distinct neural patterns associated with different levels of perceived pleasantness related to ads, where ads perceived as the most pleasant were associated with an asymmetrical increase in the neural activity of the left hemisphere, while unpleasant ads were associated with a relatively greater activity increase in the right hemisphere. Using fMRI, Tusche, Bode and Haynes (2010) investigated the ability of neural activation to predict subsequent choice, revealing that brain regions between the high-attention (liking and rating) and low-attention (visual fixation) group predicted subsequent purchase intentions. The same year Plassmann et al. (2010) investigated predicted values using real choices, revealing that neural activity in the ventromedial prefrontal cortex (vmPFC) is in correlation with behavioral measures of consumer predicted values for branded products. Moreover, Plassmann et al. (2010) found that right mOFC, ventromedial prefrontal cortex (VMPFC) and right dorsolateral prefrontal cortex (DLPFC) encode for DV during choice between unhealthy but appetitive food products. Activity in common area of the mOFC/VMPFC and DLPFC correlates positively with appetitive DVs and negatively with aversive DVs, and mOFC might comprise a common valuation region that encodes for both appetitive and aversive DVs (Litt et al., 2011).

Mishra and Mishra (2010) posited that by influencing specific neurotransmitters, one could potentially influence the individual consumer preference or the ability to make decisions. Brand choice was also investigated by Esch et al. (2012) who found that favorableness of brand associations influences brain activity decision-making and the part of the dIPFC involved in predicted value encoding is more active when consumers are exposed to "strong" than when they are exposed to "weak" brands. They also found that exposure to "weak" brands leads to more activity in the insula which is associated with intense and arousing emotions, such as disgust or pain. Results of the study on expectation bias conducted by Plassmann and Niessing (2010) also suggest that the experienced valuation system is modulated by higher cognitive processes that determine beliefs and expectancies. Interested in the motivational value or incentive salience of an option, Litt et al. (2011) found that predicted value signals encoded in the mOFC/vmPFC are not confounded with related saliency signals of the options for choice.

In relation to visual elements and consumer liking, Nik et al. (2019) show that adding the background color to the designed advertisement has a negative impact on the degree of liking a product. Furthermore, the study indicates that extracted features from EEG could predict consumer decision-making with relatively high accuracy (>87%) and are able to distinguish positive and negative preferences with accuracy higher than 63%. The most discriminative channels for predicting the incidence of decision-making regarding liking, disliking or purchasing are in the frontal and centroparietal locations while the liking/disliking decisions can be observed in the frontal electrodes.

Using model and model-free fMRI analysis in investigating the role of the ventromedial prefrontal cortex in brand preference and assessment of brands, Santos et al. (2011) noted vmPFC activation when participants were comparing positive with indifferent or fictitious brands. However, when the decision-making period was separated from the moment after the response, especially for positive brands, the vmPFC was more active after the choice than during the decision process itself, challenging some of the existing theretofore literature. Lin et al. (2010) found that cognitive sub-processes underlying the assessment of luxurious branded products are only important after the choice has been made. Li et al

(2010) investigated the neural correlates of decision-making, demonstrating a group of brain regions that included dorsolateral prefrontal cortex in relation to working memory, and insula and posterior cingulate cortex for representations of emotional states, while the vmPFC was correlated to both working memory and emotional responses. Chen, Nelson, and Hsu (2015) examined whether branding has a pre-existing personality in consumer mind or the personality is a product of outside influences and reflection.

In 2014, Thomas Zoëga Ramsøy and Martin Skov conducted the first study revealing the effect of individual preference on the clarity of conscious perception. Their novel and unexpected findings show that subjective brand preference alters the likelihood that a brand name will be consciously seen and brand names holding positive or negative preference are seen more clearly, whereas the effect is stronger for positive preferences.

2.5. Consumer decision-making

Neuroeconomic research has mostly focused on illuminating how various factors affect the emotional and cognitive processes involved in the value-based decision-making which refers to functional neural processes involved in representing internal and external individual states, valuation of possible behavioral options and selecting actions based on these valuations. Most recent neuroeconomic models are based on the assumption that valued-based decision-making process involves both cognitive and emotional components and their interaction is complex and usually interactive and interdependent. While emotions are typically seen as generators of motivational states and engaged in valuation of alternatives, cognitive components are involved in information processing and complex cognitive processes: memory, executive function and action selection. From purely neuroscience perspective, choices emanate from a specific, dynamic and complex processes. The steady technological advancement of neuroscience methods and tools, especially neuroimaging, allowed researchers and scholars to visualize perceptual input, intermediate processing and motor output clearly and separately.

The last decade abounds in neuromarketing and consumer neuroscience research focused on consumer behavior and decision making, from the effect of price on the appeal and enjoyment of products (Votinov et al, 2016; Garaus et al, 2016; Bogomolova et al., 2015; Karmarkar et al, 2015), to branding effects (Plassmann et al, 2012) and individual responses predictive abilities of market performance (Christoforou et al, 2017; Shen and Morris, 2016; Boksem and Smidts, 2015; Dmochowski et al., 2014; Berns and Moore, 2012) to advertising effects (Reynolds & Phillips, 2018), additionally providing solid evidence on the crucial role of emotional processes in consumer decision-making. In 2011, Doll and colleagues provided evidence from which a promise for exploring genetics/gene and environment interaction in decision-making research was born. However, most of the studies on decision making incorporate elements of the decision theory which incorporates several types of utility in decision-making. Smith et al. (2010) indicate that rewarding visual images simultaneously generate two types of subjective value signals within the vmPFC: the experienced value signal associated with the attractiveness of the perceived face, and a DV signal proportional to individual relative willingness to pay small amounts of money to see attractive faces. Several fMRI studies indicate that the same brain areas representing values in a choice situation (mPFC and striatum) represent values when evaluating products in the absence of choice necessity (Smith et al. 2014; Bartra et al, 2013; Falk et al, 2012; Levy and Glimcher 2012; Levy et al., 2011; Tusche et al, 2010).

Examining approach motivation ability to predict purchase decision in case of varying brand and price, Ravaja et al. (2013) revealed that relatively greater left frontal activation indicating higher approach motivation during the pre-decision stage predicts an affirmative purchase decision. Higher perceived need and product quality were associated with greater relative left frontal activation. Results showed stronger relationship between frontal EEG asymmetry and purchase decision for national brands vs. private label products, as well as for prices relatively lower than normal.

Wu et al (2012) confirmed the association of ventral striatal activity with positive arousal effect and anterior insular activity with negative arousal and arousal in general, showing that external inputs influence consumer choice by eliciting anticipatory affect, thus neural activity could be used to predict

financial risk-taking. Later, Schaefer et al. (2016) investigated pricing expectations noting that enhanced P300 results in later purchasing. Guo et al. (2016) found that the N200 component during unfamiliar recommendation sources was enhanced, whereas the P300 component was the largest during familiar recommendations (associated with trust), concluding that the N200 component reflects processing of information and P300 component predicts propensity to buy. Telpaz et al. (2015) measured the neural activity and noted an increase in N200 component accompanied by weaker theta band power that correlates with a more preferred product and realized that the accuracy of prediction is dependent the ordinal and cardinal distance of the EEG data, thus the larger the difference in EEG activity between two products, the better the predictive accuracy. Findings obtained from the study conducted by Basten et al. (2010) suggest that neural signals coding decision-related reward and loss expectations are compared in vmPFC, and the resulting cost–benefit difference is accumulated in parietal cortex. fMRI showed that ventromedial and left dorsolateral prefrontal cortex compare costs and benefits by computing the difference between neural signatures of anticipated benefits and costs from the ventral striatum and amygdala, respectively. Besides, changes in BOLD signal in the bilateral middle intraparietal sulcus reflect the accumulation of the difference signal from ventromedial prefrontal cortex (Basten et al., 2010). According to Reimann et al. (2012) in the case of novel brands versus familiar brands, the activation of the vmPFC increases prior to the expressed choice. The activity in the vmPFC and striatum correlates with various value-related attributes and known valuating methods and these areas are also active in the valuation of novel products (Barron et al, 2013).

Solid body of evidence that even complex and important economic choices are sometimes made automatically without attention to products and in the absence of explicit deliberation is provided by Tusche and colleagues (2010) who investigated the predictability of consumer choices from brain responses regarding unattended products. Activation patterns in the insula and the mPFC were found to predict these choices under high and low attention processing and close match of predictive brain regions was revealed independent of spatial attention to products. Moreover, the amount of predictive information remained persistently high when task-irrelevant products were presented outside the focus of attention.

The number of fixations on alternatives in the decision-making process is another common area of interest (Glaholt and Reingold, 2012; Schotter et al, 2012; Meißner et al., 2012; Glöckner and Herbold, 2011) from which can be concluded that chosen alternatives receive more fixations, longer first fixation duration and longer first dwell. Moreover, decision makers are more likely to fixate the chosen alternative first (Glaholt & Reingold, 2011; Schotter et al., 2010), and very likely to have their last fixation towards the chosen alternative before the decision is made (Krajbich et al., 2012; Krajbich & Rangel, 2011), while the utility effect becomes stronger during choice experiments manifesting increased correlation between attention and attribute values (Meißner et al., 2012).

2.6. Social influences and social behavior

As social animals, we are continuously under the influence of numerous external social and cultural factors and our decisions are consciously or unconsciously affected by our surrounding, friends and peers, social media and other reference groups through continuous interaction. Seems like our brains are innately wired to be social. We try to conform and adapt to the social norms, we crave to be accepted, respected, to belong and to thrive as a part of our group and our society. Willingly or unwillingly, we shape and modify our behavior according to the expectation of others. For years, social psychology and social neuroscience have been focused on providing better understanding of how social context affects our choices and our lives, identifying a multitude of complex processes, such as social learning, mental state inferences, role and perspective taking, impression formation and spontaneous trait inferences that occur during the interaction with others from our social environment. Social behavior and the social brain present new challenges to the emerging field of neuromarketing and are one of the new frontiers in consumer neuroscience, opening numerous questions about how social thinking affects what we choose, what we do and how we behave as consumers.

According to Lee and Harris (2013), a growing body of research in neuroeconomics has examined decision-making involving social and non-social stimuli to explore activity in brain regions, such as the striatum and prefrontal cortex, usually ignoring the power of the social context. Complex processes involved in the social behavior rely on a particular network of brain regions comprising superior temporal sulcus, temporal parietal junction, medial prefrontal cortex and precuneus. A growing body of evidence confirms that the social context modulates decision-making and during the last decade several studies have investigated how this particular process happens and how social cognition and perception are integrated at a neural level (Engelmann and Hein, 2013; Suzuki et al., 2012; Yoshida et al., 2010). Lin et al. (2012) expand Alexander and Brown's assumption (2011) that medial prefrontal cortex works as an action-outcome predictor concerned with learning and predicting the likelihood of outcomes associated with actions, revealing that this brain region is active in creating value signals in a social context. It is found that striatum responds to social rewards (Izuma et al., 2010), and when social targets differ from the existing expectations firing of dopamine neurons indicating prediction error occurs (Harris and Fiske, 2010). Moreover, social norms can influence the social stimuli value, specifically modifying nucleus accumbens and OFC activity (Zaki et al., 2011). In 2015, Pozharliev and colleagues confirmed the effect of social influences on purchase decision by observing changes in LPP component during purchasing decision-making in presence of other people. Research has shown that social rewards engage the same brain regions that are common when receiving non-social rewards (Smith et al., 2010; Izuma et al., 2010; Lin et al., 2012). Regarding consumer socialization and peer to peer interaction, it has to be noted that ventral striatum and OFC track predictions about whether a social agent will give positive social feedback, while ACC correlates with modulation of expected value associated with the social agents (Jones et al., 2011). In attempt to learn to predict other person's behavior, different regions of the prefrontal cortex involved in valuation and prediction error are engaged (Suzuki et al., 2012). More practical example providing evidence on human tendency to change personal opinion due to the perceived opinion of the reference group is the experimental study conducted by Berns et al. in 2010, which demonstrates this tendency to change opinion under social influences is in positive correlation with neural activation in ACC and anterior insula. A year later, Berns and Moore (2011) suggest that the neural responses to goods are not only predictive of purchase decisions for individuals, but can be generalized to the population at large and are able to predict cultural popularity. Similarly, Dmochowski et al. (2014) found that the level of inter-subject correlation in the evoked encephalographic responses obtained from the small sample predicts the expressions of interest and preference among thousands, suggesting that as favorable stimuli are perceived those to which the brain responds in a stereotypical manner shared by friends and peers.

3. EXAMPLES OF NEUROMARKETING RESEARCH IN COMMERCIAL PRACTICE AND ADVANCEMENT OF NEUROMARKETING TOOLS

In order to shed light on how practical application of neuroscience tools contributes to improvement of marketing communications, branding and product design, this chapter explores neuromarketing research studies conducted for specific commercial purposes and identifies the most successful examples of neuromarketing in practice.

In 2016, Kuhn and colleagues confirmed the feasibility of applying neuroimaging methods in a relatively small sample to correctly predict sales changes. Using fMRI to forecast chocolate sales at the point-of-sale, extracting fMRI data from the following brain regions: nucleus accumbens, medial orbitofrontal cortex, amygdala, hippocampus, inferior frontal gyrus, dorsomedial prefrontal cortex, dorsolateral prefrontal cortex and insula which based on neuroscience evidence were assumed to affect sales. The results revealed that changes in sales could be best forecasted by fMRI signal during communication viewing, then by a comparison of brain signal during product viewing before and after communication, and least by explicit liking judgements. To test whether neural activity has the ability to forecast future market-level crowdfunding outcomes, Genevsky et al. (2017) used fMRI and observed neural activity in nucleus accumbens and medial prefrontal cortex. The study suggests that although activity in both the NAcc and MPFC predicted individual choices to fund on a trial-to-trial basis in the neuroimaging sample, only NAcc activity generalized to forecast market funding outcomes weeks later on the internet –

leading to the conclusion that a subset of neural predictors of individual choice can generalize to forecast market-level crowdfunding outcomes better than choice itself.

One extraordinary case of successful use of neuromarketing to generate increase in sales and requests is the study conducted to test the effectiveness of the UNHCR charity ad aimed at promoting testamentary legacies, which revealed that increase in negative emotions, higher salience for the “Call to Action”, inclusion of more dramatic scenes related to the representation of refugees and synchronized animation with the voiceover can generate higher involvement. The results are + 237% in number of people that subscribe for the testamentary legacy, and + 553% in legacy calls (Brain Signs, 2018).

Bergman and Noren (2017) inspected the online web shop graphical elements that invoke safety and trust in buyers and concluded that intense web page colors and unprofessional text fonts such as Comic Sans should be avoided and provided certificate and contact information is recommend. Using eye-tracking technology, Leiva et al. (2019) conducted a study to assess the advertising effectiveness in Travel 2.0 websites, concluding that Facebook banner generates the most attention and recall among the participants. Even though the banner was in the same position in all compared cases, Facebook ads attracted consumer attention both more frequently and for longer time spans. These results made marketers and online content creators realize that website design complexity affects viewing patterns and less content on the page (Facebook) is more effective than TripAdvisor pages or traveling blogs with ample content. Murray (2019) gives an excellent example of neuroscientific measures able to significantly predict sales data for large number of ads: the CBS, Nielsen Consumer Neuroscience and Nielsen Catalina Solutions partnership, formed to extend the concept of neuroscience validation to the broad category of fast-moving consumer goods, which proved that a multimodal research approach comprised by different measures such as EEG, EDA, and FEA can be the best predictor of in-market sales lift. Measuring narrative engagement through the extent to which the audio or visual delivery medium of the story affected conscious and subconscious engagement, Richardson et al. (2018) found out that even though participants self-reported greater involvement for watching video relative to listening to auditory scenes, they had stronger physiological responses for auditory stories including higher heart rates, greater electrodermal activity and higher body temperatures, which is an evidence that commercial stories and ads can be more cognitively and emotionally engaging when presented in an auditory format.

Roghanizad and Neufeld (2015) investigated intuition, risk, web trustworthiness and formation of online trust among e-buyers and concluded that when confronted with a no-risk decision related to book purchase from an online bookseller, buyer decision-making process is consistent with the dominant deliberative personal view regarding the purchase, but once confronted a decision entailing risk such as sharing personal sensitive information with an unknown website, one relies on one’s non-rational gut-level intuition. To provide useful data for companies engaged in e-commerce, in 2018, Aranda et al. investigated how payment methods available on a company’s website affect the trust of prospective buyers and influence their behavior. Data showed that due to its convenience and security, PayPal payment method is preferred by the buyers. Jin et al. (2017) investigated how consumers are affected by product descriptions in online shopping. To directly examine the role of attribute framing in information processing and decision-making in online shopping, Jin, Wuke and Chan (2017) applied the measurement of event-related potentials (ERPs); obtained results revealed higher purchase intention with a shorter reaction time under a positive framing condition compared to negative framing condition. The results of ERPs indicated that negative framing messages attracted more attention resources at the early stage of rapid automatic processing and resulted in greater cognitive conflict and decision difficulty, while the positive framing messages allowed consumers to perceive a better future performance of products and classify these products as a categorization of higher evaluation at the late cognitive processing stage of valuation.

Another example of neuromarketing research in commercial practice is Chips Ahoy successful package redesign in 2011 (Young, 2011). Based on the results of the study adopting eye-tracking technique, the company implemented several key changes to their packaging: tube resealing package, refined text and bolder colors, and fun and engaging cookie image. Interested in consumer willingness to pay Herbes et al. (2015) introduced a novel neuroscience-based approach to willingness to pay for renewable energy named neuropricing and revealed that consumers are willing to pay above 15% more for green products

compared to the non-green products. Based on Herbes et al. (2015) study it can be assumed that neuropricing is significantly more precise in predicting population behavior than reaction times, which in turn are better method than questionnaires, but also neuropricing may better assess consumer valuation of non-core or symbolic product benefits like ethical production, region-specific origins, social status, healthy food, organic products, use of non-conservative materials and methods, social responsibility etc. Another excellent demonstration of neuromarketing in practice, and according to Murray (2019) one of the most prominent single-blind studies to show that neuroscience tools can be used to reliably predict the sales of a high-volume consumer electronics product, is the Mimoco case, a study conducted by Innerscope Research (2012) which included 30 existing product designs tested and assessed through static screen-based methodology in the lab, while EDA, heart rate, and eye tracking data were collected from respondents passively viewing the designs. Based on the data from the combination of biosensors Innerscope ranked the products, and the in-lab results were able to explain 50% of the variability of in-market sales. When Mimoco lined up Innerscope's ranking with their own sales data, it was clear the neuroscience data correctly identified four of the top five sellers, as well as a number of the bottom-selling designs.

When it comes to the technological advancement of neuromarketing tools over the past 10 years, it has to be noted that the number of innovative tech-companies engaged in launching neuromarketing equipment and techniques that can gauge certain neural, neurochemical, physiological or physical responses, has also significantly increased. For example, in 2017, Immersion Neuroscience developed the INBand, an armband that can measure brain oxytocin levels related to emotional engagement, by tracking the cadence of the Vagus nerve that controls the heartbeat. This tool was later used in numerous studies (assessing neurochemical responses to 17 ads from the 2018 Superbowl, cost-effectiveness of M&Ms' "Human" commercial, measuring attendees' immersion during global conference, etc.). Moreover, eye-tracking software and tools became more accessible, less expensive and easily maneuvered, the technique has become a dominant precursor to test ad campaigns. On the other side, facial expression measurements such as FaceReader by Noldus are easy to use, save valuable time and resources and could be easily integrated with eye-tracking and physiology data, which offers an integrative approach, clear insight into the emotional effect of different marketing stimuli. Another way that neuromarketing has advanced over the last few years is through personalizing virtual reality content based on biometric engagement. Moreover, another example of innovative company is iMotions which synchronizes biometric sensors combining eye-tracking, face expression, EEG and GSR into one platform that can scale and simplify biometric research and has been helping the industry with providing more accessible, scalable and less expensive research methods.

As a result of the continuous exponential technological growth, the constantly increasing number of innovation-led companies and the persistent academic interest in consumer behavior and decision-making process, it is expected that neuromarketing tools will become even more sophisticated, advanced, precise and reliable, which would lead to greater understanding of consumer mind, building predictive models of consumer behavior, making optimal marketing decisions and ultimately creating more value for the customers and providing better consumption experience.

4. DISCUSSION

We have to acknowledge academic accomplishments in the field of consumer neuroscience, as well as all the commercial attempts to employ neuroscience data, tools and technique in order to provide new ways of understanding consumer mind and create more effective strategies, not just to increase sales, but also to create value for customers and satisfaction from the consumption. Neuromarketing studies provided useful information which help marketers to surmount many challenges in business practices, especially in advertising and marketing research.

Looking back over the past 20 years since the field of neuromarketing officially emerged, both scholars and neuromarketing practitioners have become aware that this discipline is not yet at the point where it has been expected to be. However, we can't say whether we have been holding unrealistic expectations, or neuromarketing research realistically underperformed. Going back to the begging of the new millennium, it is obvious that the early steps of neuromarketing and consumer neuroscience failed to consolidate, probably because neither the technology or the science was sufficiently mature at the time.

But we have to note that the all initiatives, whether academic or commercial, have had much more success after 2010 and considering the advancement of scientific methods and techniques, as well as obtained findings over the last 10 years, the future of these still emerging fields looks promising. Moreover, numerous aforementioned studies confirmed that the application of neuroscience tools for marketing purposes can significantly boost our understanding of consumer behavior and decision-making. Even more importantly, the number of studies able to predict market performance, number of sales and general product popularity, has been constantly increasing (Christoforou et al, 2017; Barnett and Cerf, 2017; Shen and Morris, 2016; Boksem and Smidts, 2015; Dmochowski et al., 2014; Berns and Moore, 2012). I believe that neuromarketing research is still far from achieving its peak, but it is definitely promising and worth investing all required resources in it, in terms of money, technologies, time, human capital, passion and hope.

Best discussion of the advantages of neuromarketing research and explanation of how neuromarketing practice can enhance brand performance and increase sales is provided by Plassmann et al. (2015) who identify five main ways how neuromarketing can help marketing academics and professionals: identifying behavior mechanisms that help validate, refine, or extend existing marketing theories; measuring implicit processes in decision making; dissociating between different psychological processes; understanding individual differences; and improving predictions of behavior.

Another important fact is that beside the marketing industry, major companies and prominent brands, such as Coca-Cola, Campbell's Soup, PayPal, Hyundai, Yahoo, Google, Walt Disney Co., Microsoft, Chevron and Frito-Lay among others, have been quick to adopt cutting edge technology and neuroscience methods, including EEG, MEG, fMRI, facial expression recognition, eye-tracking and GSR to understand and predict consumer behavior for the purpose of improving marketing practices and creating more effective strategies. As Garun (2015) states, established companies like General Electric have launched special research centers, such as the GE BBQ research center where researchers use EEG to study consumer responses to food and taste in order to perfect their BBQ recipe. It is obvious that this is increasingly becoming interesting to academic researchers and marketing managers, as it provides more reliable and scientific data than findings obtained through traditional marketing methods.

Rawnaque et al. (2020) offer a systematic review of technology and tools used in neuromarketing, from which can be concluded that a trend of analyzing frontal and prefrontal alpha band signals is observed in emotion recognition-based experiments. Due to its low cost and high time resolution advantages, many researchers found EEG more favorable than fMRI in examining the effects of video ads. Physiological response measuring techniques such as eye tracking, skin conductance recording, heart rate monitoring and facial mapping have also been frequently employed, both independently or combined with other methods. Alongside traditional filtering methods, independent component analysis was commonly present in artifact removal from neural signal. According to Rawnaque et al. (2020), in consumer response prediction and classification, Artificial Neural Network (ANN), Support Vector Machine (SVM) and Linear Discriminant Analysis (LDA) have performed with the highest average accuracy among other machine learning algorithms.

4.1. Limitations

Despite the scientific development over the last decade and increasing commercial popularity and acceptance, neuromarketing is still facing multiple issues, including uncertainty in terms of the methods, variability in the interpretation of findings, the persisting distrust due to the insufficient reliability and validity of the metrics and measurements, reverse inference noted in primer studies, high fragmentation of consumer neuroscience scientific literature, high cost and technical limitations of some of the neuroscience tools, as well as lack of transparency regarding methodologies employed by the neuromarketing companies.

In this sense, arguing the transparency and reliability issues in the practice of application of neuroscience-based methodologies on relevant marketing stimuli, Trettel and her colleagues (2016) state that one of the reasons of misperception and overestimation by the public opinion of the actual

capabilities of neuromarketing is due to the lack of transparency of the methods and techniques used by the companies engaged in neuromarketing and the fact that different companies offer services based on proprietary computational methods that are not fully validated or disclosed through scientific publications to the scientific community (Trettel et al 2016, p. 101). Ulman et al. (2015) emphasize the need of further scientific research in order to establish stronger basis for validation of the scientific background of neuromarketing, while Stanton et al. (2016) refer to public fear regarding ethical approach of neuromarketing and the immediate effects of neuromarketing practices on individual consumer, as well as the long-term effects on society as a whole.

4.2. Implications for future research

Living in a time when scientific validity and reliability in applied sciences and research are not only recommendable, but crucial and essential, solid rules, research frameworks and universal measurements in neuromarketing should be established as soon as possible. These current limitations lead to substantial divergence in measures that are assumed to assess the same, resulting in unreliable data and decreased opportunity to repeat the study in other context or by other researchers. Moreover, it requires more research to validate each method and demonstrate predictive ability of the measures. These shortcomings should be seen as challenges, offering a vast space for improvement, and once we overcame them the future of neuromarketing would be much brighter. What this emerging discipline needs is established and solid standards, validated reliable metrics and well documented findings.

Even previously, many scholars highlighted the importance of having a certain research framework that would improve the validity and reliability of neuromarketing studies and would eradicate existing mistrust among some academics toward this discipline. Additionally, such framework and determined methodology would provide more valuable insights for marketers. Ramsøy (2019) offers further discussion on neuromarketing limitations and opportunities, thoroughly describing different types of validity and reliability of methods.

In relation to the studies on advertising effects on consumer behavior, Ramsøy (2019) suggests a basic foundation for the use of neuroscience and related methods in studying the advertising effects, identifying three crucial elements: distinction between basic, translational and applied research; conceptual clarification; and framework for the validation of neuroscience-based metrics. Moreover, future studies should be based on the new findings in consumer psychology and neuroscience and focus on the role and neural bases of dynamic memory in the formation, sustaining, and alteration of brand preferences.

It is important to note that the next level of research in this area needs to go beyond merely establishing associations between brain activity and a specific behavior. Ramsøy and Skov (2010) were the first to realize the need for novel approach to understand consumer mind and behavior, suggesting that beyond testing the relationships between brain systems and behavior, another exciting approach would be to go a level deeper and test the relationships between specific neurotransmitters, decision-making and behavior. According to Kable (2011), 60% - 70% of empirical neuromarketing and consumer neuroscience studies theretofore, adopted only one method, fMRI. Thus, in order to establish a deeper understanding of the relationships between neuropsychological processes and consumer behavior and to make a major breakthrough in our understanding of consumer mind, neuroscientific tool kit has to be even more expended, technologically advanced and innovative and easily adaptable and applied.

On a more positive note, it is undeniable that neuroscientific methodologies are now accepted as a viable tool to study marketing phenomena. Moreover, as the set of tools available to scholars expands, neuromarketing studies provide strong evidence that neuroscientific methods can make significant contributions to advancing the knowledge of consumer behavior. Further, the increasing attention given to neuromarketing in the top marketing journals, as well as the adoption of neuromarketing techniques by some of the most successful companies, should inspire even more researchers to investigate the potential of neuroscience in their area of interest.

5. CONCLUSION

By offering a detailed review of neuromarketing and consumer neuroscience studies conducted over the last decade, the purpose of this paper was to shed light on how neuromarketing expands our understanding of the consumer mind. In particular, I aimed to reveal the most significant findings in the field of neuromarketing from 2010 to 2020. This paper shows that neuromarketing has become significant academic and commercial area of interest, as the advancements in neural recording techniques and interpreting algorithms have made it an effective tool for recognizing the unspoken consumer response to various marketing stimuli. Arguing the limitations and taking in consideration methodological differences, lack of systematic validation of neuroscience-based metrics, further conceptual inconsistencies and untransparent commercial neuromarketing practices, it can be concluded that this discipline still requires maturation and more rigorous scientific approach to research. However, over the last decade there has been an apparent advancement of consumer neuroscience and neuromarketing techniques, scientifically, technologically and commercially. Neuromarketing and consumer neuroscience studies have begun to validate some of the audacious expectations among academics and practitioners, demonstrating that brain data obtained with neuroscience tools can predict future sales and other significant market-related outcomes and confirming the benefits of neuromarketing over traditional approach. I personally expect that all the skepticism regarding neuromarketing and consumer neuroscience will soon fade, due to the fast advancement of science, technology an innovation, as well the constantly increasing interest in the field since many questions about the human mind and what is hidden in the black box remain to be answered. We have to remember that scientific knowledge is always built incrementally, and each consecutive study a new building block toward groundbreaking discovery.

Barriers of Circular Economy Implementation in the Hungarian SME's

Wael Brinsi (PhD Student)¹

¹Alexandre Lamfalussy faculty of Economics, University of Sopron, Hungary, Email:
waelbrinsi@gmail.com

Abstract: Over last few years, the concept of Circular Economy has gained significant attention from both researchers and practitioners to achieve sustainable development. However, few studies have been accomplished regarding drivers and barriers to implementing Circular Economy. With this concern, the aim of this study is to identify the implementation level and the barriers that influence the transition to Circular Economy experienced by the Small and Medium Enterprises (SMEs) within Hungary. By approach, both qualitative and quantitative methods were used for a better inference results through questionnaire that was carried out with the SMEs operating in Hungary. In addition, CREFOPORT database used to select and reach out to the target companies. The barriers have been classified into 5 categories based on an extensive review: Financial, Technology & Expertise, Regulatory, Cultural and Market category. The study results reveal that the implementation of Circular Economy practices is in the infant stage in Hungary. Also the lack of consumer interest, high initial capital cost, Strong risk aversion, the current linear system is in place and lack of proper technology are the most pressing barriers.

Key Words: Circular Economy, Hungarian SMEs, Barriers, awareness level

INTRODUCTION

Indeed, the Circular Economy (CE) model entails 3R principles: Reduce, Reuse and Recycle materials. Reduce refers to the minimization of inputs and the consumption of the raw materials, energy and waste generated. Reuse refers to the repeated use of by-products or some parts of items over multiple cycles and in another stage of production. Finally, Recycle suggests the use of post-consumption items and waste materials as a substitution for using virgin materials (Q. Z. Yang, 2014).

In past years, the concept of the CE has become attractive to major companies and policy-makers as a sustainable initiative to tackle the environmental deterioration and the depletion of natural resources. Unlike the traditional model, CE aims to respect the environmental boundaries through the minimization of the use of virgin materials and discharged waste that demonstrates a strong interrelation between the economic and the environment.

The successful uptake of CE initiatives could deliver a wide range of benefits and contributes to value creation for such aspects as environmental, economic and societal spheres (Sehnm, 2018). Regarding the environmental benefits, the CE model aims to fight the severe shortage and the depletion of the natural capital that can be achieved through the integration of the recycling process. At its core, the CE tend to optimize the resource yields whereby the product is designed to last longer as possible.

Besides environmental sustainability, becoming more circular could lead to economic growth and reduce the large gap between the growing demand for raw materials due to the growth of the population and suppliers shortage. Such changes entirely increase revenue by cutting off input costs and the quantity of raw materials used. Indeed, the economic benefits have been increasingly recognised by decision-makers and researchers. In terms of social benefits, the side effects of a positive environment improve human health and well-being. The pointers are the reduction of negative externalities such as pollution, emission of carbon dioxide and the release of toxic substances. Therefore, the ultimate goal of sustainable development is to achieve harmony between a protected environment, economic growth and social equity (Garcés-Ayerbe, 2019).

Although there is widespread of the CE concept among companies, the transition to CE still in a very nascent stage, especially for SMEs that are immersed in unsustainable business models and for the emerging economies (Thayla T. Sousa-Zomera, Exploring the challenges for circular business implementation in manufacturing companies: An empirical investigation of a pay-per use service provider, 2017). Small and Medium Enterprises (SMEs) play a crucial role in this debate since they are the predominant form of companies operating in the market. According to (OECD, 2017), SMEs

represent 95% of companies in the OECD member states. Nevertheless, in the European Union, SMEs make up 99% of all companies (Ormazabal, 2018). Indeed, some research stated that the implementation of new practices that align with CE have generated value for SMEs in terms of accessibility to new markets, saving material costs and create competitive advantages (Matteo Mura, 2019).

Moving toward CE is relatively challenging and requires fundamental changes in several subsystems (Thayla T. SThayla T. Sousa-Zomera, 2018). In fact, there is a huge gap between the theory of CE and its implementation process, in other words, the CE business model is not fully implemented. Several companies have intended to adopt the CE business model but unsuccessful as there are different barriers and challenges that hamper or slow down during their transition. The exploration of the current barriers is required to give insight and support companies to shift towards the new business model. Therefore, this paper aims to explore the main barriers encountered by Hungarian SMEs to implement CE with the following objectives:

- Investigate the extent to which Hungarian SMEs have adopted CE business model
- Identify the barriers related to CE implementation
- Analyse the identified barriers to CE implementation

The remainder of this paper is structured as follows. Section 2 provides a classification of the main barriers to implement CE by SMEs. Section 3 describes the methods and materials used for gathering and analysing data. In section 4, the results are explained and discussed. Finally, the conclusion is drawn in section 5.

2. CATEGORISATION OF BARRIERS

In recent years, several research conducted have identified barriers hampering SMEs to implement CE business models and divided barriers into different categories. (Ana de Jesus, 2018) categorized barriers into *soft* “institutional and social” and *hard* “technical and economic”. However, (Eijk, 2015) opted for a different categorisation in terms of lever such as “design and production”, “logistics”, “consumption”, “recycling and recovery” and “general framework”. In addition (Krichherr, 2018) distinguished between technological, regulatory, market and cultural categories. In this research, the barriers are categorized according to the most frequented in the literature: these are *Financial, Cultural, Market, Regulatory and Technology & Expertise* categories as presented in table 1.

Table 1. Categorised barriers to implementing Circular Economy

CATEGORIES	TYPE OF BARRIER	BRIEF DESCRIPTION	LITERATURE SOURCES
Financial	High initial capital cost	High upfront costs needed which has a long-term payback period	(Krichherr, 2018)
	Low virgin material prices	Virgin material is often still cheaper than recycled	(Jim Hart et al , 2019)
	High production costs	Potential increase in production cost due to the increase of raw material costs and production process	(Aamon Kisslinga et al, 2019)
	Lack of Competence & Knowledge	Lack of Qualified workers and the know-how to embrace CE solutions	(Vasileios Rizos, 2015)
Technology and Expertise	Lack of information/data	Unavailability of clear guidelines to define sustainability in SMEs and CE principals	(de Sousa Jabbour, Jabbour, Godinho Filho and Roubaud, 2018)
	Lack of proper technology	Inability to deliver high-quality products due inappropriate technology	(Martin Agyemang et al, 2018)

	Lack of effective policies	There is no strict and clear legislative that impose companies to adopt CE	(Jim Hart et al , 2019)
Regulatory	Administrative burden	Complexity of the administrative procedures and the requirements of the environmental legislation	(Vasileios Rizos et al, 2016)
	Lack of governmental incentives	Weak incentives system to stimulate the adoption of CE business models	(Calogirou et al, 2010)
	Strong risk aversion	Difficulties to estimate products performance and the financial forecast discouraging to take risk	
Cultural	Lack of interest on the part of Leaders	Poor management commitment and focusing on short term investment which does not align with CE	(Yong Liu and Yin Bai, 2014)
	Current linear system in place	Companies are already familiar with the Linear system which is deeply rooted and widely established in their current business practices	(A.G. Pheifer, 2017)
	Lack of consumer interest/awareness	Negative perceptions of reused products and unwillingness of consumers to change their lifestyle and buying behaviour	(Yong Geng and Brent Doberstein, 2008)
Market	Difficult to cooperate/collaborate with other companies	Insufficient transparency and weak relationship within the industrial sector to create eco-industrial chains	(Kannan Govindan and Mia Hasanagic, 2018)
	Unpredictability in supply and demand	Limited willingness of suppliers and customers are considered as a discouraging factor	(D.A. Vermunt, 2019)

3. METHODOLOGY

This exploratory study follows a deductive approach. This means the results have been derived using quantitative methods, analysis and based on the interpretation of quantitative research data. The first step consisted of a structured review of the literature, followed by the design of a detailed questionnaire based on the literature. The third step was data collection including the distribution of the questionnaire. Later, data analysis of the returned questionnaires were performed. The steps followed in this research are presented in fig 1:

Figure. 1. Flowchart of research

3.1 Questionnaire design

For this study, the primary data was collected through a questionnaire to explore the degree to which the Hungarian SMEs have implemented the CE and the main barriers they face. The questionnaire was designed using the Lime Survey application with both English and Hungarian language to facilitate data collection. Overall, the questionnaire composed of 15 questions and was categorized into three sections. The first section consisted of demographic questions including the industrial category of the company, company size in terms of employees and respondents position. The second section was aimed to explore the awareness level and the degree of CE implementation among Hungarian SMEs. The questions included the percentage of Reusing or recycling materials and the percentage of Disposal of materials within the company, in addition, basic questions to uncover respondent’s knowledge about CE and its benefits. The third section aimed to find out the barriers to CE implementation, 15 barriers have been selected based on an extensive literature review were divided into 5 categories. For each barrier, the respondents were requested to estimate its significance according to the five-point Likert scale ranging from 1= the lowest level to 5= the highest level.

3.2 Questionnaire distribution

The target respondents in this research involved General Managers, management positions and Head of Environmental Management from various industries in Hungary. To avoid mistrust of the respondents, the questionnaire started off with an explanation of the overall research objectives, ensure that the participation is voluntary and promised that all responses will be treated with confidentiality. The contact person for each company was obtained from two different sources. The first source is the CREFOPORT database (the online database of companies in Hungary) while the second source consisted of the social networking site LinkedIn. We used some specific conditions and filters in CREFOPORT to get a heterogeneous sample composition. For instance, the selection of different *Regions* and *Industrial sector* of the companies within Hungary, *Number of employees* between 0-250 employees and the *Active* companies.

The questionnaire was sent by email to 1300 companies, 76 questionnaires were returned consisting of 16 uncompleted responses and 60 ones completed which represented the final sample size for this research. Thus, the effective response rate was 9.5%. In addition, the questionnaire was available for completion from 1st of March 2021 to 30 of April 2021. Due to the exploratory character of the research findings, we used SPSS to analyze the questionnaire data and the results were presented through descriptive statistics.

The WEIGHTED MEAN method was employed to evaluate the influence of each barrier. This approach is widely used in the industrial sector and serves as a support for decision-making problems.

There are five steps for applying WEIGHTED MEAN method: (1) Selecting and categorizing barriers from the literature review, (2) Designing the questionnaire (3) Distrusting and collecting data, (4) Calculating weighted mean for each barrier, (5) Ranking the barriers and interpreting results.

Step 1: Developing the Linguistic Scales

The first step consisted of the development of the linguistic scale. The respondents completed the evaluation according to their experience and knowledge. The Weighed Mean was transformed into a descriptive equivalent: Rating Scale: Highest range- Lowest range/ Highest range = $5-1/5 = 0.8$

We proposed the following five-point Likert scale:

Table 2. Weighted Mean Linguistic scale

Scale value	Range	Descriptive Equivalent
1	[1 - 1.8]	No influence
2	[1.8 – 2.6]	Very low influence
3	[2.6 – 3.4]	Low influence
4	[3.4 – 4.2]	High influence

5

[4.2 - 5]

Very high influence

Step 2: Formulate a normalized Weighted mean matrix

The normalized Weighted mean matrix was obtained as follows:

$$\bar{x} = \sum_{i=1}^N w_i x_i$$

Where \bar{x} = the weighted mean barrier
 w_i = the allocated weighted value
 x_i = the observed value

It was assumed that all barriers has equal importance.

Step 3: Calculate the Weighted mean of each barrier

The Weighted mean of each barrier is calculated using the equations in step 2. The barriers are ranked from the highest to lowest influence according to the weights of barriers. The results, weighted mean and rankings are summarized in Table 6.

3.3 Respondent’s Profile

The profile of respondents represents a heterogeneous sample as it summarized in Table 3. The greater portion of the respondents were holding managerial roles 51.67% followed by General Manager 13.33% and only 10% were acting as a Head of Environmental Management. In terms of industrial sector, around 18% of the respondents were from the mechanical and electrical engineering followed by chemical industries were 16%; food, beverages, tobacco industry were 15% whereas were 10% from other sectors. Regarding number of employees, 36% of the companies employed between 100-250 employees, 28% employed between 50-99 employees and 21% employed 10-49 employees. The remaining were between 0-9 employees.

Table 3. Demographic profile of the respondents

Demographic information	Number of Respondents	Percentage of respondents
Position		
General Manager	08	13.33%
Management positions and related	31	51.67%
Head of Environmental Management	06	10.00%
Other area of the company	15	25.00%
Sector		
Mechanical and electrical engineering	11	18.33%
Food, beverages and tobacco industry	09	15.00%
Chemical industries	10	16.67%
Mining		
Construction industries	03	5.00%
Forestry, wood and paper	05	8.33%
Oil & Gas industry	06	10.00%
Agriculture, plantations and rural sector	03	5.00%
Financial services and consultancy	04	6.67%
Other	06	10.00%
Number of employees		
0-9 employees	08	13.33%
10-49 employees	13	21.67%
50-99 employees	17	28.33%
100-250 employees	22	36.67%

4. RESULTS & DISCUSSION

The following section presents the results of the questionnaire, which is subdivided into three aspects: 1/ how participants perceive CE, 2/ Examination of the implementation level of CE, 3/ Exploring company's behavior. Finally, analyzing the barriers to CE adoption resulting from the questionnaire.

4.1 Circular Economy awareness

Initially, respondents we asked about their knowledge concerning the CE and its benefits. The results have shown that only 18% of the respondents had heard of the CE and chose the answer "Yes" while the remaining 82% did not. When we asked the respondents whether they are aware of CE benefits, about 78% have chosen the option "No". This result revealed a low level of awareness and lack of understanding around CE within companies. There is a clear strategy to provide appropriate capacity trainings and for those businesses in order to improve their awareness on the benefits of CE.

Figure2. Circular economy awareness

4.2 Implementation Level of Circular Economy

Adopting a Circular Economy business model is a challenge for SMEs. To explore the current implementation status, the respondents were asked to select one of the following alternatives: Already implemented, planned for the next 2 years or not implemented. The findings were that 86% of the respondents stated that their companies did not either implement CE practices or planned for the next 2 years. The companies are not ready yet, 11.67% of the respondents answered that their companies intend to implement it over the next 2 years. However, 8.33% acknowledged that CE already is adopted.

There is another aspect to evaluate the CE status in Hungary. The respondents we asked whether their companies cooperate with other companies to create an eco-industrial chains. The Majority, 90%, stated that there is lack of cooperation between companies to guarantee the creation of an eco-industrial chain.

Figure 3. Implementation Level of Circular Economy

Figure 4. Cooperate Level between companies to create eco-industrial chains

4.3 The behavior of companies towards Circular Economy

Regarding companies' behavior in connection with CE practices, respondents we asked to assess the percentage of recycling materials. However, the results indicated that the wasted materials rate is very high. Over 50% of respondents stated that the recycled materials rate does not exceed 40% and the remaining represents the disposal rate.

Figure 5. The Level of implementation of the Recycling phase

4.4 Barriers for the Circular Economy

The identified perceived barriers by the questionnaire respondents for implementing Circular Economy practices are illustrated in Table 2 based on their relevance.

4.4.1 Financial barriers

This category comprises the most salient barriers receiving the highest weights. The high upfront costs in any industrial sector, which are required to adopt CE practices, were perceived as major obstacles in this category and comes fifth among all categories. Moreover, companies anticipate a long pay-back period, especially for SMEs with short-term visions. Under this barrier, there are also indirect costs for hiring employees with higher expertise and arranging training for them. The "low virgin material costs" appears as the sixth most influencing barrier, (Felix Preston, 2012) Claimed that in many cases, the recycling of materials is uneconomical compared to the production of virgin materials.

The "high production costs" perceived is as the seventh barrier on its weight. This is due to the augmentation of recycling costs and wages also purchasing sophisticated machines. Thus, the profits will be decreased and companies were not willing to incur as their sole goal is striving to reduce production costs.

4.4.2 Technology and Expertise barriers

The possession of proper technology and the relevant expertise is prerequisite to implement CE. However, this category is identified as the bottleneck because it is not fulfilled yet by most companies. In contrast, the Lack of Competences & Knowledge barrier ranked as the ninth most pressing barriers includes the gap in workers in terms of detailed technical skills and the ability to design, deal with remanufactured products. The lack of data about the economic and environmental benefits has been classified in twelfth rank. Comparatively, this barrier has lower influence compared to the barriers and the respondents could access to this information.

Regarding the Lack of proper technology barrier, it emerged as the highest pressuring barrier where the existing technologies and machines are inappropriate to meet the CE expectations. Hence, companies should invest in high-grade technology that can improve the opportunity to deliver high-quality products and to integrate in eco-supply chains.

4.4.3 Regulatory barriers

Generally, government plays a crucial role for SMEs to embrace CE practices. Hopefully, such government intervention are needed to change SMEs vision towards environmental aspects. Indeed, the regulatory category consisted of three barriers; the most influencing regulatory barrier is "Lack of government incentives" which ranks eight out of the 15 barriers. The latter barrier includes the lack of special benefits to the companies that intend to adopt CE initiatives. These benefits could be in form of fiscal exemption or effective taxation system as well as opportunities for funding. In addition, the government should set up conferences to promote and discuss the importance of the CE practices with the manufacturers.

Usually, moving towards CE is a long and complex procedure for SMEs. Additionally, SMEs are required to meet certain standards and obtaining certificates. This administrative burden appears as the ninth barrier among all barriers in our questionnaire. From legislative perspective, Hungarian policy does not create a unified platform to promote the CE. Moreover, the current policy discourages companies in terms of taxation system, import duty for the recycled materials. Thus, companies prefer to use virgin material rather than the recycled as they are comparatively cheaper. The Lack of effective policies perceived is the eleventh rank. Overcoming this barrier means that, the Hungarian government should provide a strict legislative system imposing the integration of CE practices into their operation system.

4.4.4 Cultural barriers

The cultural barriers category concerns the decision-makers and manager's behavior as well as their willingness to embrace CE practices. Indeed, this category comprised the following barriers. Strong risk aversion associated to the implementation of CE. This is due to the complexity to evaluate its benefits and estimate the implementation costs. Even as some managers have positive perception towards CE, this difficulty to anticipate the concrete benefits hinder its adoption. The latter barrier is widely recognized and has been ranked as the second most pressing among all barriers. Lack Leaders' of interest refers to their mindset, which does not favor the environmental concern. The finding reveals that this barrier has low influence and the respondents showed their positive perception and interest.

The "current linear system in place" indicates that companies are already familiar with the current linear system, which is deeply rooted and widely established in their business practices. In addition, to change the attitudes of the workers, companies may motivate them to become aware of the new practices. The result revealed that this barrier has a very high influence and ranks fourth.

4.4.5 Market barriers

In CE implementation, the market barriers are considered as the major constraints. This category includes the Lack of consumer interest and awareness' which represents the second greatest barriers. The latter barrier explains the unawareness of customers of durable products and their crucial role to attain the environmental sustainability. This could be explained by customer's interests where the cost of products is more important than their impacts on the environment. Thus, customers are not willing to buy durable products, which is generally more expensive. The adoption of CE requires a fundamental change in customer's behavior and lifestyle. In relation to the willingness of companies to engage in the value chain, this barrier has been identified as the least pressing barrier. This explains the willingness of the respondents to collaborate with other stakeholders to create a value chain and enhance business relationship. The successful transition to CE necessitates a high appreciation level of circular products from the customers. This could generate high market demand then profits as well. However, the limited awareness of customers makes the unpredictability in supply and demand more difficult for the companies. The respondents perceive that this barrier has the lowest influence.

Table 4. Circular economy barriers – questionnaire results

Barriers		Rating Scale Frequency					Overall			
		1	2	3	4	5	ST DEV	WEIGHED MEAN	RANK	DE
FINANCIAL	FB 1	0	1	13	17	29	0.85	4.23	05	Very High Influence
	FB 2	0	2	14	23	21	0.85	4.05	06	High Influence
	FB 3	0	5	17	27	11	0.86	3.73	07	High Influence
TECHNOLOGY	TB 4	3	4	19	19	15	1.09	3.65	09	High Influence
	TB 5	3	10	19	19	9	1.09	3.35	12	Low Influence
	TB 6	0	1	8	23	21	0.77	4.3	01	Very High Influence
REGULATORY	RB 7	2	8	13	21	16	1.11	3.38	11	Low influence
	RB 8	3	5	15	24	23	1.07	3.65	09	High Influence

	RB 9	1	8	20	12	19	1.11	3.67	08	High Influence
CULTURAL	CB 10	1	2	6	21	30	0.90	4.28	02	Very High Influence

MARKET	MB 13	0	1	8	24	27	0.76	4.28	02	Very High Influence
	MB 14	4	10	19	17	10	1.14	3.32	13	Low Influence
	MB 15	2	10	24	15	9	1.03	3.32	13	Low Influence

CONCLUSION

This study aimed to provide an indication of the awareness levels of the CE practices among Hungarian SMEs, to identify the perceived barriers their influence on implementation. From the literature review, 15 barriers were selected and categorized as five main sub-barriers. These barriers have been ranked using the Weighted Mean method, which helps decision makers to know the influence of them. The research findings reveal that the majority of the questionnaire respondents were slightly aware of the CE and its benefits. The CE transition is unlikely to be successful with the lack of global consensus and awareness about the CE concept at the individual level in the company. In addition, the results have highlighted that the CE implementation is at an early stage in Hungary. Majority of the companies do not cooperate in the eco-industrial chains and also the recycling process still not integrated yet in their production chain.

In summary, the main findings highlight three different influence level of barriers:

- **Very high influence:** The 'Lack of proper technology' emerged as the most significant barrier due to the inadequacy of the existing technology to the circular products, followed by the 'Lack of consumer interest' in the circular economy products and the 'strong risk aversion' associated with the new practices. In addition, this level comprised the 'Current linear system in place' barrier that indicates to what extent the linear system is rooted and the 'High initial capital cost' required to invest in new technologies.
- **High influence:** This category includes the 'Low price of virgin materials' assuming that the virgin materials still cheaper than the recycling. Subsequently, 'High production costs' resulting from the increment of wages (hiring higher skilled employees) and recycling process, followed by the 'Lack of governmental incentives' unlike other governments that have heavily invested and supported SME's. Moreover, the 'Lack of knowledge and competence' and the 'Administrative burden' are barriers that have been perceived by the respondents with the same influence. Several companies do not have the technical capacity in terms of knowledge and skills to invest in advanced technology, so they prioritize the existed technology.
- **Low influence:** 'Lack of effective policies' demonstrates the limited involvement of the Hungarian government to take initiatives for a better economy. This could be improved through imposing strict policies to push the companies to evolve their supply chain. The 'Lack of Data' also perceived as a barrier with low influence with explains the accessibility to the CE information. Finally, 'Lack of Leaders' interest' and 'Difficult to cooperate/collaborate with other companies' are barriers with lowest influence level.

Admittedly, our research has some limitations that should be improved in future studies:

- Limited sample size (60 respondents) affects the generalizability of the results, so we cannot assume the findings are strictly representative.

- The study explored only the awareness level and barriers; other aspects like drivers, practices and suggestions to overcome the barriers should be taken for future research.
- The quantitative data relied on only one method Weighted Mean. In future research, more complex statistical methods should be used.

Abstract: Conflict is a spread phenomenon among organizations, either it is functional or dysfunctional. The existence of conflict is due to the contrasting of employees' ideas, goals, attitudes, behaviors, etc. However, organizations can manage it effectively to bring light into problems and provide solutions for them. The purpose of this study is to explore how conflict is managed in Albanian corporations operating in the construction sector as being one of the key sectors of the country's economic development. Considering its importance to the organization, it is crucial to see how this complex and interdisciplinary phenomenon is handled in the context of Albania. For the data collection, a survey is conducted with several private companies operating on the construction sector in Albania. The sample consists of employees of several construction firms operating in Tirana. Concretely, the study involves 152 participants. This research used the questionnaire Rahim Organization Conflict Inventory II about the five main styles of conflict management. Results of this work show that the most used method of conflict management is "integrating". The study findings are supported by reputable literature in the field.

Keywords: conflict management styles, ROCI II, construction sector, Albania.

1. INTRODUCTION

Organizations are comprised of groups of people with a certain purpose or role there and they are all divided in separate departments with different goals each. And because the organizations have people and departments which have specific goals and roles and when they have contact together then conflict is inevitable in between them. Relationships between these groups may become strained due to the presence of conflict because of the different agendas they might be on. According to Thompson (1998), conflict represents differences between people. These differences nowadays are becoming more evident due to the diversity on the workplace. Due to the consequences that conflict has on the organization, positive or negative, it is necessary to be assessed through conflict managing techniques. Conflict management (CM) in an organization is important to prevent the negative effects of conflicts and to try and give the best solutions when it happens.

In the last couple of decades, a lot of studies are conducted to assess conflict in the organization and how it affects its members. These studies are focused on conflict in the organizational level and its impact on the results, showing once again great concern on its effects on the achievement of goals by the individual and group alike. Conflict usually comes from interpersonal disagreements and it is important to note the style of how it is managed to turn it into a disadvantage for the company.

Like mentioned before, the conflict within an organization can have both a positive and a negative effect. The positive outcomes include better decisions, innovation and the group being more productive (Leung and Tjosvold, 1998). One of the main reasons for the advocacy of the management of the conflict in organizations is the fact that when managed successfully, it increases the commitment of employees in their daily tasks. Conflict can be managed successfully if the members work together towards a solution. According to Ayoko (2007), when groups were engaged in finding solutions together, they were successful in doing so. This way a successful management of conflict can lead to a better commitment and less employees leaving their jobs. Meanwhile the negative effects that conflict has on an organization are more obvious and include stress, dissatisfaction and the team being less productive overall (Jehn, 1995). According to Nizam (2011) conflict is the main reason for work stress amongst employees. When Hocker and Wilmot (1985) asked employees about how they related the word conflict, they all related it with negative emotions. If conflict is left unattended and not properly managed, it can lead to dissatisfaction which causes employees to leave a company.

Conflict has several dimensions which are interconnected with each other. There are three which are most used in the conflict literature: the situation of conflict, attitudes towards conflict and behavior towards conflict. This means that in the conflict there are always underlying factors. These dimensions emphasize the need to take into consideration that individuals have different needs which influence behaviors.

The conflict management styles (CMS) that are going to be taken into consideration for this study will be the ones studied by Rahim. In his study, Rahim (2001) selects five ways the conflict can be managed in an organization. Rahim focuses on the interpersonal conflict and uses two dimensions: concern for self and for the others. Based on these dimensions he gets five different styles of conflict management which are respectively: integrating, obliging, avoiding, dominating, and compromising.

The study of conflict in Albanian organizations remains ambiguous due to lack of research. Like mentioned before it is certain that conflict exists in an organization if there are people with different interests and the context of Albania should make no exception. What differs is how this conflict is managed in the terms of conflict management style. For this research, the construction sector will be taken into consideration. The style will be assessed with the help of a survey prepared by Rahim (2001).

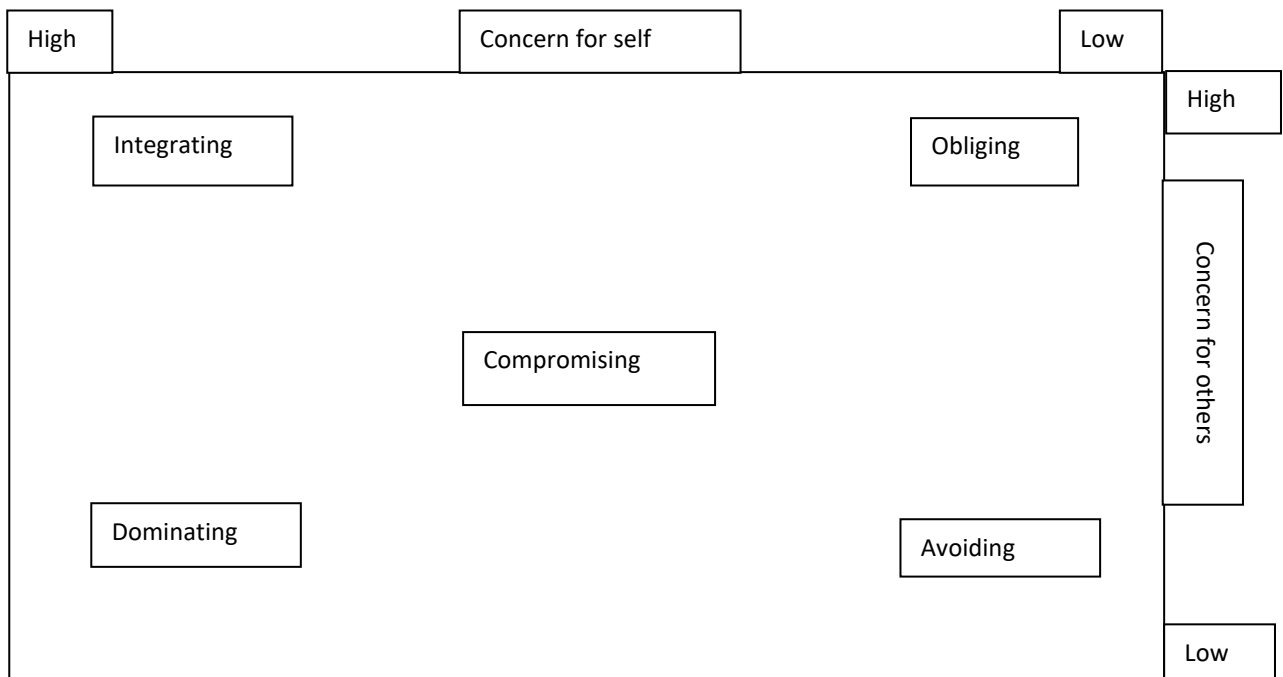

To fulfill its aims, this study has aroused the following research questions.

1. What conflict management style is used in Albanian corporations in the construction sector?
2. Is this conflict management style the same as the one suggested by the theory of conflict management?

In line with the research questions, it has been designed the conceptual framework of this research as shown in figure 1. The research model consists in two dimensions as stated by Rahim to discover the five main Conflict Management Styles. These dimensions are concern for self and for others and both of those can score high or low. From this model, five main CMS are gathered when both dimensions are combined and are as follows: integrating, avoiding, compromising, dominating, and obliging. Integrating scores high on both while avoiding scores low on both. Meanwhile dominating scores high for concern for self and low on concern for others. The opposite with obliging which scores high for concern for others and low for concern for self. The last style, compromising is derived when the concern is in intermediate levels for both dimensions.

This study intends to show the style of conflict management in Albania based on the questionnaire prepared by Rahim (2001). It intends to see also if the style used in Albania is the same as the style suggested by the studies which is the integrating style. This conclusion intends to show also if conflict management in Albania is in the right way. The focus of this study are construction companies due to their longevity in the market and structure.

2. LITERATURE REVIEW

The concern about conflict in organization has increased in the last two decades due to its effect on the work environment and the members of organization themselves. Conflict management can help in the improvement of this environment but if conflict is left unattended it can lead to many problems in the organization. Many of the problems which arise in a work environment come from interpersonal and intergroup conflict and the way it is handled (Friedman et al., 2000).

Conflict can be described as a social phenomenon which can be encountered in the interactions between individuals, groups and in some cases even organizations. Rahim (2001) states that the main reason for disputes and disagreements comes from the desire of these entities to approach the same resource. Other reasons include stances they take on a subject, beliefs about a situation and core values of the members.

The definitions of conflict come from many fields which study it ranging from sociology, philosophy, economy, politics and even biology (Nightingale, 1974). Thompson (1998) gives a simple definition of conflict as different interests amongst people. Robbins (1974) defines it as a process where there are endeavors made on purpose from one side to stop the other from achieving its goals. Another definition comes from Thomas (1976) and describes the beginning of conflict as the time where one side thinks that the other is trying to block them from achieving their objectives. According to Katz & Kahn (1978), two entities are involved in a conflict when the actions they take provoke the resistance of the other. Chung & Megginson (1981) define it as a fight between different needs and desires and it comes when entities have objectives which cannot be achieved by both on the same time. Kabanoff (1986) says that it is an outcome of opposed relationships of entities. Meanwhile Roloff (1987) says that conflict in an organization happens when the members are involved in activities that are incongruent with those of the others within the same organization. According to Bisno (1988), conflict is a process which involves disputes between members over assets, status, and mindsets. The objectives of the people involved in a conflict can result attempts to get a preference, securing assets and even harm to other members in the most extreme cases. Mayer (2000) describes conflict as a feeling or divergence of interests which can be true or perceived by the entities involved.

Other authors say that to define conflict, there is one element which should always be included and that is environment (Applefield, Huber & Moallem, 2000; Coy & Woehrle 2000; Demmers, 2006). So, an important part of the conflict is the context in which it is studied which can include the type of organization, the culture of the country, the type of leadership. This difference in the way it is perceived on different environments has a big impact on the way it is then managed.

The way conflict is perceived in the context of the organization has been different in different eras. This has changed with the developments on the studies in the field of management and conflict being part of the organization has been part of these studies with different views and perceptions about it.

2.1. The classical view of conflict

Scholars of classical management viewed conflict as a threat to the organization. To them, conflict harms the efficiency and should be kept at a minimum. To minimize conflict these theorists used structures such as procedures and hierarchy. This way the members of the organization would not have any chance to be part of a conflict. According to these researchers the only way to keep the organization efficient would be to keep it without conflict and in total harmony.

One of the authors who supported this line of thought was Frederick Taylor. According to him, the organization would function better when following a set of principles. He mentioned that there would be no conflict between employees and employers if these principles were followed. Although this set of instructions would help with efficiency, it had also criticism and it did not offer a walkthrough to manage conflict when it happened.

The same line of thought was adapted also by Max Weber who gave the idea of bureaucracy and claimed it was the best way to lead the organization in terms of efficiency. These organizations must follow a specific set of principles. But in this specified model of his, Weber did not include conflict or the fact that any dispute might happen during work. He claimed that if followed correctly, this way would completely avoid conflict.

An author who thought differently from the other authors of this period was Mary Parker Follet. Her behavioral orientation placed her in a different position than the authors of scientific management. She noted that the best way to measure the progress was to look at the nature of conflicts. She said that when the conflicts change to a higher level than that is accompanied with individual and social progress. Follet's stance to conflict was that of solving it and that its avoidance was ineffective in assessing it.

2.2. Neo classical view of conflict

In the neo classical perspective of conflict, the main study remains that of Elton Mayo which was the cornerstone for the human relations perspective of management. In his study he mentioned the need to eliminate conflict to achieve effectiveness in operations. Mayo thought that conflict could be avoided, and it was not economic for the organization. To him conflict was just because of not adjustment from some employees. Conflict to Mayo represented a bad thing and it usually meant lack of social skills when it happened.

Classicists like Taylor, Weber, and Fayol along with Mayo who was a neo classicist wanted to keep conflict at a minimum, but they followed different ways. The first group decided to change the structure of the organization and make it in a way where alterations were impossible. Whereas Mayo followed another route by changing the social system.

So, in the end all the authors who researched about classical organization except Follet did not account conflict in their theories. They deemed it not needed for the wellbeing of the organization. They tried to keep it at a minimum and saw no benefits from it. These were the main ideas about conflict during the first half of the 20th century.

2.3. The modern view of conflict

Litterer (1966) presented an argument that compared the stance of the classical organization theorists on conflict with the treatment of tension in people. The normal reaction towards tension in people was to reduce it. In both, therapy and organization, the main course of action was to make efforts to reduce tension. But recently the presence of tension has become a normality and it is even desired in some cases because of the way it helps with the development of the personality.

Another view about conflict was given by Whyte (1967) where he stated that harmony is not one of the organizational goals of a well operating organization. The main goal of organizations should not be to keep the harmony but to be able to see the problems of the organization and solve them. And since conflict is part of the organization, the companies should find ways to resolve it.

This way of thought shows a distinction from the previous eras in the concept of conflict in organizations. It shows that to have a better organization, companies should seek to increase the conflict there. This means that the conflict should not be seen as a weakness but as something that the companies can learn from.

Robbins (1974) made a categorization of the three main perceptions of conflicts:

- 1) The first one was the philosophy adapted by classicists who determined that conflict was bad for the organization and that it should be avoided and eliminated.
- 2) The other one was called the behavioral philosophy which acknowledges that conflict is ever present in companies. This group accepts conflict in organizations and believes that it can increase the effectiveness if managed correctly. But they lack the ways of how to generate it in organizations.
- 3) The last one is called philosophy of the interactionists and it has the following characteristics:
 - Conflict is necessary for the organization.
 - There should always be differences in thought.
 - Conflict management should include both its provoking and its solution.
 - Conflict management is an important component of managers.

According to Nightingale (1974), this new interactionist theory views conflict as a way to bring agreement and bringing more collaboration in the organization because only then the members will show the capacity needed for action and change in order to set things straight. So, this way conflict becomes a way of change for the better. Meanwhile Miles (1980) has given a detailed view on how conflict helps the organization. He notes that several processes in the organization are helped by conflict such as the motivation of employees, control, group dynamics, innovation and problem solving. Conflict in the organization reveals the problem and through a good management it can be used to fix these problems.

In the modern view, organizational conflict cannot be avoided in this environment and it shows how good the organization is being managed. Conflict can be very helpful because it can lead to innovative solutions and ways to reach goals in the organization. On one hand little conflict can lead to a stagnant state of the company and poor decision making. But on the other hand, when there is too much conflict and it is left unmanaged, it can lead to complete havoc in the organization. So, the best way is the presence of a medium amount of conflict which is managed effectively (Rahim & Bonoma, 1974).

Even though this modern theory of conflict is being applied widely, it is not without opposition. McDonald (1972) in his studies claimed that conflict at the top management can be destructive for the organization and it leads to its dysfunction and he also included some criteria to avoid such occurrences. Meanwhile Neuhauser (1988) stated that conflict in the organization is a cause of stress, lowers the productivity and has a bad effect on what the customers receive. Also, De Bono (1986) states that the only resolution to conflict is its elimination.

2.3. Sources of conflict in an organization

Conflict can be classified based on the sources that cause it in the first place. This source include duty, objectives, beliefs, and many others. Rahim (2001) found it convenient to classify conflict based on what causes it.

1. Affective conflict

It can happen when two members who are interacting with each other to solve an issue and they find out that their thoughts about an issue are not compatible (Amason, 1996). It is also known as personal or emotional conflict. Pelled summarized it as a case where the members of the group involved have interpersonal disputes which consist of negative feelings.

2. Substantive conflict

This type of conflict can happen when the entities involved have disagreements over the task they are given (Guetzkow & Gyr, 1954). This type of conflict is characterized as a disagreement between the members of the group on the way a task is executed (Jehn, 1997). It is called also task or issue conflict.

3. Conflict of interest

The definition of conflict of interest can be described as a disagreement between two sides for the possession of a finite resource. This situation happens when each side in the conflict, who has knowledge of the problem, chooses a different outcome which concerns the resource or the way the workload would be divided.

4. Conflict of values

This kind of conflict happens when the members have different set of values and beliefs from each other (Druckman, Broome, & Korper, 1988). The conflict of values is related with the ideologies of a person.

5. Goal conflict

This type of conflict happens when the end goal of objective of two members or groups differs from one another (Cosier & Rose, 1977). Departments have different objectives which may contradict one another and thus it leads to interdepartmental conflict.

6. Realistic vs nonrealistic conflict

Realistic conflict includes disagreements that are rational like the tasks, beliefs, objectives, and resources. Meanwhile nonrealistic conflict happens for no apparent reason related to work and mainly to release tension. While the reasons for realistic conflict are rational and related with the work, the reasons for nonrealistic conflict have nothing to do with the organization (Ross & Ross, 1989).

7. Institutionalized vs noninstitutionalized conflict

In an institutionalized conflict situation, the members involved follow the rules, have a predictable behavior and a continuous relation. Meanwhile in a noninstitutionalized conflict situation, these three conditions are not followed.

8. Retributive conflict

In this situation, the members who are conflicted tend to last the time of conflict longer than it should be to punish the opponent. Said differently, each of the members tries to make the costs of the other bigger by lasting the conflict more than it should (Saaty, 1990).

9. Misattributed conflict

This happens when one party blames the causes of a conflict on the other party by mistake. Sometimes this type of conflict happens due to the lack of information.

10. Displaced conflict

This type of conflict happens when one party blames members who are not involved in the main conflict. It can also happen when secondary issues are discussed.

2.4. Types of conflict

Organizational conflict can be divided in two big groups which are intraorganizational and interorganizational. Interorganizational conflict happens when organizations have disputes with one another. Meanwhile intraorganizational conflict happens within the organization and it is classified in two levels, individual and group. It is divided into four subgroups described as follows.

1. Intrapersonal conflict

This conflict happens when the member is asked to do tasks that do not match with the education, objectives, and beliefs that this person has, and it is also called intrapsychic conflict. Roloff (1987) defined this conflict as something that happens when an uncertainty occurs among the cognitive elements of an individual. This conflict is a challenge to one's ability to foresee and control. When an individual experience this conflict when making decisions because the ambiguity of the situation makes the alternative both good and bad.

2. Interpersonal conflict

This kind of conflict happens between two or more members of the same company who are part of the same or different hierarchical levels. It is called also dyadic conflict. This type of conflict is the one where the studies on the relationship between manager and subordinate focus.

3. Intragroup conflict

This conflict happens between the members of a group or a department, that is why it is called also intradepartmental conflict. It can happen when the members of the group have incompatible objectives, beliefs, and values.

4. Intergroup conflict

This kind of conflict happens when there is a disagreement between two or more departments in an organization. It is also called intradepartmental conflict.

2.5. Effects of conflict in the organization

According to Albert (2001) conflict in an organization can either be constructive or destructive. Albert says that conflict has a positive outcome when the parties involved discuss about the problem constructively to achieve the best solution possible. Meanwhile a badly managed conflict can bring problems to the harmony of the group, lower the effectiveness, and can bring psychological problems to the members involved. When it is managed well, it can lead to a cooperative environment and it increases the chances of achieving the goals and objectives of the group and organization overall.

When a conflict brings benefits to the organization it is considered a constructive one, meanwhile if it leads to destructive outcomes, it can be said that it has a negative effect. One of the benefits of conflict is the motivation it brings to the employees to work harder because their skills are showcased mostly in tense situations. Another benefit is related with the conflict as a source to release the tension that can be build up during the everyday organizational life. It pushes the creativity of the people involved with the discovery of innovative solutions to the problem that has arisen. Many ideas can arise for the solution which can also bring new light to the problem due to the many perspectives. An example of the benefit of conflict is the increasing of the employee rights which came from the constant conflict of unions on the past decades. It can also make the organizational life more dynamic and less a boring one, with new situations to resolve. From the conflict, the members of the organization can also understand what goes wrong in the environment and leads to the solutions to these problems by a better coordination thus leading to a strong group relationship. When a conflict is well managed it leads to the members being active listeners to get the views of the opposition right and move forward with the solution. This can also lead in the members of the group learning more about each other and strengthening the group relationship more. By learning more about each other, the members will have it easier to solve the conflicts that may rise in the future.

But despite the positive outcomes, conflict also has negative ones. Conflict can have a bad effect on the performance of the individual and the whole organization. The resolution of conflicts can take a long

time and energy from the members involved which could be used on a productive task. During conflicts, the members may use it to voice their personal interests which may be against the benefit of the organization. Meanwhile some conflicts may be quite intense and last for a long time, which can lead to a heavy psychological state for the members involved. The time spent on these conflicts could have been used to more activities that bring benefits to the organization. In extreme cases, conflict can lead to sabotage of work, low morale, and a decrease on the quality of the final product or service.

Despite its effects, conflict can be one of the best tools for change and improvement, due to its nature. Sometimes the best way to manage conflict is by, understanding one another and working together in order to create a healthy environment to achieve the objectives. In the end conflict cannot be seen as undesirable, but as a necessity which may bring benefits.

2.6. Conflict management

Conflict is an inevitable aspect of the social and professional interaction. People who have never experienced conflict on the workplace are either living in an unreal world, indifferent to the environment or are in isolation (Boohar, 2001). According to Rahimi (2002), conflict and its management are vital for the wellbeing of the organizations, even though most of the recommendations of conflict management suggest its reduction and minimization due to its negative effects on the members and the organization. Management of conflict should focus on constant improvement of the organization when that happens. According to Cowan (1995), this decision may also lead to distractions from work having an impact on the process of decision taking, the relationship between employees, productivity, and innovation.

According to Burton (1990), conflict can have a negative impact on the organizational processes, decreasing of effectiveness and an increase of expenses. Despite this, if managed correctly conflict can have a positive impact in the job satisfaction and even reduction of stress (De Dreu, 2004; Friedman et al., 2000). Management of conflict includes finding the cause of conflict, its analysis, finding the right techniques on how to intervene and finding the best method for its final resolution (Wils et al., 2006). The organizational strategies for conflict management include the analysis of the type of conflict that has arisen, its impact and the style of resolution (Rahim, 2002). According to Blake and Mouton (1986), one of the most important parts of conflict management is the cooperation to resolve it in the context of globalization.

Styles of conflict management have been usually studied as tendencies from the members involved in it. An individual style of conflict management includes an orientation of the member's behavior towards the situation of conflict. Members usually pick a certain style which includes a set of principles to guide them through situations of conflict. Previous studies have also noted the importance of studying conflict in group settings (Kuhn & Poole, 2000). Individuals pick the conflict management strategy by being influenced by the context of the group and the organization (George & Jones, 1997). When studying conflict on an individual level the main model used is the one called Model of Dual Concern which was first proposed by Blake and Mouton (1964) and modified continuously by several authors. The main dimensions of this model when analyzing conflict is the concern for self and for others. Concern for self means the level which the individual tries to resolve the personal issues. Meanwhile the second dimension, which is concern for others, is the level which the individual cares for the issues of others. The combination of both dimensions results in the five main styles of conflict management. They are as follows: integrating, obliging, dominating, avoiding, and compromising (Rahim, 2001).

In the modern organizations, groups are vital in how the organization responds to the innovations outside the company and the market overall, which can improve the performance of the organization (Illgen, Hollenbeck, Johnson, & Jundt, 2006). What can have an impact on the performance and dynamic of the groups, is the concept of conflict (De Dreu & Beersma, 2005, Tjosvold, Hui, & Yu, 2005). Conflicts in the organization are a normal thing and so is the effort to manage them (Rahim, Magner, & Shapiro, 2000). During these conflicts, the members involved become aware of the situation of disagreements and different opinions (Jehn & Mannix, 2001). Groups must always face conflicts by organizing the workload and rewards in a fair way, understand different characteristics of the members and implementing the correct tools to achieve the goals. According to De Dreu & Beersma (2005), the style

of conflict management, which can manifest itself with time and during interactions, can have an effect on the relationships of the members and the environment. Conflict management can be divided into three different types. The first one includes studies on the factors which influence the situation and the individual's attitudes towards conflict (Eisenberg & Fabes, 1988, George & Jones, 1997). The main assumption of this theory is that the conflict management style is a situation which can be influenced by many factors such as structure, behavior and the type of work. The second one focuses on the values of the group and the environment on the organization. According to this theory, groups are the source of the beliefs and behaviors and can influence the way the conflict is treated (Ehrhart & Naumann, 2004). Groups which are open in their relationships discuss their problems more openly and can have constructive discussions when conflict happens. The third one studies the theory of social learning which suggests that people learn by watching one another (Bandura, 1986). During a situation of conflict, if the style of conflict management is focused on the members of the group, then their behavior will be based also on those models, especially when they have a positive outcome (Podsakoff & MacKenzie, 1997).

Considering that the organizations nowadays are moving towards internationalization and diversity, there has been an extensive research on handling conflict on an intercultural level (Mayer, 2008). This tendency has increased due to the internationalization of the workplace, globalization and since culture has a huge impact on conflict and its management. To focus on the intercultural conflict requires a lot of information on the main concepts and definitions on culture as well as how culture impacts the relationships, conflict and its management. Conflict is usually related with issues such as beliefs and identity and this happens because conflict starts when individuals perceive the differences such as interests, beliefs, needs (De Dreu et al., 1999; Cartwright and Cooper, 2000; Mayer, 2010). Conflict can be considered as an occurrence that happens as a result of perception which is influenced by the culture and leads to the recognition of the existence of the other realities (Lederach, 1988). Considering the intercultural nature of conflict, there exists the need for more research on identity and values.

The types of conflict management are as different as the causes and its context. The main purpose of conflict management is the impact on the structure of the situation of conflict in order to not let destructive components in the process and to help the parties at dispute find a solution for their problem. An effective conflict management has the purpose to minimize unpleasant situations which come from the conflict and to have a satisfying one for all the parties involved. According to many studies, the most important conflict is the one between the manager and the employee due to the effects it can have on the effectivity and the relationships on the organization (Tjosvold & Chia 1988). Other studies show that the style of conflict management depends on factors related to the subordinates such as job satisfaction, quality of supervising, relationship with the managers, long term employment and behavior (Alexander, 1995; Blake & Mouton, 1964; Follett, 1940; Rahim, 1986; Thomas & Kilmann, 1974; Weider-Hatfield & Hatfield, 1996). An effective conflict management style can improve the interaction between the supervisor and the subordinate and make them have a positive mindset during work.

When the CMS which is used focuses on the fulfillment of the needs of both parties involved, then the parties have a relationship which is based on trust (Fisher & Ury, 1981; Pruitt & Rubin, 1986). This happens due to the perception that when the subordinates think that the supervisors value and care for them, the relationship between them has a higher level of trust and this way the satisfaction on the job is also higher. This level of trust is also closely related with the leadership and managerial style which includes transformational leadership and participating in the decision making process that have similar characteristics like an open communication, mutual care and respect. (Dirks & Ferrin, 2002). These characteristics are similar with the cooperative styles of conflict management (integrating and compromising), which is focused on a high concern for the issues of others. The ones who use these CMS tend to increase the socialization between members and gain the trust of employees which leads to positive outcomes. The role of trust in the relationship between CMS and the stance of the employees is important because it creates a friendly environment. The skills of conflict management are important due to the fact that they are crucial in the well functioning of the individuals in the entirety of the organization. Due to the increase of the participation of women on the managerial positions along with the importance of conflict management, there has been an increased focus on studies related with the difference between genders during conflict management. There are also claims that the behavior of the individual on the organization changes with the job position (Fagenson, 1990; Kanter, 1977).

2.7. Conflict management styles

Like mentioned before, conflicts are inevitable on any environment. But still conflict can bring some upsides, if treated correctly, because it pushes the parties to find acceptable solutions for all involved. On the other hand conflicts which spiral out of control can be harmful for the organization. That is why there is a necessity for conflict management. There are some steps for managing conflict which include: identifying the cause, behavior and disagreement; transforming the elements of the situation; solution which comes from the changes made earlier and pushes the conflict in the right direction.

Pruitt (1983) suggested a model based on the dual concern of the individual involved in the conflict. According to his model, the individual's concern is for himself and for others and based on the levels of both these variables, he suggested four main styles of conflict management which are as follows: problem solving, yielding, domination and contending. This is called the Model of Fours according to the number of solutions. Studies have shown that the most effective solution out of these four is problem solving but these results were derived only from laboratory studies and they have not showed the impact of these styles on productivity (Pruitt and Carnevale, 1993).

The first model with five styles was presented by Follett (1940). In this model the author presented three main ways of handling conflict: domination, compromise and integration. Then she presented two other secondary methods which were avoidance and suppression. The first conceptual model was presented by Blake & Mouton (1964) which proposed the following styles: forcing, withdrawing, smoothing, compromising, and problem solving. This model was based on two dimensions: concern for the productivity and individuals. These dimensions describe the stance of the manager based on the leadership style, task or people oriented. A modification of this model was made by Thomas & Kilmann (1976) who named used two dimensions which were assertiveness and cooperativeness. Assertiveness was used to describe the individual's tendencies to satisfy their own needs meanwhile cooperativeness was used to describe the extent that the individuals were ready to satisfy the needs of others. Through the combination of these dimensions, they got five main styles which formed the Thomas-Kilmann Conflict Mode Instrument (TKI). The five styles they proposed are as follows. Competing which involves a low level of cooperativeness and a high level of assertiveness and is a style which relies on showing power and when using this style, the individuals pursue their own goals unconcerned for the others. Collaborating has a high level of both dimensions and the individual tries to satisfy the needs of both parties and involves analyzing the cause and finding the solution that satisfies both parties. Accommodating involves a low level of assertiveness and a high level of cooperativeness where the individual takes a selfless stance and tries to support the concerns of the other party. Avoiding has a low level of both dimensions and the individual chooses not to address the conflict at all. The last one is compromising which is intermediate in both dimensions and tries to partially satisfy both needs.

Rahim (2001) based his model on both these studies to give his own set of dimensions and styles. He used as dimensions concern for self and for others meanwhile the styles he proposed are integrating, obliging, avoiding, dominating, and compromising. Based on this model, Rahim created the Rahim Organizational Conflict Inventory II (ROCI II), that is a questionnaire containing 28 questions designed to measure the five styles of interpersonal conflict.

The first style is “integrating” which means a high concern for both dimensions. It includes both parties at conflict sharing information and considering where they differ to reach an agreement suitable for both (Follett, 1940). Gray (1989) defines this style as cooperating where the members recognize the differences and reach a satisfying resolve for both. Prein (1976) identified two elements of this style. The first one is confrontation and involves the sharing of information, understanding each other and identifying the causes. The second one is problem solving which deals with finding the ways to deal with the problem.

The second style is “obliging”, which involves low level of concern for self and high for the other group. This style is also known as accommodating and means trying to satisfy the needs of others. This means that the individual sacrifices their own needs for those of the other party. It is a gesture of selflessness or compliance. Boulding (1962) notes that the person who uses this style tends to resolve the conflict even at their own expense.

The next one is the “dominating” style. This style is characterized by a high concern of the individual's needs and a low one for the others. This style involves competing with the other party to win the confrontation. The person who uses this style tries to reach their objective and pushes aside the needs of others. It can be witnessed when fighting for one's rights and keeping a stand when knowing that the stance is correct.

The other style is “avoiding” which scores low on both dimensions. It means suppressing the conflict or setting it aside. It involves pushing the issue for a further or simply giving up from dealing with it. The person who uses this does not satisfy any of the needs of the parties. This attitude can be considered as careless and the ones who use it deny that there is conflict.

The last style is “compromising” which means that both dimensions are at an intermediate level. When using this style both parties decide let go of some of their needs to reach a middle ground satisfying for both. It means getting the insight on both stances and figuring out a mutually acceptable solution. When it comes to letting go this style stands in the middle between dominating and obliging. And it stands in between integrating and avoiding when it comes to addressing the situation.

The studies of conflict management show that the style, which is closely related with productivity, is the integrating one. According to Burke (1970), integration is the one who handles conflict better meanwhile dominating and avoiding lead to a non-effective conflict management. Lawrence & Lorsch (1967), noted that the integrating style is used on organizations which have a higher performance. Meanwhile Goleman (1998) says that employees who have a high degree of emotional intelligence choose negotiating the conflict with the other members. According to some studies the most used method is integrating. Al-Hamadan (2004) in study conducted about CMS in hospitals in the Middle East, discovered that the most used style among the employees was an integrating style. He also noted that this style was more popular among women than men. This style is considered the most beneficiary and it offers a stability that lasts for the long term.

2.8. Conflict Management Strategies

A good conflict management strategy, to be effective must fulfil some criteria:

- 1) Minimizing affective conflict in different levels. This refers to conflicts that come as a result of interpersonal disagreements which come as a result of organizational members becoming conscious that their emotions and feelings concerning different topics are incompatible. "Summarily stated, relationship conflicts interfere with task-related effort because members focus on reducing threats, increasing power, and attempting to build cohesion rather than working on task . . . The conflict causes members to be negative, irritable, suspicious, and resentful" (Jehn, 1997, pp. 531–532). Evidence suggests that emotional conflict hinders group performance by restricting the information processing ability, reasoning skills of group members and antagonistic attributes of group members (Amon, 1996, Baron, 1997, Jehn, 1995, Jehn et al., 1999, Wall & Nolan, 1986). Affective conflict diminishes group loyalty, workgroup engagement, goals to stay in the current organization and work satisfaction Amason, 1996, Jehn, 1995, 1997; Jehn et al., 1999). These result in high stress levels, anxiety, and conflict escalation.
- 2) Achieving and maintaining a moderate substantive conflict rate. Substantive conflict happens when two or more organizational members do not agree on their tasks or content matters. It happens when two or more social subjects do not agree on knowing and solving a task problem. A study conducted by Jehn (1995) suggests that a moderate level of substantive conflict is useful, because it stimulates discussion and debate, which helps groups to attain a higher performance level. “Groups with an absence of task conflict may miss new ways to enhance their performance, while very high levels of task conflict may interfere with task completion” (Jehn, 1997, p. 532). Groups who report substantive conflict can make better decisions than those who do not (Amason, 1996; Cozier & Rose, 1977; Fiol, 1994; Putnam, 1994; Schweiger, Sandberg dhe Ragan, 1986).

Substantive conflict encourages better understanding of bigger issues which leads to better decisions. Substantive conflict can enhance group performance through better understanding of different points of views and alternative solutions (Bourgeois, 1985; Eisenhardt & Schoonhoven, 1990; Jehn, 1995, 1997; Jehn et al., 1999). It must be noted that the effects of substantive conflict over performance were found only on groups that had non-routine tasks, but not on groups that perform standard or routine tasks. Even though substantive conflicts, like emotional conflict, enhance group performance, it can lower group trust, the commitment of the group in work and the goal to maintain their position in the company Jehn, 1997, Jehn et al., 1999). As a result, any interfering to manage the conflict should be designed to create paths and norms which encourage disagreements in between group members concerning their tasks and other managerial issues, without creating emotional conflict.

- 3) Selecting and using appropriate strategies to manage conflict. There are different styles of behavior such as integrating, obliging, dominating, avoiding, and compromising which can be used to manage a conflict. Organizational members must be informed and must analyze the situation in detail, to find the best way to manage situational conflict. Usually, conflict management requires the use of integrating or problem-solving style (Rahim, 2001; see also Gray, 1989).
- 4) Communication as a key component in the organizational design. To avoid fear and speculation, the articulation of the reason for change, options taken into consideration and how the redesign has benefits that exceeds status quo, should be explained to workers (Galbraith et al., 2002, pp. 258). Explaining plans often, in regular intervals, contributes in understanding the design process from the workers point of view. This direct and transparent approach can affect conflict that is a result of fear and speculation by preventing it. When change agents take time to inform workers through open discussions about roles, expectations and goals, workers satisfaction increases, at the same time lowering their insecurities and fears (Sears, Shi, Coberley & Pope, 2013). Overall satisfaction is positively linked to productivity and retention of workers. Therefore, investing time in clear communication will lead to a more effective organization.

2.9. Core values of conflict management

There are some core values which should be taken in consideration when managing conflict and are as follows:

1. Being respectful
From the perspective of conflict management, conflicts can be resolved by taking into consideration the needs of the parties involved. For the solution to be solid, it must fulfill the needs of the parties involved in some way. If the needs of a party are fulfilled against the other one, it would make the solution a temporary and unfair one (Bodtker & Jameson, 2001, Kazan & Ergin, 1999).
2. Participation
The solution of the conflicts is based on the perception of individuals about what is right and the duty to participate in decisions that influence them. During conflicts, individuals have higher chances of reaching their objectives if they cooperate with each other. This way the organization can be more productive. Hughes (1993) suggests that during a conflict situation, individuals should see each other as their best ally to give a solution to the problem.
3. Respect of diversity
One of the fundamental principles of conflict management is that both parties should respect the opposition's views and needs. This means to respect not only with those who share the same views but also those who have a different opinion (Bodtker & Jameson, 2001, Kazan & Ergin, 1999).
4. Justice

When managing conflict, it is crucial that the resolution should be just. There are two types of justice: procedural and substantial. Procedural justice makes sure that the procedure of resolve is just. Substantive justice means that all the solutions produced by the process are just.

5. Nonviolence

Conflict management suggests that violence should never be used in conflict situations. Being that it is no effective and it reduces productivity, it is never recommended in this topic. CM tries to create nonviolent options during the resolving of these disputes. While it is known that violence cannot be pushed away always, by using nonviolent methods and training the employees to use these skills more, then conflict can be managed without violence.

6. Transformation

By knowing how to successfully manage conflict, one can be more responsible. Being this role model could be useful is setting good examples even for organization and thus helping with its betterment.

2.10. Mistakes that should be avoided during conflict management

There are several mistakes made during conflict management. These conflicts lead in a longer time of finding a solution and harm the organization. The first mistake when managing conflict is avoiding it. This approach can do a lot of damage further in time. It can lead to a higher level of stress and a more toxic environment. Another mistake is keeping a defensive stance and denying what may be wrong rather than trying to understand the opposition and admit the mistake. When handling conflicts, generalization can be one of the mistakes and that happens when individuals make broad statements towards the opposition. People usually ignore the views of others and thin the situation as a right or wrong one. Another bad way to handle conflict is the overanalyzing of people. When conclusions are made about the opposition which are wrong, it can lead to an unfriendly situation. During conflicts, one of the biggest mistakes is not listening to the others. This way the view of the opposition is not understood, and the conflict continues. Another mistake which is made continuously is putting the blame on others during conflict. Blaming should be avoided because during CM, people gather to find solutions and not culprits. Another problem in conflict management which should be avoided is turning it into a competition. This can ruin the relationships in the group and create a hostile environment. Another mistake to avoid is attacking the opposition by offending them. The final mistake to avoid is when some of the participants in the conflict do not actively participate.

3. METHODOLOGY

The main purpose of this paper is to discover the style of conflict management that is used the most on Albanian companies operating on the construction sector. By using a survey prepared by Rahim, which is given to some corporations who operate on the construction sector, conclusions are to be drawn about the style of conflict management. Conflict and its management are a topic which is under-researched in Albania and there is no information on how the companies handle it based on the style that is used.

3.1. Research Design

This research uses a quantitative approach to the matter, and it uses primary data, which is gathered using a questionnaire. A survey is conducted with a set of 28 statements based on the valid and reliable Rahim's model ROCI-II presented before. These statements are related with the styles of CM in a scrambled way. There are 7 statements which assess collaborating style, 6 assessing accommodating style, 5 assess competing, 6 assess avoiding and the last 4 assess compromising. These statements are evaluated in a Likert scale with 5 points and after the results the mean is calculated to see the style which is used more according to the groupings made earlier. The questionnaire was translated and adapted for Albanian audience and administered in Albanian companies operating in the construction sector. This study is an exploratory one since the topic has never been analyzed before in the Albanian context and thus it tends to shed light into this matter. The approach to theory development is that of deduction where the theory is tested if it stands or not according to the testing.

3.2. Setting and Sampling

The target population is all the residents of Tirana employed on companies operating on the construction sector. The sampling technique is a non-probability one and is the purposive sampling. This technique involves reaching only that part of the population that is related with the study and serves its purpose. This kind of sample can be assumed logically to represent the population. This technique is chosen because it focuses on characteristics of the population needed to conduct the study.

The data is gathered from the employees who work on three big companies operating on the construction sector. The setting choice is intentional due to the large impact that the construction sector has on Albanian economy. The names of the companies remain undisclosed because of a previous agreement to confidentiality with each company. The companies have operated in the market for years and have similar structures. The participants include both managers and subordinates occupying different positions working on these companies. The participants are part of different departments like administration, finance, marketing, sales, planning and design. Most participants are women while the majority are of ages between 31 and 50. The sample size is 152 employees.

3.3. Data collection technique

The technique used to gather the data needed is the survey which is distributed electronically to the companies which distributed it to their staff. Due to being in a time of social distancing caused by COVID-19 pandemic, distributing it electronically seemed the best possible way. This was also done for the convenience of the participants who in some cases were working from home. The survey was distributed through Google Forms to the companies picked for this study.

The main instrument used for this research is the questionnaire. The questionnaire has some general questions concerning the demographics and main information about the participants. The other part of the survey contains the main questionnaire which is called ROCI-II and is based on the work of Rahim (2001). This questionnaire contains 28 statements which are rated in a Likert scale from 1 to 5 where 1 is completely disagree and 5 is completely agree. Some of the statements related to each other into groups according to the style of conflict management. These statements assess different situations on the workplace where conflict is the main theme and how the participants behaved.

This survey is picked because it is based on two other important studies on the field of conflict such as those of Blake & Mouton (1964) and Thomas & Kilmann (1976). Rahim started this questionnaire with much more statements which he left out during the way after intensive tests to keep only those which helped. These intensive tests were conducted to see that if these items were free of bias. To test the construct validity, the researcher also used factor analysis. This questionnaire is also easy to understand from the participants because they only evaluate episodes that happen during the organizational life.

3.4. Hypothesis

The main purpose of this study is that through the help of a survey to figure out what CMS is used more in Albanian organizations in the construction sector. Since this is a new area in the Albanian context, the hypothesis is raised based on the foreign literature and the theories of CM authors. According to this study, in the Albanian construction sector the style used to manage conflict is the same one as in companies abroad which is integrating.

H0: The style used to manage conflict in Albanian construction firms is integrating.

Ha: The style used to manage conflict in Albanian construction firms is not integrating.

4. RESEARCH FINDINGS

Below are shown the answers gathered from the responses of 152 employees working in three different companies operating in the construction sector. The data are presented and organized with Microsoft Excel. Google Forms was used to make the survey more convenient for people who could not attend in the office and to reach as many as possible in the vacation.

4.1. Age

Many of the respondents in this survey are of ages from 31 to 50 with nearly 50% of the respondents belonging to this group. The second group are employees from 18 to 30 years old, which make for 42% of the respondents. The last group are those with more than 50 years old which take up 8% of the employers.

Figure 3: Age

4.2. Experience

From the responses, most employees working in this sector (50%), have more than seven years of experience in the same sector. Then 25% of the respondents claim that they have 1-3 years of experience in this sector. Meanwhile 12,5% of them had 0-1 year of experience and another 12,5% had 3-7 years' experience.

Figure 5: Experience in the sector

4.3. Educational level

Meanwhile as far as education is concerned every employee of this sector who took part in the survey had finished at least the Bachelor Studies. This makes for a well-educated group of employees which can help while managing conflict. 67% of the respondents had finished a master's degree, 30% a bachelor's degree and only 3% did a PHD to further their studies.

Figure 6: Education Level

4.4. ROCI-II

By completing the questionnaire, the respondents helped in the determination of the most widespread style of CM in the construction sector. To understand this questionnaire, first the mean of each statement has been calculated. After this the means of the connected questions were added and then divided for the number of items assessing that style. This way the value of the mean of the style was calculated. By comparing the means, the one with the highest number of means is the one which is used mostly.

The statements were grouped together according to the style, like for example, the statements assessing the integrating style are statement number 1, 4, 5, 12, 22, 23, 28. For the obliging style the statements with the following numbers were used 2, 10, 11, 13, 19, 24. To calculate the mean for the dominating style statement 8, 9, 18, 21, 25. For the avoiding style were used statement number 3, 6, 16, 17, 26, 27. Meanwhile to assess compromising style the last statements are 7, 14, 15, 20.

From the results the highest mean was that of the integrating style which scored higher in all the statements with a mean of 4.4. This style involved both concern for self and others and included employees working together to reach an agreement good for both parties. In Albanian context, employees try to investigate the issue with the colleagues before deciding. They try to gather expertise from many departments and in the end decide upon a route jointly. The exchanging of the information is crucial for the solution that will be proposed.

Table 1: Integrating

Item number	Mean
1	4.5
4	4.4
5	4.5
12	4.7
22	3.8
23	4.3
28	4.6
Total	30.8
Average= Total of means/Number of items	4.4

The second style is that of collaborating which scores intermediately on both dimensions with a mean of 3.87. It has many similarities with integrating but in this case not all the information is transparent and it consists in letting go of some benefits in order to reach other objectives. There are many negotiations to meet a middle ground for the solution.

Table 2: Collaborating

Item number	Mean
7	4
14	3.9
15	4.3
20	3.3
Total	15.5
Average= Total of means/Number of items	3.87

The third most used style is obliging with a mean of 3.33. Due to the high concern for others, the ones who go towards this try to satisfy the needs of their colleagues. This is viewed as an altruistic style.

Table 3: Obliging

Item number	Mean
2	3.3
10	3.1
11	2.9
13	3.5
19	3.8
24	3.4
Total	20
Average= Total of means/Number of items	3.33

The least preferred were avoiding and dominating. This is understandable since dominating could lead to aggression and a bad environment. Using a dominating style creates a toxic environment in the company and makes the relationships between coworkers worse. Meanwhile avoiding the conflict could lead to bad consequences for the company. If the problem is left unsupervised for too long it may become worse and the relationships in the company may reach a stagnant state.

Table 4: Dominating

Item number	Mean
8	2.8
9	2.4
18	3.3
21	3.9
25	2.5
Total	14.9
Average= Total of means/Number of items	2.98

Table 5: Avoiding

Item number	Mean
3	3.8
6	2.9
16	3.9
17	2.7
26	3
27	3.6
Total	19.9
Average= Total of means/Number of items	3.31

5. DISCUSSION

Results showed that the highest mean was that of *integrating style* which is supported by previous literature. Studies show that integrating is the best CMS due to the high score on both dimensions and because a huge amount of information is shared between parties in conflict. This result converges also with the hypothesis 0 which proves that it stands that the CMS which is used by employees in Albania in the construction sector is the same as the one suggested abroad. According to Burke (1970), it is the

style which can handle conflict better. Also, Lawrence & Lorsch (1967) claimed that according to their study, the integrating style is closely related with the organization being a successful one.

According to the interactionist theory, which was presented by Nightingale (1974), the conflict was needed in the organization and it was accepted by members as an opportunity to fix things that may be wrong in the organization. It was perceived as a way to strengthen the relationships between members and evoke innovation. This modernist view that conflict helps with the relationships is supported by the findings because the participants picked integrating as the main style which is closely related with working together among colleagues to solve the problems.

Another idea explored in the literature review was that the most appropriate style of conflict management was integrating which converges with the findings. This happened because that style possessed the highest mean after the calculations. According to Burke (1970), this style manages conflict in a better way because it involves creating a relationship with the colleagues to move towards a solution. According to the replies from participants, they were ready to work together with the other party to bring a solution which would satisfy both sides. According to many studies, when both parties work together to fulfill both needs, then the relationship is based on trust.

Also, the findings of the survey converge with what the theorists say about the least successful styles. The least successful in today's environment were dominating and avoiding. Burke (1970) noted that these styles lead to a non-effective CM. In the same manner these styles resulted with the lowest means among all in the study of Albanian companies in construction sector. Considering that this sector is conservative in the way of management in Albania the shift in a more modern style is a change for the better.

5.1. Implications

The study implies that in Albanian organizations, members are familiar with conflict and have dealt with it using the integrating method as suggested by other studies. It also implies that employees have high concern for themselves and the others. Based on the study findings, the most used CMS is integrating. This style is highly recommended as a best practice, and because Albanian organizations of the construction sector scored high in integrating CMS, this suggests a culture of collaboration to be diffused also in other business sectors. Another implication would also be to not avoid conflict but to learn to manage it better due to the benefits it brings. Managers should learn to see conflict as something that may help the organization improve rather than a disadvantage. Managers should consider using the integrating style since it offers a value added for the involved parties in a conflict. Meanwhile they should also avoid using styles which increase toxicity such as dominating or avoiding.

5.2. Conclusions

There are many views about conflict. Some say it is good and some say it is bad. Conflict can be both for an organization based on how it is managed. Conflict situations can bring stress and headaches for the participants in it but if it is managed well, it can bring innovation and change. One thing is for sure, that conflict cannot be avoided in an organization. This happens because, the employees are different from one another and they may have different ideas which can lead to a conflict situation. Organizations cannot stop conflict but what they can do is find ways to manage it better.

One way to manage conflict is by using the CMS. Many researchers have presented their own styles based on the dimensions they think are appropriate. The study which was taken into consideration in this research was that of Rahim (2001). He presented two dimensions, concern for self and for others and five styles, integrating, dominating, obliging, avoiding, and compromising. Rahim assessed this model of his with a set of statements which decided what style did participants prefer more.

From the results gathered in this study which was focused on Albanian companies on the construction sector, it was noted that the most preferred CMS was integrating. This result also converged with the theories about CMS which suggest that this style is the most successful one. Meanwhile the least preferred styles were also the least suggested. These styles were avoiding and dominating. These styles only worsen the conflict rather than solve it and make the workplace a toxic environment.

The Effect Of The World Pandemic Covid-19 On Tourism In Bulgaria

Zlatina Karadzova¹

¹“Asen Zlatarov” University – Burgas, Bulgaria, E-mail: zlatina_karadjova@abv.bg

Abstract: At present, the world is on the verge of the biggest economic downturn since the Great Depression in the 1930s. New market economies and poorer countries are more affected by the Corona virus as their economy is hit by the measures they have taken themselves - they lose production from a smaller base, are affected by capital outflows, and by money transfers of families abroad.

The World Tourism Organization has published recommendations to mitigate the socio-economic impact of the COVID-19 pandemic and to speed up the recovery of tourism. The recommendations are divided into three groups: First group - Crisis management and mitigation; Second group - Creating an incentive to accelerate the recovery of the tourism sector; Third group - Preparing for tomorrow.

Tourism is a priority sector for Bulgaria. There are about 250,000 people directly employed and with satellite professions, the number exceeds one million. The National Tourism Council predicted that tourism needed strategic change and economic support. For example, to revise the visa policy; to abolish visas for citizens of the Russian Federation; to introduce subsidies for companies providing tourists for the resorts; to assist Bulgaria Air.

The purpose of this study is to examine the effect of the world pandemic Covid 19 on Bulgarian tourism. The research was conducted in the period February – March 2020.

The object of study in this article is tourism in Bulgaria.

The subject is the negative consequences of Covid 19 on the tourism industry.

The current article examines the economic and, in particular, the social impact of the Covid 19 pandemic on the Bulgarian tourism industry.

The author also offers specific suggestions for overcoming the crisis situation and the future development of the tourism industry.

Key words: tourism, Bulgarian tourism industry, effect, Covid 19, negative consequences.

INTRODUCTION

Bulgaria has been, is, and will always be a tourist destination. The share of marine, summer and mountain, winter tourism is predominant. At the same time, alternative types of tourism are being successfully developing in the country - cultural, eco, rural, adventure, culinary, wine, festival, sports, health, with its subspecies - balneology, spa and medical.

Our country has a strategic geographical location, located on the territory of South Eastern Europe in the Northeast of the Balkan Peninsula, fulfilling the role of a crossroad between the East and the West and between the North and the South.

Due to the natural and historical diversity within a relatively limited area, Bulgaria has significant potential for tourism development, expressed not only in the availability of unique natural and anthropogenic resources, but also mostly in qualified tourist personnel.

TOURISM - A PRIORITY SECTOR OF BULGARIA

Bulgaria has a strategic geographical location, situated in Southeastern Europe in the Northeast part of the Balkan Peninsula, serving as the crossroad between East and West, North and South. Thanks to natural and historical diversity within a relatively confined space, Bulgaria has a considerable potential for developing tourism. This potential is not only Black Sea coast and mountains, which occupy more than one third of the country, but also nine sites included in the World Heritage List of UNESCO, more than 600 mineral sources, thousands of local traditional and cultural attractions more than 5% of the territory has the status of protected areas (including 3 national parks and 11 natural) 40 000 historic

monuments, 160 monasteries, more than 330 museums and galleries rich tradition of holding festivals and holidays reserved ethnographic heritage and others. Officially there are 142 resorts in the country, 58 of which are SPA, 56 - mountain and 28 - sea. [Karadzova, Zl., 2011]

Bulgaria's position in comparison to the countries generating large tourist flows is relatively favorable. Although situated in the Southeastern periphery of the continent, Bulgaria is an European country and is relatively close to the countries of Western Europe. However, it is not close enough to be subject to mass organized trips, including short trips nor is far enough to be considered exotic. It is essential that Bulgaria is out of the so-called "Car distance" / one-day road trip - 800-1000 km / which determines the dominance of the charter air transportation and flat-rate tourism from these countries / total cost trips organized by Tour Operator/.

The crossroads transport-geographical position of Bulgaria is an important factor for the development of transit tourism, which potential is not fully exploited due to the state of the transport infrastructure. [McCartney Glenn, Butler Richard and Bennett Marion, 2009]

Bulgaria is well known and preferred by Bulgarian and foreign tourists and modern attractive year-round tourist destination with a specific look and distinctive national identities (natural, architectural and cultural), with preserved cultural traditions and unique combination of preserved natural resources.

Tourism in Bulgaria is a prosperous sector which shows a consistent trend of growth in recent years. The tourism sector in the country is built on successful long term partnerships at the national, regional and local level between all stakeholders - national, regional and local authorities, businesses, NGOs, local communities and international partners.

Tourism is among the national priorities for the Bulgarian economy and forms nearly 12 percent of GDP and 11 percent of employment in the country. It is closely linked to the development of transport infrastructure. [4]

Tourism in BG profits from its proximity to main markets, however further positioning as high-end, year-round destination is required.

THE GLOBAL ECONOMIC OUTLOOK DURING THE COVID 19 PANDEMIC: A CHANGED WORLD [16]

The COVID-19 pandemic has spread with alarming speed, infecting millions and bringing economic activity to a near-standstill as countries imposed tight restrictions on movement to halt the spread of the virus. As the health and human toll grows, the economic damage is already evident and represents the largest economic shock the world has experienced in decades.

The June 2020 Global Economic Prospects describes both the immediate and near-term outlook for the impact of the pandemic and the long-term damage it has dealt to prospects for growth. The baseline forecast envisions a 5.2 percent contraction in global GDP in 2020, using market exchange rate weights—the deepest global recession in decades, despite the extraordinary efforts of governments to counter the downturn with fiscal and monetary policy support. Over the longer horizon, the deep recessions triggered by the pandemic are expected to leave lasting scars through lower investment, an erosion of human capital through lost work and schooling, and fragmentation of global trade and supply linkages.

The crisis highlights the need for urgent action to cushion the pandemic's health and economic consequences, protect vulnerable populations, and set the stage for a lasting recovery. For emerging market and developing countries, many of which face daunting vulnerabilities, it is critical to strengthen public health systems, address the challenges posed by informality, and implement reforms that will support strong and sustainable growth once the health crisis abates.

ECONOMIC EFFECT OF COVID-19 ON THE TOURISM INDUSTRY

In 2019, the tourism industry is responsible for 22.6 million jobs, or 11.2% of the total EU workforce. In addition, it generates € 1.319 billion in GDP, or 9.5% for the EU economy.

While the overall EU economy grew by only 1.4%, the tourism sector showed significant growth of 2.3% over the previous year. The EU is the largest region in the world in terms of international revenue with the staggering 427 billion euros in 2019, representing 6.2% of total EU exports.

The EU's largest economies in terms of total tourism contribution to GDP were also revealed: Germany (\$ 347 billion), Italy (\$ 260 billion), France (\$ 229 billion) and Spain (\$ 198 billion). [5]

Figure. 1 below shows that the pandemic had the strongest effect over the tourism industry. The global tourism industry accounts for over 10% of world GDP. Currently, the travel and tourism business is facing losses that are unlikely to be recoverable. According to World Travel and Tourism Council, the COVID-19 pandemic could cost 50 million jobs worldwide in the tourism industry alone. It is estimated that 7 million of them are in Europe. After the end of the pandemic, it is expected that at least 10 months will be needed for the industry to fully recover.

Fig. 1. Index of the impact of Corona virus on industries [6]

75 million jobs in the tourism sector worldwide are at immediate risk due to the spread of the Corona virus, warns the World Tourism Council (WTTC). The estimated number is already 25 million more than the previous result from the study made just ten days ago. Global financial losses will be around \$ 2.1 trillion by 2020. The Tourism Council study shows that within the EU alone, 6.4 million jobs are already at risk and the losses that will be suffered, amount to about \$ 413 billion. However, this does not include lost jobs in the transport sector, which collapsed in an unprecedented crisis. In fact, there is no way that the most affected of all sectors is not transport, because never before in human history has the world been given the opportunity for such unprecedented mobility. [7]

COVID 19 AND BULGARIAN TOURISM

"According to estimates, about BGN 1 billion will be lost by Bulgaria from tourism during the one-month state of emergency that was imposed due to the coronavirus." [8]"The shadow of the coronavirus hangs over tourism - The first charter flight with Israeli tourists, which was planned to begin in April, is

postponed by one month. The reason - security measures due to the spread of the new Corona virus, introduced by the Israeli government. " [9]

Many Bulgarians cancel their reservations at home and abroad. Demand is falling sharply as consumers reduce their costs. In the most affected industries, which are expected to be the services sector, including aviation and tourism, the number of corporate layoffs and bankruptcies increased in 2020 and led to an intensified economic downturn. The financial system is experiencing significant difficulties, but the overall banking crisis has been averted thanks to the strong capitalization of banks and the already introduced macroprudential supervision. Government fiscal policies are proving insufficient to halt the economic downturn. [10]

Most economic entities - tour operators and travel agencies are small companies, self-employed people who are not entitled to unemployment benefits, according to Bulgarian law. Larger tour operators have 20 to 50 employees. The monthly costs of each tour operator are on average up to BGN 20,000 (EUR 10,000). The costs for employment of an employee - for monthly remuneration, social, health insurance and tax, amount to BGN 2,000 (EUR 1,000). Legal entities face the responsibility to fully refund the prepaid and canceled travel packages to their clients. At the same time, the liquidity of vouchers is questionable due to the lack of clear state regulations and a Guarantee Fund in accordance with Articles 17 and 18 of the Package Travel Directive 2015/2302 / EU. Tour operators face the loss of their professional insurance and the threat of mass bankruptcy, leaving their customers without guaranteed compensation.

Hotels and restaurants suffer losses from canceled reservations, events and individual visitors for two months. Given that we are not in an active season, the planned and expected revenues were needed to retain staff and to cover current overheads. The amounts paid on early reservations are invested by hoteliers in preparation of material base, repairs and improvements. At the same time, given the lack of revenue and the desire of companies to maintain the management of hotels and restaurants, the cost of maintaining a minimum and retaining staff is 100%. The canceled reservations for the period 12.03-10.06.2020 (we can expect more cancellations during the season) are about 30 to 50% of the annual turnover of small and medium enterprises. The outflow from Bulgarian hotels is expected to be between 750,000 and 850,000 foreign tourists by June 2020 alone. Thousands of seasonal jobs are in question.

The profession of tour guide in Bulgaria is practically banned with the declaration of the state of emergency on March 13, 2020 and the ban on tourism by the Minister. Guides in Bulgaria fall into forced unemployment. According to the National Tourist Register, there are approximately 1,400 licensed guides and approximately 300 mountain guides. For about 80% of them, this activity is the only source of income. The guides have no chance for alternative employment, given that since March the registered unemployed in Bulgaria have exceeded 75,000 people. The guides realize one third of their annual income (between 2000-5000 BGN / 1000-2500 EUR) in the period March-May. Almost half of all tour guides and mountain guides are self-employed. About 40% work under seasonal employment contracts and there is no guarantee that they will be hired for this summer season. Over 80% of the tour guides in Bulgaria provide services to arriving tourists, and about 20% - to outgoing tourists.

In the sub-sector "occasional transport" operate about 1000 micro and small enterprises with a fleet of more than 10,000 buses and about 15,000 employees. It is a business and the only source of income for one or more families. Carriers are self-insured and are not entitled to unemployment benefits under Bulgarian law. Reducing working hours is also not an alternative for them.

Businesses have fixed costs that cannot be canceled or reduced in the current situation of complete lack of income. The monthly costs for one vehicle for insurance, parking and service, excluding those for fuel and tolls, amount to BGN 2,000 (EUR 1,000). At the same time, almost all companies have investment debts of over 150,000 euros, secured mainly by real estate mortgages. In addition, employment costs, including social security and taxes, amount to BGN 2,000 (EUR 1,000) per employee. Carriers and their families are at additional risk of losing their homes due to their inability to service these loans in monthly installments of between BGN 5,000 and 10,000 (2,500 to 5,000 euros). For a medium-sized enterprise in the sector, the monthly fixed costs are estimated at about BGN 30,000 (EUR 15,000). They are absolutely unbearable in the current situation. The only possible solution is to limit employment,

which would reduce costs by only a third. However, there is a risk of a resumption of business once the restrictions are lifted, if the companies have not gone bankrupt by then.

CONCLUSIONS AND RECOMMENDATIONS:

Travel companies regulate staff salaries and costs to maintain their livelihood during this existential crisis caused by the coronavirus, putting staff commitment and confidence under significant strain, says Global Data, a leading data and analysis company. The demotivated workforce will jeopardize the level of services provided, which in turn will affect the reputation, return on investment (ROI) and financial performance of the company. Freezing hiring, reducing working hours, reducing wages and, in some cases, redundancies are measures taken by companies across the sector. So far, staff adjustments are the most common actions taken by hotel and travel company management to ultimately reduce costs. [11]

The law on the state of emergency stipulates the measure 60/40, according to which the budget covers 60% of the insurance income and the social security costs for this part of the salary, and the remaining 40% is paid by the employer, turns out to be non-working for the seasonal tourism staff. This scheme is applicable only to the management teams, which, however, are only a very small part of the 250 thousand workforces in Bulgarian tourism. With satellite professions, the number of employees exceeds one million. Many of these people are already out of work, and their personal savings cannot guarantee their physical survival for more than a year without a job. [12]

The problem is that many of the people, left unemployed by the pandemic in the tourism industry will focus their potential on other sectors, and when tourism recovers, there is no doubt that they will not be able to rely on a large part of their qualified staff.

The spread of Covid 19 is the reason for canceling the largest tourist exhibition in the world - the one in Berlin. Tour operators dealing with inbound and outbound tourism have frozen activities. Some of the large hotels may not be open in the summer of 2020 due to the inability to fill their capacity. Another part of the hoteliers have started planned repairs and relied on the money usually transferred by March from the tour operators for the early bookings. For the most part, such payments did not take place due to fear of travel and canceled reservations. Not only is the upcoming summer season in question, the 2021 season is also in danger, due to the fact that the contracts were signed a year earlier, and no one is still sure how the situation in tourism will develop.

Nevertheless, I believe that there will be a summer season, albeit starting later, albeit shorter in compliance with the highest sanitary and hygienic conditions for tourists. The mini-season within July, August and September is a completely realistic forecast after active advertising of Bulgaria and emphasizing the fact that the country is among the least affected by the virus. The tourist super structure in the largest resort complex in Bulgaria - Sunny Beach, can be safely used for rehabilitation of the surviving Corona virus, as well as for prevention.

The most important thing at the moment is for the state to support the tourism business by rescheduling loans and actively advertising markets for which Bulgaria is a real or potential receptive market. Businesses need stable and affordable financial support to meet current and future challenges. The sudden lack of liquidity is fatal for many segments of tourism, and adequate liquidity support is essential to maintain the viability of the sector. Many companies have investment debts that need deferred government guarantees to prevent the unbearable consequences of overdue monthly installments.

Apart from that, it is appropriate to draw the attention of Bulgarian tourists to the advantages of domestic tourism by purposefully emphasizing the good material and technical base, unique natural resources, low prices, good service and especially avoiding the risk of traveling abroad and possible problems that may occur in these uncertain times. By uniting the efforts of business and the state to prepare packages for rest-rehabilitation, as the business offers preferential prices and conditions, and the state - financing a significant part of these packages.

The Ministry of Tourism can purposefully use the created critical international situation and redirect the national tourist advertising to emphasizing the advantages of Bulgaria in the conditions of fighting the viral pandemic. Bulgaria is a country of herbs, of SPA, we have wonderful pulmological resorts (among them Sandanski is at a supra-European level), where the consequences of diseases of the respiratory system due to the virus can be successfully treated.

A possible option is in the years to come for the state to emphasize on vouchers for medics and civil servants, as well as travel subsidies for school, student and retirement groups, groups of people with disabilities, as well as amateur ensembles and ensembles, which will quickly achieve promotion of national tourist sites, sustainable development of local infrastructure of all types and will ensure the recovery not only of transport but also of the entire tourism industry.

Ensuring gratuitous and low-interest financing of investments in tourism is crucial for the sustainable development of the sector. Bulgaria has been making long-term efforts to establish itself as an attractive tourist destination. It is imperative to provide European investment funds or state funding in the sector to ensure the sustainable development and competitiveness of the industry at the international level. In the context of the above, the author believes that the state, through its power economic and social structures, is morally obliged to demonstrate high social responsibility by making decisions and implementing actions that increase the level of welfare and are in the public interest. An adequate social response, understood as a set of voluntary rather than coercive attitudes, decisions and actions that are altruistic, would be a response to what excites society, but for some reason this society cannot cope alone. [3]

CONCLUSION

Tourism has been and will be. But from now on, tourist trips will be carried out with extremely serious security and safety measures. Tourists will increasingly pay attention to the clean environment. For both those offering and consuming a tourist service, the "price" factor will be of leading, though not the only, importance. Individual travel, small groups traveling by private transport will become more and more necessary. The airlines will drastically reduce the ticket price and the number of seats sold for organized tourism. The gradual return to a normal rhythm of life will take place in those tourist destinations that are the fastest to open their borders to their regular visitors and restore their transport connections.

The Bulgarian tourism industry is vital for the recovery of the national economy. Bulgarian tourism survives after the Chernobyl accident, after the global financial and economic crisis, will survive after the global pandemic Covid 19. It is an indisputable fact that adapting the industry to the situation after the virus will be difficult, but Bulgarian tourism companies will soon be able to provide their needed workforce, to bring back the contingents of tourists and to stand on their feet with new business plans.

Finansal Gelişme, Sefalet Endeksi ve Ekonomik Büyüme: Türkiye’den Ampirik Bulgular

Dr. Öğr. Üyesi Ahmet Eren Yıldırım¹

¹Hitit Üniversitesi, İİBF, İktisat Bölümü, aerenyildirim@hitit.edu.tr, ORCID: 0000-0002-2405-3081

Özet: Türkiye ekonomisi son yıllarda makroekonomik olarak hem finansal hem de reel değişimlerden ciddi şekilde etkilenmektedir. Bu çalışma Türkiye’de finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki uzun dönem ilişkisi ampirik olarak incelemeyi amaçlamaktadır. Çalışmada 1988-2019 yılları arası yıllık seriler kullanılarak Dinamik Gecikmesi Dağıtılmış Otoregresif Model Simülasyonları (Dinamik ARDL Simülasyonları) tahmin edilmektedir. Ekonomi büyüme hem reel hem de parasal gelişmelerden aynı anda ve önemli ölçüde etkilenebilen temel makroekonomik büyüklüktür. Sefalet endeksi literatürde işsizlik oranı ile enflasyonu oranının toplamı olarak tanımlanmaktadır. Sefalet endeksi farklı makroekonomik etkileri olan ve çoğu zaman hayat standartlarındaki değişiklikleri açıklayabilen bir ekonomik göstergedir. Finansal gelişme özellikle küreselleşmeyle birlikte gelişen piyasa ekonomilerinde ekonomik büyüme üzerinde önemli bir role sahiptir. Çalışmada finansal gelişmeyi temsil etmesi için özel sektöre yönelik yurtiçi krediler analize dahil edilmektedir. Çalışmanın öncül bulgularına göre, sefalet endeksi ve finansal gelişme endeksinin ekonomik büyüme üzerinde güçlü etkilere sahip olduğu görülmektedir. Ayrıca hem kısa dönemde hem de uzun dönemde hem reel hem de parasal büyüklüklerin ekonomik büyümeyi anlamlı şekilde etkilediği gözlenmektedir.

Anahtar Kelimeler: Finansal Gelişme, Sefalet Endeksi, Ekonomik Büyüme, Türkiye, Dinamik ARDL Simülasyonları

Abstract: In recent years, the Turkish economy has been seriously affected by both financial and real changes at the macroeconomic level. This study aims to empirically investigate the long-term relationship between financial development, misery index and economic growth in Turkey. In the study, a dynamic Autoregressive Distributed Lag Model Simulations (Dynamic ARDL Simulations) is estimated using annually series between 1989 and 2019. Economic growth is the main macroeconomic indicator that can be significantly and simultaneously affected by both real and monetary issues. The misery index is defined as the sum of the unemployment rate and the inflation rate in the literature. The misery index is an economic indicator that has different macroeconomic effects and can often explain changes in living standards. Financial development has an important role on economic growth, especially in emerging market economies within globalization process. Domestic credits to the private sector data are included in the analysis to represent financial development in this study. According to the preliminary findings of the study, it is seen that the misery index and financial development index have strong effects on economic growth. In addition, it is observed that both real and monetary indicators significantly affect economic growth, both in the short run and in the long run.

Key Words: Financial Development, Misery Index, Economic Growth, Turkey, Dynamic ARDL Simulations

1. GİRİŞ

Bu çalışma Türkiye’de finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki ilişkiyi incelemektedir. Finansal gelişme 1970’li yılların sonlarından itibaren dünyanın genelinde olduğu gibi Türkiye’de de büyüme ve kalkınma süreçlerinde önemli bir rol oynamaya başlamıştır. Öyle ki yaklaşık son otuz yıldır ekonomilerin büyüme ve kalkınma patikaları o ekonomilerin finansal sektörlerinin gelişmiş olmasına bağlı hale gelmiştir. Finansal sektörlerin gelişmesi ise ekonomiler için önemli boyutlarda olan yatırımların sürdürülebilmesi için gereken kurumların, aracı kuruluşların ve pazarların ortaya çıkması ve yaygınlaşmasına dayalıdır (Guru ve Yadav, 2019: 114). Finansal gelişme aracılık ve finansal piyasa işlemlerinin etkin bir biçimde yürütülmesini sağlayan politikaların uygulandığı süreç olarak tanımlanmaktadır (Sehrawat ve Giri, 2017: 1). Finansal sistem güçlü olduğunda risk yönetimi kolaylaşır ve kaynakların etkin dağılımı sağlanır. Bunun yanı sıra finansal gelişmenin büyüklüğü ile tasarrufların ekonominin dinamiklerine daha fazla dahil edilmesi ve yüksek getiri sağlayabilecek yatırımlara daha yoğun yönlendirilebilmesi arasında güçlü bir bağ bulunmaktadır. Finansal gelişme finansal sistemin derinliği, erişimi ve doğruluğu gibi unsurları dahil ederek farklı yollardan ölçülebilmektedir. Aynı zamanda bankaların ve farklı piyasaların yasalaşma eylemleri dikkate alınarak da finansal gelişme ölçülebilmektedir (Wang, vd., 2019: 1).

Sefalet endeksi ise enflasyon ve işsizlik oranlarının toplamı şeklinde tanımlanmaktadır ve aynı zamanda bir ekonomide refah düzeyinin ölçülmesinde kullanılmaktadır (Wang, vd., 2019: 2). Türkiye ekonomisinde büyüme ve kalkınma hedefleri doğrultusunda uygulanan makroekonomik politikalar sonucunda enflasyon ve işsizlik oranları bazı dönemlerde çok yüksek düzeylere eriştiği için sefalet endeksi son yıllarda kritik öneme sahip bir göstere haline gelmiştir. Sefalet endeksinde bir artış meydana geldiğinde, bu durum toplumun yaşam standardı üzerinde etkisi olabilecek ekonomik refahının azalmasına yol açabilmektedir. Sefalet endeksi ilk olarak Arthur Okun tarafından tanımlanmış, sonraki dönemlerde ise geliştirilmiştir. Bir ekonomideki zenginlik düzeyinin belirlenmesinde temel olarak başvurulan göstergelerden biri olduğu için sefalet endeksi ile ekonomik büyüme arasında dikkate alınması gereken bir ilişki söz konusudur. Bunun yanı sıra, sefalet endeksi ekonomik kalkınma politikalarının belirlenmesinde yol gösterici bir özellik taşıyabilmektedir. Sefalet endeksinde bir düşüş meydana gelmesi kalkınma politikalarının uygun olarak belirlendiğini işaret etmektedir.

Bu çalışmada finansal gelişme ve sefalet endeksi dışında, Türkiye ekonomisinin küresel ekonomiye entegrasyon süreci içerisinde dış dünya ile ticarete açıklık olarak ifade edilen ticari açıklık da kontrol değişkeni olarak araştırma modeli içerisine dahil edilmektedir. 1980 yılında yapısal bir dönüşüme uğrayan Türkiye ekonomisi 1989 yılında finansal sermaye akımları önündeki engelleri de kaldırmıştır (Boratav ve Yeldan, 2001; Pamuk, 2020; Orhangazi, 2020). Sonraki dönemlerde Türkiye ekonomisinin büyüme patikası büyük oranda finansal sermaye akımlarına bağlı hale gelmiştir. Aynı zamanda 1990'lı yıllar Türkiye ekonomisi için yüksek enflasyon oranlarının deneyimlendiği yıllar olmuştur. İşsizlik oranları ise Türkiye ekonomisinde neredeyse her dönem doğal işsizlik oranının çok üstünde gerçekleşmiştir. Öyleyse, enflasyon ve işsizlik oranlarının toplamı olarak tanımlanan sefalet endeksinin ekonomik büyüme üzerinde bir etkisi var mıdır? Bu etki kısa dönem ve uzun dönem arasında farklılaşmakta mıdır? Bu çalışma temel olarak bu sorulara yanıt aramaktadır. Bu nedenle bu çalışma finansal gelişmenin yanı sıra sefalet endeksinin de ekonomik büyümeyle olan uzun dönem ilişkisini incelemeyi amaçlamaktadır. Bu çalışma Türkiye ekonomisi için finansal gelişme, sefalet endeksi ve ticari açıklığı bir arada modellemesi bakımından ilgili literatürde yer alan çalışmalardan farklılık göstermektedir. Türkiye için yapılan çalışmalarda finansal gelişme ile ekonomik büyüme arasında çok sayıda çalışma olmasına karşın (Kar ve Pentecost, 2000; Aslan ve Küçükaksoy, 2006; Güneş, 2013; Güney, 2017; Vurur, 2020) bilindiği kadarıyla sefalet endeksi ile ekonomik büyüme arasındaki ilişkiyi inceleyen çalışma bulunmamaktadır.

Bu çalışma, Türkiye'de finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki uzun dönem ilişkisini 1988-2019 yılları arası dönem için analiz etmektedir. Bu kapsamda çalışma dört bölümden oluşmaktadır. İkinci bölüm ilgili literatürde yer alan çalışmaları tartışmaktadır. Üçüncü bölümde çalışmada kullanılan veri ve yöntem açıklanmaktadır. Dördüncü bölümde analiz sonucu elde edilen ampirik bulgulara sunulmaktadır. Son bölümde ise sonuçlar ve değerlendirmelere yer verilmektedir.

2. LİTERATÜR

Finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki ilişkiye yönelik ampirik literatür kabaca iki grupta incelenebilmektedir. Finansal gelişme ile ekonomik büyüme arasındaki tartışmalar ilk olarak Schumpeter (1911), Robinson (1952), Mckinnon (1973) ve Shaw (1973) tarafından geliştirilmiştir. Finansallaşmanın yaygın olarak kabul edilmeye başladığı dönemlerde ise Gurley ve Shaw (1967), Goldsmith (1969), Jung (1986) çalışmaları ise finansal gelişme ile ekonomik büyümenin birlikte hareket ettiğini ortaya koyan çalışmalar olmuştur. Uluslararası literatürde son yıllarda finansal gelişme ve ekonomik büyüme arasındaki ilişkiyi araştıran çok sayıda çalışma bulunmaktadır. Calderon ve Lin (2003) 109 gelişmiş ve gelişmekte olan ülkeye yönelik finansal gelişme ve ekonomik büyüme arasındaki nedenselliği araştırmış ve karşılıklı nedensellik olduğu sonucuna ulaşmıştır. Bu sonuçlar gelişmekte olan ülkelerde gelişmiş ülkelere daha güçlü olarak ortaya çıkmıştır. Khan ve Qayyum (2007) ve Khan (2008) Pakistan'da finansal gelişme, ticaret ve ekonomik büyüme arasındaki ilişkiyi incelemiş ve uzun dönemde finansal gelişmenin ekonomik büyüme üzerinde pozitif ve anlamlı etkisi olduğu sonucuna ulaşmıştır. Jalil ve Feridun (2011) de Pakistan için finansal gelişme ve ekonomik büyüme arasındaki eşbütünleşme ilişkisini ele almış ve finansal gelişmenin ekonomik büyüme için güçlü bir neden olduğunu ortaya koymuştur. Ahmed (2010) Sahra-Altı ülkeleri için finansal gelişme ve ekonomik büyüme arasındaki ilişkiyi analiz etmiş ve değişkenler arasında uzun dönemde dengeli bir ilişki olduğunu ortaya koymuştur.

Hye ve Dolgoplova (2011) Çin için bir finansal gelişme endeksi oluşturmuş ve finansal gelişme ile ekonomik büyüme arasındaki ilişkiyi incelemiştir. Çalışmada finansal gelişme ve ekonomik büyüme arasında uzun dönemde anlamlı bir eşbütünlük ilişkisi olduğu sonucuna ulaşılmıştır. Hsueh, vd. (2013) 10 Asya ülkesi için finansal gelişme ve ekonomik büyüme arasındaki nedenselliği analiz etmiş ve değişkenler arasında güçlü bir nedensellik ilişkisi olduğu sonucuna ulaşmıştır. Uddin, vd. (2013) Kenya için finansal gelişme ve ekonomik büyüme arasındaki uzun dönem ilişkisini analiz etmiş ve finansal gelişmenin ekonomik büyüme üzerinde anlamlı ve pozitif bir etkisi olduğunu ortaya koymuştur. Menyah, vd. (2014) 21 Afrika ülkesi için finansal gelişme ve ekonomik büyüme arasındaki nedensellik ilişkisini araştırmıştır. Çalışmaya ticari açıklık da dahil edilmiş ve finansal gelişme ve ticari açıklığın ekonomik büyümeye kısıtlı katkıları olduğu sonucuna ulaşılmıştır. Sehrawat ve Giri (2017) Hindistan ekonomisi için finansal gelişme ile ekonomik büyüme arasındaki ilişkiyi araştırmış ve uzun dönemde büyüme ile finansal gelişme arasında anlamlı bir ilişki olduğunu ortaya koymuştur. Guru ve Yadav (2019) BRICS ülkeleri için finansal gelişme ve ekonomik büyüme arasındaki ilişkiyi panel veriler kullanarak araştırmıştır. Çalışmanın sonuçları, seçilen ülkelerde farklılık gösterdiğini ortaya koymuş ancak tüm ülkelerde finansal gelişmenin ekonomik büyümeyi pozitif yönde etkilediği sonucuna ulaşılmıştır.

Türkiye’de finansal gelişme ile ekonomik büyüme arasındaki ilişkiyi bilindiği kadarıyla ilk olarak Kar ve Pentecost (2000) çalışmıştır. Çalışmada ekonomik büyüme ile finansal gelişme arasındaki nedensellik ilişkisi analiz edilmiş ve ekonomik büyümeden finansal gelişmeye daha güçlü bir nedensellik olduğu sonucu elde edilmiştir. Ünalmiş (2002) finansal gelişme ile ekonomik büyüme arasındaki uzun dönem ilişkisi incelediği çalışmasında, finansal gelişme ve ekonomik büyüme arasında uzun dönemde karşılıklı nedensellik olduğunu ortaya koymuştur. Aslan ve Küçükaksoy (2006) finansal gelişme ile ekonomik büyüme arasında nedensellik ilişkisini analiz etmiş ve finansal gelişmeden ekonomiye büyümeye doğru bir nedensellik olduğunu belirtmiştir. Güneş (2013) finansal gelişmişlik ile ekonomik büyüme arasındaki nedensellik ilişkisini inceleyen bir diğer çalışmadır. Bu çalışmada ise finansal gelişmeden ekonomik büyüme doğru bir nedensellik ilişkisi bulunamamıştır. Ak, Altıntaş ve Şimşek (2016) finansal gelişme ile ekonomik büyüme arasındaki nedensellik ilişkisini incelemiş ve değişkenler arasındaki nedensellik ilişkisinin tek yönlü olduğunu, finansal gelişmenin ekonomik büyümeyi anlamlı olarak açıklamadığını ortaya koymuştur. Güney (2017) çalışmasında Türkiye ile Şanghay Beşlisi ülkelerini ele almış ve finansal gelişme ile ekonomik büyüme arasındaki ilişkiyi panel veriler ile analiz etmiş ve bu ülkelerde finansal gelişme ile ekonomik büyüme arasında eşbütünlük ilişkisi olduğu sonucuna ulaşmıştır. Bunun yanı sıra çalışmada finansal gelişme ekonomik büyümeyi pozitif yönde etkilediği ortaya koyulmuştur. Vurur (2020) çalışmasında finansal gelişme ve ekonomik büyüme arasındaki uzun dönem ilişkisini incelemiş ve finansal gelişmenin ekonomik büyüme üzerinde pozitif ve anlamlı etkisi olduğu sonucunu elde etmiştir.

Literatürde sefalet endeksi ile ekonomik büyüme arasındaki ilişkiyi inceleyen çok az sayıda çalışma bulunmakla birlikte, bilindiği kadarıyla Türkiye için yapılan çalışma bulunmamaktadır. Uluslararası literatürdeki ilk çalışmalardan olan Ali, vd. (2015) Pakistan’da ekonomik sefalet ile beşerî sermaye çıktısı arasındaki ilişkiyi incelemiş ve değişkenler arasında pozitif bir ilişki tespit etmiştir. Saboor, vd. (2017) çalışmalarında sefalet endeksi ile ekonomik büyüme arasındaki ilişkiyi suç ve demokrasi üzerinden araştırmıştır. Çalışmada değişkenler arasında demokrasi yanlı bir büyüme olduğu sonucuna ulaşılmıştır. Wang, vd. (2019) ise Pakistan’da finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki uzun dönem ilişkisini ele aldıkları çalışmalarında uzun dönemde değişkenler arasında pozitif ve anlamlı bir ilişki olduğunu ortaya koymuşlardır.

3. VERİ VE YÖNTEM

3.1. Veri

Çalışmada Türkiye’de finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki uzun dönem ilişkisini analiz etmek için dört önemli makroekonomik değişken kullanılmaktadır. Bu değişkenlerden ekonomik büyüme (*Lkgsyh*) kişi başına gayri safi yurtiçi hasıla ile, finansal gelişme (*Lfg*) özel sektöre yönelik yurtiçi krediler ile, sefalet endeksi (*Lse*) ise enflasyon ve işsizlik oranlarının toplamı olarak ölçülen bir endeks ile temsil edilmektedir. Çalışmada ayrıca ticari açıklık (*Lta*) modele kontrol değişkeni olarak

eklenmektedir. Çalışmada kullanılan tüm seriler Dünya Bankası Veritabanından¹ derlenmiştir. Çalışmada kullanılan tüm serilerin doğal logaritması alınmıştır. Çalışmanın ampirik uygulamasında 1988 – 2019 dönemi yıllık serileri kullanılmıştır. Çalışmada kullanılan değişkenlere ait tanımlayıcı istatistikler Tablo 1’de sunulmaktadır.

Tablo 2’de ise çalışmada kullanılan değişkenler arasındaki korelasyonlar görülmektedir. Buna göre finansal gelişme ile kişi başına gayri safi yurtiçi hasıla arasında oldukça güçlü bir ilişki söz konusudur. Bunun yanı sıra, sefalet endeksi ile kişi başına gayri safi yurtiçi hasıla arasında ise ters yönlü bir ilişki olduğu gözlenmektedir.

Tablo 1: Tanımlayıcı İstatistikler

Değişkenler	Gözlem	Ortalama	Standart sapma	En küçük	En büyük	kurtosis	skewness
<i>Lkgsyh</i>	32	9.152843	0.280704	8.749642	9.628399	1.797909	0.3138674

<i>Lta</i>	32	3.816139	0.1950588	3.41694	4.138088	2.588603	-
							0.6254505

Tablo 2: Korelasyon

	Lkgsyh	Lfg	Lse	Lta
Lkgsyh	1.0000			
Lfg	0.9252	1.0000		
Lse	-0.8187	-0.7069	1.0000	
Lta	0.7982	0.6763	-0.6016	1.0000

3.2. Yöntem

Çalışmada finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki ilişkiyi analiz etmek için özgün bir yöntem olarak Dinamik Gecikmesi Dağıtılmış Otoregresif Simülasyonlar (Dinamik ARDL) modeli (Jordan ve Phillips, 2018: 14) kullanılmaktadır. Dinamik ARDL yöntemi değişkenler arasındaki uzun dönem ilişkilerine yönelik gerçek bulgular ortaya koymaktadır. Jordan ve Phillips (2018)’e göre dinamik simülasyonlar, anlamlı karşı-olgusal senaryolar aracılığıyla katsayıların temel önemini aktarmaktadır. Geleneksel eşbütünleşme yöntemlerinde olduğu gibi, simüle edilmiş dinamik ARDL yönteminin modeldeki değişkenlerin durağanlık sürecini kontrol etmesi gerekmektedir. Buna göre, Dinamik ARDL simülasyonlarının uygulanabilmesi için değişkenler ancak I(0) veya I(1) düzeyinde durağan halde olmalıdır (Abbasi ve Adedoyin, 2020).

Jordan ve Phillips (2018), bulguların asıl önemini açık bir şekilde yorumlayabilmek için çok sayıda farklı ARDL modellerini dinamik olarak simüle eden yeni bir yöntem önermektedir. Bu yöntem, değişkenler arasındaki uzun dönemli ve kısa dönemli etkileşimi ayırarak halihazırda olan ARDL yönteminin karmaşıklıklarını çözebilmektedir (Khan vd., 2019: 23483). Dinamik ARDL modeli, çok değişkenli normal dağılımdan değişkenlerin vektörü için 5000 simülasyon çalıştırmaktadır. Simülasyonların sonuçları, açıklayıcı değişkendeki gerçek hareketi ve bunun bağımlı değişken üzerindeki etkisini incelemek üzere grafiklerle gözlenebilmektedir.

Bu teorik açıklamalar göre oluşturulan dinamik ARDL simülasyon modeli şöyle yazılabilmektedir:

$$\Delta Lkgsyh_t = \alpha_0 + \theta_0 Lkgsyh_{t-1} + \beta_1 \Delta Lfg_t + \theta_1 Lfg_{t-1} + \beta_2 \Delta Lse_t + \theta_2 Lse_{t-1} + \beta_3 \Delta Lta_t + \theta_3 Lta_{t-1} + \varepsilon_t \quad (1)$$

Zaman serisi analizleri genellikle değişkenlerin istikrar koşullarının kontrol edilmesini gerektirmektedir. Çünkü bu değişkenler farklı zaman noktalarında farklı ortalamalara sahip olabilmektedir ve istikrarsız serilerin varyansları bulunmaktadır. Aynı zamanda bu seriler örneklem büyüklüğü ile arttığı için

¹ World Development Indicators, World Bank için bkz. <https://databank.worldbank.org/source/world-development-indicators>

değişkenlerin kararlılık koşullarının test edilmesi gerekmektedir (Harris ve Sollis, 2003). Zaman serilerinin doğrusal kombinasyonları, önemli ölçüde yüksek t değerlerine sahip sahte bir regresyon problemine (Alimi, 2014) yol açar ve katsayı belirlemesi 1'e oldukça yakın ve Durbin-Watson (DW) istatistiklerine göre oldukça düşüktür (Granger ve Newbold, 1974). Sonuçta, katsayıların tahmin sonuçları sapmalı olur. Bu nedenle, herhangi bir sahte regresyon probleminden kaçınmak için birim kök testleri ile değişkenlerin durağanlıklarının test edilmesi gerekmektedir. Bu çalışmada birim kök testlerinden Augmented Dickey-Fuller² (ADF) ve Phillips-Perron³ (PP) birim kök testleri kullanılarak serilerin doğrusal stokastik eğilimleri incelenmektedir.

Çalışmada son olarak değişkenlerin tahmin edilen uzun dönem katsayılarının istikrarlı bir yapıya sahip olup olmadığını belirleyebilmek için Kümülatif Toplam (Cumulative Sum, CUSUM) ve Kümülatif Kareler Toplamı (Cumulative Sum of Squares, CUSUMSQ) testleri uygulanmaktadır.

4. BULGULAR

Çalışmada finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki ilişkiyi dinamik ARDL yöntemiyle analiz etmeden önce analizde kullanılan değişkenlere yönelik ADF ve PP birim kök testleri uygulanmıştır. Tablo 3 bu testlerin sonuçlarını göstermektedir. Sonuçlara göre çalışmada kullanılan tüm değişkenler hem ADF hem PP testleri sonucunda birinci farkı alınarak durağan hale gelmektedir. Ayrıca tüm değişkenler % 1 anlamlılık düzeyinde I(1) seviyesinde durağan hale gelmektedir. Bu sonuçlar bu değişkenler kullanılarak öncelikle eşbütünleşme ilişkisinin sonrasında da uzun dönem ve kısa dönem katsayıların elde edilebilmesi için dinamik ARDL simülasyonları yönteminin uygulanabileceğini göstermektedir.

Tablo 3: Birim Kök Testi Sonuçları

Değişkenler	ADF				Phillips-Perron			
	Düzye		Fark		Düzye		Fark	
	Sabit	Sabit ve trend	Sabit	Sabit ve trend	Sabit	Sabit ve trend	Sabit	Sabit ve trend
Lkgsyh	0.9668	0.3330	0.0000***	0.0000***	0.9745	0.3104	0.0000***	0.0000***
Lfg	0.9581	0.7815	0.0008***	0.0059***	0.9420	0.7336	0.0010***	0.0078***
Lse	0.7481	0.9749	0.0013***	0.0086***	0.7037	0.9166	0.0013***	0.0085***
lta	0.6649	0.2100	0.0000***	0.0005***	0.7030	0.1772	0.0000***	0.0005***

Not: *** %1 düzeyinde anlamlılığı temsil etmektedir. Gecikme uzunluğu Akaike Bilgi Kriteri (AIC)'ne göre belirlenmiştir. ADF ve PP'nin boş hipotezi bir zaman serisi örneğinde bir birim kökünün varlığını gösterir.

Tablo 4 bir önceki kısımda açıklanan eşitlik (1)'in tahmininde hesaplanan F istatistik değerini göstermektedir. Buna göre, hesaplanan F istatistik değeri % 1 anlamlılık düzeyinde alt ve üst kritik değerlerin dışındadır. Hesaplanan F istatistiği 9.160 olarak elde edilmiştir ve üst kritik değer üzerinde. Üst kritik değerden büyük olması ise çalışmada kullanılan değişkenler arasında uzun dönemde bir eşbütünleşme ilişkisinin olduğunu kanıtlamaktadır.

Tablo 4: ARDL Eşbütünleşme Test Sonuçları

Bağımsız Değişken Sayısı (k)	F istatistiği	% 1 Anlamlılık Seviyesinde Kritik Değerler	
		Alt Sınır I(0)	Üst Sınır I(1)
$Lkgsyh=f(Lfg, Lse, Lta, d2001, d2009)$			
(2, 2, 1, 0, 0, 1)	9.160	4.777	7.036

²Dickey, D. A. ve Fuller, W. A. (1979). Distribution of the estimators for autoregressive time series with a unit root, *J Am Stat Assoc*, 74, 427-431

³Phillips P.C.B. ve Perron, P. (1988). Testing for a unit root in time series regression, *Biometrika*, 75, 335-346

Not: F testi analizinde kullanılan kritik değerler için Kripfganz ve Schneider (2018) çalışmasında yer alan değerler kullanılmıştır ve analiz Stata-14 paket programı ile yapılmıştır. (2, 2, 1, 0, 0, 1) ise Akaike Bilgi Kriterine dayalı olarak analiz edilen modeldeki parametrelerin gecikme uzunluklarını gösterir.

Eşbütünleşme ilişkisinin elde edilmesi sonrasında kısa ve uzun dönemin ayrıştırılarak bulguların ortaya koyulmasına gereksinim duyulmaktadır. Tablo 5 dinamik ARDL sonuçlarını ortaya koymaktadır. Buna göre, finansal gelişme kişi başına gayri safi yurtiçi hasıla üzerinde kısa dönemde anlamlı bir etkiye sahip olmamasına rağmen, uzun dönemde % 0.08 civarında % 5 anlamlılık düzeyinde anlamlı pozitif bir etkiye sahiptir. Sefalet endeksi ise kişi başına gayri safi yurtiçi hasıla üzerinde hem kısa dönemde (% -0.10) hem de uzun dönemde (% -0.03) beklentilere uyumlu olarak negatif ve sırasıyla % 5 ve % 10 anlamlılık düzeylerinde anlamlı etkiye sahiptir. Diğer yandan, ticari açıklığın kişi başına gayri safi yurtiçi hasıla üzerindeki etkisi pozitif ancak istatistiksel olarak anlamlı değildir. Bu çalışmada modelin açıklama gücünü artırabilmek için kontrol değişkeni olarak modele 2001 ve 2009 yıllarında yaşanan krizleri temsilen kukla değişkenler dahil edilmiştir. Buna göre 2001 yılında yaşanan bankacılık krizinin Türkiye’de kişi başına gayri safi yurtiçi hasıla üzerinde kısa dönemde anlamlı ve negatif bir etkisi olmasına rağmen uzun dönemde yine negatif ancak istatistiksel olarak anlamsız bir etki söz konusudur. Son olarak, 2009 yılında yaşanan küresel finansal krizin Türkiye ekonomisine etkilerine bakıldığında ise hem kısa dönemde hem de uzun dönemde istatistiksel olarak sırasıyla % 1 ve % 5 düzeyinde anlamlı ve negatif etkiler olduğu görülmektedir.

Tablo 5: Dinamik ARDL Sonuçları

Not: ***, ** ve * sırasıyla % 1, % 5 ve % 10 anlamlılık düzeylerini temsil etmektedir.

Çalışmanın uzun dönem ve kısa dönem bulgularını ortaya koyan dinamik ARDL simülasyonları yöntemiyle elde edilen sonuçlara göre finansal gelişmenin kişi başına gayri safi yurt içi hasıla üzerindeki pozitif yönde etkisi literatürde yer alan hem Türkiye hem de farklı ülkeler üzerine yapılan birçok çalışma ile benzer olarak ortaya çıkmıştır (Kar ve Pentecost, 2000; Calderon ve Lin, 2003; Khan ve Qayyum, 2007; Khan, 2008; Jalil ve Feridun, 2011; Menyah, vd., 2014; Güney, 2017; Guru ve Yadav, 2019; Vurur, 2020). Finansal gelişmenin bu pozitif etkisi sermaye akımlarının ekonomide hem kaynak yaratma hem de doğrudan üretimde bulunmaya katkı sağlaması bakımından teorik olarak da tutarlıdır. Sefalet endeksi ise özellikle enflasyon oranı ve işsizlik oranının toplamını yansıttığı için kişi başına gayri safi yurt içi hasılayı negatif yönde etkilemesi anlamında literatürde yer alan az sayıdaki ilişkili çalışmayla uyumludur (Ali, vd., 2015; Wang, vd., 2019). Aynı zamanda 2001 ve 2009 krizleri de Türkiye ekonomisinde kişi başına gayri safi yurt içi hasılayı olumsuz etkilemiştir. 2001 krizi bankacılık sektöründe yaşanmış ve finansal yapı üzerinden sermaye daralması sonucu ekonomik büyümeyi olumsuz etkilemiştir. 2009 krizi ise küresel finansal sistemde oluşan ve Türkiye ekonomisinde özellikle 2009 ve sonrası dönemde daha önemli negatif etkileri olan bir kriz olmuştur.

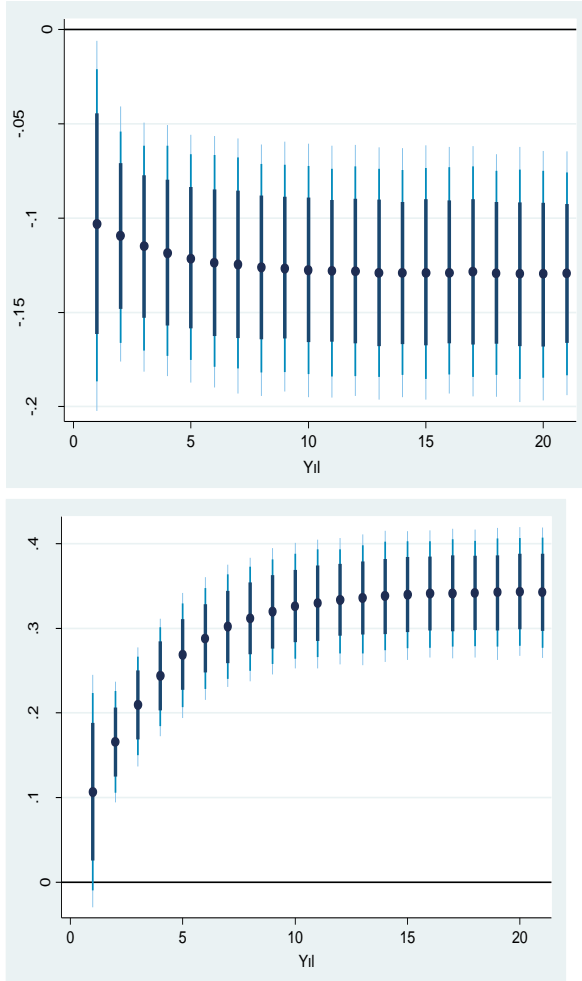

Tablo 6 çalışmada kullanılan modelin analizi sonucunda elde edilen bulguların tutarlı olup olmadığını gösteren testlerin sonuçlarını ortaya koymaktadır. Tablodaki test sonuçlarına göre, çalışmada analiz edilen modele ilişkin herhangi bir normallik, otokorelasyon veya değişen varyans problemi bulunmamaktadır.

Tablo 6: Tanısal Testler

Testler	Olasılık Değerleri
Jarque-Bera Normallik Testi	0.2934
Ramsey Reset Testi	0.6952
Breusch-Godfrey LM Testi	0.4361
ARCH LM Testi	0.6721
Breusch-Pagan Değişen Varyans Testi	0.2100
Durbin-Watson Testi	2.2278

Dinamik ARDL simülasyonları yönteminin son aşaması olan etki tepki fonksiyonları ise Şekil 1’de gösterilmektedir. Etki tepki fonksiyonlarına göre, sefalet endeksinde meydana gelen 1 puanlık artış hem kısa hem de uzun dönemde kişi başına gayri safi yurt içi hasıla üzerinde negatif ve anlamlı etkiye sahiptir. Finansal gelişimde meydana gelen 1 puanlık artış ise yalnızca uzun dönemde kişi başına gayri safi yurt içi hasılayı pozitif ve anlamlı olarak etkilemektedir. Ticari açılımda meydana gelen 1 puanlık artış ise hem kısa hem de uzun dönem kişi başına gayri safi yurt içi hasılayı pozitif olarak etkilemesine rağmen istatistiksel olarak anlamlı değildir.

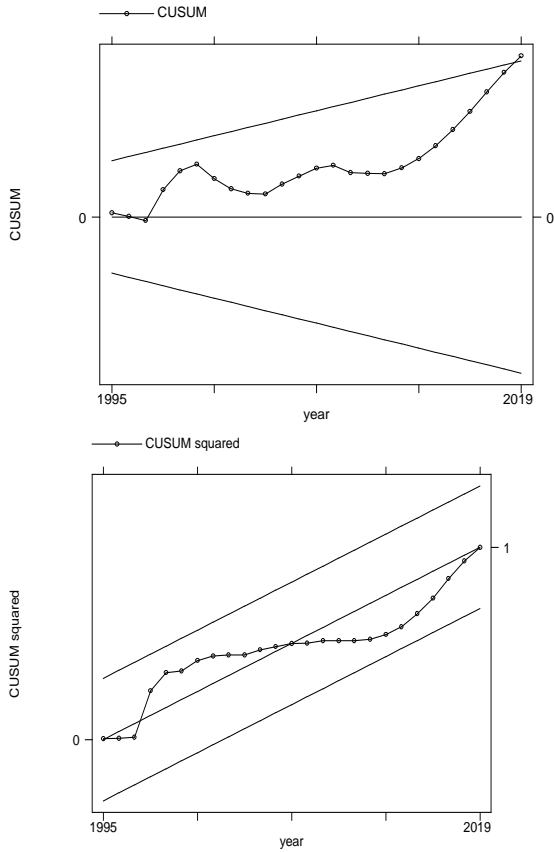

Şekil 1: Etki Tepki Fonksiyonları

Şekil 2’de ise analiz sonucunda elde edilen katsayılarının yapısal tutarlılıklarına ilişkin yapılan Cusum ve CusumSQ test sonuçları yer almaktadır. Buna göre her iki test sonucu da katsayıların yapısal olarak istikrarlı olduğunu ortaya koymaktadır.

Şekil 2: Cusum ve CusumSQ Test Sonuçları

5. SONUÇ

Çalışmada Türkiye ekonomisinde 1989-2019 dönemine ilişkin finansal gelişme, sefalet endeksi ve ekonomik büyüme arasındaki ilişkinin uzun dönem analizi gerçekleştirilmiştir. Elde edilen bulgular, incelenen dönemde teorik ve ampirik literatürle uyumlu olarak finansal gelişmenin ve sefalet endeksinin Türkiye’de kişi başına gayri safi yurt içi hasıla için oldukça önemli olduğunu ortaya koymaktadır. Özellikle

1989 yılında yaşanan finansal serbestleşme girişimleri sonucunda Türkiye ekonomisinde önemli oranda sermaye girişi olmuş ve bu sermaye girişi sonucunda üretim ve gelir düzeylerinde artışlar yaşanmıştır. Finansal gelişme aynı zamanda Türkiye ekonomisinin küresel iktisadi entegrasyona hızlı bir biçimde uyumlandığını da göstermektedir. Sefalet endeksi ise finansal gelişmede olduğu gibi makroekonomik olarak Türkiye ekonomisinde dikkate alınması gereken bir gösterge olduğu görülmektedir. Türkiye ekonomisi özellikle 1990'lı yıllar boyunca yüksek enflasyon ve sonrasında da yüksek işsizliği aynı anda deneyimlemiştir. Bu durumun önemli bir sonucu olarak bu iki göstergenin toplamı şeklinde hesaplanan sefalet endeksi ise kişi başına gayri safi yurt içi hasılayı olumsuz yönde etkilediği görülmektedir. Çalışmanın ilgili literatüre en önemli katkısı hem parasal hem reel büyüklüklerin ekonomik büyüme üzerindeki etkilerinin özgün bir yöntem ile analiz edilmesidir. Bu kapsamda elde edilen sonuçlar finansal gelişme ve sefalet endeksinin Türkiye ekonomisinde hem kısa dönem hem de uzun döneme yönelik makroekonomik politika uygulamalarında dikkat edilmesi gereken önemli göstergeler olduğunu ortaya koymaktadır.

Özet: Kurumsal sürdürülebilirlik, Dünya gelişme komisyonu tarafından açıklanan Brundlant raporu ile çok önemli bir kavram haline gelmiştir. Gelecek nesillerin ihtiyaçlarını karşılama becerisini kaybetmeden bu günün ihtiyaçlarını karşılamak olan kurumsal sürdürülebilirlik, sürdürülebilirliği destekleyen teoriler arasında büyük öneme sahiptir. Günümüzde işletmelerin sadece ekonomik açıdan kar etmesi, işletmenin devamlılığı için yeterli olmamaktadır. Kurumsal sürdürülebilirlik projelerine verdikleri desteklere ve kurumsal sosyal sorumluluğa sahip işletmeler tüketiciler tarafından tercih edilmektedir. İşletmeler kurumsal sosyal politikalara daha fazla ağırlık vererek kurumsal sürdürülebilirliğe katkı sağlamalıdır. Ayrıca işletmeler paydaşlarıyla daha iyi ilişkiler kurarak ve onların çıkarlarını gözeterek sürdürülebilirliğe katkı sağlamalıdır. Bu noktada bu çalışma paydaş ve toplum nazarında olumlu etkileşimler kurularak daha sağlam temelleri olan işletme faaliyetlerine yönelme konusuna ışık tutmuştur. Bu araştırmada kurumsal sürdürülebilirliği ile ilgili kavramları açıklayarak işletmeleri bilgilendirmenin yanı sıra kurumsal sürdürülebilirliği destekleyen teoriler ve bu teorilerin birbirleri ile olan ilişkilerini açıklayarak literatüre katkı sağlanması amaçlanmıştır. Yapılan literatür çalışması sonucunda ilgili teoriler titizlikle incelenmiş ve gelecek çalışmalarda teori temelli nicel çalışmalara ışık tutacağı varsayılmıştır.

Anahtar Kelimeler: Kurumsal Sürdürülebilirlik, Sürdürülebilir Kalkınma, Paydaşlar Teorisi, Kurumsal Sürdürülebilirlik Teorileri.

Investigation Of Corporate Sustainability In Theoretical Context

Abstract: Corporate sustainability has become a very important concept with the Brundlant report announced by the World Development Commission. Corporate sustainability, which is to meet the needs of this day without losing the ability to meet the needs of future generations, is of great importance among the theories that support sustainability. Currently, businesses profit only from economic gain is not enough for the continuity of the business. Businesses with their support for corporate sustainability projects and Corporate Social Responsibility are preferred by consumers. Businesses should contribute to corporate sustainability by giving more weight to corporate social policies. At this point, this study shed light on the topic of turning to business activities with more solid foundations by establishing positive interactions in the eyes of stakeholders and society. In this research, it is aimed to inform businesses by explaining the concepts related to corporate sustainability, as well as to contribute to the literature by explaining the theories supporting corporate sustainability and the relations of these theories with each other. As a result of the literature study, the relevant theories have been carefully studied and it is assumed that future studies will shed light on theory-based quantitative studies.

Key Words: Corporate Sustainability, Sustainable Development, Stakeholder Theory, Corporate Sustainability Theories.

1. GİRİŞ

Kaynakların hızla tükenmesi, çevre kirliliği, küresel ısınma ve biyolojik çeşitliliğin azalması gibi çevre sorunları çevre dengesi de bozulmaya neden olmaktadır. Bu çevreyle ilgili sorunların sürekli artması hükümetleri, toplulukları, şirketleri ve bireyleri çevresel konularda önlem almaya yönlendirmektedir (Walker ve ark. 2008). Kurumsal sürdürülebilirlik; kurumsal sosyal sorumluluk, sürdürülebilir kalkınma, paydaşlar teorisi ve kurumsal hesap verebilirlik teorisi gibi dört temel unsurdan meydana gelmiştir (Ceylan, 2010: 25). Kurumsal sürdürülebilirlik ve sürdürülebilir kalkınma, 2000'li yılların başlarında kurumsal sosyal sorumluluk birlikte tartışmaların odak noktasını oluşturmaktadır. Kurumsal sürdürülebilirliği kurumsal sosyal sorumluluk ve sürdürülebilir kalkınma; ekonomik sorumluluklar, sosyal ve çevresel açılardan aynı hedefe yönelmelerine rağmen bu terimler ayrı ayrı olarak evrimleşmişlerdir (Montiel, 2008). Kurumsal sosyal sorumluluk yalnız olarak işletmelerin sosyal sorumluluklarını değil,

buna ek olarak toplumun, işletmeleri sorumlu tutma yönünü de inceleyen geniş bir alanda tartışılmaktadır (Lee, 2008). Kurumsal sürdürülebilirlik ilgili teoriler birçok alanda benzerlik göstermelerine rağmen dünyanın çeşitli ülkelerinde yer alan işletmeler kurumsal sürdürülebilirliğe farklı anlamlar yüklenmektedir. Örneğin herhangi bir kavram bir ülkede ticari sorumluluk olarak kabul edilirken, diğer bir ülkede kamusal, sosyal veya bireysel sorumluluk olarak kabul edilmektedir (Moon, 2007).

Bu araştırmada, kurumsal sürdürülebilirlik, kurumsal sürdürülebilirlik teorileri açısından araştırılmaktadır. Kurumsal sürdürülebilirlik teorilerinden sürdürülebilir kalkınma, kurumsal sosyal sorumluluk, sosyal paylaşım teorisi, kurumsal hesap verilebilirlik teorileri düzeyinde kavramsal olarak incelenecektir.

2. KAVRAMSAL ÇERÇEVE

Çalışmanın bu kısmında; kurumsal sürdürülebilirlik, sürdürülebilir kalkınma, kurumsal sosyal sorumluluk kavramları açıklanmıştır.

2.1. Kurumsal Sürdürülebilirlik

Kurumsal sürdürülebilirlik kavramı 21. yüzyılda en çok üzerine konuşulan ve açıklamalar yapılan bir kavram arasındadır. Kurumsal sürdürülebilirlik işletmelerin sahip olduğu doğal, bilimsel ve insani kaynakların ihtiyatlı olarak kullanılmasıdır (Gladwin vd., 1995). Kurumsal sürdürülebilirlik kavramı hem aktif hem de proaktif bir yapı olarak tanımlarken ekosistemin sahip olduğu değerlerin ve sistemin işleyişin devamlılığı olarak görmektedir (Karaman, 1996). Bu günlerde sıkça gündeme gelen küresel ısınma, çevre kirliliği, toplumsal olarak yoksulluğun artışı dünyanın geleceği ve sürekliliği açısından büyük önem taşımaktadır. Dünyanın nüfusunun hızlı bir şekilde artışı doğal kaynakların hızlı bir şekilde azalması tüm çevreler arasında tartışılmaktadır.

Kurumsal sürdürülebilirlik; bir yönü ile işletmenin paydaşlarının günümüz ihtiyaçlarını karşılarken, diğer yönü ile işletmenin gelecekteki ihtiyaçlarını beşeri ve doğal kaynaklarını koruyarak gelişmesine olanak sağlayan işletmenin stratejileri ve faaliyetleri olarak tanımlamak mümkündür (Roca ve Searcy, 2012). Marrewijk (2003) kurumsal sürdürülebilirlik; sosyal ve çevresel konuların işletmenin faaliyetlerinin ve işletmenin paydaşlarının faaliyetlerine dâhil edilmesi olarak açıklar.

Banerjee ve diğerleri, (2003) göre; Kurumsal sürdürülebilir işletmenin karşılaştığı kritik çevresel sorunların tanımlanmasıdır. Chan (2010) buna, işletme çevreyi korumaya olan bağlılığının içsel değerleri ve etik standartları adını vermiştir. Kurumsal sürdürülebilir, yeni ürün tasarımı ve süreçlerinin organizasyon yapısına entegrasyonu üzerinde bir etkiye sahiptir (Klewitz ve Hansen, 2013). Kurumsal sürdürülebilir tipik olarak işletmelerin ürünlerinin ve üretim süreçlerinin nihai olarak rekabet avantajı sağlayan çevresel ve sosyal düzenlemelere göre yeniden tasarlanmasına yansır (Aikenhead vd. 2015). El-Kassar ve Singh (2018), ürün ve süreç yeniliğinin kirliliği ve enerji tüketimini ve dolayısıyla işletmelerin performansını azalttığını bulmuşlardır.

Literatürde kurumsal sürdürülebilirlikle ilgili çalışmalara ulaşılmaktadır. Kurumsal sürdürülebilirlik etkileşimler ve kurumsal finansal performansı, (Tarhan, 2017) Kurumsal sürdürülebilirlik uygulamalarının stratejik etmenlerinin belirlenmesi, (Korkmaz, 2020) yöneticilerin kurumsal sürdürülebilirlik algısı ve farkındalık düzeyinin tespitine yönelik BIST Bursa işletmelerindeki araştırması, (Altay, 2019) kurumsal sürdürülebilirlik açısından entegre raporların incelemesi, (Sarıyar, 2019) Kurumsal sürdürülebilirlik uygulamalarının algılanması bir sanayi işletmesinde araştırma, (Savaş, 2019) Tüketim toplumunda kurumsal sosyal sorumluluk ve kurumsal sürdürülebilirlik: Tüketici katılımı ile yapılan sosyal kampanyalara yönelik niteliksel bir araştırma çalışmaları görmektediriz.

Wilson kurumsal sürdürülebilirliği, yeni gelişen kurumsal yönetim paradigması olarak açıklamış ve kurumsal sürdürülebilirliği 4 konseptten yararlanarak açıklamıştır (Wilson 2003).

Tablo1: Kurumsal Sürdürülebilirliğin Dayandığı Teoriler

Alt Dallar	Kavramlar	Kurumsal Sürdürülebilirliğe Katkısı
Ekonomik	Sürdürülebilir Kalkınma	Konunun sınırlarının, sosyal amacın belirlenmesi
Ekoloji		
Sosyal		

Ahlak Felsefesi	Kurumsal Sosyal Sorumluluk	İşletmenin neden sürdürülebilir olmasını açıklayan ahlaki sebepler
Stratejik Yönetim	Sosyal Paylaşımlar Teorisi	İşletmenin neden sürdürülebilir olmasını açıklayan iş sebepleri
İş Hukuku	Kurumsal Hesap Verilebilirlik Teorisi	İşletmenin neden sürdürülebilir performans raporlaması gerektiğini açıklayan ahlaki sebepler

2.2. Sürdürülebilir Kalkınma

Sürdürülebilir kalkınma son yıllarda sık bir şekilde tartışılan bir kavram olarak karşımıza çıkmaktadır. Sürdürülebilir kalkınma 1980 yılların sonuna doğru ortaya çıkmış halen günümüzde önemini kaybetmeden konuşulan bir kavramdır. Sürdürülebilir kalkınma ülkelerin sosyal, ekonomik ve çevresel yönden gelişmesine katkı sağlayan bir kavramdır. Sürdürülebilir kalkınmanın ortaya çıkış sebepleri olarak ülkeler arası gelir dağılımındaki adaletsizlik ve büyük işletmelerin üretim odaklı çalışmaları örnek verilebilir. 1970’li yıllarda bu sorunu çözümü için büyük çaba harcamışlardır. Sürdürülebilirlik kavramı ilk olarak 1972 yılında Stockholm’de gerçekleşen birleşmiş milletler çevre konferansında bahsedilmeye başlanmıştır. 1987 yılında birleşmiş milletler genel kurulunda Brutland raporu olarak bilinen geleceğimiz raporu yayınlanarak Dünya çevre ve Kalkınma komisyonu tarafından bu gün bilinen sürdürülebilirliğin tanımı oluşturulmuştur (Tıraş, 2012). Tanımda Sürdürülebilir kalkınma; Gelecek nesillerin ihtiyaçlarını yok etmeden şimdiki nesillerin ihtiyaçlarının karşılanması olarak tanımlanmıştır. Güneydoğu Anadolu projesinin sürdürülebilir kalkınmayı doğa ile insan arasında dengeyi kurarak gelecek nesillerin doğal kaynaklarını yok etmeden bu günün ihtiyaçlarının karşılanmasını sağlayacak programların yapılmasıdır (www.gap.gov.tr.). Sürdürülebilir kalkınma küresel anlamda Rio gerçekleşen 178 ülke devlet başkanlarının katılımı ile gerçekleşen Rio konferansında gerçekleşmiştir. Bu küresel toplantıdan bir yıl sonra yapılan toplantıda Birleşmiş Milletler Kalkınma Komisyonu kurulmuştur.

Sürdürülebilir kalkınmanın sosyal, ekonomik ve çevresel olmak üzere üç boyut olarak karşımıza çıkmaktadır. Sosyal boyutu, insanla ilgili olup sosyal ve kültürel sistemlerin devamlılığının sağlanmasıdır. Gelişmekte olan ülkelerde yoksulluğun artması sosyal boyutunu ortaya çıkarmaktadır. Ekonomik boyut, doğada var olan kıt kaynakların kullanımının sağlanmasıdır. Çevresel boyut ise fiziksel ve biyolojik sistemlerin adaletli olmasını öngörür. Toplumda biyolojik çeşitliliğin korunması önem arz etmektedir (Gürlük, 2010). Sosyal ve ekonomik boyutlar gelir dağılımı, işsizlik sorununun çözümü, yoksulluğun azaltılması gibi konularla etkileşim içindedir. Çevresel ve ekonomik boyutlar çevresel değerlendirme ile ekonomik faktörlerin meydana getirdiği olumsuzlukları içleştirmeyi öngörmektedir. Sürdürülebilir kalkınma bir dengeyi ve uzlaşma olarak ifade edilir (Turgut, 1996). Sürdürülebilir kalkınmanın kurumsal sürdürülebilirliğe katkısı iki yönlüdür. Birincisi, şirketlerin odaklanması gereken çevresel, sosyal ve ekonomik performanslarının belirlenmesine yardımcı olur. İkincisi, şirketlerin, hükümetlerin ve sivil toplumun ekolojik, sosyal ve ekonomik sürdürülebilirliğe yönelik çalışmaları için ortak bir toplumsal hedef sağlar. Ancak, sürdürülebilir kalkınma tek başına şirketlerin neden bu konuları önemsemeleri gerektiğine dair gerekli argümanları sağlamaz. Bu argümanlar kurumsal sosyal sorumluluk ve paydaş teorisi kaynak temelinde incelenmektedir.

2.3. Kurumsal Sosyal Sorumluluk

Sürdürülebilir kalkınma gibi, kurumsal sosyal sorumluluk (KSS) da geniş, diyalektik bir kavramdır. Dünya İş Konseyi kurumsal sosyal sorumluluğu, “ekonomik kalkınmayı desteklerken aynı zamanda işgücünün, ailelerin ve toplumun yaşam kalitesini de arttırmayı sürdüren bir taahhüttür” şeklinde ifade etmiştir (https://www.wbcsd.org, 1998). Avrupa Birliği Komisyonu tarafından yayınlandığı 2011 yılındaki bildirisinde kurumsal sosyal sorumluluk tanımında: “Kurumsal sosyal sorumluluk, işletmelerin toplum üzerindeki etkileri bakımından yerine getirmeleri gereken sorumluluklardır. Yürürlükteki mevzuata ve toplu sözleşmelere saygı göstermek, bu sorumluluğu yerine getirmenin bir önkoşuludur (European Commission, 2011)” En genel anlamda, kurumsal sosyal sorumluluk, iş dünyasının toplumdaki rolüyle ilgilidir. Temel önermesi, şirket yöneticilerinin, yalnızca hissedarların çıkarları veya kendi çıkarları için hareket etmekte kalmayıp, toplumun ihtiyaçlarını dikkate alma ve ele alma konusunda etik bir yükümlülüğü olduğudur. Birçok yönden kurumsal sosyal sorumluluk bir tartışma olarak kabul edilebilir ve

genellikle söz konusu olan, şirket yöneticilerinin toplumun ihtiyaçlarını dikkate alma yükümlülüğünün olup olmadığı değil, bu ihtiyaçları ne ölçüde dikkate almaları gerektiğidir.

Bir kavram olarak, kurumsal sosyal sorumluluk, sürdürülebilir kalkınmadan veya bu makalede tartışılan diğer kavramlardan çok daha uzun süredir varlığını sürdürmektedir. Nicholas Ebserstadt'ın 1973 tarihli bir makalesi, yönetim organlarının işadamları ve tüccarlar için davranış kurallarını belirlediği zaman, kurumsal sosyal sorumluluğunun tarihini antik Yunanistan'a kadar uzanmaktadır (Brown ve Company, 1977). İş dünyasının toplumdaki rolü o zamandan beri tartışılıyor. Kurumsal sosyal sorumluluk konusunda en üretken yazarlardan biri olan Archie B. Carroll'a göre, kurumsal sosyal sorumluluğun modern çağı işadamları sosyal sorumlulukları kitabının yayımlanmasıyla başladı. Howard Bowen tarafından 1953'ten beri birçok yazar konu hakkında yazılar yazdı. 1953'ten sonraki ilk birkaç on yıl boyunca, bu yazıların ana odak noktası, şirket yöneticilerinin toplumun ihtiyaçlarını göz önünde bulundurmamak için etik bir sorumluluğa sahip olup olmadıklarıydı. 1980 yılına gelindiğinde, genel olarak şirket yöneticilerinin bu etik sorumluluğa sahip olduğu kabul edildi. Topluma karşı etik bir sorumluluğu olan işletmelerin yöneticilerinin lehine olan argümanlar dört felsefi teoriden çıkar:

Sosyal sözleşme teorisi: Sosyal sözleşme teorisinin temel ilkesi, toplumun bireyler, kuruluşlar ve kurumlar arasındaki bir dizi açık ve örtük sözleşmeden oluşmasıdır. Bu sözleşmeler, taraflar arasında güven ve uyum ortamında değiş tokuş yapılabilecek şekilde gelişti. Sosyal sözleşme teorisine göre, şirketler, kuruluşlar olarak, toplumun diğer üyeleriyle bu sözleşmelere girerler ve iyi davranış karşılığında faaliyet göstermek için kaynaklar, mallar ve toplumsal onay alırlar.

Sosyal adalet teorisi: Sosyal sözleşme teorisinin bir varyasyonu olan (ve bazen zıt bir bakış açısı olan) sosyal adalet teorisi, adalet ve dağıtımçı adalet üzerine odaklanır - toplumun mallarının (burada zenginlik, güç ve diğer gayri maddi varlıklar) nasıl ve hangi ilkelere göre dağıtıldığı toplumun üyeleri arasında. Sosyal adalet teorisinin savunucuları, adil bir toplumun, sadece güç ve zenginliğe sahip olanların değil, toplumun tüm üyelerinin ihtiyaçlarının dikkate alındığı bir toplum olduğunu savunuyorlar. Sonuç olarak, şirket yöneticilerinin bu malların toplumda en uygun şekilde nasıl dağıtılabileceğini düşünmesi gerekir.

Haklar teorisi: Haklar teorisi, şartı olmayan bir şekilde, temel insan hakları ve mülkiyet hakları dâhil olmak üzere hakların anlamı ile ilgilenir. Haklar teorisindeki bir argüman, mülkiyet haklarının insan haklarını geçersiz kılmaması gerektiğidir. KSS perspektifinden bakıldığında, bu, bir şirketin hissedarlarının belirli mülkiyet haklarına sahip olmalarına rağmen, bu onlara çalışanların, yerel topluluk üyelerinin ve diğer paydaşların temel insan haklarını geçersiz kılma lisansı vermediği anlamına gelir.

Deontolojik teorisi: Deontolojik teori, şirket yöneticileri de dahil olmak üzere herkesin, diğer herkese saygılı davranmak gibi ahlaki bir görevi olduğu inancıyla ilgilenir. Bu bazen "Altın Kural" olarak adlandırılır. Kurumsal sosyal sorumluluk, kurumsal yöneticilerin neden sürdürülebilir kalkınma için çalışması gerektiğine dair etik argümanlar sunarak kurumsal sürdürülebilirliğe katkıda bulunur: Eğer toplum genel olarak sürdürülebilir kalkınmanın değerli bir hedef olduğuna inanırsa, şirketlerin toplumun bu yönde ilerlemesine yardımcı olmak için etik bir yükümlülüğü vardır.

3. Kurumsal Çerçeve

Çalışmanın bu bölümünde kurumsal sürdürülebilirlikle ilgili literatürde en fazla karşılaşılan; paydaşlar teorisi ve kurumsal hesap verilebilirlik teorisine değinilmiştir.

3.1. Paydaşlar Teorisi

Kurumsal sürdürülebilirliğin katkı sağlayan teoriler arasında sosyal paydaşlar teorisi de yer almaktadır. İşletmeler açısından sosyal paylaşımlar teorisinin kısaltması olan paydaş teorisi, nispeten modern bir kavramdır. İlk olarak 1984 tarihli *Stratejik Yönetim: Paydaş Yaklaşımı* adlı kitabında R. Edward Freeman tarafından popüler hale getirildi (Books vd., 1984). Freeman bir paydaş "organizasyonun hedeflerine ulaşılmasını etkileyebilecek veya bundan etkilenebilecek herhangi bir grup veya birey" olarak tanımladı. Paydaş teorisinin temel önermesi, diğer dış taraflarla ilişkileriniz ne kadar güçlüyse, kurumsal iş hedeflerinize ulaşmanın o kadar kolay olacağıdır, ilişkileriniz ne kadar kötü olursa, o kadar zor olur. Paydaşlarla güçlü ilişkiler güven, saygı ve işbirliğine dayalı ilişkilerdir. Büyük ölçüde felsefi bir kavram olan kurumsal sosyal sorumluluğun aksine, paydaş teorisi başlangıçta stratejik bir yönetim

kavramıydı ve hâlâ da öncelikli olarak olmaya devam ediyor. Paydaş teorisinin amacı, rekabet avantajı geliştirmek için şirketlerin dış gruplarla ilişkilerini güçlendirmelerine yardımcı olmaktır.

İşletmeler için ilk zorluklardan biri paydaşlarını belirlemektir. İşletmeler arasında belirli grupların paydaşlar olduğu konusunda genel bir anlaşma var gibi görünüyor - hissedarlar ve yatırımcılar, çalışanlar, müşteriler ve tedarikçiler. Ancak bunların ötesinde, paydaşları tanımlamak için net bir kriter olmadığı için daha zor hale geliyor. Yazarların çoğu, 'paydaş' teriminin anlamlı olması için, paydaşları paydaş olmayanlardan ayırmanın bir yolu olması gerektiği konusunda hemfikirdir. Bazı yazarlar, paydaşların işletmenin faaliyetlerinde payı olan kişiler olduğunu ileri sürmüşleri, riskli bir durumdur. Diğer yazarlar, iklim değişikliği veya pazarlama ve reklamcılıktan kaynaklanan kültürel değişiklikler gibi endüstrinin küresel etkilerini dikkate alırsanız, herkesin bir paydaş olduğunu öne sürdüler.

Ana paydaşların belirlendiğini varsayarsak, kurumsal yöneticiler için bir sonraki zorluk, onlarla başa çıkmak için stratejiler geliştirmektir. Bu bir zorluktur çünkü farklı paydaş grupları farklı hedeflere, önceliklere ve taleplere sahip olabilir ve çoğu zaman vardır. Hissedarlar ve yatırımcılar, yatırımlarından optimum getiri ister; çalışanlar güvenli iş yerleri, rekabetçi maaşlar ve iş güvenliği ister; müşteriler uygun fiyatlarla kaliteli mal ve hizmet ister; yerel topluluklar topluluk yatırımı ister; düzenleyiciler, geçerli düzenlemelere tam uyum isterler. Bununla birlikte, ekonomik istikrar, çevre koruma ve sosyal adalet hedeflerinin birçok paydaş grubu arasında ortak olduğu konusunda genel bir kabul vardır. Öncelik veya acil olma düzeyini tartışsalar da, az sayıda grup bu hedeflere karşı çıkacaktır.

Paydaş teorisinin kurumsal sürdürülebilirliğe katkısı, şirketlerin neden sürdürülebilir kalkınma için çalışması gerektiğine dair iş argümanlarının eklenmesidir. Paydaş teorisi, bu yönde çalışmanın işletmenin en iyi ekonomik menfaatine olduğunu öne sürmektedir çünkü bunu yapmak, paydaşlarla olan ilişkisini güçlendirecek ve bu da işletmelerin iş hedeflerine ulaşmasına yardımcı olacaktır.

3.2. Kurumsal Hesap Verebilirlik Teorisi

Kurumsal sürdürülebilirliğin katkı sağlayan teoriler arasında kurumsal hesap verilebilirlik teorisi de yer almaktadır. Vance vd. (2015) tarafından açıklandığı gibi, hesap verebilirlik teorisi, birinin davranışlarını başka bir tarafa meşrulaştırmak için algılanan ihtiyacın, kararlara ve yargılara ulaşma sürecini düşünmeye ve sorumlu hissetmeye nasıl yol açtığını açıklar. Buna karşılık, bu algılanan bir karar verme sürecini açıklama ihtiyacı ve sonucu, kişinin prosedürel davranışları hakkında derinlemesine ve sistematik bir şekilde düşünme olasılığını artırır. Bu teori başlangıçta Tetlock, Lerner ve meslektaşları tarafından geliştirildi ve organizasyonel araştırmalarda etkili bir şekilde uygulandı. Kurumsal hesap verebilirlik, bir şirketin kurumsal faaliyetlerinde ne kadar şeffaf olduğu ve hizmet verdiği kişilere ne kadar duyarlı olduğudur. Genel olarak, kurumsal hesap verebilirlik, (1) finansal raporlama hesap verebilirliği ve (2) stratejik karar şeffaflığından ("stratejik", hissedarların ve diğer büyük paydaşların çıkarları üzerinde önemli etkileri veya etkileri olan kararlar anlamına gelir) oluşur. Hesap verebilirlik, esasen bir ifşa etme, şeffaflık ve işletme politikalarını ve eylemlerini işletmenin sorumlu olduğu kişilere açıklama meselesidir (Shearer, 2002; Wild, 1994). Bir işletme sadece hissedarlara değil, aynı zamanda düzenleyiciler, müşteriler, çalışanlar, alacaklılar, tedarikçiler ve yerel topluluk gibi tüm büyük paydaşlara karşı da hesap verebilir olmalıdır (Shearer, 2002). Bir işletme, tüm bu paydaşlar - sermaye, finansman, beceri, emek, hizmet ve bağlam sağlayıcıları, teşebbüsün uzun vadeli iyiliği için birlikte çalıştıklarında en etkili şekilde çalışır. Kurumsal hesap verebilirlik için temel bir gereklilik, işletmenin ilgili bilgileri hızlı, doğru ve etkili bir şekilde hissedarlarına, paydaşlarına veya firmayı hem müdürlerin hem de toplumun çıkarlarına göre davranmaya motive eden ve sınırlayan düzenleyiciler gibi diğer ana taraflara sinyal verme veya bilgi verilmesine yardımcı olmaktadır.

4. Sonuç

Kurumsal sürdürülebilirlik, kavramı ilk defa 1972 yılında yapılan Stockholm konferansında karşımıza çıkmıştır. Kısa sürede içerisinde işletmeler ve ülkelerin takip ettikleri politikalarının vazgeçilmez unsurları arasında görmekteyiz. Kurumsal sürdürülebilirlik, mevcut kit kaynakların ve bu kaynakları gelecek nesillere aktarılabilmesiyle ilgili olan ve dünyanın gelecek nesillere de yaşanabilecek bir dünya bırakmayı amaçlayan bir kavramdır. Kurumsal sürdürülebilirlik, sosyal, ekonomik ve çevresel boyutları ile işletmeler arasında yer bulması 80'li yılların sonunda gerçekleşmiştir. Kurumsal sürdürülebilirlik teorileri sayesinde işletmeler sadece mal ve hizmet üreten kurumlar olmanın yanında çevreye ve

toplumun sorunlarına duyarlı faaliyetlerin önemsenmesini sağlamıştır. Kurumsal sürdürülebilirlik kavramı kurumların sürdürülebilir kalkınmadaki etkisini araştırdığımızda karşımıza çıkmaktadır. Kurumsal sürdürülebilirlik işletmelerin birçok alanda sorumluluklarının olduğu ve bu sorumlulukları yerine getirmesi ile ilgilidir. İşletmelerin hesap verilebilir duruma gelmesi kurumsal hesap verilebilirlik, şeffaf yönetim kurumsal yönetim kurumsal vatandaşlık kavramını ortaya çıkmasında kurumsal sürdürülebilirlik ve sürdürülebilir kalkınma önemli rol oynamaktadır.

Kurumsal sürdürülebilirlik kapsamında ele alınan diğer bir teoride kurumsal sosyal sorumluluk teoridir. Kurumsal sürdürülebilirlik birlikte ifade edilen kavramlar önemli bir uzantısı olarak; kurumsal sosyal sorumluluk olduğu bilinmektedir. Tüm toplumun ve işletmelerin her bireyin, refah ve gelir seviyesini artırmak amacıyla göstermiş olduğu çabaların tümü kurumsal sosyal sorumluluk olarak ifade edilmektedir. Bu durum işletme içerisinde bireyin sorumluluğu yanında bir rekabet unsuru olarak da görülmektedir. Dünyamızda mevcut kısıtlı kaynakların duyarlı bir şekilde kullanılması bireylerin bilgilendirilerek ilere duyarlı hale gelmesi ve bireylerin dünya ve toplumsal sorunlar konusunda bilinçlenmesi çerçevesinde kurumsal sosyal sorumluluk çalışmaları kurumlar açısından bakıldığında artık günümüzde bir ihtiyaç ve zorunluluk olarak gerçekleşmesi beklenmektedir.

Günümüzde artık işletmelerin devamlılığının sağlanması sadece ekonomik açıdan karlılık sağlaması tek başına yetmemekte, kurumsal sosyal sorumluluk projelerinde yer alması toplum tarafından başarılı sayılmakta tercih edilme sebebi olarak görülmektedir. Uluslararası faaliyet gösteren işletmelerin kurumsal sürdürülebilirlikle ilgili stratejilerine baktığımızda bu stratejileri ekonomik, çevresel ve toplumsal alanda gerçekleştirdikleri görülmektedir. İşletmelerin sosyal sorumluluk çalışmalarını bir çözüm üretme, ihtiyaçlara ve beklentilere cevap verme noktasında gerçekleştirmektedirler. İşletmelerin kurumsal sürdürülebilirlik hedeflerini bu çalışmalarla uyumlu hale getirmek için caba göstermektedirler. İşletmeler kurumsal sürdürülebilirlik vizyonlarını sosyal sorumluluk projeleriyle güçlü hale getirmektedirler.

İşletmeler artık sadece ekonomik sorumluluklarını yerine getirerek varlık göstermeleri yeterli olmamakla birlikte kurumsal sosyal sorumluluk günümüz işletmelerinin ve kurumsal sürdürülebilirliğin vazgeçilemez bir parçası olduğu görülmektedir.

Kamu ve Özel Sektör Dış Borcunun Ekonomik Büyüme Üzerine Etkisi: Türkiye için Ampirik Bir Çalışma

Dr.Öğr.Üyesi Ahmet Kâhiloğulları

Çanakkale Onsekiz Mart Üniversitesi, Gökçeada Meslek Yüksekokulu, Yönetim ve Organizasyon Bölümü,
ahmetkahil@gmail.com, ORCID:0000-0002-5419-2429

Özet: Dış borçlanma az gelişmiş ve gelişmekte olan ülkelerin başvurduğu başlıca finansman kaynaklarından biridir. Bu kaynağa başvurulduğu ölçüde ülke ekonomileri büyüme, işsizlik, enflasyon açısından çeşitli etkilere maruz kalmaktadır. Bu çalışmanın amacı 2002Q4-2019Q4 dönemi için Türkiye’de dış borçların ekonomik büyüme üzerindeki etkisinin analiz edilmesidir. Çalışmada, ekonomik büyüme bağımlı değişken olarak yer alırken; kısa vadeli kamu dış borcu, uzun vadeli kamu dış borcu, kısa vadeli özel sektör dış borcu ve uzun vadeli özel sektör dış borçları bağımsız değişken olarak yer almıştır. Çalışmanın amacı doğrultusunda VAR (Vector Auto Regression) Analizi çerçevesinde varyans ayrıştırması, etki-tepki analizi ve nedensellik analizi teknikleri kullanılmıştır. Çalışma bulguları çalışmaya dahil olan bağımsız değişkenler bağlamında varyans ayrıştırması yönünden 10 yıllık dönemde ekonomik büyümede meydana gelen şokların en çok kısa vadeli kamu dış borçlarından kaynaklandığını göstermektedir. Etki tepki analizinin sonuçları ise varyans ayrıştırmasının sonuçlarını destekler nitelikte, ekonomik büyümenin en fazla tepkiyi kısa vadeli dış borçlardaki değişimlere gösterdiğini ortaya koymaktadır. Nedensellik analizinin sonuçları ise uzun vadeli özel sektör dış borcu ile ekonomik büyüme arasında çift yönlü; kısa vadeli kamu dış borcundan ekonomik büyümeye doğru ise tek yönlü bir nedensellik ilişkisinin varlığına işaret etmektedir.

Anahtar Kelimeler: Kamu dış borçları, özel sektör dış borçları, ekonomik büyüme, VAR Analizi

Impact of Public and Private Sector Extnal Debt on Economic Growth: An Empirical Study for Turkey

Abstract: External borrowing is one of the main sources of financing for less developed and developing countries. To the extent that this resource is used, the economies of the country are subjected to various effects in terms of growth, unemployment and inflation. The aim of this study is to analyze the impact of external debt on economic growth in Turkey for the period 2002Q4-2019Q4. In the study, economic growth was listed as dependent variable; short-term public external debt, long-term public external debt, short-term private sector external debt and long-term private sector external debt were included as independent variables. For the purpose of the study, variance decomposition, impact-response analysis and causality analysis techniques were used within the framework of VAR (Vector Auto Regression) Analysis. The study findings show that the shocks in economic growth over a 10-year period in terms of variance decomposition in the context of the independent variables included in the study were mostly due to short-term public external debt. The results of the impact response analysis support the results of variance decomposition and reveal that economic growth has shown the most reaction to changes in short-term external debt. The results of the causality analysis are two-way between long-term private sector external debt and economic growth; from short-term public external debt to economic growth, it indicates the existence of a one-way causality relationship.

Keywords: Public external debt, private sector external debt, economic growth, VAR Analysis

1. GİRİŞ

Ülkelerin kalkınma hızını ve ekonomik büyüme oranlarını yükseltebilmeleri yatırımların artışıyla mümkün olabilmektedir. Bu noktada tasarrufların yeterli düzeyde olmaması ülkeleri yabancı kaynak arayışına sürüklemekte ve ülkeler dış borçlanmaya başvurmaktadırlar. Artan kamu borçlarının sürekli ve yeterli bir büyümeye katkı vermesi durumunda bunun endişe edici olmadığından hareketle (Yıldırım vd.,2007:423) dış borç stoku özelinde de benzer bir kabulde bulunulabilir. Burada dış borçların hangi alanlarda kullanıldığı önem arz etmektedir. Nitekim dış borçların kârlı olmayan yatırımları veya tüketim malları ithalatını finanse edebilmek amacıyla kullanılması durumunda söz konusu borçların geri ödenememesi gibi bir sonucu ortaya çıkacak (Krugman vd, 2017:678) bu da ekonomiyi bir borç krizi ortamına sürükleyecektir.

Dış borçlanma iktisat yazınının daima önemli konuları arasında yer almıştır. Nitekim Smith, ünlü kitabı “Ulusların Zenginliği”nde “Kamu Borçları Üzerine” adı altında bir bölüme yer vermiş ve dönemin Büyük

Britanya'sıyla birlikte İspanya'nın, Fransa'nın, İtalya Cumhuriyetlerinin ve Birleşik Felemenk Eyaletleri'nin de borç içinde olduğunu ifade etmiştir (Smith, 2010: 1035-1039). Smith ayrıca Kral William ve Kraliçe Anne dönemlerine atıfla; yapılan borçlanmaların tıpkı günümüzde olduğu gibi uzun vadeli veya kısa vadeli olduğunu belirtmiştir (Smith, 2010:1045-1049). Her ne kadar kamu borçlanması o dönemde ülke içinden sağlanıyor gibi görünse de Felemenkilerin ve diğer yabancı ulusların elinde önemli miktarda kamu senedi olduğu da bir gerçektir ki bu da dış borçlanmanın varlığı hakkında bir fikir vermektedir. (Smith, 2010: 1058-1059).

1929 bunalımına dönemin gelişmekte olan ülkelerinin bir kısmı (Avustralya, Kanada, ABD vs) sınai gelişmelerini, bir kısmı da (Brezilya, Peru, Kenya, Endonezya vs) doğal kaynakların çıkarılması ve büyük ölçekli tarımın finanse edilmesi için dış borçlanma yoluna gitmişlerdir. 2. Dünya savaşı sonrası dönem, gelişmekte olan ülkeler açısından borçlanmanın devam ettiği bir dönem olmuş ve 1980'lerde uluslararası borç krizleri ülkeler açısından önemli bir sorun haline gelmiştir (Krugman vd, 2017:677).

2000'li yıllarda özellikle gelişmekte olan ülkeler küreselleşmenin teknolojik ve ekonomik etkileri ve borçlanma araçlarının çeşitlenmesiyle dış borçlanmalarını artırarak devam ettirmişlerdir. Söz konusu dış borçlar sadece hükümetler için değil özel sektör kişi ve kuruluşları içinde geçerli olmaktadır. Dünya bankası verilerine göre 2019 yılı sonu itibariyle düşük ve orta gelirli ülkelerin borçları 8.1 Trilyon Amerikan Doları'nı bulmuştur. 2018 yılı sonu ve 2019 yılının ilk çeyreği için dış borç stoku açısından dünyanın en borçlu ülkeleri sıralamasında ilk sırada Çin yer alırken; Türkiye de en borçlu ilk on ülke arasında yer almıştır (Dünya Bankası, 2020:3).

Türkiye açısından 2000'li yılların en başından günümüze kadar geçen süreçte gerek kısa vadeli dış borçlar gerekse uzun vadeli dış borçlar genel olarak artış eğilimi göstermiştir. Kamu-özel sektör dış borçları bağlamında da benzer bir eğilimden söz edilebilir. Türkiye'nin vade ve sektör açısından dış borç kompozisyonu Grafik 1'de gösterilmiştir.

Grafik 1'e göre 2000-2020 döneminde uzun vadeli dış borçlar açısından 2007 yılına kadar kamu borçları özel sektör borçlarından fazla iken daha sonraki dönemlerin tamamında özel sektörün borcu kamu sektörünün borcundan daha yüksek olmuştur. Uzun vadeli borçların bileşimindeki bu değişimin 2008 küresel krizinin hemen öncesinde gerçekleşmiş olması göz ardı edilmemesi gereken bir husustur. Kısa vadeli dış borçlar açısından ise anılan dönemde daima özel sektörün borcu kamu sektörünün borcundan fazla olmuştur.

Grafik 1:Türkiye'nin Dış Borçlarının Vade ve Sektör Açısından Görünümü (2000-2020)

Kaynak: Türkiye Cumhuriyet Merkez Bankası <https://evds2.tcmb.gov.tr/index.php?/evds/serieMarket> Erişim Tarihi: 24.03.2021

Bu çalışmada 2002Q4-2019Q4 dönemi için Türkiye'nin vade ve sektör açısından dış borçlarının ekonomik büyüme üzerindeki etkisi analiz edilmiştir. Çalışmanın söz konusu dönem için özel sektör kısa ve uzun vadeli dış borçları ile kamu sektörü kısa ve uzun vadeli dış borçlarının bir arada ele alınması yönüyle literatüre katkı vermesi beklenmektedir.

2. LİTERATÜR

Dış borçlar ile ekonomik büyüme arasındaki ilişkinin araştırıldığı çalışmalara bakıldığında bu çalışmaların büyük ölçüde tek bir ülke için yapılan zaman serisi analizleri ve ülke grupları için yapılan panel analizler biçiminde olduğu görülmektedir. Tablo 1'de dış borçlar ve ekonomik büyüme ilişkisinin araştırıldığı çalışmalara ilişkin literatür özeti yer almaktadır.

Tablo 1: Literatür Özeti

Yazar	Dönem ve Ülke	Yöntem	Sonuç
Altıntaş ve Alancıoğlu (2021)	1991-2015 (Gelişmekte olan 16 ülke)	Westerlund-Edgerton ve Durbin-Hausman Panel Eşbütünlük Yöntemleri, AMG Tahmincisi	Dış borçlar ve ekonomik büyüme arasında negatif yönlü bir ilişkinin varlığı ortaya konulmuştur.
Uslu (2021)	1970-2016 (Türkiye)	ARDL Yöntemi, Toda Yamam	Dış borç stokundaki %1'lik artışın, milli geliri %0,13 arttırdığı sonucunun yanı sıra; dış borçlardan ekonomik büyüme ve beşeri sermayeye doğru tek yönlü nedensellik ilişkilerin varlığı tespit edilmiştir.
Akduğan ve Yıldız (2020)	1970-2018 (Kırılğan Beşli: Brezilya, Endonezya, Hindistan, Güney Afrika, Türkiye)	VAR Modeli, Granger Nedensellik Analizi, Etki-Tepki Analizi	Endonezya ve Hindistan için dış borç stoku ile GSYİH arasında anlamlı ilişkiler bulunamamışken; Türkiye ve Güney Afrika'da dış borç stokundan GSYİH'ye doğru tek yönlü bir nedensellik ilişkisinin yanı sıra dış borçların ekonomik büyümeyi olumlu etkilediği bulgusuna varılmıştır. Brezilya için ise dış borç stoku ile GSYİH arasında çift yönlü nedensellik ilişkisinin varlığı tespit edilmiştir.
Cebeci Mazlum (2020)	1990-2016 (Latin Amerika Ülkeleri)	Emirmahmutoğlu ve Köse Panel Nedensellik Yöntemi	Guyana ve Peru için ekonomik büyümeden dış borçlara doğru; Kostarika, Honduras ve Meksika için dış borçlardan ekonomik büyümeye doğru tek yönlü; El Salvador ve Panama içinse dış borçlar ve ekonomik büyüme arasında çift yönlü nedensellik ilişkisi tespit edilmiştir.
Hotunluoğlu ve Yavuzer (2020)	2000:Q1-2019Q3 (Türkiye)	Engle-Granger Eşbütünlük Yöntemi	Dış borçlar ile ekonomik büyüme arasında pozitif yönlü bir ilişkinin varlığının yanı sıra dış borçlarda meydana gelen %1'lik bir değişimin ekonomik büyümeye %1,95 oranında etki ettiği bulgusu elde edilmiştir.
Koyuncu ve Demirhan (2020)	1970-2015 (Brezilya)	ARDL Sınır Testi	Dış borçlar ile ekonomik büyüme arasında uzun dönemli bir ilişkinin varlığına karşın, dış borçların

				ekonomik büyüme üzerinde olumsuz bir etkiye sahip olduğu sonucuna varılmıştır.
Qureshi ve Liaquat (2020)	1990-2015 düzeylerine sınıflandırılmış 123 Ülke)	(Gelir göre olan	GMM Bağlamında Panel VAR Modeli	Tüm gelir gruplarında kamu dış borcunun ekonomik büyümeyi olumsuz etkilediği bununla birlikte özel dış borç ile ekonomik büyüme arasında anlamlı ilişkiler olmadığı tespit edilmiştir. Çalışmadan çıkan bir diğer sonuç tasarruf ve yatırımların, dış borçların ekonomik büyüme üzerindeki etkisinde başlıca kanallar olduğudur.
Gövdeli (2019)	1970-2016 (Türkiye)		ARDL Sınır Testi Yöntemi	Dış borçların ekonomik büyümeyi olumlu etkilediği, buna karşın dış açıklığın ekonomik büyümeyi negatif etkilediği sonucu elde edilmiştir.
Güneş (2019)	1995-2016 gelişmiş ve gelişmekte olan 22 ülke)	(Az ve 22	Panel Eşbütünlüme ve Granger Nedensellik Analizi, FMOLS ve DOLS Yöntemleri	Ekonomik büyümeden dış borçlara doğru tek yönlü bir nedensellik ilişkisi tespit edilmiştir. Öte yandan FMOLS testine göre ekonomik büyümedeki 1 birimlik artış dış borçları 0,849 birim arttırırken, DOLS yöntemine dış borçlardaki bu artış 0,802 birim olmaktadır.
Onafowora ve Owoye (2019)	1970-2014 (Nijerya)		VAR Modeli, etki tepki analizi	Dış borç şoklarının ekonomik büyüme üzerinde kalıcı olumsuz etkileri olduğu tespit edilmiştir.
Mercan ve Ergen (2018)	1990-2017 (Türkiye)		VAR Modeli, Etki Tepki Analizi, Granger Nedensellik Testi	Ekonomik büyümeden dış borçlara doğru bir nedensellik ilişkisinin varlığının yanı sıra ekonomik büyümede meydana gelen bir şoka karşılık dış borçların ikinci dönemde negatif bir tepki verdiği bulguları elde edilmiştir.
Yıldız (2018)	2002Q1-2018Q1		VAR Analizi Granger Nedensellik Testi	Özel sektörün uzun vadeli dış borcu ile ekonomik büyüme arasında çift yönlü bir nedensellik ilişkisinin varlığına karşın; uzun vadeli kamu dış borcu ile ekonomik büyüme arasında bir nedensellik ilişkisinin bulunmadığı sonucuna ulaşılmıştır.
Bittencourt (2015)	1970-2007 (Ekvador, Arjantin, Brezilya, Bolivya, Şili, Peru, Uruguay Guayana ve Paraguay)		Dinamik Panel Zaman Serisi (En Küçük Kareler ve Sabit Etkiler Modeli)	Ekonomik büyümenin borç oranlarını düşürmekte olduğu sonucuna ulaşılmıştır. Çalışmadan çıkan bir diğer sonuç ticarete açıklık, likit yükümlülükler oranı ve enflasyon oranı değişkenlerinin anlamlılık ve teorik beklentilere uyumluluk açısından tatmin edici

				olmadığıdır.
Tanna, Li ve De (2017)	1984-2010 Vita Gelişmekte ülke)	(39 Hansen Panel Eşik Modeli olan	Granger Nedensellik Analizi	Doğrudan yabancı yatırımların büyüme üzerindeki etkisinin dış borçlar dolayısıyla sınırlı kaldığı ortaya konulmuştur.
Kutlu ve Yurttagüler (2016)	1998:01-2014:02 (Türkiye)	Granger Nedensellik Analizi	Granger Nedensellik Analizi	Dış borçlardan ekonomik büyümeye tek yönlü bir nedensellik ilişkisi varlığı bulgusu elde edilmiştir.
Uysal, Özer ve Mucuk (2009)	1965-2007 (Türkiye)	VAR Modeli, Granger Nedensellik Analizi	Granger Nedensellik Analizi	Dış borçların gerek kısa gerekse uzun dönemde ekonomi büyümeyi olumsuz etkilediği sonucuna ulaşılmıştır.

3. VERİ SETİ VE YÖNTEM

Çalışmanın ampirik kısmına yer verilen bu bölümde veri seti başlığı altında değişkenler ve değişkenlere ait verilerin kaynağı hakkında bilgi verilmiş ve sonrasında yapılan analizin bulgularını detaylı bir biçimde içeren yöntem kısmına geçilmiştir.

3.1. Veri Seti

Türkiye'nin 2002Q4-2019Q4 döneminde dış borçlarla ekonomik büyüme arasındaki ilişkisinin VAR (Vector Auto Regression) yöntemiyle ampirik olarak araştırıldığı bu çalışmada çeyreklik (3'er aylık) veriler kullanılmıştır. Analizin yapılmasında EViews 11 paket programından yararlanılmış olup çalışmada kullanılan veriler Tablo 2'de gösterilmiştir.

Tablo 2: Veri Seti

Değişkenler	Verilerin Kaynağı- Kaynaktaki Kod Numarası
GSYİH: Ekonomik Büyüme	OECD. Stat
LKVK:Kısa Vadeli Kamu Dış Borcu	TCMB EVDS (Elektronik Veri Dağıtım Sistemi)-TP.DB.B03
LKVO:Kısa Vadeli Özel Sektör Dış Borcu	TCMB EVDS (Elektronik Veri Dağıtım Sistemi)-TP.DB.B15
LUVK:Uzun Vadeli Kamu Dış Borcu	TCMB EVDS (Elektronik Veri Dağıtım Sistemi)-TP.DB.B21
LUVO:Uzun Vadeli Özel Sektör Dış Borcu	TCMB EVDS (Elektronik Veri Dağıtım Sistemi)-TP.DB.B33

Tablo 2'de yer alan değişkenlerden GSYİH değişkeni analizde bağımlı değişken olarak yer alırken; diğer değişkenler bağımsız değişken olarak yer almıştır. Bağımsız değişkenler analize doğal logaritmaları alınmak suretiyle dahil edilmiştir.

3.2. Yöntem

Çalışmada ilk olarak değişkenlerin durağanlık yapıları ADF (Augmented Dickey-Fuller) birim kök testi ile incelenmiştir. Daha sonra VAR analizi çerçevesinde gecikme uzunlukları saptandıktan sonra VAR modelinin istikrarlı ve sağlıklı bir biçimde kurulup kurulmadığının görülebilmesi adına AR polinom ters kökleri incelenmiş ve Jarque-Bera normallik testi, otokorelasyon LM testi, değişen varyans için de White testi yapılmıştır. Daha sonra çalışmanın odak noktasını oluşturan varyans ayrıştırması, etki tepki analizi ve nedensellik testleriyle çalışmanın ampirik kısmı tamamlanmıştır.

3.2.1. Birim Kök Testleri ve Gecikme Uzunluğunun Belirlenmesi

Birim kök testi yapılmadan önce sabit terimin ve trendin varlığını araştırmak amacıyla değişkenlerin grafiği incelenmiştir. Bu inceleme sonrasında sabit terimli ve trendli modelde ADF birim kök testi yapılmıştır. ADF birim kök testi sonuçları Tablo 3'te yer almaktadır.

Tablo 3:ADF Birim Kök Testi Sonuçları

Değişkenler	Düzye Değerleri		1. Fark Değerleri	
	ADF t- İstatistiği	Olasılık Değeri	ADF t-İstatistiği	Olasılık Değeri
GSYIH	-7.318664	0.0000	-	-
LKVK	-1.735276	0.7246	-8.216332	0.0000
LKVO	-1.447445	0.8376	-5.392352	0.0000
LUVK	-2.331666	0.4114	-6.727664	0.0000
LUVO	-1.188322	0.9046	-3.071370	0.0026

Birim kök testi sonuçlarına göre GSYIH değişkeninin ADF t- istatistiği ve olasılık değerleri göz önüne alındığında; düzeyde birim kök içermediği yani durağan olduğu görülmektedir. Oysa analize dahil olan diğer tüm değişkenlerin olasılık değeri %5'ten yüksek olduğu için düzeyde birim kök içerdiği buna karşın birinci farklarında durağan hale geldikleri, olasılık değerlerinin %5'ten az olmasından anlaşılmaktadır. Buradan elde edilen bulgu GSYIH değişkeninin I(0) yani düzeyde bütünleşik; LKVK, LKVO, LUVK ve LUVO değişkenlerinin ise I(1) yani birinci farkında bütünleşik olduğudur.

VAR analizine devam edebilmek için değişkenlerin farkı alınarak optimal gecikme uzunluğu 6 gecikmede araştırılmıştır. Tablo 4, çeşitli bilgi kriterleri bağlamında gecikme uzunluklarını göstermektedir.

Tablo 4:VAR Analizi İçin Gecikme Uzunluğu

Gecikme Sayısı	LR	FPE	AIC	SC	HQ
0	NA	1.00e-09	-6.530823	-6.360732*	-6.463925
1	67.19286	6.84e-10	-6.915994	-5.895543	-6.514610*
2	53.53890	5.49e-10	-7.151937	-5.280947	-6.416067
3	49.35272*	4.41e-10*	-7.408344*	-4.686903	-6.337988
4	17.56862	6.93e-10	-7.032994	-3.461103	-5.628152
5	33.02257	7.14e-10	-7.131845	-2.709504	-5.392517
6	23.47534	9.32e-10	-7.071799	-1.799007	-4.997984

Tablo 4'te görüldüğü üzere gecikme uzunluğunun Schwarz (SC) bilgi kriterine göre 0, Hannan-Quinn (HQ) bilgi kriterine göre 1 ve Akaike (AIC) bilgi kriterine göre 3 olduğu görülmektedir. SC ve HQ bilgi kriterlerinin seçilmesi durumunda temel varsayımların sağlanması mümkün olmadığından optimal gecikme uzunluğu AIC bilgi kriteri çerçevesinde 3 olarak belirlenmiştir.

3.2.2. Ekonometrik Problem Testleri

Zaman serisi analizlerinde olası sahte regresyon sorunun varlığını test edebilmek amacıyla bazı ekonometrik testler yapılmaktadır. Bu bağlamda çalışmada istikrarlılık, normallik, değişen varyans ve otokorelasyon testlerine yer verilmiştir.

3.2.2.1. İstikrarlılık Testi

Kurulan VAR modeli ile ilgili olarak optimal gecikme uzunluğunun belirlenmesinden sonra AR polinom ters kökleri incelenmiştir. Şekil 1'de görüldüğü üzere tüm noktalar çemberin içinde olduğu için modelin istikrarlı olduğu söylenir.

Şekil 1:AR Karakteristik Polinomunun Ters Kökleri

3.2.2.2. Normallik Testi

Modelin normalliğinin test edilmesi amacıyla Jarque-Bera testi yapılmıştır. Bu testle ilgili olarak kurulan hipotez şu şekildedir:

$$H_0: \text{Hata terimleri normal dağılım göstermektedir.}$$
$$H_1: \text{Hata terimleri normal dağılım göstermemektedir.}$$

Jarque-Bera normallik test sonuçları tablo 5'te gösterilmiştir. Tabloda yer alan bileşenlerin her birinin olasılık değerleri %5'ten büyük olduğu için H_0 hipotezi kabul edilir. Yani hata terimleri normal dağılmaktadır.

Tablo 5: Jarque-Bera Normallik Test Sonuçları

Bileşenler	Jarque-Bera	df	Olasılık Değeri
1	2.293420	2	0.3117
2	1.127916	2	0.5690
3	1.380799	2	0.5014
4	3.753517	2	0.1531
5	0.884661	2	0.6425

3.2.2.3. Değişen Varyans Testi

Klasik doğrusal regresyon modelinin temel varsayımlarından biri de hata terimlerinin sabit varyanslı olmasıdır (Gujarati, 2001:61). Bu varsayıma göre bağımsız değişkendeki değişimler hata terimi varyansını değiştirmemektedir. Başka bir ifadeyle hata terimleri ile bağımsız değişkenler arasında bir ilişki bulunmamaktadır (Tari vd 2019:169). Değişen varyansın varlığına ilişkin hipotez aşağıdaki gibi olup test sonucu Tablo 6'da gösterilmiştir.

$$H_0: \text{Değişen Varyans Yoktur.}$$
$$H_1: \text{Değişen Varyans Vardır.}$$

Tablo 6:Değişen Varyans Test Sonucu

Ki-Kare	df	Olasılık Değeri
451.7944	450	0.4673

Tablo 6'daki değerlere göre modelin toplu olarak değişen varyansa sahip olmadığı olasılık değeri olan 0,4673'ün %5'ten büyük olmasından anlaşılmaktadır.

3.2.2.4. Otokorelasyon Testi

VAR modeli ile ilgili olarak otokorelasyonun varlığı LM Testi ile tespit edilebilmektedir. Sonuçları Tablo 7'de yer alan bu testle ilgili hipotez şu şekilde oluşturulmuştur:

$$H_0: P_1 = P_2 = P_3 = P_4 = 0 \text{ (Otokorelasyon yoktur.)}$$

$$H_1: P_1 \neq P_2 \neq P_3 \neq P_4 \neq 0 \text{ (Otokorelasyon vardır.)}$$

Tablo 7: Otokorelasyon LM Test Sonuçları

Gecikme	LM Test İstatistiği	Olasılık Değeri
1	19.96828	0.7485
2	31.14138	0.1844
3	25.09648	0.4570
4	31.85102	0.1624

Tablo 7'de yer alan LM test istatistik sonuçlarının olasılık değerlerinin tamamı %5'ten büyük olduğundan H_0 hipotezi kabul edilir. Yani modelde otokorelasyon sorunu yoktur.

3.2.3. Varyans Ayrıştırması

Varyans ayrıştırması değişkenlerde meydana gelen şoklardan hangisinin; kompozisyonu çıkarılan değişkeni daha çok etkilediğinin belirlenmesine olanak verir. GSYİH değişkeninin kompozisyonunu, Cholesky sıralanmasına göre 10 yıllık bir dönemi kapsayan varyans ayrıştırmasının sonuçları Tablo 8'de yer almaktadır.

Tablo 8: Varyans Ayrıştırması Sonuçları (GSYİH)

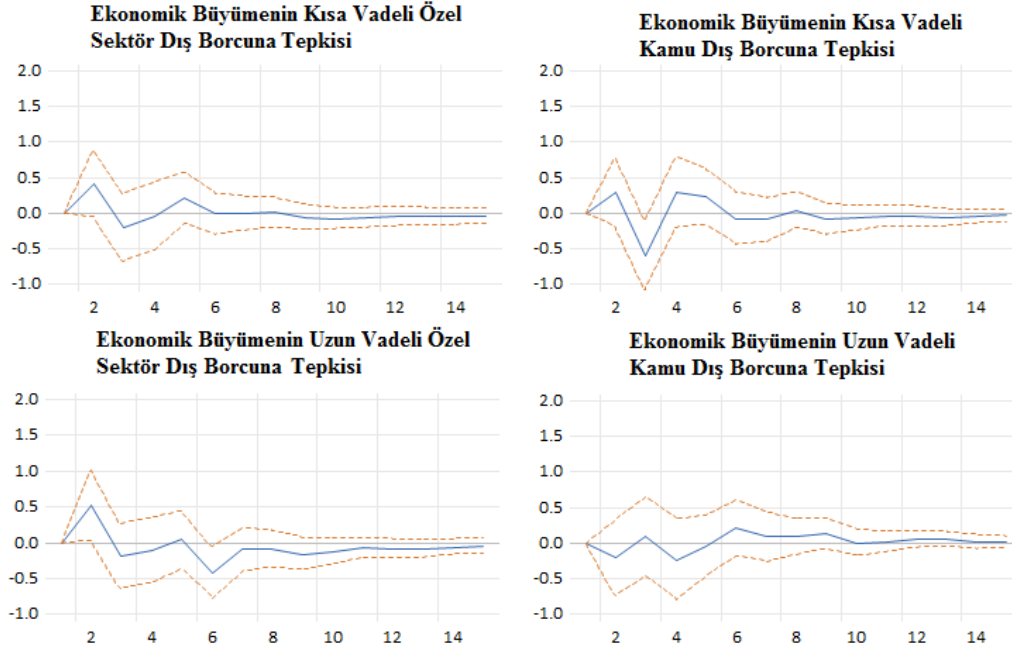

Dönem	Std. Hata	GSYİH	LKVK	LKVO	LUVK	LUV0
1	1.776271	100.0000	0.000000	0.000000	0.000000	0.000000
2	1.961128	85.55608	2.114979	4.343449	1.033199	6.952295
3	2.089160	77.35002	9.830885	4.767209	1.125010	6.926874

6	2.226785	70.36240	11.56664	5.158662	3.046574	9.865722
7	2.237149	70.13911	11.60273	5.111044	3.191778	9.955340
8	2.241473	69.93472	11.59590	5.092671	3.337772	10.03893
9	2.256807	69.24429	11.55530	5.103296	3.676361	10.42076
10	2.267081	69.05142	11.54102	5.159204	3.643130	10.60522

Tablo 8'e göre ekonomik büyüme (GSYİH) değişkeni 10 yıllık dönemde %69.05 oranında kendisinde meydana gelen şoklardan etkilenirken; bağımsız değişkenler bağlamında şokların etkisi en fazla kısa vadeli kamu dış borcu (LKVK) değişkeniyle açıklanmaktadır. Nitekim GSYİH'de meydana gelen şokların %11.54'ü LKVK değişkeni ile açıklanmaktadır. Diğer değişkenlerin GSYİH'de meydana gelen şokları açıklama gücü ise uzun vadeli özel sektör dış borcu (LUV0) değişkeni için %10.61; kısa vadeli özel sektör dış borcu (LKVO) değişkeni için %5.16 ve uzun vadeli kamu dış borcu için %3.64'tür.

3.2.4. Etki Tepki Analizi

Etki tepki analizi bir değişkende meydana gelen bir şokun diğer bir değişkende nasıl tepki verdiğinin ve verilen şok sonrasında etkilenen değişkenin kendi değerleri bağlamında kaç dönemde ortalamaya yaklaşacağını görülmesini sağlayan bir analizdir. Kısa ve uzun vadeli kamu ve özel sektör dış borçlarında meydana gelen şoklara ekonomik büyümenin gösterdiği tepki Grafik 2’de gösterilmiştir.

Grafik 2: Ekonomik Büyümenin (GSYİH) Dış Borçlara Tepkisi

Yapılan etki tepki analizi çerçevesinde ekonomik büyümenin değişkenler arasında en fazla tepkiyi kısa vadeli kamu dış borcunda meydana gelen şoklara verdiği görülmektedir.

3.2.5. Nedensellik Analizi

Değişkenler arasında nedensellik ilişkisinin varlığının araştırılması için Granger Nedensellik/Wald Testi yapılmış ve analiz sonuçları Tablo 9’da yer almaktadır.

Tablo 9: VAR İkili Granger Nedensellik/Wald Testi Sonuçları¹

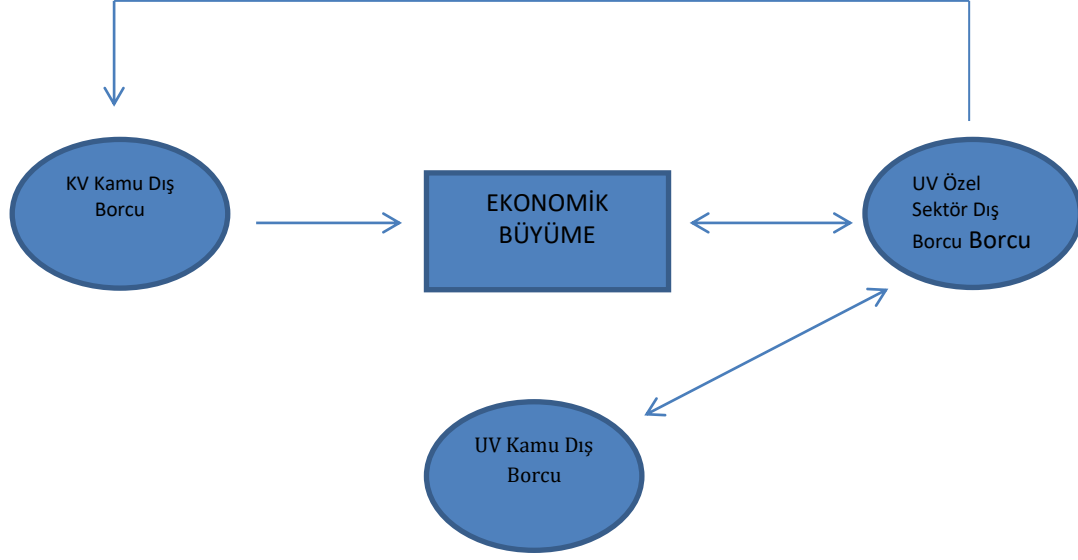

Bağımlı Değişken	Bağımsız Değişkenler				
	GSYİH	LKVK	LKVO	LUVK	LUVO
GSYİH	-	11.23200 (0.0105)**	3.673767 (0.2989)	1.149905 (0.7650)	8.643407 (0.0344)**
LKVK	7.243958 (0.0645)	-	3.854911 (0.2776)	2.069918 (0.5580)	10.95584 (0.0120)**
LKVO	6.781645 (0.0792)	7.462532 (0.0585)	-	6.133363 (0.1053)	0.903027 (0.8247)
LUVK	7.088581 (0.0691)	3.906522 (0.2717)	1.778909 (0.6195)	-	12.75381 (0.0052)***
LUVO	15.55287 (0.0014)***	5.458996 (0.1411)	2.935495 (0.4017)	15.88212 (0.0012)***	-

Nedensellik analizi sonuçlarına göre bağımsız değişkenlerden kısa vadeli kamu dış borcu (LKVK) ile uzun vadeli özel sektör dış borcu (LUVO) ekonomik büyümenin (GSYİH) nedenidir. Bunun yanında ekonomik büyüme (GSYİH) de uzun vadeli özel sektör dış borcunu (LUVO) etkilemektedir. Nedensellik analizinden elde edilen bir diğer bulgu da uzun vadeli özel sektör dış borcundan (LUVO); hem kısa vadeli kamu dış

¹ *** ve ** sembelleri sırasıyla %1 ve %5 olasılık düzeyindeki anlamlılığı ifade etmektedir.

borcuna (LKVK) hem de uzun vadeli kamu dış borcuna (LUVK) doğru bir nedensellik ilişkisinin varlığıdır. Öte yandan uzun vadeli kamu dış borçları (LUVK) da özel sektörün uzun vadeli dış borçlarını (LUVO) etkilediği analizden çıkan bir başka sonuçtur. Değişkenler arasındaki nedensellik ilişkisi Şekil 2’de özetlenmiştir.

Şekil 2: Nedensellik ilişkilerinin Şematik Görünümü

4. SONUÇ

Uluslararası ekonomik ilişkilerin mal ve para akımları bağlamında oldukça gelişkin bir yapıda olduğu günümüz dünyasında dış borçlar bir finansman kaynağı olarak ülkelerin sıklıkla başvurduğu önemli bir araç olmuştur. Bu araç sadece kamu sektörü eliyle değil aynı zamanda özel sektörde de kullanılmaktadır. Dış borçların üretime dönük yatırımlarda kullanılması ile verimsiz alanlarda kullanılması birbirinden farklı sonuçlara yol açmaktadır.

Bu çalışmada Türkiye'nin 2002Q4-2019Q4 döneminde dış borçlarının ekonomik büyüme üzerine etkileri hem dış borca başvuran sektör hem de dış borcun vadesi açısından VAR yöntemi kullanılarak araştırılmıştır. Çalışmadan elde edilen temel sonuçların başında varyans ayrıştırması tekniğine göre, analize dahil edilen değişkenler arasında ekonomik büyüme üzerinde kısa vadeli kamu dış borcunda meydana gelen şokların en fazla etkiye sahip olduğu gelmektedir. Bu sonuç çalışmada kullanılan bir diğer teknik olan etki tepki analizince de desteklenmektedir. Nitekim bu teknik de ekonomik büyümenin en fazla tepkiyi kısa vadeli kamu dış borcuna verdiği sonucunu ortaya koymuştur.

Yapılan nedensellik analizi sonuçları kısa vadeli kamu dış borcu ile uzun vadeli özel sektör dış borcundan ekonomik büyümeye doğru bir nedenselliğin varlığını göstermektedir. Aynı zamanda ekonomik büyüme de uzun vadeli özel sektör dış borcunun bir nedenidir. Öte yandan nedensellik analizi özel sektörün uzun vadeli dış borcunun kamu sektörü kısa vadeli dış borcunun da bir nedeni olduğunu ortaya koymaktadır. Uzun vadeli borçlar kamu ve özel sektör dış borçlarının birbirleriyle çift yönlü nedensellik ilişkilerinin varlığı analizin ortaya koyduğu bir diğer sonuçtur. Bu sonuçlar özel sektörün uzun vadeli dış borçlarının ekonomik büyümeyle çift yönlü nedensellik ilişkisinin varlığı ve kamu sektörünün uzun vadeli dış borçları ile ekonomik büyüme arasında herhangi bir nedensellik ilişkisinin olmadığı bulguları yönünden Yıldız (2018) çalışmasındaki sonuçlarla paralellik göstermektedir.

Çalışmadan elde edilen bu bulgular Türkiye'nin dış kaynak kullanımındaki tercihini kamu sektörünün kısa vadeli borçlanmasından yana kullanılmasının dış borç krizlerine yol açabileceğini düşündürmektedir. Öte yandan kısa vadeli finansman kaynaklarıyla reel yatırımların gerçekleştirilmesinin finansman yönetiminin

mantığı açısından kusurlu olabileceği göz önünde bulundurulmalıdır. Bu bağlamda orta vadede ekonominin kendi kendini finanse edebileceği ve gücünü üretimden alacağı bir planlamanın hayata geçirilmesi ekonomik büyümede istikrarın sağlanmasında önemli bir anahtar olabilecektir.

İnternetin Vergi Gelirleri Üzerindeki Etkisi*

Arş. Görevlisi Aykut SÖNMEZ¹

¹Recep Tayyip Erdoğan Üniversitesi / İİBF / Maliye, aykut.sonmez@erdogan.edu.tr/ORCID:0002-7367-2794

Özet: Teknolojinin gelişmesi ve internet ağının yaygınlaşması ile birlikte insanlar da bu değişime hızlı bir şekilde uyum sağlamaya başladılar. Devletler de var oluşlarını sürdürebilmek amacıyla bu değişime kendileri de uyum sağlamaktadır. Makalemizde ise bu teknolojinin, vergi gelirleri ile alakasını ve vergi tahsilatlarına etkisi incelenmiştir. Yıllar itibarı ile artan vergi gelirlerine bakılıp aynı şekilde internet bağlantısının da gelişip gelişmediği incelenmiştir.

Anahtar Kelimeler: İnternet, Vergi, Vergi Gelirleri, Teknoloji

Internet's Effect On Tax Revenues

Abstract: With the development of technology and the spread of the internet network in the world, people have started to adapt quickly to this change. In our article, the relevance of this technology to tax revenues and its effect on tax collections is examined. By looking at the tax revenues that have increased over the years, it has been checked whether the internet connection has developed in the same way.

Key Words: Internet, Tax, Tax Revenue, Tecnology

1.GİRİŞ

Dünya üzerindeki bilgisayarların birbirlerine bağlanması neticesinde ortaya çıkan internet, hiçbir sınırı olmayan, uluslararası bir bilgisayar ve bilgi iletişimini sağlayan ağ olarak açıklanmaktadır. Ve internetin dünya üzerinde başka bir benzeri mevcut değildir. İnternet üzerinden yapılan işlemleri başka bir ağ üzerinden gerçekleştirme imkanı söz konusu değildir (İnan, 2001:7).

İnternetin sağladığı kolaylık ve her an her yerden erişimin sağlanabilme özelliği sayesinde bireyler ve firmalar ticari işlerini bu platform üzerinden yerine getirmeye başlamıştır. Özellikle son 10 yıllık dönemde internette yaşanan bu gelişme ile fiziki ortamda olan her şeyin neredeyse tamamı sanal ortama taşınarak bireylerin kullanımına sunulmuştur (Yumuşak, 2000:4).

İnsanlar için bir tanışma, sohbet etme, müzik dinlenip eğlenme, alışveriş yapma, film izleme, bir şeyler satın alma, bilgi arama gibi çok işlevsel olarak kullanılan internet ortamı, dünya çapında bir çok sayıda işletmenin ve tüketicinin yer aldığı bir platformdur. Tüm bunlar internetin devlet eliyle de kullanılma zorunluluğunu doğurmuştur. Devletler internet sayesinde tüketicilerin ve şirketlerin internet kullanımların ve faaliyetlerini denetleme imkanı bulmuştur. Bunlarda toplumun sanayi toplumundan bilgi toplumuna geçişin bir göstergesi olarak karşımıza çıkmaktadır (Bektaş, 2004:34).

İnternetin son yıllardaki hızlı gelişimi ile birlikte bu gelişim bireylerin internet kullanım oranlarına da yansımaya başlamıştır. Bireyler artık günlük yaşamda yaptıkları çoğu alışkanlıklarını internet üzerinden yapmaya başlamıştır. Yani hayatımıza giren bu araç ile hayatın içerisinde bulunan her alanı etkilemeye başlamıştır (Karaca, 2006:17).

Yapmış olduğumuz bu çalışmada da internet kullanımının devletin gelirlerinden olan vergi gelirini nasıl etkilediğini, tablolar yardımı ile yorumlamaya çalışılmıştır.

2.İNTERNET KULLANIMININ VERGİ GELİRLERİNE ETKİSİ

Çağımızın bir teknoloji çağı olması, bilgi işlemlerin artık bilgisayarlar, telefonlar, tabletler gibi çeşitli teknolojik aletler ile yapılmasına olanak sağlamıştır. Öyle ki artık bu teknolojik aletler hayatın birçok yerinde kullanılmaya başlanmıştır. Tüm bu teknolojik aletleri birbirine bağlayan, dünya ile iletişimini sağlayan ise bir ağ bağlantısı yoluyla gerçekleştirilen internet teknolojisi olmuştur.

* Bu çalışma Kırıkkale Üniversitesi Maliye Bölümünde hazırlanmış olduğum Y.Lisans Tezinden türetilmiştir.

3.İNTERNETİN TANIMI

İnterneti dünyadaki tüm bilgisayar ağlarının elektronik şebeke ağı ile birbirlerine bağlanması neticesinde ortaya çıkan, hiçbir sınırı ya da bir yöneticisi olmayan global bir bilgisayar ve bilgi iletişimini sağlayan ağ olarak ifade edebiliriz. Ayrıca internetin dünyada hiçbir benzeri olmayan bir sistem olduğu bilinmektedir. Yani buda demek oluyor ki internet üzerinden yaptığımız işlemlerin hiçbirini dünya üzerindeki başka bir sistemden yapmamız söz konusu değildir (Hotunoğlu, 2012:355).

Birden fazla bilgisayar sisteminin dünya çapında birbiri ile bağlantı kurduğu, günden güne büyümeye devam eden bir iletişim ağı olarak da interneti açıklayabiliriz. Çağın bir iletişim çağı olması sebebiyle internet günlük yaşamda da insanların fazlaca kullandığı bir sistem olmaya devam etmektedir. Birbirine ağ yoluyla bağlı olan bilgisayarlardan, insanların istediği zaman istediği yerden istedikleri bilgiye ulaşabilmeleri bunları saklayabilmeleri veya başka birileri ile kolayca paylaşabilmesi daha ucuz, hızlı yolla erişilebilmesi gibi nedenler internetin yaygınlaşmasını ve gelişmesini sağlayan unsurlardan birkaçı olmuştur (Kuşay, 2005:120).

İnternet terimini oluşturan sözcükler international ve network sözcüklerinin birleşimidir. Uluslararası çapta bir kullanılabilirliği mevcut olan internet ağı, birbiriyle sabit olarak bağ kurulmuş iletişim hızının yüksek olduğu bilgisayarlar vasıtasıyla ortaya çıkarılmıştır (Karaduman, 2002:58). Literatürdeki bir diğer tanıma göre ise internet yüz binlerce veri tabanı veya diğer çeşitli kaynaklar vasıtasıyla sağlanan bilgileri, dünyadaki diğer bütün kullanıcıların faydalanmasına imkan sağlayan bir sistem olarak açıklamıştır (Çelik, 2005:42).

4.İNTERNETİN ÖNEMİ

Dünyanın artık küresel bir köy haline gelmesiyle birlikte bunun oluşumuna da en büyük katkıyı sağlayan teknolojik gelişmeler hayatımızın yönünü belirlemeye başlamıştır. Eskiden mümkün olmayan dünya çapındaki bağlantılar internet sayesinde tüm kurum ve kuruluşlara hatta her bir bireye dünya ile daha kolay bağlantı kurabilme, işlerini kolay hale getirme, zahmetsiz bir şekilde bilgiye ulaşmayı, onları saklamayı kendine yarayacak şekilde kullanmayı mümkün kılmıştır. Tabi bu durum bireylerin ve kurumların bu değişime ayak uydurmasını zorunlu hale getirmiştir (Akınoğlu, 2002:13).

İnternetin servislerinden olan web insanların internet üzerinden erişmeye çalıştıkları belgelere, dokümanlara, resim, yazı, ses gibi birçok işlevi kolayca bulanabilmesini, ve bunu insanlara iletmeye yarayan bir araç olmuştur. Bu hizmetin ortaya çıkması için birden fazla yazılımın işlev gördüğü de bilinmektedir (Çelik, 2005:41).

İnternetin yukarıda bahsi geçen işlevlerinin yanı sıra ticaret açısından çok ciddi bir ağ potansiyeli ve dağıtım gücünün olduğunu bilmekteyiz. Günümüzde neredeyse ticari faaliyetle uğraşan tüm firmalar internetin tanıtım gücünü, müşteri potansiyelini keşfetmiş bunun sonucunda da elinde bulunan ürünleri internete entegre ederek doğrudan internet üzerinden müşterilerine ulaşmaya başlamıştır. Ve firmalar da ürünlerini artık internet satışına uygun şekilde tasarlama yoluna gitmiştir. Bu sayede firmalar en yüksek kar oranını yakalamaya çalışırken daha az maliyetle ürettikleri ürünleri müşterilerine tanıtmaya, satmaya, ulaştırma ve tüm bunların takibini kolayca yapabileceği bir sisteme kavuşmuştur. Ve bu gelişim internetin sadece ürün alım satımı yahut reklamı gibi olaylarla sınırlı kalmayıp diğer birçok alanda da insanların hayatını kolaylaştıracak şekilde kullanılması gerekliliğini ortaya çıkarmıştır (Kirli, 2014:5).

İnternet vasıtasıyla insanlar artık daha sık birbirleri ile iletişim kurmakta, kendilerini daha fazla ifade etmekte hatta keyfi zaman geçirme aracı olarak da interneti kullanmaktadır. Artık istedikleri zaman istedikleri yerden yorulmadan, dışarı çıkma gereksinimi hissetmeden sahip olduğu telefon, bilgisayar ya da tablet gibi çeşitli teknolojik aletler sayesinde bir tıkla her türlü alışverişini giderebilmekte, bankayla olan münasebetlerini bu sayede bankaya gitmeden kolayca gerçekleştirebilmekte, radyo yada televizyon gibi cihazlara ihtiyaç kalmadan onların işlevlerini de bu teknolojik araçlarla giderebilmektedir. Bunlar gibi birçok işi daha, insanlara kolayca yapabilme imkanı sunan internet insanoğlunun hayatın da artık vazgeçilmez bir platform olmuştur (İnan, 2001:7).

Günümüzde mevcut olan bilgi toplumu çağı bilgisayarların etkisiyle daha da hızlanmıştır. 90'lı yıllarla hayatımıza önemli ölçüde giriş yapan internet insanların siyasi, kültürel, ekonomik gibi birçok yönden etkileyen ve bunların yaygınlaşmasını sağlayan bir araç olmuştur. İnsanları bir şekilde katılıma teşvik

eden kendisiyle bir şekilde ilişki kurmasını sağlayan internetin interaktif olan yapısı gereği insanları geliştirici bir özelliğinin de olduğu bilinmektedir.

5. İNTERNET KULLANIMININ VERGİ GELİRLERİ ÜZERİNE ETKİSİ

Teknolojinin gelişimi ile birlikte bilgi teknolojisinde de yaşanan gelişmeler sayesinde bilgisayarlar arası bağlantı kurmaya yarayan internet de hayatımızda büyük önem taşımaya başlamıştır. İnternetin insanlar arasında bilgi ve iletişim amacıyla kullanılması sonucu özel şirketler, kamu kurum ve kuruluşları ve bireyler arasında yeni bir platform ortaya çıkmıştır. Yapılan işlemler artık fiziksel ortamdan çıkıp sanal ortamlarda kendini göstermeye başlamıştır. İnternetin insanoğluna sağladığı en büyük kolaylıklardan biride oluşturulan bu sanal ortamlardır (İnan, 2000:10).

İnternetin bireyler açısından vergiye katkısına baktığımızda ise kişiler için kolaylaştırıcı olması bakımından önem arz etmektedir. Vatandaşlara göre vergi, devlet tarafından cebri olarak alınan bir ücret özelliği taşımasından ötürü kişilerin bu vergileri ödemedeki gönüllüğü devletin vergi gelirlerini artırmadaki en önemli kaynağı olacaktır. Bir ülkedeki bireyler vergi ödeme konusunda ne kadar bilinçli ve gönüllüyse buna paralel olarak da vergi gelirleri de o denli yüksek olarak toplanabilecektir. Bu sebeple de devlet bireylerin vergi ödeme arzusunu artırabilmek amacı ile vergisel süreci tüm vatandaşların kolayca anlayabileceği ve hızlı bir şekilde işlemlerini gerçekleştireceği bir ortamı hazırlamalıdır. Günümüzde de bu tezdin yola çıkarak ülkeler, vergisel sürecin kolaylaşması, anlaşılması ve daha geniş kitlelere ulaşabilmek amacıyla interneti bir araç olarak kullanmaktadır (Karagül, 2013:122).

Günümüzde insanlar artık internet aracılığıyla ürün alıp ürün satabilmektedir. İnternette yapılan bu ticaret daha geniş kitlelere hitap etmekte ve insanlar arası etkileşimi artırmaktadır. Ancak bu faaliyetler vergisel açıdan devletleri zor duruma sokmaktadır. Bunun sebebi de devletlerin internet aracılığıyla yapılan bu ticarete yapısal olarak vergisel tabanda hazır olmadığıdır. Devletler de gelişime teknik alt yapı ve yasal düzenlemelerle bu sürece kendilerini hazırlamaya başlamışlardır. 99'lu yılların başında 1 trilyonlarda olan e ticaret 2020 yılında 91 milyar civarında gerçekleşmiştir (Canpolat, 2001:24).

Özellikle 2019 yılında başlayan Covid19 salgını ve devletlerin aldığı önlemlerin etkisiyle kişilerin internette geçirdiği zaman artmış ve ticaret de büyük oranda internet üzerinden gerçekleşmeye başlamıştır.

TABLO:1 E-Ticaret Hacmi Karşılaştırması

Kaynak: TİCARET BAKANLIĞI (<https://www.eticaret.gov.tr/>).

Tablo-1 de 2019 ve 2020 yıllarına ait e-ticaret hacmini görmekteyiz. Buradaki artışın en önemli sebebi yukarıda da değindiğimiz gibi 2020 yılında yaşanan Covid19 salgınıdır. İnsanların yasaklar nedeni ile evde kalmaları, sınırlamalar gereği alışveriş merkezlerinin kapalı olmaları gibi nedenlerden ötürü e-ticaret hacminde %64 oranında bir artış yaşandığı gözlemlenmektedir.

TABLO-2: 2009-2020 YILLAR İTİBARI İLE İNTERNET KULLANIMI

Kaynak: TÜİK

Tabloda 2009 yılı ile 2020 yılları arasında internet ile alakalı veriler paylaşılmıştır. 2009 yılı itibarıyla Türkiye’de internet erişimine sahip olan hane sayısı %30 iken 2020 yılında bu oran 3 kat artarak %90.7 civarına gelmiştir. Aynı şekilde bireysel internet kullanımı da 2009 yılında 2020 yılına kadar 2 katından fazla artış göstermiş. Tüm bunlara ek olarak internet üzerinden bir ürün alım satımı yapma işi de 2009 yılından 2020 yılına gelene kadar 8 kat artmıştır. Özellikle 2015 yılından sonra internet üzerinden yapılan alışverişler de sürekli bir artışın yaşandığı görülmektedir. Yani ülkemizin son on yılındaki internet ile tanışma, hayatına adapte etme ve günlük yaşamında kullanım oranlarını tabloyu inceleyerek görebilmekteyiz.

Yukarıda ki tablo da internetin vergi gelirleriyle olan alakası açık bir şekilde görülmektedir. Yıl geçtikçe ülkedeki nüfusun yüzde doksan gibi bir oranın bilgisayara sahip olması, bireysel internet kullanımının her geçen yıl artmaya devam etmesi ve internetle yapılan tüm işlemler ülkelerin mali açıdan bir değişime uğraması gerekliliğini ve yapacağı reformları buna göre belirlememesi zorunluluğunu göstermektedir.

İnternetin gitgide popülerliğinin arttığı bu dönemlerde yapılan işlemlerin vergilendirilmesi konusunda da farklı görüşler mevcuttur. Bunlardan yaygın olan görüş internet üzerinden yapılan işlemlerde verginin alınmaması yönündedir. Bu görüşe göre internetin vergilendirilmesi durumunda devletin altın yumurtlayan tavuğu keseceği şekilde yorum yapılmaktadır. Diğer görüşe göre ise internet üzerinden vergi alınmadığı takdirde internet üzerinden ticaret yapan işletmeler lehine bir üstünlük olacak bu da reel piyasada ki işletmeleri olumsuz etkileyecektir. Ayrıca internet üzerinden yapılan işlemlerin vergilendirilmemesi durumunda, internet üzerinden yapılan satış artacak devletin de burada elde edeceği vergiyi kaybettiği görülecektir.

6.İNTERNET KULLANIMI SONRASI VERGİ DAİRESİNİN ROLÜ

Bilgisayarlar ile internet üzerinden veri alışverişi, 1980’lerin son çeyreğinde Bilgi ve İletişim Teknolojilerinin (BİT) öncülüğünde gerçekleştirilmiştir. Buradaki en büyük kazanım uzak mesafelerden vatandaşlara bilginin sunulabilme olanağı olmuştur. BİT’ler de yaşanan gelişmelerin, kamu kesiminin, bireylerin ve şirketlerin uyumlu olması demokratik sistem bünyesi bakımından gerekli, vatandaşın kamusal zorunlulukları perspektifinden de yeni bir oluşum yarattığı söylenebilir (Torlak, 2010:7).

Vatandaşlar için vergi, kaçınması doğal bir iç güdüyle bütünleşmiş olan bir yapı halindedir. Bu da insanın doğası gereği olabilecek bir tutumdur. Hiçbir vatandaş özellikle de karşılıksız olarak devlet istedi diye gönüllü bir şekilde vergisini ödemek istemeyecektir. Bazı vatandaşlar ise aldığı hizmetlerin bir karşılığı olarak vergi ödemeye gönüllü olabilmektedir. Her iki insan davranışı tipinde de devlete önemli görevler düşmektedir. Devlet gönüllü olarak vergisini zamanında ödeyen kişiyi yapacağı hizmetlerle memnun etmeli ve vergisel süreçte insanların menfaatine olacak şekilde süreci kolaylaştırmalıdır (Kirli, 2014:23). Ayrıca devlet vergisini ödemeyen, vergiden kaçınan bireyleri ödüllendirir gibi vergi affı, yapılandırması gibi uygulamalara her zaman gitmemelidir. Bu uygulamalar gönüllü olarak zamanında vergisini ödeyen vatandaş için bir ceza gibi olmaktadır. Bu da insanlardaki vergi ahlakı ve bilincini olumsuz şekilde etkileyecektir. Bir diğer önemli konu ise vergilerin tahsilatlarının gerçekleştiği vergi daireleridir (GİB, 2013).

Vergi dairelerine vergisini ödemeye giden vatandaşların vergi dairelerinde karşılaştıkları tutum, mükelleflerin vergi dairesinde geçirdiği süre, işlem yaptırma hızı, orada çalışan memurların hal hareket ve tavırları vergi mükellefinin vergi ile alakalı düşüncelerini etkilemektedir. Süreç ne kadar hızlı ilerlerse bu aşamalar da mükellef de o kadar vergi ödemede istekli olacaktır. 1990’lı yıllarla birlikte vergi dairelerinin görev tanımında da bir değişiklik yaşandı. Vergi dairelerinin görevi sadece vergi tahsilatı yapmak değil, vergilerin yürütülmesi, vergiler üzerinden yapılan sahtekarlıklar, kaçınmaları önleme, ve mükellefi vergiler konusunda bilgilendirme misyonu da yüklenmiştir. Günümüzde bir çok ülke vatandaşları ve şirketleri müşteri gözüyle görmek ve vergilerle alakalı kalite çalışmalarını da bu düşünce tarzı ile yürütmektedir (Uygur, 2010:42).

Tüm bu konularda hayatımızın tüm aşamasının içerisinde olan internetten devletin yararlanması kendi faydasına olacağı düşünülmektedir. Vergi mükelleflerini bilgilendirmek, vergilerle yapılan hizmetleri halka gösterip açıklayabilmek, koordinasyonu sağlamak, vergi tahsilatında yaşanacak olan gecikmelerin önüne geçebilmek, mükellefine kolay bir şekilde ödeme yapabilme imkanı bulmak açısından internet devlet açısından önemli bir araç halindedir.

Vergi dairesi ve Bilgi Teknolojileri arasında yaşanan etkileşim sonucu verilecek olan hizmetin kalitesinin artırılması hazine ile vergi mükellefleri arasındaki ilişkinin güvenli olmasını sağlamıştır. Tüm bunlarda vergi yükümlülüğü olan bireylerin vergi ödevlerini yerine getirmede olumlu bir etki yaratmaktadır.

TABLO-3: YILLARA GÖRE VERGİ GELİRLERİ VE TAHSİLATLARI

Kaynak: GİB (<https://www.gib.gov.tr/>)

Tablo-3'ü incelediğimizde 1999 yılından 2019 yılına kadar geçen her yılda vergi gelirleri ve vergi tahsilatlarının farklı oranlarda olmak üzere devamlı bir artış yaşandığını görebilmekteyiz. Ve bazı yıllar istisna olmak üzere genelde hedeflenen vergi tutarı tutturulmuş dahası üzerine çıktığı yıllarında sayısı fazladır.

TABLO-4: TOPLAM NÜFUSUN İNTERNET, MOBİL KULLANIM VE SOSYAL MEDYA İSTATİSLİKLERİ

TOPLAM NÜFUS	83.88 MİLYON
MOBİLE TELEFON BAĞLANTISI	77.39 MİLYON
İNTERNET KULLANIMI	62.07 MİLYON
SOSYAL MEDYA KULLANIMI	54.00 MİLYON

Kaynak: (<https://dijilopedi.com/2020-turkiye-internet-kullanimi-ve-sosyal-medya-istatistikleri/>)

Tablo-4'te toplam nüfusunun 83 milyonun üzerinde olduğu görülmektedir. Türkiye nüfusunun %92'sinin mobile telefon bağlantısının olduğu görülmektedir. Aynı şekilde Türkiye nüfusunun %74'ünün erişimi bulunmaktadır. Türkiye nüfusunun yarısından fazlası da sosyal medyayı kullanmaktadır.

TABLO-5: E-TİCARET ÖDEME YÖNTEMİ

Kaynak: (<https://dijilopedi.com/2020-turkiye-internet-kullanimi-ve-sosyal-medya-istatistikleri/>)

Bireyler elektronik ortamlarda yapmış oldukları alışverişlerin %70'ini kredi kartı ile gerçekleştirmektedir. Tablo-5 de görüldüğü gibi %12 gibi düşük bir oranda nakit ödeme ile yapılmaktadır. İnternet üzerinden yapılan bu harcamalar da kredi kartının kullanılması verginin kaçırılmasını da imkansız kılmaktadır.

Tüm bu tablolara bakıldığında yıllar geçtikçe internet kullanım oranların da yaşanan artış, internet bağlantısının yaygınlaşması, teknolojinin gelişmesi ve birçok işlemin artık sanal ortamda gerçekleşmesi vergi gelirlerini de paralel olarak arttırdığı yönündeki bir yorumu bize yaptırabilmektedir.

SONUÇ

İnternetin genel amacı insanların birbirleri ile iletişim kurmaları, bilgi alışverişinde bulunmaları ve bununla birlikte bilgiye ulaşmada kolaylık, hızlilik ve güvenilir bir ortamda iletme imkanı veren ortak bir iletişim aracı olmasıdır. İnternet, yeterli düzeyde altyapıya sahip olan bütün ülkelerdeki bireylerin erişebileceği dünyanın ortak ağıdır ve hiçbir ülkeye kuruma ait değildir.

Teknolojinin gelişmesi ile birlikte insan hayatında da hızlı bir adapte olma dönemi yaşanmaktadır. Türkiye nüfusunun %8 gibi düşük bir oranı internet hizmetini kullanmamaktadır. Özellikle 16-64 yaş aralığı teknolojiyi çok aktif bir şekilde kullanmaktadır. Ve bu aktif kullanım devlet yönetenler tarafından da vatandaşların hizmetlere kolay ulaşması açısından kullanılmaktadır. Dünya çapında yaşanan salgın hastalık nedeni ile gelişmekte olan internet işlemleri salgın dönemiyle birlikte iyice hayatımıza girdi ve ticaretimiz reel ortamdan sanal ortama kaymaya başladı. İnternet üzerinden gerçekleşen bu işlemler de ülkelerin vergi tabanları açısından önem arz etmeye başlamaktadır.

İnsanlar fitratı gereği vergi ödemek istemezler. Devletler de varlıklarını sürdürülebilmek için koymuş oldukları vergileri zamanında ve tam olarak tahsil etmek isterler. Bu konu da önceleri vergi dairelerine çok iş düşmekteydi. Mükellefi küstürmemeleri, işlemlerini hızlıca halledip uzun süre vergi dairesin de zaman geçirmemeleri, vergi ile alakalı merak edilenleri açıklamaları, vergileri iyi tanıtabilmeleri gibi birçok husus vergi dairelerinin görevleri arasında idi. İnternet bağlantısının gelmesi ve teknolojinin yaygınlaşması ile bu görevler sanal ortamlarda da yapılmaya başladı. Ve bunun da vergi gelirlerine etkisi olduğu düşünülmektedir. Yani vergi gelirlerinin yıllar itibarı ile artması aynı şekilde teknolojinin gelişmesi ve internetle olan münasebetin de sürekli olarak artması arasında bir ilişki olduğunu düşündürmektedir.

Türkiye’deki İşletme Faaliyetlerinde Sürdürülebilir Finans Uygulamalarının Önemi

Dr. Öğr. Üyesi Ayla YAZICI¹

¹ Anadolu Üniversitesi, İİBF, İktisat Bölümü, e-mail: ayazici@anadolu.edu.tr , ORCID: 0000-0002-7491-8709

Özet: İklim krizi devam ederken ortaya çıkan Covid-19 salgınıyla birlikte sürdürülebilirlik kavramı daha fazla önemli olmaya başlamıştır. Zira salgının nedenleri ve sonuçları, üzerinde yaşanan yerkürenin sınırlarının zorlandığını ve sürdürülemez hale geldiğini göstermektedir. Küresel ölçekteki bu sorunların temelinde genel anlamda işletme faaliyetlerinin sonuçlarının yattığı görülmektedir. Dolayısıyla ekonomilerin sürükleyici gücü olan işletmelerin faaliyetlerini ve özellikle kriz dönemlerini yönetebilmesindeki başarılarının temelinde, mikro ve makro seviyedeki kurumsal altyapının sağlamlığı yatmaktadır. Bunun için öncelikle makro seviyedeki ekosistemin kurumsal (finansal, konjonktürel sinyalleri hemen okuyarak yönetebilme) kapasitesinin yüksek olması gerekmektedir. Çünkü iktisadi politikaların belirlenmesinde, verilecek desteklerde, kıt olan kaynakların yönlendirilebilmesinde bu kapasite sayesinde uygun zamanda, uygun miktarda, uygun işletmelerin seçimi mümkün olabilecektir. Bu seçimde başarının temel koşulu, verimliliği, rekabet gücü yüksek işletmelere desteklerin verilmesini sağlayabilmektir. Böylece hem onların faaliyetlerindeki sürdürülebilirlik hem de makro iktisadi yapının krizleri yönetmedeki başarısı artabilecektir. Bu beklentilerin gerçekleşebilmesi için ekonomide önemli bir finansal aracılık görevini yerine getiren bankalara önemli görevler düşmektedir. İşletmelerdeki kurumsallaşma seviyesinin gelişmemesinin veya eksikliklerinin bir nebze giderilebilmesinde bankaların kredi tahsisten, kredinin kullanılması ve kapatılması süreçlerindeki uluslararası standartlara göre operasyonlarını yönetmesi, işletmelerin kurumsallaşma kapasitelerine önemli katkı yapabilecektir. Yani bankaların kredilendirme süreçlerinde, hem işletmelerin kredibilitelerine hem de projelerin iktisadi sürdürülebilirlik kriterlerine göre finansman sağlanması bu amaca hizmet edebilecektir. İşletmelerin gücüne göre uygun fiyatlamayla kredi tahsisi, işletmelerin finansman maliyetlerini azaltabileceği gibi bankaların kaynaklarının geri dönüşleri mümkün olabilecektir. Aynı şekilde yeşil ekonomi anlayışını taşıyan işletme ve projelere göre kredi kullanılması, olumsuz dışallığa neden olmadan iktisadi kalkınma faaliyetleri, sürdürülebilirlik koşullarına göre yürütülebilecektir. Bu kapsamdaki çalışmada, Türkiye’de sürdürülebilir iktisadi kalkınma ifadesinin, hem nicel hem de niteliksel özelliklerine göre bankacılık sektörünün nasıl destek verebileceği incelenecektir.

Anahtar Kelimeler: Ekonomik Kalkınma, Sürdürülebilirlik, Sürdürülebilir Finans, Sürdürülebilir Kalkınma, Uluslararası Standartlar

1. GİRİŞ

İklim krizi devam ederken ortaya çıkan Covid-19 salgını sonrasında yaşananlar ve sorunlarıyla birlikte sürdürülebilirlik kavramı daha da önemli olmaya başlamıştır. Çünkü salgının hem nedenlerini barındıran durumlar hem de salgının sonuçları, devam eden etkileri, yaşanan gezegenin sınırlarının zorlandığını ve sürdürülemez bir durum aldığını göstermektedir. Küresel ölçekteki bu sorunların temelinde genel anlamda işletme faaliyetlerinin sonuçlarının yattığı bilinmektedir. Dolayısıyla ekonominin sürükleyici gücü işletme faaliyetlerinin sonuçlarının olumsuz dışallığa neden olmadan sürdürülebilir şekilde yürütülmesi gerekmektedir. Bu yüzden iktisadi anlamdaki kalkınma ifadesi, hem nicel hem de niteliksel özelliklerinden daha geniş bir anlamı içeren dönüşümle sürdürülebilir kalkınma şeklinde ifade edilmeye başlamıştır.

Bu dönüşümün amacı iktisadi gelişimin artırılmasıyla birlikte çevresel, sosyal faktörler gibi birey ve toplumların yaşam kalitesinde artışın sağlanmasıdır. Fakat gezegenin artan nüfusu ve kaynakların adil olmayan kullanımı bu amaca ulaşmayı zorlaştırmakla beraber ekosistemin de tahrip edilmesine yol açmaktadır. Aynı şekilde küresel ticaretten pay alma yarışındaki kavga, sürdürülebilir kalkınmanın sağlanabilmesini ve işletmelerin ayakta kalabilmesini gittikçe zorlaştırmaktadır. Bu yüzden küresel rekabet ortamında sürdürülebilir kalkınmada başarılı olabilmek için ülkelerin kalkınmasının dinamosu olan işletme faaliyetlerinin düzenlenmesini ve denetlenmesini mümkün kılacak uluslararası fikir birliğine, iş birliğine ortam hazırlayacak düzenlemelere ihtiyaç vardır.

Küresel bir sorun olan iklim krizinin çözümlenebilmesi için uluslararası koordinasyon, işbirlikleri gerekmektedir. Birleşmiş Milletler¹, Paris Anlaşması², Avrupa Yeşil Düzeni (European Green Deal, AYD) tavsiye ve standartları hem bölgesel hem de küresel açıdan önemlidir. Aynı şekilde işletmelerin kuruluş temelindeki yeterliliklerinin var olup olmadığını test edecek ve sürekliliğini sağlayacak Uluslararası Standardizasyon Örgütü'nün (International Organization for Standardization - ISO) geliştirdiği standartlardan yararlanılarak, işletmelerin operasyon süreçlerinin kurulması, işletilebilmesi ve iyileştirilebilmesi sağlanmalıdır. Bu standartlar yanında işletmelerin finansman imkânlarının geliştirilmesinde sürdürülebilirlik esaslarına göre faaliyetlerini yürüten işletmelere pozitif bir kayırmanın, kredi tahsis süreçlerinin işletilmesi de iktisadi anlamdaki sürdürülebilirliğe önemli katkı sağlayabilecektir.

Bu kapsamdaki çalışmanın amacı, Türkiye'deki işletme faaliyetlerinde sürdürülebilir finans uygulamalarının önemini incelemektir. Makalenin alt ana başlıklarının birincisinde, sürdürülebilir kalkınma ve işletmelerde sürdürülebilirlik kavramı incelenmektedir. Sonrasında sürdürülebilir kalkınmada uluslararası standartların önemi verilmektedir. Türkiye'de bankacılık sektörü ve sürdürülebilir kalkınma ilişkisini destekleyen unsurlara takip eden başlıklarda değinilmektedir. Bu kısımda işletmelerde artan risklerin yönetiminde ve işletmelerde sürdürülebilir finans uygulamalarında bankaların önemine yer verilerek öneriler geliştirilmeye çalışılmıştır. Araştırma yöntem olarak literatür incelemesini kullandı.

2. LİTERATÜR ÇALIŞMASI

Günümüz dünyasında küreselleşmenin ve Covid-19 salgınının tetiklediği belirsizlik ve yıkıcı rekabet ortamı, işletmelerde risk yönetimini giderek zorlaştırmaktadır. Özellikle küreselleşen piyasalarda daralan pazar hacminin neden olduğu ticaret savaşları; toplumsal ve politik çevredeki değişikliklerin neden olduğu kargaşaların ortaya çıkardığı göç hareketleri; teknolojik ve doğal çevrede yaşanan, öngörülme yen değişiklikler risk yönetimindeki temel belirsizlikleri, zorlukları göstermektedir. Kurumsal yönetişimin sağlandığı yapılarda sürdürülebilirliğin mümkün olması literatürde bu konudaki çalışmaların artmasına sebep olmuştur.

Literatürde sürdürülebilirlik konularının işletmelere yönelik önemli riskler ve fırsatlar içerdiğini ortaya koyan kapsamlı teorik temelli ve/veya ampirik bulgulara dayalı sonuçlar ortaya koyan ve analizlerin yapıldığı çalışmalar vardır. Buna göre, sürdürülebilir yönetim, işletmeler açısından orta ve uzun vadeli ve aynı zamanda istikrarlı başarıyı sağlamayı hedeflerken; yönetim kurulunun rolünü tanımlanmasının yeterli olmayacağından hareketle; yeni bir yaklaşımın benimsenmesidir. Bu yeni yaklaşım, işletmenin sosyal ve çevresel performansının etkin bir yönetim gözetim işlevini yerine getirmesini sağlamak için, yönetim kurulunun aldığı stratejik kararları ve tüm uygulamaları üç boyutlu olarak kurumsal, sosyal ve çevresel perspektifle ele almaya dayanmaktadır. Bu açıdan değerlendirildiğinde, sürdürülebilirlik uygulamalarının işletmeleri katma değer yaratma ve şirket değerini koruma konusunda çok boyutlu olarak geliştirdiğini destekleyen kanıt ve bulgular bulunmaktadır (Bozkuş Kahyaoğlu, 2019:128). Tablo 1'de bu konuda literatüre katkı yapan bazı çalışmalar özetlenmiştir.

Bankacılık sektörü gibi güçlü ve müşterileri, çalışanları, paydaşları, ortakları vb. ile etki edebileceği geniş bir kitleye sahip bir kurumun, sürdürülebilir kalkınmayı sağlamak için vereceği desteklere değinilmiş.

3. SÜRDÜRÜLEBİLİR KALKINMA KAVRAMININ ÖNEMİ

Dünya nüfusu giderek artıyor. Bununla birlikte dünyanın uğradığı tahribat da tehlikeli boyutlara varmış durumda. Küresel finans sisteminin ve tüm ülkelerin bu tahribatta payı var. Şu an elimizde tek gezegenimiz olduğuna göre ona iyi bakmak sadece bireysel bir girişimden ibaret olmamalı. En azından bundan sonrası için kurumsal ve evrensel tedbirler almak şart (Gündoğdu, 2019: 5).

Bu olumsuzluklara rağmen “sürdürülebilirliğin ağızlarda sakız olduğu bir çağda yaşıyoruz. Bu kelimenin kakofonik kullanımı çevresel açıdan daha iyiden havaliya kadar uzanıyor. Aslen kesinti ya da azalma olmadan varlığını devam ettirebilme kapasitesi anlamına gelen bu sıfatın tarihsel kökeni Antik Roma dönemine dayanıyor. 1987’de Dünya Çevre ve Kalkınma Komisyonu’nun Ortak Geleceğimiz raporu ile sürdürülebilirlik kelimesinin çevre anlamında kullanımında patlama yaşanıyor” (Engelman, 2014: 3). En basit şekliyle sürdürülebilir kalkınma veya iktisadi faaliyet, üretimden tüketime kadar gerçekleşen süreçlerin çevreyle uyumlu bir şekilde yürütülmesi olarak ifade edilebilir. Kavram, iklim değişiklikleri ve salgının ortaya çıkardığı sorunlarla dünya gündemini giderek daha fazla meşgul etmektedir. Bu sorunların temelinde, gıda arzından fazla artan dünya nüfusunun ihtiyaçlarını karşılamak için yürütülen faaliyetlerdeki kapitalist üretim tarzı yatmaktadır. Bu yaklaşımdaki işletmelerin, tüm paydaşların hakkını düşünmeden, yenilenemeyen doğal kaynakları da yok edercesine kullanan ve çevreyi kirleten davranışları sürdürülebilir ekonomik faaliyetleri imkânsız yapmaktadır.

Kuşat’a (2019: 11) göre de insanoğlu mevcudiyetinden bugüne, doğayı üretimin ana kaynağı olarak görüp bu kaynağı yenilenme fırsatı vermeksizin hızla tüketmeye devam etmekte, ayrıca üretimin her sürecinde çevreye saldırdığı atıklarla telafisi çok zor bir yapıya sebep olmaktadır. İşin içerisine ihtiyaç, üretim ve tüketim girdiği andan itibaren, sürdürülebilirlik, ekonomik yönü ağır basan bir kavram olarak anılmaya başlamıştır. Sonuç itibarıyla de sürdürülebilir kalkınma ile aynı anlama geldiği yönünde bir anlayış gelişmiştir.

On Birinci Kalkınma Planı da (2019: 188) sürdürülebilir kalkınmada düzenlemelerin önemine şöyle dikkat çekmiştir: Sürdürülebilir kalkınmanın sağlanması, ekonomik ve sosyal refahın artırılması hukuk devleti, demokratikleşme ve iyi yönetim ilkelerinin devlet tarafından güçlü bir şekilde sahiplenilmesi ve etkili bir biçimde uygulanmasıyla mümkündür.

Planda genel anlamda yer alan bu bakışın öncelikle makro ölçekte düzenleyici, denetleyici yapılarda oluşturulması ve mikro unsurlara yansıtılması gerekir ki, beklenen başarılar elde edilebilsin. Bu da kolay değildir. Zira Acar’a (2018) göre iyi yönetim; bir dizi ilke ve kuralı listelemekle başarılabilecek bir hedef olmaktan çok, o ilke ve kuralların yetkili kişiler ve kurumlar tarafından nasıl algılandığıyla ve ne ölçüde uygulamaya aktarıldığıyla daha yakından ilgilidir. Yönetim aynı zamanda yöneten-yönetilen ilişkilerini biçimlendiren bir kültürdür; etkileşimlere yön veren zihni yol haritasıdır; karar verme, kaynak tahsisi, siyasi önceliklerinin belirlenmesi ve çatışmaların çözümü süreçlerinde esas alınan usul ve üsluptur.

4. SÜRDÜRÜLEBİLİR KALKINMADA ULUSLARARASI STANDARTLARIN ÖNEMİ

Ekonomilerin temel dinamosu alan işletmelerin faaliyetlerini sürdürülebilir kalkınma ölçütlerine göre yürütebilmesi için üretim süreçlerindeki yeterliliklerinin var olup olmadığını test edecek ve sürekliliğini sağlayacak düzenlemelerle kurumsallaşma seviyelerinin artırılması gerekmektedir. İşletmelerde bu şekildeki yapılanma, işletme faaliyetlerinin sürdürülebilir bir şekil almasına ve ülke kaynaklarının boşa gitmeden sürdürülebilir kalkınma hedeflerine yönelik kullanılmasına hizmet edebilecektir. İşletmelerin kuruluş ve faaliyet süreçlerinin düzenlenmesi ve denetlenmesini sağlayacak ISO gibi uluslararası standartlara göre tüm süreçlerin tanımlanması, risk analizlerinin yapılması; hem operasyonların standart bir şekilde yürütülmesine hem de neye göre kontrol edilebileceğine, sistemin sürekli dış denetim ve iyileştirmelere açık olmasına hizmet edebilecektir. İşletmelerin sahip olacağı bu şekildeki yeterlilikler; fiziksel, finansal sermayenin beşeri sermaye tarafından sürdürülebilir kalkınma hedeflerine yönelik kullanılmasına önemli katkılar sağlayabilecektir.

ISO’nun geliştirdiği uluslararası standartlardan yararlanılarak, hayatın içindeki tüm sistem süreçlerinin iyileştirilebilmesi ve işletilebilmesi mümkündür. Bütünsel bir bakışla sürekli geliştirilen bu standartlar sayesinde üretimde verimi artıracak daha iyi koşullar yakalanabilmektedir. Çünkü devamlı yapılan dış

denetimler sonucunda ortaya çıkan sonuçların baştaki standartlar ile karşılaştırılarak kontrol edilebilmesi, varsa sapmalarının ölçülebilmesi sayesinde hem kaliteli hem de sürdürülebilir kalkınma ölçütlerine göre üretim gerçekleştirilebilmektedir.

Küresel ve ulusal ölçekte sürdürülebilir kalkınmada başarı sağlanabilmesi için bu standartlar, üretimden tüketime kadar olan zincirindeki tüm taraflar arasındaki bilgi asimetrisini, çeşitli engelleri aşmaya yardımcı olmaktadır. Örneğin gelişmekte olan ülkelerde faaliyet gösteren işletmelerin ürettikleri mal ve hizmetlerin kalitesini ortaya koymak ve belgelemek bu standartlar sayesinde sağlanmaktadır. Bu şekildeki genel kabul görmüş açık standartlar, iyiye varmak için önemli bir araç olarak kullanılmaktadır ki, mükemmelle her alanda ulaşabilmenin garantisi, hızlandırıcısı şeffaflıktır.

5. TÜRKİYE'DE BANKACILIK SEKTÖRÜ VE SÜRDÜRÜLEBİLİR KALKINMA İLİŞKİSİ

Dünya ve elbette ülkemiz sürdürülebilir kalkınmada yolun başında sayılır. Bundan sonraki süreçte sürdürülebilirlik felsefesinin tüm şirketler için zorunlu hale getirilmesi, bankaların kredi kullandırırken şirketin büyüklüğüne bakmadan çevreye ve insana verdiği değeri dikkate alması, tüketicilerin de bu konuda daha duyarlı olması zamanla mümkün olabilir (Gündoğdu, 2019: 6). Bu yüzden işletmelerin kuruluş ve faaliyet süreçlerinin düzenlenmesini ve denetlenmesini sağlayacak ISO gibi standartlar yanında finansal sektör için Basel düzenlemeleri de bankaların ve müşterilerinin finansal başarısızlık riskinin yönetiminde önemlidir. Bankacılık sektöründeki uluslararası düzenlemeler ve ulusal ölçekteki düzenleyici/denetleyici yapıların sıkı gözetimleri, edindikleri risk yönetimindeki tecrübeler bankaların kurumsallaşma seviyelerinin işletmelere göre yüksek olmasını sağlamıştır. Dolayısıyla bu küresel ve yerel standartlara göre işlem yapma kapasitelerinin, onların müşterileri olan işletmelere de yansıtılması sürdürülebilir kalkınmanın sağlanmasında önemli bir katalizör görevi görebilecektir.

Türkiye'deki işletmelerin hem kendi faaliyetlerinin sürekliliği hem de sürdürülebilir kalkınma için ihtiyaç duydukları işletme sermayesinin karşılanmasında çeşitli sorunlar vardır. Bunların kısa vadede çözümü zordur. Uzunoğlu'na (2019: 239) göre çözüm: "Sermayesiz, ülkenin parasal kaynaklarını heba eden şirketlerin tasfiye edilmesi, kamuda etkin sürdürülebilir harcama yapısı, finansal yapılanmada yatırım-kalkınma bankacılığına geçiş yapılması, kayıt dışı ekonomi, dolaylı vergi yapısından hızla çıkılması ve vergide adaleti sağlayan adil bir paylaşım mekanizmasının kurulması gerekmektedir. Makroekonomik dengelenme ancak bu yapı üzerinde sürdürülebilir hale gelebilecektir." Özetle ifade edilen temel yapısal sorunlar, ülkede tasarruf yetersizliği, kullanım etkisizliği ve para piyasalarının egemenliğidir. Bankalarımız (2020: 30) verilerine göre bankacılık sektörünün toplam finansal sistemdeki payı % 81'dir. Bir yıl önce söz konusu oran %83'tür. Dolayısıyla alternatif finansman imkânlarının oluşturulabilmesi, yapısal sorunların çözülebilmesi için zamana ihtiyaç vardır. Kısa dönemde yapılacakların başında, var olan kaynakların tahsisinde, sürekliliği ve sürdürülebilir kalkınma faaliyetleri mümkün olan işletmeleri, projeleri seçebilmeyi becerabilmek gelmektedir.

5.1 İşletmelerde Artan Risklerin Yönetiminde Bankacılık Sektörünün Önemi

Evren risklerle doludur. İnsanlar, risklerin yıkıcı etkisinden korunmak amacıyla onları yönetmeye çalışmaktadır. Tarih, riskler ve risklerden korunmaya çalışan insanların akla durgunluk veren risk yönetme türleriyle doludur. Korunma ve savunma amaçlı sayısız buluş gerçekleştiren, kaleler, surlar, setler gibi ölümsüz eserler inşa eden insanlar gelecekte kendilerini tehdit edebilecek risklerden korunmayı amaçlamışlardır (Uralcan, 2005:3). Günümüzde de küresel finansallaşma, ticaret savaşları ve son yaşanan Covid-19 salgını maruz kalınan riskleri artırmaktadır. İş yapma şekillerindeki hızlı değişiklikler, yıkıcı rekabet risklerin niteliksel ve niceliksel çeşitliliğini, yönetimini zorlaştırmaktadır. Bu yüzden gerek kurumsallaşmış gerekse de kurumsallaşmamış yapılarda, işletme körlüğü gibi çeşitli olumsuzlukların etkisinde kalınacağı için risk yönetimi işletme dışından alınacak hizmetlerle desteklenmelidir. Bu destek konusunda finansal sektörün yaptığı iş gereği birikmiş tecrübeleri önemli bir kaynaktır. Bolgün ve Akçay'a (2009) göre de risk yönetimi felsefesi, özünde finansal profesyoneller açısından bir tür zorunluluk olarak görülmeyle beraber bireyler bazında, kültürel bir değişimi ifade ettiğinde ancak tam anlamıyla başarılı olabilecektir.

Bu değişimin gerçekleşmesinde özellikle finansal okuryazarlık faaliyetleriyle işletme yönetimlerinin bilinçlenmesini sağlayacak; iç ve dış denetim süreçlerinin kurulmasını teşvik edecek kamusal

düzenlemeler önem taşımaktadır. Ayrıca küreselleşmenin olumsuz etkilerini en aza indirmede bankacılık sektöründen alınabilecek kurumsal ve ticari destek son dönemde daha fazla önem kazanmaya başlamıştır. Zira finans kuruluşları belli bir kurumsallaşma seviyesine erişmiş dolayısıyla risk yönetimi konusunda işletmelere göre daha iyi durumdadırlar. Onların bu tecrübelerini, müşterileri olan işletmelerin kit bir faktör olan finansal sermaye eksikliklerinin karşılanmasında kullanmaları sürdürülebilir kalkınma için önemli olacaktır. Çünkü bankalar kredi kullandırarak müşterilerinin risklerini üstlenmektedirler. İşletmeler açısından risk kavramı ise “bir işletmenin yapmış olduğu karşı tarafla ya da işletme bünyesindeki işlemler ve sözleşmeler nedeniyle gelecekte zarara uğrama olasılığı ve tehlikesidir” (Babuşçu vd., 2018: 4).

5.2. İşletmelerde Sürdürülebilir Finans Uygulamalarında Bankaların Önemi

Ülke kaynaklarının verimli kullanılması amacıyla hem toplumun hem de çevrenin küresel anlamda korunması mümkündür. Özellikle finansal sistem içerisindeki otoriter kurumların ve devletlerin gerekli düzenlemeler ile hem çevreye hem de insana değer veren sürdürülebilir kalkınma politikalarının gündeme geldiğini görüyoruz. Sürdürülebilir kalkınmaya aracılık eden finansal piyasaların rolü gün geçtikçe artıyor. Ülke tasarruflarının taşındığı finansal piyasaların sağlamlığı sürdürülebilir kalkınmayı doğrudan etkilemektedir. Bankaların ve borsaların aracılık ettiği kurumların çevreye, ekonomiye ve insana vereceği etkiler sanılandan daha fazla. Bunun farkına varan ülkeler sürdürülebilir raporlama ile başlayan süreçte sürdürülebilir endeksler ile kalkınma için çeşitli girişimlerde bulunuyorlar (Gündoğdu, 2019: 5).

Bu girişimcilerin uluslararası ve ulusal boyutta artması gerekmektedir. Çünkü küresel ticaretteki pastadan pay alma yarışındaki kavganın Covid-19 ile kızıştığı günümüzde; hem sürdürülebilir kalkınmanın sağlanabilmesi ve büyümenin devamlılığı, hem de işletmelerin ayakta kalabilmesi gittikçe zorlaşmaktadır. Bu yüzden küresel rekabet ortamında, sürdürülebilir kalkınmada başarılı olabilmek için ülkelerin kalkınmasının lokomotifleri olan işletme faaliyetlerinin düzenlenmesini ve denetlenmesini sağlayacak düzenlemelere ve desteklere ihtiyaç vardır. Özellikle işletmelerin risk yönetiminde yeterli bilgiye sahip olmamaları veya uygulamadaki hataları, hem kendi operasyonlarında; hem de bulaşıcılık etkisiyle, ilişkili taraf boyutunda olanlarla veya olmayanlarla sorunlar yaşamalarına neden olmaktadır. Bu sorunların çözümlenebilmesi, işletmelerin başarılı olabilmesi için “ekonomik, etkin ve verimli iş süreçlerinin; sağlam bir kurumsal risk yönetimi altyapısının; etik ilkelere özen gösteren ve çevreye duyarlı bir yönetim stratejisinin olması gereklidir. Bundan dolayı işletmeler açısından iyi yönetim yasal gerekliliklerin, politika ve prosedürlerin çok ötesindedir. Bu yeni anlayışın önem kazanmasının nedeni; işletme yöneticilerinin kısa vadeli kâr elde etmek yerine, orta ve uzun vadeli iş değeri yaratmaya yönelik bir eğilimin ortaya çıkmasıdır. Yeni iş değeri yaratmaya yönelik orta ve uzun vadeli stratejik bakış açısı, söz konusu işletmeler ile bu işletmelerin sorumlu ve ihtiyatlı üst düzey yöneticileri için beraberinde sürdürülebilirlik kavramını içselleştirmelerini gerekli kılmaktadır” (Bozkuş Kahyaoğlu, 2019: 127).

Hem işletmelerin sürekliliğine hem de sürdürülebilirliğe katkı sağlayacak finansman imkânlarının artırılması ve uygun maliyetle sunulması için finans sektörüne önemli görevli düşmektedir. Ersoy ve Oral’a (2015: 383) göre işletmelerin, finansman ihtiyaçlarını gidermede yaşadıkları sorunları minimum seviyeye indirebilmeleri için mali verilerinin dışında yönetim şekillerine de önem vermeleri gerekmektedir. Kurumsal yönetim anlayışını benimseyerek ortaklık yapılarını güçlü hale getirmelidirler. Ayrıca pazar faaliyetlerinde ve ilgili iş kolunda uzmanlaşarak sektördeki değişim ve gelişime uyum sağlamalıdır. İşletmelerin ödemelerini ve nakit akışını doğru yönetmesi ise mali sicil kayıtlarına olumlu yönde yansıtacaktır.

Dolayısıyla faaliyetlerinde sürekliliği ve sürdürülebilirliği esas alan anlayış içinde faaliyetlerini yürüten işletmeler, finansörler gözünde düşük riskli grupta yer alacağından, finansmana daha düşük maliyetle erişebileceklerdir. Bu yaklaşım işletmelerin “finansman yapısını güçlendirecek, yabancı finansal kaynak ihtiyacının uygun koşullarla karşılanabilme düzeyini yükseltecek, ekonomik daralma dönemlerinde zorluklara karşı daha dirençli kalmalarını ve mali sorunlarla daha rahat başa çıkabilmelerine katkı sağlayacaktır” (Ersoy ve Oral, 2015: 383).

5.2.1 Bankalar Kredilendirme Süreçlerinde Değişikliklere Gitmeli

Bankaların, müşterilerine kredi verme sürecindeki istihbarat çalışmaları ve değerlendirmeleri, işletmelerin risk seviyesini belirlemektedir. Risk seviyesi de, kredinin teminatı olarak alınacak varlıkları etkilemektedir. Burada teminata alınacak varlıklar ve mali veriler yanında, işletmenin gelecekteki değerliliğini etkileyebilecek sürdürülebilirlik faktörlerinin de dikkate alınması gerekmektedir. Yani bankalar, verdikleri kredinin sadece teminatlarının sağlamlığına göre değil projelerin sürdürülebilirlik koşullarına uygunluğunu da değerlendirerek, bir ortaklık yapılmış gibi kredi verme süreçlerini yeniden düzenlemelidirler. Bu şekildeki yaklaşımın başarısı için Gedikli ve Erdoğan'a (2016: 243) göre finansör ile proje arasında mutlak bir bağ kurulması gereklidir. Bankaların bu şekildeki yaklaşımı, hem müşterilerinin; hem de müşterilerinin çalıştığı sektörün, iş yaptığı işletmelerin ve rakiplerinin faaliyetlerinin izlenmesini de mümkün kılacaktır.

Bu izleme sayesinde, kredi kullanılan işletmelerin borç ödeme kapasitesinin sürekliliğini sağlayacak risk yönetimi ve faaliyetlerinin sürdürülebilirlik koşullarına göre takibi mümkün olabilecektir. Bu izleme işletme faaliyetlerinin devamlılığı ve sürdürülebilirlik koşullarının takibi yanında finansal sektör için de çok önemlidir. Dolayısıyla kredilendirme öncesi ve sonrası faaliyetler, tüm paydaşlar için dikkatlice yönetilmesi gereken süreçlerin planlanmasını ve yönetilmesini gerektirmektedir. Zira "bir ekonomide mali riskler gerçekleşmeye başladığında, mali şokların tetikleyici etkisiyle derinleşen ekonomik krizlerin ilk olumsuz etkileri de mali sistemde faaliyet gösteren kurumlarda özellikle bankalarda ortaya çıkmaktadır" (Sayım ve Er, 2009: 12).

5.2.1 Bankaların Sürdürülebilirlik Konusundaki Çalışmaları Ortak Standartlara Bağlanmalı

Bankacılık sektöründeki olumsuzlukların ve fiyatlamalarda enflasyonist bir etkiye yol açan mali baskınlığın azaltılması temel gerekliliktir. Temeldeki bu makro yapısal sorun yanında mikro ölçekteki geleneksel kredilendirme süreçlerindeki olumsuzlukların azaltılabilmesi, sürdürülebilirlik konusundaki faaliyetlerde ortak standartların oluşturulabilmesi ve etik bankacılık uygulamalarının yaygınlaşabilmesi için sektörün sıkı bir düzenleme ve denetlemeye tabi tutulması gerekmektedir.

Rekabetin yoğun yaşandığı bankacılık sektöründeki çalışanların hata yapmalarına yol açan yüksek hedefler verilmesi uygulamaları kontrol altına alınmalıdır. Sektördeki yöneticilerin, çalışanlarına verdikleri hedeflerin de sürdürülebilir olması gerekmektedir. Çünkü hedef tutturamama stresi, etik dışı uygulamalara dolayısıyla hatalara, asimetrik bilgiden, asil/vekil ilişkisinden kaynaklanacak sorunlara yol açabilecektir. Bu sıkıntılar sadece bankacılığı değil, ekonominin tümüne yansıtılmaktadır. Çünkü "bankalar hem mali kesim hem de ekonominin geneli açısından çok önemli olduğu için bankacılık sektöründeki sorunlar ve krizler de ekonominin geneline hızlıca yayılabilmektedir. Bu çerçevede bankaların denetimi ve denetlemeler sonucunda gerekli önlemlerin alınması çok önemli bir husustur" (Günel, 2010: 199).

6. SONUÇ

İklim değişikliği ve Covid-19 gibi salgın hastalığın iktisadi hayata etkisi şiddetli olmaya başlamıştır. Özellikle küreselleşen piyasalardaki daralan pazar hacminin neden olduğu ticaret savaşları; toplumsal ve politik çevredeki değişikliklerin neden olduğu savaşların ortaya çıkardığı göç hareketleri; teknolojik ve doğal çevrede yaşanan, öngörülmeleyen değişiklikler risk yönetimindeki temel belirsizlikleri, zorlukları göstermektedir. Bu olaylar ve küresel sistemdeki finansal dönüşümler, küresel ticaretin her geçen gün artan hacmi ve karşı karşıya kalınan risk ve fırsatlar, işletmelerin bu süreçten zarar görmemeleri adına kurumsal risk yönetim alt yapılarını oluşturmaları gerekliliğini gündeme getirmiştir. Bu yapıların inşasında temel ölçüt, işletmelerin hem kendi sürekliliğini hem de iktisadi sürdürülebilirlik koşullarına göre faaliyetlerini yürütmeleri olmalıdır. Bu yaklaşım çevre dâhil tüm paydaşların menfaatlerini gözetecek bir üretim şeklini gündeme getirmektedir.

Makro ölçekte böyle bir yapının inşası, mikro ölçekteki işletmeleri şekillendirecek kurumlarla mümkün olacaktır. Bu yüzden başta ilgili sektörlerdeki düzenleyici ve denetleyici kurumlara önemli görevler düşmektedir. Onların belirleyeceği çerçeve düzenlemeler kılavuzluğunda, risk yönetim modellerinin

geliştirilebilmesi, uygulanmasının teşvik ve takibinin yapılması da bağımsız düzenleyici ve denetleyici kurumlarca sağlanabilmelidir. Bu konulardaki temel rehber uluslararası standartlar olmalıdır. Örneğin finansal sektör için Basel düzenlemeleri; işletmelerin kuruluş ve faaliyet süreçlerinin düzenlenmesini ve denetlenmesini sağlayacak ISO gibi standartlar; işletmelerin finansal başarısızlık riskinin yönetiminde, standart hale getirilmiş finansal raporlama sistemlerinin kurulması ve işletilmesi gerekmektedir. Bunun için de temel şart, tüm yapılarda iç ve dış kontrol süreçlerinin yapılması ve işletilmesi olmalıdır.

Bu yapılanma sürecinde, bankacılık sektöründeki uluslararası düzenlemeler, ulusal ölçekteki düzenleyici ve denetleyici yapıların sıkı gözetimlerine ilave olarak edindikleri risk yönetimindeki tecrübeler de önemlidir. Zira bankaların kurumsallaşma seviyelerinin işletmelere göre yüksek olması; küresel ve yerel standartlara göre işlem yapma kapasitelerinin, onların müşterileri olan işletmelere de yansıtılması sürdürülebilir kalkınmanın sağlanmasında önemli bir katalizör görevi görebilecektir.

Bankaların bu kapasitelerinin, işletmelerdeki kurumsallaşma seviyesinin gelişmemesinin veya eksikliklerinin bir nebze giderilebilmesinde şu süreçlerle dolaylı katkısı olabilecektir. Bankaların kredi tahsis aşamasından, kredinin kullanılması ve kapatılması işlemlerindeki uluslararası standartlara göre operasyonlarını yönetmesi, işletmelerin kurumsallaşma kapasitelerine önemli katkı yapabilecektir. Yani bankaların kredilendirme süreçlerinde, işletmelerin fiziksel, finansal beşeri sermaye kapasitelerine göre ve projelerin iktisadi sürdürülebilirlik ölçütlerine göre finansman sağlanması bu amaca hizmet edebilecektir. İşletmelerin gücüne göre uygun fiyatlamayla kredi tahsisi, işletmelerin finansman maliyetlerini azaltabileceği gibi bankaların kaynaklarının geri dönüşleri mümkün olabilecektir. Aynı şekilde yeşil ekonomi anlayışını taşıyan işletme ve projelere göre kredi kullanılması, olumsuz dışsallığa neden olmadan iktisadi kalkınma faaliyetleri, sürdürülebilirlik koşullarına göre yürütülebilecektir.

Muhasebe Denetimi Ve Denetim Türleri

Aytaç Tosun¹

¹Beykent Üniversitesi, İşletme Fakültesi, İşletme Yönetimi, aytactosun34@gmail.com,

ORCID: <https://orcid.org/0000-0002-1072-2985>

Özet: Ülkelerin hızlı büyümesi ve gelişmesi, o ülkede yaşayan kişilerin başarılı örgütlenme yapısına bağlıdır. Şirketlerin başarısı ise, hukuka ve muhasebe standartlarına uygun faaliyet göstermelerine göre değişmektedir. Dünya'nın birçok ülkesinde muhasebe ve denetim sistemi gelişmediği için ülkelerin büyümesi ve gelişmesi zorlaşmaktadır. Global Dünya'da ekonomisini geliştirmek isteyen ülkelerin muhasebe sistemini geliştirmesi ve uygulaması gerekmektedir. Aksi takdirde hızla gelişen Dünya'nın gerisinde kalacaktır. Muhasebe ve denetim sistemi, şirketlerin ekonomik faaliyetlerinin Genel Kabul Görmüş Muhasebe İlkelerine uygun ve tutarlı olacak şekilde uygulamaları zorunludur. Denetim, şirketlerin rakamlardan oluşan faaliyetlerinin Genel Kabul Görmüş Muhasebe İlkelerine uygun olup olmadığını incelemesidir. Genel olarak kurallar aynı olmakla beraber, şirketlerin faaliyet alanına ve hizmetine bağlı olarak farklılık gösterebilir. Muhasebe denetimi ülkelerin kalkınması için vergi ödemelerinin kesintisiz yapılması gerekmektedir. Vergi kaçakçılığının önüne geçebilmek için ise denetim sisteminin düzenli ve kurallara uygun olarak yürütülmesi gerekmektedir. Bunun kontrol edilebilmesi için muhasebe kayıtlarının düzenli olarak kaydedilmesi gerekmektedir. Düzenli ve doğru kaydedilen muhasebe işlemlerinin denetimi daha kolay olacaktır. Denetimin en etkin olduğu durum, bağımsız denetim sistemidir.

Anahtar Kelimeler: Muhasebe Denetimi, Denetim Türleri, Bağımsız Denetçi, Denetim Görüşleri

1. GİRİŞ

Denetim, milattan önce Mısırlılar, Yunanlılar ve Romalılar zamanında kamu hesaplarını kontrol etmek için oluşturulmuş bir sistemdir. Firavunlar zamanında verginin toplanması, incelenmesi ve kayıt altına alınması denetim sürecinin temellerini oluşturmuştur. Birçok eski kaynakta denetimin yapıldığı görülmektedir. Sanayi devriminden sonra denetim sistemi önem kazanarak hızlı bir şekilde gelişme göstermiştir ve uluslararası yaygınlaşarak günümüzdeki yerini almıştır. Denetim sistemi bütün iş kollarında yolsuzluğu ve hileyi önlemek için uygulanmaktadır.

Denetim, istenilen işin doğru ve uygun olarak yapılıp yapılmadığını incelemek, teftiş etmek ve kontrol etmektir. Literatürde denetimin birçok tanımı bulunmaktadır. En temel tanımı, bir işlemin prosedürlere uygun olarak incelenmesi ve bu incelenmenin raporlanmasıdır. Firmaların istedikleri amaca ulaşım ulaşmadığını denetleyip raporlayan sistemdir. Muhasebe denetimi, mali tablolar denetimi, uygunluk denetimi ve faaliyet denetimi olarak gruplara ayrılmaktadır. En yaygın denetim türü olan mali tablolar denetimi işletmenin mali işler departmanında hesapların doğru ve genel kabul görmüş muhasebe ilkelerine göre hazırlanıp hazırlanmadığını kontrol etmektedir. Uygunluk denetimi, işletmenin yönetiminin ve yetkili kişilerin kurallara uygun olarak çalışıp çalışmadığını incelemektedir. Son olarak faaliyet denetimi ise, işletmenin herhangi bir bölümünde istenilen hedeflerin yapılıp yapılmadığını kontrol etmektedir.

Denetim işlemini yürüten kişilere denetçi denilmektedir. Denetçi, bağımsız ve meslek bilgilerine sahip kişilerdir. Bağımsız denetçi, iç denetçi ve kamu denetçisi olarak üç denetçi türü bulunmaktadır. Bağımsız denetçi, denetlenen firmanın dışında çalışan, denetlenen firma ve yetkililerle bir bağı olmayan kişilerdir. En güvenilir denetim türü bağımsız denetçilerin yaptığı denetim türüdür. İç denetçi, işletme yönetimine bağlı ücretli çalışan ve uygunluk denetimi yapan kişilerdir. Kamu denetçisi ise, kamuya bağlı çalışan ve kamu kurum ve kuruluşlarını denetleyen kişilerdir. Denetçiler genel kabul görmüş muhasebe standartlarına vâkıf kişilerdir. Bağımsızlık, mesleki eğitim ve mesleki muhakeme denetçilerin temel özellikleridir. Denetçi, denetim sonucunda görüş bildirmek zorundadır. Çalışmalarını rapor hâline getirerek görüş bildirir. Denetçiler görüşlerini olumlu, olumsuz, şartlı olumlu ve görüş bildirmekten kaçınma olarak dört şekilde bildirirler.

2. DENETİMİN TARİHSEL GELİŞİMİ

Denetim süreci insanların topluluklar halinde yaşamaya başladığından sonra anlam kazanmaya başladığı bilinmektedir. İnsanların kurdukları devletler ve beyliklerin oluşumu, ekonomik menfaatlerin önem kazanması denetim sürecinin gelişmesini hızlandırmıştır (Şentürk, 2017: 4). Muhasebe denetiminin ilk kez nerede, ne zaman ve nasıl başladığına dair kesin kanıtlar bulunmamaktadır. Denetimin tarihsel gelişiminin, ekonomik olayların tarihsel gelişimi ile yakından ilgili olduğu söylenebilir. Buna göre muhasebe denetiminin başlangıcı M.Ö 3000’li yıllara kadar gidebilmekte, yine bu dönemde Eski Roma ve Mısırlılarda denetimle ilgili uygulamalara rastlandığından bazı kaynaklarda söz edilmektedir (Haftacı, 2016: 1).

Denetim sürecinin gelişmesi ilk olarak kamu hesaplarının denetlenmesi ile başlamıştır. 2000 yıl önce Mısırlılar, Yunanlılar ve Romalıların bütün kamu hesapları ile muhasebe sorumlularının denetimi için kullanılmıştır. Yunan ve Roma İmparatorluklarının kamu hesaplarından sorumlu olan kişilerin, düzenli olarak yetkililere sözlü rapor vermesi gerektiğini eski kaynaklarda görmemiz mümkündür. (Şentürk, 2017: 4). M.Ö 3000 yıllarında Ninova ve Babil’de denetim ile ilişkili bulgulara rastlanmıştır. Mısır’da Firavunlar zamanında, vergilerin hesaplanması amacıyla birçok kayıtların tutulduğu bilinmektedir. Atina’da M.Ö 300 senelerinde kamu maliyesinin bir denetleme organına sahip olduğu ortaya çıkmıştır (Bozkurt, 1985: 5).

Hesap verme sorumluluğu 17. Yüzyıl İngiltere’sine dayanmaktadır. 17. Yüzyılın sonlarında, 1690 yılında İngiltere’de Kamu hesapları komitesi oluşturulmuş ve İngiliz Sayıştay’ı kurulmuştur. Kamu ekonomisindeki parlamentonun üstünlüğü ilkesi de ilk kez bu dönemde yaşama geçirilerek yasama organının yürütmeyi kontrolü esası benimsemiştir (Çankaya, 2014: 53). Sanayi devriminden önce muhasebe denetimi meslek olarak görülmektedir. Sanayi devriminden sonraki zamanlarda muhasebe denetimi büyük gelişmeler göstermiştir. Bunun sonucunda; yaklaşım, amaç ve ilgili taraflar açısından büyük aşamalar ortaya çıkmıştır (Bozkurt, 1985: 5).

1920 ile 1960 yılları arasında şirketler büyüdükçe yöneticilerinde elinde bulunan muhasebe ve diğer görevleri devredilmiştir. Sorumluların işlem alanı arttıkça şirket kayıtlarında hatalar ve aynı zamanda dolandırıcılık daha fazla hale gelmiştir. Hata ve dolandırıcılık işlemlerini anlayabilmek amacıyla yönetim birimlerine iç kontrol sistemi girmiştir (Şentürk, 2017: 5).

1960-1990 yılları arasında bilgisayarın hayatımıza girmesiyle denetlenen kuruluşların bir unsuru olarak denetim firmaların da bir denetim inceleme aracı olarak bilgisayarın önemi artmıştır. 1990’ların başından itibaren, toplumun ve kurumsal yönetim konularında ilgili düzenleyicilerin artan endişe ile uyumlu olarak, denetim mesleğinin tespit ve dolandırıcılık raporlama gibi denetlenen konusunda şüpheleri değerlendirmek için daha açık rapor sorumluluğu artmıştır (Şentürk, 2017: 5). 1930’lu yıllardan sonra gelişim hızlanarak sürmüştür. Bu dönemde özellikle örnekleme çalışmalarında çok fazla gelişmeler olmuştur. İşletmelerin içerisinde gelişmiş iç kontrol yapıları kurmaları, denetçilerin çalışmalarını yönlendirmeye başlamıştır (Bozkurt, 2015: 24).

3. DENETİM KAVRAMI

Türkçe’de denetim için kullanılan anlam, Türk Dil Kurumunun yaptığı tanımda karşılığını bulmaktadır. TDK tanımına göre *“denetleme, bir işin doğru ve yöntemine uygun olarak yapılıp yapılmadığını incelemek, murakabe etmek, teftiş etmek, kontrol etmektedir.”* Hukuki anlamda ise *“gerek devlet daire ve teşkilatının ve gerek özel hukuk hükümlerine göre kurulmuş kuruluşların kamu menfaati noktasından kanun, nizamname ve statüleri hükümlerine uygun olarak çalışıp çalışmadıklarının tetkik edilmesidir”*. Avrupa komisyonu da denetimin tanımını yapmıştır. Tanıma göre en genel denetim, bir işlem, prosedür veya raporun her bir yönünü doğrulayacak şekilde ve sonradan yapılan bütün incelemedir (Kurnaz vd., 2010: 11).

Dilimize muhasebe denetimi olarak çevrilebilen denetim tanımının Anglosakson Ülkelerindeki karşılığı *“auditing”* dir. Auditing kelimenin kökeni, Latince *“dinleme veya işitme”* anlamına gelen *“audire”* fiiline dayanmaktadır (Bozkurt, 2015: 23). Dar anlamda denetim, işletmelerin finansal tablolarını ve muhasebe sürecindeki kayıtların incelenmesidir (Şentürk, 2017: 8). Genel anlamda muhasebe denetimi, bir firmada istenilen amaca ulaşıp ulaşılmadığını veya hangi ölçüde ulaşıldığını araştırmaktadır (Dalak, 2000: 2). Denetim, denetlenecek unsurlara ilişkin olarak önceden belirlenmiş kriterlere uygunluk derecesini

belirlemek için denetlenecek unsurlar hakkında tarafsız olarak kanıt toplaması, toplanan kanıtların değerlendirilmesi ve elde edilen sonuçların raporlanması faaliyetlerinden oluşan sistematik bir süreçtir (Gücenme, 2004: 1).

Denetim, belli bir ekonomik birime ait rakamlarla ifade edilebilir bilgilerin önceden tespit edilmiş kıstaslara uygunluk derecesini belirlemek ve bu konuda ilgili kişilere bir rapor vermek amacıyla bağımsız bir uzman denetçi tarafından yapılan kanıt toplama ve bu kanıtları değerlendirme sürecidir (Durmuş vd., 2008: 5). Muhasebe denetimi, bir ekonomik birim veya döneme ait bilgilerin önceden belirlenmiş ölçütlere uygunluk derecesini araştırmak ve bu konu üzerine bir rapor düzenlemek amacıyla bağımsız denetçi tarafından yapılan kanıt toplama ve değerlendirme sürecidir (Bozkurt, 2015: 29).

4. DENETİM TÜRLERİ

İşletme yetkilileri ilgilendikleri bilgilerin güvenilir olup olmadığı konusunda görüş bildirmektedir. Yetkililerin ilgi alanlarına göre yapılan denetim çalışmaları çeşitlilik göstermektedir. Genel olarak üç farklı alanda denetim çalışması yapılmaktadır. Amaçları bakımından denetim türleri kısaca şu şekildedir (Bozkurt, 2015: 33).

- **Mali Tablolar Denetimi**

Bu denetim çalışmasında, işletmelerin mali tablolarının, mali durumu ve faaliyet sonuçlarını, doğru, dürüst, genel kabul görüş muhasebe ilkelerine ve yasal düzenlemelere uygun olarak düzenlenip düzenlenmediğine dair görüş oluşturmaya çalışır. Mali tabloların denetiminde denetçinin dayanağı olan önceden saptanmış ölçütlerin temeli, genel kabul görmüş muhasebe ilkelerine dayanmaktadır. Bunun yanı sıra ülkeden ülkeye farklılık gösteren yasal düzenlemelerde ölçüt olarak kullanılmaktadır (Bozkurt, 2015: 33).

- **Uygunluk Denetimi**

Bir şirketin finansal işlemlerinin ve faaliyetlerinin, işletme yönetimi, yasama organı ya da diğer yetkili kişi ve kuruluşlarca belirlenmiş yöntemlere, kurallara ve mevzuatlara uygun olup olmadığının incelenmesi sürecine uygunluk denetimi denir (Durmuş vd., 2008: 14). Nihai amacı herhangi bir mevzuata uygun davranılıp davranılmadığını incelemektir. Uygunluk denetimi, işletme çalışanı tarafından gerçekleştirilir (Gönül, 2008: 7).

- **Faaliyet Denetimi**

İşletmenin veya işletme içi herhangi bir bölümün belirli bir dönemdeki faaliyetlerinin sistematik olarak gözden geçirilmesidir. Faaliyet denetimi, işletme faaliyetlerinin verimliliğinin ölçülmesi amacıyla faaliyet sonuçlarının verimlilik standartları ya da önceden belirlenmiş hedeflerle karşılaştırılması suretiyle yapılan denetim türüdür (Gücenme, 2004: 2).

5. DENETÇİ VE DENETÇİ TÜRLERİ

Denetim eski Mısır ve Asurlular gibi büyük medeniyetlerde de uygulanmış eski bir meslektir. İşlemlerin bugüne göre az ve basit olduğu zamanlarda hesapların kontrolü ile görevlendirilen kişi, harcamalar için kullanılan işlemlerin miktar ve içeriklerini okutur ve hesaplar hakkında fikir söyler (Şentürk, 2017: 20).

5.1 Denetçinin Tanım

Denetim çalışmalarını sağlayan, mesleki bilgi ve deneyime sahip, çalışmalarında tarafsız davranabilen yüksek ahlaki özellikler taşıyan uzman kişilere denetçi denir. Bir başka tanıma göre ise denetçi, denetim faaliyetlerini kendisine meslek edinmiş, mesleki bilgi ve deneyime sahip, tarafsız davranabilen ve yüksek ahlaki nitelikler taşıyan uzman kişilerdir (Şentürk, 2017: 20).

Tanımdan da anlaşılacağı gibi denetçinin bazı özellikleri taşıması gerekir. Denetçiler (Haftacı, 2016: 13);

- Gerekli mesleki bilgi ve deneyime sahip olmalıdır,
- Bağımsız olmalıdır,
- Yüksek ahlaki nitelikler taşımaktadır.
- Çalışma yaparken gerekli mesleki özen ve dikkati göstermelidir.

5.2 Denetçi Türleri

Denetçilerin bağımsız olma özelliği ile yaptığı denetim faaliyetine ilişkin olarak farklı denetçiler ortaya çıkmaktadır. Denetçileri genel olarak sıralamak gerekirse şu şekilde sınıflandırılır (Gönül, 2008: 8).

- Bağımsız Denetçiler
- İç Denetçiler
- Kamu Denetçiler

5.2.1 Bağımsız Denetçiler

Denetim mesleğinin ileri düzeyde olduğu gelişmiş ülkelerde bağımsız denetçiler önemli bir konuma sahiptirler. Bağımsız denetçiler işverene bağlı olarak çalışmazlar. Tamamen işletmelere denetim hizmeti sunmak için bağımsız olarak görev alırlar. Bu özellik bağımsız denetçileri diğer denetçilerden ayırılmaktadır (Haftacı, 2016: 15). Bağımsız denetçiler, denetledikleri işletmelerin işverenlerine bağlı olmadan denetim yapan kişilerdir. Bağımsız denetçilere farklı ülkelerde Dış Denetçi, Fermanlı Muhasip, Hesap Uzmanları gibi isimler verilmektedir. Ülkemizde ise, Yeminli Mali Müşavir ya da Dış Bağımsız Denetçi olarak adlandırılmaktadırlar (Bozkurt, 2015: 37; Haftacı, 2016: 15; Gönül, 2008: 8). Çok farklı alanlarda hizmet veren bağımsız denetçilerin en önemli çalışma alanları işletmelerin finansal mali tablolarını denetlemektedir. (Bozkurt, 2015: 38; Haftacı, 2016: 15; Bozkurt, 1985: 11).

Mali tablolar çeşitli karar birimlerini yakından ilgilendirir. Bu tablolar aynı zamanda ülkelerin iktisadi hayatında önemli bilgi verirler. Bundan dolayı bağımsız denetçilerin yaptığı işlemlerin ülke ekonomisi için çok önemli işlevleri vardır. Bunların dışında bağımsız denetçiler uygunluk ve faaliyet denetimi işlemlerini de yapmaktadırlar. Denetçiler serbest çalışanlar olduğu için belirli ücret karşılığında faaliyet göstermektedirler (Haftacı, 2016: 15).

5.2.2 İç Denetçiler

İç denetçiler işletme içinde çalışan ya da işletme dışından ücret karşılığında işverene bağlı olarak denetim faaliyetlerini yürüten kişilerdir (Haftacı, 2016: 15; Çankaya, 2014: 63; Bozkurt, 2015: 39). İşletmede çalışanlar tarafından yapılabilecek hata ve hilelerin önlenmesi ve bunların tespit edilmesi için yapılan denetim türüdür (Gücenme, 2004: 3). İç denetim mesleği ikinci dünya savaşından sonra gelişmeye başlayarak daha yaygın hale gelmeye başlamıştır (Bozkurt, 1985: 11).

İç denetim, üst yöneticilerin aldıkları kararların bir yansıması olan yönetmeliklere ve yazılı emirlere uyulup uyulmadığını tespit etmekle sorumludur. İç denetçiler, işletme içerisinde olumsuz gelişmelere söz konusu ise bu konuyu üst yönetime raporlamakla görevlidirler (Kurnaz vd., 2010: 26). İç denetçilerin görevi işletme yönetimin istekleri doğrultusunda denetim hizmeti vermektir. İç denetçilerin yaptığı birkaç görev şu şekildedir (Bozkurt, 2015: 39).

- İşletmeye ait varlıkların yeteri kadar korunup korunmadığını araştırmak,
- Muhasebe belgelerinin güvenilir olup olmadığını belirlemek,
- İşletme yöneticilerinin belirledikleri prosedürlere uyulma derecesini izlemek,
- İşletme sahiplerinin ve yöneticilerinin istedikleri özel araştırmaları yaparak, yönetime sunmak,
- Bağımsız denetçilerle bazı konularda işbirliği yapmak.

İç denetim, mali tablolar, uygunluk ve faaliyet denetimini kapsayan işletme içinde kurulmuş bir inceleme ve değerlendirme işlevidir. İç denetim için zorunlu olarak belirlenmiş bir süre olmadığı için diğer denetimlerden farklı olarak sürekli denetim niteliğindedir (Kurnaz vd., 2010: 18).

5.2.3 Kamu Denetçileri

Kamu kurumlarına bağlı olarak çalışan ve kamu yararına uygun olarak denetim yapan kişilere kamu denetçisi denir. Diğer denetçiler gibi mali tablo, uygunluk veya faaliyet denetimi yaparlar (Kurnaz vd., 2010: 18; Bozkurt, 2015: 39). Kamu denetçileri, Bakanlıklar ve kamu kuruluşlarına bağlı olarak çalışan kişiler tarafından yapılmaktadır. Kamu denetçileri Türkiye’de kamu kuruluşlarının ve özel işletmelerin faaliyetlerini denetlemek olarak iki gruba ayrılırlar (Haftacı, 2016: 16). Türkiye’de özel işletmeleri denetleme yetkisi olan kurumların birkaç tanesi şu şekildedir (Haftacı, 2016: 16; Bozkurt 2015: 39):

- Maliye Bakanlığı Hesap Uzmanları, Müfettişleri ve Gelir Kontrolörleri,
- Sosyal Güvenlik Kurumu Müfettişleri,
- Çalışma ve Sosyal Güvenlik Bakanlığı Müfettişleri

Kamu denetçilerinde bulunması gereken bazı özellikler ise şu şekildedir (Gönül, 2008: 9);

- Denetçi bağımsız olmalıdır,
- Gerekli mesleki bilgi ve beceriye sahip olmalıdır,
- Yüksek ahlaki nitelikleri olmalıdır,
- Denetim esnasında gerekli özeni göstermelidir. vd.

6. GENEL KABUL GÖRMÜŞ DENETİM STANDARTLARI

6.1 Genel Açıklama

Denetçinin yapmış olduğu denetim işleminin güvenilir olması, denetim mesleğinin en önemli taşlarından birisidir. Bunu sağlamak, denetçinin denetim çalışmaları sırasında önceden belirlenmiş ölçütlere uygun olarak hareket etmesine bağlıdır. Yasalar ya da mesleki kuruluşlar tarafından belirlenmiş, meslek mensupları tarafından genel kabul görmüş denetim uygulamalarının kalitesini ölçen ölçütlere denetim standartları denir (Haftacı, 2016: 24).

Her meslekte olduğu gibi denetçilerin de uyması gereken bazı kurallar vardır. Devam ettirilen denetim çalışmalarının kalitesini kontrol altında tutabilmek için bazı standartlar oluşturulmuştur. Bu standartların hepsine Genel Kabul Görmüş Denetim Standartları denilmektedir (Bozkurt, 2015: 41). Denetim standartları, denetçiye mesleki sorumluluğunu yerine getirmesinde yardımcı olan ve denetçiye denetim faaliyeti sırasında yol gösteren genel ilkelerdir. Uygulanan denetimin doğru ve geçerli kabul edilmesi için denetleyicinin bu ilkelerden hiçbir zaman ayrılmaması gerekir (Gücenme, 2004: 31). Genel kabul görmüş denetim standartları ilk defa 1947 yılında Amerikan Yeminli Serbest Muhasebeciler Enstitüsü (AICPA) tarafından kabul edilmiştir. Yayınlanan Genel kabul görmüş muhasebe standartları birçok ülkede kabul edilerek günümüze kadar gelmiştir (Gücenme, 2004: 31; Bozkurt, 2015: 41). Genel kabul görmüş denetim standartları, 3 ana bölüm olmak üzere 10 madde olup, bunlar şu şekildedir (Durmuş vd., 2008: 27):

- 1. Genel standartlar**
 - Eğitim ve deneyim
 - Bağımsızlık
 - Mesleki dikkat ve özen
- 2. Çalışma alanı standartları**
 - Planlama ve gözetim
 - İç kontrol sistemini inceleme
 - Kanıt toplama
- 3. Raporlama standartları**
 - Genel kabul görmüş muhasebe ilkelerine uygunluk
 - Genel kabul görmüş muhasebe ilkelerine devamlılık
 - Tam açıklama

- Görüş bildirme

6.2 Genel Standartlar

Üç standarttan oluşan genel standartlar bölümü, denetçinin hangi özelliklere sahip olması gerektiğini açıklamaktadır (Bozkurt, 2015: 43).

6.2.1 Mesleki Eğitim ve Deneyim

Denetçinin yeterli eğitim ve deneyimi olmazsa tam anlamıyla denetim yapamaz. Denetçinin muhasebe, istatistik, hukuk, denetim, maliye, vergi ve yasalar alalındaki konularda bilgi sahibi olması gerekmektedir. Birçok ülkede denetçilerin yeterli eğitimi alıp almadığını ölçmek için özel sınavlar yapılmaktadır (Gücenme, 2004: 33). Denetim görevi yeterli bilgi ve beceriye sahip kişiler tarafından yapılmalıdır (Durmuş vd., 2008: 27; Haftacı, 2016: 25).

Denetçiler, denetim hakkında yeterli mesleki eğitim ve deneyime sahip kişiler olmalıdır. Muhasebe denetimi için denetçilerin uzmanlık belgesine sahip ve denetim faaliyetinde belirli süre çalışmış kişilerin bilgi ve yeterliliğe sahip olduğu düşünülmektedir (Durmuş vd., 2008: 27)."

6.2.2 Bağımsızlık

Denetçiler, denetim yaptıkları firmalara kesinlikle tarafsız davranmalıdırlar. Tarafsızlık, denetçinin bağımsız olmasıyla gerçekleşir. Denetim faaliyetlerinin gerçekleştirilmesinde, sonuçların değerlendirilmesinde ve denetim raporunun oluşturulmasında tarafsız kimliğe sahip olunmalıdır (Bozkurt, 2015: 43). Bağımsızlık, denetim mesleğinin en temel kavramını oluşturmaktadır (Şentürk, 2017: 50). Bağımsızlık standardı, denetçinin firma baskısına karşı koyabilme ve alacağı karara tarafsız kalabilme yeteneğine sahip olması gerektiğini öngörür (Haftacı, 2016: 25).

6.2.3 Mesleki Dikkat ve Özen

Denetçi, denetim çalışması esnasında gerekli mesleki özen, dikkati ve çabayı titizlikle göstermelidir. Denetçiden beklenen, uzmanlık alanındaki özeni ve dikkatli olmayı ortaya koymasıdır (Durmuş ve Taş, 2008: 28). Denetçiler, denetim sırasında çıkar çatışmalarından uzak kalmalı ve denetim faaliyetini sürdürürken gereken mesleki özen ve titizliği göstermelidirler. Denetçiler, görevini yaparken topluma ve devlete karşı sorumluluk taşırlar. İşletme yöneticilerine, doğru karar alabilmeleri için güvenilir bilgi sağlarlar (Gücenme, 2004: 40).

6.3 Çalışma Alanı Standartları

Genel kabul görmüş denetim standartları dikkate alınarak denetçinin denetim faaliyetleri sırasında uyması gereken kuralları belirlenir (Durmuş vd., 2008: 28).

6.3.1 Planlama ve Gözetim

Denetim çalışması, kendine ait bazı özellikleri bulunan bir projedir. Bu proje bir faaliyet olarak başlatılır ve bu şekilde sürdürülerek bitirilir. Projenin hayata geçirilmesi için ilk önce bir denetim planının hazırlanması gerekmektedir (Bozkurt, 2015: 45). Bu standarda göre denetçinin, denetim yapacağı çalışmayı mutlaka detaylı bir şekilde planlaması gerekmektedir. Denetimde bulunan denetçi, yardımcılarının yaptıkları işlemleri devamlı izleyerek yetişmelerini sağlayacak şekilde gözetlemelidir (Haftacı, 2016: 26).

6.3.2 İç Kontrol Sisteminin İncelenmesi

İç kontrol sisteminin detaylı olarak incelenmesi için denetçi, uygulanacak denetim işlemlerinin kapsamını, ayrıntı derecesini ve işletmede içinde kullanılan iç kontrol sisteminin etkinliğini bulmalıdır (Durmuş vd., 2008: 30). Denetim çalışmalarına yön veren en önemli aşama, işletmenin iç kontrol yapısının güvenilir bilgi sağlamadaki başarısı hakkında verilecek karardır (Bozkurt, 2015: 45).

6.3.3 Kanıt Toplama

Denetimin sonunda elde edilen kanıtlar, denetçinin yaptığı çalışmalarla işletmenin içinden ya da dışındaki kaynaklardan elde edilir. İşletme dışından elde edilen kanıtlar, işletme içindeki kaynaklara göre daha üstündür (Durmuş vd., 2008: 30). Herhangi bir finansal tablo üzerinde bilgi ve düşüncenin oluşturulmasına ilişkin bir nesne ya da algılanan durumdur (Şentürk, 2017: 52). Bağımsız denetçilerden mali tabloların durumu hakkında görüş oluşturabilmeleri için gerekli sayıda kanıt toplamaları gerektiğini bildirir (Bozkurt, 2015: 46).

6.4 Raporlama Standartları

Her denetim çalışmasının sonunda düzenlenen denetim raporunda bulunması gereken özellikler bu standardın içinde yer alır (Bozkurt, 2015: 46). Denetçinin görüşlerini ve kanaatini eksiksiz bir biçimde belirtmesi ile ilgili ilke ve düzenlemeleri içermektedir (Şentürk, 2017: 52).

6.4.1 Genel Kabul Görmüş Muhasebe İlkelerine Uygunluk

Denetçinin hazırlayacağı denetim raporunda müşteri, işletmenin finansal tablolarının genel kabul görmüş muhasebe ilkelerine uygunluk derecesini belirtmelidir (Haftacı, 2016: 27; Bozkurt, 2015: 46). Denetçi, denetimini yaptığı işletmenin muhasebe kayıtlarının işlenmesi ve finansal tablolarının düzenlenmesi sırasında genel kabul görmüş muhasebe ilkelerine uygun olup olmadığını araştırmak, incelemek ve son olarak görüşünü bildirirken bu ilkelere uygunluğunu denetim raporunda belirtmelidir (Şentürk, 2017: 52). Mali tabloların düzgün ve güvenilir olup olmadığının belirlenmesinde muhasebe ilkeleri önemli konumdadır (Bozkurt, 2015: 46).

6.4.2 Genel Kabul Görmüş Muhasebe İlkelerine Devamlılık

Denetimi yapılan işletmenin denetlendiği yıl ve bir önceki yıla ait mali tablolarında yer alan bilgilerin karşılaştırılabilir özelliğinin olup olmadığının kontrol edilmesidir (Bozkurt, 2015: 47). Denetçi hazırlayacağı raporda muhasebede kullanılan yöntem ve politikaların belirli zamanlarda değiştirilmediğini, aynı yöntemde kullanılmış olduğunu belirtmelidir (Haftacı, 2016: 27). Muhasebede uygulanan yöntemlerin birbirini takip eden dönemlerde ve yıllarda değişmeden uygulandığını ifade etmelidir (Şentürk, 2017: 52).

6.4.3 Tam Açıklama

Denetçi, finansal tabloların doğru ve güvenilir olduğunu, genel kabul görmüş muhasebe ilkelerine göre düzenlendiğini ve yeterli bilgileri kapsadığını denetim raporunda belirtmelidir (Haftacı, 2016: 27). Finansal tabloların, daha sonra bu tablodan yararlanacak kişi ve kurumların doğru karar vermeleri için yeterli, açık ve anlaşılır olması gerekmektedir (Şentürk, 2017: 53). Finansal tablolarda yer alan sayısal bilgilerin yanında, yöneticilerin yeterli bir biçimde bilgilendirilmelerini sağlamak amacıyla dipnotlar halinde bilgi vermelidir. Denetçi bu bilgilerin yeterince açıklayıcı olup olmadığını raporunda belirtmelidir (Bozkurt, 2015: 47).

6.4.4 Görüş Bildirme

Denetim sonucunda denetim raporu açıklanır. Denetim raporu, mali tablolarla ilgili bir görüş bildirmeli eğer görüş bildirmiyorsa bunu nedenleriyle açıklamalıdır (Durmuş vd., 2008: 32). Denetçinin, finansal tabloları incelemesi sonunda görüşünü raporunda belirtmesi gerekmektedir (Bozkurt, 2015: 47). Denetçi, gerçekleştirmiş olduğu denetimin sonunda incelediği mali tablolarla ilgili olarak görüşünü denetim raporunda açıklamalıdır (Haftacı, 2016: 27). Genel kabul görmüş denetim standartları denetçiye görüş bildirmesi için dört seçenek sunar. Bunlar şu şekildedir (Bozkurt, 2015: 47).

- **Olumlu Görüş:** Firmanın mali tablolar ile yıllık faaliyet raporunun; kanuna, esas sözleşmedeki finansal raporlamaya ve Türkiye Muhasebe Denetim Standartları'na uygun olduğunun doğrulanmasıdır. Bağımsız denetçinin, firmanın kayıtlarının durumu ve güvenilirliği hakkındaki şüpheler sebebiyle şirket mali tabloları hakkında yeterli ve uygun delili toplayamaması nedeniyle olumlu görüş bildirmesini engeller (Çankaya, 2014: 114).
- **Şartlı Olumlu Görüş:** Denetçinin incelediği mali tablolar hakkında tam anlamıyla olumlu görüş taşımasına rağmen, bazı konulardaki eksiklik ya da hatalardan dolayı şartlar koyması veya bu eksik konuların dikkate alınmasını belirtmesi durumudur (Durmuş vd., 2008: 33).
- **Olumsuz Görüş:** Firmanın mali tabloları, genel kabul görmüş muhasebe ilkelerine uygun olmaması veya nakit akışlarındaki firmanın finansal durumunu gerçek sunmaması bu ve benzeri durumlarda denetçinin vereceği görüştür (Şentürk, 2017:54). Olumsuz görüş bildirmek, firmanın finansal tabloları ile yıllık faaliyet raporunun; kanuna, esas sözleşmedeki finansal raporlamaya ve Türkiye Muhasebe Denetim Standartları'na göre doğru olmadığını kanıtlar (Çankaya, 2014: 117). Denetçi, anlaşmazlık etkisi finansal raporun doğru olmadığını ve yanıltıcı olduğu sonucuna varırsa olumsuz görüş yazabilir (Şentürk, 2017: 54).
- **Görüş Bildirmekten Kaçınma:** Denetçinin bazı durumlar sebebiyle raporunda görüş bildirmemesidir. Denetim kapsamında denetçi, bir sınırlama veya denetim görüşünü desteklemek için yeterli kadar kanıt elde edemediği zaman görüş bildirmekten kaçınabilir (Şentürk, 2017: 54). Denetçinin görüş bildirmesini engelleyen bazı durumlar vardır bunlar şu şekildedir (Çankaya, 2014: 118); Denetçi, denetim yaparken çalışmasının büyük ölçüde engellenmesi ve işletmenin gelecekle ilgili önünde büyük sorunların ve belirsizliklerin olmasıdır.

SONUÇ

Şirketlerin yaşamını sürdürmek için karşısına çıkan engelleri kaldırması gerekir. Şirketler geleceğe yönelik, kısa ve uzun vadeli planlar yapar, bu planları uygulamak için gerekli şartları uygulamaya çalışır. Bunları yaparken hukuka ve muhasebe standartlarına bağlı kalmaları gerekir. Muhasebe sisteminde kullanılan verilerin güvenilir olması ve gerçeği yansıtmaması aranır. Denetim yapılırken, şirketlerin muhasebe kayıtlarının gerçeği ne oranda yansıtıyor ve oluşturulan kayıtların güvenilir olup olmadığı araştırılır.

Toplumların gelişmesi yaşadıkları ülkedeki ekonomiye bağlıdır. Ekonomiyi oluşturan ise toplumlardır. Devletin toplumdaki almayı beklediği vergiler vardır. Bu vergilerin eksiksiz ve hatasız ödenmesi için, şirketlerin şeffaf olması gerekir. Genel Kabul Görmüş Muhasebe İlkelerini dikkate alarak mali tablolarını hazırlayan şirketler geleceğe güven verirler. Şirketler bağımsız denetçi ile denetlenmelidir, denetçiler uyması gereken kurallar çerçevesinden çıkmadan tarafsız ve bağımsız bir şekilde mali tabloların güvenilirliğini araştırmalı ve tespit etmelidir. Bu işlemlerin nasıl yapılması gerektiği makalede yer almaktadır. Bağımsız denetçi, kullanıcılara olumlu ve olumsuz olarak rapor sunar. Bu rapora bağlı olarak ise, şirketin geleceği ve güvenilir olup olmadığı anlaşılır. Bu bilgilerin şirketten tamamen bağımsız kişiler tarafından objektif bir şekilde yapılması gerekmektedir. Bütünlük, doğruluk ve tarafsızlık incelenmiş ve doğrulanmış bilgi, güvenilir olarak kabul edilir.

Çevreci Davranış Ölçeklerinin İncelenmesine Yönelik Literatür Araştırması

Öğr. Gör. Bekir Değirmenci¹

¹Adıyaman Üniversitesi, Besni MYO, BHS Böl., bdegirmenci@adiyaman.edu.tr, ORCID: 0000-0001-5236-5245

Özet: Bu çalışmanın amacı bireylerin ve çalışanların çevreci davranışlarını ortaya çıkarmaya yönelik kullanılan ölçeklere ilişkin boyutları ve ifadeleri ortaya çıkarmayı amaçlamıştır. Bu kapsamda araştırma yöntemi olarak bütünlendirici literatür değerlendirme yöntemi kullanılmıştır. Ölçeklerin ortaya konulması amacıyla Elsevier's Scopus veri tabanında yer alan ve 2020 yılında yapılmış çalışmalar incelenmiştir. Çevreci davranış kavramına ilişkin yapılan aramada 609 çalışmaya rastlanmıştır. Ayrıca 26 dergide kavrama ilişkin çalışmalara yer verildiği tespit edilmiştir. 609 çalışma içerisinde dergiler, konferans bildirileri, değerlendirmeler, kitap bölümleri ve kitap olarak yer verilen çalışmalardan oluşmaktadır. Bu çalışmada araştırma makalesi olarak sınırlandırılmıştır. Ayrıca 26 dergi içerisinde sadece çevre psikolojisi dergisinde yer alan 49 makale incelenmiştir. Çalışma sonucunda incelenen makalardan sadece 5'inde çevre dostu davranışlarla ilgili ölçek ifadelerinin bulunduğu tespit edilmiştir. Uzman görüşü alınmak koşuluyla bu ölçeklerin Türkçe çevirileri yapılmıştır. Ölçeklerin Türkçeleri toplam 5 tabloda yer verilmiştir. Elde edilen bulgular uzmanlar, akademisyenler, yöneticiler ve öğrenciler için yararlı bilgilerin ortaya konulduğu düşünülmektedir. Uygulamalı çevreci davranışları ölçmeye yönelik yapılacak çalışmalarda bu ölçeklerin kullanılmasında araştırmacılara büyük kolaylıklar sağlayacaktır.

Literature Research For The Study Of Environmental Behavior Scales

Abstract: The aim of this study was to reveal the dimensions and expressions of the scales used to reveal the environmental behavior of individuals and employees. In this context, the Integrative literature evaluation method was used as a research method. Studies in Elsevier's Scopus database in 2020 have been examined to reveal the scale. 609 studies were found in the search for the concept of environmental behavior. In addition, studies on comprehension were found to be included in 26 journals. 609 the study consists of journals, conference papers, evaluations, book chapters and books. This study is limited as a research paper. In addition, 49 articles in the journal Environmental Psychology were examined in 26 journals. As a result of the study, it was found that only 5 of the articles examined contained scale statements related to environmentally friendly behavior. Turkish translations of these scales were made, provided that expert opinion was obtained. A total of 5 tables are given. The findings are thought to reveal useful information for experts, academics, administrators and students. The use of these scales in studies aimed at measuring applied environmental behavior will provide researchers with great convenience.

Key Words: Environmental Problems, Environmental Behavior, Literature Review, Elsevier's Scopus

1. GİRİŞ

Günümüzde sanayi devrimiyle beraber küreselleşmenin getirdiği seri üretim ve tüketicilerin refah seviyesinin yükselmesi nedeniyle doğal kaynaklar hızlı bir şekilde tüketilmektedir. Hızlı tüketim beraberinde doğal çevrede; küresel iklim değişikliği, kuraklık, hava, su ve toprağın kirliliği gibi doğaya zarar verici bir takım olumsuzlukların yaşanmasına neden olmuştur (Dursun vd., 2018: 43). Son yıllarda doğanın dengesi daha fazla bozulmakta, iklim değişikliğinden kaynaklı felaketler sürekli yaşanır hale gelmekte ve doğal çevrenin insanlar tarafından katledilmesi ve sorumsuz çevresel davranışlar dünyamızı yaşanabilir bir şekilde yönetilmesini nedereyse imkansız hale getirmiştir. Organize sanayi bölgesinde çalışanları ve yakın bölgede ikamet edenlerin sanayi kaynaklı yaşadıkları sağlık problemleri güzelim dünyamıza zarar vermektedir. Diğer taraftan, sanayileşmenin küresel ısınmanın ana aktörü olarak görülmesine karşın, yer küre üzerindeki tüm bireylerin çevreye verdiği zarar da, görmezden gelinemeyecek kadar büyüktür (Turan ve Kılıçlar, 2019: 1207). Bu bağlamda çevresel sorunlar sadece kurumsal kaynaklı değil aynı zamanda insan kaynaklı olduğu görülmektedir. "Tabiatın insanoğlundan intikamı" olarak da açıklanan çevre sorunları, bugün insanoğlunun karşı karşıya olduğu en temel ve yaygın sorunlar arasında yer almaktadır. Çevre sorunları, "insanların bir takım ihtiyaçlarının karşılanması uğruna toprak, su ve havanın zaman içerisinde yapılarının bozularak yaşam özelliklerini kaybetmeleri,

hayvan ve bitki nesillerinin tükenmeye başlaması, ekosistemin doğal yapısının giderek bozulması problemi” olarak açıklanmaktadır (Arslan, 2020: 11).

Çalışmanın esas çıkış noktasını çevresel sorunlar oluşturmaktadır. Çevresel sorunların zararlı etkilerinin hafifletilmesi noktasında; devletlere, toplumu oluşturan bireylere(tüketicilere) ve işletmelere önemli görevler düşmektedir. Başka yaşayabileceğimiz bir dünya olmadığı ve gelecek nesillere de daha yaşanabilir bir çevre bırakılması amacıyla insanlar davranışlarını çevreye zarar vermeme, doğal çevre sorunlarına duyarlı olma gibi önleyici-düzeltilici-teşvik edici bir takım davranışlar sergilemelidir.

Bu çalışmanın amacı bireylerin çevreci davranışlarını ortaya koymaya yönelik geliştirilen ölçeklerin incelenmesi olmuştur. Bu noktada çevreci davranışlar gerek bireysel gerekse de çalışan ekseninde geliştirilen ölçekleri incelemek amacıyla Elsevier’s Scopus veri tabanında yer alan araştırma makalelerinden faydalanılmıştır. Çalışma literatür incelemesi ekseninde şekillenmiş olup daha önce çevreci davranışları araştıran ve Türkçe diline uyarlama yapılan herhangi bir çalışmaya rastlanmamıştır. Bu bağlamda, çalışmada literatürde kullanılan güncel ölçeklere yer verilerek bu kapsamda incelenen çevreci ölçeklerin bundan sonraki uygulamalı araştırmalarda tercih edilen önemli bir rolmodel olması beklenmektedir.

Çalışma kapsamında ilk olarak çevresel sorunlar ve çevreci davranışlar incelenmiştir. Daha sonraki aşamada çalışma kapsamında çevreci davranışlar ölçeklerine yer verilmiştir. Literatür kapsamında gerekli açıklamalar yapıldıktan sonra sonuç ve değerlendirme kısmına yer verilerek çalışma sonlandırılmıştır.

2. Literatür İncelemesi

Çalışmanın bu kısmında çevre sorunları ve çevreci davranış kavramları açıklanmıştır. Çevre sorunları gün yüzüne aniden çıkmamış, zaman içerisinde bir süreç dâhilinde meydana çıkmıştır. İnsan faaliyetleri neticesinde çevreye verilen zararlar, ilk başlarda doğanın kendi kendisini yenileyebilme becerisi sayesinde fark edilmemiş ve zaman içerisinde çevrenin kendini yenileyeceği düşünülmüştür. Fakat zannedilenin aksine çevreye atılan kirletici ve zarar verici madde çeşitlerinin zaman içerisinde artmasıyla birlikte çevrenin kendi kendini yenileyebilme kapasitesinin üzerine çıkmıştır. Kirletici maddelerin hem nicelik, hem de nitelik bakımından artış göstermesiyle birlikte çevre kendini yenileyememiş ve geri dönüşümünü sağlayamamış, bunun sonucu olarak da hızlı bir biçimde bozulmaya başlamıştır. Temel çevre sorunları hava kirliliği, su kirliliği, toprak kirliliği, gürültü kirliliği ve bazı canlı türlerinin neslinin tükenmesidir (Arslan, 2020: 12).

Çevreci davranış (pro-environmental behavior), geniş kapsamda sosyoloji çalışmalarında, daha dar kapsamlı olarak ise örgütsel davranış çalışmalarında literatürde sıkça inceleme konusu olmuştur. Çevreci davranışlar, bireylerin doğal yaşama olan negatif etkilerini kendi rızalarıyla azaltmaya yönelik olan davranışlar şeklinde açıklanmıştır (Stern, 2000). Yapılan literatür araştırmalarında çevreci davranışları bireysel ve çalışanlar ekseninde incelendiği görülmüştür. Bireylerin çevre konusundaki hassasiyetleri çevre ile ilgili sahip oldukları bilgileri ile yakından ilişkilidir. Çevreci davranışlar, bireyin gösterdiği gayret ve ödün verdiği konfor açısından daha maliyetlidir (Turan ve Kılıçlar, 2019: 1207-1209). Çevresel sorunları azaltmanın en önemli yollarından birisi de toplumu oluşturan bireylerin çevreci davranışlar sergilemelerinin gerekliliğidir. Yapılan araştırmalar toplumu oluşturan bireylerin çevreci davranışlara ilişkin olumlu tutumlarının bulunduğu ama bunu bir türlü davranışlarına yeterince yansıtmadıkları görülmektedir (Vermeir ve Verbeke, 2006; Young vd., 2010). Bu doğrultuda çalışanların çevreci davranışları ölçmeye yönelik daha fazla nicel çalışmaya ihtiyaç duyulmaktadır.

3. Yöntem

Çalışmanın amacı literatürde yer alan çevreci davranışlara yönelik ölçeklerin incelenerek çevrelerinin yapılması ve bundan sonra yapılacak çalışmalarda çevresel davranışların ölçülmesine yönelik bu ölçeklerin referans olarak görülmesi amaçlanmıştır. Bu kapsamda bütünleştirici literatür değerlendirme yöntemi kullanılmıştır. Literatürde daha önce çevreci davranışları tespit etmeye yönelik kullanılan ölçeklerin ortaya konduğu herhangi bir çalışmaya rastlanmamıştır. Bu bağlamda araştırma Elsevier’s Scopus veri tabanında yer alan araştırma makalelerinde kullanılan çevreci davranışlara yönelik ölçeklere yer verilmiştir. Literatür taraması yapılırken öncelikle “sciencedirect.com” sitesine girilmiş ve “Pro-Environmental Behavior” anahtar kelimesi yazılmıştır. Arama yılı olarak 2020 yılında yapılan araştırma

makaleleri baz alınmıştır. Yapılan arama sonucunda 609 çalışmaya rastlanmıştır. Çevreci davranış kavramının kullanıldığı 27 derginin bulunduğu tespit edilmiştir. Çalışma kapsamında, “Journal of Environmental Psychology” dergisinde 2020 yılında yayınlanan 49 araştırma makalesinin incelenmesine yönelik çalışma sınırlandırılmıştır. Sonrasında bu makaleler, 2 Mart ila 8 Nisan 2021 tarihleri arasında incelenmiştir. Sonrasında çalışma içerisinde “çevre dostu davranışları” ölçmeye yönelik çalışma içerisinde yer verilen ölçekler çalışma kapsamında ortaya çıkarılmıştır. Çevreci davranışları ölçmeye yönelik ifadelerin yer aldığı ölçeklerin yer aldığı çalışmalar aşağıda açıklanmıştır.

Tablo 1: Çevreci Davranışlar Ölçeği

1-Cam ve teneke kutuları, plastik kutuları ve gazeteleri vb. geri dönüşüme göndermek için ayırım.
2-Zirai ilaçlar ve kimyasal madde olmadan yetiştirilen meyve ve sebzeleri satın alırım.
3-Çevresel sorunları nedeniyle araba kullanımını azalttım.
4-Çevre sorunları nedeniyle evde enerji ve yakıt kullanımını azalttım.
5-Çevre sorunları nedeniyle evde su kullanımını azalttım.
6-Çevreye zarar veren ürünleri satın almaktan kaçınırım.

İlk olarak Gu vd., (2020) yılında yapmış olduğu çalışmada yer alan ve 6 maddeden oluşan çevreci davranışlar ölçeği Tablo 1’de gösterilmiştir. Bu ölçekte bireylerin çevre dostu davranışlarını ölçmeyi amaçlamıştır. Bu maddeleri ölçmek için çevreci davranışlarda bulunma sıklığını gösteren 4’lü likert ölçeği kullanılmıştır (1= Her zaman, 2 = sık sık, 3 = bazen, 4= hiç). Ölçeğin iç tutarlılık katsayısı “Cronbach’s alpha = .77” olduğu tespit edilmiştir.

Tablo 2: Çevreci Davranışlar

1-İşten ayrılırken ışıkları kapatırım.
2- Yaz aylarında klimanın sıcaklığını 26-28 derece arasında ayarlarım.
3-Enerji tasarrufu sağlayan cihazları satın alırım.
4-Yazıcıdan yazı alırken kağıdı çift taraflı çıkarırım,
5-Yemeklerde tek kullanımlık (plastik çatal-bıçak) kullanmaktan kaçınırım.
6-Su kullanırken musluğu kısık ayar tutarım.

Aynı çalışmada yani Gu vd., (2020) yapmış oldukları çalışmada bu sefer çalışanların çevreci davranışlarını ölçmeye yönelik ölçek kullanılmıştır. Çalışmalarında katılımcılara, 1 (asla) ile 5 (her zaman) arasında bir sıklık değerleri arasında, günlük yaşamlarında ne sıklıkta ÇD (çevreci davranışlar) katılım sağladıkları sorulmuştur. Çalışmada özellikle, daha yüksek puanlar daha yüksek ÇD frekansları gösterdiği tespit edilmiştir (O = 3.92, Standart Sapma = 0.48, Min. = 2.17, Maks. = 5.00). Çalışanların çevreci davranışlarının tespitine yönelik kullanılan ölçek Tablo 2’de gösterilmiştir. Kısaca açıklamak gerekirse Gu ve arkadaşları 2020 yılında yapmış oldukları çalışmada hem tüketicilere yönelik (Tablo 1) hem de çalışanlara yönelik (Tablo 2) çevreci davranış ölçeklerine çalışma içerisinde yer vermiştir.

Tablo 3: Çevreci Davranışlar Ölçeği

Alt Boyutun Adı: Hayırsever Davranışlar (1)	
1	Dilencilere bazen bozuk para veririm.
2	Hayır kurumlarına imkanım oldukça yardım yaparım.
3	Yaşlı ve engelli bir kişi otobüs ve metroya bindiğinde ona yerimi veririm.
4	Eğer bir işveren olsaydım, daha önce bir suçtan hüküm giymiş bir kişiyi işe almayı düşünürdüm.
5	Fast food restoranlarında, yemekten sonra tepsiyi masadan alarak görevliye teslim ediyorum.
6	Bir arkadaşım ya da bir akrabam küçük bir amaliyatta olsa ve kısa sürelide olsa hastanede kaldığı dönemde mutlaka onu ziyaret ederim.
Ekolojik Atıkları Ortadan Kaldırma (2)	
1	Biten pilleri çöpe atarım.
2	Yemek atıklarını çöpe atarım.
3	Kullanmadığım ilaçları eczaneye iade ediyorum.
4	Kullanılmış kağıtları toplayarak geri dönüşüme yolluyorum.
5	Boş şişeleri geri dönüşüme yolluyorum.
Su ve Enerji Tasarrufu (3)	
1	Günlük olarak banyo yapmak yerine duş almayı tercih ederim.
2	Kışın kazak giymemek için oda ısısını sabit tutuyorum.

3	Kirli kıyafetlerimi çamaşır makinesi dolana kadar biriktir ve öyle yıkarım.
4	Kış aylarında odaya temiz hava girmesi için uzun süre penceri açık tutuyorum.
5	Ön yıkamasız olarak kirli kıyafetlerimi yıkarım.
Çevre Bilinçli Tüketim Davranışları (4)	
1	Çamaşırımı yıkarken yumuşatıcı kullanırım.
2	Fırınımı temizlemek için sprey kullanıyorum.
3	Evimde böcekler varsa onları yok etmek için ilaç kullanırım.
4	Banyonun temiz kokmasını sağlayacak banyo parfümü kullanırım.
5	Tuvaleti temizlerken kimyasal temizlik malzemeleri kullanırım.
6	Banyoda çok amaçlı bir temizlik malzemesi yerine sadece banyoda kullanılabilen temizlik malzemeleri kullanırım.
7	Fosfatsız çamaşır deterjanı kullanırım.
Çöplerin Etrafa Dökülmesini Engelleme (5)	
1	Cam şişede satılan içecekleri satın alırım.
2	Markette meyve ve sebze satın alırken açıkta satılanları tercih ederim.
3	Mağazada alışveriş yaparken sorumluların poşet satın almam yönündeki önerilerini kabul ederim.
4	Alışveriş yaparken karton poşetleri plastik olanlara tercih ederim.
5	İade edilebilir şişelerde satılan sütleri satın almayı tercih ederim.
Çevreyi Koruma Faaliyetlerine Gönüllü Katılım (6)	
1	Arkadaşlarımla sık sık çevresel sorunlar hakkında konuşuyorum.
2	Çevresel bir sivil toplum kurumu (dernek ya da vakıf) üyesiyim.
3	Geçmişte, çevreye uygun olmayan bireysel davranışları eleştirmiştim.
4	Bazı zamanlar çevresel alanda faaliyet gösteren kurumlara bağışta bulunuyorum.
Ekolojik araç kullanımı (7)	
1	Aracımda kurşunlu benzin kullanıp kullanamayacağım hakkında bilgim bulunmamaktadır.
2	Şehir içinde genellikle aracımı kullanmam.
3	Otobanda 120 km. hız sınırının altında araç kullanıyorum.
4	Yakın mesafelerde aracımı kullanmak yerine bisiklet ya da toplu taşıma aracı kullanırım (30 kilometreye kadar olan mesafelerde).

Vesely vd., 2020 yılında yapmış oldukları çalışmada kullandıkları ve orijinal halinin Kaiser tarafından 1998 yılında yapmış olduğu çalışmada kullanılan 28 ifadeye yer verilmiştir. Vesely ve arkadaşları 28 madde kullanarak ölçmeye çalıştıkları çevre dostu davranışlara ilişkin; her katılımcı için toplam puanı hesaplamışlar ve daha yüksek puanlar daha fazla çevre dostu davranışları gösterdiğini bulgulamışlardır (M=18.03, SD=3.77, $\alpha=0.70$). Tablo 3'te ise Kaiser'in 1998 yılında geliştirdiği ölçek orijinal haliyle gösterilmiştir. Çalışmada 7 alt boyut ve 36 ifadeye yer verilmiştir. Ayrıca çalışmada bu davranışları sergileme sıklığını gösteren 5'li likert ölçeği kullanılmıştır (1= asla ve 5= her zaman).

Tablo 4: Çevreci Davranışlar Tutum Ölçeği

1- Modern bilim, yaşam tarzımızda çok az değişikliklerle çevre sorunlarımızı çözecektir.
2- Gelecekte daha yaşanabilir bir doğayı gelecek nesillere bırakma, yeterli bir gelirimiz olmadığı için yeşil ürün satın alacak kadar gelirimiz olmadığı için sadece endişe boyutuyla sınırlı kalmaktadır.
3-İnsanlar, devletlerin ve işletmelerin çevreye zarar veren eylemleri konusunda oldukça endişeliler.
4-Benim karakterdeki bir insanın çevre konusunda çok şey yapması oldukça zor görünmektedir.
5-Hayatta çevreyi korumaktan daha önemli şeylerde vardır.
6-Toplumu oluşturan bireylerin çevresel konular konusunda hassas olmaması nedeniyle benim bu konudaki mücadelem bir anlamı bulunmamaktadır.

Rodriguez vd. 2020 yılında yapmış oldukları çalışmada, Çevreci Davranışlar Tutum ölçeğini kullanarak katılımcıların bireylerin çevresel değerler hakkındaki inançlarını, düşüncelerini ve duygularını ortaya çıkarmışlardır. Ankete katılanlardan, yüksek değerlerin daha yüksek özellik seviyelerini gösterdiği bir dizi ifadeye katılmalarını (1= kesinlikle katılıyorum, 5= kesinlikle katılmıyorum) değerlendirmelerini isteyen 6 maddeden oluşan ölçek Tablo 4’te gösterilmiştir.

Tablo 5: Çevreci Davranışlar Ölçeği

Çevre konularında yazıları okurum. (Fiziksel ya da elektronik ortamlarda).
Yakın çevremle çevresel konular hakkında konuşurum.
Çevreyle ilgili konuları televizyon ya da bilgisayardan izlerim.
Çevre dostu ürünleri satın alırım.
Ambalajı daha az olan ürünleri satın alırım.
Tek kullanımlık ürünler yerine sürekli kullanılabilir ürünler satın alırım (Örn. Plastik bardak yerine cam bardak satın alma gibi).
Çevreye zarar vermeden üretim yapan firmaların ürünlerini satın alma konusunda hassasım.
Ev işlerinde suyu mümkün olduğu tasarruflu kullanırım (Diş fırçalarken daha az su israfı, Bulaşıkları yıkarken uzun süre suları akıtmama gibi).
Çevreyle ilgili bilgileri sosyal medya aracılığıyla paylaşıyorum (facebook ve twitter gibi).
Çevreci konuları destekleyen sanal sosyal gruplara katılırım (Facebook ve twitter gibi ortamlarda).
Çevreci sivil toplum kuruluşlarının faaliyetlerini desteklerim (Yeşilay ve Tema gibi).
Çevreye zarar veren kişi ve işletmelere yönelik protestoları desteklerim.
Genel ve yerel seçimlerde (milletvekilliği ve belediye gibi) iklim değişikliğine yönelik önlemleri destekleyen adaylara oy veririm.
Siyasetçilere iklim konularında gerekli yasal düzenlemeleri yapmaları konusunda tavsiyede bulunurum.
Ev ve araba satın almayı planlarken çevreye yönelik kaygıları ön planda tutarak karar veririm.

Duchia vd. (2020) yapmış oldukları çalışmada çevreci davranışları ölçmek için Soliman ve Wilson (2017) tarafından geliştirilen ve 15 maddeden oluşan ölçeği kullanmışlardır. İlgili ölçek Tablo 5’te görülmektedir. Bu ölçek, Stern’in (2000) çok yönlü davranışsal kümelemesine (1 = çok olası değil, 5 = çok olası) uygun olarak farklı çevreci davranışlar sergileme yönünde eğilimleri ortaya çıkarmıştır.

4.SONUÇ Ve DEĞERLENDİRME

Çalışma kapsamında Elsevier’s Scopus veri tabanında çevreci davranışlara yönelik literatür taraması yapılmıştır. Çalışmanın ana eksenini 2020 yılında yapılan çalışmalarda kullanılan çevreci davranışları ortaya çıkarmaya yönelik kullanılan ölçekleri açıklamak olmuştur. Bu bağlamda “çevre psikolojisi dergisinde” yer alan 49 araştırma incelenmiştir. Yapılan incelemeler sonucunda 5 çalışmada makale içerisinde ölçeğe ilişkin ifadelerin yer verildiği tespit edilmiştir. 49 makale içerisinde sadece 5 makalede kullanılan çevreci davranışlara ilişkin ifadeler yer vermesi diğer makalelerin ise sadece atıf vererek geçiştirmesi önemli bir eksiklik olarak görülmüştür. Bu çalışmanın esas çıkış noktası olan çevreci davranışları ortaya çıkarmaya yönelik kullanılan ölçeklerin nicel çalışmalarda kullanılmasına yardımcı olması bakımından ortaya konulan sonuçlar oldukça yararlı olduğu görülmektedir. Literatürde daha önce benzer bir çalışmaya yer verilmemiştir. Bu çalışmada ise ortaya konulan verilerle bu alandaki boşluk doldurulmaya çalışılmıştır. 2020 yılında yapılan çalışmaların incelenmesi çalışmanın güncelliğini perçinlemiştir.

Çalışma kapsamında sadece Elsevier’s Scopus veri tabanından tarama yapılması ve yayın yılının 2020 olarak baz alınması önemli bir kısıtlılıktır. Ayrıca sadece çevre psikolojisi dergisinde yer alan çalışmaların incelenmesi de önemli bir eksikliktir. Fakat bu çalışma kısıtlılıkları ve eksikliklerine rağmen ortaya çıkarılan 5 ölçek ile bundan sonraki yapılacak çalışmalara ışık tutacağı düşünülmektedir.

Çevre sorunlarının çözümünde toplumu oluşturan bireylerin ve çalışanların çevreci davranışları sergilemesi oldukça önemlidir. Bu bağlamda gerek yetkililerin gerekse de tüketicilerin çevresel konularda daha hassas olması ve onların çevreci tutum ve bilgilerinin uygulamaya konması noktasında

eksikliklerin görülmesi açısından bu tür ölçeklerin kullanılması sorunun çözümü noktasında önemsenmektedir. Tabii ki sadece anket uygulaması yoluyla sorunun tespit edilmesi yeterli olmamaktadır. Aynı zamanda konunun uzmanlarına, akademisyenlere, sivil toplum kuruluşlarına ve kanun koyuculara alınması gereken önlemler kapsamında yapılacak daha fazla çalışmanın konunun çözümüne yönelik öneriler geliştirilmesine katkı sağlayacaktır.

Son olarak bundan sonraki yapılan çalışmalara sunulacak öneriler şu şekilde sıralanabilir:

1. Web of Science, google akademi ve dergipark gibi sitelerden daha kapsamlı araştırmalara yer verilerek daha kapsamlı çalışmalar ortaya çıkarılabilir.
2. Çevreci davranışları ölçmeye yönelik yerli literatürde boşluk olduğu görülmektedir. Bu kapsamda daha fazla ölçek uyarlama ve ölçek geliştirme çalışmalarına ihtiyaç duyulmaktadır.
3. Aynı zamanda uygulamalı nicel çalışmalarda bu çalışmada yer verilen ölçeklerin kullanılması yoluyla gerek çevresel sorunların tespiti gerekse de bu tür ölçeklerin Türk kültürüne uyumu araştırılmalıdır.

Dijital Pazarlama ile İşletmelere Sosyal Medya Etkisi

Bora GÜNDÜZYELİ

Özet: Geçtiğimiz yıllarda yaşanan dijital dönüşüm diğer alanları etkilediği gibi pazarlama alanında da büyük değişimlere yol açmıştır. Rekabetin daha hızlı olması; işletmelerin rekabet avantajı sağlamada çeşitli yöntemler geliştirmek durumunda kalmışlardır. İşletmelerin içinde buldukları bu dönemde geleneksel pazarlama yöntemleri yanı sıra dijital pazarlama alanında da gelişmeleri yakından takip etmek zorunda kalmışlardır. Günümüzde geleneksel pazarlama iletişim faaliyetleri pek çok konuda yetersiz görülmekte ve işletmelere yeterli fırsat kapıları yaratamamaktadır. İnternet ve sosyal medya kullanımının artması ile birlikte işletmelere reklam ve pazarlama ile ilgili çalışmalarını gerçekleştirebilecekleri yeni alanlar ortaya çıkmıştır.

İşletmeler sosyal medya ortamlarının etkisi ile hem bünyesinde hali hazırda bulunan müşterileri ile iletişimlerini korumakta, hem de potansiyel müşteri kitlesine daha kolay bir şekilde ulaşabilmektedir. Bu sayede sosyal medya ortamları işletmelerde daha geniş müşteri topluluğuna ulaşabilmektedirler. Bu doğrultuda sosyal medya ortamları geleneksel pazarlama yöntemlerine göre hem daha ekonomik hem de geniş müşteri kitlelerine daha kolay ulaşabilme imkanı sunmaktadırlar.

Dijital pazarlama üzerine yapılmış bu araştırmada; kendisine tercih yapılmasına olanak sağlanmayan ürünleri almak zorunda kalan tüketici profilinden, isteklerini belirtip yerine getirilmesini bekleyen tüketici profilinin ortaya çıktığı yeni ekonomik şeklinin müşteriye en yakın ve en hızlı etkileşim aracı olarak kullanılabilecek sosyal medya yansımaları üzerinde durulmuştur. Dijital pazarlamanın sosyal medyaya etkileri bu alanda çalışmalar yapan araştırmacıların dikkatini çekmiş ve bu yazın alanında hem ulusal hem de uluslararası alanda pek çok farklı çalışma yapılmıştır. Bu araştırmacının amacı da dijital pazarlama ve sosyal medya alanında yapılmış çalışmaları bütüncül bir yaklaşım ile literatür taraması ile inceleyerek, bu alanda çalışma yapan araştırmacılara önemli kaynaklar sunabilmektir.

Anahtar Kelimeler: Dijital Pazarlama, Sosyal Medya, Rekabet

1. GİRİŞ

Geleneksel pazarlama anlayışında üretici ile tüketici arasında her zaman tek taraflı olan bir akış varken, teknolojinin gelişmesi ile birlikte internet ortamının sağladığı imkanlar ile çift taraflı ve sürekli kendini yenilemekte olan bir iletişim süreci ortaya çıkmıştır. İşletmeler böylece pazarlama yöntemlerinde sistemlerin bugüne kadar alışık olduğu biçimlerden farklı olarak “dijital pazarlamanın” sağlamış olduğu imkanlar doğrultusunda tüketici ve üretici ağının sistematik bir şekilde işleyişini dijitalleştirmişlerdir.

İçinde bulunduğumuz yüzyılın en önemli unsurlarından biri haline gelen dijitalleşme; sosyal yaşam, iş hayatı, günlük veya sosyal yaşamda insan ilişkilerinden tüketici davranışlarına kadar işletmelerin pazarlama kanallarını düzenler hale getiren önemli bir güç haline gelmiştir. Pazarlama alanında pek çok alanda olduğu gibi akademik ve iş dünyasından da oldukça büyük ilgi görülmektedir. İşletmeler dijital pazarlamayı öncelikle internet ve sosyal medyayı kullanarak belirledikleri satış hedeflerine ulaşabilmek, reklam ve tanıtım organizasyonlarını sunabilmek, marka yönetimi ve marka imajını sağlanması, müşterilerle iletişimin etkin bir şekilde gerçekleştirilebilmesi için yapılan faaliyetler olarak tanımlamak mümkündür (Kotler, 2017, s. 65).

Dijital pazarlamanın en büyük avantajlarından birisi ekonomik olmasıdır. Ek harcamalar; kira bedeli, stopaj bedeli, amortisman giderleri gibi giderler olmadan internet sitesi veya sanal mağazayı ziyaret eden müşterilere ürün veya hizmetlerinizi pazarlama imkânına sahip olunmaktadır. Dijital ortam da oluşturulan kampanyaların tüketiciye ulaşma hızı ve satış hedeflerine ulaşmada başarılı olması da avantajları arasında yer almaktadır. Aynı zamanda işletmelerin tüketicilerin satın alma eğilimleri ile ilgili bilgi toplamaları, bunları işleme ve değerlendirme süreçlerinde teknolojinin getirdiği imkânlar ile büyük faydalar sağlamaktadır. Geleneksel pazarlama yöntemleri ile birlikte dijital pazarlamayı bünyesine katmayan işletmelerin rakipleri ile sektör içerisinde mücadele edebilmesi oldukça zor olabilmektedir.

2. DİJİTAL PAZARLAMA

Dijital pazarlamanın birçok tanımı olmakla birlikte, bunların başlıcaları; interaktif, çevrimiçi, e- pazarlama veya internet pazarlamasıdır (Alan, vd, 2018; 495). Dijital pazarlama dört adımdan oluşmaktadır. Bu adımlar; elde et, kazan, ölç ve optimize et, sahip çık ve büyüttür. Bu dört yöntem birbirlerinin devamı

niteliği taşır ve dijital pazarlama aracılığı ile müşterisine ulaşmaya çalışan işletmeler için önem arz etmektedir.

Elde et yöntemi; müşterilerin ilgisini satışların gerçekleştirildiği ortama çekmek için yapılan faaliyetlerdir. Arama motorlarının optimize edilmesi, arama motorlarında yayınlanacak reklamlar, e-mail ve sosyal medya pazarlamaları, gelir ortaklığı, viral pazarlama, içerik üretme, online pr bu yöntemin başlıkları altındadır.

Kazan yöntemi; hedef müşteriye istenilen ortama girmesi sağlandıktan sonra, satıcının hedeflerine ulaşabilmesinde yardımcı olacak faaliyetlerdir. İşletmeler hedeflerini her zaman satış üzerine kurmazlar. Bir web sitesinde geçirilen süre, incelenen ürün adet sayısı gibi konular da bu yöntem içerisinde verilecek örneklerdir.

Ölç ve optimize et yöntemi; Dijital pazarlamanın bu aşamasında yapılan tüm faaliyetlerin her bir iş akışına bakılarak neyin nerede yanlış veya doğru yapıldığını anlamak ve aynı zamanda rakip firmalarla karşılaştırılabilmesi açısından önemli bir aşamadır.

Sahip çık ve Büyüt yöntemi; bu yöntemde işletmelerin mevcut olan müşterilerini memnun etme ve sürekliliklerini sağlamaya çalışılması yapılmaktadır. Müşteri hizmetlerini en iyi biçimde sunma, sadakat programları, dinamik fiyatlandırma stratejileri uygulama, ürün-tüketici kişiselleştirmesi, referans programları başlatma gibi teknikler bu yöntemde kullanılmaktadır.

Son günlerde internet ortamında kullanıcıların yapabildiklerine bakıldığında bundan yirmi yıl öncesinde kullanıcılar tahmin bile edemeyecekleri işlemleri teknolojinin sayesinde yapabilmektedir. İşletmeler de rekabetin şiddetlenmesi ve artması ile birlikte devamlılıklarını sürdürebilmek için kısa ve orta vadeli planlar ile birlikte uzun vadeli planlar da hazırlamalıdır (Aksoy, 2009, s. 54). 7P dijital pazarlama karmasını dikkate alarak kısa, orta ve uzun vadede planlarını hazırlamak işletmelerin her zaman yararına olacaktır.

Şekil 1: 7P Dijital Pazarlama Karması

Kaynak: Şengüler (2019: 7)

3. SOSYAL MEDYA

3.1 Sosyal Medya Kavramı

Günümüzde sosyal medya kullanan tüketiciler, teknolojinin gelişmesi ile ortaya çıkan tablet, akıllı telefon, dizüstü bilgisayar gibi teknolojik aletler ile mekân ve zamana bağlı olmadan sosyal medya mecralarında istedikleri ürüne ulaşabilir, istediklerini satın alabilir, aldığı bir ürün hakkında fikirlerini beyan edebilmektedir.

Sosyal medya kavramı olmadan önce hayatımızda olan geleneksel medya ile en belirgin farkı anlık olarak geribildirim alınmasıdır. Sosyal medya da reklam, pazarlama, tanıtım gibi organizasyonların uygulama maliyetleri geleneksel medyaya göre çok daha ekonomiktir. Bu durumda sosyal medya özellikle küçük ölçekli işletmelerin sektörleri içerisinde kendilerini var etmelerine imkân sağlamıştır. Sosyal medya

uygulamalarını etkin bir şekilde kullanan küçük ölçekli işletmeler geniş müşteri kitlelerine ulaşabilme fırsatı elde etmişlerdir(Köksal, 2012, s. 38).

3.2 Sosyal Medya Süreç Adımları

Günümüz teknolojisinde tüketiciler bir ürün veya hizmet satın almaya karar vermeden önce çoğunlukla internet üzerinden araştırma yapmaktadırlar. Sosyal medya pazarlamasında, çekme stratejisi olarak kullanılan yöntemde online bir izleyici grubu, gerçek odak grubu olarak kullanılmaktadır. Bu odak gruplarında diyaloglar, görüş siteleri, sosyal ağ platformları, bloglar gibi geniş bir yelpazeden oluşmaktadır. İşletmeler de sosyal medyayı daha doğru kullanabilmek ve devamlılık sağlamak adına sosyal medya pazarlama süreçlerine daha çok odaklanmaktadır.

Sosyal medya pazarlama süreçlerini işletmeler dört adımda yürütürler;

1. Dinleme

Müşterilerin ürün veya aldıkları hizmetten memnuniyeti, marka bağlılığını, yeni ürüne karşı olan fikirlerini, rakiplerin pazar durumlarını ortaya çıkartır. Ayrıca müşterilerin daha derinden anlaşılmasını sağlar. Dinlemede, müşterilerin konuşmalarının kalitatif bakış açısı ile incelenmesinin artılarından biri de tüm ilgili online konuşmaların kendi bağlamlarında neden ve sonuç ilişkisi kurularak incelenmesidir (Miranda vd, 2016, s.10).

2. Bağlanma

Markaya olan sadakat, tüketicinin belirli bir markaya karşı olan pozitif bir tutum içerisinde olması, bağlı olduğu markayı çok sık satın alması, uzun süre içerisinde o markayı kullanması anlamına gelmektedir. Günümüzde tüketiciler markalar arasında tercihlerini yaparken çok fazla alternatifle karşılaşmaktadırlar. Markalar içerisindeki bu alternatifler arasında kendilerine en fayda sağlayan markayı tercih etme eğiliminde bulunacaklardır. Sosyal medyadaki etkinlikler tüketiciler için bağlılık yaratmada etkili olur (Hacıefendioğlu, 2014:61).

3. Ölçme

Sosyal medya ölçümü yaparken, firmalar belirledikleri satış hedefleri doğrultusunda ortaya koymuş oldukları sosyal medya faaliyetlerinin takip edilebilmesi ve bu faaliyet ile ilgili performanslarının ölçülebilmesi olarak tanımlanır. Sosyal medya programlarında farklı alanlarda veri toplayarak ölçüm yapabilme imkanı, firmalar hem müşterilerin karar süreçleri ile ilgili hem de sosyal medyada neler yapıldığı ile ilgili bilgi sahibi olma imkânı verir.

4. Optimize Et

Bu aşamada işletmeler müşterileri ile uzun vadeli devamlı ilişkiler kurma yollarını araştırmalıdır. Tüketici neyi nasıl istiyor? Sunulan çözüm ne kadar verimli? Gibi önemli sorular sorar ve bunlardan geribildirim alır. İşletmeler tüm bu iletişim ile ilgili çalışmalarını optimize ederek ilk baştaki süreç olan dinleme aşamasına geri dönerek süreci yenilerler. (Dolakla ve Agnozi, 2001:165).

4.SONUÇ

Yapılan bu çalışmada işletmeler için önem arz eden ve yeni müşteri kitlelerine ulaşmada, mevcut müşterilerin de devamlılığını sağlamak ve uzun ilişkiler kurabilmek adına destek olan dijital pazarlama ve sosyal medyanın etkisi kavramları üzerinde kapsamlı bir şekilde değinilmiş ve konu ile ilgili yapılan edebiyat çalışmaları derlenerek gelişen teknolojinin etkisi ile ortaya çıkan dijital pazarlamanın sosyal medya etkisi bütüncül bir bakış açısıyla ele alınmıştır. Bu bağlamda dijital pazarlama kavramları ve adımları, sosyal medya kavramı, sosyal medya süreçleri, sosyal medyanın satın alma davranışlarına etkisi incelenmiş olup akademik çıkarımlarda bulunulmuştur.

Günümüzde internet kullanımının yaygın hale gelmesi, insanların vazgeçilmez bir parçası olması, teknolojinin hızla değişime uğraması, müşterilerin beklentileri ve pazarlamanın çevresini değiştirmiştir. İşletmeler müşterileri ile artık geleneksel yöntemlerden farklı olarak sosyal medya ortamlarında iletişime geçmektedirler. Dijital pazarlama faaliyetleri çok çeşitli olmasından dolayı işletmeler dijital pazarlama yöntemlerini kullanırken geleneksel pazarlama yöntemlerinin içinde kullanmalıdırlar. Dijital pazarlamada

takip edebilme ve devamlılık çok önem arz etmektedir. Dijital ortamlarda işletmeler kendileri ile ilgili bilgileri sürekli güncellemek zorundadırlar.

Dijital pazarlama faaliyetlerinin işletmelere sağlayacağı yararlardan en önemlisi geniş kitlelere ulaşabilmesi, ürün veya hizmetlerin tanıtımı ve satışı, müşterilerle ilgili verilerin analiz edilirken hızlı, kolay, ekonomik olmasıdır.

Dijital pazarlama faaliyetlerinin tüketicilere sağlayacağı faydalar ise, işletmeler istedikleri zaman iletişime geçebilir, şikayet veya önerilerini sunabilir. AR-GE çalışmalarına istedikleri zaman dahil olabilir ve işletmeleri bu doğrultuda yönlendirebilir.

Sosyal medya platformlarını Dünya da veya ülkemizde işletmeler genel olarak işletmelerini tanıtabilmek, sunmuş oldukları ürünleri ya da markaları hakkında bilinirlik sağlamak, satış hedeflerini arttırmak, müşteriler ile ilgili bilgi alışverişi yapabilmek, onların görüş ve öneri ile ilgili geribildirim sağlama, müşterilerini ürün geliştirme süreçlerine dahil edebilmek, işletmeler arasında bilgi paylaşımı ve fikir alışverişinde bulunmak, yeni iş gücü potansiyeli sağlamak için kullanılmaktadır.

Gün geçtikçe önemi daha fazla artan dijital pazarlama faaliyetleri önümüzdeki yıllarda, hem işletmeler için hem de tüketiciler için önemli ölçüt noktası olacaktır. Tüketiciler işletmelerin dijital ortamlarda ki aktif olup olmamalarına göre referans alıp satın alma kararı vereceklerdir. İşletmeler ise düşük maliyet ve diğer avantajları değerlendireceklerdir. Günümüzdeki küçük ölçekli işletmelerin ayakta kalabilmeleri için rekabet stratejileri oluşturup bunlara çabuk uyum sağlamaları gerekmektedir. Dijital pazarlama stratejilerini başarılı biçimde uygulayan işletmeler rekabet avantajını elde ederken, iyi bir şekilde de bunu uygularlarsa hedeflerine ulaşmaları oldukça hızlı olacaktır.

Yapılan bu derleme çalışması sonucunda, yeni bir iletişim aracı olan dijital pazarlama ve sosyal medyanın etkisi konusunda hem işletmeler hem de tüketiciler açısından birçok yarar sağlamak ve aynı zamanda da konunun işletmeler açısından stratejik bir önemi bulunmaktadır. Oldukça önemli olan bu konunun gelecek çalışmalarda ampirik olarak değerlendirilmesi önerilmektedir.

Özet: TR72 Bölgesi içinde bulunan Kayseri ilindeki şirketlerin ihracat kapasitesinin araştırıldığı ve ithalata bağımlılıklarının incelendiği bu çalışmada, teorik bilgilerin oluşturulmasında Türkiye İstatistik Kurumu, Kayseri Sanayi Odası, Kayseri Organize Sanayi Bölgesi ve Kayseri Serbest Bölgesi yayın ve verilerinden yararlanılmıştır. Çalışmanın uygulama aşaması, Kayseri İl merkezinde faaliyet gösteren 192 firmaya anket yöntemi kullanılarak yürütülmüştür. Anketler elektronik ortamda hazırlanmış ve anketi cevaplayan kişilerin yetkili olması amacıyla firma yetkilileri ile görüşmeler yapılmıştır. Çalışmada farklı sektörlerden, farklı büyüklüklerde faaliyet gösteren bu firmalardan ihracat ve ithalat yapılarına ilişkin kapsamlı bilgiler alınmıştır. Çalışmanın sonuçlarına bağlı olarak, ankete katılan firmaların ihracat olanaklarının geliştirilebileceği belirlenirken, ankete katılan firmaların ortalama yüzde otuzunun ithalata bağımlılıklarının %40 olduğu gözlemlenmiştir.

Anahtar Kelimeler: İhracat, İthalata Bağımlılık, Kayseri’de Dış Ticaret.

Structure of Export in Kayseri Province and Import Dependency of Firms

Abstract: In this study, the export capacities of companies is investigated and their dependence on imports is examined in which the generation of theoretical information of the Turkish Statistical Institute, Kayseri Chamber of Industry, Kayseri Organized Industrial Zone and Kayseri Free Zone’s publications and data. The implementation phase of the study was carried out by using the survey method on 192 companies operating in the city center of Kayseri. Questionnaires were prepared electronically and interviews were held with company officials in order to authorize the people who answered the questionnaire. In the study, comprehensive information was obtained on the export and import structures of companies of different sizes from different sectors. Depending on the results of the study, it was determined that the export opportunities of the companies participating in the survey could be improved, while it was observed that an average of thirty percent of the companies participating in the survey had an import dependency of 40%.

Keywords: Export, Import Dependency, Foreign Trade in Kayseri.

1. GİRİŞ

Kayseri’de ticari ve ekonomik hayatı meydana getiren kurum ve kuruluşlara bakıldığında Kayseri Ticaret Odası’nın 12.000, Kayseri Sanayi Odası’nın 1.290 ve Kayseri Ticaret Borsası’nın 874 üyesi bulunmaktadır. Kayseri Esnaf ve Sanatkarlar Odasına kayıtlı 42 oda ve 26.840 üye mevcuttur. 62 adet yabancı sermayeli firma Kayseri’de faaliyet göstermektedir. Kayseri’de 3 adet Organize Sanayi Bölgesi bulunmakta olup, Kayseri Organize Sanayi Bölgesinde 845, Mimar Sinan Organize Sanayi Bölgesinde 50, Kayseri Serbest Bölgesinde 38 işletme üretim yapmaktadır. Kayseri Serbest Bölgesi yatırımcılar için uygun ve cazip maliyetli arsaların üretilmesinin sağlanması, yatırım alanlarının enerji, ulaşım, lojistik ve çevre ile ilgili altyapılarının iyileştirilmesi ve sanayi ile yerleşim bölgeleri arasındaki ulaşım yetersizliklerinin giderilmesi bölgenin sanayi altyapısının iyileştirilmesi için öncelikle ele alınması gereken konular olarak öne çıkmaktadır. Kayseri Serbest Bölgesi’nde 80 civarında işletmede yaklaşık 2.200 kişiye istihdam sağlamaktadır. Serbest Bölgenin en önemli tesisleri ofis büro mobilyaları, sac boru ve profil, elektrostatik toz boya, yatak-baza, dayanıklı tüketim malları, alüminyum iletken tel tesisleri, beyaz eşya üretim fabrikası gibi üretim ağırlıklı tesislerden oluşmaktadır. Bölge demiryolu inşaat aşamasında olan Boğazköprü Lojistik Köyüne 900 m, uluslararası karayoluna 600 m uzaklıkta bulunmasından dolayı her

¹Bu çalışma, 2209-A Lisans Öğrenci Projesi kapsamında 2018/2 dönemi 1919B011803900 proje numarası ile TÜBİTAK tarafından desteklenen proje kapsamında hazırlanmıştır.

türlü yatırım için uygun bir arazi üzerindedir. Türkiye'nin en geniş Serbest Bölge alanına sahip olan Serbest Bölge aynı zamanda düşük arsa satış fiyatı ile de yatırım yapmaya en uygun bölgelerdendir. Bu avantajlar da göz önünde bulundurularak, özellikle Bölgede yüksek ve orta-yüksek teknoloji sektörlerine yönelik girdi üretimine, Serbest Bölge deki bu imkânların tanıtımına ve Ar-Ge faaliyetlerine özel önem verilmektedir².

Tablo 1'de TR72 Bölgesine ait 2013-2019 yılları arasında dış ticaret işlemleri ve Kayseri için ihracatın ithalatı karşılama oranı görülmektedir.

Tablo 1. 2013-2014 Dönemi TR72 Bölgesi Dış Ticaret Göstergeleri (bin dolar)

İhracat	2013	2014	2015	2016	2017	2018	2019
Kayseri	1.889.386	2.120.071	1.809.533	1.743.457	1.876.654	2.362.967	2.496.210
Sivas	78.550	91.375	77.886	80.166	93.109	96.098	92.752
Yozgat	21.495	16.921	11.091	10.648	11.952	9.522	13.499
İthalat	2013	2014	2015	2016	2017	2018	2019
Kayseri	1.529.514	1.470.946	1.282.317	1.329.596	1.784.386	1.340.390	1.066.746
Sivas	122.578	49.377	44.975	54.889	50.254	50.958	45.692
Yozgat	7.216	8.050	9.114	27.538	28.453	21.884	25.331
Kayseri İhracat/ithalat	%124	%144	%141	%98	%105	%176	%234

Kaynak: Türkiye İstatistik Kurumu, Dış Ticaret Verileri, il bazında ihracat ve ithalat verileri kullanılarak ithalatın ihracatı karşılama oranı hesaplanmıştır. www.tuik.gov.tr.

Tablo 1'de belirtildiği gibi Kayseri ihracatı 2015 ve 2016 yılları dışında sürekli artış içindedir. Kayseri'de ithalat ihracata göre daha düşük oranda seyretmekte, il de dış ticaret fazlası verilmektedir. Sivas ve Yozgat illerine göre Kayseri'nin dış ticaret hacmi yüksektir.

Tablo 2. 2019 Yılı Kayseri İhracatında İlk On Ülkeye Ait Bilgiler

ÜLKELER	1 OCAK-31 ARALIK		
	2018	2019	DEĞ.
Irak	244.988,12	267.964,67	9,38%

İtalya	80.267,51	90.455,56	12,69%
ABD	51.215,17	84.461,45	64,91%
Birleşik Krallık	52.900,82	77.913,28	47,28%
İsrail	51.019,03	72.085,21	41,29%
Libya	25322,8477	54714,381	-
Belçika	101.361,84	53.677,52	-47,04%
Fas	48.833,78	52.537,71	7,58%
Romanya	50738,617	51130,989	-

Kaynak: İhracatta ülke verileri, <https://ticaret.gov.tr/istatistikler/dis-ticaret-istatistikleri>

Tablo 2'de, Kayseri'de 2018 ve 2019 yıllarında ihracat pazarında ilk sırada Irak bulunmaktadır. Almanya, İtalya, ABD, İsrail, Fas gibi ülkelerle olan ihracatta da artış söz konusudur. Belçika'ya ihracat ise 2018 ve 2019 yılları karşılaştırıldığında gerileme göstermiştir.

Tablo 3. Kayseri'nin İhracatında İlk 5 Sektör Ürünleri (Dolar, ISIC Rev3 Düzey2)

Sıra	Sektör	2017	2018	Değ. (%)
1	Mobilya	413.182.073	460.873.945	11,5
2	Tekstil	302.243.096	311.533.760	3,1

² Kayseri Ticaret Odası, Kayseri Sanayi Odası, Kayseri Esnaf ve Sanatkârlar Odası, Kayseri Organize Sanayi Bölge Müdürlüğü, Kayseri Serbest Bölge Müdürlüğü web sayfalarında yer alan verilerden yararlanılmıştır. Erişim Tarihi: 01.09.2020

3	Makine ve teçhizat	240.165.503	294.325.931	22,6
4	Ana metal sanayi	98.450.892	242.745.156	146,6
5	Metal eşya sanayi	148.970.519	207.313.200	39,2
6	Diğerleri	438.947.198	570.607.454	30,0
TOPLAM		1.641.959.281	2.087.399.446	27,1

Kaynak: Türkiye İstatistik Kurumu, Dış Ticaret Verileri, www.tuik.gov.tr.

Tablo 3’de yer alan Kayseri’de ihracatın sektörlere göre payına bakıldığında, 2018 yılında 460 milyon 873 bin 945 dolar ihracatı ile mobilya sektörü ilk sırada yer almıştır. Tekstil sektörü 311 milyon 533 bin 760 dolar ile ikinci sırada, makine ve teçhizat sektörü ise 294 milyon 325 bin 931 dolar ile üçüncü sırada yer almıştır. İlk 5 sektör ihracatının Kayseri ihracatı içindeki payı yüzde 72,7’dir.

Kayseri’de 2018 yılında en çok ithalat yapılan ülke Çin’dir. Daha sonraki sıralamada Rusya, Almanya ve ABD yer almıştır. 2018 yılında gerçekleşen ithalat işlemlerinde ISIC REV 3 kodlarına göre en fazla ithalat yapılan 5 sanayi alt grubu sırasıyla ana metal sanayi, kimyasal madde ve ürünler, diğer ulaşım araçları, makine ve teçhizat ile tarım ve hayvancılıktır. 2018’de bu ilk 5 sektörün toplam ithalat değeri 1,16 milyardır³

2. ÇALIŞMANIN KONUSU, AMACI VE YAZIN ARAŞTIRMASI

Çalışmanın konusu, Kayseri ilindeki şirketlerin ihracat kapasitesi araştırmak ve ithalata bağımlılıkları incelemektir. Çalışma hazırlanırken Kayseri ile ilgili genel bilgilerin elde edilmesinde, Türkiye İstatistik Kurumu, Orta Anadolu Kalkınma Ajansı, Kayseri Sanayi Odası, Kayseri Organize Sanayi Bölgesi ve Kayseri Serbest Bölgesi yayın ve verileri kaynak olmuştur. Çalışmanın il, bölge ve ülke bazında dış ticaretin geliştirilmesine yönelik politikalara ve alanında yapılan çalışmalara katkı amaçlanmaktadır. Uygulama aşamasında anketlerin farklı büyüklükte ve farklı faaliyet alanlarında firmalar tarafından cevaplanması, elde edilen sonuçların çok yönlü incelenmesine olanak sağlamıştır.

Yazın araştırması incelendiğinde; Gerni vd. (2008) çalışmasında ihracata dayalı büyümenin ithalat kaynaklı olduğuna ve ithalatın toplam mal ihracatının önemli bir belirleyicisi olduğunu ileri sürmüş, 1989-2007 dönemi aylık verileriyle aramalı ve sermaye malı ithalatı ile sanayi üretim indeksi arasındaki ilişki nedensellik testleriyle incelenmiştir. Çalışma sonunda Türkiye ekonomisinde ihracatının aramalı ve sermaye malı ithalatından önemli ölçüde etkilendiğini belirlemiştir.

Yükseler ve Türkan (2008) imalat sanayinin ithalata bağımlılığını incelediği çalışmasında 1998 yılı girdi çıktı analizi kapsamında doğrudan ve dolaylı ithal girdi kullanımını hesaplamıştır. Buna göre, 1998 yılında imalat sanayi doğrudan ithal girdi kullanımı yüzde 14,75’dir.

Aktaş (2009) 1996 – 2006 yılları için, ithalat, ihracat ve ekonomik büyüme arasındaki ilişkiyi eş bütünleşme ve vektör hata düzeltme modeli kullanarak incelemiştir. Çalışma sonuçlarına göre kısa ve dönemde ithalat ve ihracat arasında çift yönlü nedensellik ilişkisi vardır.

Saygılı vd. (2010) tarafından 145 firmaya anket yöntemi kullanarak yürütülen çalışmada firmaların üretimde ithal girdi düzeyi ve ithal girdi kullanma nedenleri incelenmiştir. Çalışma sonucunda, ithalat bağımlılığının 2002 yılında yüzde 56,5 2007 yılında ise yüzde 61,8 olduğu belirlenmiştir. Firmalara yapılan alan araştırması sonucunda ithal girdi kullanılmasının nedenleri; kaliteli ara ve yatırım malı kullanma, yurt içi üretim eksikliği, üretim yapısında meydana gelen değişiklikler, yurt içi ara ve yatırım mallarındaki fiyat yüksekliği olarak belirlenmiştir.

İnançlı vd. (2011) çalışmasında Türkiye’de 1998 sonrası otomobil sektöründe ve bu sektörün önsel ve gerisel bağlantılı olduğu sektörlerdeki dış bağımlılık düzeyini ölçmeye çalışılmıştır. Bunu gerçekleştirirken TÜİK’in yayınladığı 1998 ve 2002 yıllarına ait girdi çıktı tablolarını kullanmıştır. Dış bağımlılığı arttıran pek çok faktörlerin bulunduğunu bunların özellikle döviz kurlarındaki artışlar, ulusal paranın aşırı değerlenmesi ve dış ticarete dengesizliğine yol açtığı ortaya koymuştur. Türkiye’nin otomotiv

³ 2018 ekonomi göstergeler TR72, TÜİK. https://www.oran.org.tr/images/dosyalar/20190524140009_0.pdf

sektörünün dışa bağımlılığını azaltmak için yan sanayi üretimini arttıracak yatırım harcamalarının teşvik edilmesi ve teknoloji düzeyini geliştirilmesiyle dışa bağımlılığının azalacağını ortaya koymuştur.

Palacioğlu (2018) Türkiye'nin ham madde ithalatını ana fasıl ve ürün gruplarıyla inceleyerek, Türkiye'de yetersiz üretilmeyen ürünlerin ithalatının yüksek olduğunu, bu kapsamda demir-çelik, otomotiv, plastik, gıda, kimya, tekstil ürünlerin öne çıktığını belirlemiştir. Dış ticaret açığı veren bu alt sektörlerine teşviklerle desteklenmesiyle sektörlerin tamamında olmasa bile önemli bölümünde olumsuz yapıyı tersine çevirmek mümkün olduğunu gözlemlemiştir.

Irmak vd. (2020) Türkiye'de ihracatın ithalata bağımlılığın nedenlerini, üretim için gerekli girdilerin yurt içinde yeterli miktarda üretilmediği ya da yerel firmaların beceri ve teknoloji konusunda gerekli yetkinliği edinmemesi olarak açıklamıştır. Sönmez (2007) çalışmasında aşırı değerlenmiş döviz kuru politikasının imalat sanayinin ithalata bağımlılığın arttığını belirtmiştir.

3. ARAŞTIRMA YÖNTEMİ

Çalışmada anket yöntemi kullanılmıştır. Anketler, firma yetkilileri ile bizzat görüşülüp, dış ticaretle ilgili kişiler belirlenerek, bu kişilere mail üzerinden gönderilmiştir.

Tablo 4. (0.05) için Örneklem Büyüklükleri

Kaynak: Yazıcıoğlu ve Erdoğan, 2004, s.50.

Tablo 4'de görülebileceği üzere, Yazıcıoğlu ve Erdoğan (2004) örnekleme hatasını azaltmak için örneklem büyüklüğünün artırılması gerektiğini, diğer yandan seçilen hata payına göre belli bir değerden sonra örneklem büyüklüğünün artmasına gerek olmadığı ileri sürmektedirler. Kayseri Sanayi Odasına kayıtlı 1.290 işletme bulunmaktadır. Bu kapsamda 300 firma ile görüşülmüş fakat 192 firmadan sağlıklı dönüş sağlanabilmiştir.

4. UYGULAMA SONUÇLARI

Anket sonuçlarına bağlı olarak elde edilen sonuçlar, ankette yer alan soru sırasına göre aşağıda sunulmuştur.

Soru 1: Şirketteki göreviniz sorusunu 192 firma katılmıştır. Bunlardan 83 kişi (%43,2) Müdür, 41 kişi (%21,4) dış ticaret bölümü çalışanı, 52 kişi (%27,1) Yönetici, 16 kişi (%8,3) Diğer çalışan olarak yanıtlamıştır.

Soru 2: Şirketin Hukuki Statüsü sorusunu 192 firma yanıtlamıştır. Firmalar hukuki statüsüne göre; 110'u (%57,3) Limited şirket, 70'i (%36,5) Anonim şirket, 9'u (%4,7) Gerçek kişi ticari işletmesi (Şahıs Şirketi), 3'ü (%1,5) Adi ortaklık şirkettir.

Soru 3: Şirkette Çalışan Toplam Kişi Sayısı sorusunu 188 firma yanıtlamıştır. 1-9 aralığında çalışan sayısı 21 firma (%11,2), 10-49 aralığında 68 firma (%36,2), 50-249 aralığında çalışan sayısına 64 firma (%34), 250-499 aralığında 23 firma (%12,2), 500 ve daha fazlasına 12 firmadır (%6,4).

Soru 4: Faaliyet Gösterilen Sektör Bilgisi sorusuna 190 firma yanıt vermiştir. Bunlar; Mobilya, Ambalaj-Plastik, İnşaat yapı malzemeleri olarak sıralanmaktadır.

Soru 5: Şirketin Faaliyet Yılı sorusuna 192 firma yanıt vermiştir. Şirketlerin büyük çoğunluğunun 15 ve üzeri yıldır faaliyet gösterildiği bilgisine ulaşılmıştır.

Soru 6: Şirketiniz İhracat yapıyor mu? sorusuna 192 firma yanıt vermiş, 132 firmanın ihracat yaptığını belirtmiştir.

Soru 7: Şirketiniz ihracat yapmıyorsa, bunun nedeni aşağıdaki ölçütleri kullanarak açıklayabilir misiniz? sorusuna, firmalar genel olarak işletmelerinin sermayesinin ve üretim kapasitesinin yeterli olduğunu fakat dış ticaret yapmak için dış ticaret desteklerin nasıl alındığı bilmediklerini, dış ticaret departmanında çalışanın uzmanın olmadığını, yurt dışı pazar araştırması yapacak düzeyde bilgili, tecrübeli ve yabancı dil bilen çalışanların bulunmadığını belirtmiştir.

Soru 8: Dış Ticaret Departmanında kaç kişi çalışmaktadır? sorusuna 167 firma yanıt vermiştir. Bunlardan 75 firma 1-9 arası dış ticaret departmanında çalışanın bulunduğunu, 65 firma ise dış ticaret departmanında çalışanın bulunmadığını belirtmiştir.

Soru 9: Dış ticaret işlemlerinde kendi personelinizi mi kullanıyorsunuz yoksa dışarıdan destek mi alıyorsunuz? sorusuna 135 firma yanıt vermiştir. 64 firma dış ticaret departmanında dış ticaret operasyonlarını yürütecek nitelikte elemanım ve gümrük müşavirim de bulunuyor, olarak cevap vermiş, 31 firma dış ticaret departmanım yok, dış ticaret işlemleriyle ilgili tüm aşamaları gümrük müşavirimle yürütüyorum olarak cevap vermiştir.

Soru 10: Şirketiniz kaç yıldır ihracat yapıyor? sorusuna 134 firma yanıt vermiş, 15 yıl ve daha fazla yıldır ihracat yapan firmanın çoğunlukta olduğu belirlenmiştir.

Soru 11: İhracat yaptığınız ilk 10 ülkeyi sıralayınız? sorusuna 107 firma yanıt vermiştir. Ankete katılan firmalara göre, en fazla ihracat yapılan ülkeler içinde ilk sırada Almanya gelmektedir. İlk on ülke sıralaması; Almanya (44), Fransa (27), Gürcistan (26), Azerbaycan (25), Suudi Arabistan (24), Cezayir (23), ABD (18), Libya (17), Mısır (17), İngiltere (16)'dir.

Soru 12: İhracat yapılan müşterilere nasıl ulaştınız? sorusuna firmaların en fazla yanıt verdiği cevaplar sırasıyla; gümrük komisyoncusu aracılığıyla, Ticaret ve/veya Sanayi Odaları kanalıyla, Yurtdışı-Yurtiçi vb. etkinliklere katılım yoluyla, dış ticaret departmanın girişiyle ve Organize bölgesine gelen müşterilerin firmaları gezip yerinde görmesi ile gerçekleştiği yönündedir.

Soru 13: İhracat desteklerinden hangisi/hangilerinden yararlandınız? sorusuna firmaların verdiği yanıtlara göre yurtiçi uluslararası fuar desteğinden 74, yurt dışı uluslararası fuar desteği 59, yurt dışı ofis mağaza açma yardımı 17, eğitim yardımları 33, istihdam desteği 40, Ar-Ge desteği 56, KOSGEB faizsiz ihracat kredisinden 34 firma yararlanmıştır.

Soru 14: Toplam satış hacminiz içinde toplam ihracatınızın payı nedir? sorusuna 136 firma yanıt vermiş, bunların içinde %40 ve üstü yanıtının diğer yanıtlara göre yüksek olduğu belirlenmiştir.

Soru 15: İhraç konusu mallarınız nelerdir? sorusuna 132 firma yanıt vermiş, firmaların en fazla ilk üç ihraç konusu ürününü Mobilya ahşap ürünleri, Metal ürünler ve Ambalaj-Plastik olduğu belirlenmiştir.

Soru 16: İthalat yapıyor musunuz? sorusuna 183 firma yanıt vermiş, firmaların 129'u ithalat yapmadığını belirtmiştir.

Soru 17: Kaç yıldır ithalat yapıyorsunuz? sorusuna 62 firma yanıt vermiş, 15 yıldan fazla ithalat yapan firma sayısının çoğunlukta olduğu belirlenmiştir.

Soru 18: Hangi malları ithal ediyorsunuz? sorusuna 57 firma yanıt vermiş, en çok ithalat edilen ürünün hammadde olduğu belirlenmiştir.

Soru 19: Neden ithal mal kullanmayı tercih ediyorsunuz? sorusuna 54 firma yanıt vermiş, bunlardan; %48,1'i ithal malı iç piyasada üretilmediğini, %25,9'u ithal malın fiyatı iç piyasadaki benzer mallardan düşük olduğunu, %20,4'ü ithal malın kalitesi iç piyasadaki benzer malların malın kalitesinden yüksek olduğunu, %5,6'sı karşılıklı ticaret yaptığı için ithal mal kullandığını belirtmiştir.

Soru 20: En fazla ithalat yaptığınız ilk 10 ülkeyi sıralayınız, sorusuna 46 firma yanıt verilmiştir. En fazla ithalat yapılan ülke Almanya'dır. İthalat yapılan ilk 10 ülkeyi sıralaması; Almanya (18), Çin (14), Hindistan (7), Suudi Arabistan (5), Fransa (5), Belçika (5), İtalya (5), İngiltere (4), G. Kore (4), İran (4), Irak'tır (4). Bu

sonuçlar, anket yapılan firmalara göre Kayseri de ham madde ithalatının yüksek olduğunu ortaya koymaktadır. Bunun nedeni olarak ise ithal malın yurtiçi piyasada üretilmemesi yanıtı temel unsur olarak belirlenmiş ikinci olarak ithal malın yurtiçi ikamesinin az olmakla birlikte yüksek fiyatlı olması gösterilmiştir. Bununla birlikte firmalar ithal malın kalitesinde daha yüksek olduğu ileri sürülmektedir.

Soru 21: İthalat yaptığınız müşterilere nasıl ulaştınız? sorusuna 16 firma yurt dışı fuar vb. etkinliklere katılım yoluyla ulaştığı yanıtını verirken, 11 firma yurt içi fuar vb. etkinliklere katılım yoluyla bulduğunu, 12 firma dış ticaret departmanında çalışanların girişimleriyle bulabildiğini, 6 firma Ticaret ve/veya Sanayi odaları kanalıyla bulduğunu, 3 firma gümrük komisyoncusu aracılığıyla her zaman seçeneğiyle bulduğunu belirtmiştir. Sıklıkla firmalara ithalatçı bulma konusunda yurtiçi ve yurtdışı fuarların katkı sağladığı görülmüştür. İthalat yapacak müşterileri bulmakta şikayetçiler bu konuda ticaret/sanayi odalarından daha fazla destek beklediklerini belirtmişlerdir. 90 firma büyük ölçüde ithalat yaptığı müşterileri yurt içi/ yurt dışı fuardan bulduğu belirlenmiştir. 102 firma ithalat için müşteri bulmada sıkıntı yaşadığı belirlenmiştir. Bu firmalar Gümrük komisyoncusu aracılığıyla, Yurt dışı fuar vb. etkinliklere katılım yoluyla, Yurtiçi fuar vb. etkinliklere katılım yoluyla, Dış ticaret departmanında çalışanların girişimleriyle, Ticaret ve /veya Sanayi Odaları kanalıyla bu seçeneklerde müşteri bulmada yararlanmadığını belirtmiştir.

Soru22: Aşağıdakilerden hangisi sizin ithalatınızı azaltabilir? sorusuna, firmaların yurtiçinde üretilen mevcut kalite ve nitelikte olan ürünlerin fiyatı daha düşük olursa ve ithal malları ikamesine kalite standart getirilirse ithalata olan bağımlılığın azalacağını belirtmişlerdir. %41,5 Yurt içinde üretilen mevcut kalite ve nitelikte olan ürünlerin fiyatı daha düşük olsa, %35,8 Yurt içinde ithal malları ikamesine kalite standart getirilirse, %1,9 Ülkemizde üretilen bir mal değil, %1,9 yerli üretim olursa, %1,9 ithal ettiğimiz ürünler yurt içinde üretilirse, %1,9 her ikisi de yanıtlarını vermiştir.

Soru 23: Döviz kuru artışı toplam ithalatınızı ortalama yüzde kaç etkiler? sorusuna 58 firma yanıt vermiştir. Firmaların çoğunlukla %40 ve üstü etkilendiklerini belirtmişlerdir. Döviz kurlarındaki artışın ithalatı yavaşlatma etkisi ise ihracatı artırma etkisinden daha yüksek olduğu gözlenmiştir.

Soru 24: Ürettiğiniz bir birim ürünün yaklaşık yüzde kaçını ithal malından oluşturur? sorusuna 62 firma yanıt vermiştir. Bunlardan 9 firma hiç, 8 firma %1-10, 14 firma %11-20, 8 firma %21-30, 5 firma %31-40, 18 firma %40 ve üzeri, olduğunu belirtmiştir.

4. SONUÇ

Dışa dönük üretim yapan yerli ya da yabancı sermayeli kuruluşların ihracattaki ağırlıkları ve dış girdilere bağımlılığı, ülke ekonomilerinin gelişmişlik düzeyi hakkında belirleyici özelliğe sahiptir. Bu nedenle dış ticaret yapısındaki gelişmeler ülke ekonomisi ile doğrudan ilişkili olmakta ve ülkenin makroekonomik değişkenlerini olumlu ya da olumsuz etkileyebilmektedir. Gelişmekte olan ülkelerin dış ticaret yapısına yönelik dikkat çeken en önemli şey ihracatın ithalata bağımlı olmasıdır. Bu bağımlılığın artmasında en önemli nedenlerden biri de ihraç malları üretiminde önemli oranda ithal girdi kullanılıyor olmasıdır.

Bu çalışmada Kayseri ilindeki şirketlerin ihracat kapasitesi ve ithalata bağımlılıklarının belirlenmesi ve arasındaki ilişkilerin düzeyi ölçülmeye çalışılmıştır. Uygulama aşamasında anket yöntemi kullanılmış, 192 firmadan geri dönüş sağlanmıştır. Ankete katılan kişiler büyük ölçüde üst düzey yönetici ve dış ticaretle ilgili kişiler olması, anketin güvenilirliğini artırmıştır. Firmaların hukuki yapısı ağırlıklı olarak limited şirket biçimindedir. Çalışan sayısı bakımından, 10-49 aralığında 68 firma (%36,2), 50-249 aralığında 64 firma (%34), ankete katılanların %70,2'sini temsil etmektedir. Sektörel açıdan bakıldığında, ankete katılan itibarıyla ilk üç sektör mobilya, ambalaj-plastik, inşaat yapı malzemeleri sektörleri önde olduğu görüldü. Ankete katılan firmaların verdiği cevaplara göre 132 firmanın ihracat yaptığını belirlendi. İhracat yapmayan firmalar bunun nedenini firmalarının sermayesi ve üretim kapasitesinin yeterli olmasına rağmen dış ticaret desteklerinin nasıl alındığı bilmediklerini, dış ticaret departmanında çalışan uzman olmadığını, yurt dışı pazar araştırması yapacak düzeyde bilgili ve yabancı dil bilen çalışan bulunmadığı ifade etti. Ankete katılan firmaların ağırlıklı olarak dış ticaret departmanında uzman sıkıntısı yaşadığı ve gerek müşteri bulma aşamasını gerekse gümrük işlemlerini gümrük müşavirleri aracılığıyla yürüttüğü belirlendi. Ankete katılan firmalar arasında sektörde 15 yıldan fazla faaliyet gösteren ve ihracat yapan firma sayısı yüksektir. Aslında ihracat deneyimlerinin yüksek olduğu söylenebilir. Öte yandan Kayseri'de anket sonuçları kapsamında en fazla ihracat yapılan ülkeler içinde ilk sırayı Almanya'nın aldığı belirlendi. İhracatta ilk on ülke sıralaması; Almanya, Fransa, Gürcistan, Azerbaycan, Suudi Arabistan, Cezayir, ABD, Libya, Mısır, İngiltere şeklinde sıralanmaktadır. İhracat pazarına nasıl ulaştığı noktasında firmalar, gümrük komisyoncusu aracılığıyla, ticaret ve/veya sanayi odaları kanalıyla, yurtdışı-yurtiçi vb. etkinliklere katılım yoluyla ve dış ticaret departmanının girişimiyle ulaştıklarını belirtmişlerdir. Bunun yanı sıra organize sanayi bölgesine gelen ithalatçıların şirketleri bizzat yerinde görmesi ile de müşteri bulduklarını ifade etmişlerdir. Ayrıca anket sonuçları ihracat yapan firmalar içinde, ihracat ettiği ürünlerin toplam satış hacmi içindeki payı %40 ve üstü olan firma sayısının yüksek olduğunu göstermiştir.

Firmaların ithal malı kullanma tercihinde etkili olan faktörler ise; ithal edilen ara malının iç piyasada sınırlı olması, fiyatının yüksek olması, iç piyasada benzerinin bulunmaması, yerli malın kalitesinin farklı olması ve karşılıklı ticaret yaptığı için ithal mal kullandığı şeklinde belirlenmiştir. Firmaların ithalat yaptığı birinci sıradaki ülke Almanya'dır. İthalat yapılan ilk 10 ülke; Almanya, Çin, Hindistan, Suudi Arabistan, Fransa, Belçika, İtalya, İngiltere), G. Kore, İran ve Irak şeklinde sıralanmaktadır. Anket yapılan firmalara göre Kayseri'de hammadde ithalatı yüksek görünüyor. Bunun nedeni olarak ithal malın yurt içi piyasada üretilmemesi ilk neden olarak belirlenmiştir. İkinci neden ithal malın yurt içi ikamesinin az olmakla birlikte yüksek fiyatlı olmasıdır. Bununla birlikte ithal malın kalitesinde daha yüksek olduğu yönünde

yanıtlar da alınmıştır. İthalat yapılan müşterilere, yurt dışı fuar vb. etkinliklere katılım yoluyla, firma yurt içi fuar vb. etkinliklere katılım yoluyla, dış ticaret departmanında çalışanların girişimleriyle, ticaret ve/veya sanayi odaları kanalıyla ve firma gümrük komisyoncusu ulaşıldığı belirlenmiştir. Ankete katılan firmaların ihracat olanaklarının geliştirilebileceği belirlenirken, ankete katılan firmaların ortalama yüzde otuzunun ithalata bağımlılıklarının %40 olduğu gözlenmiştir.

Anket sonuçlarına göre Kayseri’de firmaların yenilikçi olması, girişimcilik kültürünü benimsemesi, dış ticaret elemanı çalıştırması, bu elemanların eğitimi için katılacakları programları teşvik etmesi gerekmektedir. Edinilen bulgular firmaların dış ticaret okuluna ihtiyacı olduğu yönündedir. Firmalara özellikle dış ticaret nasıl yapılır, destekler neler, e-ticaret konularında yoğun ve sürekli eğitim verilmelidir. Pazarı araştırması yapmayı bilmeyen firmalara eğitimlerinin artırılması, yurtiçi ve yurt dışı fuarlara katılımın artırılması için firmalarla ihracatçılar birliklerinin koordineli ve sık sık görüşmeler yapılması önerilebilir.

Özet: Savaşlar ne kazanan ne de kaybeden toplumlara bir fayda sağlamıştır. Savaş sonrası her iki tarafın da her alanda çok büyük kayıplar vermiş olduğu görülmektedir. İki büyük dünya savaşını kaybeden taraf olarak Almanya, savaşın toplum üzerinde ki yıkıcı etkisini ve yarattığı travmayı oldukça uzun süre yaşamıştır. Savaş sonrası kötü koşullar altında sürdürülen acılı toplumsal yaşam, Alman yazınında da çeşitli şekillerde yansıtılmıştır.

Heinrich Böll bizzat savaşa katılmış biri olarak savaşın kötü yüzünü ve sonrasında Almanya'da yaşanan sefaleti, Alman bir ailenin yaşamı üzerinden anlatmaktadır. Yıkılan binalar nedeniyle konut sıkıntısı çekilen bir ortamda kilisenin lojmanına yerleştirilen bir ailenin yaşam mücadelesi o günün Almanya'sını gözler önüne sermektedir. Yaşam alanlarının yıkıntıları gibi, içerisinde yaşayan insanlar da toplumsal yaşam içerisinde, yıkılmış bir şekilde teslimiyetçi ve edilgen bir tutum sergilemektedir.

H. Böll, savaşın yok ettiği şehirlerin durumu, parçaladığı aileleri ve kilisenin tutumu, eserin bütünlüğü içerisinde nesnel bir bakış içerisinde eleştirel bir gözle anlatılmıştır. Ayrıca birçok değerini savaş nedeniyle kaybetmiş bir toplumun, çalışarak var olma ve yaşama tutunma çabası bu eserin diğer önemli özelliğini oluşturmaktadır.

Bu çalışmada, savaş kuşağının bir temsilcisi olarak Heinrich Böll'ün, kendi toplumunun savaş sonrası Alman toplumunun yaşadığı acılar, çaresizlikler ve yoksulluk "Ve Tek Bir Kelime Söylemedi (1953)" eseri ışığında incelenecektir. Savaşların yıkıcı etkisinin, toplumun en küçük yapı taşı olan aile yaşamını nasıl etkilediği, buna bağlı olarak kilisenin o dönemki toplumsal yaşama bakış açısı nicel bir araştırma şeklinde kaynak tarama yapılarak betimleme yoluyla irdelenecektir.

Anahtar Kelimeler: Savaş, Toplumsal Yıkıntı, Edilgenlik

Reflection of Social Ruin to Literature

Abstract: Wars have benefited societies that neither win nor lose. It is seen that both sides gave great losses in all areas after the war. As the losing party of two great world wars, Germany has lived through the devastating effect of the war on society and the trauma it created for a long time. The painful social life sustained under bad post-war conditions has also been reflected in various ways in German literature.

Heinrich Böll, as a person who took part in the war, tells about the bad face of the war and the later misery in Germany through the life of a German family. The struggle for life of a family placed in the housing of the church in an environment with housing shortages due to the collapsed buildings reveals the Germany of that day. Like the ruins of living spaces, the people living in it also exhibit a submissive and passive attitude in social life, destroyed.

H. Böll, the state of the cities destroyed by the war, the families that he destroyed, and the attitude of the church are explained with a critical eye in an objective perspective within the integrity of the work. In addition, the effort of a society that has lost many of its values due to war, to exist by working and to hold on to life is another important feature of this work.

In this study, as a representative of the war zone, the suffering, desperation and poverty of his own society, the post-war German society will be examined in the light of "And He Didn't Say A Single Word (1953)". How the destructive effect of wars affected family life, which is the smallest building block of society, and the church's perspective on social life at that time will be examined through a source scan and description in the form of a quantitative research.

Keywords: War, Social Ruin, Passivity

1. GİRİŞ

İnsanlık tarihi boyunca nice savaşlar olmuş, ancak hiç biri insanlığa bir yarar getirmemiştir. Bağımsızlık, vatan, toplumların yaşam alanlarının ve özgürlüklerinin yok olmasına karşı verdikleri haklı savaşların yanında, özellikle ekonomik, siyasi hırslarla yapılan savaşlar insanlığa büyük zararlar vermiştir. Almanya'nın o dönem faşizm yönetim anlayışı ile başladığı II. dünya savaşı insanlığın, sonucunda da kendi toplumunun dehşeti yaşamasına neden olmuştur. Savaş ve savaşı konu edinen o dönemin edebiyatçıları, tüm gerçekliği ile savaşın yok edici yönünü toplumsal yaşamın içerisinde, bir sonraki kuşakların ders almaları bakışı düşüncesiyle açısı ile edebiyat aracılığı ile aktarmışlardır.

Edebiyat, toplumsal yaşamın bir aynasıdır. Yaşanılan çağın tüm gelişmeleri edebiyat aracılığı ile bir sonraki nesille aktarılmaktadır. Savaş sonrası Alman edebiyatında, savaşın neden olduğu öncelikliğin ülkenin bölünmesi, insanların acıları, yoklukları ve toplumsal yıkımın görünümü anlatılmıştır. Savaşın beraberinde getirdiği ölüm, yıkım, parçalanmış aileler, psikolojik olarak sağlığı bozulmuş bir toplum, yeniden toparlamaya çalışma gibi konular tüm çıplaklığı ile herhangi bir abartı olmadan edebiyat aracılığı ile bir sonraki kuşağa yansıtılmıştır.

Alman toplumunun savaş sonrası harabeler içerisindeki yaşantısını en net anlatan, bizzat kendisi de savaşı yaşamış Heinrich Böll'dür. Heinrich Böll savaş süresince Almanya'da kalmış ve savaşın tüm kötü yönlerini yaşamıştır. Heinrich Böll tüm eserlerinde Alman toplumunun savaştan ne kadar zarar gördüğünü anlatırken, diğer bir taraftan da toplumun yeniden ayağa kalkma ve yaşama çabalarını, gün yüzüne sermektedir. Savaş sonrası edebiyatın temsilcileri de savaşta gördüklerini, yaşadıklarını ve özellikle savaşta insan olma değerlerinin yıkıldığını eserlerinde anlattılar.

Heinrich Böll, "Ve Tek Bir Kelime Söylemedi (1953" (Und sagte kein einziges Wort) eserinde savaş sonrasında yaşanan olaylara yönelik toplumsal bir eleştiri yöneltmektedir. Özellikle savaşın edilgen hale getirdiği insanların yaşamından kesit şeklinde bir anlatım tarzı sergilemiştir. Eser, bir ailenin, yaşam mücadelesi verirken, insan olmanın gerekliliklerini de unutmadan tek düze yaşamlarının yansıtıldığı tipik bir eserdir. Eserde kilisenin üstlendiği konut yardımı konusunda işlenmiş, savaş sonrası "sabırlı olma" olgusunda vurgu yapılmıştır. Diğer bir taraftan da o dönem de kadın olmanın zorlukları göz önüne serilmiştir.

2. HEINRICH BÖLL'ÜN OTOBİYOGRAFİSİ, ESERLERİ VE EDEBİ YÖNÜ

Heinrich Böll 1917'de Köln'de doğmuştur. Çocukluğu I. Dünya Savaşının yokluk yıllarında geçmiştir. Katolik bir terbiye içerisinde büyümüş ve 1924 yılında okula başlamıştır. 1937'de liseyi bitirdikten sonra 1938 yılında çalışma kampına daha sonra da askere alınmıştır. Her ne kadar Alan Edebiyatının ünlü nesir yazarlarından iri olarak bilinse de ilk şiirini askerden önce 17 yaşındayken yazmıştır. Savaşta birçok cephede görev almıştır. 1945 yılında 6 ay süreyle İngiliz ve Amerikalıların savaş esri olmuştur. Savaş sonrası doğduğu Köln kentine dönerek hem üniversiteyi okudu hem de çalıştı. 1947 yılında ilk kısa öyküsü Haberci, sonra ilk romanı Ademoğlu Neredeydin?, Ve O Hiçbir Şey Demedi yayınlandı. Kendisi, savaş sonrası koşullardan, yoksulluk, açlık ve hastalık gibi sıkıntılardan hem kendi geçtiği, hem de çevresinde bu durumlardan acı çeken birçok insan gördüğünden, hiçbir zaman çocuk sahibi olmak istememiş, kendi deyimile "Böyle bir dünyaya çocuk getirmek" istememiştir. 16 Temmuz 1985'te, 67 yaşında, evinin merdiveninden yuvarlanarak ölmüştür. Heinrich Böll'ün eserleri savaş sonrası yaşanan dramatik sosyal olayların aynası olmuştur. Yapıtlarında İkinci Dünya Savaşı'nı, özellikle de insanların nasıl savaştıklarını, savaşın yıkıntılarını ve acılarını anlatmıştır. Bu anlamda Aytaç şöyle demektedir.

Heinrich Böll kendisini savaş kuşağının temsilcisi olarak görmüş ve sanatını bu kuşağın huzursuzluğunu, yoksulluğunu, çaresizliğini dile getirmekle görevli saymıştır. Demek oluyor ki Böll edebiyatı bir amaç uğrunda görevlendirdiği için angajedir, ama ideolojiye ya da partiye angaje değil, ahlakçılığa, insancılığa angajedir (Aytaç, 1983:421).

Heinrich Böll'ün hemen hemen tüm eserlerinde geçmişe yönelik söz konusudur. Geçmişte yaşanan olayların unutulmaması çok önemlidir. Özellikle savaş sonrasında insanların geçmişe yönelik hayallere dalmaları, yaşanmamışlıklarla alakalıdır. Savaşın kendilerinden kopardığı değerler üzerinde ve gündüz rüyaları görme anlamına gelen hayaller konusunu Böll titizlikle eserlerinde dile getirmiştir. Bu konuyla ilgili görüşlerini Kırmızı şöyle ifade etmektedir.

Böll'ün romanlarında hatıralara da büyük yer verilir. Hatıralar genelde eseri oluşturan tematik kurguyla birlikte verilir. Böll'ün figürleri geçmişini hatırlayan kişilerdir. Yazarın neredeyse tüm eserlerinde bu hatırlama tekniği (Erinnerungstechnik) görülmektedir. Hatırlama tekniği geçmişini unutmamak anlamına gelir (Kırmızı, 2017:115).

Döneminin en çok okunan yazarı olan Böll, edebiyat da nesir yazmaya kısa hikâyelerle başlamıştır. Bu nedenle, eserlerinde zaman konusunda oldukça tasarruflu davranmaktadır. Eserlerinde kısa süreye sığdırdığı olaylar, mekânla iyi bir şekilde örgülenmiş olarak verilmektedir. Eserlerinde geçen olaydan çok olayın kahramanlarını ön plana çıkarmış ve böylece eserlerine bir acıklık kazandırmıştır. Bu konuda Aytaç şöyle düşünmektedir.

Romanlarında zaman ilkesini son derce ustalıkla değerlendiren yazar, ideal roman konusunun aslında bir dakikaya sığması gerektiğini söylemiştir. Daha ilk romanlarında bile konu birkaç günle inirlandırılmış, bu “Billard um halb zehn” de yirimi dört saate, “Ansichten eines Clowns” da üç buçuk saate indirgenmiştir (Aytaç, 1983: 427).

Heinrich Böll, sert bir Katolik terbiye ile büyüdüğü için, eserlerinde kilise ile ilgili bölümleri görmek olasıdır. Ayrıca din adamlarının Nazi Almanya’sında ayrıcalıklı olarak yaşamaları ve insanlığı hizmet yerine kendilerini koruma altına almalarına karşı eleştirel bir tutum sergilemektedir. Böll’ün eserlerinde politikaya sığınan din adamlarını, çıkar gruplarını, çok çabuk düzene ayak uyduran insan tipleri abartılı bir alay ifadesiyle anlatılmaktadır. Böll’ün eserlerinin kahramanları sıradan ve basit yaşayan insanlardır. Eserlerinde ki anlatım dili de basit ve sadedir. Zaman zaman dil olarak, mekân olarak seçtiği ve yaşadığı şehir Köln şivesini kullanmaktadır. Heinrich Böll’ün Aldığı ödüller, eserleri aşağıdaki gibidir.

Aldığı Ödüller

1951 Gruppe 47 Edebiyat Ödülü (Die schwarzen Schafe adlı yapıtıyla), 1953 Alman Eleştirmenler Ödülü (Deutscher Kritikerpreis), 1958 Wuppertal Şehri Eduard von der Heydt Kültür Ödülü (Eduard von der Heydt- der Stadt Wuppertal), 1967 Georg Büchner Ödülü (bütün edebiyat yapıtları için), 1972 Nobel Edebiyat Ödülü, 1974 Carl von Ossietzky Madalyası, 1982 Köln Şehri Onursal Vatandaşı

Eserleri

1949 - Trenin Tam Saatiydi (Der Zug war pünktlich), 1951 - Âdemoğlu Neredeydin? (Wo warst du, Adam?), 1954 - Ve O Hiçbir Şey Demedi (Und sagte kein einziges Wort), 1954 - Babasız Evler (Haus ohne Hüter), 1955 - İlk Yılların Ekmeği (Das Brot der frühen Jahre), 1957 - İrlanda Güncesi (Irisches Tagebuch), 1959 - Dokuz Buçukta Bilardo (Billard um halbzehn), 1962 - Savaş Çıktığında (Als der Krieg ausbrach) ve Savaş Bitince (Als der Krieg zu Ende war), 1963 - Palyaço (Ansichten eines Clowns), 1966 - Bir Görev Seyahatının Sonu (Ende einer Dienstreise), 1971 - Fotoğrafta Kadın da Vardı (Gruppenbild mit Dame), 1974 - Katharina Blum'un Çiğnenen Onuru (Die verlorene Ehre der Katharina Blum), 1985 - Dört Oğluma Mektup ya da Dört Bisiklet (Brief an meine vier Söhne oder vier Fahrräder), 1992 - Melek Sustu (Der Engel schwieg), 1995 - Solgun Köpek (Der blasse Hund) (tr.wikipedia.org).

Ayrıca merkezi Almanya’da bulunan ve Türkiye’nin İstanbul kentinde şubesi olan **Heinrich Böll Stiftung Derneği** adında bir sivil toplum kuruluşu vardır.

3. ALMAN EDEBİYATINDA SAVAŞ SONRASI YIKINTI EDEBİYATI

Yıkıntı edebiyatı (Trümmerliteratur), II. Dünya Savaşından hemen sonra başlayan ve savaşın etkilediği toplumların savaş travmasını atlatana kadar süren edebiyat akımıdır. O dönem edebiyatın konularını, savaşın toplumlar üzerindeki yıkıcı etkisi oluşturmuştur. Bu edebiyat akımının yazarları, genellikle Nazi Almanya’sından kaçan ve savaşın bitmesiyle birlikte vatanlarına geri dönen ve toplama kamplarında tutulan yazarlardı. Savaş sonrası Alman edebiyatı, “Trümmerliteratur, Kahlschlagliteratur veya Stunde Null” gibi değişik adlar şeklinde tanımlanmıştır. Ancak tüm hepsinde de konular aynıdır. Savaşın etkilediği insanların yaşamlarından kesitler yansıtılmıştır. Yapılan edebiyat, sade ve abartısız bir dille anlatılmış, savaşın açtığı derin toplumsal yaralar nedeniyle süslü sözlerden kaçınılmıştır. Yıkıntı edebiyatının en önemli konuları şu şekilde verilmektedir.

Hayat öylesine zorlu, hayal kurmaya ayrılacak zaman ve olanak o kadar azdır ki, yazar ve şairler gerçekçi bir dil kullanarak abartı ve süslü laflardan kaçınmışlardır. Ölüm, yıkım, savaştan dönüş, savaşın parçaladığı aileler, esaret ve yeniden inşa konuları oldukça gerçekçi bir şekilde anlatılmıştır. Bu dönemin edebiyatçıları, faşizm dönemini sürgünde geçirerek ülkesine geri

dönerler, faşizm dönemini ülke içinde tecritte geçirenler ve savaş sonrası ilk eserlerini ortaya koyan genç yazarlar olarak gözlemleyebiliyoruz. Parçalanmış Almanya'daki yaşamın, savaş zamanında yaşananların anlatıldığı eserlerde politik konulara değinilmemeye gösterilen itina ise dikkat çekmektedir (yenihayat.de).

Nazi döneminde Almanya'yı terk eden yazarlar ve Almanya'da kalıp yaşanan olumsuzluklara sesiz kalan yazarlar savaş sonrası Nazi döneminin eleştirisini yapmaya başlamıştır. Özellikle Berthold Brecht ve Heinrich Böll, savaş döneminin toplumsal felaketlerini ve savaş dönemi insanın karakteristiğini edebiyata yansıtmışlar ve Almanya'nın her iki blokunda da çok sık okunan yazar olmuşlardır. Nürnberg'li bu konuda şöyle düşünmektedir.

1945 Alman edebiyatı için yeni bir gelişme başlangıcı olsa da, sanatsal düşünce olarak yeni bir gelişme dönemi olmadığı sonraki zamanlarda görülmüştür. Edebiyatta 1933 den beri açıkça yapılan bölünmüşlüğün savaş sonrası siyasi görünümüdür. Milliyetçi sosyalistler iktidara geldiklerinde, dünya görüşleri zıtlık gösteren yazarlarla bağlantı kurulamayacak şekilde edebiyata değil her alanda bir ayırım olmuştur. Hitler döneminin sona ermesiyle birlikte ayrılmış edebiyatın tekrar tesisi için, 1945'den sonra yeni bir anlayış ve kültürel çizgiye çekmeyi olanaklı hale getirecek koşullar oluşmuştur (Nürnberger, 1995:347).

Trümmerliteratur' (YıkıntıEdebiyatı) konusunda ise en net açıklamayı dönemin en iyi anlatıcılarından Heinrich Böll yapmıştır: "Bizim nesil yazarlarının 1945'ten sonraki çalışmaları 'Trümmerliteratur' olarak tanımlandı. Buna bir itirazımız olamazdı, çünkü bu haklı bir tanımlamaydı. Bizim yazdığımız insanlar yıkıntıların içinde yaşıyorlardı. Bunlar savaştan çıkmış kadınların ve erkeklerin ve de çocukların aynı ölçüde zarar gördükleri insanlardı. Bu insanlar keskin gözlüydüler. Görüyorlardı. Hiçbir zaman tam bir barış içinde değillerdi. Çevrelerinde buldukları yerlerde ve yanlarındaki hiçbir şey iç açıcı değildi. Ve yazar olarak bizler kendimizi onlara yakın hissediyorduk. Çünkü biz onlarla özdeştik. Karaborsacılarla ve karaborsacıların kurbanlarıyla, kaçaklarla ve herhangi bir şekilde yurtsuz evsiz kalmışlarla ve her şeyden önce bizim ait olduğumuz ve büyük bölümünün gerçekten dikkate değer bir durum içinde bulunduğu nesille özdeştik. Bu nesil yurda dönüyordu. Bu, biteceğine pek az kişinin inanabildiği bir savaştan yurda dönüşü. Yani biz savaşı, yurda dönüşü, savaştan gördüklerimizi ve yurda döndüğümüzde karşılaştıklarımızı, kısacası yıkıntıları yazdık. Bu da bu genç edebiyata ait olan 'savaş' 'yurda dönüş' ve 'yıkıntı edebiyatı' gibi kavramları ortaya çıkardı."

Yıkıntı edebiyatı (Trümmerliteratur), gerçeği olduğu gibi aktararak gelecek kuşağa savaşın ve nedenlerinin olumsuz yönlerini göstermeyi amaçlamıştır. Savaş sonrası insanın ruh halini yansıtan eserler kaynağını savaştan alan eserler yazılmıştır. O dönemlerde Alman edebiyatını etkileyen farklı dünya görüşleri ve edebiyat akımları (Marksizm, varoluşçuluk, psikanaliz, ekspresyonizm ve sürrealizm) olmuştur. Konu seçimi genelde tabu kabul edilen, üzerinde konuşulamayan konulara yönelmiştir. Bu anlamda Aytaç düşüncelerini şöyle ifade etmektedir.

Savaşı yaşamış olanların eserleri organik bir gelişimden değil, bir felaketten, savaştan kaynağını alma eserlerdir. Ve yazarları çoğu kez etrafına bakınmaya, karşılaştırmalar yapmaya, özümlemeye fırsat bulamamış kişilerdir. O yüzden gerçekçi ve şüpheli tonda yazmışlar, romantizme ve kahramanlık havasına kapılmamışlardır (Aytaç, 2012:360).

Yıkıntı edebiyatının Almanya dışında örnek aldığı edebiyat türleri; Amerikan kısa öyküleri ve bunların özlü, basit olanlardır. Ernest Hemingway, John Steinbeck ve William Faulkner'in eserleri Yıkıntı Edebiyatına örnek gösterilmektedir. Yine o dönemin bazı varoluşçuluk ve direniş yelpazesinden ideolojik olarak Fransız Jean Anouilh, Jean-Paul Sartre, Albert Camus ve İtalyanlar Elio Vittorini ve Ignazio Silone gibi yazarlar "Yıkıntı Edebiyatı" için etkili olmuştur. Yıkıntı Edebiyatı yazarlarının örnek aldığı diğer yazarlar, Arthur Koestler ve Gustav Regulator gibi sol görüşlü Alman göçmenlerdi. Yıkıntı Edebiyatı, Almanya'nın giderek zenginleşmesiyle, şehirler inşa edildiğinde ve savaşın dehşetinin arka planda kaybolmasıyla sona ermiştir.

4. ESERİN İÇERİK AÇISINDAN KISACA DEĞERLENDİRİLMESİ

Heinrich Böll, “Ve Tek Bir Kelime Söylemedi” romanda geçen olayları kesin tarihler (30 Eylül ile 2 Ekim 1950) vererek anlatmıştır. Fred Bogner, eşi Käte ve üç çocuğunun savaş sonrası yaşamlarından bir kesitin verildiği roman, o dönemin bir aynası gibidir. Romanda savaşın geride bıraktığı kötü etkileri unutmak isteyen ve sürekli alkol alan bir baba, zor koşullarda ayakta kalmaya çalışan sabırlı bir anne ve yıkıntıların arasında yeşeren yeni yaşam umudu çocuklar biçiminde verilen bir ailenin iki hafta sonunu kapsayan dramatik yaşam mücadelesi anlatılmaktadır. Romanın temelinde, nerdeyse tüm binalar yıkıldığı için konut sorunu bulunmaktadır. Eser 13 bölümden oluşmaktadır. Olayların monolog şeklinde bir anlatımı olan eserde, anlatım bazen kadının bazen de kocasının ağzından aktarılmıştır. Heinrich Böll’ün romanında olayların kısaca gelişimi şu şekildedir.

Fred bir kilise idaresinin telefon operetörü olarak çalışmakta ve ara da bir ders vermektedir. Karısı Kaete ise, arada bir temizlik işi bulduğunda çalışmaktaydı. Savaşın ve sonrasında ağır yükünü içerek unutmak isteyen ve alkolik olduğu için, kilise aracılığı ile yapılan ev dağıtımın da kendine haksızlık yapılan Fred ve ailesi, ancak bir papaza ait tek odalı odada barınabilmişlerdir. Papazın diğer yerel din adamlarıyla çok iyi ilişkileri çok iyidir. Kendisi oldukça titiz karısı ise çok sinirlidir. Ses yalıtımı olmaya bir odada neredeyse tüm komşularının uyku esnasında çıkardıkları sesleri bile duyabiliyorlardı. Çocukların çıkardıkları sesler nedeniyle, papazın karısı tarafından sessiz olmaları için sık sık uyarılmaktadırlar. Üç çocuklu Bogner ailesi, tek odalı evlerinde gürültü nedeniyle zorbalığa maruz kalmaktadırlar. Savaş sendromu yaşadığı için alkolik olan, ancak karısını ve çocuklarını her şeyden çok seven Fred, bu nedenle şiddette başvurmaktadır.

Gün geçtikçe tek odalı evde daha da gerginleşen ve gürültü nedeniyle ortaya çıkan olayları kontrol edemeyen Fred, çocuklarına karşı uyguladığı şiddetin artması üzerine evi terk eder. Bu kaçış aslında tek odalı evde yaşamaktan bir kaçıştır. Fred, ev dışında gecelemeğe başlar. Bu süreçte alkol bağımlılığı devam etmekte ve çeşitli şans oyunları da oynamaktadır. Eşi Keate ile ev dışında sadece hafta sonları harabe otel odalarında görüşmeye başlar. Kazandığı parayı, alkol, şans oyunları ve lokantalarda yemeğe vermekte, geri kalan az bir miktarı da zarf içerisinde eşine vermektedir. Evliliklerini böyle ayakta tutmaya çalışan çift, önceleri, kiliseye gitmekte ve teselli bulmaya çalışmaktaydılar. Ama yaşadıkları sosyal kriz, gittikçe inanç krizi yaşamalarına da neden olmuştur.

Bogner çifti, en son ren nehri kenarında harabe bir otel odasında buluşmuş ve ailenin devam etmesi üzerine uzun konuşmalar yapmışlar. Bu konuşmadan sonra, o zamana kadar çok sabırlı davranan Keate, artık evliliği bitirmekten başka çare kalmadığını anlamıştır. Üstelik kendisi de hamiledir. Bu durumu anlayan Fred, ailesine geri dönmeyi ciddi şekilde düşünmeye başlamıştır (Böll.1953).

Roman, 1950’lerin başında okuyucuyu büyük bir şehre götürürken, ikinci Dünya Savaşı’ndan sonra kent sakinlerinde yaşanan evlilik sorunları, konut kıtlığı, yoksulluk ve kökensizliği konu almaktadır. Köln kentinde geçen olayların çok iyi bir betimlemesi yapılmış ve şehrin okuyucunun hayalinde tanınmasına kaynaklık etmiştir. O dönemin Köln kenti molozlar altında kalmış ve insanlar konut sıkıntısı çekmekteydiler. Köln kenti sakinleri savaşın üzerinden beş yıl geçmesine rağmen, romanda anlatıldığı gibi savaşın etkisini üzerinden atamayan pasif insan görünümü içerisinde verilmiştir.

5. SONUÇ

Savaş sonrası, yaşanan dramatik olayların edebiyata yansıtılması, insanın kendi eliyle yaptığı savaş gibi bir felaketin bir daha yaşanmaması açısından çok önemlidir. Savaşın yok ettiği yaşamlar, hayatta kalanların savaş süresince yaşanmamışlıkları, ekonomik krizlerin yaşanması, mesken sorunları, ailelerin dağılması, yalnızlık gibi sosyolojik ve psikolojik sorunların konu edildiği edebiyat ürünleri gelecekte dünya barışının inşa edilmesi için bir ışık niteliğinde olmuştur. Bunun en büyük kanıtı, savaşın sonunda yıkıntılar arasında var olma savaşı veren Alman halkı bugün dünyanın en büyük ekonomisine sahip olmasıdır.

Yazar Heinrich Böll bizzat kendisi savaşa katılmış ve savaşın tüm insanlık için yıkıcı etkilerini yaşamıştır. Bu nedenle, Alman halkının özellikle alt tabaka insanların savaş sonrası yaşadığı yoksulluk ve çaresizliğini

dile getirmiştir. Heinrich Böll, nerdeyse tüm eserlerinde Almanya'nın yıkılmış şehirlerinde yaşanan mesken sorunlarını, insanların yaşamlarını ne kadar olumsuz etkilediği konusuna yazmıştır. H. Böll, savaşın suçuz kahramanları olarak nitelediği çocukların o dönem yaşadıkları aile, din, ahlak gibi toplumsal sosyal kurumların yokluğu ve gerekliliği konularına değinmiştir.

Heinrich Böll'ün 1953'de yayınlanan "Ve Tek Bir Kelime Söylemedi" (Und sagte kein einziges Wort), eserin de savaş sonrası yıkılan bir şehirde konut sorunu yaşayan bir ailenin yaşamından hareketle; toplumsal kurumların (özellikle Kilisenin tutumu) tutumlarına yöneltilen bir eleştiri söz konusudur. Eserde savaşın edilgen hale getirdiği ve yaşamın zorluklarından kaçarak, tüm olumsuzlukları alkole sığınarak unutmaya çalışan bir babanın ailesine karşı tutumunun yanında, yaşam savaşında, sabırlı ve güçlü kadının bir aile için ne kadar önemli rol model olduğu vurgulanmıştır. Ayrıca Böll, bu eserinde zor koşullarda yaşanan olumsuzluklar nedeniyle, evlilikte yabancılaşma konusuna da değinmiştir.

Suç ve Vicdan

Öğr.Gör.Dr. Coşkun DOĞAN¹

¹Trakya Üniversitesi / Eğitim Fakültesi / Yabancı Diller Bölümü, coskundogan2002@yahoo.de,

ORCID: <https://orcid.org/0000-0002-6072-2721>

Özet: Suç insanlığın var oluşundan beri toplumsal bir sorun olarak her dönem de değişik şekillerde var olmuştur. Suç bütün toplumlarda sorun olmuştur. Suçun tamamen ortadan kaldırılması olası değildir. Ancak suçun topluma olan zararlarını en aza indirmek ve suçun gerçekleşmesini engellemek için önlemler alınabilir. Bu bağlamda toplumun sosyo-kültürel yapısını çok iyi tanımak gerekmektedir.

Küçük yerleşim bölgelerinde birincil derecede toplumsal ilişkiler önceliklidir. Bu nedenle toplumsal etkileşim bireylerin davranışları üzerinde oldukça etkilidir. Böylece toplumsal yaşam tarzları birbirine benzemektedir. Toplumda düzenin devam etmesi için toplumsal değerlere ve kurallara uyulması gerekmektedir. Aksi halde toplumun kabullenemeyeceği davranış şekilleri suç olarak ortaya çıkar.

Anette von Droste- Hülshoff'un "Yahudi Gürgeni (1842)" eserinde bir adamın toplumsal çevre, kalıtım ve kader örgüsü çerçevesinde işlediği cinayeti ve sonunda da cinayetin işlendiği yerde esrarengiz intiharı anlatılmaktadır. Toplumsal değerler uymayan davranışı nedeniyle suç işleyen bir adamın aklanmasına rağmen vicdani suçluluk nedeniyle, cinayetin sembolü olan ağaca kendini asarak ölümü tercih etmesi, hiçbir suçun cezasız kalmayacağı göstermektedir.

Bu çalışmada, suç ve vicdan olguları, bireyin davranışlarının olumlu veya olumsuz sonuçlarını gösteren bir toplumsal düzen aracı olarak incelenecektir. Eserde işlenen suçun kaynağının toplumsal çevre ve kalıtımın bir sonucu olduğu düşüncesinden hareketle, suçun bireyde nasıl bir vicdani bir sorumluluk oluşturduğu değerlendirilecektir. Suç ve vicdan arasında ilişki, "Yahudi Gürgeni" eseri ve yazarın yaşadığı dönem bağlamında nicel bir araştırma şeklinde kaynak tarama yapılarak betimleme yoluyla irdelenecektir.

Anahtar Kelimeler: Suç, Vicdan, Ceza

Crime and Conscience

Abstract: Crime as a social problem has existed in different forms in every period since the existence of humanity. Crime has been a problem in all societies. It is not possible to completely eradicate the crime. However, measures can be taken to minimize the damages of the crime to society and to prevent the crime from happening. In this context, it is necessary to know the socio-cultural structure of the society very well.

Social relations are of primary importance in small residential areas. Therefore, social interaction is very effective on the behavior of individuals. Thus, social lifestyles are similar. Social values and rules must be followed in order to maintain order in the society. Otherwise, behaviors that cannot be accepted by the society are revealed as crimes.

In Anette von Droste-Hülshoff's "Jewish Hornbeam (1842)", the murder of a man within the framework of the social environment, heredity and fate, and finally his mysterious suicide at the place where the murder was committed, is depicted. The fact that a man who commits a crime due to his behavior that does not comply with social values is acquitted, preferring death by hanging himself on the tree, which is the symbol of murder, due to conscientious guilt, shows that no crime will go unpunished.

In this study, the facts of crime and conscience will be examined as a social order tool that shows the positive or negative consequences of an individual's behavior. Based on the idea that the source of the crime committed in the work is a result of the social environment and heredity, it will be evaluated what kind of a conscientious responsibility the crime constitutes in the individual. The relationship between crime and conscience will be explored through a description of the literature in the form of a quantitative research in the context of the "Jewish Hornbeam" and the period in which the author lived.

Keywords: Crime, Conscience, Punishment

1. GİRİŞ

İnsanoğlu var olduğundan beri toplu bir yaşam sürdürmüştür. Aynı mekânda yaşayan, ortak çıkar ve değerler etrafında varlığını sürdüren insan topluluğu, belli bir düzen içerisinde olması gerekmektedir.

Her toplum düzenin oluşumunda belli kurallar vardır. Bu kurallar, toplum düzeninin bozulmaması ve her bireyin, toplum yaşamının temel haklarından faydalanabilmesi için bazı insan davranışlarını yasaklamaktadır. Bu anlamda toplum üye ve ya üyelerinin toplumun ortak düzenine ve kurallarına ters düşecek davranışlar sergilemesi suç sayılmaktadır. Kural dışı insan davranışı sayılan “suç”, dünyada her zaman ve her toplumda görülmüştür. Bireyleri, toplum tarafından onaylanmayan davranışlara iten nedenler oldukça çeşitlidir. Ancak bu nedenlerin değerlendirmesi toplumun yazılı veya yazılı olmayan kurallarıdır.

Her birey içerisinde yaşadığı toplumun bir yapı taşı ve toplumu oluşturmaktadır. Toplum birey ilişkisi açısından bakıldığında, karşılıklı olarak birbirlerine varlıkları için gereklidir. Bireyin, toplumun bir üyesi olabilmesi için, toplumun kültürünü, yaşam kurallarını öğrenmesi ve uygulaması gerekmektedir. Bu anlamda toplumsal etkileşim oldukça önemli rol oynamaktadır. Toplumsal etkileşimin küçük toplumlarda ve yerleşim bölgelerinde çok ön plana çıkmaktadır. Özellikle, toplum üyelerinin yaşamsal ihtiyaçlarını karşılama konusunda zorluklarla karşılaşmaları ve aynı mekânı paylaştıkları kültürel farklılıklara karşı önyargılı davranışların sergilenmesi, bazı bireyleri toplum kurallarına karşı suç sayılan olumsuz davranışlara itmektedir.

Bireyi toplumsallaştıran kurumlar aile, okul ve çevredir. Çevrenin bireyin tutumlarının oluşmasında büyük önemi vardır. Özellikle bazı kapalı toplumlar kendi yaşamsal koşulları çerçevesinde genel toplum düzenine uymayan kendilerine göre kurallar koyabilmektedir. Bu anlamda toplumsal çevreye bağlı olarak düzen dışı davranışlara eğilimi olan bireylerin suç oluşturan davranışları olmaktadır. Anette von Droste-Hülshoff’un Yahudi Gürgeni (Judenbuche, 1842)” eserinde, bir adamın toplumsal çevrenin böyle bir tutumunun sonucunda işlediği bir cinayet konu edilmektedir. Bu suçun temelinde kader ve kalıtım da söz konusudur.

Bireyin toplumsal kurallara uygun olmayan ve kendisinden beklenilmeyen hatalı bir davranış sergilediğini düşündüğünde, bir suçluluk duygusu içerisine girmektedir. Suçluluk duygusunu vicdan ile alakalıdır. Vicdan bireyin pişmanlığı ve kendine yönelttiği bir kızgınlık durumudur. Yahudi Gürgeni eserinde ana karakter, işlediği cinayetten yıllar sonra, cinayet yerine döner. Eserin kahramanı geçmişteki olumsuz eyleminden ötürü vicdan azabı çektiği için, kendi canına kıyarak özür dilemektedir.

2. ANETTE VON DROSTE- HÜLSHOFF’UN OTOBİYOGRAFİSİ, ESERLERİ VE EDEBİ YÖNÜ

Annette von Droste-Hülshoff 19. yüzyılda Alman dilinde şiir yazan en önemli şairlerden biridir. Ünü kendisinin ölümünden sonra duyulan kadın şair, çok dindar biridir. Çocukluğundan itibaren çok narin ve hassa bir kişiliğe sahip olan Annette von Droste Hülshoff’un eserlerinin temel kaynağını İncil oluşturmaktadır. Eserlerinde doğaya yönelik çok detaylı ve canlı betimlemeleri, kendisinin uzaklara yönelik özlemlerinin göstergesidir.

Annette von Droste-Hülshoff, 1797’de Münster yakınlarında babasına ait Hülshoff malikânesinde doğmuştur. Ailenin ikinci çocuğu olan Annette von Droste-Hülshoff, soylu bir aile geleneği çerçevesinde yetişmiş ve iyi bir Katolik eğitim almıştır. Ailenin edebiyata ve müziğe karşı olan ilgisi, Annette von Droste Hülshoff’u da yakından etkilemiştir. Çocukken o dönemin modern sayılan “kadınların eğitimi” konusunda pedagoji eğitimini Bernhard Overberg’den almıştır. Kardeşleri ile birlikte Fransız bir dadi tarafından eğitilen, Annette döneminin kızlarından daha iyi bir eğitim almıştır. Daha lise döneminde Latince, Yunanca, Fransızca, İngilizce dillerini bilmekte ve o dillerin edebiyat ürünlerini orijinal şekillerinde okumuştur. Ancak eserlerinin kaynaklarını hiçbir zaman antik edebiyata dayandırmamıştır. Bu konuda Aytaç şöyle demektedir.

Droste- Hülshoff, antik edebiyattan hiçbir şey almamıştır. Sanatının tek kaynağı, İncil’dir. Vicdan problemi, kendi kendini ahlaken kontrol eme eğilimi, onu Barok edebiyatına bağlar. Zaman zaman bir müzice ve kan edebiyatına sapışı, Katolik mistisizmle ilişkisini açığa vurur. Şairin çağdaşlarıyla ortak yönü azdır. Platen’in güzellik anlayışı, Lenau’un isyankar havası, Mörike’nin ahenk ve akılcılığı ondan çok uzaktır. Hiçbir zaman halk edebiyatına yaklaşmamıştır, ama şiirlerinde halkın batıl inançları önemli bir yer alır (Aytaç, 2012:293).

Annette von Droste- Hülshoff'un doğuştan itibaren sürekli sağlık sorunlarının olması, onun topumdan uzaklaşmasına ve yalnız bir yaşam sürdürmesine neden olmuştur. Özellikle 1826 'da babasının ölümünden sonra, annesi ve kız kardeşi Rüschaus'a taşınmıştır. Ölümüne kadar burada yaşamıştır. 1836'da kız kardeşinin evlenerek İsviçre'ye Bodensee'ye gitmiştir. Annette kız kardeşi hamile kalınca burada bir yıl süreyle kalmıştır. Rüschaus'a dönüşünde doğa gezintileri yapmış ve döneminin birçok ünlü yazar, şair ve müzik insanlarıyla çok yakın olmamakla birlikte tanışmıştır.

1842'ye kadar çoğu kez ziyaret ettiği Bonn'da August Wilhelm Schlegel ile de karşılaştı. Böylece Annette von Droste-Hülshoff Grimm Kardeşler gibi çağdaşlarıyla yazılı iletişime geçmiş oldu ama asla onu hemşire olarak yetiştirmek isteyen ailesinin isteklerinden kaçınmadı. Ama bu kendisini sürekli rahatsız ettiğinden ailesiyle ilişkilerini azaltma ve geçimini de yazarlığıyla kazanmak istediğinden dolayı da ailesiyle hiç görüşmeme kararını aldı (www.wikipedia.org).

Ailesinin hemşirelik mesleğini yapmasını çok istemesine rağmen Annette, şair olmaya yönelmiştir. Hatta Bonn'da arkadaş çevresi müzisyen ve şair olan Sibylle Mertens-Schaaffhausen ile arkadaşlık kurmuştur. 1841 yılında çok sevdiği Bodensee'ye eniştesinin yanına gitmiş ve Meersburg şatosunda kalmıştır. Eniştesi bir antika koleksiyoncusu, ortaçağ edebiyatı araştırmacı olması nedeniyle, kendisinin bir kütüphanesi vardır. Annettebu kütüphanede çalışan Levin Schücking'le sıkı bir duygusal dostluğu olmuştur. Ancak Levin Schücking başka bir kadınla evlenince Annette von Droste Hülshoff kendini aldatılmış hissetmiştir. Hem bu aşk acısına hem de yakalandığı ağır zatürreye dayanamayan Anett von Droste Hülshoff 24 Mayıs 1848 günü öğleden sonra Bodensee'deki Meersburg Şatosu'nda, vefat etmiştir. Annette von Droste Hülshoff'un eserleri şunlardır.

Gedichte, 1838 (Şiirler), Die Judenbuche, 1842 (Yahudi Kayını, Türü:Polisiye Roman), Westfälische Schilderungen, 1845 (Vestfalya Tasvirleri), Gedichte, 1844 (Şiirler), Das geistliche Jahr, 1818-1820 / 1839-1840 (Ruhani Sene), Der Knabe im Moor, (Bataklıktaki Oğlan, Türü: Balat), Letzte Gaben, (Son Hediyeler), Briefe von Annette von Droste-Hülshoff und Levin Schücking

3. ALMAN EDEBİYATINDA BIEDERMEIER DÖNEMİ

Biedermeier Dönemi olarak adlandırılan edebiyat akımı, Viyana Kongresi (1814/15) ile 1848 burjuva devrimi arasında yer almaktadır. Almanya'nın Napolyon'un önderliğinde ki Fransızlarla yaptığı savaşlardan sonra, edebiyatta da belli değişiklikler meydana gelmiştir. O dönme kadar edebiyat alanında varlıkların sürdüren Klasik ve Romantik dönemlerin aydınlanma hızı sona ermiştir. Toplumsal yapı içerisinde gelişen Burjuvazi, her ne kadar devlet yönetiminde olmasa da yerel bağlamda gelişmiş ve toplumsal bir kültür kendini göstermiştir. Toplumda görülen dönemin etkileri edebiyatı şekillendirmiştir. Toplumda görülen rahatlık etkisi, şehir kültürünü ve yaşam tarzını benimsenmesine yol açmıştır. Bu anlamda Aytaç şöyle söylemektedir.

Biedermeier devri burjuvası, mutlakiyet rejimini biraz olsun hafifletmek konusundaki mücadelelerin bir şey sağlamadığını, yorgunluk ve hayal kırıklığı içinde kendi rahatını düşünmekten başka çare olmadığını anlamıştır. Politik hayatta aktif rol oynamaktan, devlet işlerine karışmaktan çekilmek, Hegel'in daha sonra Rechts Hegelianer tarafından aktüel hale sokulan vatandaşlık görüşüyle belirlenmiş romantik anlayıştan uzaklaştırılmıştır (Aytaç, 2012: 261).

Biedermeier sözcüğünün ilk akla getirdiği, o dönem zayıf yönleridir. Güzel kavisli mobilyalarla, o sırada mumların yerini almaya başlayan ışık çemberi için yaratılan yuvarlak masa sohbetleri, çok güzel kıyafetler ve moda giyecekler, halkın katılımı festivaller, yapılan eğlenceler gibi rahatlığın sergilendiği toplumsal davranışlardır. Biedermeier döneminin, alçakgönüllülük, geçmişe değer vermek, görevi bilincinde olmak, sessiz şeylere bağlılık, aile kültürüne bağlı kalmak gibi olumlu yönleri de vardır. Yeniden yapılanma ve devrim dönemi edebiyatı olarak tanınan Biedermeier dönemiin edebiyatçıları Nürünberger şöyle belirtmektedir.

Biedermeier edebiyatı, burjuvazinin kültürünü yansıtır, ancak aynı zamanda zamanın iç gerilimlerini de açığa çıkarır. İddiasız olanlar, yıldızlı almanakların zarif ayetlerinin tadını çıkardı. Bunun üzerinde, bu dönemin büyük şairlerinin eserleri yükseldi. Grillparzer, Mörike, Droste-Hülshoff, Gotthelf ve Stifter da Biedermeier özellikleriyle tanımlanabilir (Nürünberger, 1985:180).

Biedermeier dönemi yazarları, gerçekliklere bağlıdır. Doğaya yönelişleri, insan ve doğa arasındaki ahengin yeniden sağlanmasını vurgulamaktadır. Geçmişe özlem duymalarının nedeni, Fransız savaşlarında yaşanan sefalettir. Özel yaşam dönüşle birlikte, esrareniz yaşamı olan kişilere ilgi duymayı beraberinde getirmiştir. Biedermeier döneminin yazarları daha çok idealizm ile gerçeklik arasında bir noktada bulunmalarıdır. İdealleri yok etmek yerine korumuşlar, gerçek yaşamın olumsuz yönünü de dile getirmişlerdir. Böylece insanları yaşama karşı mücadele etmekteyse, kendi özel yaşamına yönelip iç huzura kavuşmalarını sağlamak amaçlanmıştır. Aytaç Biedermeier döneminin sanatsal anlayışını şöyle ifade etmektedir.

Doğa edebiyatının yanı sıra geçmişe doğru bir bakış, hatıralar, çocukluk anıları, hayaller, sade bir hayata özlem, münzevilere, esrareniz yaşayışlı insanlara ilgi, Biedermeier'in başlıca konuları olmuştur. Ahenkli bir hayatı dile getirme amacı, bu şairlerin konularını sınırlamalarını gerektirmiş, bu nedenle ev, bahçe, aile gibi küçük çevreler ele alınmıştır (Aytaç, 2012:264).

Dönemin siyasi gelişmeleri nedeniyle bir belirsizlik içerisinde olan Biedermeier akımı yazar ve şairleri, genelde muhafazakâr yapıları ile tanınmaktadır. Özel yaşama kaçış şeklinde geriye çekilme ya da doğaya yöneliş bu dönemin edebiyatını şekillendirmiştir. Biedermeier dönemine paralel olarak çok liberal genç Almanya, (Das Junge Deutschland) ve radikal demokratların edebiyat akımı Vormærz dönemi de ortaya çıkmıştır. Her üç edebiyat akımı da dönemin siyasal gelişmelerinin beraberinde getirdiği olumsuz gelişmelerin sonucudur. Biedermeier'in sanatsal düşünceleri; özlem, melankoli ve istifa, yerine getirilmemiş dilekler, eski güzel günlerin yüceltilmesi (Fransız işgalinden önce) ve üzüntüdür. Eserlerinde bu duygu ve düşünceleri dile getiren dönemin önemli temsilcileri ise, Ferdinand Jakob Raimund, Franz Grillparzer, Karl Leberecht Immermann, Annette von Droste-Hülshoff, Jeremias Gotthelf, Johann Nestroy, Nikolaus Lenau, Eduard Mörike ve Adalbert Stifter'dir.

4. YAHUDİ GÜRGENİ (JUDENBUCH) ESERİNİN İÇERİK AÇISINDAN DEĞERLENDİRİLMESİ

Yazılı yasalar bazı olaylar karşısında yetersiz kalmaktadır. Ancak kamuoyunun oluşturduğu gelenek ve göreneklere uygun toplum içerisinde uygulanan örfi yasalar vardır. Bu eserde olduğu gibi, bazen yasalar herkes için geçerli olmayabilmekte, sadece toplumun alt tabakası için uygulanmaktadır. Eserde, ormanlık bir alanda kurulmuş köyün tüm halkı dindardır. Oramdan yapılan geyik ve ağaç hırsızlığına karşıdır. Buna rağmen tüm köy halkı hem geyik hem de odun hırsızlığı yapmaktadır. Eserde anlatılan olayın kahramanları Margreth Mergel ve erkek kardeşi Simon Semmler bunun en iyi örnekleridir. Cinayeti işlediği düşünülen Fridrich Mergel'in annesi olan Margreth, ormandan geyik ve odun çalmak kadar, Yahudilerden de hırsızlık yapılabileceğini çok normal karşılamaktadır. Margerth'in erkek kardeşi olan Simon dindar gibi davransa bile tüm kötülükleri yapabilecek eğilimde biridir. Örf ve adet yasalarının geçerli olduğu köyde, geri kalmışlığın tüm olumsuzlukları yaşanmaktadır.

Annette von Droste-Hülshoff, çocukluğunda annesinin akrabalarını ziyaret etmektedir. Bu ziyaretleri birinde amcasından 1818'de gerçekten yaşanan Yahudi tüccar Soistmann Berend olayını öğrenmiştir (www.wikipedia). Bir kumaş tüccarı olan Yahudi Soistmann Berend sattığı ve parasını almadığı kumaş için şikâyet ettiği ve ödemeye mahkûm edilen kişi tarafından ormanda, bir kayın ağacı üzerinde ölü olarak bulunmuştur. O bölgede yaşayan Yahudi topluluğu o ağacı satın alarak üzerine İbranice harflerle işaret kazımışlardır. Zanlı olaydan sonra kaçmış ve uzun süre köyüne geri dönmemiştir. Döndükten bir süre sonrada cinayeti itiraf etmiş ve bir gün sonra aynı ağaca kendini asarak intihar etmiştir. Bu olaydan esinlenen Annette von Droste-Hülshoff, Judenbuche eserinde bu konuyu işlemiştir.

Eserde yaşanan olayların akışında doğanın çok önemli rol oynadığı görülmektedir. Doğa hem olaylara tanık hem de yargıç olmuştur. Ayrıca yaşanan olaylar hep gece veya alaca karanlık gerçekleşmesi, doğanın gizemini ortaya koymaktadır. İnsanların dindar görünümü altında işledikleri suçlar, kendilerinin

iç adalet duygularını yitirdiklerini ve doğaya karşı işlenen suçlarsa doğa ile insan dengesini bozduğu görülmektedir. Küçük bir köy yaşamında olan bu çelişkilerin, işlenen cinayet sonrasında, esrarengiz sonla biten bir adamın sonunu getiren olay örgüsünün temelinde (Aytaç,2012) kalıtım, çevre ve kader yatmaktadır. Yahudi Gürgeni (Judenbuche) eseri Anette von Droste Hülshoff tarafından yazılan eserin kısaca özeti şu şekildedir.

Friedrich Mergel'in yaşamı henüz doğmadan belirlenmiştir. Friedrich'in annesi Margerth köyde yaşanan ekonomik zorluklardan ötürü geç evlenmek zorunda kalmıştır. Bir çoban olan ve ilk karısı daha düğün gecesi kaçarak ölen Hermann Mergel, Margreth Semmler'i ikinci karısı olarak almıştır. Bu durumu köy halkından saklamak isteyen Margerth, bazen oldukça acı çekmektedir. Alkolik olan kocası Hermann Mergel, bir kış gecesi ormanda sarhoş olarak donarak ölmüştür. Friedrich, babası öldüğünde dokuz yaşındadır. Annesi Margereth çaresiz kalmıştır. Friedrich bir süre inekleri otlatmıştır. Ancak ekonomik olarak bu gelir yeterli olmayınca, Dayısı Simon Friedrich'i evlat edinmiştir. Onu itibar sahibi yapmak için biraz para verir ve bazı yasal olmayan işlerin içine sokar. Simon'un Friedrich'e çok benzeyen bir gayri meşru bir oğlu vardır. Simon kimsenin bilmemesi için onu hizmetkârı olarak kullanmaktadır. Adı Johannes Niemand'dır. Domuz çobanlığı yapan, çok çekingen olan ve kimseyle konuşmayan biridir. Friedrich, Johannes Niemand'la tanışır.

Bu tanışmadan sonra mavi ceketliler adı verilen orman hırsızlarının eylemleri artmaya başlar. Hatta bir orman koruma memuru mavi ceketliler tarafından öldürür. Bu olay ile ilgili yargılanan ve her şeyi inkâr eden Friedrich, aslında kaçakçılara gözcülük yapmıştır. Kendini suç ortağı hissetmektedir. Dayısı Simon, Friedrich'i sesiz kalması konusunda uyarır. Friedrich, bir gece saat satıcısı Yahudi Aron'dan saat satın alır. Ancak parasını ödemez. Köyde bir gece yapılan bir düğün esnasında Yahudi Aron, herkesin önünde, Friedrich'in aldığı saatin parasını ödemediğini söyler. Biraz sonra Yahudi aron bir kayın ağacı altında ölü bulunur. Herkes Friedrich'in yaptığından şüphelenir. Friedrich tutuklanacağı esnada evin penceresinden atlayarak kaçır. Aynı anda kendisine çok benzeyen Johannes Niemand'da kaybolmuştur.

Aron'un Yahudi arkadaşları, cesedinin bulunduğu gürgen ağacını arazinin sahibinden satın alarak, ağacın üzerine İbranice olarak, "Bu yere yaklaşırsan sen de bana ettiğini bulursun" yazısını yazarlar. Uzun süre sonra köye geri dönen çok zayıflamış olarak görünen katil zanlısı Friedrich'i çektiği vicdan azabı, cinayeti işlediği yere götürür ve o ağaca kendini asarak intihar eder. Cesedi inceleyen bilirkişiler, cesedin boynundaki işaretten Friedrich Mergel'e ait olduğunu belirlerler (Von Droste Hülshoff,1842) .

Eserde gelişen tüm kötü olaylar orman ve kayın ağaçları üzerinden anlatılmıştır. Diğer bir durum ise, olayların gece olmasıdır. Aron'un cesedinin bulunduğu gürgen ağacının olduğu alan, eserde verilen kötü olayın sembolü durumuna getirilmiştir.

5. SONUÇ

İnsan davranışları, bireyin ailesinin kendisine aktardığı genlerin, çevresel etkenlerle biçimlenerek ortaya çıkmasıyla oluşmaktadır. Bireyin toplumsallaşmasında en büyük rol oynayan kurumların başında aile gelmektedir. Ailenin davranışsal tutumları, bireyin yaşamında karşılaşacağı olaylara vereceği tepkileri belirlemektedir. Bireyin toplumsallaşmasında diğer kurumlar çevre ve okul, bireyin toplumun bir üyesi olmasına ve davranışlarının toplum tarafından genel kabul görmesi konusunda kendisine yardımcı olmaktadır.

Küçük yerleşim birimlerinde toplumsal ilişkiler oldukça sıklıdır. Bu nedenle bireylerin davranışları birbirine çok benzemektedir. Ayrıca yazılı olmayan örfi yasalar ve din yaptırımları bireylerin tutumlarını çok etkilemektedir. Bireyin kendi özel yaşamını saklaması oldukça zordur. Doğanın insanlara sunduğu doğal kaynakların yasal olmayan kullanımı, sonrasında gelen cinayetler, doğa- insan dengesinin bozulduğuna işaret etmektedir. Ayrıca doğa sürekli alacakaranlık içerisinde gizemli bir şekilde anlatılması, sanki kötü olayların habercisi gibidir.

Yazar, eserinde suç ve vicdan ilişkisini, çevresel koşulların belirlediği toplumsal örf ve adetlerin, yazılı yasaların önüne geçtiği bir toplum yapısı üzerinden anlatmaktadır. Friedrich'in ebeynlerinin birlikteliği ile

başlayan sorunlar ve babasının ölümünden sonraki dayısı ile yaşantısı, onu çevresinin kurbanı hale getirmiştir. Ormandan odun hırsızlığının çok normal karşılandığı bir toplum içerisinde yetişen bireyin, odun hırsızlığına karşı tepki gösteren kişiler vereceği tepki çok normal karşılanacaktır. Yine annenin Yahudilere kaşı önyargılı bakışı, Friedrich'in saatin parasını ödememesine ve işlenen cinayetin sorumlusu haline getirmiştir. Ayrıca, eserde gerçekleştirilen olumsuz eylemleri, din olgusunu kullanarak olumlu bir eylem gibi gösterilmesi, Friedrich'in kaderini belirlemiştir.

Friedrich'in işlediği cinayet yerine yıllarca sonra geri dönerek, intihar etmesi, aslında kendisinin kendi içerisinde yaşadığı adalet duygusunun yerine getirilmesi ile alakalıdır. Ormanda işlenen cinayet olayında gözcülük yaptığı için yargılanan ve suçsuz bulunan Friedrich o zaman da vicdani olarak aynı duyguyu yaşamıştır. Aslında bilinmeyen diğer bir olay ise, Friedrich'e çok benzeyen ve cinayet gecesi ortadan kaybolan dayısının gayri meşru oğlu Johannes Niemand'a ne olduğudur. Sonuçta çevresinin bir kader kurbanı olan bireyin vicdani olarak kendini yargılaması ve işlediği cinayet nedeniyle adaletin yerini bulması açısından önemlidir. Toplumun geri kalmış yapısından kaynaklanan bireysel yasadışı eylemler vicdani de olsa cezasız kalmamıştır.

Özet: İnsanlık tarihini asırlardır derinden etkileyen yoksulluk kavramı, küreselleşmenin bir sonucu olarak ülkelerarası ve/veya ülke içindeki bölgesel kalkınma ve gelir eşitsizliğini artması ile tüm dünya ülkelerini endişelendiren bir sorun haline gelmiştir. Son yıllarda birçok uluslararası kuruluş ve sivil toplum örgütleri dünya yoksulluğunu azaltmak amacıyla çeşitli politikalar uygulamaya çalışmaktadır. Ayrıca bir ülke içindeki bölgeler arası yoksullukla mücadele etmek ve insani kalkınmışlığı sağlamak için çeşitli çalışmalar yapılmaktadır.

Devlet veya devletin görevlendirdiği kurumlar, kamu harcamalarını finanse etmesi yanında ülkenin içinde bulunduğu sosyoekonomik sorunların çözümünü için çeşitli önlemler almak amacıyla bireyler ve kurumlardan cebri yolla, karşılıksız ve parasal şekilde vergi toplamaktadır. Dolaylı vergiler, bir bireyin bir başkasına kolaylıkla yansıtılabildiği, verginin vergi mükellefine hissettirilmeden vergi mükellefinden alınabildiği, vergi konusu ve kaynağı bakımından sürekli olmayan bir vergi türüdür. Dolaylı vergiler özellikle tüketim ve üretim üzerinden alınan vergilerdir.

Bu çalışma gelişmekte olan ülkeler örneğine ilişkin 1990-2018 yıllarını kapsayan dengesiz panel veri seti kullanarak dolaylı vergilerin insani kalkınmışlık ve yoksulluk üzerindeki etkisini analiz etmektedir. Bu amaca yönelik olarak oluşturulan basit ve çoklu ülke spesifik sabit ve rastsal etki modelleri arasında tercih Hausman testine dayalı olarak gerçekleştirilmiştir.

Üç farklı dolaylı vergi türü kullanılarak yapılan basit ve çoklu regresyon analizi sonuçlarına göre, dolaylı vergiler ile yoksulluk arasında pozitif yönlü ve istatistiksel olarak anlamlı bir ilişki görülmüştür. Bir başka ifade ile gelişmekte olan ülkelerde dolaylı vergilerdeki artış yoksulluğu arttırmakta ve insani kalkınmışlığı azaltmaktadır.

Anahtar Kelimeler: Dolaylı Vergiler, Yoksulluk, İnsani Kalkınmışlık, Panel Veri Analizi.

Abstract: The concept of poverty, which has deeply affected human history for centuries, has become a problem that worries all countries of the world with increasing regional development and income inequality across countries and/or within countries as a result of globalization. In recent years, many international organizations and non-governmental organizations have been trying to implement various policies to reduce poverty in the world. In addition, various efforts are being carried out to combat interregional poverty within a country and to ensure human development.

The state or the institutions appointed by the state collect taxes from individuals and institutions by compulsory, gratuitous, and monetary means to take various measures to solve the socio-economic problems of the country as well as to finance public expenditures. Indirect taxes are a type of tax that can be easily reflected by an individual to another, and the tax can be collected from the taxpayer without being noticed by the taxpayer, and which is not continuous in terms of tax subject and source. Indirect taxes are taxes levied, especially on consumption and production.

This study analyzes the impact of indirect taxes on human development and poverty using an unbalanced panel data set covering the years 1990-2018 on a sample of developing countries. The choice between simple and multi-country specific fixed and random effects models created for this purpose was based on the Hausman test.

According to the results of simple and multiple regression analysis using three different types of indirect taxes, a positive and statistically significant relationship was found between indirect taxes and poverty. In other words, the increase in indirect taxes in developing countries increases poverty and decreases human development.

Key Words: Indirect Taxes, Poverty, Human Development, Panel Data Analysis.

¹ Bu çalışma Bilecik Şeyh Edebali Üniversitesi Lisansüstü Eğitim Enstitüsü İktisat Anabilim Dalı öğrencisi Büşra Konuş'un ilgili anabilim dalında Prof. Dr. Cüneyt KOYUNCU danışmanlığında yürütmekte olduğu yüksek lisans tezinin bir bölümünden oluşmaktadır.

1. GİRİŞ

Yoksulluk, insanların beslenme, giyinme ve barınma gibi temel ihtiyaçlarının bir kısmını ya da tamamını karşılayamaması ve yaşamını devam ettirebilmesi için yeterli gelire sahip olamaması durumudur. Ancak yoksulluk, bireylerin gelir yoksulluğunun yanında eğitim, sağlık, altyapı gibi bireysel ve sosyal faktörlerden de yoksun olması özelliği ile ekonomik nedenlerin yanında sosyal, demografik, siyasal gibi çeşitli nedenlerden de etkilenmektedir.

Gereksinimlerin karşılanamaması ve içinde bulunulan toplumun refah seviyesine erişilememesi açısından mutlak ve göreceli yoksulluk olarak iki farklı yoksulluk tanımı ortaya çıkmaktadır (Arabacı, 2017: 152). Mutlak yoksulluk, "bireylerin temel ihtiyaçlarının karşılayamama durumu" iken göreceli yoksulluk "bireyin, içinde bulunulan toplumun ortalama refah düzeyinin altında kalması ve içinde bulunulan toplumun bireylerinin karşılaştırılması" nı ifade etmektedir. Dolayısıyla ülkeler arası karşılaştırma yapıldığında refah seviyesi düşük olan ülkeler, refah seviyesi yüksek olan ülkelere göre göreceli yoksuldur. Refah seviyesi düşük olan ülkelerin mutlak, kronik ve aşırı yoksulluk sorunları ile karşılaşabilmesi daha muhtemeldir. Ayrıca bir ülkede gelir eşitsizliğinin artması ve bir ülkenin bir bölgesinin çok gelişirken diğer bölgesinin gelişmemesi ülke içindeki göreceli yoksulluğu arttırmaktadır. Dahası yoksulluğunun gelişmiş ve az gelişmiş ülkeler ayrımı yapmadan tüm dünyayı etkisi altına alması zengin ve fakir ayrımının ciddi boyutlara ulaşması küresel eşitsizliğin artmasına neden olmaktadır. Küreselleşmenin zengin getireceği düşüncesinin aksine tüm dünyada yoksulluğa neden olmasının yanında önceden yoksul olmayıp bu süreçte uygulanan sosyal ve ekonomik politikalar nedeniyle işsiz kalan ve yoksullaşan yeni bir toplumun ortaya çıkmasına neden olmuştur (Dağdemir, 2013: 172).

Çok boyutlu ve karmaşık tanımlamalara sahip olan yoksulluk kavramı insani yoksulluğun tanımlaması ile farklı açılardan incelenme imkânı sunmaktadır. İnsani yoksulluk endeksinde; gelir düzeyi ölçümü yerine kısa bir yaşam, temel eğitim eksikliği ve kamu-özel kaynaklara erişim eksikliği gibi yoksulluğun en temel boyutlarının göstergeleri kullanılmaktadır (HDR, 1997: 5). Bireylerin iyi bir eğitim alması, sağlıklı ve uzun bir hayatı olması, bunların yanında asgari bir gelir sağlamaları sonucunda toplumun gelişiminde her insan sadece ekonomik alanda değil, insanın bulunduğu her alanda gelişim sağlayacaklardır.

Vergi, devlet ve devletin görevlendirdiği kurumların birey ve kurumlardan topladığı zorunlu, karşılıksız ve parasal ödemelerdir. Due (1967: 88) verginin devlet faaliyetlerinin finansmanı için şahıslardan talep edilen zorunlu ve karşılıksız ödemeler olarak temin edildiğini belirterek bu tanımı doğrulamaktadır. Eski toplumlarda halk tarafından devlet büyüklerine veya tapınaklara hediye olarak sunulan vergiler, günümüzde kamu gelirlerinin büyük bir bölümünü oluşturmakta; birey ve kurumlardan zorunlu olarak alınmaktadır. Dolaylı vergiler ise, vergiyi ödeyecek kişinin bir başka kişiye kolaylıkla yansıtılabildiği bir vergi türüdür. Dolaylı vergilerin dolaysız vergilere nazaran süresizdir ve geçicidir. Ayrıca vergi yükümlüsünün üzerine düşen vergi yükünü hissetmemesi veya ne kadar vergi ödeyeceğini bilmemesi durumu da dolaylı verginin özelliklerdendir.

İbni Haldun'un Mukaddime adlı eserinde hükümdarların kendi çıkarları doğrultusunda kamu harcamalarını arttırması, halktan çok fazla vergi almasına neden olmuş; dolayısıyla halkın ağır vergi yükü altında yoksullaşmasına ve halkın yoksullaşması ile devletlerin yıkılmasına neden olacağı belirtilmiştir (Pehlivan, 2010: 23). Halkın vergi yükü altında ezilmesi, vergiyi ödeyecek gücünün olmaması, hükümdarların keyfi harcamalarının sonucudur.

Yoksulluk; küreselleşme, gelir dağılımındaki eşitsizlik, enflasyon, işsizlik, ekonomik büyüme, ekonomik krizler, hızlı nüfus artışı gibi ekonomik, siyasal, sosyal ve demografik birçok nedeni içinde barındırmaktadır. Söz konusu nedenlerden ötürü ortaya çıkan yoksullukla mücadele etmek amacıyla çeşitli politikalar uygulanmaktadır. Yoksullukla mücadelede vergisel politikaların incelendiği bir çalışmada yoksulluk karşısında iyi planlanmış vergi kanunları, başarılı bir vergi idaresi ve kayıtdışılığın düşük olması durumunda yoksulluğun azalmasını sağlayabileceği belirtilmiş; vergi politikalarının gelir dağılımını azaltmak, çalışan kesimi yoksulluktan korumak ve istihdam alanı açmak gibi amaçları olduğu ileri sürülmüştür (Günaydın ve Yıldız, 2016: 90).

2. LİTERATÜR TARAMASI

Yoksulluk ve dolaylı vergiler ile ilgili çeşitli çalışmalar olmasına rağmen yoksulluk ile vergiler ilişkisini inceleyen doğrudan ekonometrik çalışmalara rastlanmamıştır. Ancak insani gelişme ve vergiler arasındaki ilişkiye dair çok az sayıda ekonometrik çalışmalara rastlanmıştır.

Şaşmaz ve Yayla (2018: 79) çalışmalarında AB geçiş ekonomilerinden 11 ülke için 2004-2015 yılları arasında dolaylı-dolaysız vergiler ve ekonomik büyüme ile insani gelişme arasındaki ilişkiyi incelemiştir. Bu çalışma sonucunda dolaysız vergilerden insani gelişmeye doğru tek yönlü ve insani gelişmeden ekonomik büyümeye doğru tek yönlü bir nedensellik ilişkisi ortaya çıkmıştır. Ayrıca dolaylı vergiler ile insani gelişme arasında çift yönlü bir nedensellik ilişkisi tespit edilmiştir.

Kızılkaya vd. (2015) çalışmalarında 1998-2007 döneminde 14 OECD ülkesi için vergilerin, devlet harcamalarının, gelirin ve altyapının (elektrik tüketiminin) insani gelişme üzerindeki etkisini incelemiştir. Bu çalışma sonucunda Panel FMOLS sonuçlarına göre vergiler insani kalkınma üzerinde olumsuz yönde, devlet harcamaları ve gelirleri olumlu yönde etkilemektedir. DOLS panel sonuçlarına göre devlet harcamalarının ve elektrik tüketiminin insani gelişme üzerinde olumlu yönde etkilemektedir. Ancak gelir ve vergi katsayıları istatistiksel olarak anlamlı değildir. Nedensellik testi sonuçları, uzun vadede vergilerden, devlet harcamalarına, elektrik tüketiminden ve gelirden insani gelişmeye, vergilerden, devlet harcamalarına, insani gelişme ve elektrik tüketiminden gelire nedensellik ilişkileri olduğunu göstermiştir.

Dronca (2016) çalışmasında, Avrupa Birliği üyesi 28 devlet için 1999-2010 döneminde mali özgürlük, hükümet etkinliği ve İnsani Gelişme Endeksi ile vergi kaçırma arasındaki ilişkiyi incelemiştir. Bu çalışmada mali özgürlük, hükümet etkinliği ve insani gelişme endeksi ile vergi kaçırma arasında negatif yönlü bir ilişki olduğu görülmüştür. Dolayısıyla mali özgürlük, hükümetin etkinliği ve insani gelişme değişkenlerindeki artışlar vergiden kaçırma azaltmaktadır.

Vergiler ile yoksulluk arasında dolaylı yoldan en çok araştırma ekonomik büyüme ve gelir eşitsizliği üzerinde yapılmıştır. Vergiler ile ekonomik büyüme ilişkisi, vergiler ile gelir eşitsizliği ilişkisi, yoksulluk ile ekonomik büyüme ilişkisi ve yoksulluk ile gelir eşitsizliği ile ilgili oldukça ampirik çalışma bulunmaktadır.

Topal (2017) çalışmasında 22 OECD ülkesi için 1971-2014 yılları arasında yatay kesit bağımlılığını dikkate alan panel nedensellik ve dinamik panel tahmin yöntemleri ile vergi yapısının uzun dönem ekonomik büyüme üzerine etkisini incelemiştir. Uzun dönem ekonomik büyüme üzerinde dolaylı vergilerin istatistiksel olarak pozitif, vergi yükü ile dolaysız vergilerin negatif etkisi olduğu sonucuna varılmıştır.

Kanca ve Bayrak (2019) çalışmalarında OECD ülkeleri için 1990-2017 yılları arasında panel veri analizi yöntemiyle dolaylı ve dolaysız vergilerin gelir dağılımına etkisini incelemiştir. Bu inceleme sonucunda dolaylı ve dolaysız vergiler ile Gini Katsayısı arasında istatistiksel olarak anlamlı ve pozitif bir ilişki bulunmuştur. OECD ülkelerindeki dolaylı ve dolaysız vergilerdeki artış, bu ülkelerin gelir dağılımını olumsuz yönde etkilemektedir.

Guiga ve Rejep (2012) çalışmalarında 1990-2005 dönemi için panel veri analizi kullanarak yoksulluk, büyüme ve eşitsizlik arasındaki ilişkiyi geliştirmekte olan 52 ülkenin konumlarına göre incelemiştir. Bu çalışma sonucunda kamu harcamalarının eğitim ve sağlık gibi sosyal sektörler için kullanılması ve kırsal nüfusun yaşam koşullarının iyileştirilmesi, ekonomik büyümeyi olumlu yönde etkilediği ve dolayısıyla eşitsizliği azaltabildiği sonucuna varılmıştır.

Ncube vd.(2014) çalışmalarında 1985-2009 yılları arası Orta Asya ve Kuzey Afrika ülkeleri için kesitsel zaman serisi verilerini kullanarak gelir eşitsizliğinin toplumsal kalkınma ve yoksulluk üzerine etkisini incelemiştir. Bu çalışma sonucunda gelir eşitsizliğinin bölgedeki büyümeyi azalttığını ve yoksulluğu artırdığı görülmektedir.

3. DATA VE METODOLOJİ

Dolaylı vergilerin insani kalkınmışlık ve yoksulluk üzerindeki etkisi incelenen bu çalışmada geliştirmekte olan ülkeler örnekleme ilişkin 1990-2018 yıllarını kapsayan dengesiz panel veri seti kullanılmıştır. Bu amaca yönelik olarak oluşturulan basit ve çoklu ülke spesifik sabit ve rastsal etki modelleri arasında

tercih Hausman testine dayalı olarak gerçekleştirilmiştir. Seçilen her vergi türü için basit ve çoklu regresyon modeline göre elde edilen tahmin sonuçları tablolaştırılmış ve yorumlanmıştır.

Modelde YOKSULLUK bağımlı değişkeni için en geniş veri tabanına sahip olan İnsani Gelişmişlik Endeksi (HDI) ele alınmıştır. İnsani Gelişmişlik Endeksi (HDI) verileri -1 ile çarpılarak en düşük değer ile en yüksek yoksulluk oranı, en yüksek değer ile en düşük yoksulluk oranı elde edilmiştir.

Tablo 1: Bağımlı Değişken Listesi

Değişken	Tanımı	Kaynak
YOKSULLUK	İnsani Gelişmişlik Endeksi (HDI) verilerinin -1 ile çarpılması sonucunda en düşük değer ile en yüksek yoksulluk oranı, en yüksek değer ile en düşük yoksulluk oranı elde edilmiştir.	http://hdr.undp.org/en/indicators/137506

Dolaylı vergiler ana değişkeni için üç farklı dolaylı vergi türü ele alınmıştır. DOLAYLI1 ana değişkeni için “Mal ve Hizmet üzerinden alınan diğer vergiler”, DOLAYLI2 ana değişkenleri için “Satış Vergileri” göstergelerine ulaşılmıştır. DOLAYLI3 değişkeni için “Mal ve Hizmetler Üzerinden Alınan Vergilerin (Cari LCU=Yerel Para Birimi)/Resmi Döviz Kuru (ABD Doları başına LCU, dönem ortalaması)] Vergi Gelirine (GSYİH’nin yüzdesi)/100)*GSYİH(Cari ABD Doları)] oranı” ele alınmıştır.

Tablo 2: Dolaylı Vergiler Ana Değişkeni Listesi

Tahmini sonuçları bölümünde dolaylı vergiler ile yoksulluk arasındaki ilişki basit ve çoklu regresyon sonuçlarına göre analiz edilmiştir. DOLAYLI1, DOLAYSIZ2 VE DOLAYSIZ3 için basit ve çoklu regresyon modeli uygulanmıştır.

•DOLAYLI1 için basit regresyon modelinde bağımlı değişken YOKSULLUK iken bağımsız değişken DOLAYLI1'dir. Çoklu regresyon modelinde bağımlı değişken YOKSULLUK iken modelin sağ tarafında DOLAYLI1 ana değişkenimizin yanında kontrol değişkenleri olarak ENFLASYON, İŞSİZLİK, SAĞLIK ve EĞİTİM değişkenleri kullanılmıştır.

•DOLAYLI2 için basit regresyon modelinde bağımlı değişken YOKSULLUK iken bağımsız değişken DOLAYLI2'dir. Çoklu regresyon modelinde Çoklu regresyon modelinde bağımlı değişken YOKSULLUK iken modelin sağ tarafında DOLAYLI2 ana değişkenimizin yanında kontrol değişkenleri olarak ENFLASYON, İŞSİZLİK, SAĞLIK ve EĞİTİM değişkenleri kullanılmıştır

•DOLAYLI3 için basit regresyon modelinde bağımlı değişken YOKSULLUK iken bağımsız değişken DOLAYLI3'dir. Çoklu regresyon modelinde bağımlı değişken YOKSULLUK iken modelin sağ tarafında DOLAYLI3 ana değişkenimizin yanında kontrol değişkenleri olarak ENFLASYON, İŞSİZLİK, SAĞLIK ve EĞİTİM değişkenleri kullanılmıştır.

3.1. Tahmin Sonuçları

Dolaylı vergiler ile yoksulluk arasındaki ampirik ilişkiyi irdelemek için oluşturulan basit ve çoklu ülke spesifik sabit etki (FEM) modellerinin görünümü aşağıdaki gibidir:

$$YOKSULLUK_{it}=\beta_{0i}+\beta_1DOLAYLI1+u_{it}$$

$$YOKSULLUK_{it}=\beta_{0i}+\beta_1DOLAYLI2+u_{it}$$

$$YOKSULLUK_{it}=\beta_{0i}+\beta_1DOLAYLI3+u_{it}$$

$$YOKSULLUK_{it}=\beta_{0i}+\beta_1DOLAYLI1+\beta_2ENFLASYON+\beta_3İŞSİZLİK+\beta_4SAĞLIK+\beta_5EĞİTİM+u_{it}$$

$$YOKSULLUK_{it}=\beta_{0i}+\beta_1DOLAYLI2+\beta_2ENFLASYON+\beta_3İŞSİZLİK+\beta_4SAĞLIK+\beta_5EĞİTİM+u_{it}$$

$$YOKSULLUK_{it}=\beta_{0i}+\beta_1DOLAYLI3+\beta_2ENFLASYON+\beta_3İŞSİZLİK+\beta_4SAĞLIK+\beta_5EĞİTİM+u_{it}$$

Dolaylı vergiler ile yoksulluk arasındaki ampirik ilişkiyi irdelemek için oluşturulan basit ve çoklu ülke spesifik rastsal etki (REM) modellerinin görünümü aşağıdaki gibidir:

$$YOKSULLUK_{it}=\beta_0+\beta_1DOLAYLI1+\epsilon_i+u_{it}$$

$$YOKSULLUK_{it}=\beta_0+\beta_1DOLAYLI2+\epsilon_i+u_{it}$$

$$YOKSULLUK_{it}=\beta_0+\beta_1DOLAYLI3+\epsilon_i+u_{it}$$

$$YOKSULLUK_{it}=\beta_0+\beta_1DOLAYLI1+\beta_2ENFLASYON+\beta_3İŞSİZLİK+\beta_4SAĞLIK+\beta_5EĞİTİM+\epsilon_i+u_{it}$$

$$YOKSULLUK_{it} = \beta_0 + \beta_1 DOLAYLI2 + \beta_2 ENFLASYON + \beta_3 İŞSİZLİK + \beta_4 SAĞLIK + \beta_5 EĞİTİM + \epsilon_i + u_{it}$$

$$YOKSULLUK_{it} = \beta_0 + \beta_1 DOLAYLI3 + \beta_2 ENFLASYON + \beta_3 İŞSİZLİK + \beta_4 SAĞLIK + \beta_5 EĞİTİM + \epsilon_i + u_{it}$$

Yukarıda ifade edilen *it* alt indisi *i.nci* ülkenin *t* yılındaki ilgili değişkene ait almış olduğu gözlem değerini; β_{0i} FEM modeline ait ülke spesifik sabit etkiyi; β_0 REM modeline ait sabit terimi; ϵ_i zamanlar arası aynı kalan fakat ülkeler arası değişen ülke spesifik rastsal etkiyi; u_{it} ise regresyon modelinin hata terimini ifade etmektedir.

Tablo 4 dolaylı vergileri temsilen kullanılan DOLAYLI1 değişkeninin yoksulluk üzerindeki etkisini inceleyen basit regresyon modeli tahmin sonuçlarını vermektedir. %5 anlamlılık düzeyinde gerçekleştirilen Hausman test sonuçlarına göre en uygun model REM modeli seçilmiş ve bundan dolayı yorumlar REM modeline göre yapılacaktır. DOLAYLI1 değişkenine ait katsayı pozitif değer almakta ve istatistiksel olarak anlamlıdır. Tahmin sonuçlarına göre dolaylı vergilerdeki artış yoksulluğu arttırmakta ve insani gelişmişliği azaltmaktadır. Modelin açıklama gücünü yansıtan R-kare değeri 0.0097'tür. F-testi sonuçları da modelin bir bütün olarak anlamlı olduğunu göstermektedir.

Tablo 4: DOLAYLI1 için Basit Regresyon Sonuçları

Değişken	FEM Modeli		REM Modeli	
	Katsayı	P-değeri	Katsayı	P-değeri
C	-0.7098	0.0000	-0.6896	0.0000

Seçilen Model	REM		REM	

Tablo 5 dolaylı vergileri temsilen kullanılan DOLAYLI1 değişkeninin yoksulluk üzerindeki etkisini inceleyen çoklu regresyon modeli tahmin sonuçlarını vermektedir. %5 anlamlılık düzeyinde gerçekleştirilen Hausman test sonuçlarına göre en uygun model olarak REM modeli seçilmiştir ve bundan dolayı yorumlar REM modeli sonuçlarına göre yapılacaktır. DOLAYLI1 değişkenine ait katsayı pozitif işaret almakta ve istatistiksel olarak anlamlıdır. Diğer bir ifade ile dolaylı vergilerdeki artış yoksulluğu arttırmakta ve dolayısıyla da insani kalkınmışlığı azaltmaktadır. ENFLASYON, İŞSİZLİK, SAĞLIK, EĞİTİM kontrol değişkenlerinin her biri istatistiksel olarak anlamlıdır. Tahmin sonuçlarına göre ENFLASYON ve İŞSİZLİK değişkenlerindeki artış YOKSULLUK değişkeni üzerinde artırıcı etkiye sahip iken SAĞLIK ve EĞİTİM değişkenlerindeki artış YOKSULLUK değişkeni üzerinde azaltıcı etkiye sahiptir. Modelin açıklama gücünü yansıtan R-kare 0.7393 olup, R-kare değerine göre DOLAYLI1, ENFLASYON, İŞSİZLİK, SAĞLIK, EĞİTİM değişkenlerinden oluşan bağımsız değişkenlerin tamamının YOKSULLUK değişkenindeki toplam değişimin %73'lük kısmını açıkladığı, geriye kalan %27'lik kısmını ise bu beş değişkenin dışındaki unsurlar tarafından açıklandığını göstermektedir. F-testi sonuçlarına göre modelin bir bütün olarak anlamlı olduğunu görülmektedir.

Tablo 6 dolaylı vergileri temsilen kullanılan DOLAYLI2 değişkeninin yoksulluk üzerindeki etkisini inceleyen basit regresyon modeli tahmin sonuçlarını vermektedir. %5 anlamlılık düzeyinde gerçekleştirilen Hausman test sonuçlarına göre en uygun model FEM modeli seçilmiştir ve dolayısıyla yorumlar FEM modeli sonuçlarına göre yapılacaktır. DOLAYLI2 değişkenine ait katsayı pozitif değer almakta ve istatistiksel olarak anlamlıdır. Tahmin sonuçlarına göre dolaylı vergilerdeki artış yoksulluğu arttırmakta ve insani gelişmişliği azaltmaktadır. Modelin açıklama gücünü yansıtan R-kare değeri 0.9089 olup bu değer DOLAYLI2 değişkeninin YOKSULLUK değişkeni üzerinde oldukça yüksek bir açıklama gücüne sahip olduğunu yansıtmaktadır. F-testi sonuçları da modelin bir bütün olarak anlamlı olduğunu göstermektedir.

4. SONUÇ

Kamu harcamalarını finanse etmek ve ülkenin sosyal, ekonomik sorunlarına çözümler üretmek amacıyla alınan ve kamu gelirlerinin büyük bir bölümüne sahip vergiler, belli oranlarda ve belli durumlarda sürekli veya geçici olarak birey ve kurumlardan alınmaktadır. Yoksulluğu azaltmak ve insani kalkınmışlığı arttırmak amacıyla devletin vergi toplaması söz konusudur. Ancak verginin türü, oranı ve kaynağı ne olursa olsun birey ve kurumlar üzerinde ağır bir yük oluşturmamalıdır. Gelişmekte olan ülkeler örneğine ilişkin 1990-2018 yıllarını kapsayan bu çalışmada dengesiz panel veri seti kullanarak dolaylı vergilerin insani kalkınmışlık ve yoksulluk üzerindeki etkisini analiz edilmiştir. Üç farklı dolaylı vergi türü kullanılarak yapılan basit ve çoklu regresyon analizi sonuçlarına göre, dolaylı vergiler ile yoksulluk arasında pozitif yönlü ve istatistiksel olarak anlamlı bir ilişki görülmüştür. Bu gelişmekte olan ülkelerde dolaylı vergilerdeki artış yoksulluğu arttırmakta ve insani kalkınmışlığı azaltmaktadır. Söz konusu ülkelerde yoksulluğu azaltmak ve insani kalkınmışlığı arttırmak için dolaylı vergilerin toplanması yerine yansıtılması zor, gelir ve harcama üzerinden alınan vergiler gibi konusu ile kaynağı sürekli ve vergi yükümlüsü önceden belli olan dolaysız vergilerin toplanması tercih edilebilir.

Özet: Türkiye'ye ve özellikle Trakya Bölgesine gelen yabancı turist hareketliliği incelendiğinde, Balkan ülkelerinden gelen turistlerin yoğunlukta olduğu görülmektedir. Bu noktada özellikle Edirne'nin doğa ve tarihi güzellikleri, soyut ve somut kültür mirası ve gastronomideki zenginliği yabancı turistleri bu bölgeye çekmektedir. Bunun yanında son zamanlarda Balkan ülkelerindeki para birimlerine karşı Türk lirasının değer kaybetmesi, bu ülkelerde yaşayan vatandaşlar için Edirne'yi cazibe merkezi haline getirmekte, özellikle günübirlik turistlerin sayısını artırmaktadır. Bu artış Edirne'deki ekonomik ve sosyo-kültürel hayatı etkilemekte ve çevresel değişimler meydana getirmektedir. Bu kapsamda çalışmanın amacı, Edirne'de yaşayan bireylerin Balkan ülkelerinden gelen turistlere karşı bakış açısını belirlemektir. Çalışma kapsamında Edirne merkezde ikamet eden 204 kişiye yüz yüze anket yöntemi yoluyla ulaşılarak veriler elde edilmiştir. Ankete katılan bireylerin demografik özellikleri ve anketteki sorulara verdikleri yanıtlar yüzde ve frekans olarak belirlenmiş, ayrıca bireylerin Balkan ülkelerinden gelen turistleri algılama düzeyleri, demografik değişkenler bakımından t Testi ve Anova testleri ile analiz edilmiştir.

Abstract: When examining the mobility of foreign tourists coming to the Turkey and especially Thrace region, it is seen that the density of tourists from Balkan countries. At this point, the natural and historical beauties of Edirne, its intangible and tangible cultural heritage and its richness in gastronomy attract foreign tourists to this region. In addition, the depreciation of the Turkish lira against the currencies of the Balkan countries has made Edirne a center of attraction for the citizens living in these countries and it increases the number of day tourists. This increase affects the economic and socio-cultural life in Edirne and creates environmental changes. In this context, the aim of this study is to determine the perspective of individuals living in Edirne towards tourists from Balkan countries. 204 people living in the center of Edirne were reached through face-to-face survey method. The demographic characteristics of the surveyed individuals and their answers to the questions in the questionnaire were given as percentage and frequency, in addition the perception levels of the individuals living in Edirne to tourists from the Balkan countries were analyzed with t test and Anova in terms of demographic variables.

Key Words: Tourism, Resident's Perception, Tourism impacts, Edirne, Balkan Countries

1. GİRİŞ

Turizmin sürdürülebilir gelişimi noktasında yerel halkın bu sürecin ayrılmaz bir parçası olarak görülmeye başlanması, araştırmacı ve akademisyenlerin yerel halkın algılarını ve sektöre verdikleri desteği anlamaya büyük özen göstermeleri bu konu üzerine çok sayıda çalışma yapılmasını sağlamıştır (Nunkoo and Ramkisson, 2011: 964). Bu çalışmalar neticesinde, bölgedeki turizmin gelişmesine karşı yerel halkın birtakım olumlu ve olumsuz tepkiler sergileyebileceği görülmektedir. Örneğin, turizmin gelişmesi olumlu anlamda yerel halk için iş imkânlarının artmasına, bölgedeki iş bağlantılarının gelişmesine, bölgede yaşayanların yaşam standartlarının artmasına, anıtların ve arkeolojik bölgelerin korunmasına yardımcı

olmaktadır. Bunun yanında turizmin gelişmesi çevresel, ekonomik ve sosyo-kültürel alanlarda negatif etkiler oluşturabilmektedir. Özellikle turizmin hat safhaya ulaştığı dönemlerde, halka açık yerler ve eğlence yerleri tamamen dolabilmekte, trafik ve park sorunları yaşanabilmektedir. Ayrıca turizmdeki yoğunluk uyuşturucu ve alkol problemlerinin ortaya çıkmasına sebebiyet verebilmekte, hava ve çevre kirliliğinde artış meydana getirebilmektedir. Bu sebepler nedeniyle bölgede yaşayan insanlar turizme karşı negatif tutumlar sergileyebilmektedir (Almeida-García et al., 2016:259-260). Bunların yanında turizmin gelişmesi çevresel ve kültürel değerlerin korunmasına, tarihi eserlerin veya somut olmayan kültürel varlıkların daha titizlikle ele alınması, bölgedeki yolların ve tesislerin yenilenmesine ve rekreasyon fırsatlarının artmasına yardımcı olabilmektedir (Yoon et al., 2001: 365). Yerel halkın turizme ve turistlere karşı bakış açısı, yaklaşımları ve misafirperverliği turizmin gelişmesi ve sürdürülebilirliği ile oldukça ilgilidir (Gürsoy et al., 2002). Çünkü bölgede yaşayan insanların turistlere karşı hoş olmayan tavırlar sergilemeleri, turistleri o bölgeye tekrar gelmeleri konusunda isteksizliğe itecektir. Bunun aksine bölgede yaşayan insanların turistlere karşı misafirperver bir tutum sergilemeleri, turistleri memnun ederek bölgeye tekrar gelmelerine ve bölgede turizmin gelişmesine katkı sağlayacaktır. Özellikle turizm gibi hizmet sektörlerinde ağızdan ağıza pazarlamanın oldukça önemli olduğu düşünüldüğünde, ilgili destinasyondan memnun kalan turistlerin bu memnuniyetlerini yakın çevresine iletmeceklere düşünülmektedir. Bunun yanında olumsuz deneyimlerin diğer insanlarla paylaşılma ihtimalinin daha yüksek olduğu göz önüne alındığında, yerel halkın algı ve tutumlarının önemi daha da artmaktadır.

Edirne'nin önemli tarihi eserlere, önemli bir gastronomiye sahip olması ve Avrupa'dan Türkiye'ye geçiş noktasında bir "sınır şehri" olması, dönemsel olarak yabancı turistlerin özellikle Balkan ülkelerinden gelen turistlerin sayısının artmasına neden olmaktadır. Bu noktada, şehrin en önemli paydaşlarının yani yerel halkın turizmi ve turistleri nasıl algıladıkları ise oldukça önem arz etmektedir. Bu sebeple çalışmada, yerel halkın Edirne'ye Balkan ülkelerinden gelen turistlere karşı algılarının, onlarla yapılan yüz yüze anket yöntemi ile belirlenmesi amaçlanmıştır. Covid-19 pandemi süreci öncesini, yani 2019 yılının ikinci yarısı ile 2020 yılının ilk çeyreğini kapsayan dönemde gerçekleştirilen çalışmada, yerel halkın turistlere yönelik algıları incelenerek elde edilen sonuçlar hakkında önerilerde bulunulmuştur.

2. TURİZM MERKEZİ OLARAK EDİRNE

Edirne, Türkiye'nin Marmara Bölgesinin en batısında bulunan ilidir. Edirne'nin 2019 yılı itibarıyla nüfusu 413 bin kişi olup, merkez nüfusu ise yaklaşık 185 bindir (nufusu.com). Kuzeyinde Istranca Dağları, orta bölümünde Ergene Havzası, güneyinde dağ ve platolar ile Meriç Deltası bulunmaktadır. Ayrıca Edirne'de bulunan Meriç nehri Yunanistan ile sınır oluşturmakta; Tunca nehrinin bir kısmı ise Bulgaristan ile sınır oluşturmaktadır. Edirne, ülkemizin Avrupa'ya kara ve demiryolu ile bağlantısını sağlayan 5 sınır kapısına sahiptir. Kapıkule sınır kapısı, ülkemizin en büyük kara ve demiryolu sınır kapısıdır. Bulgaristan üzerinden Avrupa'ya açılan Kapıkule haricinde, Yunanistan ile Türkiye'yi birleştiren İpsala ve Pazarkule sınır kapıları mevcuttur. Ayrıca Uzunköprü'den yine Yunanistan'a giden demiryolu sınır kapısı mevcuttur (Edirne.bel.tr).

Edirne, 92 yıl boyunca Osmanlı İmparatorluğu'na başkentlik etmiş, pek çok kültürel ve tarihi eseri bünyesinde barındıran bir şehirdir. Anadolu ile Avrupa arasında bir köprü olması nedeniyle pek çok halkı içinde barındırarak çeşitli tarihi yapıları günümüze kadar korumuştur. Selimiye Camii 2011 yılında Dünya Kültür Mirası listesine dâhil edilmiştir. Ayrıca Eski (Ulu) Camii, Muradiye Camii, Üç Şerefeli Camii, Rüstempaşa Kervansarayı, Ali Paşa Kapalı Çarşısı, Selimiye Arastası, Deveci Hanı ve Bedesten gibi Osmanlı döneminden günümüze kalan pek çok esere sahiptir. Ayrıca Meriç ve Tunca Köprüleri ile Uzunköprü gibi tarihi köprüler günümüzde hizmetine devam etmektedir (edirne.ktb.gov.tr). Bunun yanında pek çok kilise ve havra gerekli restorasyonların yapılmasıyla günümüzde ayakta durabilmektedir. Edirne'nin sahip olduğu ve en çok turist çeken önemli eserlerinden birisi de "II. Beyazıt Külliyesi Sağlık Müzesi"dir. Ayrıca yaklaşık 660 yıldır devam eden "Kırkpınar Yağlı Güreşleri", "Kakava Şenlikleri" ve "Hidrellez Festivalleri" gibi kültürel miraslara ev sahipliği yapmaktadır. Turistlerin konaklama imkânları değerlendirildiğinde ise Edirne'de konaklama için 123 tesisin bulunduğu ve yatak kapasitesinin 8.311 olduğu görülmektedir (Kültür ve Turizm Bakanlığı, 2019).

Kültür ve Turizm Bakanlığı'nın "2019 Sınır İstatistikleri Yıllık Bülten" verilerine göre; 2019 yılında Türkiye'ye Edirne'deki sınır kapılarından giriş yapan ziyaretçilerin sayısı 4.348.565 kişidir. Türkiye'ye 2019

yılında yaklaşık olarak 51,7 milyon turist geldiği düşünüldüğünde, bunların yaklaşık %8,3'ünün Edirne'deki sınır kapılarından giriş yaptığı görülmektedir. Bu kişilerin milliyetlere göre dağılımı incelendiğinde; Balkan ülkelerinden gelen ziyaretçilerin sayısı yaklaşık 4 milyondur. Bu rakam çerçevesinde Edirne sınır kapılarından giren toplam ziyaretçilerin yaklaşık %92'sini balkan ülkelerinden gelen ziyaretçiler oluşturmaktadır. Afrika kökenli ziyaretçilerin oranı %0,4 iken Amerika kökenli ziyaretçilerin oranı %0,5, Asya kökenlilerin oranı %0,6, Avrupa'daki OECD ülke vatandaşlarının oranı ise %13'tür. Türkiye'ye en çok ziyaretçi gönderen ülkeler ise 7 milyon kişi ile Rusya, 5 milyon kişi ile Almanya ve 2,7 milyon kişi ile Bulgaristan'dır. Rapora göre Edirne sınır kapılarından geçen yabancı ziyaretçilerin sıralamasına bakıldığında; en çok ziyaretçinin 2.713.464 kişi ile Bulgar vatandaşların, ikinci sırada ise 570.419 kişi ile Yunan vatandaşların, üçüncü sırada 262.083 kişi ile Romanya vatandaşlarının, dördüncü sırada ise 154.099 kişi ile Kuzey Makedonya vatandaşlarının yer aldığı görülmektedir. Bu rakamlara göre Edirne'ye gelen turistlerin yaklaşık %62'sinin Bulgar vatandaşı olduğu, %13'ünün ise Yunan vatandaşı olduğu görülmektedir. Ayrıca rapora göre sınır kapılarından geçen Yunan ve Bulgar vatandaşlarının sayısının yıldan yıla arttığı görülmektedir.

3. YEREL HALKIN TURİZMİN GELİŞİMİNE YÖNELİK ALGISI

Belirli bir bölgede ikamet eden ve orada yaşayan topluluğu ifade eden yerel halk, özellikle eğlence ve turizm sektörleri için en önemli paydaşlardan birisidir. Bir bölgedeki turizm faaliyetleri, oradaki yerel halka odaklanılarak tüm paydaşların ilgisi ve yardımıyla yönetilmelidir (Mohammadi et al., 2010). Bir destinasyonun doğal ve tarihi güzellikleri, yapısal özellikleri orada turizmin gelişmesi için tek başına yeterli değildir. Turizmin gelişiminin tek başına gerçekleşmediği, belirli ortamlarda kendine has özellikleri olduğu görülmektedir. Bu noktada yerel halkın desteği, turizmin gelişmesinde kilit bir rol oynamaktadır (Almeida-García et al., 2016: 206). Butler (1980) yerel halkın turistlere yönelik tutumları ile turizmin gelişimi arasında bir bağlantı olduğunu ileri sürmektedir. Butler "destinasyon yaşam döngüsü modeline" göre, bir destinasyondaki turist sayısı arttıkça yerel halkın turistlere yönelik iyi niyetli eğilimleri yerini, turistlerin uzun dönemli faydaları hakkındaki çekincelere bırakmaktadır (Vargas-Sánchez et al., 2015). Bu nedenle turizmin kendine has özellikleri, yerel halkın algısını ve turizmin gelişimini etkilemektedir.

Yerel halkın turizmi destekleme durumları, turizmin etkilerini nasıl algıladıklarına göre değişebilmektedir. Sosyal değişim teorisi (Social Exchange Theory - SET) çerçevesinde bir bölgedeki yerel halk, turizmden elde edilen faydaların turizmin getirdiği olumsuz sonuçlardan daha fazla olduğunu düşündüğü süre turizmin gelişmesine katkı sağlayacaklardır (Yoon et al., 2001: 364). Fakat bölge halkı turizmin sosyal, kültürel ve çevresel açıdan getirmiş olduğu maliyetlerin daha fazla olduğunu düşünürse turizmin gelişmesine katkıda bulunmayacaktır. Yerel otoritelerin halkın desteğini almadan yapacakları turizmi geliştirme faaliyetleri başarısızlıkla sonuçlanabilecek ve bu durum bölgeye gelen turistlere ilgisizlik veya güvensizlik olarak geri dönebilecektir. Bu sebeple turizmin ve bunun en önemli parçası olan turistlerin nasıl algılandığının bilinmesi, yerel halkın desteği ile bölge turizminin gelişmesi noktasında oldukça önemlidir.

Yerel halkın turizmde anahtar bir rol oynaması nedeniyle, onların turizmin gelişimine ve bu gelişimin olumlu ve olumsuz etkilerine yönelik algıları üzerine pek çok araştırma yapılmıştır (Jani, 2018; Afthanorhan et al., 2017; Rasoolimanesh and Jaafar, 2016; Sharpley, 2014). Turizmin ilgili bölgeye yönelik etkileri incelendiğinde bu etkilerin genellikle üç ana başlık etrafında toplandığı görülmektedir. Turizmin gelişmesinin destinasyona etkileri ve bunların yerel halk tarafından algılanmaları "ekonomik", "sosyo-kültürel" ve "çevresel" boyutta ele alınmaktadır (Yoon et al., 2001: 363). Bu başlıklar şu şekilde açıklanabilmektedir:

3.1. Turizmin Gelişiminin Ekonomik Etkileri

Turizmin sağladığı olumlu ekonomik etkiler, yerel halk için en değerli unsurlardan birisidir. Bu nedenle turizmin gelişimi, ekonomik anlamda yerel halk tarafından genellikle olumlu olarak algılanmaktadır (Sinclair-Maragh et al., 2015: 37). Turizm, genellikle yerel ekonominin gelişmesine, gelir ve yaşam kalitesinin artmasına yardımcı olmaktadır. Bunun yanında turizmin gelişmesi; aile gelirinin artmasına, vergi gelirlerinin artmasına, yeni iş imkanları ve yatırım fırsatlarının ortaya çıkmasına, kültürel

değerlerin korunmasına hatta bireylerin benlik saygısının gelişmesine yardımcı olabilmektedir (Rasoolimanesh et al., 2015: 336; Nunkoo and Gursoy, 2012: 247). Özellikle nüfusu az olan destinasyonlarda turizmin gelişmesiyle birlikte pansiyon, butik otel gibi işletmelerin sayıları artmaktadır. Bunun yanında mikro ve küçük işletmelerin ve kadın girişimcilerin sayılarında da artış meydana gelmektedir. Yöresel ürünlerin, el yapımı hediyelik eşyaların, yeme-içme mekânlarının artması hem yeni iş imkanlarının hem de istihdamın artmasına yardımcı olarak, ekonomik anlamda yerel halkın gelişimine katkı sağlayabilmektedir.

Turizmin gelişiminin olumlu ekonomik etkileri yanında bir takım olumsuz etkileri de bulunmaktadır. Bunlar yaşam maliyetlerinin artması, mal ve hizmetlerin fiyatlarının artması, ev ve işyeri kiralalarının artması, ürünlerdeki vergi oranlarının artması şeklinde sıralanabilmektedir (Rasoolimanesh et al., 2015: 336; Nunkoo and Gursoy, 2012: 248).

3.2. Turizmin Gelişiminin Kültürel ve Sosyal Etkileri

Yerel halkın turizmin gelişmesine yönelik algıları incelendiğinde kültürel ve sosyal anlamda bir takım olumsuz etkilerin olabileceği görülmektedir. Örneğin turizmin gelişmesi, geleneksel aile yapısının değişmesine, kültürel ticarileşmeye, ziyaretçilerin norm ve değerlerine uyum sağlayan yeni bir kültürün ortaya çıkmasına neden olabilmektedir. Bunun yanında yerel halk ile turistler arasındaki sosyo-kültürel farklar, ekonomik refah ve satın alma gücü arasındaki farklar uzun dönemde turistler ile yerel halk arasında sosyal ve kültürel çatışmalar yaratabilmektedir (Dyer et al. 2007: 416). Turizmin gelişmesi yerel halkın alışkanlıklarının, günlük rutinlerinin, inanç ve değerlerinin değişmesine neden olabilmektedir. Bunun yanında geleneklerden uzaklaşılmasına, materyalizmin artmasına, suç oranlarının ve sosyal çatışmaların, stresin, kalabalığın, trafiğin ve park sorunlarının artmasına neden olabilmektedir (Andereck et al, 2005: 1058).

Turizmin gelişmesinin kültürel ve sosyal anlamda bir takım olumlu yönleri de mevcuttur. Turizmin gelişmesi yeni parkların yapılmasına, rekreasyon ve kültürel tesisler ve kültürel faaliyetlerin artmasına yardımcı olarak sosyo-kültürel anlamda topluma yönelik hizmetlerin gelişmesine katkı sağlayabilmektedir (Andereck et al, 2005: 1058). Ayrıca turizmin gelişmesi, özellikle genç kuşağın kültürel farkındalığının artmasına yardımcı olabilmektedir (Sinclair-Maragh et al., 2015: 37). Bunun yanında turizmin gelişmesi, bir takım kültürel değerlerin gün yüzüne çıkması ve gerekli onay mercileri tarafından koruma altına alınmasına yardımcı olabilmektedir.

3.3. Turizmin Gelişiminin Çevresel Etkileri

Turizm gelişmesinin etki edebileceği bir diğer alan ise çevredir. Turizmin gelişmesi çevre kirliliğinin ve çöplerin artmasına neden olabilmektedir. Taşıt trafiğinin artması egzoz gazlarından dolayı hava kirliliğine neden olabilmektedir. Bunun yanında turizmin aşırı gelişmesi atık su problemlerine, doğal yaşamların bozulmasına, kentin silüetini bozabilecek yapıların oluşmasına neden olabilmektedir (Nunkoo and Uysal, 2012: 248; Andereck et al, 2005: 1059).

Turizmin gelişmesinin çevresel anlamda olumlu yönlerinin olabileceği de düşünülmektedir. Kirliliğin artmasıyla beraber bu kirliliği giderecek yeni düzenlemelerin, atık su ve katı atık depolarının yapılması yerel halkın geniş çerçevede faydasına olabilecek uygulamalar olarak görülebilmektedir.

Turizmin potansiyel etkilerini azaltmak amacıyla yapılan çalışmalar ve uygulamalar neticesinde “sürdürülebilir turizm” kavramı ortaya çıkmıştır. Sürdürülebilir turizm; ekolojik süreçlerin, doğal hayatın ve çeşitliliğin korunmasına yardımcı olma, ev sahibi toplulukların sosyo-kültürel özgünlüğüne saygılı olma ve tüm paydaşlara sosyo-ekonomik faydalar sağlama temeline dayanmaktadır (Törn et al. 2008). Böylelikle yerel halkın bir paydaş olarak görüldüğü, onların ekonomik ve kültürel anlamda korunması ve gelişmesi gerektiğine yönelik bir çabanın var olduğu görülmektedir. Turizmin etkilerinin olumlu algılanması, yerel halkın turizmin gelişmesini desteklemesine, olumsuz algılanması ise desteklerini geri çekmeye ve turizmin sürdürülebilir gelişimini engellemeye neden olmaktadır (Rasoolimanesh and Jaafar, 2016: 93).

4. ARAŞTIRMANIN METODOLOJİSİ

Bu bölümde araştırmanın amacına, yöntemine ve bulgularına dair bilgiler yer almaktadır.

4.1. Araştırmanın Amacı

Turizmin gelişimine yönelik yerel halkın algısını ölçmek, turizmin gelişmesinden dolayı ortaya çıkabilecek olumsuzlukların azaltılmasına, olumlu yönlerin de artırılmasına yardımcı olacaktır. Çünkü turizmin başarılı bir şekilde gelişmesinde “mutlu ev sahibi” durumunun oluşturulması esastır. Bu nedenle yerel halkın turizmin gelişimine yönelik tutumunun belirlenmesi ve turizmin yerel halkın yaşamını nasıl etkilediğinin bilinmesi, turizmin gelişiminin başarıya ulaşmasında oldukça önemlidir. Karşılıklı yarar sağlayacak gelişmeler (sosyal gelişim teorisinde olduğu gibi) turizmdeki gizli çatışmaları ve muhalefeti önleyebilecektir (Bimonte and Faralla, 2016: 200). Turizmin gelişme sürecinde erken aşamalarda yerel halkın dâhil edilmesi, turizmin gelişimi için oldukça önemlidir. Bunun yanında planlı bir gelişim sürecinde yerel halktan alınacak düzenli bilgiler, gelişimin daha sağlıklı yürütülmesinde oldukça önemlidir. Ayrıca turizmin planlama ve gelişmesinde yerel halkın karar alma süreçlerine katılımının sağlanması, onların turistlere ve turizme karşı daha olumlu tutum sergilemelerine yardımcı olacaktır (Almeida-García et al., 2016: 260).

Edirne coğrafi konumu itibarıyla Balkan coğrafyasında yer almaktadır. Balkan coğrafyası ya da “Balkan Ülkeleri” olarak nitelendirilen ülkeler ise; Arnavutluk, Bosna-Hersek, Bulgaristan, Hırvatistan, Karadağ, Kosova, Kuzey Makedonya, Romanya, Sırbistan, Slovenya, Yunanistan ülkelerinden oluşmaktadır. Edirne’ye gelen turistlerin büyük çoğunluğunun Balkan ülkelerinden gelmesi nedeniyle çalışma, yerel halkın Balkan ülkelerinden gelen turistlere yönelik bakış açısını yansıtacak şekilde oluşturulmuştur.

Turizmin gelişmesi noktasında yerel halkın algısının önemi ve Edirne özelinde, turistlerin genellikle Balkan ülkelerinden gelmesinden dolayı bu çalışmanın amacı, Edirne’deki yerel halkın Balkan ülkelerinden gelen turistlere yönelik bakış açılarını ortaya koymaktır. Bu çerçevede turizmin etkileri ekonomik, sosyo-kültürel ve çevresel yönden ele alınmıştır. Yerel halkın Balkan turistlerine yönelik algılarına dair genel değerlendirmenin yanında cinsiyete, yaşa, öğrenim durumuna, mesleğe, aylık ortalama gelire, Edirneli olup olmama durumuna ve ikamet süresi değişkenlerine göre farklılık gösterip göstermediğinin belirlenmesi hedeflenmektedir.

4.2. Araştırmanın Yöntemi

Bu çalışmanın ana kütlesini Edirne’de ikamet eden yerel halk oluşturmakta ve veriler rastgele örnekleme yöntemine göre yüz yüze anket aracılığıyla toplanmıştır. Araştırmada 210 kişiye ulaşılmış olup bazı anketlerdeki yetersiz ve eksik bilgilerden dolayı 204 anket araştırmaya dâhil edilmiştir. Anket iki bölümden oluşmaktadır. İlk bölümde Edirne’deki yerel halkın Balkan turistlerine yönelik algılarını ekonomik, sosyo-kültürel ve çevresel açıdan belirleyecek 20 soru ve genel bir değerlendirme içeren 2 soru olmak üzere 22 soru yer almaktadır. Söz konusu sorular Çeken vd., (2018) ile Boğan ve Sarıışık (2016)’ın çalışmalarından yararlanılarak oluşturulmuştur. Bu bölümdeki sorular 5’li Likert tipi ölçekle “hiç katılmıyorum=1”, “katılmıyorum=2”, “kararsızım=3”, “katılıyorum=4” ve “tamamen katılıyorum=5” şeklinde hazırlanan ifadelerden oluşmaktadır. Anketin ikinci bölümünde ise katılımcıların sosyo-demografik özellikleri (cinsiyet, yaş, gelir, eğitim, meslek, doğum yeri) ile Edirne’deki ikamet sürelerine yönelik toplam 7 adet soru yer almaktadır.

Araştırmadan elde edilen veriler SPSS 21.0 programında analiz edilmiştir. Öncelikle katılımcıların sosyo-demografik özelliklerinin belirlenmesi için “tanımlayıcı istatistikler” kullanılmıştır. Daha sonra katılımcıların her bir soruya vermiş oldukları yanıtların ortalama ve standart sapmaları alınarak, Edirne halkının balkan turistlerin etkilerine yönelik algıları ölçülmüştür. Araştırmanın son bölümünde ise algıma düzeyine ilişkin sorulara verilen yanıtlar “Bağımsız t-testi” ve “Anova” yardımıyla analiz edilerek, sosyo-demografik değişkenler çerçevesinde farklılıkların olup olmadığı belirlenmiştir.

4.3. Bulgular ve Yorumlar

Araştırmanın bu bölümünde ankette yer alan ölçeğin güvenilirliği, katılımcıların sosyo-demografik özellikleri ve yapılan analizlere ait sonuç ve yorumlar yer almaktadır.

Cronbach Alpha katsayısına göre ölçeğin güvenilirliği test edildiğinde sonucun 0,669 olduğu görülmektedir. Böylelikle soruların yer aldığı ölçeğin güvenilirliğinin 0,60 ile 0,80 değerleri arasında olduğu için “oldukça güvenilir” olduğu ortaya çıkmaktadır.

Katılımcılara ait sosyo-demografik verilere ilişkin yapılan tanımlayıcı istatistik sonucunda Tablo 1.’deki sonuçlar elde edilmiştir.

Tablo 1. Katılımcıların Sosyo-Demografik Özellikleri

Cinsiyet (n=204)	f	%	Edirne’de mi doğdunuz? (n=204)	f	%
Kadın	82	40,2	Evet	117	57,4
Erkek	122	59,8	Hayır	87	42,6
Yaş (n=204)	f	%	Ailenin aylık ortalama geliri (n=204)	f	%
18-28	69	33,8	0-2000	26	12,7
29-39	51	25,0	2001-4000	99	48,5
40-50	61	29,9	4001-6000	43	21,1
51-60	20	9,8	6001-8000	20	9,8
60+	3	1,5	8001 ve üzeri	16	7,8
Öğrenim (n=204)	f	%	Meslek (n=204)	f	%
İlkokul	7	3,4	Öğrenci	58	28,4
Ortaokul	27	13,2	Ev hanımı	13	6,4
Lise	56	27,5	İşçi	22	10,8
Önlisans	9	4,4	Kamu personeli	26	12,7
Lisans	88	43,1	Emekli	5	2,5
Lisansüstü	17	8,3	Esnaf	74	36,3
			Serbest meslek	6	2,9
Edirne’deki ikamet yılı (n=204)	f	%			
5 yıl ve altı	48	23,5			
5-10 yıl	23	11,3			
10-15 yıl	14	6,9			
15 yıl ve üzeri	119	58,3			

Yapılan incelemeler sonucunda katılımcıların yaklaşık %60’ının erkek, %40’ünün kadın olduğu; yaş aralığına bakıldığında ise %33,8’inin 18-28 yaş aralığında olduğu, %29,9’unun 40-50 yaş aralığında olduğu, %25’inin 29-39 yaş aralığında olduğu görülmektedir. Katılımcıların öğrenim durumlarına bakıldığında %13,2’sinin ortaokul, %27,5’inin lise ve %43,1’inin lisans mezunu olduğu görülmektedir. Katılımcıların mesleklerine bakıldığında; %36,3’ünün esnaf, %28,4’ünün öğrenci ve %12,7’sinin kamu personeli olduğu; aylık ortalama gelir durumlarına bakıldığında ise %48,5’inin 2001-4000 TL aralığında, %21,1’inin 4001-6000 TL aralığında gelire sahip oldukları görülmektedir. Bunun yanında katılımcıların %57,4’ünün Edirne doğumlu olduğu ve %58,3’ünün 15 yıldan daha fazladır Edirne’de ikamet ettiği görülmektedir.

Edirne halkının, Balkan ülkelerinden gelen turistlerin ekonomik, sosyo-kültürel ve çevresel etkilerine yönelik algıları ile genel olarak turistlere yönelik değerlendirmeleriyle ilgili sorulara verilen yanıtların ortalamaları ve standart sapmaları Tablo 2., Tablo 3., Tablo 4. ve Tablo 5.'te gösterilmektedir.

Tablo 2. Turistlerin Ekonomik Etkilerine Yönelik Yerel Halkın Algısı

Turistlerin Ekonomik Etkilerine Yönelik Edirne Halkının Algısı (n=204)	Ortalama	Standart Sapma
Edirne'de Balkan ülkelerinden gelen turistlerin fazla para harcamaları sayesinde yaşam standartlarımız hızlı bir şekilde yükselmektedir.	2,70	1,356
Edirne'nin ekonomisi canlanmaktadır.	3,47	1,249
Edirne'de birçok ürün ve hizmetin fiyatı artmaktadır.	3,34	1,278
Yeni iş olanakları ortaya çıkmaktadır.	2,63	1,148
Sadece küçük gruplara fayda sağlamaktadır.	2,91	1,245
Hediyelik eşya sektörünün canlanmasını sağlamaktadır.	3,65	1,093
Edirne'de birçok kişiye iş imkânı sağlamaktadır	2,76	1,177
Edirne'ye zenginlik getirmektedir.	3,27	1,110
Edirne'de emlak fiyatlarının aşırı yükselmesine neden olmaktadır.	3,20	1,269

Tablo 2. incelendiğinde, Edirne halkının Balkan ülkelerinden gelen turistlerin olumlu olarak; hediyelik eşya sektörünü canlandırdığını, Edirne ekonomisini canlandırdığını, Edirne'ye zenginlik getirdiklerini düşündüğü söylenebilmektedir. Bunun yanında, Balkan ülkelerinden gelen turistlerin ekonomik olarak olumsuz etkilerine bakıldığında; birçok ürün ve hizmetin fiyatının artmasına ve emlak fiyatlarının artmasına neden olduklarına yönelik bir algı olduğu söylenebilmektedir. Bunun yanında turistlerin yerel halkın yaşam standartlarını yükselttiğine ve birçok kişiye iş imkânı sağladığına dair olumlu bir algının olmadığı görülmektedir. Genel olarak Tablo 2. incelendiğinde, turistlerin Edirne ekonomisine hareketlilik getirdiği fakat birçok mal, hizmet ve gayrimenkul fiyatlarında artışa sebep olduklarına dair bir algı olduğu görülmektedir.

Tablo 3. Turistlerin Sosyo-kültürel Etkilerine Yönelik Yerel Halkın Algısı

Turistlerin Sosyo-kültürel Etkilerine Yönelik Edirne Halkının Algısı (n=204)	Ortalama	Standart Sapma
Balkan ülkelerinden gelen turistlerle bir arada olmak mükemmel bir deneyimdir.	3,07	1,160
Edirne'nin geleneksel kültüründe olumsuz değişimlere neden olmaktadır.	2,48	1,116
Edirne'nin tanınmasına katkı sağlamaktadır.	3,59	1,246
Balkan ülkelerinden gelen turistler ile yerel halk arasında kültür alışverişi sağlamaktadır.	3,58	1,040
Balkan ülkelerinden gelen turistlerden yeni bilgiler öğrenilmektedir.	3,15	1,207
Balkan ülkelerinden gelen turistlere konut ve arsa satışı artmaktadır.	2,99	1,170

Tablo 3. incelendiğinde, Edirne halkı Balkan ülkelerinden gelen turistlerin olumlu olarak; Edirne'nin tanınmasına katkı sağladıklarını ve kültür alışverişine yardımcı olduklarını düşünmektedir. Bunun yanında turistlerin, Edirne'nin geleneksel kültüründe olumsuz bir değişime sebebiyet verdiğine dair bir düşüncenin olmadığı görülmektedir. Genel olarak değerlendirildiğinde, Edirne halkının Balkan

ülkelerinden gelen turistlerin sosyo-kültürel olarak olumlu etkiler bıraktıklarını düşündüğü söylenebilmektedir.

Tablo 4. Turistlerin Çevresel Etkilerine Yönelik Yerel Halkın Algısı

Turistlerin Çevresel Etkilerine Yönelik Edirne Halkının Algısı (n=204)	Ortalama	Standart Sapma
Edirne’de doğal kaynakların tahribatına neden olmaktadır.	2,53	1,089
Caddelerin, parkların rahatsız edici bir şekilde kalabalıklaşmasına neden olmaktadır.	3,24	1,307
Çevre kirliliğine yol açmaktadır.	3,01	1,300
Trafik yoğunluğuna neden olmaktadır.	3,78	1,146
Edirne’nin dokusu bozulmaktadır.	2,57	1,166

Tablo 4. incelendiğinde, Edirne halkının Balkan ülkelerinden gelen turistlerin trafik yoğunluğuna ve cadde, parklarda kalabalığa neden olduğuna dair bir algısının olduğu görülmektedir. Bunun yanında turistlerin Edirne’nin dokusuna veya doğal kaynaklarına zarar verdiğine dair olumsuz bir algının olmadığı görülmektedir.

Tablo 5. Turistlere Yönelik Yerel Halkın Genel Algısı

Katılımcıların Genel Olarak Balkan Ülkelerinden Gelen Turistlere Yönelik Algıları (n=204)	Ortalama	Standart Sapma
Genel olarak değerlendirildiğinde, Balkan ülkelerinden gelen turistlerin ziyaretleri Edirne’ye yarardan çok zarar vermektedir.	2,60	1,273
Genel olarak değerlendirildiğinde, Balkan ülkelerinden gelen turistlerin ziyaretleri Edirne’ye zarardan çok yarar sağlamaktadır.	3,37	1,266

Tablo 5. incelendiğinde, Edirne halkının Balkan ülkelerinden gelen turistlere yönelik olumlu bir algısının olduğu, Edirne’ye zarardan çok yarar sağladıklarına inandıkları görülmektedir.

Edirne halkının Balkan ülkelerinden gelen turistlere yönelik algıları incelendiğinde; sosyo-kültürel olarak ve kısmen ekonomik olarak olumlu düşüncelere sahip olduklarına, çevresel anlamda ise birtakım olumsuz düşüncelere ve ekonomik olarak fiyat artışına sebep olduklarına dair düşüncelere sahip oldukları görülmektedir. Genel olarak değerlendirildiğinde, Edirne halkının Balkan ülkelerinden gelen turistlere yönelik birtakım olumlu ve olumsuz düşünceleri olsa da, sosyal değişim teorisi çerçevesinde değerlendirildiğinde; ağırlıklı olarak olumlu düşüncelerin olduğu, turizmin olumlu etkilerinin olumsuz etkilerinden daha ağır bastığı görülmektedir.

Edirne halkının Balkan turistlere yönelik algılarının sosyo-demografik değişkenlere göre farklılaşp farklılaşmadığına dair yapılan t Testleri ve Anova testlerine ait sonuçlar Tablo 6. ve Tablo 7.’de gösterilmektedir.

Tablo 6. Yerel Halkın Cinsiyete ve Edirneli Olma Durumuna Göre Turistlere Yönelik Algılarına Dair t Testi Sonuçları

Değişkenler	Gruplar	n	Ortalama	Standart Sapma	t	Sig. (p)
Cinsiyet	Kadın	82	3,19	,423	2,557	,011*
	Erkek	122	3,03	,446		
Edirne’li olma durumu	Edirneli	117	3,04	,413	-1,800	

Edirneli değil	87	3,15	,474	,073
-------------------	----	------	------	------

*p<0,05

Tablo 6. incelendiğinde, yerel halkın Balkan turistlerine yönelik algılarında cinsiyete göre bir farklılık ortaya çıktığı (0,011 <0,05) görülmektedir. Bu sonuca göre, kadınların erkeklere göre turistlere yönelik algılarının daha olumlu olduğu ortaya çıkmaktadır. Katılımcıların Edirneli olup olmamaları durumuna göre Balkan turistlere yönelik algılarında ise bir farklılık olmadığı (0,073 > 0,05) görülmektedir. Balkan turistleri algılama noktasında cinsiyet ve Edirneli olma durumları istatistiki olarak bir farklılık yaratmasa da, kadınların ve Edirneli olmayanların Balkan turistlere karşı nispeten daha olumlu düşüncelere sahip olduğu söylenebilmektedir.

Tablo 7. Yerel Halkın Yaşa, Öğrenim Durumuna, Mesleğe, Aylık Ortalama Gelire ve Edirne’de İkamet Edilen Yıla Göre Turistlere Yönelik Algılarına Dair Anova Testi Sonuçları

Değişkenler	Gruplar	n	Ortalama	Standart Sapma	Levene Stat.	F	Sig. (p)	Tukey

*p<0,05

Tablo 7.de ilk olarak katılımcıların yaşları ile Balkan turistlere yönelik algıları arasında anlamlı farklılık olup olmadığına dair Anova testi sonuçları yer almaktadır. Öncelikle Levene testine bakıldığında $0,866 > 0,05$ olduğundan, varyansların homojen olduğu ve verilerin Anova testine uygun olduğu görülmektedir. Test sonuçlarına göre, katılımcıların yaşları ile Balkan turistlerine yönelik algıları arasında $p < 0,05$ anlamlılık düzeyinde istatistiksel olarak farklılık ($0,001 < 0,05$) bulunmuştur. Yapılan Tukey Post-hoc testi sonucunda 40-50 yaş aralığındaki katılımcı grubunun 18-28 ve 29-39 yaş aralığındaki katılımcılara göre Balkan turistlerine yönelik daha olumsuz bir algıya sahip oldukları görülmektedir. Katılımcıların öğrenim durumları ile Balkan turistlere yönelik algıları arasında anlamlı farklılık olup olmadığına dair yapılan test sonuçlarına göre; Levene testi $0,241 > 0,05$ olduğundan dolayı Anova testine uygun olduğu görülmektedir. Anova testine göre, katılımcıların öğrenim durumu ile Balkan turistlerine yönelik algıları arasında $p < 0,05$ anlamlılık düzeyinde istatistiksel olarak farklılık ($0,000 < 0,05$) bulunmuştur. Yapılan Tukey Post-hoc testi sonucunda, ortaokul mezunu katılımcıların lisans ve lisansüstü mezuniyete sahip katılımcılara göre Balkan turistlerine yönelik daha olumsuz bir algıya sahip oldukları görülmektedir.

Tablo 7.deki katılımcıların meslekleri ile Balkan turistlere yönelik algıları arasında anlamlı farklılık olup olmadığına dair testi sonuçlarına göre; Levene testi $0,112 > 0,05$ olduğundan dolayı Anova testine uygun olduğu görülmektedir. Anova testine göre, katılımcıların meslekleri ile Balkan turistlerine yönelik algıları arasında $p < 0,05$ anlamlılık düzeyinde istatistiksel olarak farklılık ($0,013 < 0,05$) bulunmuştur. Yapılan Tukey Post-hoc testi sonucunda öğrenci ve esnaf katılımcıların arasında anlamlı bir farklılığın olduğu, öğrencilerin Balkan turistlerine yönelik daha olumlu bir algıya sahip olduğu görülmektedir. Ayrıca Balkan turistlere yönelik en olumlu algının öğrencilerde olduğu, bunu ev hanımı ve işçilerin takip ettiği görülmektedir. Katılımcıların aylık ortalama gelir durumları ile Balkan turistlere yönelik algıları arasında anlamlı farklılık olup olmadığına dair test sonuçlarına göre; Levene testi $0,186 > 0,05$ olduğundan dolayı Anova testine uygun olduğu görülmektedir. Anova testine göre, katılımcıların aylık ortalama gelirleri ile Balkan turistlerine yönelik algıları arasında $p < 0,05$ anlamlılık düzeyinde istatistiksel olarak farklılık ($0,165 > 0,05$) bulunmamıştır. Bu sonuca göre aylık ortalama gelirin, istatistiki olarak balkan turistlere yönelik algılamada bir farklılık yaratmadığı görülmekte olup, bununla birlikte en olumlu algının 8000 TL ve üzerinde aylık ortalama geliri olan katılımcılarda olduğu görülmektedir. Katılımcıların Edirne'deki ikamet süreleri ile Balkan turistlere yönelik algıları arasında anlamlı farklılık olup olmadığına dair testi sonuçlarına göre; Levene testi $0,678 > 0,05$ olduğundan dolayı Anova testine uygun olduğu görülmektedir. Anova testine göre, katılımcıların Edirne'deki ikamet süreleri ile Balkan turistlerine yönelik algıları arasında $p < 0,05$ anlamlılık düzeyinde istatistiksel olarak farklılık ($0,012 < 0,05$) bulunmuştur. Yapılan Tukey Post-hoc testi sonucunda, 5 yıl ve daha az süredir Edirne'de ikamet eden katılımcılar ile 15 yıl ve daha fazla süredir Edirne'de ikamet eden katılımcılar arasında anlamlı farklılığın olduğu ortaya çıkmıştır. Bu sonuca göre 5 yıldan daha az süredir Edirne'de ikamet eden katılımcıların Balkan turistlere yönelik en olumlu algıya sahip grup olduğu, en olumsuz algıya sahip grubun ise 15 yıl ve üzerinde ikamet süresine sahip katılımcıların oluşturduğu görülmektedir.

Genel olarak değerlendirildiğinde 18-28 yaş aralığındaki, lisans eğitim düzeyine sahip, 5 yıldan daha az süredir Edirne'de ikamet eden kadın öğrencilerin, Balkan turistlere yönelik daha olumlu bir algıya sahip olduğu görülmektedir. Bunun aksine 51-60 yaş aralığındaki, ortaokul eğitim düzeyine sahip, 15 yıldan daha fazla süredir Edirne'de ikamet eden ve serbest meslek icra eden katılımcıların Balkan turistlerine yönelik en olumsuz algıya sahip kişiler oldukları görülmektedir.

SONUÇ

Yerel halkın, turizmin gelişmesinde önemli bir paydaş olarak görülmesi ve yerel halkın turizme ve turistlere yönelik bakış açılarının incelenmesi gerekliliği yapılan pek çok araştırmada ortaya çıkmaktadır. Çünkü şehrin yerel sakinlerine, turizmi desteklemeye ikna edilmesi gereken bir müşteri gibi davranılmaması gerekmektedir. Bunun yerine yerel halk, sürdürülebilir turizm için tutum ve çıkarlarının oldukça önemli olduğu bir paydaş olarak görülmelidir (Nunkoo and Gursoy, 2012). Yerel halkın algı ve tutumlarının belirlenmesi, turizmin sürdürülebilir şekilde geliştirilmesi için oldukça önemlidir. Kültür ve Turizm Bakanlığının verilerine neticesinde Edirne iline büyük çoğunlukta Balkan ülkelerinden turistlerin geldiği görülmektedir. Bu çerçevede yürütülen çalışmada, turizm açısından önemli bir paydaş olan halkın, Balkan ülkelerinden gelen turistlere yönelik algıları ölçülerek Edirne özelinde bu konu hakkındaki araştırma eksikliği kapatılmaya ve elde edilen sonuçların diğer çıkar gruplarıyla paylaşılmaya çalışılmaktadır.

Araştırma sonucundan elde edilen sonuçlara göre, Edirne halkının Balkan ülkelerinden gelen turistlere yönelik olumlu bir algıya sahip olduğu, turistlerin olumlu etkilerinin olumsuz etkilerinden daha çok olduğu görülmektedir. Bunun yanında yerel halka göre Balkan ülkelerinden gelen turistlerin sosyo-kültürel olarak olumlu etkiler bıraktığı görülmektedir. Bu durumun, Edirne bölgesi de dâhil Balkan ülkelerinin benzer coğrafyada yaşamasından ve benzer kültürlere sahip topluluklardan oluşmasından kaynaklandığı düşünülmektedir. Bunun yanında Edirne halkına göre, Balkan turistlerin fiyat artışlarına sebebiyet vermeleri dışında genel olarak ekonomik anlamda olumlu etkiler bıraktığı, çevresel anlamda ise genel olarak olumsuz etkiler bıraktığı görülmektedir. Söz konusu sonuçlar literatürde yer alan diğer çalışmalarda paralellik göstermektedir. Bu noktada yerel yöneticilerin, turizm sektöründe çalışanların ve turizmin gelişmesi için çabalayan grupların, bu çalışma sonuçlarını değerlendirerek yerel halkın bakış açısına göre turizm politikaları ve uygulamaları geliştirilmesi tavsiye edilmektedir. Halk tarafından algılanan park ve caddelerin kalabalık olması, trafik yoğunluğunun artması ve kirlilik ile ilgili problemler, yerel yöneticiler tarafından dikkatle takip edilip gerekli çözümlerin üretilmesi sağlanabilir. Yerel halkın algısında sosyo-demografik değişkenlerin farklılık oluşturup oluşturmadığı araştırıldığında, genellikle üniversiteli gençlerin turistlere yönelik daha olumlu bir algıya sahip oldukları görülmektedir. Bu noktada yerel yöneticilerin ve turizm sektörünün diğer paydaşlarının üniversite öğrencileri ile işbirliğine girmesi, bu algının daha da güçlenerek sürekli hale gelmesini ve turistlerle etkileşime girmelerini sağlayacak faaliyet ve organizasyonlar yürütmesi tavsiye edilebilmektedir. Bunun yanında turistlere yönelik olumsuz algıya sahip olan kitle ile iletişime geçilerek, bunun sebeplerinin araştırılması ve bu algının değiştirilmesine yönelik gerekli eylem planlarının hazırlanması tavsiye edilmektedir.

Genel olarak değerlendirildiğinde, turizmin ve turistlerin olumsuz etkilerine rağmen olumlu etkilerin daha etkin bir şekilde algılanması ve bu durumun devam ettirilmesi turizmin sürdürülebilirliği açısından önemlidir. Bu noktada gerçekleştirilen çalışma, sürdürülebilir turizmin önemli bir paydaşı olarak yerel halkın algısını ölçmeye ve literatüre katkı sağlamaya çalışmakta, aynı zamanda yerel yöneticilere ve diğer paydaşlara yönelik bilgiler ve tavsiyeler sunmaktadır.

Sınırlılıklar ve Gelecek Araştırmalar İçin Öneriler

Araştırmada bulunan sınırlılıklardan bir tanesi, örneklem büyüklüğü ve araştırma periyodunun kısıtlılığıdır. Bütçe kısıtlamasından dolayı daha büyük örneklem grubuna ulaşılamaması ve yalnızca kısa bir dönemi kapsayan zamanda verilerin toplanması, araştırmanın en önemli kısıtını oluşturmaktadır. Bu nedenle gelecek araştırmalarda daha geniş bir örnek kitleye ulaşılması, ayrıca yılın farklı sezonlarında verilerin elde edilmesi tavsiye edilmektedir.

Ayrıca elde edilen sonuçlar, yalnızca Edirne halkının turistlere ve turizme yönelik algılarını içermektedir. Her bir destinasyon ve orada yaşayan halk, farklı özelliklere sahiptir. Bu nedenle gelecek araştırmaların farklı destinasyonlarda yapılarak sonuçların karşılaştırılması, bölgesel farklılıkların olup olmadığını ortaya koyma noktasında yardımcı olacaktır.

Araştırma, pandemi sürecinden önce gerçekleştirilmiştir. Bu nedenle pandemi sürecinin çeşitli zamanlarında sınır kapılarının kapatılması ve sokağa çıkma yasağı gibi uygulamalar, halkın turizme ve turistlere bakış açısından bir değişiklik meydana getirmiş olabilmektedir. Bu nedenle pandemi sürecinin

sona ermesiyle normal hayata dönüldüğünde, aynı çalışmanın tekrar yapılması faydalı olacaktır. Böylelikle pandeminin yerel halkın turistlere yönelik algılarında bir değişikliğe neden olup olmadığı ortaya çıkartılabilecektir.

Özet: Tarih boyunca bulaşıcı hastalıklar dünya ekonomisini ve ülkelerin politikalarını etkilemiştir. Yaşanan salgınların sağlık, demografi, sosyo-ekonomi ve politika alanlarında birçok olumsuz yönleri olmuştur. Tüm dünya, 2020 yılının başından itibaren Çin'in Wuhan bölgesinde ortaya çıkan ve 11 Mart'ta Dünya Sağlık Örgütü tarafından "pandemi" olarak ilan edilen Covid-19 salgınının etkisi altında kalmıştır. Tarih boyunca Bunlardan sosyo-ekonomik alandaki etkilerin üretimin azalması, işsizliğin artması, temel ihtiyaç maddelerinin temin edilememesi ve insan ilişkilerinin olumsuz etkilenmesi gibi örnekleri bulunmaktadır. Covid-19 salgını büyük sağlık sorunlarına ve kitlesel kayıplara da neden olmuştur. Enfekte vakaların ve ölüm vakalarının sayısı keskin bir şekilde artarken ve salgının atlatılması gelişmiş ülkelerde bile belirsizliğini korurken salgını önlemeye yönelik alınan tedbirlerin yeterli olup olmadığı konusu hala birçok kesim tarafından tartışılmaktadır. Bu süreçte Covid-19 pandemisinin etkileri küresel ve bölgesel açıdan çeşitli araştırmalara da konu olmuştur. Çalışmada, literatür taraması yapılarak tarihte yer alan önemli salgın hastalıkların potansiyel etkileri ve sonuçları değerlendirilmiş, devam eden Covid-19 pandemisinin potansiyel etkileri ve olası sonuçları incelenmiş ve bazı çözüm önerileri sunulmuştur. Covid-19 pandemisinin küreselleşmesinin, dünyadaki tüm ekonomileri etkileyeceği ve birçoğunu durgunluğa ve muhtemel ekonomik geriliğe sürükleyeceği öngörülmektedir.

Anahtar Kelimeler: Pandemi, Covid-19, Sağlık, Ekonomi.

Abstract: Throughout history, infectious diseases have affected the world economy and the policies of countries. The whole world has been under the influence of the Covid-19 epidemic that has emerged in the Wuhan region of China since the beginning of 2020 and was declared as a "pandemic" by the World Health Organization on March 11. These epidemics have had many negative effects in the fields of health, demography, socio-economy and politics. Among these, there are examples of socio-economic impacts such as decreased production, increased unemployment, not being able to supply basic necessities and negatively affected human relations. The Covid-19 outbreak has also caused major health problems and mass casualties. While the number of infected cases and death cases is increasing sharply and the recovery of the epidemic remains uncertain even in developed countries, the issue of whether the measures taken to prevent the epidemic are sufficient or not is still debated by many parties. In this process, the effects of the Covid-19 pandemic have been the subject of various studies from a global and regional perspective. In the study, the potential effects and consequences of important epidemic diseases in history were evaluated, the potential effects and possible consequences of the ongoing Covid-19 pandemic were examined and recommendations were submitted. It is predicted that the globalization of the Covid-19 epidemic will affect all economies in the world and will drag many of them into recession and possible economic backwardness.

Key Words: Pandemic, Covid-19, Health, Economy.

1. GİRİŞ

Dünya tarih boyunca birçok salgın hastalıkla karşı karşıya kalmıştır. Geçmişte yaşanan Asya gribi, İspanyol gribi, SARSCOV, kuş gribi, domuz gribi MERS-COV gibi salgın hastalıklar hem ülkeler için hem de insanlık için kayıplara neden olmuştur. Geçmişte yaşanan salgın hastalıkların üzerinden uzun zaman geçmesi, etkilerinin unutulmasına neden olmuştur. 21. yüzyılda dünya Covid-19 pandemisi ile boğuşmaktadır. Koronavirüs ailesinin yeni bir mutasyonu olan Covid-19, 1 Aralık 2019'da Çin'in Wuhan bölgesinde ilk vakanın görülmesiyle ortaya çıkmıştır. Daha sonra hızla diğer ülkelere yayılmış ve küresel olarak milyonlarca insanı etkilemiştir. Özellikle COVID-19'un başlangıçta ulaştığı ülkelerin, virüsün ölümcül etkisine ve hızlı yayılmasına hazırlıklı olmamasından dolayı tıbbi ihtiyaçlar ve diğer temel ihtiyaçlar için sürekli bir mücadele içinde bulunması gerekmiştir. Covid-19 pandemisi dünya çapında birçok ülkede hasara neden oldu ve olmaya da devam etmektedir. Oldukça bulaşıcı olan bu salgının

önüne geçmek için tüm dünya kısmen kapanmaya dayalı önlemler alarak insani etkileşimi minimal düzeyde tutmaya çalışarak hem sağlıklı bir yaşamı sürdürebilmek hem de ekonomiyi ayakta tutabilmek gerekli çalışmalarını sürdürmektedir.

Halk sağlığını tehdit eden Covid-19 pandemisi salgın bir hastalık olmasının yanında aynı zamanda etkisini giderek arttıran ekonomik bir tehdittir. Durumun gelişen doğası göz önüne alındığında, COVID-19'un dünya ekonomisi üzerindeki tam etkisini tahmin etmek için henüz çok erken, ancak COVID-19'un gerçek ve potansiyel ekonomik sonuçları hakkında yapılan çalışmaların çoğunda COVID-19'un farklı ekonomik perspektifler üzerindeki kısmi ekonomik etkileri ortaya konulmaya çalışılmıştır. Yaşanan pandemiyi yakın zamanda kontrol altına alınması durumunda bile ekonomik etkilerinin beklenenden daha uzun süreceği düşünülmektedir.

Bu araştırmada, sağlık ekonomisi kavramının kapsamını, tarihte yaşanan salgın hastalıkların etkilerini, belirlenen sonuçlarını değerlendirerek, devam eden Covid-19 pandemisinin potansiyel etkileri ve olası sonuçlarını belirlemek ve önerilerde bulunmak, COVID-19'un önemli, gerçek ve öngörülen etkilerini tasvir etmek amaçlanmıştır. Elde edilen bilgiler ışığında salgın hastalıkların bir ülke ekonomisini sağlık, ulaşım, tarım ve turizm sektörleri de dahil olmak üzere çeşitli kanallardan etkilediğini göstermektedir. Aynı zamanda, diğer ülkelerle ticaret de etkilenirken, modern ekonomilerin birbirine bağlı olması nedeniyle, pandemiyi uluslararası tedarik zincirlerini de kapsayabileceği anlamına gelmektedir ve pandemiyi kümülatif etkisi, yoksulluk oranlarında önemli bir artışa yol açacağı öngörülmektedir.

2. SAĞLIK EKONOMİSİ KAVRAMI VE KAPSAMI

Sağlık ekonomisi, sağlık sektörüne ayrılmış olan tüm kaynakların veya üretim faktörlerinin en üst düzeyde sağlık hizmeti üretmek için en etkili ve verimli bir şekilde nasıl kullanılması gerektiği ve üretilen sağlık hizmetlerinin toplumu oluşturan fert ve gruplar arasında en iyi şekilde paylaşılmasını amaçlayan bilim dalı olarak ifade edilmektedir (Çelik, 2019: 48). Sağlık alanındaki yasal düzenlemeler, sağlık politikalarının oluşturulması ve sonuçların değerlendirilmesi, birey ve toplum sağlığını ilgilendiren düzenlemelerin iktisadi sonuçlarının, sağlık hizmetlerinde kaynakların etkin kullanımının sağlanması ve yaygınlığın ve sürekliliğin oluşturulması, hizmet alanlarında elde edilen analizi faydaların artırılması amacıyla sağlık hizmetlerinin finansmanı, arz ve talebinin; yönetim, organizasyon ve insan gücü boyutuyla yeniden yapılandırılması ve geliştirilmesi faaliyetlerini kapsamaktadır (Tıraş, 2013: 131).

Ekonomi, *"insanların sahip oldukları sınırlı kaynakları, sınırsız ihtiyaçlarını karşılamak için nasıl dağıttıklarının incelenmesi"* olarak tanımlanmaktadır (Andargie, 2008: 1). Ekonomi, kıt kaynakların en iyi kullanımı, toplumsal ve bireysel kararlarda birçok alternatifin doğru şekilde değerlendirilmesidir. Sağlık ekonomisi, kıt kaynaklar ile sağlık hizmetlerinde sınırı belli olmayan ihtiyaçlar arasındaki uyumun sağlanması ile ilgilidir (Paksoy, 2017: 9). Mevcut kaynakların en iyi şekilde kullanılması ve artırılması ile ilgili problemlerin çözülmesine olan ihtiyaç ekonominin uygulamalı bir alanı olan sağlık ekonomisine olan ilgiyi arttırmıştır (Şantaş, 2017: 86). Sağlık ekonomisinin öneminin artmasının nedenleri aşağıdaki gibi özetlenebilir (Şantaş, 2017: 86-87):

- Alternatif kullanım alanlarına sahip kaynakların olması,
- Her bir kişinin kendi istek ve ihtiyaçlarının diğer kişilere göre daha önemli olduğu düşüncesinin var olması,
- Mevcut kaynakların kıt olması ve kişinin istek ve ihtiyaçlarının karşılanamayacağı düşüncesinin oluşması.

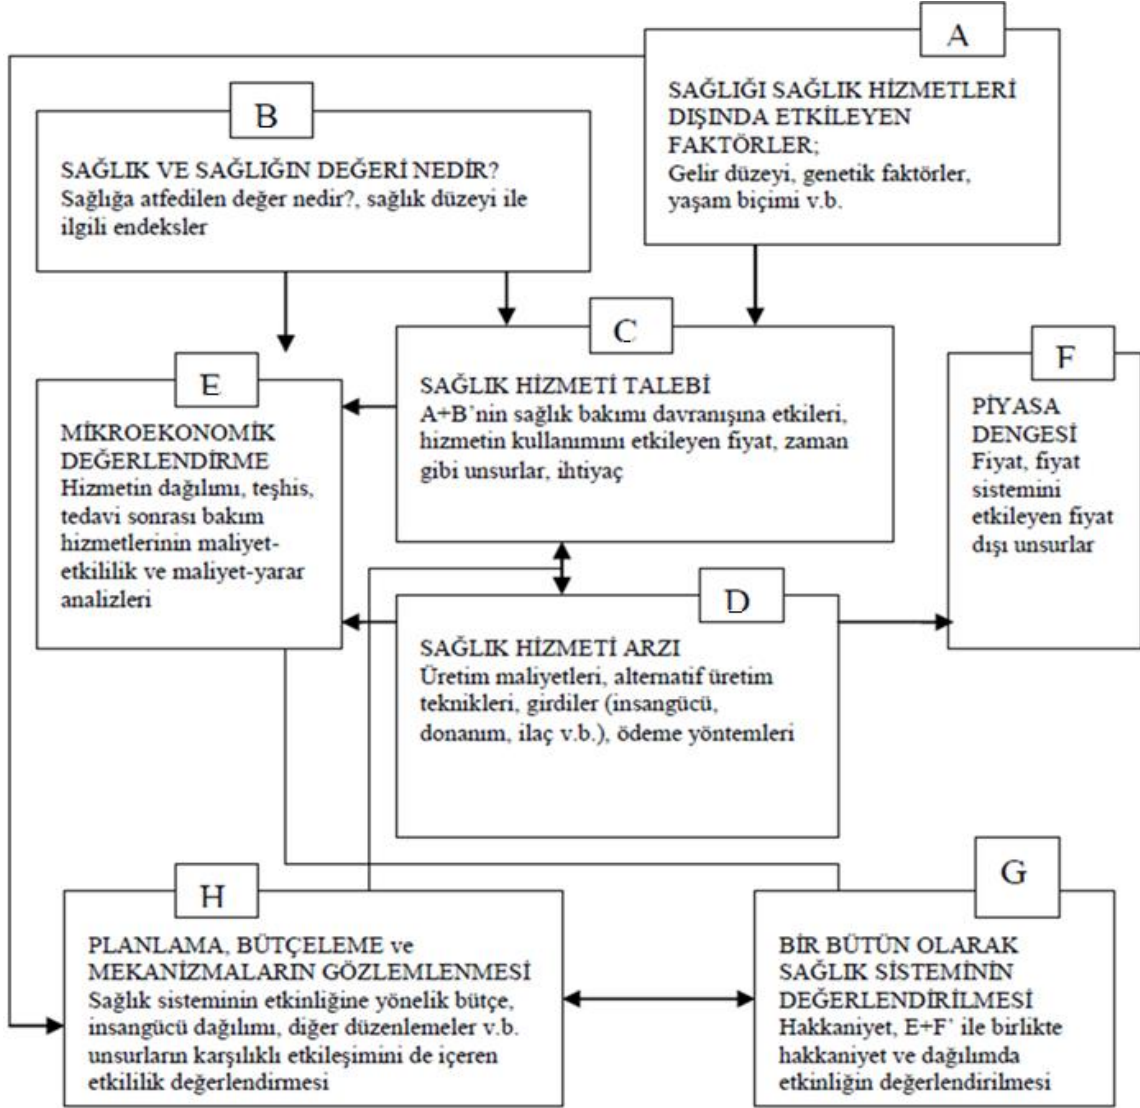

Sağlığın öneminin artmasına paralel olarak gelişen disiplinlerden biri de sağlık ekonomisidir. Sağlık hizmetlerinde arz ve talep önemli yer tutmaktadır. Sağlık ekonomisinin üretim yönünü sağlık hizmetleri arzı oluşturmaktadır. Sağlığa ayrılan kaynaklar, alternatif üretim teknikleri, üretim maliyetleri, piyasanın yapısı, sağlık hizmetlerinin finansman biçimi, kar amacı gütmeyen faaliyet gösteren sağlık kurumlarının varlığı gibi etkenler sağlık hizmetlerinin arz yönündeki temel unsurları oluşturmaktadır. Sağlık hizmetleri talebi ise sağlık ekonomisinin tüketim tarafını oluşturmaktadır. Kişilerin gelir düzeyi, sağlık hizmetlerine yönelik bakış açısı ve davranış biçimi ve piyasa şartları gibi etkenler sağlık hizmetleri talebini belirleyen etkenlerdir (Tıraş, 2013: 131). Sağlık hizmetlerinde fiyatların genellikle yükselme eğiliminde olduğu ve talebin arz edilen hizmete göre belirlendiği düşünülmektedir. Hem hastane gibi sağlık kuruluşlarının

inşasının hem de sağlık hizmeti sağlayıcıların yetiştirilmesinin uzun sürede olması nedeniyle sağlık hizmetlerinde fiyatların yüksek olması olasıdır ve dolayısıyla sağlık hizmetlerinde arz esnekliği katıdır.

Sağlık ekonomisinin kapsamı Williams (1987) tarafından oluşturulan akım tablosunda bir arada açıklanmaya çalışılmıştır. Şekildeki ilk 4 kutu (A, B, C, D) sağlık sektörünü analiz etmeyi sağlayan temel yapı taşlarını; Culyer ve Newhouse (2000) tablodaki ilişkiyi açıklarken sağlık ekonomisinin kapsamına ilişkin ayrıntılı analiz ortaya koymuştur.

Culyer ve Newhouse (2000) ilk dört kutuyu makine dairesi olarak tanımlamaktadır; diğer kutular uygulama alanlarını ifade etmektedir (Şantaş, 2017: 87). Aşağıdaki şekilde sağlık ekonomisinin kapsamı yer almaktadır.

Şekil 1. Sağlık Ekonomisinin Kapsamı

Kaynak: Çalışkan, 2008: 33.

Şekil 1'deki (A) kutusu sağlık hizmetlerinin dışında kalan ve sağlığı etkileyen unsurları içermektedir. Sağlık, kişilerin genetik yapıları belirleyiciliğinde eğitim, gelir düzeyi ve dağılımı, barınma koşulları, beslenme ve yaşam biçimi gibi sağlık hizmetleri dışındaki faktörden etkilenmektedir. (B) kutusu ise sağlığın tanımı ve ölçülmesi ile ilgili kısımdır. Dünya Sağlık Örgütü (DSÖ) tarafından sağlık "yalnızca hastalık ya da sakatlığın olmayışı değil, bedensel, ruhsal ve sosyal yönden tam bir iyilik halidir" şeklinde tanımlanmıştır. Birçok unsuru içerdiğinden bu tanım geniş kabul görmüştür. (C) kutusu sağlık talebi ile ilişkili olarak değerlendirilmesi gerekmektedir. Çünkü bireylerin nihai amacı sağlıklı olduğundan

doğrudan ve açıkça sağlık talep etmeleri kaçınılmazdır. (D) kutusu bir sağlık sisteminde sağlık hizmetleri üretimi ve üretim maliyetleri ile ilgilidir. Sektör düzeyinde ele alındığında sağlık hizmetleri koruyucu hizmetler, tedavi hizmetleri, rehabilitasyon ve sağlığı geliştirme hizmetleri olmak üzere dört farklı biçimde sunulmaktadır. (E) kutusu sağlık hizmetlerinde önceliklerin belirlenmesinde kullanılan araçları içermektedir. (F) kutusu büyük ölçüde iktisadın temel kurgusu olan kıt kaynak yönetimi ile ilgilidir. Bu hem sağlık alanına ayrılan kaynaklar hem de bu alandaki kaynakların dağılımı hangi düzeyde olmalıdır sorusuna yanıt aramayı gerektirir. (G kutusu) sağlık sistemi amaçlarının tanımlanması ve performans değerlendirmesinin yapılması anlamına gelmektedir. Bu, ulusal düzeyde ve uluslararası düzeyde karşılaştırmaların yapılmasını gerektirmektedir. (H) kutusu doğumda beklenen yaşam süresi, çocuk ve bebek ölüm hızı gibi sağlık çıktıları sağlık iktisatçıları tarafından sağlık sisteminin performansını ölçmek amacıyla geniş kabul gören ölçütleri içermektedir (Çalışkan, 2008: 34-39).

Sağlık hizmetleri piyasasında genellikle risk ve belirsizlik vardır ve ihtiyaçlar ortaya çıktığı zamanda maliyetler oldukça yüksektir. Üretim ve tüketim aynı zamanda gerçekleştiğinden hizmeti alan ile sunan arasında bilgi asimetrisi vardır. Hizmeti alan rasyonel bir davranış gösterememektedir (Yıldırım, 2015: 25). Sağlık hizmetlerinin ekonomik sistemi; arz-talep, en uygun fiyat ve finansmandan oluşmaktadır. Sağlık hizmetlerinin ekonomik özellikleri aşağıdaki gibidir (Tutar ve Kılınç, 2007: 34):

- Talep tesadüfi ve esnekliği katıdır.
- Hizmetler toplumsal özellik taşır.
- Kişilerin taleplerini doktor belirler.
- Sosyal amaçlıdır ve hasta aldığı hizmetin kalitesini ölçme yeteneğine sahip değildir.

19-22 Temmuz 1946 tarihinde New York'ta düzenlenen Uluslararası Sağlık Konferansı'nda Birleşmiş Milletler üyesi 51 ülkenin temsilcisi DSÖ Anayasasını oluşturmuştur. DSÖ anayasasında temel amaç "*Tüm insanların mümkün olan en yüksek sağlık düzeyine ulaşmaları*" dır (T.C. Dışişleri Bakanlığı). Dünyada birçok devlet ve örgüt sağlık sorunlarına ortak çözüm bulmak için ortaya çıkan ve uluslararası anlaşma niteliğinde olan birçok sağlık bildirgesi yayınlanmıştır. Bu bildirelerden başlıcalarını aşağıdaki gibi sıralayabiliriz.

Tablo 1. Sağlık Bildirgeleri

Bildirgenin Adı	Yayınlandığı Yıl	Bildirgenin Ana Teması
Almata-Ata Bildirgesi	1978	Temel sağlık hizmetleri açıklanmış ve devletin görevleri üzerinde durulmuştur.
Lizbon Bildirgesi	1981	Hasta hakları ele alınmıştır.
Ottawa Şartı	1986	Sağlığı geliştirme yalnızca sağlık sektörüne ait bir sorumluluk olmaktan çıkarılmıştır.
Adelaide Tavsiyeleri	1988	Sağlıklı halk politikası stratejileri belirlenmiştir.
Amsterdam Bildirgesi	1994	Hasta hakları; bilgilendirme, onay, mahremiyet ve özel hayat; bakım ve tedavi başlıkları altında ele alınmıştır.
Kopenhag Bildirgesi	1994	Avrupa'da sağlığa yönetilen eleştiriler yer aldığı gibi gerekli değişimlerin yapılmasını öngörmektedir.
Bali Bildirgesi	1995	Amsterdam Bildirgesi'ne ek olarak intihar girişimi, dini temsilcilerin desteği gibi düzenlemeler yer almıştır.
Ljubijana Bildirgesi	1996	Güneydoğu Avrupa'da sağlık hizmetlerinden faydalanamayan nüfusun ihtiyaçlarının giderilmesidir.
Jakarta Deklerasyonu	1997	21. yüzyılda sağlığı geliştirme eylem planları sunulmuş ve önceliklerine yer verilmiştir.
Dubrovnik Sözleşmesi	2001	Sağlık alanında hedef ve stratejilerin belirlenmesi üzerinde durulmuştur. Ayrıca kalite üzerinde durulmuştur.
Bangkok Konferansı	2005	Sağlıklı halk politikası ve destekleyici çevreler oluşturma, sağlık hizmetlerini yeniden yönlendirilmesi
Tallinn Şartı	2008	Sağlık sistemlerinin güçlendirilmesi için stratejik çerçeve ve kılavuz oluşturulması
Malta Belgesi	2012	Sağlık alanındaki eşitsizliklerin azaltılması, halk sağlığını güçlendirilmesi ve insan odaklı sağlık sistemlerinin oluşması ve sürdürülebilirliği

Kaynak: Akalın, 2018: 17; Madenoğlu Kıvanç, 2015: 164.

Tablo 1’de yer alan verilere göre ilk olarak 1978 yılında yayınlanan bildirmede sağlık hizmetleri ile ilgili tanımlamalar yapılmış ve devlete düşen görevler açıklanmıştır. Sonrasında belirli aralıklarla bildirmeler yayınlanmıştır. Son olarak 2012 yılında Malta’da yapılmıştır. DSÖ bölgesindeki 53 üye devlet Sağlık 2020 yeni ortak bir politika çerçevesi üzerinde anlaşmaya varmışlardır. Her bir yeni bildirme bir öncekine göre daha insan odaklı ve gelişime açık olarak yayınlanmıştır. Sağlık bildirmelerinin ortak amacı; sağlık sisteminin sürdürülebilirliğini sağlamak, kişilerin faydalandığı sağlık kurum ve kuruluşlarını arttırmak, sağlık hizmetlerinde meydana gelebilecek eşitsizliği ortadan kaldırmak ve esenliği oluşturmak, insan odaklı, evrensel ve kaliteli sağlık sistemlerinin oluşturulmasını sağlamaktır. Kişilerin hayatlarını tehdit eden yeni sorunların ortaya çıkması durumunda sağlık bildirmeleri ile ilgili yeni eylem planları hazırlanmaya çalışılmaktadır.

DSÖ 1948 yılında kurulduktan sonra sağlık sorunlarına teknik açıdan yaklaştığı görülmektedir. Yaşanan gelişmeler ile ihtiyaçların değişkenlik göstermesi ve eşitsizliğin giderek artmasıyla DSÖ politikasını değiştirmeye karar vermiştir. DSÖ’nün 80’li yılların başından itibaren sağlık hizmetlerine olan yönelimini arttırmış ve sağlık hizmetlerine daha fazla önem vermiştir. DSÖ, kişilerin sağlık hizmetlerinden eşit şartlarda yararlanması için gerekli eklemeleri yapmıştır.

3. DÜNYADA YAŞANAN SALGIN HASTALIKLAR VE ETKİLERİ

Pandemi, Eski Yunan dilinde “tüm” anlamına gelen “pan” ve “insanlar” anlamına gelen “demos” sözcüklerinden oluşan “tüm insanları etkileyen” anlamındadır (Aslan, 2020: 36). İnsanlık tarihinde iki düzineden fazla büyük pandemi meydana gelmiştir.

Toplum sağlığı kurallarına uyulmaması ekolojik dengenin bozulması, doğal afetler ve kıtlıklar gibi faktörler salgın hastalıkların ortaya çıkmasına neden olmaktadır (Kılıç, 2020: 18). İnsanlar dünyanın dört bir yanına yayıldığından, salgın hastalıklar da var oldu. Modern çağda bile pandemiler kaçınılmaz bir durum olmaktadır. Teknolojik gelişmeler yaşandıkça ve insanların sağlık bilgisi arttıkça pandemileri kontrol altına alabilme imkânı ortaya çıkmıştır (Feyisa, 2020: 64).

Tablo 2. Zamanla Meydana Gelen Büyük Salgınlar

İsim	Periyod	Ölü Sayısı
Antonine Vebası	165-180	5.000.000
Japon Çiçek Hastalığı	735-737	1.000.000
Justinian Vebasına	541-542	30.000.000-50.000.000
Kara Veba	1347-1351	200.000.000
Yeni Dünya Çiçek Hastalığı	1520	56.000.000
Londa’nın Büyük Vebası	1665	100.000
İtalyan Vebası	629-1631	1.000.000
Kolera Salgını	1817-1923	1.000.000 dan fazla
Üçüncü Veba	1885	12.000.000
Sarıhumma	1800 sonları	100.000-150.000 (ABD)

Kaynak: Feyisa, 2020: 64.*: Covid-19 ile ilgili güncel veri worldometer, 2021’den alınmıştır.

Tablo 2’de geçmişten günümüze kadar öne çıkan pandemilerin tarihsel açıdan sıralanmış hali yer almaktadır. Bu salgınların ortak özelliği dünyayı etkisi altına alması ve birçok insanın hayatını kaybetmesidir. En çok can kaybına sebep olan kara vebayı, 56 milyon ölü sayısı ile çiçek hastalığı takip etmiştir. 1630-1770 yılları arasında çiçek hastalığının Amerika’daki yerli halklara bulaştırılması sonucu ortaya çıkan salgınlar, yerli halk nüfusunda yüksek oranda ölümlere ve Avrupalı işgalcilere karşı

savunmasız kalmalarına neden olmuştur. Sonrasında İspanyol gribi gelmiştir. Ciddi hastalığa ve çok sayıda ölüme neden olan İspanyol gribinde büyük ölçekli aşılamaya geçilmeden ABD'deki toplam ekonomik etkisinin tahminleri 71,3 milyar dolar ile 166,5 milyar dolar arasında değiştiği görülmektedir. İspanyol gribine kişilerin bağışıklık kazanmasıyla ortadan kaybolduğu, domuz gribi ile İspanyol gribi arasında genetik benzerlik olduğu ve aşılama iki salgından da koruma sağlayabileceği düşünülmektedir.

2014 yılında Ebola salgını sırasında sıtma, HIV/AIDS ve tüberküloz için rutin bakım eksikliğinden dolayı Gine, Liberya ve Sierra Leone'de tahmini 10.600 ek ölüme neden olmuştur. Bu ülkelerde rutin çocukluk aşılama oranlarında yüzde 30'luk bir azalmaya yol açmıştır (Şahin ve Demir, 2020: 72-74). SARS ve halen yok olmayan MERS ve 2019 yılının son aylarında ortaya çıkıp bütün dünyayı etkisi altına alan COVID-19 pandemileri Koronavirüs kaynaklı salgınlardır (Kılıç, 2020: 32). Yaşanan salgın hastalıklardan (HIV, MERS, COVID-19 gibi) bazılarının halen devam ettiği ve kesin bir tedavi yönteminin bulunmadığı ve ölüm sayılarının da kesin bir sayıya ulaşmadığı görülmektedir.

Salgın hastalıklarda kısa zamanda kaynağın ve sebebin kesin olarak bilinmemesinden dolayı kişilerde şok ve panik etkisi yarattığı görülmektedir. Kişilerin salgın hastalığın ortaya çıkmasından sonra buldukları bölgeleri terk etmek istedikleri ve ailelerini ihmal edip ölüme teslim oldukları görülmüştür. Veba salgını sonrasında Floransalı kişilerin her gün öleceklerini düşünerek yaşadıkları kaydedilmiştir (Slavicek, 2008: 79).

Salgın hastalıkların sonrasında ölüm oranları giderek artmaktadır. Örneğin Kara Veba salgını sırasında ve sonrasında bebek ölüm oranlarında bir yükselme görülmüştür. Kişilerin salgın sırasında psikolojilerinin bozulmasıyla bebeklerin boğularak öldürülmesi eylemi yaygın hale gelmiştir. 1445 yılında Floransa'da kurulan yetimhanelere olan yoğunluğun sebebi ise salgın hastalıklarda kişilerin psikolojik rahatsızlıklarından dolayı bebeklerini terk etme eğilimi göstermesidir (Kılıç, 2020: 34).

Etienne ve arkadaşlarının (2020: 2) yapmış oldukları çalışmada salgın hastalıklar sırasında ve sonrasında sağlıklı bir sistemin oluşturulabilmesi ve ülkenin sürdürülebilirliği için yapılması gerekenler;

- Bir insan güvenliği, ekonomik ve sosyal kalkınma sorunu olarak sağlığı yükseltmek,
- Entegre politika geliştirme ve planlamaya öncelik vermek,
- Evrensel sağlık ve insan güvenliğini sağlamak için sağlık sistemlerini dönüştürmek,
- İlaçlara, aşılar ve diğer sağlık teknolojilerine eşit erişim sağlamak için bilim, teknoloji ve yeniliğe yatırım yapmak,
- Temel halk sağlığı işlevlerini ve risk azaltma ve azaltmada ulusal kapasiteyi güçlendirmek olarak ifade edilmiştir.

Küresel olarak yaşanan pandemilere cevap verebilmek, sağlık yönetimine ve sağlık sistemlerinin ulusal ve yerel düzeylerde koordineli bir şekilde yanıt verme becerisinin geliştirilmesine bağlıdır. Bu salgınların etkisi büyük ölçüde sağlık sistemlerinin nasıl organize edildiğine, finanse edildiğine ve bunların mevcut tehdide hazırlanma ve hızla adapte olma ve bunlara yanıt verme kapasitelerine bağlıdır. Bunlar dayanıklı bir sağlık sisteminin özellikleridir. Bir pandeminin veya benzer bir tehdidin bir toplum ve ekonomi üzerindeki daha geniş etkisi, insanların hükümetleri tarafından alınan önlemlere olan güvenine, sağlığı, refahı ve refahı teşvik eden değerler ve politikadaki dengeye ve insanların istekliliğine bağlıdır (Etienne,2020: 2).

3.1. Dünyada Covid-19 Pandemisi ve Etkileri

Koronavirüs, ek sarmallı RNA genomuna sahip pozitif anlamlı zarflı virüslerdir (Şahin ve Demir, 2020: 65). COVID-19, dünyanın çeşitli bölgelerine hızla yayılan viral bir hastalıktır. Öksürük, boğaz ağrısı, ateş ve solunum güçlüğü gibi birçok belirtisi vardır. Bu virüsün havada ve birçok yüzeyde birkaç saat hayatta kalabileceğine inanılmakta ve bu nedenle hastalığın yayılmasını önlemek için azami önlemlerin alınması gerekmektedir (Singh ve Gupta, 2021: 2). 2019 yılının Aralık ayında Çin'in Wuhan kentinde ortaya çıkmıştır. Çin, Dünya Sağlık Örgütü'ne 31 Aralık 2019 tarihinde pnömöni vakalarının kümelenmesi üzerine bildirimde bulunmuştur. Sonrasında 4 Ocak 2020 tarihinde salgın üye ülkelere duyurulmuştur

(Buzgan ve Güner, 2020: 141). 11 Mart 2020 tarihinde de DSÖ, Covid-19 salgın hastalığını pandemi olarak ilan etmiştir.

Başlangıçta algı, COVID-19 pandemisinin yalnızca Çin'de lokalize olacağı yönündeydi. Daha sonra insanların hareketiyle tüm dünyaya yayıldı. İnsanlardan evde kalmaları istendiğinde ekonomik problemler şiddetlendi ve havacılık sektörünü etkileyen seyahat yasakları, spor sektörünü etkileyen spor etkinlikleri iptalleri, olayları etkileyen toplantıların yasaklanması ve ekonominin çeşitli sektörlerinde şiddeti hissedildi (Ozili, 2020: 5).

COVID-19 pandemisi bulaşıcılık ve ölümcüllük açısından yıkıcı oldu ve ekonomileri durma noktasına getirdi. Covid-19 pandemisi, dünya çapında benzeri görülmemiş politika tepkilerine, kilitlenmelere, sosyal mesafeler ve teşvik paketlerine yol açtı. Şubat 2020'de Çin'deki arz şoku, COVID-19 pandemisini izleyen ve küresel üretim ve tedarik zincirlerinin zaafılarının altını çizen kapatma politikaları nedeniyle küresel bir talep şokunu tetikledi. Benzer şekilde, COVID-19 pandemisinin ardından küresel olarak ticaret birbirine bağlılığında önemli bir azalmaya neden oldu ve açıkça küresel ticarete olumsuz bir etki gösterdi (Lyke,2021:2).

Tedarik zinciri, bir ürün veya hizmeti tasarlamak, üretmek ve bir pazara sunmak için birlikte çalışan, hammaddelerin çıkarılmasından bitmiş ürün veya hizmetlerin dağıtımına kadar uzanan bir organizasyon veya operasyon sistemini ifade eder. Otomobil, bilişim sektörlerinde çok önemli bir rol oynuyor ancak Covid-19 salgını nedeniyle tüm otomobil, imalat ve bilişim sektörlerinin kapatılması gerekti ve bu da küresel olarak tedarik zincirini etkiledi. Covid-19 salgınının tedarik zincirini nasıl etkilediğine ve dünya çapında üretim operasyonlarını nasıl aksattığına dair raporlar her geçen gün artıyor. Covid-19 pandemisi ABD, Avrupa ve Hindistan'daki binlerce şirketi hâlihazırda montaj ve üretim tesislerini kısmaya veya geçici olarak kapatmaya zorladı (Omkar, 2020: 21).

Covid-19 hızla yüzyılın dünya krizlerinden biri haline geldi. DSÖ Avrupa ülkelerindeki evler için bazı yönergeler hazırladı. Bu yönergelerde evlerde sağlıklı yaşama ve belirlenen standartları uygulama yer aldı. Ayrıca sağlıklı ev standartları oluşturulması ile ülkelerin kişilerin sağlığına ev yaşamlarında da önem verdiğinin bir göstergesi olarak görülmektedir (Zarrabi vd., 2021: 1). Ülkeler, salgına çeşitli düzeylerde yanıt verdiler. İnsanların hareketini kontrol etmek için seyahat kısıtlamaları, sokağa çıkma yasakları, evde kalma emirleri ve tesislerin kapatılması uyguladı. Hükümetler, hastalara uygun tedaviyi sağlamak için karantina merkezleri ve özel Covid-19 hastaneleri açtı.

Tablo 3. Seçilmiş Ülkelerde ve Dünyada Covid-19 Pandemisine İlişkin Veriler

Sıra	Ülkeler/Dünya ^a	Toplam Vaka Sayısı	Bir milyonda vaka	Aktif Vaka Sayısı	Toplam İyileşen Sayısı	Toplam Ölüm Sayısı	Bir milyonda ölüm	Toplam Test Sayısı

Kaynak: Worldometers, 2021.

Tablo 3'te 12 Mayıs 2021 tarihinde seçilmiş ülkelerdeki Covid-19 pandemisine ilişkin son veriler yer almaktadır. Tablodan da anlaşılacağı gibi ABD'de toplam vaka sayısı yaklaşık 34 milyondur. Toplam ölüm sayısı 597.309 iken toplam iyileşen sayısı 26.581.881'dir. En yüksek vaka sayısına sahip olan ABD'yi bir milyondaki vaka sayısında Çekya'nın geçtiği görülmektedir. Çekya'da bir milyondaki 2.777 sayısı ile en yüksek ölü sayısına sahip olduğu görülmektedir. Aşı çalışmaları ile öne çıkan Almaya, Rusya ve Çin gibi ülkelerin verilerine bakıldığında, Rusya'da toplam vaka sayısının yaklaşık 5 milyon, 114.331 ölü sayısı, toplam iyileşen sayısı 4.518.529'dur. Almanya'da toplam vaka 3.551.550'dir. 85.921 ölü sayısının varken iyileşen sayısı 3.220.300'dür. Salgının ortaya çıktığı Çin'de ise toplam vaka sayısı 91 bin olarak, toplam ölüm sayısı 4.636 iken toplam iyileşen sayısı 85.861'dir. Çin'in yapmış olduğu kısıtlamalar, aldığı önlemler ve kontrollü aşılama sistemi ile pandemi sürecini iyi bir şekilde yürüttüğü söylenebilir.

Çin, koronavirüs salgınının merkez üssü olan Wuhan kentindeki tüm hastaneleri geçici olarak kapattı. İran hastaneleri koronavirüs salgınıyla başa çıkmak için mücadele etti. İspanya'da İspanyol hükümeti, virüs çok hızlı yayılırken tüm özel hastaneleri ve sağlık hizmeti sağlayıcılarını kamulaştırdı. Singapur, artan COVID-19 hasta sayısı ile başa çıkmak için yeterli sağlık tesislerine ve doktora sahipti ve özel hastaneler yabancı COVID-19 hastalarını kabul ediyordu. Daha sonra Singapur'daki Sağlık Bakanlığı (MOH), kamu ve özel hastanelerdeki ve özel uzman kliniklerdeki tüm doktorlara Singapur'da yaşamayan yeni yabancı hastaları kabul etmeyi durdurmalarını tavsiye etti (Ozili, 2020: 12).

Salgından sağlık sigortacıları da etkilendi. ABD'deki birçok sağlık sigortacısı, hastanelere yapılan sigorta ödemeleri ile baş edemedi ve sigortacılar, sağlık sektörünün ekonomik görünümü olumsuz olduğundan planlanan federal yardım teşvik paketine dahil edilmek istedi. Standard & Poor's (S&P) 500 Yönetilen Sağlık Hizmetleri endeksi, yatırımcıların sağlık sektörünün ciddi şekilde zarar göreceğini düşündüklerini gösterdi. Moody's derecelendirme kuruluşu, COVID-19 pandemisinin yayılması nedeniyle kar amacı gütmeyen kuruluş ve kamu sağlık hizmetleri sektörünün görünümünü durağandan olumsuzla indirdi. COVID-19 pandemisi kontrol altına alınabilse bile, kar amacı gütmeyen sağlık şirketlerinin zaten artan harcamalar ve yaygın belirsizlikle karşı karşıya olduğunu belirtti (Ozili, 2020: 12).

Tablo 4. COVID-19 Pandemisi Süresinde Hükümetlerce Uygulamaya Koyulan Politikalar

Politika Türü	Alınan Tedbirler	Uygulayan Ülkeler
Para Politikası	Bankalara zorla düzenleyici işlem yaptırılması, Covid-19'dan etkilenen borçlulara anapara-faiz moratoryumu verilmesi	İrlanda, Çin, Nijerya, İtalya
	Merkez bankalarının finansal piyasalara likidite sağlaması	ABD, Çin
	Merkez bankalarının hızla değer kazanan tahvil ve menkul kıymetleri satın alması	Avustralya, AB, Kanada
	Merkez bankaları tarafından faiz oranlarının düşürülmesi	Türkiye, ABD, Yeni Zelanda, Japonya, İngiltere, Nijerya, Güney Kore, Kanada
	Bankalara, KOBİ'lere, halk sağlığı sektörüne, bireylere ve önemli işletmelere sürekli kredi akışı	İngiltere, ABD, Avustralya, Nijerya
Maliye Politikası	Covid-19 salgından en fazla etkilenen sektörler ve endüstriler için büyük bir federal teşvik paketini onaylayan hükümetler	Türkiye, İngiltere, ABD, Avustralya, Nijerya,
	Her hanehalkını desteklemek için sosyal yardım ödemeleri	Türkiye, Avustralya, ABD
	Bireyler için gelir desteği sağlanması	Türkiye, Avustralya, ABD, İngiltere, Hindistan

Kaynak: Acar, 2020: 291.

Tablo 4'te Covid-19 pandemisi sürecinde bazı hükümetlerin uyguladığı para ve maliye politikaları görülmektedir. Bu ülkeler uyguladıkları bu politikalar ile ekonomik açıdan hem sektörel hem de bireysel rahatlamayı hedef almışlardır. Türkiye'de faiz oranlarının düşürülmesi ve sosyal yardım paketleriyle Covid-19 pandemisi dönemini sorunsuz bir şekilde atlatmayı hedeflemiştir.

COVID-19 pandemisi, ülkeleri ihtiyaç temelli düzeyde iş birliği konusunu ele almaya zorladı. Aşırı çalışmalarında bir araya gelmesi mümkün olmayan hükümetlerin bir araya gelmesinin mümkün olması gibi (Aybet, 2020: 315). Pek çok ülke salgını durdurmak için olağanüstü önlemler alırken, bazıları pek çok önlemi yanlış uyguladıkları için ağır şekilde eleştirildi. Bazı hükümetler, zorunlu olmayan çalışanları görevden alarak ve küçük işletme sahiplerine tazminat ödeyerek işçilerin gelirlerini desteklerken, diğerleri, Covid-19 pandemisi karşısında ekonomide paylaşımı başarılı bir şekilde yapamamıştır (Hossain, 2021: 2).

Son araştırmalar Covid-19 pandemisinin tüketim, hizmetler, finans ve yatırımlar ile kısmen sektörlerle ilişkin ilk etkilerini değerlendirmeye odaklanmıştır. Kısıtlama yaptırımları ve gönüllü sosyal uzaklaşma nedeniyle hizmet sektörü (seyahat, turizm, yiyecek-içecek ve eğlence gibi) ciddi şekilde etkilendi. Salgının ilk ortaya çıktığı Çin, lüks seyahat acenteleri tarafından beklenen turizm geliri %75 olarak tahmin edildi ve bu, 2019 verilerine bakıldığında 2020'de yaklaşık 95 milyar dolar anlamına gelecektir. Uluslararası Hava Taşımacılığı Birliği (IATA) tarafından yapılan tahmine göre, havacılık endüstrisinin 2020 için beklenen yolcu geliri kaybı 113 milyar ABD dolarıdır ve bu, öngörülen toplam gelirin %20'si civarındadır (Ceylan vd., 2020: 819).

Birçok hükümet, gençleri kendilerini ve genel nüfusu koruma çabalarını benimsemeye çağırdı. Gençler aynı zamanda en savunmasız olanlara yardım edebilecek ve toplumları arasında halk sağlığı ve sosyal farkındalık kampanyalarının artırılmasına yardımcı olacak bir konumdadır. Bu nedenle, gençler virüsün yayılmasını ve halk sağlığı, toplum ve genel olarak ekonomi üzerindeki etkisini sınırlamak için kritik öneme sahiptir. (Verma ve Prakash, 2020: 7358).

Covid-19 salgınının pandemi olarak ilan edilmesi ile bazı ülkeler hem kendi ülkelerini korumak hem de salgının yayılmasını önlemek amacıyla kapılarını diğer ülkelere belirli süreyle kapatma kararı almıştır. Salgın sonuçlarının ağırlaşması, ağır hasta ve ölü sayılarında artışın korkutan seviyelere ulaşması, kısmen ya da tamamen kapanmaların yaşanmasına sebep olmuştur. Yaşamın sürdürülebilirliği için ülkelerin çeşitli desteklerle vatandaşlarını, kurum ve kuruluşları desteklediği görülmüştür. Yoğun bakımlarda yatan hastalar için ihtiyaç duyulan ventilatör cihazlarının üretimine ağırlık verilmiştir. Sağlık sektöründe aşı ve ilaç çalışmalarına ağırlık verilmiştir. Genel olarak Çin, Almanya ve Rusya'nın geliştirdiği aşuların onay almasıyla bazı ülkelerde uygulanmaya başlanmıştır.

3.2. Türkiye'de Covid-19 Pandemisi ve Sağlık Hizmetlerinin Sunumu

Türkiye'de sağlık alanında yapılan reform çalışmaları ve düzenlemeler uzun bir geçmişe sahiptir. Sağlıkta dönüşüm ve reform çalışmaları 2000'li yıllarda hız kazanmıştır. Sağlık hizmetleri sunumunda kişilerin beklenti ve taleplerinin artması, kamusal kaynakların sınırlı olması ve maliyetlerin artması sağlık hizmetleri sunumunda reforma gidilmesine sebep olmuş ve Sağlıkta Dönüşüm Programı (SDP) ilan edilmiştir (Memişoğlu ve Kalkan, 2016: 655). SDP, 2003-2011 birinci stratejik plan ile uygulanmaya başlanmıştır. Sağlık hizmetlerinin verimli ve etkili, hakkaniyete uygun bir şekilde organize edilmesi, finansmanın sağlanması ve sunulması amaçlanmıştır. Sağlık Bakanlığı'nın planlama ve denetlemeden sorumlu bir kurum olması, Türkiye'deki tüm vatandaşları Sosyal Güvenlik Kurumu (SGK) çatısı altında birleştiren Genel Sağlık Sigortasının hayata geçirilmesi, sağlık hizmetleri sunumunun genişletilmesi ve kalite-akreditasyon sistemlerinin düzenlenmesi, sağlık çalışanlarının gerekli eğitimleri almasının sağlanması ve motive edilmesi, sağlık bilgi sistemlerinin kurulması ve tıbbi cihaz ve malzeme yönetiminin uygulanması SDP'nin hedefleri arasında yer almaktadır (Madenoğlu Kıvanç, 2015: 4).

Türkiye'de sağlık harcamaları merkezi yönetim bütçe giderleri içinde yer almaktadır. Sağlık harcamaları; genel tedavi ve sağlık malzemeleri giderlerinden, genel ilaç ve sağlık malzemeleri giderlerinden oluşmaktadır (Akar, 2014: 316). Sağlık harcamalarının Gayri Safi Yurtiçi Hasıla (GSYİH) içerisindeki payı, nüfus artış hızı, kişi başına sağlık harcamaları, doğum oranı, ölüm oranı, bebek ölüm hızı, toplam

doğurganlık oranı gibi değişkenler sağlık göstergesi olarak kullanılmaktadır. Birçok çalışmada sağlık göstergesi olarak en çok kullanılan “doğuşta yaşam beklenti süresi” dir (Yardımcıoğlu, 2012: 33). Gelişmiş ülkelerde ekonomik kalkınma sağlandığı için sağlık harcamalarının düzeyi diğer ülkelere göre daha fazla olduğu söylenebilir (Akar, 2014: 321). Türkiye’de 2019 yılı toplam sağlık harcaması bir önceki yıla göre %21,7 artarak 201 milyar 31 milyon TL’ye yükselmiştir. Genel devlet sağlık harcaması %22,5 artarak 156 milyar 819 milyon TL’ye ulaşmış, özel sektör sağlık harcaması ise %18,8’lik bir artış oranı ile 44 milyar 212 milyon TL olarak tahmin edilmiştir (TÜİK, 2020). Sağlık harcamalarına gereken önemin verilmesi, sağlık hizmetlerinde ihtiyaçların önemszenmesi ve sağlık kurumlarının ve personelinin sayısının istenen sayıya ulaştırılmasında gerekli çalışmaların yapıldığı söylenebilir.

Şekil 2. 2010-2019 Yılları Arasında Sağlık Harcamalarının Genel Devlet ve Özel Sektöre Göre Dağılımı

Kaynak: TÜİK, 2020.

Şekil 2’de 2010 yılından itibaren sağlık harcamalarına yapılan yatırımın dörder yıllık periyotlarda devlet ve özel sektörde artış gösterdiği, genel devlet sağlık harcamasının toplam sağlık harcamasına oranı 2019 yılında %78,0, özel sektör sağlık harcamasının ise %22,0 olarak gerçekleştiği görülmektedir. Genel devlet ve özel sektörün alt bileşenlerine bakıldığında, 2019 yılında Sosyal Güvenlik Kurumu %51,7, merkezi devlet %25,6, hanehalkları %16,7, sigorta şirketleri %2,9, hanehalklarına hizmet eden kar amacı gütmeyen kuruluşlar ile diğer işletmeler %2,4, mahalli idareler %0,7’lik bir paya sahip olduğu belirtilmiştir (TÜİK, 2021).

Şekil 3’te Nisan 2019, 2020 ve Nisan 2021 yıllarına ait ekonomik güven endeksi değişim oranları yer almaktadır.

Şekil 3. Ekonomik Güven Endeksi Değişim Oranları

Kaynak: TÜİK, 2021.

Şekil 3’te ekonomik güven endeksi Mart ayında 98,9 iken, Nisan ayında %5,1 oranında azalarak 93,9 değerine düşmüştür. Ekonomik güven endeksindeki düşüş, tüketici, reel kesim (imalat sanayi), hizmet,

perakende ticaret ve inşaat sektörü güven endekslerindeki düşüşlerden kaynaklandığı söylenebilir (TÜİK, 2021).

Tablo 5'te Türkiye'de 11 Mart 2020'de ilk vakanın ortaya çıkmasından itibaren aylık vaka sayısının değişimi, toplam ölüm sayısı, toplam iyileşen hasta sayısı ve toplam yapılan test sayıları yer almaktadır.

Tablo 5. Türkiye'deki Covid-19 Pandemisine İlişkin Veriler

Tarih	Toplam Test Sayısı	Artış	Toplam Vaka Sayısı	Artış		Toplam Ölüm Sayısı	Artış		Toplam İyileşen Hasta Sayısı	Artış	
				Sayı	%		Sayı	%		Sayı	%

Kaynak: Sağlık Bakanlığı, 2021 tarafından sunulan verilerden derlenmiştir.

Tablo 5'te yer alan verilere göre en fazla test, en fazla vaka ve ölüm olayı Nisan 2021'de gerçekleşmiştir. Toplam vaka sayısı ve iyileşen hasta sayısında en fazla artış Aralık 2020 döneminde olmuştur. Bir önceki döneme göre toplam vaka sayısındaki artış hızının en düşük olduğu dönem Şubat 2021'dir. Bir önceki döneme göre toplam ölüm olayı artış hızının en fazla olduğu Aralık 2020 dönemidir. 12 Mayıs 2021 tarihi itibarıyla toplam vaka sayısı 5.072.462, toplam vefat eden 43,821 ve iyileşen sayısının 4.801.291 olduğu görülmektedir. Covid-19 pandemisinde vaka sayılarının en üst sayılara ulaşmasıyla ülkede kapanma tedbirleri alınmış ve bu tedbirler günlük vaka sayılarına olumlu yönde yansımıştır. Yapılan test sayılarının artması, öncelikle sağlık personelinin ve yaşlıların aşılması ve uygulanan tedavilerde iyileşen hasta sayısının vefat eden sayısına oranla daha fazla olması salgını yönetmedeki başarıyı ortaya koymaktadır.

Tablo 6'da Covid-19 pandemisi ile yaşanan küresel krizde Türkiye'nin ekonomik açıdan nasıl etkileneceği ile ilgili öngörülerde bulunulmuştur.

Tablo 6. Covid-19 Pandemisi Nedeni ile Oluşan Küresel Krizin Türkiye Ekonomisine Etkileri

Gösterge	Nasıl Etkileneceği	Açıklama
İhracat	Düşer	İhracat yapılan ülkelerde ekonomik daralma ortaya çıkacağından ithalat düşüşleri yaşanacak ve bu Türkiye'nin ihracatını olumsuz etkileyecek.
İthalat	Karışık	İthalat, korona virüs etkisi sonucu düşecek. Bu bir yandan cari açığımızın

		denetlenmesine ve dolayısıyla dış finansman ihtiyacımızın düşmesine bir yandan da üretimin düşmesine ve dolayısıyla büyümenin gerilemesine yol açacak.
Turizm	Karışık, Olumsuz Etki Daha Ağırıklı	Korona virüs nedeniyle turistler gezilerini erteleyecekleri için bu gelişme Türkiye'yi iki yönlü etkileyecek. Türkler yurt dışına eskisi kadar gitmeyecek, yabancılar da Türkiye'ye ve diğer yerlere eskisi kadar gitmeyecek. Toplamda Türkiye'ye etkisi olumsuz olacak.
Üretim	Düşer	Üretimimizde girdi olarak kullandığımız ithal mallar oldukça ağırıklı. Bunların çoğu Çin kökenlidir. Bunların ithalatında oluşacak sıkıntılar üretimimizi olumsuz etkileyecek.
Risk Primi	Yükselir	Ekonomisi kırılan olan Türkiye'nin bu aşamada riskleri artacak ve dolayısıyla CDS primi yüksek kalacak.
TL'nin Değeri	Düşer	Risklerin yükselmeye devam ettiği böyle bir ortamda TL'nin dış değerinin düşmesi beklenir.
Altın	Yükselir	Risklerin yükselmeye devam ettiği böyle bir ortamda altının değerinin yükselmesi beklenir. Altın ithalatçısı olan Türkiye'de ithalat miktarı değişmese bile ödenecek bedel yükselir.
Enflasyonu Cari Denge	Yükselir	TL'nin dış değerinin düşmesi enflasyonu da yükseltir. İhracatın ve ithalatın birlikte düşeceği bir ortamda hangisinin etkili olacağını önceden kestirmek kolay değil.
Bütçe Açığı"	Yükselir	Büyümenin düşeceği bir ortamda hükümet ekonomiyi canlı tutabilmek için harcamaları artırıp, vergileri düşürecektir. Bu da bütçe açığını büyütür.

Tablo 6'da pandemi sürecinde birçok ülkede olduğu gibi Türkiye'de de bazı sektörler olumsuz etkilenmiş, üretim düşmüştür. Küresel bir salgın olmasından dolayı ithalat ve ihracatta karşılıklı düşüşler ve karmaşık durumlar ortaya çıkmıştır. Örneğin, üretilen ve teslimatı yapılması gereken araçların gemilerde bekletilmesi ile ürünün tüketici ile buluşamaması ve bu durumun fiyatlara yansımaları. Diğer yandan üretimde pandeminin yayılmasını önlemek amacıyla kullanılan maske, dezenfektan ve eldiven gibi ürünlerin üretimine ağırlık verilmiş ve sağlık hizmetlerindeki talep karşılanmaya çalışılmıştır.

Covid-19 pandemisi sürecinde yapılan bu kısıtlamalar turist sayısında azalmaya sebep olmuştur. Yaşanan bu düşüş ile turizm gelirlerinde düşüşe neden olmuştur (Eğilmez, 2021). Bununla birlikte sağlık turizmi kapsamında birçok ülkeye aşı olabilmek için seyahat eden turistlerin olduğu ve reklamlar ile ülkelere turların görülmüştür. Bazı ülkeler bu şekilde aşılmanın önüne geçmek için kısıtlamalar yapmış ve bu tür seyahatlerin önünü kapatmıştır.

Covid-19 pandemisi sürecinin devam etmesi, yatan hasta sayısında olası artış yaşanması durumlarına karşı İstanbul'un her iki yakasında 1008'er yataklı acil durum hastanesinin temelini atılmıştır. Şehir hastanelerindeki tek kişilik 100.000 yatak kapasitesinin yoğun bakım yatağına dönüştürülebilir hale getirilmiş sanayi işbirliği ile solunum destek cihazı üretilmeye başlanmış ve yeterli sağlık çalışanı istihdam edilmiştir (Aydın, 2020: 104). Türkiye, sağlık çalışanlarının ve vatandaşların kişisel koruyucu malzemelerini eksiksiz temin edebilmenin yanında tedavide kullanılacak tüm ajanları, oluşturduğu ciddi ekonomik yüke rağmen vatandaşına ücretsiz temin etmiştir. Sosyal devlet olmanın getirdiği bu avantajlar tedavideki başarı oranlarını önemli oranda artırmıştır. Kısacası dünyada sağlık hizmetleri sunulurken sorunlar yaşanmasına rağmen hiçbir konuda eksiklik çekilmemiştir (Türkiye Cumhuriyeti Sağlık Bakanlığı, 2020). Türkiye'de şehir hastanelerinin sayısının artırılması, yeni sağlık çalışanı atamalarının yapılması ve destekler ile aşı ve ilaç çalışmalarının desteklenmesi gibi faaliyetler başarılı bir şekilde yürütülmektedir.

4. SONUÇ

Düzenli faaliyet gösteren sağlık sektörü olmadan sağlıklı bir ekonomi olması mümkün değildir. Sağlıklı bir ekonomi ve sağlık hizmetlerinin istenilen düzeyde olması için sağlık kurum ve kuruluşlarının istenilen kriterlere sahip olup olmadığına dikkat edilmelidir. Halk sağlığı ve sağlıkla ilgili araştırma ve geliştirme faaliyetleri küresel işbirliği yatırımları ile desteklenmeli ve teşvik edici nitelikte olmalıdır. Covid-19 pandemisini kontrol altına almak için küresel işbirliği yapmak daha iyi sonuçlara daha hızlı ulaşmamızı sağlayabilir. Karşılıklı güveni artırmak, bilgi ve deneyimi paylaşmak, tıbbi malzeme ve ekipmanların tedarikini ve teslimatını sağlamak için bölgesel ve küresel düzeyde acil ve uyumlu eylemler gerçekleştirilmelidir.

Covid-19 pandemisinde ekonomide hem arz hem de talep etkileri vardır. Salgının başlangıcında stokların olmasından dolayı taleplerin karşılanmasında herhangi bir sorun yaşanmamıştır. Talepte yaşanan dinamikler ve tüketicilerin değişen satın alma davranışları ve tüketim ihtiyaçları ile taleplerin karşılanmasında güçlülüklerin yaşanmasına neden olmaya başlamıştır.

Türkiye'nin diğer gelişmiş ve gelişmekte olan birçok ülkede olduğu gibi bu süreci şuan kadar başarılı bir şekilde yürüttüğü söylenebilir. Covid-19 pandemisi, bu dönemde insanları kapalı mekanda tutarken, doktorların, hemşirelerin, sağlık görevlilerinin, polislerin ve temizlik görevlilerinin iş yükünü arttırmıştır. Sağlık personelinin hizmetleri insanların hayatını kurtarmak için belirtilen iş tanımı ve şartnamelerin ötesine geçmiştir. Sağlık personelleri hastanelerin içinde ve ailelerinden ayrı kalmıştır. Büyük özveride bulunan sağlık personelinin istek ve ihtiyaçları karşılanmaya çalışılmış ve gerekli sağlık personeli atamaları aralıklarla yapılmıştır.

Türkiye, Covid-19 pandemisi karşısında proaktif önlemler almaya hazırlıklı olmalıdır. Sağlıkla ilgili bütçenin bir kısmını ölüm oranlarını ve vaka sayılarını bir kısmını da pandemi sonrası ekonomik sarsıntı derecesini azaltmak için kullanmalıdır.

Bu çalışma için farklı kaynaklar incelenmiş ve birçoğunda aynı konu ve önerilerin yer aldığı görülmüştür. Covid-19 pandemisi özelinde pandemilerin sağlık ekonomisi alanındaki etkilerinin anlaşılabilmesi bakımından üzerinde durulması önerilen temel konular;

- Covid-19 pandemisinin kaynağı ile ilgili kaygı unsurlarının ortadan kaldırılması,
- Bazı endüstri dallarının bu krizde nasıl hayatta kalacağı ve gelişebileceği konusunda destek programlarının oluşturulması,
- Sosyal yardımların ihtiyaç sahiplerine istenilen yer, zaman ve şekilde ulaştırılması,
- Sağlık hizmeti sağlayıcılarının istek ve ihtiyaçlarının belirlenmesi ve giderilmesi,
- Gerekli sayıda sağlık personelinin istihdam edilmesi,
- Sağlık hizmeti arz edenlerle talep edenler arasında koordinasyonun sağlanması ve hizmetin gerçekleştirilmesi,
- Covid-19 kapsamında ar-ge, inovasyon ve aşı ve ilaç geliştirme çalışmalarına destek verilmesi ve gerekli mali desteğin sağlanması,
- Sağlık turizmi kapsamında konaklama rezervasyonlarının iptali veya ertelenmesinin önüne geçilmesidir.

Yaşanan salgın hastalıkların sonucunda, salgının öncesi ve sonrasında ekonomik ve sosyal kalkınma sorunu olarak sağlık hizmetlerine ulaşımı kolaylaştırmak, sağlık sistemini evrenselleştirerek yükseltmek, entegre politika geliştirmek ve planlamaya öncelik vermek, sağlıkta dijital dönüşümün sağlamak, insan sağlığını güven altına alacak sağlık hizmetlerini sağlamak ve ilaçlara, aşılar ve diğer sağlık teknolojilerine eşit erişim sağlamak için bilim, teknoloji ve yeniliğe yatırım yapmak gerekmektedir.

Türkiye'de Mısır Üretiminde Kendine Yeterliliğin Değerlendirilmesi

Zir. Müh. Elvan AKKURT¹

Prof. Dr. Nevin DEMİRBAŞ²

Özet: Enerjiden hayvan beslenmesine kadar geniş bir kullanım alanına sahip olan mısır, Türkiye’de tahıllar içerisinde buğday ile arpadan sonra en fazla üretim payına sahip olan üçüncü üründür. Bu çalışmanın amacı, stratejik bir ürün olan mısırın dünya ve Türkiye perspektifinden güncel durumunu incelemek ve Türkiye’nin mısır üretiminde kendine yeterlilik düzeyini değerlendirmektir. Bu çalışmada makro verilerin değerlendirilmesinde 2009/2010 pazarlama yılı başlangıç olarak belirlenmiş ve sonraki on yıllık dönem ele alınmıştır. Türkiye’nin mısır üretiminde kendine yeterlilik seviyesi, 2015 yılından itibaren düşüş eğilimi göstermekte, son yıllarda %70 düzeyinde seyretmektedir. Bu durum ithalatı zorunlu kılmaktadır. Dekara verim seviyesi, dünya ortalamasının üzerinde olmasına rağmen kendine yeterliliğin sağlanmadığı mısır için teknik ve ekonomik destekleyici önlemlerin alınması gerekmektedir. Girdi maliyetlerinin azaltılması, sulama problemlerinin çözülmesi, üreticiyi kaliteli ürün ve üretimin devamlılığına yönlendirecek destekleme modellerinin geliştirilmesi kendine yeterlilik seviyesini yükseltebilecek bazı tedbirlerdir. Ayrıca yerli çeşitlerin ıslah edilmesi ve yeterli miktarda üretilmesinin sağlanması, tohumda Ar-Ge çalışmalarına önem verilmesi de dışa bağımlılığın azaltılması için önemli görülmektedir.

Anahtar Kelimeler: Kendine Yeterlilik, Tahıl, Mısır, Türkiye

Evaluation of Self-Sufficiency in Corn Production in Turkey

Abstract: Corn, which having a wide range of applications such as animal nutrition and energy production the third cereal products with the highest production share in grains after wheat and barley in Turkey. The aim of this study is to examine the current production and trade status of the corn is a strategic product in the world and in Turkey, and also to evaluate the self-sufficiency in corn production in Turkey. In this study, in the evaluation of macro data, the marketing year 2009/2010 was determined as the beginning and the next ten-year period was considered. Turkey’s level of self-sufficiency in corn production shows a downward trend since 2015, has remained at the 70% level in recent years. This situation makes corn import mandatory. Although the productivity is above the world average, supporting measures should be taken with technical and economic tools for corn, where self-sufficiency cannot be achieved. Reducing input costs, solving irrigation problems, developing support models that will direct the producer to the continuity of quality products and production are some measures that can increase the level of self-sufficiency. In addition, it is important to improve domestic varieties and to ensure that they are produced in sufficient quantity, and to give importance to R&D studies in seeds, in order to reduce foreign dependency.

Keywords: Self-Sufficiency, Grain, Corn, Turkey

1. GİRİŞ

Dünya genelinde temel tarım ürünleri arasında yer alan mısır, hayvan yeminden, işlenmiş gıdalardaki mısır şurubuna, enerji kaynaklarından temel gıdalarda kullanımına kadar çok geniş yelpazede kullanılmaktadır (BÜGEM, 2019). Mısır bitkisi halen Dünya nüfusunu doyuran altı tahıldan bir tanesidir. Bu nedenin yanı sıra, çok yönlü kullanım alanı, adaptasyon kabiliyeti ve verimliliği ile Dünya’da en fazla üretilen tahılları arasındadır (Cengiz, 2016: 304). Mısırın anavatanı Amerika kıtası olup buradan Dünya’nın her yerine yayıldığı bilinmektedir. Mısırın Türkiye’ye girişi, Kuzey Afrika üzerinden olmuştur. Bu bitkiye, mısır adının verilmiş olması, bu bitkinin Mısır ve Suriye üzerinden girdiğinin bir göstergesi olarak kabul edilmektedir (Babaoğlu, 2005: 2). Hububat, bakliyat ve yağlı tohumlarda dünyadaki gelişmeler ışığında Türkiye’nin dövizdeki artışa bağlı olarak yaşadığı ekonomik kriz dikkate alındığında ülkeyi bu zorlu süreçten çıkaracak olan ana sektörlerden birisi tarım olacağı düşünülmektedir. En liberal ülkeler bile tarımda korumacılık politikası uygulamaktadır. Yerli üretimin artırılması için çaba gösterilirken, başka ülkelerin ürünlerine karşı engeller çıkarılması ise olağan hale gelmektedir. Ülkeler

arasında yaptırımlar, ticaret savaşları tarım ve gıda ürünleri üzerinden yapılmaktadır. Yaşanan birçok siyasi sorunda bile, ülkeler birbirlerine karşı tarım veya gıda yaptırımını uygulamaktadır. Bu nedenle yoğun ticaret savaşları yaşanmaktadır. Böyle bir ortamda, tarım ve gıdada “kendine yeterlilik” konusunun önemini ciddi bir şekilde hatırlatmaktadır (Yıldırım, 2018). Tarım ve Orman Bakanlığı’na göre, dünya genelinde önümüzdeki yıllarda kanatlı et ve yumurta tüketiminin artması ve buna bağlı olarak da mısır ihtiyacının artması beklenmektedir. Türkiye’deki nüfus artış hızı, hayvan sayısındaki artış ve artan gereksinimlere karşın mısır üretiminin son yıllarda 6 Milyon ton düzeylerinde sabit kalması ise kendine yeterlilik ile ilgili bir sorun olduğunu göstermektedir (ZMO, 2020). Bu çalışmanın temel amacı, Türkiye’nin mısır üretiminde kendine yeterlilik düzeyini ortaya koymak ve değerlendirmektir. Çalışmanın ana konusu olan Kendine Yeterlilik; bir bölgenin kullanılabilir üretiminin (iç üretim) o bölgenin talebini ya da yurt içi kullanımını (insan, hayvan ve endüstrinin bütün ihtiyaçlarını) ne ölçüde karşıladığını göstermektedir (TUİK, 2020). Kendi kendine yeterlilik düzeyi = (üretim x 100 / (üretim + ithalat - ihracat)) şeklinde hesaplanmaktadır (FAO, 2011; Akouegnonhou ve Demirbaş, 2019: 205). Değerin, 100’den küçük olması, üretimin yurt içi talebi tam olarak karşılayamadığını göstermektedir. 100’den büyük olan bir değer, iç ihtiyaçları geçen, ihraç edilebilir ve/veya stoklanabilir miktarı ortaya koymaktadır (TUİK, 2020). Çalışmada, makro verilerin değerlendirilmesinde 2009/2010 yılı başlangıç olarak alınmış ve 10 yıllık veriler incelenmiştir. Bazı tablo ve grafiklerde ise 2020/2021 pazarlama yılı bilgilerine ulaşılabildiği için başlangıç yılı 2011/2012 olarak alınmıştır.

2. DÜNYADA MISIR ÜRETİM, KULLANIM ve DIŞ TİCARETİ

2.1. Dünyada Mısır Üretimi ve Verimi

Dünyada tarımsal üretim yapısı içerisinde, tahıllar oldukça önemli yere sahiptir. Tahıl grubu içinde yer alan mısır ise, diğer tahıllara göre oldukça geniş bir kullanım alanı olması nedeni ile farklı bir konuma sahiptir. İçerdiği zengin besin maddeleri ile mısır hem insan hem de hayvan beslenmesinde kullanılabilir. Hayvan beslenmesinde yem hammaddesi olarak kullanılan mısır insan beslenmesinde ise, doğrudan kullanımının yanı sıra birçok gıda maddesinin üretiminde hammadde olarak kullanılmaktadır. Diğer yandan imalat sanayinin başka dallarında da doğrudan ya da türevleri kullanılabilir. Bu kullanım çeşitliliğinin yanı sıra artan nüfus, işlenmiş ürünlere olan talep artışı, sağlıklı yaşam trendi, hayvansal üretimin artışı ve işleme sanayinin gelişimi gibi faktörlere bağlı olarak ortaya çıkan talep gelişimi dünya mısır üretiminin sürekli olarak artmasını sağlamıştır (UHK, 2012: 2).

Dünya mısır üretimi son 6 yılda, 1,1 milyar tonluk seviyesini korumuştur. Giderek artan hayvansal üretime bağlı yemlik kullanımın yanı sıra biyoyakıt başta olmak üzere endüstriyel kullanımdaki artış ile ortaya çıkan yüksek talep düzeyi üretimin bu seviyede kalmasını sağlamaktadır (Grafik 1).

Grafik 1: Dünyada Mısır Üretimi (Milyon Ton)

Kaynak: Uluslararası Hububat Konseyi, (IGC, 2020)

Son 10 yıllık dönemde Ukrayna, Rusya, Hindistan gibi ülkelerdeki ekim alanlarındaki genişleme de üretimi olumlu yönde etkilemiştir. Ayrıca artan verim de üretim artışını desteklemiştir (TEPGE, 2020: 1). 2019/2020 döneminde mısır üretim ve ekim alanı açısından en önemli ülkeler ABD, Çin ve Brezilya'dır (Grafik 2). Üretimde %31,3 ile ABD'nin oransal ağırlığı büyük iken, Çin %22'lik payı ile ekim alanı büyüklüğünde ilk sıradadır.

Grafik 2: Mısır Üretiminde Önemli Ülkeler (%)

Kaynak: Uluslararası Hububat Konseyi, (IGC, 2020)

Dünya mısır verimi 2012 yılında kuraklığın özellikle ABD ve AB mısır verimini düşürmesi ile önemli bir azalış göstermiş, sonraki sezonlarda ise genellikle arttığı görülmektedir (Tablo 1). Son üç sezonda dünya mısır verimi neredeyse aynı seviyededir (TMO, 2019: 16).

Tablo 1: Ülkeler Bazında Mısır Verimi (Ton/ha)

Ülkeler	2009/10	2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18	2018/19

2.2. Dünyada Mısır Tüketimi ve Kullanımı

Küresel mısır tüketimi, etanol ve yem talebindeki artışa bağlı olarak son yıllarda rekor seviyelere ulaşmıştır. FAO Gıda Görünüm Raporlarına göre (2013 ve 2018) son beş yılda dünya karkas et üretimi (büyükbaş, küçükbaş, kanatlı ve domuz eti) %9, ticarete konu olan et miktarı ise %10 artış göstermiştir. Ayrıca dünyanın en büyük et üreticisi olan Çin'in, ABD ile sürmekte olan ticaret savaşının neticesinde tedarik sıkıntısı çektiği soya fasulyesine yönelik talebini mısırla ikame etmesi ve mısırın etanol üretimi için işlenmesinden sonra kalan küspesi olan biyoetanol artışı DDGS (Distillers Dried Grains with Solubles) üretim tesislerinde giderek artan üretimi için devasa mısır stoklarını kullanması dünya mısır tüketiminin artmasında önemli bir rol oynamaktadır (TMO, 2019: 16).

Mısır için küresel talep, büyük ölçüde tahılın yakıt ve enerji piyasalarına olan bağlantıları nedeniyle koronavirüs salgınından sert bir şekilde etkilenmiştir. COVID-19 ile ilgili kamusal hareket kısıtlamalarından dolayı benzin talebinin 2020 ilkbaharında düştüğü görülmekte, özellikle ABD'de önemli kullanıcılarda yakıt etanol alımının kısıtlandığı, dezenfektanlar ve dezenfektanlar için artan etil alkol üretiminin sadece kısmi bir artış sağladığı görülmektedir. Mısır bazlı nişastaların üretimini de sınırlandıran ekonomik faaliyetle birlikte, 2019/20 dünya endüstriyel kullanımının altı yıllık genişlemenin ardından yaklaşık %4 düşerek üç yılın en düşük seviyesine gerilediği tahmin edilmektedir (IGC, 2021). Dünya mısır üretiminde 2013/14 pazarlama yılından itibaren aşılın 1 milyar tonluk seviyenin üzerindeki seviye korunmakla birlikte 1.1 milyar tonu aşmadığı görülmektedir. Tüketimde de benzer durum söz konusu iken 2016/2017 pazarlama yılından itibaren 700 milyon tona yaklaşan yem üretiminin tüm yıllarda en büyük kullanım alanı olduğu görülmektedir (Tablo 2).

Tablo 2: Dünya Mısır Verileri (Milyon Ton)

	2011/ 12	2012/ 13	2013/ 14	2014/ 15	2015/ 16	2016/ 17	2017/ 18	2018/ 19	2019/ 20	2020/ 21*

Çin ve Hindistan gibi nüfusu oldukça yüksek olan ülkelerin yanı sıra gelişmekte olan birçok ülkede hayvansal ürün talebinin giderek artmasına ek olarak Brezilya gibi et ihracatını geliştiren ülkeler dikkate alındığında, mısır talebini gelecekte de yönlendirecek faktörler arasında yemin ağırlığını koruyacağını, hatta daha da yükseltebileceğini göstermektedir. OECD'ye göre 2027'ye kadar yemlik mısır kullanım oranı gelişmekte olan ülkelerde hayvansal üretimdeki genişlemeye bağlı olarak, 2 puan artacaktır. Diğer yandan, gıda amaçlı kullanımda da Alt-Sahra bölgesi başta olmak üzere gelişmekte olan ülkelere kaynaklı olarak artacaktır (TEPGE, 2018: 3). Uluslararası Hububat Konseyi (IGC); 2019/20 sezonu sonunda 1.141 milyon ton miktarda gerçekleşeceğini öngördüğü dünya mısır tüketiminin, 2020/21 döneminde, 1.175 milyon ton düzeyinde olmasını beklemektedir (TTB, 2020: 3).

2.3. Dünyada Mısır Dış Ticareti

Dünyada 2018/2019 pazarlama sezonunda 37,5 milyar \$ değerinde 163 milyon ton mısır ithalatı ve 34 milyar \$ değerinde 180 milyon ton mısır ihracatı gerçekleşmiştir (Tablo 3). Dünya mısır ithalatında AB ülkeleri ve Asya ülkeleri, mısır ihracatında ise ABD ve Güney Amerika ülkeleri söz sahibidir. Dünyada 2019 yılında 1.109 milyon ton mısır üretimi yapılmış olup; en büyük ihracatçı ülke olan ABD mısır tüketiminde %27'lik bir paya sahiptir. Türkiye ise 2018/2019 pazarlama sezonunda 2,1 milyon ton ithalat ile dünya sıralamasında 23. sıradadır (BÜGEM, 2020: 2). Mısır üretimi dünya genelinde ekiliş alanlarındaki daralma ve verimdeki düşüşe bağlı olarak 2017/18 döneminde bir önceki yıla kıyasla 40 milyon ton civarı azalmıştır (Tablo 3). Söz konusu azalış büyük oranda Arjantin ve Brezilya'nın üretimlerinde kuraklığın etkisine bağlı olarak düşüşten kaynaklanmıştır (TMO, 2017: 9).

Tablo 3: Dünya Mısır Ticaret Verileri (Milyon Ton)

	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21*

Kaynak: IGC, 2021

Yükü ithalatları ile uluslararası piyasaları etkileyen önemli bir ülke olan Çin'in piyasadan her talep ettiği ürün karşısında fiyatlar yükselmektedir. Çin'in 2021 Ocak ayında ABD'den yüksek miktarda mısır alımı yapması mısır fiyatlarını hızla yükseltmiştir. Mısır fiyatlarının artışında Çin'in taleplerinin yanı sıra Güney Amerika'da yaşanan kuraklık etkisinin belirsizliği, Arjantin'in mısır ihracatına miktarsal kısıtlama getirmesi (karar yürürlükten kalktı ama piyasaları gerilemedi), Ukrayna'nın bu yılki rekor düşüklüğü ve ihracat miktarını 24 milyon tonla sınırlama kararı etkili olmaktadır (İK Tarımüssü, 2021: 3).

3. TÜRKİYE'DE MISIR ÜRETİM ve DIŞ TİCARETİ

3.1. Türkiye'de Mısır Üretimi, Ekim Alanı ve Verimi

Tahıllar içerisinde Türkiye'de mısır üretimi, buğday ve arpadan sonra üçüncü sıradadır. Bunun en büyük sebeplerinden bazılarını, Türkiye'de insan gıdası olarak tüketim alışkanlıklarının diğer dünya ülkelerinden biraz farklı olması (Un ve ekme vd. gibi unlu mamullerin yoğun tüketilmesi vb.), ayrıca buğday ve arpa gibi ürünlerin hayvancılıkta kesif yem (Dane, kırma, kepek vb.) ve kaba yem (yeşil ot, kuru ot, saman vb.) amacıyla kullanılması olarak sıralanabilmektedir. 1980'li yıllardan sonra Türkiye'de mısır üretiminde belirgin artışlar kaydedilmiştir. Bunun nedeni devletin mısır üretimini teşvik etmesi, üreticilerin modern mısır üretim tekniklerini uygulamaları, hibrit tohum kullanımının yaygınlaştırılması, mısır üretiminin sulanan alanlara kaydırılması ve belli düzeylerde gübre kullanımının sağlanmasıdır. Özellikle Güneydoğu Anadolu Projesi (GAP) ile sulanabilen alanlarda mısır üretiminin yaygınlaştırılmasıyla Türkiye mısır üretiminde gözle görülür bir artış olmuştur. Türkiye'de mısır ticaretindeki en büyük pay %70'ler civarındaki tüketimle yem hammaddesi olarak; büyükbaş – küçükbaş hayvan yemlerinde, broiler yemlerinde, yumurta ve damızlık yemlerinde kullanılmaktadır. Mısırın en çok kullanıldığı ikinci sektör ise, yaklaşık %20'lere varan tüketim kapasitesi ile nişasta sektörüdür. Etanol üretimi, dünyada olduğu gibi Türkiye'de de son yıllarda artarak yükselerek devam eden önemli bir sektör haline gelmektedir (Nogay, 2019: 56).

Grafik 3: Türkiye Mısır Üretimi (Ton)

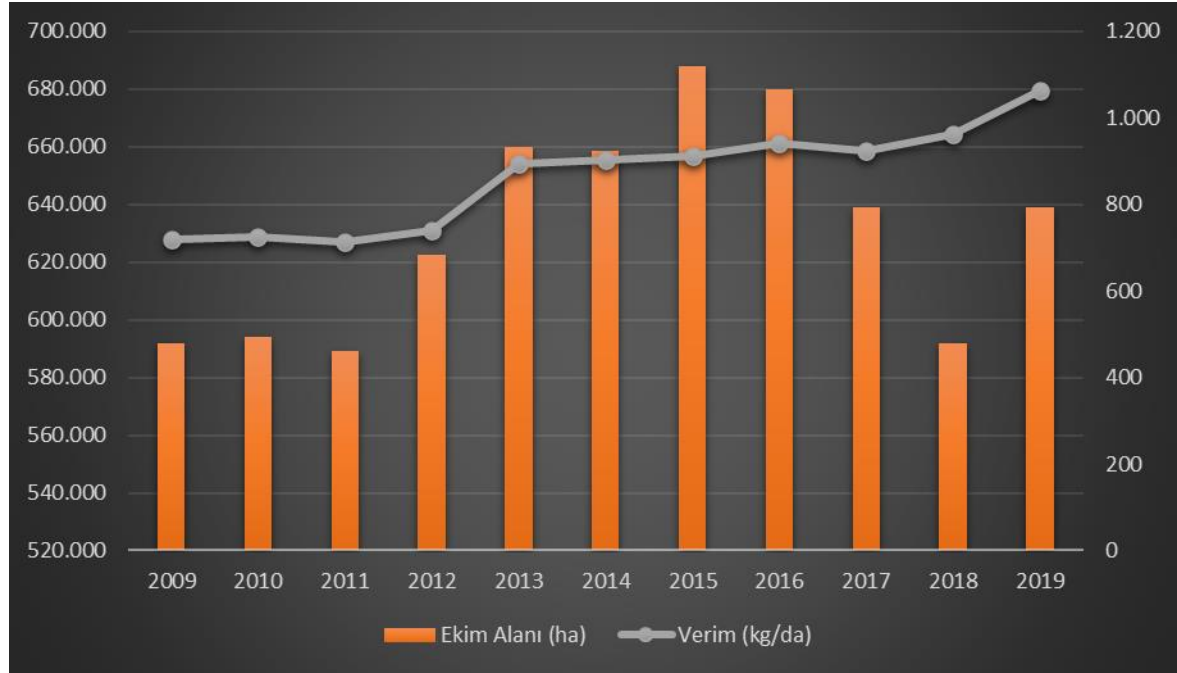

Kaynak: TÜİK, 2020

Mısır ekimi için iklim şartları bakımından en elverişli bölge Karadeniz Bölgesi'dir. Ancak bölgede çay ve fındık gibi daha fazla gelir getiren ürünlerin yetiştirilmesi ve bölgenin doğal yapısı mısır ekim alanlarının daha fazla genişlemesini kısıtlamıştır. Türkiye mısır ekim alanları, 2013/14-2017/18 pazarlama yılları arasında 6.4-6.9 milyon dekar aralığında iken, 2018/19'da bir önceki döneme göre %8 azalarak 6.4 milyon da seviyesinde gerçekleşmiştir. Geleneksel mısır üretim bölgesi olan Doğu Akdeniz ve sulamanın etkisiyle önemli artışın olduğu Güneydoğu Anadolu en önemli paya sahip bölgelerdir. Konya ve Manisa ise, son yıllarda alan genişlemesinin olduğu önemli illerdir (TEPGE, 2020: 2). Diyarbakır ilinde ise mısır ekim alanı 6.2 kat artmıştır. Bu artışta Diyarbakır ilinin mısır tarımı için uygun iklim koşullarına sahip olmasının yanı sıra GAP'ın da etkili olduğu belirtilmektedir (Yaşa ve Kutlar, 2019: 168). 2017 itibarıyla, 1 milyon tondan fazla üretime sahip Doğu Akdeniz ile Güneydoğu Anadolu, ekim alanı gibi üretimde de en önemli paya sahip bölgelerdir. Üretimde il bazında sıralama son üç yılın ortalaması itibarıyla 865.543 ton ile Adana, 1.023.828 ton ile Konya ve 473.834 ton ile Mardin şeklindedir (TEPGE, 2020: 2).

Dünya mısır verimi ortalaması 580 kg/da'dır. Türkiye'de verim ortalaması son yıllarda dünya ortalamasının üstünde olup, Grafik 4'te de görüleceği üzere yıllara göre 700-1000 kg/da aralığında değişmektedir. 2015/2016 üretim sezonunda 930 kg/da olan verim ortalaması, %4 oranında artarak 2018/2019'da 963 kg/da'a yükselmiş, 2019'da ise 1062 kg/da 'a ulaşmıştır (Grafik 4).

Grafik 4: Türkiye’de Mısır Ekim Alanı ve Verim Karşılaştırması

Kaynak: TÜİK, 2020

3.2. Türkiye’de Mısır Tüketimi ve Kullanımı

Mısır üretim miktarı 2015/16 sezonunda 6.400 bin ton iken, 2018/19 sezonunda 5.700 bin tona düşmüş, kullanılabilir üretim 5.529 bin ton olmuştur. Üretim kayıpları 2001/02 sezonunda 22 bin ton iken, 2018/19 sezonunda 171 bin tona yükselmiştir. Mısırdaki “arz (kullanım)” 2001/02 sezonunda 3.375 bin tondan 2018/19 sezonunda 9.211 bin tona çıkmıştır. “Yurt içi kullanım” ise, sürekli artarak 7.866 bin tona ulaşmıştır (Tablo 4).

Tablo 4: Türkiye’nin Mısır Denge Tablosu

Yıllar	Ekilen Alan (ha)	Üretim Miktarı (ton)	Üretim kayıpları (ton)	Kullanılabilir Üretim (ton)	Kullanım (Arz) (ton)	Yurt İçi Kullanım(ton)	Tüketim(ton)	Kişi başına tüketim(kg)

Türkiye’de mısır kullanım miktarının 2015/16 dönemi itibariyle 7 milyon tonu aştığı görülmektedir. 10 yıllık verilere göre yemlik kullanım toplam kullanımın içerisinde birinci sırayı almaktadır. 2019 piyasa yılında 7.8 milyon tonluk kullanımın içerisinde yemlik kullanımın payı %82 olmuştur (Tablo 5). Son yıllara kadar çoğunlukla yem üretimi ve öz tüketim dahil gıda amaçlı kullanılan mısır, günümüzde bunlara ek olarak biyoyakıt da dahil olmak üzere çok geniş bir alanda kullanılmaktadır. Yemlik kullanımın %41’i etlik piliç yemi, %34’ü yumurta ve damızlık tavuk yemi, %25’i de büyük ve küçükbaş yemi üretiminde kullanılmaktadır (Taşdan, 2019: 12).

Tablo 5: Türkiye'nin Mısır Kullanım Tablosu

Yıllar	Yurtiçi Kullanım (Ton)	Tohumluk Kullanım (Ton)	Tohumluk Kullanımın Toplamdaki Payı (%)	Yemlik Kullanım (ton)	Yemlik Kullanımın Toplamdaki Payı (%)	Endüstriyel Kullanım (Ton)	Endüstriyel Kullanımın Toplamdaki Payı (%)

3.3. Türkiye'de Mısır Dış Ticareti

Dünya mısır fiyatlarında son dönemlerde görülen azalma eğilimi, üretimi koruma amaçlı gümrük vergileri ve üretim dalgalanmaları nedeniyle yurtiçi piyasalarına aynı şekilde yansımamaktadır. Bununla birlikte, yumurta ve kanatlı üretimi ile nişasta bazlı şeker başta olmak üzere mısırı hammadde olarak kullanan gıda sanayi dallarındaki gelişmelerin yurtiçi piyasalarda mısır fiyatlarını belirleyen etkenlerin başında geldiği bilinmektedir (TEPGE, 2020: 3). İthalat miktarını yem sanayi ihtiyacı belirlemekte ve hayvansal üretimdeki artış, yem ihtiyacını da artırmaktadır. Mısır üretiminin talebi karşılayamaması ise ithalatın artışına yol açmaktadır (Tablo 6).

Tablo 6: Mısır Ticaret Verileri

Yıllar	İthalat (ton)	İhracat (ton)
2009/10	570.025	390.766
2010/11	385.467	212.323
2011/12	756.092	275.046
2012/13	1.544.231	285.848
2013/14	1.261.330	593.036
2014/15	1.935.666	421.311
2015/16	603.739	603.844
2016/17	1.425.469	728.344

2018/19	3.682.366	1.496.421

Kaynak: AGRISTAT, 2021

TMO'ya son yıllarda sıfır gümrük vergili ithalat olanağı sağlanmış olması bu açığı kapatmak üzere alınmış bir önlemdir. Rusya, Moldova, Romanya ve Ukrayna gibi yakın bölge ülkeleri ithalatta önemli paya sahiptir (Tablo 7).

Tablo 7: İthalat Yapılan İlk 5 Ülke ve İthal Edilen Değerler (Bin \$)

3.4. Mısırdaki Uygulanan Tarım Politikaları

Mısır politikasının dört ana bileşeni vardır. Bunlar;

- TMO alımları
- Fark ödemesi
- Girdi destekleri
- Dış ticaret uygulamaları

TMO alımını yaptığı ürünlerde en önemli piyasa yapıcıdır ve uluslararası fiyatlar ile diğer piyasa koşullarına bağlı olarak mısır alımı yapabilmektedir. TMO tarafından yapılan alımlarda mısırın çok büyük bölümü peşin alım yöntemiyle alınmakta bunun yanı sıra emanet usulü alım da yapılabilmektedir. Alım miktarı TMO'nun alım politikasına ve pazarın durumuna göre değişmektedir (Kara, 2020).

Tablo 9: TMO Alımı

Yıllar	Üretim (ton)	TMO Alımı (ton)	Alımın Üretime Oranı (%)
2009	4.250.000	183.467	4,3
2010	4.310.000	83.491	1,9
2011	4.200.000	47.632	1,1
2012	4.600.000	125.962	2,7
2013	5.900.000	1.373.444	23,3
2014	5.950.000	173.541	2,9
2015	6.400.000	1.752.453	27,4
2016	6.400.000	1.756.906	27,5
2017	5.900.000	204.757	3,5
2018	5.700.000	184.247	3,2

Kaynak: TÜİK, Tarım ve Ormanlık Bakanlığı, TMO, (2020)

Tarım ve Orman Bakanlığı tarafından Türkiye Tarım Havzaları Üretim ve Destekleme Modeli kapsamında üreticilere, ürettikleri ürün karşılığında yapılan "Fark Ödemesi" mısır destekleme politikasının en önemli aracıdır. Mısıra ödenen fark ödeme desteği birim tutarı 2010-2015 döneminde değişmemiş ve 40 TL/ton olarak uygulanmıştır. Buna karşın mazot ve gübre başta olmak üzere diğer desteklerde yıllar itibarıyla artış gerçekleşmiştir. 2016 yılında fark ödeme desteği 20 TL/tona gerilerken, gübre ve mazot desteği birleştirilerek 11 TL/da olarak uygulanmıştır. 2017'de ise desteğin verilmiş biçiminde önceki duruma dönülmesinin yanı sıra bu verilerde de önemli değişim olmuştur. Buna göre mazot ve gübre desteği ayrılırken sırasıyla 17 TL/da ve 4 TL/da olarak belirlenmiş ve 21 TL/da ile 2016'ya göre neredeyse iki katına çıkarılmıştır. Fark ödeme desteği de 2016'nın yarısı kadar artırılarak 3 kr/kg olmuştur. 2019 ve 2020 yıllarında ise mazot desteği 25 TL/da, gübre desteği ise 4 TL/da olarak belirlenmiştir. Gümrük vergileri başta olmak üzere dış ticaret uygulamaları son yıllarda mısır piyasasını etkileyen en önemli

politika araçlarından olmuştur. Gümrük vergileri 2008 öncesinde hasat döneminde artan, talebin yoğun ancak iç kaynaklı arzın düşük olduğu dönemlerde de azalan bir seyir izlemiştir. 2008 yılından itibaren ise değişmemiş %130 olarak uygulanmıştır. Mısır ve türevi olan ürünlerin tabi olduğu piyasalara ilişkin diğer yasal düzenlemeler de hem iç piyasayı hem de dış ticareti doğrudan etkilemektedir. 2009 yılı Kasım ayında yürürlüğe giren GDO yönetmeliği ve Mart 2010'da yürürlüğe giren biyogüvenlik yasası bu duruma örnektir. Yine doğrudan dış ticarete yönelik olmasa da DDGS için uygulanan KDV oranlarının artırılması gibi iç ticarete yönelik uygulamalar da dış ticareti ve mısır piyasasını önemli ölçüde etkilemiştir (Taşdan, 2019: 15).

4. TÜRKİYE'DE MISIR ÜRETİMİNDE KENDİNE YETERLİLİK DURUMU

FAO'ya göre, "Gıdada ve tarımda kendine yeterlilik kavramı, bir ülkenin kendi gıda üretimini kendi yerel üretiminden ne ölçüde karşılayabileceği" anlamına gelmektedir. Bu en temel tanım bireyler, ülkeler veya bölgeler düzeyinde kendine yeterliliği açıklamaktadır. Ticaret ve gıda güvenliğiyle ilgili tartışmalar bağlamında, kendine yeterlilik, tipik olarak, kendi tüketiminin tamamını veya çoğunu kendi iç tüketimi için üretmeye çalışan ülkeleri ifade etmektedir (Anonim, 2018).

Mısır gerek üretimi ve talebi gerekse dış ticareti açısından dünya tarım ürünleri piyasası içerisinde oldukça önemli bir yere sahiptir. Büyük oranda hayvan yemi olarak kullanılmasının yanısıra, insan beslenmesi için kullanımı önemini daha da artırmaktadır. Türkiye'de de mısır, üretimi oldukça yaygın olan ve tahıl grubu içerisinde buğday ile arpadan sonra en fazla üretim payına sahip olan üründür (UHK, 2012: 87). Dünyada 2019 yılında ortalama mısır verimi 587 kg/da iken, Türkiye'de bu değer 963 kg/da olarak gerçekleşmiştir. Uygulanan politikalar ve piyasa koşulları nedeniyle ekim alanlarında yaşanan azalmadan dolayı, dünya ortalamasından daha yüksek verime sahip olunmasına rağmen, toplam üretimde bir artış olmamaktadır (Tipi ve Erdal, 2021: 2). Gelişen imalat sanayii ve sürekli artan mamul madde ihracatıyla birlikte sektörün hammadde ihtiyacı, üretimin yanı sıra ithalat yoluyla da giderilmektedir. TÜİK verilerine göre toplam tahıl ürünlerinde 2017/18 piyasa döneminde yurtiçi üretimin yurtiçi talebi karşılama oranı %98,0 ve 2018/19 piyasa döneminde ise %92,4 olarak gerçekleşmiştir. Mısır için kendine yeterlilik düzeyi ise 2009 ve 2018 yılları arasında sadece 2015 yılında %100'ün üzerine çıkabilmiştir. 2018 yılında kendine yeterlilik %70,3 düzeyinde gerçekleşmiştir (Grafik 6).

Grafik 6: Türkiye'de Mısır Üretiminde Kendine Yeterlilik Düzeyi (%)

Kaynak: TÜİK, 2020

5. SONUÇ ve ÖNERİLER

Dünya ve Türkiye tarımsal üretim yapısı ve piyasasındaki yeri, yem ve biyoyakıt başta olmak üzere çok geniş alanda kullanılabilen ve hem üretim hem de kullanım miktarı giderek artan mısırın, bu konumunu koruyarak gelecekte daha da güçlendireceği öngörülmektedir.

Türkiye'de 2017/18 döneminde hem fiyat hem de destekleme açısından avantajlı konuma geçen pamuk ve soya gibi ürünlerin tercih edilmesi ile birlikte 2018/19 döneminde mısır üretimi %3,4 azalmıştır. 2019/20 döneminde bu durum tersine dönmüş ve üretim yeniden 6 milyon tona çıkmıştır. Ancak halen

2015/16'daki 6,4 milyon tonluk seviyeye ulaşamamıştır. Hızlı artan ve 8 milyon ton sınırına yaklaşan talep, ithalatı zorunlu kılmaktadır. Bu nedenle kendine yeterliliğe ulaşma sorunu yaşanan mısır bitkisi için bazı önlemlerin alınması zorunluluk arz etmektedir. Bunun için, Türkiye'de mısır ekim alanlarının en fazla olduğu Karadeniz Bölgesi'nde verimi artırmaya yönelik önlemler alınabilir. Bu önlemlerin özellikle Marmara ve Ege Bölgeleri'nde de alınması önemlidir. Akdeniz Bölgesi ile Güney Doğu Anadolu Bölgesi'nin sulanabilir alanlarında mısırın ikinci ürün olarak üretimi mümkün olabilir. Bütün bunların yanı sıra Türkiye'de mısır üretiminde istenilen seviyeye ulaşılabilmesi için kaliteli tohum kullanılmalı ve gübre kullanımı da yaygınlaştırılmalıdır. Mısırın sulu tarım olarak üretildiği bölgelerde sulama sorununun çözümü de giderek önem kazanmaya başlamıştır. Türkiye için en önemli önerilerden biri organik mısır üretme stratejisinin güçlendirilmesi olabilir. Dünyanın en önemli mısır üreticisi ülkelerinden biri olan ABD Türkiye'den organik mısır ithalatı yapmaktadır. Genetik Olarak Modifiye edilmiş (GDO) mısır üretiminin yaygınlığı, organik hayvancılık yapan işletmelerin organik hayvan yemi tedarikini zorunlu kılmakta, ABD organik mısır üretimi için stratejiler geliştirmektedir. Ayrıca, orta ve uzun vadede değişen iklim koşullarına adaptasyonu yüksek yerli mısır tohumları üretimine ağırlık verilmesi de öncelikli öneriler arasında sıralanabilir.

Inclusive and Employment Generating Growth To Remove Inequality

Assoc.Prof.Dr. Emel Yıldız¹

¹Trakya University/Faculty of Economics & Administrative Sciences, Business Administration,
emelyildiz@trakya.edu.tr ORCID: 0000-0002-6951-4195

Abstract: With the First Industrial Revolution, there were significant increases in production, income and therefore prosperity. However, the resulting increase in prosperity did not reach the world population in fair conditions, leading to increased inequalities. While unemployment and poverty constitute the negative side of inequalities, increased wealth and prosperity have only reached the narrow part of the society. In addition to increasing prosperity, the "inclusive growth" approach, which aims to achieve increased prosperity across all segments of society, is of greater importance with deepening inequalities.

The aim of this study is to; using ILO data, to emphasize the need for policies that combat unemployment to create jobs and improve employment conditions in order to share development gains fairly and eliminate poverty. While there is sufficient academic and theoretical work in this regard, it is now important to draw attention to the need to take action towards inclusive growth, which improves the level of employment and conditions.

Key Words: Inclusive Growth, Jobless Growth, Unemployment

1.INTRODUCTION

Mainstream economics has maintained an approach that perceives the increase of Gross Domestic Product(GDP) or Per Capita Income as a success alone as an indicator of economic growth. On the other hand, while GDP has increased, at the same time, problems such as the increase of unemployment problem at the global level, lack of employment level and quality, and the lack of fair sharing of prosperity resulting from growth have reached significant levels. These developments brought up the "Inclusive growth" approach by drawing attention to the quantitative increase in growth and the process of division. Inclusive growth is growth that makes it possible for prosperity to grow and increased prosperity to reach all segments of society. The OECD defines inclusive growth as growth that allows to improve the well-being of the entire population, while at the same time sharing all components of monetary and non-monetary prosperity with fairness among all individuals (OECD 2018).

Achieving inclusive growth can be made possible by the elimination of unemployment, inequality and poverty. Unemployment, low wages, insecure or poor quality employment, lack of a fair income distribution policy reduce unemployment but do not contribute to the elimination of poverty and inequalities.

Level of employment and quality are the most important factors determining the nature of growth. Any economy that can create jobs and employment can also significantly utilizes its growth potential. Just as the high level of employment is advantageous, unemployment is also an important problem that leads to the loss of income and morale of both unemployed individuals and their relatives and national economies.

Unemployment leads to the bluntness of the ability and skills of individuals in addition to income losses, and prolonged unemployment periods cause people to move away from formal labor markets. If the unemployment problem is widespread and the unemployment rate is high, problems such as unprotected and insecure employment or working poverty are also raised. The production and revenue growth since the 1st Industrial Revolution, which is considered the turning point of economic growth, has not been shared fairly between countries and individuals on a global scale. This unequal distribution of emerging prosperity has led to the emergence of new approaches or searches in the growth process with the concepts of "good growth", "sustainable growth" and "inclusive growth" in the near term.

1.THEORETICAL FRAMEWORK AND LITERATURE

Arthur Okun studied the relationship between growth and unemployment in the American economy between 1948 and 1960. He determined that the unemployment rate decreased during periods of rising real GDP, and in the opposite case, unemployment increased while real growth fell (Okun,1962:98-104). Okun basically determined that employment tends to increase when there is a real increase in GDP and the unemployment rate decreases. Although he had different interpretations (Zanin, 2014: 243-248), Okun emphasized that unemployment decreased as the economy grew, and that there were growth losses if unemployment increased.

$$\Delta U = -0.4 (\Delta Y - 3\%)$$

Every extra 1% economic growth, which occurs above 3% in this first form of the Okun Law, reduces the unemployment rate by 4%.

In the second step: $U - 4\% = -0.3$ out put gap

It refers to the output gap that any unemployment rate exceeding 4%, which is considered as the natural unemployment rate, will create. When two formulas are edited

$(Y_p - Y)/Y = -\alpha (U - U^*)$ is obtained. Y_p Potential GDP, Y real GDP, U unemployment rate, U^* natural unemployment rate and α is the decrease in unemployment if production exceeds the threshold.

The negative relationship between unemployment and growth has been included in the literature as the Law of the Okun and has been the basis of many studies examining this relationship. Pehlivanoglu and Thanga (2016:31-44) have concluded that the Okun Law does not apply to Turkey, Brazil and South Africa for the period 1990-2014. In the study conducted by Yildirim, et al. for Turkey(2009) with data covering the years 1975-1995, it was concluded that unemployment decreased by 0.13 percentage points compared to every 1 point increase in growth exceeding 4.3%.

As the 1950-2007 study for Turkey by Ceylan and Şahin reached; The unemployment-enhancing effect of the recession periods is greater than the unemployment-reducing effect of economic expansion (Ceylan and Şahin, 2010:158). This finding has brought the concept of "jobless growth" or 'growth that does not create employment' to the literature. Growth that does not create employment; technological developments can be associated with import dependence in developing countries, education and public policies.

In the study for India, Bhalla addressed widespread poverty in response to low unemployment. In addition to the distinction between efficient and inefficient employment, it has revealed that not everyone is included in the scope of growth. He addressed the inclusiveness of growth according to income and food poverty criteria on a regional, sectoral and individual scale. Bhalla recommends supporting sectors that will be more effective in alleviating poverty in order to expand inclusion.(Bhalla, 2007:24-43). This study is important to draw attention to employee poverty and inefficient employment problems.

The process of globalization, which is at the heart of technological and financial developments, is also cited as a cause of inequalities. Milanovic conducted a study on globalization and income distribution using household data from 1988 of 95 countries and 113 countries from 1993 and 1998. According to its conclusion: Globalization increases inequality in income distribution in low-income countries, while in countries with high-income levels, globalization reduces inequality in income distribution. (Milanovic, 2005:21-44).

In 2013, Christoph Lakner and Branko Milanovic examined the global income distribution for the period 1988-2008 and gave the literature a graph as "Elephant Curve".

Figure1: Original Elephant Chart

Source: Homi Kharas and Brina Seidel(2018), What’s Happening To The World Income Distribution? The Elephant Chart Revisited, Global Economy & Development Working Paper 114, April 2018, 1-2.

Figure 1:

- Revenue has increased greatly in favor of the elites, which amounts to 1% in the world; the area where the elephant’s hose is above
- The global upper-middle income group has stagnated with 0 growth in 20 years, which is related to real wage growth and frustrations in populist politics; the location of the elephant proboscis in the pit,
- In countries such as China, large poor populations rise to the middle class; torso in the body of the elephant,
- Globally, extreme poor and many countries are stuck in a cycle of poverty and violence and left behind, in the tail of the elephant (Kharas and Seidel, 2018: 1-2).

Inequalities arise, multiply and are not solved as a result of economic and political choices. In poor societies where there is no social security or trust in the state, children are seen as an element of security for the future. Thus, the growing population is included in the "vicious cycle of poverty" with the inheritance they receive from their families.

The vicious cycle of poverty, which Ragnar Nurkse (1953) put forward as "poor countries are poor because they are poor", states that poverty in underdeveloped countries also leads to low levels of austerity, investment, productivity and employment rates, and ultimately poverty, which is the starting point.

Figure2: Vicious Circle of Poverty

Source: Ragner Nurkse: Vicious Circle of Poverty (1953)

The Vicious Cycle theory put forward by Nurkse is important for stating that poverty and unemployment would continue if not intervened. In this respect, as well as the elimination of unemployment, the elimination of employee poverty is important as an important determination.

Ianchovichina, Lundstrom and Garrido (2009:1-16) use the concept of inclusive growth as an approach that addresses the concepts of poverty and growth together, which are handled separately. Inclusive growth; it is sustainable, high rate and includes an analysis of resources and obstacles that target not only the poor but also society as a whole. Policies developed for inclusive growth are also an important component of most public strategies developed for sustainable growth.

Inclusive growth is defined as absolute as the per capita income of the poor rises as an absolute figure, which is that it is characterized as inclusive growth in favor of the poor. Growth is also relatively defined as being considered inclusive, when the average income of the poor increases by more than the average income of society (Anand et al., 2013:4).

There is a wide accumulation of growth, poverty and inequality in the literature. Solutions are also offered. However, the results show that inequalities persist through poverty, unemployment and labour markets. Addressing inequalities will be possible with prosperity reaching all individuals, which will be possible with a significant improvement in employment conditions and an inclusive approach.

2.GOOD GROWTH, SUSTAINABLE GROWTH AND INCLUSIVE GROWTH

Approaches that measure economic growth with quantitative increase in production and income are replaced by approaches that are sensitive to issues such as income distribution justice, poverty, unemployment, environmental problems, democracy and cultural changes. The Human Development Report prepared by the United Nations in 1996 expressed the growth that could not create sufficient employment opportunities, the distribution of increasing income was not fair, democracy, rights and freedoms did not improve, cultural values, traditions and customs were lost and the ecological balance was stated as "Poor Growth". Growth that promotes employment, shares prosperity fairly, promotes democratic rights and freedoms, maintains cultural values and achieves social cohesion, cooperation and solidarity, and protects the environment to be left to future generations is referred to as "Good Growth" (UNDP, 1996). As a general approach, it is accepted that there is a correct relationship between employment and economic growth.

The production power of an economy is closely related to the factors of production it has. However, the way in which it employs the production factors it has is of particular importance as the main issue. The participation of production factors in full production is expressed as full employment. Increasing the

level of employment means increasing production, income and prosperity by evaluating the production potential of the economy.

In 2015, the United Nations adopted the Sustainable Development Goals (SDGs) to eradicate poverty, protect our planet, and combat inequality and injustice with the goals set out in 17 articles to be completed in 2030. These objectives are a continuation of the Millennium Development Goals adopted in 2000, focusing on pro-poor growth covering the period 2000-2015 (UNDP, 2015).

Almost all of the SDG seen in Figure 3 is directly related to participation in business life, improved working conditions and fair sharing of emerging prosperity. The report also emphasizes the need for cooperation between businesses and governments to achieve these goals. It is also clear that these objectives are extremely comprehensive.

Figure3. Sustainable Development Goals

Source: UNDP

In 2015, "The Inclusive Growth and Development Report" was published as part of the World Economic Forum. The report laid out the need to strike a balance between the ceiling target, which is to improve the performance of the national economy measured by gross domestic product per capita, and the base target based on increasing the standard of living of society by spreading it over large layers. Although increasing gross domestic product per capita for all developed and developing countries is necessary for economic performance, it is stated that it alone is not enough to meet the social expectations of the society (Samans et al., 2015:1).

Inclusive growth has an approach to address inequalities and poverty with its human rights dimension, social and political dimension, economic dimension. It focuses on the benefits of disadvantaged groups such as women and the poor, excluded sectors or regions, from development gains.

3. Inclusive Growth and Employment Relationship

Achieving a higher level of prosperity, which is the common goal of all individuals and societies, is largely possible by producing more. Limited production factors and meeting the increasing demand due to the increasing population necessitates production to take place within the framework of efficiency and productiveness (Yıldız et al., 2009;202). The labor that remain inactive, the increase in unemployment, the lack of employment despite growth causes the social structure to deteriorate as well as the economic balances.

Economic growth is the most powerful tool to reduce poverty and increase human well-being in developing countries (OECD, 2018). Achieving rapid economic growth is one of the most important indicators taken into account for the success of the economy (Gordon, 2000:286).

The issues of how economic growth, which is a quantitative change, contributes to social well-being, employment level and unemployment problem, improved income distribution, sustainable use of natural resources, and the improvement of democratic rights and freedoms, also reveals the need to question the quality of growth (Berber, 2011:6-7). With this inquiry, the United Nations published five types of "Bad growth" in the 1996 Human Development Report; emphasis has been on jobless growth, relentless growth, quiet growth, rootless growth and futureless growth.

-Jobless growth: In economies, unemployment does not decrease but rather increases due to the fact that the level of employment is not increased at the required rate, even though there is growth.

Jobless growth

- Negative divergence from potential GDP,
- Keep the workforce idle,
- Increase in public expenditures due to reasons such as unemployment benefits,
- Leads to increased idle capacity and socio-economic effects.

-Relentless Growth: The failure to share the positive developments achieved by economic growth fairly; although income increases with growth, income distribution is not improved.

Unemployment and deprivation of income, in addition to disrupting the distribution of income, as Keynes stated, cause the total demand levels of highly prone workers to decrease, leading to a contraction of production and employment (Alkin, 1995:141). Thus, unemployment, which is seen as an individual problem, causes social, national and global impacts.

-Silent Growth: Despite economic growth, democratic rights do not improve, for example, workers' rights are not given importance.

The World Economic Forum (WEF,2014) stated that deepening income inequality and growth without permanent employment are already among the most important problems that threaten humanity (WEF 2014).

It is the common longing of people to have a fair job opportunity in all aspects of decent work, working life and work, equal treatment and conditions in the workplace, protection of social protection, employment and freedom rights. However, the regulation of labor markets for governments is a complex and challenging process due to the difference in employee-employer interests, technological and demographic developments (ILO, 2020:16). Although this process is complex, it requires governments to take decisive solution-oriented steps. Table 1 shows an overall assessment of the global workforce according to the ILO's 2019 data.

According to ILO 2019 data, 188 million people are unemployed globally, 165 million are not paid enough even they employed and 120 million people have stopped looking for work or are unable to access the labor market. An additional 2.5 million people are expected to be added to the unemployed in this table, and 267 million 15-24 year olds are neither in education nor in employment. The mismatch between labor supply and labor demand, the unavailability of the workforce, labor force participation in inadequate or poor conditions, inadequate and low wages, unequal conditions in labor markets continue to lead to socio-economic losses on an individual and global scale.

- Economic growth does not have a significantly reducing effect on unemployment and poverty,

- The prevalence of the share of informal employment of 61% globally, especially in developing countries, leads to problems such as unprotected employment and the inability to benefit from support,

Overworked poverty comes in below US\$1.90 per person per day on a SAGP basis, and moderate working poverty (in terms of SAGP, an income of between \$1.90 and US\$3.20 per person per day is considered zero in high-income countries such as the European Union, North America, Japan, Canada, Australia and New Zealand (ILO,2020).

Table 1: Global Workforce (2019)

Global Population		Working-age population 15+		
7,67 billion		5,7 billion (74,3%)		
		Employed	Total labour underutilization	Out of labour force:
		3,3 billion (57%)	473 Million	2,3 billion (39%)
Youth working-age population (15–24 years): 1.2 billion				
Youth in employment		Youth in education or training (not employed)		Youth not in employment, education or training
429 Million (36 %)	509 Million (42 %)			267 Million (22%)
Characteristics of global employment				
Way of Employment		Formal/informal Employment		Employee Welfare
53%	Wage and salaried workers	%39 Formal	% 61 Informal	% 7 Extreme working poverty
34%	Own-account workers			% 12 moderate working poverty
11%	Contributing family workers			% 81 Yoksul değil
2 %	Employers			
The labour force participation rate				
Men 74%		Women 47%		

Source: Organized from ILO, World Employment and Social Outlook-Trends 2020 data, 18-21.

There are deep inequalities in the division leg of economic developments consisting of four basic periods: production, consumption, trade and division. These inequalities are largely related to unemployment, poor quality of employment, job-creating growth, inequalities and poverty. The solution of these problems requires egalitarian and inclusive public policies that want to be resolved first and foremost, that are planned, that improve employment in a quality way. This approach requires an adaptation and employment program that takes care of the private sector but also embraces the workforce and shares social well-being fairly.

The inclusive growth process can be achieved by coordinating income distribution justice, inclusive and qualified education, legal regulations and sanctions to address inequalities, and ultimately inclusive employment policies. As figure 4 shows, inclusive growth fundamentally requires fairness in income distribution, but equal and qualified education to all is an extremely important step in addressing inequalities. While inclusive growth requires the support of market actors, it needs to be supported and coordinated with legal and institutional regulations. It is also of particular importance to develop employment opportunities in the process, as the training and production knowledge that improves the skills of individuals will gain economic value if they find employment opportunities. Each of these steps requires political stability.

Figure 4. Inclusive Growth Process

For the regulation of market conditions for income distribution justice,

- Eliminating the imbalance between the real economy and the financial economy,
- Stability of exchange rates and interest rates, and for this, price stability,
- Fee policies; minimum wage level and regulation of tax liability,
- Wealth tax application can be implemented.

Qualified education is considered the most important tool of development. It is a great necessity that education be delivered equally to disadvantaged groups such as the poor, disabled, refugee-migrant, child laborers and girls as a right. As well as achieving education, it is also important that education is qualified and has an elevating quality of employment capability.

Low income level, child labor, gender inequality, difficulties in reaching schools as a distance, leaving school are the main reasons for barriers to participation in education.

- Starting by focusing on preschool education and educating families,
- Implementation of education programs in accordance with market demand within the scope of vocational education, employment and career planning,
- Supporting university-industry cooperation with a focus on innovation and technology,
- To reach the whole population of media and communication tools with the understanding of lifelong education,
- Ensuring rationale, science and technology-oriented coordination between educational institutions is a very necessary process for the welfare community.

Inadequate employment opportunities and unemployment, informal employment, women's low participation in the workforce and female unemployment, discrimination and gender inequality against women, disability labor force participation and disability unemployment, youth unemployment, long working hours and poor working conditions, low wages, child labor are the main obstacles and problems in the labor markets (Candaş and Yılmaz, 2012: 60-81). Employment policies that encourage employment and participation in the workforce and reduce unemployment are steps that need to be taken to solve these problems.

There are four basic conditions under which decent work should be employment, social security, basic rights to work life and social dialogue (Ghai, 2003:114).

4.RESULTS AND RECOMMENDATIONS

The way to sustainable inclusive growth is to address inequalities and achieve the high level of employment provided by good and qualified education. Inequalities, inadequate or failure of education policies, low labor force participation or high unemployment is the most important reasons that impair the quality of growth.

For the prosperity of countries and social peace, inequalities must be addressed, i.e. prosperity must cover all segments of society. Since this requirement cannot take place in the market, which considers economic profitability as its top priority, it needs public regulations.

Although growth that does not create employment primarily affects young people and the disadvantaged, unemployment leads to the deterioration of individual and social peace as well as economic aspects, and the increase of problems such as migration.

- Making public arrangements in solving and developing the problems of education and labor markets,
For example, such as providing financing facilities to entrepreneurship, supporting cooperatives for the disadvantaged and excluded segments
- To meet the demand for labor; improving learning quality and skills and ensuring the transition to employment (UNDP,2012),
 - Creating and supporting the jobs that will employ the existing labor supply while growing the demand for labor that technological developments will create,
 - Decisive struggle with informal employment,
 - Preventing individuals from being subjected to lower levels of earnings due to unemployment and the prevalence of informal employment,
 - Widespread use of advances in information and technology in agriculture and agriculture-based industries, thus ensuring migration to cities and efficient employment of the unemployed in the agricultural sector,
- Achieving social consensus for these practices are steps that will be wounded.

In conclusion, the solution of unemployment, inequality and poverty is a priority problem that is too comprehensive to be solved by the market and requires public regulation. None of these findings are new findings. There are also many theoretical and academic studies that indicate that unemployment causes welfare losses that are transferred to social and future generations more than individual growth that does not create jobs. At this point, what needs to be done is to urgently implement inclusive growth policies.

Özet: Günümüzde inovatif faaliyetler, işletmelere uluslararası pazarlarda rekabet avantajı sağlayan önemli araçlardır. Rakiplerin yapmadığı yeniliklerin gerçekleştirilmesi maliyetlerin minimize edilmesine yönelik çabalardan daha fazla önem kazanmakta, işletmeleri rakiplerine karşı ürün ya da süreçlerinde yeniliğe zorlamaktadır.

Bu çalışmada, KOBİ'lerin ihracat performansları ile inovasyon uygulamaları ve inovasyon işbirlikleri arasındaki ilişkinin değerlendirilmesi amaçlanmıştır. Veriler, nitel araştırma yöntemlerinden birisi olan görüşme metodu ile elde edilmiştir. Oluşturulan görüşme soruları, tipik durum örnekleme yönteminde seçilen, Kırklareli ilinde faaliyeti olan imalatçı/ ihracatçı bir işletmenin üst düzey firma yöneticisine iletilmiştir. Elde edilen veriler betimsel analiz yöntemi ile değerlendirilmiştir. Araştırma bulgularına göre inovasyon uygulamalarının ihracatçı işletmelerin rekabet gücü ve pazar payları üzerinde olumlu etkileri bulunmaktadır. Buna göre, inovasyon geliştirme konusunda istekli işletmeleri destekleyecek inovasyon işbirliklerinin KOBİ'ler düzeyinde yaygınlaştırılmasına yönelik öneriler geliştirilmiştir.

Anahtar Kelimeler: KOBİ, İnovasyon İşbirliği, İnovasyon Yönetimi, İhracat Performansı.

Abstract: Nowadays innovative movements are important tools for businesses enterprises to provide advantage in competition. Realizing innovations that competitors cannot make becomes more important than efforts to minimize costs and forces businesses to innovate in their products or processes against their competitors. In this study, it is aimed to evaluate the relationship between export performance of SMEs and their efforts towards innovation and their attitudes towards cooperation in innovation management. The data were obtained by interview method, which is one of the qualitative research methods. The interview questions were forwarded to the senior company manager of a manufacturer / exporter operating in Kırklareli, selected according to the "typical case" sampling technique. Descriptive analysis technique was used in the analysis of these data. According to the research findings, innovation practices positively affect the competitiveness and market share in export markets. Suggestions have been developed to expand innovation cooperation at the level of SMEs. that will support businesses willing to develop innovation.

Key Word: SME, Innovation Collaboration , Innovation Management, Export Performance.

1.GİRİŞ

İşletmelerde inovasyon kültürünün yeterince oluşmaması, üniversiteler ve diğer aktörlerle geliştirilemeyen işbirlikleri, inovasyon faaliyetleri sonucu elde edilen çıktının ticarileştirilmesi ve fikri mülkiyet hakları gibi konularda yeterince bilgiye sahip olmamak gibi olumsuzluklar, işletmelerin inovasyon yapmalarını etkilemekte ve rekabet güçlerini azaltmaktadır (Yüksel vd., 2013: 24).

Günümüzün yoğun rekabetçi ortamında, bir firmanın teknolojik ilerlemeyi yakalama ve sürekli yenilik yapma yeteneği, hayatta kalması ve büyümesi için çok önemlidir. Bununla birlikte, sınırlı uzmanlık ve kaynakların bir sonucu olarak, firmaların yeni teknolojileri tamamen kendi başlarına keşfetmeleri giderek zorlaşmaktadır. Küresel pazarda endüstriyel inovasyona yönelik artan talebi karşılamak için endüstri ve araştırma üniversiteleri arasındaki işbirliğinin geliştirilmesi gerektiğine dair evrensel bir kabul bulunmaktadır (Guan and Zhao, 2013: 1271).

İnovasyonun, olumlu etkilerinden yararlanabilmek ve bu etkileri maksimize edebilmek için öncelikle birey, toplum, kurum ve kuruluşlar açısından belirli düzeyde bir farkındalığa sahip olunması, inovasyonun öneminin kavranması, gerekli mekanizmaların kurularak bu mekanizmalar arasındaki iletişim ve etkileşimin sağlanması gerekmektedir (Çütcü, 2017: 595).

Bu çerçevede çalışmada öncelikle, inovasyonun KOBİ'lerin ihracat performansı üzerindeki etkileri ve dış aktörler ile inovasyon stratejileri konusunda işbirliği yapmanın işletmeler açısından önemine yönelik yabancı ve yerli literatür incelenmiştir. Çalışmanın uygulama aşamasında, Kırklareli ilinde tekstil örgü makineleri için yedek parça üreten ve 2005 yılından bu yana birçok ülkeye ihracat yapan örgü platini üreticisi bir firma örnek olay olarak ele alınmıştır. Görüşme yöntemi uygulanarak toplanan veriler analiz edilerek, işletmenin pazarlama, süreç ve ürün inovasyonu konularındaki uygulamalarının ihracat performansı üzerindeki etkileri değerlendirilmiştir. Aynı zamanda işletmenin inovasyonda işbirliği konusundaki tecrübeleri ve buna yönelik tutum ve beklentileri ile ilgili araştırma bulgularına yer verilmiştir.

2. İNOVASYON KAVRAMI

Inovasyon Peter F. Drucker tarafından, “yeni, gelişken yetenekler veya artan kullanılabilirlikla donatılma süreci” olarak tanımlanmaktadır. Drucker, inovasyonu girişimcilerin özel aracı olarak nitelendirir; girişimciler bu aracı farklı bir iş veya farklı bir hizmet için değişim fırsatı olarak kullanırlar (Elçi vd., 2008: 26).

Oslo El Kitabında (OECD 2005) ise inovasyon türlerine ilişkin tanımlamalar çerçevesinde işletmelerin dört farklı türde inovasyon yapabilecekleri kabul edilmektedir. Bunlar; ürün inovasyonu, süreç inovasyonu, pazarlama inovasyonu ve örgütsel inovasyondur. (Angelo, 2012: 394). Ürün inovasyonu, hem yeni ürün ve hizmetlerin pazara sunulmasını hem de mevcut mal ve hizmetlerin işlevselliğinde veya kullanıcı özelliklerinde önemli iyileştirmeleri içermektedir (Oslo Kılavuzu, 2005). Süreç inovasyonu, yöntemlerde, ekipmanlarda ve/veya yazılımlarda büyük değişiklikleri içinde barındırmaktadır. Bu inovasyona örnek olarak yeni bir üretim yöntemi gösterilebilir. Örgütsel inovasyon , bir işletmenin ticari uygulamalarında, organizasyonunda ve/veya dış ilişkilerinde yeni bir örgütsel yöntemin uygulanması olarak tanımlanabilir (Özgül, 2020: 64). Pazarlama inovasyonu ise var olan ürün ya da hizmetlerin, mevcut müşterilerin memnuniyeti arttırmak ve sürdürülebilir bir ticaret gerçekleştirmek için, yeni müşteriler edinerek pazar payını artırmak için pazarlama stratejilerine yönelik yapılan yenilik çalışmalarıdır. İşletmeler, ürün ve hizmetlerini pazara sunmak için geliştirirler. Pazara sundukları ürün ve hizmetlerde pazar paylarını arttırmak için farklı, değişik ve yeni tasarımların, ambalajların ve pazarlama yöntemlerini geliştirilip kullanılması pazarlama inovasyonu olarak adlandırılır (<https://pazarlamaturkiye.com>).

Schumpeter'e göre (1950) kapitalizmin arkasındaki itici güç işletmelerin oluşturdukları yeni ürünler, yeni üretim ya da ulaşım metodları, yeni pazarlar ve yeni endüstriyel örgüt yapılarıdır. İşletmeler pazar liderini takip ederek liderin kurallarına göre oyunu oynamak yerine yenilikler ile pazarda lider konuma gelerek oyunun kurallarını değiştirebilir ve bu şekilde rekabetçi avantaj elde edebilir (Kahveci, 2013: 47).

Yeni olarak adlandırılan her şeyin inovasyon olmadığını anlamak, inovasyon kavramının içeriğini kavrayabilmek adına önem arz etmektedir. İnovasyon hareketliliğini meydana getiren yenilikler, sosyal ve ekonomik katma değere çevrilebilen yeniliklerdir. Sosyal ve ekonomik katma değeri bulunmayan hiçbir yenilik özgün ya da yaratıcılığı olsa dahi inovasyon kavramı içinde yorumlanmamaktadır (Şahin, 2020: 38).

2.1.Kobi'ler ve İnovasyon

İsviçre'de yerleşik olan Dünya Ekonomik Forumu (DEF) tarafından hazırlanan 2019 Küresel Rekabetçilik Raporunu (KRR) verilerine göre Türkiye 141 ülke arasında 61 inci sırada yer almaktadır. Raporun değerlendirmesinde temel alınan bileşenlerden birisi olan “İnovasyon Kabiliyeti” sıralamasında ise Türkiye 49. sıradadır. Raporda vurgulanan temel bulgulardan birisi, güçlü inovasyon kabiliyetine sahip birçok ekonominin yetenek tabanını ve işgücü piyasasının işleyişini geliştirmesi gerektiği şeklindedir (www.gazetesi.sabanciuniv.edu).

İnovasyonun mikro perspektifte işletmeler ve organizasyonların, makro çapta ülkelerin refah seviyesini yükselterek, küresel rekabette ayakta kalmalarını sağlayan bir faktör olduğunu, önemle vurgulamak gerekir. Sürdürülebilirlik, yüksek istihdamı oranı, düşük cari açık oranı ve ihracat fazlası gibi bir ülkenin en

önemli ekonomik hedeflerinin gerçekleştirilmesinde yenilikçi politikaların benimsenmesi gerekmektedir (Oralhan ve Büyüktürk, 2019: 472).

Ülke ekonomisinin doğası ne olursa olsun, KOBİ'ler inovasyona, bölgesel kalkınmaya ve sosyal uyuma büyük katkı sağlamakta, bu da GSYİH, istihdam ve ihracat üzerinde önemli ölçüde olumlu etkiler yaratmaktadır (İmran et al., 2017: 40).

Yapılan araştırmalar küçük firmaların artan payı dikkate alındığında, daha büyük firmaların inovasyon ve uluslararasılaşmada lider olduğu şeklindeki geleneksel anlayışın modası geçmiş olduğunu göstermektedir. Daha büyük firmalar genellikle organizasyonel rutinlerine kilitlenirken, daha az rutin ve daha az bürokratik dirence sahip küçük firmaların, çevresel değişikliklere daha kolay uyum sağlama yeteneğine sahip olmaları, onları büyük rakiplerine kıyasla yenilikler sunmaya daha yatkın hale getirmektedir. (Angelo, 2012: 394). Diğer yandan daha büyük bir kalifiye teknik ve yönetim kadrosu yüzdesine sahip firmalar daha yenilikçi yeteneklere sahiptir. Ayrıca, KOBİ'ler pazara yönelik yenilikler geliştirme olasılıklarını artırmak için üniversitelerle işbirliği yapabilmektedirler. Bu tür işbirlikleri, bu firmaların kendi iç yeteneklerini güçlendirmelerine olanak sağlarken, gelişmekte olan ekonomilerdeki KOBİ'ler, üniversitelerin düşük standardı nedeniyle bu tür faydalardan çoğu zaman yararlanamamaktadır (Edeh et al., 2020: 2).

İnovasyonun rekabet gücü, kalkınma ve ekonomik büyümedeki etkileri incelendiğinde, inovasyon uygulamalarının gerçekleştirilmesi büyüklüğü ne olursa olsun tüm işletmeler için büyük önem taşımaktadır. Dolayısıyla KOBİ'lerin de ürün ya da hizmetlerini sunumunda ve sunum kalitesinde fark oluşturarak verimliliklerini arttırmaları gerekmektedir. Bu yüzden inovasyon stratejilerinin KOBİ'lerin öncelikli konuları arasında yer alması ve bu stratejilerin uygulanıyor olması bu işletmelerin faaliyetlerini daha etkin ve verimli şekilde sürdürebilmeleri bakımından önem arz etmektedir (Korucuk vd., 2020: 158).

2.2.İnovasyonda İşbirliğinin Önemi

İnovasyonun planlanması, uygulanması ve kontrol edilmesine ilişkin dikkatle incelenmesi gereken ilkelerden birisi olan işbirliği ilkesine göre inovasyon konusunda gelen başarı, iş birlikleri olan unsurlarla doğrudan ilişkilidir. İnovasyon fikirleri genel olarak bir kişiden doğmakta ama değerlendirme ve fikirleri gerçekleştirmede birden fazla kişiye ihtiyaç duyulmaktadır. İnovasyon kavramı amaçları ve gerçekleşmesi için ekip çalışmasını gerektirmektedir (Şahin, 2020: 43).

İnovasyon faaliyetleri genellikle işbirliğine dayalı bağlantılar çerçevesinde gerçekleşmektedir. Bugün hala izole bir şekilde çalışan yenilikçi işletmeler olsa da, günümüzde yenilikçi şirketler, üniversiteler ve araştırma merkezleri, stratejik işbirliklerinden toplu sinerji ve bireysel avantajlar elde etmeyi amaçlayan işbirlikçi Ar-Ge projelerinde giderek daha fazla bilgi ve kaynak aktarmaktadırlar (Galaso, 2018: 2).

İşletmelerin, çeşitli çıkar grupları, hükümetler ve diğer paydaşlarla ortak paydada birleşme çabaları, rekabetçi avantaj elde etmek, çevredeki fırsatları yakalayabilmek ve çeşitli tehditlerin etkilerini dengeleyebilmek için önemlidir.(Kahveci, 2013: 5).

KOBİ 'lerde inovasyon çalışmaları sırasında karşılaşılan problemlerden birisi de, inovasyonun kolektif bir çalışmayı gerektirmesine karşılık, inovasyon geliştirme grupları arasında bir koalisyonun oluşturulamamasıdır. İnovasyon girişimcinin tek başına yapacağı bir iş değildir. Toplumsal yapıdan, hükümetlerin uygulamalarından, endüstrinin özelliklerinden, gerekli bilgi ve kaynağa sahip olup olmamaktan etkilenen bir süreçtir (Bozkurt, 2007: 6). Günümüzde KOBİ'ler, değişen ve gelişen ekonomik çevrede hayatta kalabilmek için çeşitli ortak girişimler, işbirliği ağı oluşturma ve yeni pazar stratejileri oluşturma çabasındadırlar. Diğer taraftan kümelenmenin bel kemiğini oluşturan üç temel avantaj olarak sayabileceğimiz elverişli bilgi ortamı, azaltılmış belirsizlik ve birlikte hareket etme gücü sayesinde firmalar, daha yakın etkileşim, işbirliği, ölçek ekonomileri, daha fazla uzmanlık, daha etkin strateji uygulamaları ve daha fazla yenilik elde etmektedir (Öztürk,2020: 33).

Çalışmalar, firmaların dış pazarlarda bilime dayalı ortaklarla işbirliği yaparak yenilikçiliklerini ve üretkenliklerini artırabileceklerini göstermektedir (Edeh et al., 2020: 9). Özellikle, birçok ülkenin ekonomisinin temel motorunu temsil eden KOBİ'lerin, ürünlerini, süreçlerini ve iş modellerini sürekli

olarak yenilemedikleri sürece artık güvenli bir geleceğe sahip olmadığı görülmektedir (Bertello et al., 2021: 3).

İnovasyon yapan işletmeler, inovasyon faaliyetini tamamlayıcı stratejilere ve yetkinliklere ihtiyaç duymaktadırlar. İnovasyon konusunda rakipler de dâhil olmak üzere dış paydaşlarla işbirliği yapma becerisi ve stratejileri; işletmenin faaliyetlerini ilgilendiren alanlarda, işletmenin bulunduğu bölgede, yurtiçinde ve dışında geliştirilen yeni teknolojilerin ve üretilen bilginin sürekli olarak takibi ve ihtiyaç duyulanların firma tarafından özümsemesi gibi konular, bu tür yetkinlik ve stratejilere verilebilecek örneklerdendir. Diğer yandan, inovasyonda işbirliğinin, işletmelerin rekabet avantajının belirlenmesinde önemli rolü bulunmaktadır (Elçi vd., 2008: 29).

Güler (2011)'in, inovasyon işbirliklerinin inovasyon performansı üzerindeki etkisinin araştırıldığı çalışmasında, İnovasyon faaliyetleri ile ilgili kuruluşlarla işbirliği yapmanın inovasyon performansını olumlu yönde etkilediği, kuruluşlarla yapılan işbirliği ve sıkı ilişkiler sayesinde ortaya çıkan öğrenme ve bilgi yayılımının inovasyon performansının en temel kaynağını oluşturduğu sonuçlarına ulaşmıştır (Güler ve Kanber, 2011: 73).

Guan(2013)'a göre üniversiteler ve sanayi arasındaki bağlantılar, bölgesel ve ulusal inovasyon sistemlerinin önemli kısmını oluşturmaktadır. Bu nedenle, aralarındaki işbirliğinin güçlendirilmesi bir ülkenin rekabet gücü için çok önemlidir. Üniversite-endüstri bilgi transferi günümüzde hem ekonomi hem de yönetim çalışmalarında önemli bir araştırma konusudur ve aynı zamanda bir dizi gelişmiş ve gelişmekte olan ülkenin bilim ve teknoloji politikası gündeminin ilk sıralarında yer almaktadır (Guan ve Zhao, 2013: 1271).

Abar (2020)' a göre sanayileşmiş ülkelerin ekonomileri ve inovasyon seviyeleri incelendiğinde üretilen bilginin sanayide doğrudan kullanıldığı ve böylece küresel pazarlarda rekabetçi avantajlar elde ettikleri görülmektedir. Üniversiteler ve endüstriler arasındaki işbirliği, bilgi transferini kolaylaştırabilir ve yeni bilgi ve teknolojinin üretimini teşvik edebilir (Abar, 2020: 1032).

Hancıoğlu (2019)' nun, İngiltere, Amerika Birleşik Devletleri Ve Türkiye'nin Ulusal İnovasyon Sistemlerinin İncelenmesi: Türkiye İçin Öneriler başlıklı çalışmasında yer alan bilgilere göre ise, İngiltere inovasyon sisteminde küçük işletmeler, küçük işletme hizmeti ve iş bağlantıları ile desteklenmektedir. ABD'de "Küçük İşletme İnovasyon Araştırma Programı" ile küçük işletmeler inovasyon yapmaları için teşvik edilmektedir. ABD'deki mevzuat küçük işletmelerin oluşumunu engellememektedir. Türkiye'de KOSGEB'in KOBİ'lere verdiği inovasyon ve Ar-Ge'ye yönelik özel eğitim ve danışmanlık hizmetleri bu ülkeler ile benzerlikler göstermektedir (Hancıoğlu ve Atay, 2019: 544).

Dolayısıyla, inovasyon ve girişimcilikle ilgili son literatür, günümüzün iş ortamının karmaşıklığının birden çok aktörün işbirliğine dayalı çabaları gerektirdiğini vurgulamaktadır (Bertello et al., 2021: 3).

2.2.1.İnovasyonda İşbirliği Türleri

-İnovasyon Ağları: İnovasyon ağları, firmalar, üniversiteler, kamu kuruluşları, müşteriler ve diğer aktörler tarafından oluşturulur ve bunlar arasındaki bağlantılar ve etkileşimlerle hayat bulur. Bu nedenle, bir firmanın bu tür ağlarda yer alması, stratejik olarak büyük bir önem taşır ve bulunduğu ağdaki gücünü ve etkisini yansıtır. Ağlar, inovasyon için pek çok yeni fırsatın ortaya çıkmasına da yol açar (<https://inomer.org>).

-İnovasyona Dayalı Kümelenmeler: Michael Porter, Amerika'nın inovasyonla gelen rekabet avantajının kümelenmeler temeline oturan bölgesel ve yerel inovasyon sistemlerinden kaynaklandığını ortaya koymuştur. Porter, kümeyi belli bir alanda birbiriyle bağlantılı şirketler ve kurumların oluşturduğu coğrafi yoğunluk olarak tanımlar. Küme, birbiriyle bağlantılı sanayileri ve rekabet için gerekli diğer kuruluşları kapsar. Örneğin, parça, makine ve hizmet gibi belli alanlarda uzmanlaşmış girdi tedarikçilerini ve yine alanında uzmanlaşmış altyapı sağlayıcılarını içerir. Genellikle, birbirlerini tamamlayan ürünlerin üreticileri, müşterileri ve dağıtım kanallarından beceri, teknoloji ve ortak girdi bakımından ilişkili sanayilerde faaliyet gösteren şirketlere kadar uzar. (<https://inomer.org>.)

2.2.2.Tim İnovalig Ve İnosuit Programları

Türkiye İhracatçılar Meclisi (TİM) tarafından oluşturulan İNOVALİG ve İNOSUİT gibi programlar ile ihracatçı firmaların inovasyon yetkinliklerinin sürdürülebilir hale gelmesi inovasyon altyapısının ve yönetiminin güçlendirilmesi hedeflenmektedir. İnovasyon bilincinin sağlanması ve uluslararası standartta firmaların inovasyon karnelerinin çıkarılması amaçlanmaktadır. Programa katılımcı firmaların başarı öykülerinde, belirlenen yol haritasında, yapılan inovasyon uygulamaları ile pazar paylarını arttırdıkları ve yurt dışı pazarlara açılmada atılım gerçekleştirdikleri görülmektedir.

Üniversite - Sanayi işbirliğine dayanmakta olan “İnoSuit - İnovasyon Odaklı Mentorluk Programı” kapsamında, İhracatçı Birlikleri üyesi şirketlerde inovasyon yönetimi yetkinliğinin sürdürülebilir şekilde artırılması, inovasyon yönetimi altyapısının oluşturulması, güçlendirilmesi, her bir kurumun kendi hedeflerine, yapısına ve ihtiyaçlarına uygun kurumsal inovasyon sistemlerinin tasarlanması ve hayata geçirilmesi amaçlanmaktadır. Programın hedeflerinden bazıları (www.tim.org.tr);

- 1.İnovasyon yönetimi yetkinliğinin sürdürülebilir şekilde artırılmasının, bunun sonucunda da ihracat performansının yükseltilmesinin sağlanması,
- 2.İnovasyon yönetimi konusunda ülkemizdeki üniversiteler ve özel sektör arasında iş birliğinin artırılması,
- 3.Ürünlerde, süreçlerde, organizasyonel yapılanmalarda veya pazarlama faaliyetlerinde inovasyon projelerinin hayata geçirilmesi,
- 4.İnovasyon yönetimi konusunda, ülkemiz üniversitelerindeki bilimsel bilgi, araştırma ve uygulama tecrübesinin artırılmasıdır.

Olarak belirtilmektedir.

3.İHRACAT PERFORMANSI

İhracat performansı, genel olarak işletmenin uluslararası satışlardan elde ettiği çıktılar şeklinde tanımlanmaktadır. Uluslararası satışlardan elde edilen çıktılarının yüksek olması ihracat performansının yüksek olduğunun göstergesidir. Çıktılar performansın finansal, stratejik yönleri ve değişimi yakalayabilecek şekilde belli bir zaman aralığını kapsmalıdır (Kahveci, 2013: 45).

Thirkell ve Dau (1998:817-818) ihracat performansı ölçmede sekiz yaklaşım kullanıldığını belirtmişlerdir. Bu sekiz yaklaşım, İhracat engelleri, ihracat eğilimi, ihracat problemleri, ihracatçılarla ihracatçı olmayanların karşılaştırılması, ihracat satışları, ihracat seviyesi (ihracatın toplam satışlar içindeki oranı), ihracatın büyüme yoğunluğu ve yöneticilerin ihracatı algılamalarından oluşmaktadır (Torlak vd., 2007: 106).

McGuinness ve Little (1981: 115) ihracatın toplam satışlara oranı ile ihracat performansını ölçmüştür. Ayal (1982), ek olarak ihracatın sermayeye oranını da finansal bir gösterge şeklinde performans ölçümü için kullanmıştır (Sarıhan ve Tepeci, 2017: 869).

İhracat performansının tanımı konusunda literatürde genel kabul gören bir tanım birliği olmamasına rağmen, ihracat performansının ölçümünün nasıl yapılacağı ve ihracat performansının alt boyutları ile ilgili olarak genel bir uzlaşma vardır. Genel olarak ihracat performansı ölçülürken objektif ve subjektif kriterler kullanılmaktadır (Yücel ve Yeniçeri, 2008: 709):

Tablo 1: İhracat Performans Ölçüm Kriterleri

İhracat performans ölçümünde kullanılan objektif kriterler	İhracat performans ölçümünde kullanılan subjektif kriterler
Toplam Satış Hasılatı İçinde İhracat Satış Hasılatının Oranı	Stratejik Nitelikli Kriterler
İhracat Faaliyetinin Finansal Sonucu	Davranışsal Kriterler
İhracattaki Büyüme	

Objektif ölçütler ihracat performansı ile ilgili kesin değerleri ortaya koyarlar. Objektif ölçütler arasında satışla ilgili ölçütler (ihracat yoğunluğu, ihracat satış büyümesi gibi) en çok kullanılan ölçütler arasında bulunmaktadır. Bu ölçütler ancak işletmenin ihracata özgü kayıtları mevcutsa doğru bilgiler vermektedir ve bu bilgiler işletmeler tarafından araştırmacılara gönüllü bir şekilde verilebilir olmalıdır. Subjektif ölçütler ise algısal veya tutumsal performansı ortaya koyar. Bu ölçütler arasında algılanan ihracat başarısı, ihracat satışlarındaki tatmin düzeyi ve beklentilerin karşılanması yer almaktadır (Ghabangandi, 2018: 68).

İhracat performans ölçütleri konusunda literatürdeki gelişim incelendiğinde son periyotta öne çıkan konuların işletmeye özgü faktörlerden oluşan strateji, firma büyüklüğü, performans, verimlilik ve inovasyon gibi kavramlar olduğu gözlemlenmektedir (Tanrıverdi ve Altıntaş, 2019: 307).

3.1.Kobi'lerin İhracat Performansını Etkileyen Faktörler

TÜİK 'in 2019 yılında yayınlanan KOBİ istatistikleri raporuna göre; Türkiye'nin ekonomik hacminde KOBİ'lerin toplam girişimin (işletme) %99,8'ini, istihdamın %72,4'ünü, maaş ve ücretlerin %51'8 ini, cironun (satışların) %50'sini ve katma değer de %44'ünü oluşturdukları görülmektedir. Aynı rapora göre 2019 yılında KOBİ'lerin ihracat miktarı 65 milyar dolar olarak gerçekleşmiş olup, bu rakam toplam ihracatın %36'sını oluşturmaktadır.

Özellikle gelişmekte olan ülkelerde küçük firmalar için, iç pazar ihracat pazarlarına göre oldukça istikrarsız, daha az karlı ve daha az caziptir. Dahası, iç pazar genellikle çok küçüktür. Bu nedenle, iç pazar doygun hale geldikten sonra, dış pazarlardaki ticari genişleme, büyümeyi ve uzun vadeli hayatta kalmayı sağlamanın tek yoludur (Gupta and Chahuan, 2020: 2).

Birçok işletme açısından ihracat işlemleri karmaşık olarak algılanmaktadır ve ihracatın gerektirdiği kalite standartlarına ulaşmak ve yeterli finansman bulma gibi konular aşılması zor engeller olarak bilinmektedir. Bu nedenlerle, gelişmemiş ve gelişmekte olan ülkelerde KOBİ'lerin dış pazarlara açılma ve başarılı olmalarının büyük çaplı işletmelere göre çok daha zor olduğu bilinmektedir (Kaya, 2012: 29).

Eisenhardt ve Martin (2000)'a göre "dinamik yetenekler", işletmelerin, pazarda değişime cevap vermek, hatta değişim yaratmak için gereken yöneticilerin kaynak tabanını değiştirmesi, ürün yenilemesi gibi özel örgütsel ve stratejik süreçler olarak tanımlanmaktadır (Şahin, 2017: 111). *İnovasyon, ağ oluşturma ve pazarlama yetenekleri gibi dinamik yeteneklerin küçük firmaların ihracat performansında önemi üzerine geniş bir fikir birliğinin oluşmasını sağlayan çok sayıda çalışma gerçekleştirilmiş ve bu üçü, son literatürde bu ilişkide en çok etkisi olan küçük firma yetenekleri olarak tanımlanmıştır (Gupta and Chahuan, 2020: .2).*

KOBİ'lerin faaliyetleri bölge ve ülke ekonomisi açısından önem arz etmekle birlikte, ihracat faaliyetlerinde bu işletmeler bir takım sorunlar yaşamaktadırlar. KOBİ'lerin ihracat faaliyetlerini etkileyen ulusal düzeydeki sorunlar dokuz başlık altında toplanmaktadır (Aktepe vd, 2018: 109):

- 1.Kamu finansman yardımlarının ve teşviklerinin yetersiz olması,
- 2.KOBİ'leri ihracata yönelten ve ihracatlarını geliştirmeye yönelik planlı bir stratejinin izlenmemesi,
3. KOBİ'lerin ihracata katkısını artırmaya yönelik amaçların açıkça ortaya konmaması,
- 4.Tarife ve kotalara ilişkin engeller,
- 5.Bürokratik engeller ve mevzuat sorunu,
6. İç piyasa şartlarının dış piyasaya göre cazip olması,
- 7.KOBİ'lerin organize olmamaları,
- 8.KOBİ'lerin ihracatını kolaylaştırmaya yönelik pazarlama kanalları ve ihracat pazarlama örgütleri, konsorsiyumlar gibi sistemlerin kurulması için uygun ortamların bulunmaması,
- 9.İhracata yönelik uygulamaların KOBİ'lerin yararına işlememesi.

3.2.İnovasyon Stratejileri ile İhracat Performansı İlişkisi

Dünya ekonomilerini inovasyon yeteneklerine göre sıralayan Küresel İnovasyon Endeksi (Global Innovation Index)'nin 2020 yılı raporuna göre Türkiye 51. Sırada yer almaktadır (www.zucder.org.tr). Elmacı (2021) nin bu konuda yaptığı değerlendirmelere göre; yaygın toplantılara, demeçlere, ödüllere, teşviklere karşın Türkiye'nin dünya çapında bir markası olmadığı gibi geliştirdiği, ihraç ettiği yeni ürün, yeni teknoloji, yeni üretim süreci de bulunmamaktadır. Yeni ürün, yeni teknoloji ihracının yokluğu bir yana, ileri teknoloji ürünlerinin ihracat içindeki payı da son derece düşüktür. Türkiye daha çok geleneksel sanayi ürünlerini, onların da büyük ölçüde montajını yaparak dışarıya satmaktadır. Türkiye'nin ihracatında ortalama kg. değeri 1.46 ABD Doları (USD) olarak hesaplanmaktadır. Bu değer, teknoloji ürünü satan Ar-Ge harcamalarının yüksek olduğu Güney Kore'de 3.0 USD, Japonya'da 3.5 USD, Almanya'da 4.1 USD'ye kadar yükselmektedir. (<https://portal.dpu.edu.tr/orhan.elmaci>).

Yenilikçi firmaların yenilikçi olmayanlardan daha iyi performans gösterdiği ihracat pazarları, yeniliğin önemli kalite farklılıklarına yol açtığı pazarlardır (Mallinguh et al., 2020: 6). Hızla gelişen teknolojide ticarileşmek, inovasyonla mümkün olabileceği gibi ihracatla desteklenen bir ekonomi, gelişmekte olan ülkelerin uzun vadeli sürdürülebilir, ihracata dayalı bir inovasyon modelinin önemini arttırmakta ve her geçen gün, böyle bir modele, daha da fazla ihtiyaç duyulduğunu göstermektedir. Girdileri ve çıktıları açısından tüm ekonomik faaliyetlerde, ülke ekonomilerinin gelişmesinde, istihdamda, milli kalkınmada, "inovasyon ve ihracat" çarpan ve hızlandırıcı etkisiyle önemli bir kaldıraç rolü üstlenmekte ve firmaların genel performanslarını önemli derecede artırmaktadır (Çetin ve Gedik, 2017: 110).

Literatürde bu konuda yapılan çalışmalardan bazıları şu şekilde özetlenebilir. Edeh (2020) 'in inovasyon türlerinin KOBİ lerin ihracat performansı üzerindeki etkileri başlıklı araştırmasında; inovasyon-ihracat performansı büyük ölçüde bir firmanın çevresiyle nasıl etkileşim kurduğuna bağlı olduğundan, dış inovasyon işbirliklerinin olası etkileri incelenmiştir. Elde edilen bulgulara göre firmaların, hem yurtiçi hem de yurtdışı pazarlarda bilime dayalı ortaklarla işbirliği yaparak inovasyon yeteneklerini geliştirebilecekleri sonucuna ulaşılmıştır. Üniversiteler ile inovasyon işbirliklerinin İhracat performansı ile olumsuz yönde ilişkili olduğu, ancak yurtdışındaki kamu araştırma kurumları ile yapılan işbirliğinin ihracat performansı üzerinde olumlu bir etkisi olduğunu göstermektedir. İş yeniliklerinin geliştirilmesinde bilime dayalı ortakların önemi vurgulanmaktadır (Edeh et al., 2020: 9).

Easmon (2019), Gana'daki ihracatçı firmaların yöneticileri ve üst düzey yöneticilerinden elde ettiği veriler ile, KOBİ'lerin ihracat performansı ile inovasyon yeteneklerinin ilişkisi üzerine yaptığı çalışmada, KOBİ'lerin ihracat pazarlamasındaki performansında inovasyon yeteneklerinin kritik rolünün bulunduğu sonucuna ulaşmıştır (Easmon et al., 2019: 20).

Guan ve Ma (2003), inovasyon yeteneklerinin sadece çeşitli endüstrilerdeki imalat firmalarının ihracat oranını etkilemekle kalmayıp, aynı zamanda ihracat büyümesinin de inovasyon yeteneklerinin iyileştirilmesiyle ilgili olduğu sonucuna varmıştır.

İnovasyon yapmak ihracatı tetiklediği gibi, inovasyon yapma isteği ve dışa dönük ticari faaliyetler de yeni pazarlar oluşturmaya ve markalaşmaya destek sağlamaktadır. Yüksek kazanç isteği ve pazar payı hâkimiyeti yerel pazarda üründe, süreçte ve piyasada pazarda yenilik yapmayı sürekli kılmaktadır. İhracat yapan işletmeler ise değişime ayak uydurup karlılık ve rekabet güçlerini koruyabilmek için daha çok inovasyon yapmak zorunda kalmaktadır. Küresel rekabet için uluslararasılaşmada en çok tercih edilen dış pazar bulma yöntemi ve pazarı genişletme yolu ihracattır. Bu anlamda, "Dünya ekonomisine damgasını vuran en önemli iki dinamik: küreselleşme ve inovasyondur (Çetin ve Gedik, 2017: 111).

Ülkeler belli bir süre, ihracat oranlarındaki iyiyeye gidiş veya iç talebin yüksekliği sayesinde büyüyebilseler de bu büyümenin uzun vadeli ve sürdürülebilir olması, ülkenin inovasyon performansına ve bu performanstaki artışa bağlıdır (Elçi vd., 2008: 30).

Tekin ve Hancıoğlu (2018) 'nun Avrupa İnovasyon Karnesi'nde yer alan 36 ülkenin 2008-2015 yılları arasındaki verilerinin panel veri analizi ile incelendiği çalışmasının sonuçlarına göre, inovasyon ile ihracat performansı arasında pozitif bir ilişki olduğu bulunmuştur (Tekin, 2018: 897).

Jusufi ve Ukaj (2020)'in Kosova'da imalat ve ihracat yapan 100 KOBİ'nin inovasyon modelini analiz ettiği çalışmasında ürün çeşitliliği ile ihracattaki artış arasında bir bağlantı olduğu sonucuna ulaşılmıştır.

İnovasyon ile bu KOBİ'lerin ihracat büyümesi arasında güçlü bir pozitif ilişki bulunmaktadır. Bu çalışma, ürün inovasyonunun KOBİ'lerin ihracat performansı üzerindeki etkisini değerlendirerek Batı Balkan literatüründe mevcut olan mevcut boşluğu ele almaktadır. Ekonometrik sonuçlar, ürün inovasyonunun önemli olduğunu ve ihracat büyümesi ile güçlü bir ilişkisi olduğunu göstermektedir (Jusufo et al., 2020: 215).

4.ARAŞTIRMANIN METODOLOJİSİ

Torlak (2007) 'ın Türk İşletmelerinin İhracat Performansı Belirleyicileri başlıklı araştırmasında işletmelerin yer aldığı coğrafi bölgelerin dağılımı ile ihracat performansları arasında bir ilişki olduğu tespit edilmiştir. Akdeniz, Ege ve Marmara bölgelerinin; ihracat performansı açısından diğer coğrafi bölgelerden daha yüksek performanslı olduğu görülmektedir. TÜİK'in dış ticaret verilerine göre de, 2020 yılında gerçekleşen 179 milyon dolarlık ihracat rakamı ile Kırklareli ili, illere göre ihracat listesinde 45. Sırada yer almaktadır. Kırklareli ilinin son yıllarda yurt içi ve dışında yatırımcıların ilgi odağı haline gelmeyi başarabilmesinde, İstanbul ve Tekirdağ'da fabrika kurmak isteyen ancak yer bulmakta sıkıntı çeken yatırımcının, İstanbul'a yakınlığı ile Kırklareli'ni tercih etmeye başlaması rol oynamaktadır (<https://www.haberturk.com>).

Bu bağlamda Kırklareli ilinde, Türkiye ekonomisinin en önemli sektörü olan imalat sektöründe (Bağcı,2016: 74) faaliyet gösteren, ihracatçı bir işletmenin inovasyon uygulamalarının ihracat faaliyetlerine etkisi çalışmanın ana çerçevesini oluşturmaktadır.

Bu çalışmada, KOBİ'lerin ihracat performansları ile inovasyon uygulamaları ve inovasyon yönetiminde işbirliğine yönelik tutumları arasındaki ilişkinin değerlendirilmesi amaçlanmıştır. Çalışmada nitel veri toplama araçlarından biri olan görüşme tekniği kullanılmıştır. Bu yöntem katılımcının bir konu hakkındaki kişisel deneyimlerini, bakış açısını ve düşüncelerini kendi ifadeleri ile anlatmasına olanak tanıyan esnek bir yöntemdir.

Araştırmada, nitel araştırmalarda kullanılan amaçlı örnekleme yöntemlerinden birisi olan tipik durum örnekleme yöntemi kullanılmıştır. Bu yöntemde araştırmacı yeni bir uygulamayı veya yeniliği tanıtmak istediğinde, bu uygulamanın yapıldığı veya yeniliğin olduğu bir dizi durum arasından en tipik bir ya da birkaç tanesini saptayarak bunları çalışabilir. Bu kapsamda, ön çalışma olarak Kırklareli ili Babaeski Ticaret Odasına kayıtlı ihracatçı işletmelerden anket yöntemi ile elde edilen veriler değerlendirilmiştir. Çalışmanın amacına uygun olarak son 2 yıl içinde ihracat pazarlama faaliyetlerinde inovatif süreç geliştirmiş olduğunu belirten, tekstil örgü makineleri için yedek parçalar üreten ve Türkiye'nin ilk ve tek örgü platini üreticisi olan, üretici-ihracatçı işletme tipik bir durum olarak ele alınmıştır. İşletmenin dış pazarlardaki inovasyon stratejileri yeni bir uygulama olarak incelenmiş; yerli rakibi olmayan ancak girdiği yabancı ülke pazarlarında yoğun rekabet çevresinde faaliyetlerini sürdüren işletmenin inovasyonda işbirliğine yönelik tutumları hakkında bakış açısı kazanılmaya çalışılmıştır.

Araştırmanın amacı doğrultusunda, işletmenin yöneticisi ile yapılan görüşmede yedi sorudan oluşan yarı yapılandırılmış mülakat formu kullanılmıştır. Katılımcının gerçek ismi yerine takma ismin (Yönetici 1) kullanıldığı çalışmada veriler mülakattan yapılan alıntılarla desteklenmiştir.

Çalışmada toplanan veriler, konuya ilişkin katılımcının görüş ve tutumlarını derinlemesine tanımlamak amacıyla betimsel analiz ile çözümlenmiştir. Betimsel analizde görüşülen ya da gözlenen bireylerin görüşlerini çarpıcı bir biçimde yansıtmak amacıyla doğrudan alıntılara sık sık yer verilir (Yıldırım ve Şimşek, 2011). Betimsel analizde amaç elde edilen bulguların düzenlenmiş ve yorumlanmış bir biçimde okuyucuya sunmaktır. Çalışmada betimsel analiz yapılırken Yıldırım ve Şimşek (2011)'in ifade ettiği; (1)betimsel analiz için bir çerçeve oluşturma, (2) tematik çerçeveye göre verilerin işlenmesi, (3)bulguların tanımlanması, (4) bulguların yorumlanması adımları izlenmiştir. Araştırma konusu ihracatçı işletmeye ait demografik veriler ve görüşmede yöneltilen sorular aşağıdaki gibidir:

Tablo 2: Demografik Veriler

Katılımcının Ünvanı	Genel Müdür Yardımcısı
İşletmenin Faaliyette Bulunduğu Yıl Sayısı	25
İşletmenin Çalışan Sayısı	50

İşletmenin Ağırlıklı Pazar Yapısı	Karma (Ulusal ve Uluslararası)
İhracat Yapılan Yıl	9
İhracat Yapılan Ülke Sayısı	23
İşletmenin İhracat Satışlarının Toplam Satışlara Oranı	% 14,3

Tablo 3: Görüşme Soruları

No	Sorular
1	İşletmenizin geliştirdiği inovatif ürün ya da süreçler nelerdir?
2	Size göre ihracata yönelik hedef pazarlardaki pazar payınızın artışı için inovatif faaliyetler önemli mi?
3	Sizce inovasyon yeni pazarlar oluşturmak için gerekli midir?
4	İşletmeniz diğer şirket ya da kurumlarla ortaklaşa inovasyon geliştirme konusunda istekli midir? Bu konuda bugüne kadar bir girişiminiz oldu mu?
5	Türkiye’deki inovasyon geliştirmeye yönelik desteklerin kapsamı konusundaki düşüncelerinizi öğrenebilir miyim?
6	Bugüne kadar işletmenizin dış kaynaklardan inovasyon danışmanlığı alma konusunda herhangi bir girişimi oldu mu?

4.1.Araştırma Verilerinin Analizi

Çalışmada katılımcı yöneticinin görüşlerini çarpıcı bir biçimde yansıtmak amacıyla doğrudan alıntılara yer verilerek, verilerin analizinde “betimsel analiz” yöntemi kullanılmıştır. İlk aşamada, kavramsal çerçeveye bağlı olarak görüşme sonunda elde edilen verilerin hangi temalar altında düzenleneceği ve sunulacağı belirlenmiştir. İkinci aşama olarak, tematik çerçeveye göre veriler anlamlı ve mantıklı bir şekilde ilişkilendirilerek düzenlenmiştir. Düzenlenen bu veriler tanımlanarak, doğrudan alıntılarla desteklenmiş ve yorumlanmıştır. Verilen yanıtlar örgütsel ve yönetsel anlamda değerlendirilmiştir. Yönetici ile görüşme, 40- 60 dakika arasındaki bir sürede gerçekleştirilmiş olup, bilgilerin kaybolmaması için görüşme katılımcının izniyle kaydedilmiştir.

4.2.Araştırmanın Bulguları

Araştırmada öncelikle katılımcıya firmanın inovatif ürün ve süreçleri ile ilgili uygulamalarını, inovasyon konusundaki girişimlerinin ihracat performanslarına etkilerini öğrenmeye yönelik sorular yöneltilmiştir. Daha sonra görüşme, inovasyon süreçlerinde işbirliğine yönelik tutum ve beklentileri konusundaki değerlendirmelerine yönelik sorularla devam etmiştir. Yapılan görüşmede ortaya çıkan bazı çarpıcı ifadeler aşağıda yer almaktadır (kişisel görüşme, 2020):

Soru 1: İşletmenizin geliştirdiği inovatif ürün ya da süreçler nelerdir?

Yönetici: hem üretim yapan hem de ürettiği ürünleri kendi kanalları aracılığı ile satan bir firmayız. Bugün artık her şey maliyet odaklı hale geldi. Müşterilerimizin de yaklaşımı “ürün Alman kalitesinde olsun ama bunu bana Çin fiyatıyla sat” şeklinde. Böyle olunca da kaliteyi korurken maliyetleri düşürmenin arayışına giriyoruz. Üretimde daha hızlı daha uygun fiyata daha kaliteli nasıl yaparız arayışındayız. Sarf malzeme ve makine alımı yaptığımız, tedarikçimiz olan bir firmanın proses uzmanı ile şu anda ortak bir proses çalışması yürütüyoruz. Ürünümüzü müşterinin daha fazla arayacağı bir ürün haline getirecek bir çalışma bu. Dünya genelindeki rakiplerimizin kullandığı makineler var ancak bizim kur artışı, bürokratik süreçler, vergiler nedeniyle aynı makinelere rakiplerimizin ulaştığı fiyatlarla ulaşmamız çok kolay değil. Yurtdışından yüksek maliyetle getirmek yerine ben bu işi başka türlü nasıl çözerim arayışına giriyoruz. Yurtdışından 250 -300 bin euro ödeyerek tedarik etmem gereken bir firmanın elimdeki mevcut fırında bir takım sistem ve aparat değişiklikleri yaparak çözmüş durumdayım. Dolayısıyla işletmem 300 bin euroluk yatırımı yapmaktan kurtuldu. Elindeki imkânları kullanarak ürün kalitesini arttırdı. Bu da pazara daha kaliteli ürünü daha düşük maliyetle sunmamı sağlıyor. Türkiye’de rakibimiz yok bu sektörde tek üretici biziz, iç pazarımız da var, ihracatın toplam satışlar içindeki payı % 15

civarında. Yurtiçinde yatırımcıların çekimser olması, üretimin yavaşlaması vb nedenlerle ihracata yönelik çalışmayan firmalar ciddi sıkıntılar yaşayabiliyor. Bu nedenle nihai hedefimiz ihracatın payını % 50 ye çıkarmak. Biz örneğin 2019 yılı itibarıyla pazarlama süreçlerimizde de değişime gittik; önceden müşterilerimizle fuarlardan alınan iletişim bilgileri üzerinden e posta yoluyla iletişim kurmaya yöneliyorken yerinde müşteri ziyaretleri yapmaya başladık. İlk ziyaretlerimizi Arjantin, Brezilya ve Peru'ya gerçekleştirdik. Trade Map sitesinden ülkelerin hangi ürünlere kaç milyon dolarlık ithalat yaptıklarını araştırdık. Arjantinle başladık. Önce bizim ürünlerimizi alıp son müşteriye satan tedarikçileri ziyaret ettik. Sonra onlarla birlikte onların müşterilerini ziyaret ederek marka ile ilgili güven ortamı oluşturmaya çalıştık son kullanıcının gözünde.

İhracat yapan KOBİ'lerin yenilikçi faaliyetleri içerisinde ürün inovasyonları özel bir önem taşımaktadır (Jusufo et al., 2020: 216). Açıklamalara göre, işletmede hem ürün hem pazarlama inovasyonuna yönelik çalışmalar yapılmaktadır. Ürün inovasyonu konusunda mevcut tedarikçiler ile sektörel işbirliği kapsamında ortak proje yürütülmüş, yapılan yenilik ile beraber önemli ölçüde maliyet avantajı elde edilmiştir. Pazarlama süreçleri ile ilgili ise yine inovatif bir yaklaşımla, genelde ihracatçı işletmelerin tercih ettiği yöntem olan klasik e posta yoluyla iletişim kurmanın dışında, dış pazarlarda yerinde müşteri ziyaretleri yapmak şeklinde yeni bir pazarlama iletişimi yolu denenmiştir. Oldukça maliyetli olan bu yöntem işlemenin tamamen kendi içindeki kaynaklar kullanılarak, yönetim kademesinde alınan bir karar ile uygulamaya konmuştur.

Soru 2: Size göre ihracata yönelik hedef pazarlardaki pazar payınızın artışı için İnovatif faaliyetler önemli mi?

Yönetici: Önemli. Önceki sorunuzun cevabı olarak bahsettiğim pazarlama çalışmasını Peru ve Brezilya'da da yapıp geri döndükten sonra bu ülkelerde o güne kadar gerçekleştiremediğimiz şekilde ihracatımız arttı. Ziyaret ettiğimiz ilk ülke olan Arjantin'de 15.000 dolara yakın bir satış gerçekleşti. Peru pazarında 5.000 dolar olarak, Brezilya pazarında ise 25.000-26.000 dolar olarak gerçekleşti bu ziyaretlerin arkasından. Dolayısıyla bizim pazarlama süreçlerimizde yaptığımız bu ufak yenilik firmamıza çok büyük bir değişiklik olarak yansıdı. Bir önceki yılın (2018) ihracatı ile karşılaştırınca % 60 gibi bir artış oldu.

Pazarlama inovasyonu, üründe veya ambalajında farklı ve yeni tasarımların gerçekleştirilmesi, farklı pazarlama yöntemlerinin geliştirilmesi ve uygulanması ya da var olanların iyileştirilerek daha gelişkin hale getirilmesi olarak tanımlanmaktadır (Çütcü, 2015: 22). Diğer bir tanımla var olan ürün ya da hizmetlerin, mevcut müşterilerin memnuniyeti arttırmak ve sürdürülebilir bir ticaret gerçekleştirmek için, yeni müşteriler edinerek pazar payını artırmak için pazarlama stratejilerine yönelik yapılan yenilik çalışmalarıdır. Yetkili, bu tanıma uygun olarak, pazarlama sürecinde gerçekleştirdikleri inovasyonun ardından, işletmenin Güney Amerika pazarında o güne kadar kullanılan geleneksel yöntemlerle ulaşılamayan ihracat rakamlarına ulaştığını belirtmektedir. Önceki yıllarla karşılaştırıldığında gözlenen % 60'lık artış inovatif faaliyetlerin ihracata yönelik hedef pazarlardaki Pazar payının artışı üzerinde etkili olduğunu ortaya koymaktadır.

Soru 3: Sizce inovasyon yeni pazarlar oluşturmak için gerekli midir?

Yönetici: Gerekli. Biz yukarıda bahsettiğim pazarlama yeniliğini potansiyel müşteriler için yaptık ve sonuç aldık şimdi hedefimiz mevcut müşteriler ile hacmimizi arttırmak üzere bu çalışmalarımızı geliştirmek. Yenilik yapmadan farklı sonuçlar elde etmek mümkün değil. Yıllarca aynı yöntemi kullanabilir, yıllarca dış pazardaki müşterilere mail yoluyla iletişim kurmaya çalışabiliriz. Hala da mail yoluyla ulaşmaya çalışıyoruz. ABD de ki potansiyel müşterilerin listesine ulaştık Trakya Kalkınma Ajansının ilgili istihbarat birimi aracılığıyla 90 adet firmaya mail yolladık. Kaç tane geri dönüş oldu dersiniz hiç olmadı. Dolayısıyla ziyaretlerimizi devam ettirmek zorunda olduğumuzu anladık. Yeni kanallar açmak için inovasyonun şart olduğunu anladık. Herkes yerinden kalkmadan müşteriye ulaşmaya çalışıyor ama bunu farklı yöntemle yapmak fark yaratıyor. Bu ziyaretler sırasında pazarların kendi iç dinamiklerindeki ihtiyaçlarını öğrenmek mümkün oluyor. Brezilyada enerji çok pahalı vergi yüksek üretici birim zamanda maksimum ürünü almaya çalışıyor. Daha fazla ürün alabilmek için makinanın hızını arttırmış ürünün ömrünü azaltmışlar. Ürünü değiştirdik müşterinin ürünü daha uzun süre kullanabilmesini sağladı bu yenilik. Müşterinin üretim verimliliği arttı biz tercih edilir olduk En büyük rakibimiz yüz elli iki yüz yıl önce bu işe başlamış olan Alman firmaları. Tekel haline gelmiş durumdadır. Müşteriye çözüm sunmak yenilik yaratmak zorundayız rekabet edebilmek için..

Pazarlama yeniliklerinin ayırıcı özelliği, yeniliklere konu olan pazarlama yönteminin işletme bakımından daha önceden kullanılmamış olmasını teşkil etmektedir (Şahin, 2020: 57). Görüşülen yetkiliye göre, işletme potansiyel müşterilerine yönelik ilk defa uyguladığı pazarlama yeniliği yoluyla pazar payını arttırmış olup inovasyon yeni pazarlar oluşturmada önemli rolü olan bir araçtır. Ayrıca işletme, mevcut müşterilerine de yerinde müşteri ziyaretleri gerçekleştirmeye başladıktan sonra pazarlama inovasyonu yoluyla elde edilen bilgiyi kullanarak mevcut üründe müşterinin ihtiyaçlarına uygun uyarılama yapmış ve rekabet gücünü arttırmıştır. Bu girişimleri de pazarlama yeniliği aracılığıyla üründe inovasyon yapmak olarak değerlendirilebilir.

Soru 4: İşletmeniz diğer şirket ya da kurumlarla ortaklaşa inovasyon geliştirme konusunda istekli midir? Bu konuda bugüne kadar bir girişiminiz oldu mu?

Yönetici: *Elbette istekliyiz örneğin bizim ürettiğimiz ürünlerin üretimi noktasında sarf malzeme tedarik ettiğimiz firmaların ürün bilgisinden uzmanlığından faydalanıyoruz bizim 3 ya da 6 ayda yapabileceğimiz bir şeyi 1 ayda yapabilmemizi sağlıyor böyle bir sektörel işbirliği dolayısıyla açtığımız böyle sektörel işbirliklerine.*

Süreç inovasyonu, yeni veya önemli derecede iyileştirilmiş bir üretim veya teslimat yönteminin gerçekleştirilmesi olarak tanımlanmaktadır (İyidemirci, 2019: 23). Yetkili açıklamasında, hem inovasyonda işbirliği türlerinden birisi olan “**İnovasyona Dayalı Kümelenme**” tanımına uygun biçimde işletmenin faaliyeti ile bağlantılı sanayilerle işbirliği yaptığını işaret etmekte; hem de teknoloji ve ortak girdi bakımından ilişkili olunan tedarikçi işletmelerle işbirliği yoluyla süreç inovasyonu gerçekleştirildiğinden bahsetmektedir. İşletme, ortaklaşa çalışma ile uzmanlık bilgisinden faydalandığı tedarikçisi aracılığı ile üretim sürecinde iyileştirme gerçekleştirmiştir.

Soru 5: Türkiye’deki inovasyon geliştirmeye yönelik desteklerin kapsamı konusundaki düşüncelerinizi öğrenebilir miyim?

Yönetici: *Bizim ürünlerimizi kullanan firmalardan zaman zaman bazı ürün üzerinde değişiklik yapma talepleri alıyoruz çünkü tekstil tarafında da bir üründe yenilik yapmazsan o ürünü satamazsın. Türkiye’nin tekstilde kendisine ait markası yok maalesef. Fason kısmını yapıyoruz daha çok. Yerel firmaların ürüne özellik katma gibi girişimler oluyor. Biz de tekstil makine yedek parçası ürettiğimiz için bizden üretimlerinde yenilik yaratabilecek farklı parça talepleri olabiliyor. Bu anlamda işbirliği yapıyoruz müşterilerimiz ile. Ama gönül ister ki çok iyi üniversitelerin tekstil mühendisliği bölümleri var keşke bu üniversiteler de bu işlerin içine girse bu firmalarla ortaklaşa bir çalışma yapsa yeni kumaş tipleri yeni modeller geliştirse dünyada olmayan özellikli ürünler çıkarsa markalaşma süreci daha kolay hale gelebilir. Buradaki üretim Bangladeşe Vietnamaya kaymasa. Bu noktada üniversitelerin ya da devletin resmi kurumlarının sanayi ile yeteri kadar işbirliği yapmadığını yapamadığını görüyorum. Üniversitelerle çalışma çabalarımız oldu zaman zaman. Ama sanayici işin verimliliği ile maliyeti ile ya da ortaya çıkacak olan ürünün ne kadar kullanışlı olduğu ile ilgilenirken, üniversite tarafı işin teorik kısmında kalıyor daha çok kağıt üzerinde kalıyor. Üniversitede akademisyenlerin sektör tecrübesi olması önemli. Yurt dışında bir alanda eğitim verecek öğretim görevlisinin öncelikli olarak sektör tecrübesi olması koşulu aranıyor diye biliyorum. Maalesef sanayi ile üniversite işbirliği açısından bence bu bir olumsuzluk. Aynı dili konuşmuyoruz. Beklentiler aynı değil bakış açıları aynı değil. Geliştirmek istediğimiz süreç ile ilgili cevap almaya çalıştığımızda aradığımız cevabı bulamıyoruz. Keşke farklı olsa üniversite ve devletin resmi kurumları sanayi ile daha fazla iç içe olsa 2023 ihracat hedefi gibi hedeflere ulaşmanın daha kolay olacağını düşünüyorum. Yapılan planlamalardan önce sektör temsilcilerinin üniversitelerin bürokratların, ticari ateşelerin fikirleri alınarak, çalıştaylar düzenlenerek kağıt üzerinde yapılan bir şeyler iyi görünen uygulamalar var ama ortaklaşa kararlar yapılması KOBİlerin ihracatını arttırmak, yeni pazarlar açabilmek için daha verimli olacaktır. Ortak akılla yapılacak çalışmalara ihtiyacımız var. Her KOBİ bugün kendi imkânı ile bir şeyler yapmaya çabılıyor. Kendi inisiyatifi kendi özkaynakları ile firmalar bir şeyler yapmaya çalışıyor. Bizi de dâhil edecek ne yapıyorsun nasıl yapıyorsun diye soracak girişimlere açtığımız. Böyle bir yapı kurulsa keşke dâhil oluruz.*

İnovasyonda üniversite işbirliği, özellikle iş dünyasında hızlı değişikliklerle karşılaşıldığında, firmaların dahili inovasyon faaliyetlerinin ve danışman tarafından üretilen dış inovasyonların önemli bir tamamlayıcısı olarak kabul edilmektedir (Kurdve et al., 2020: 1584). Görüşmede yetkili, üniversiteler ile sanayi arasında yapılacak işbirliklerinin hem işletme hem ülke ölçeğinde ihracat hedeflerine ulaşmada

katkı sağlayacağını ancak deneyimlerine dayanarak üniversiteler ile işbirliklerinin çok somut ve verimli sonuçlar doğurmadığını belirtmiştir. Gerek üniversiteler gerekse diğer devlet kuruluşları ile sanayinin ihtiyaçlarını temel alan katılımcı işbirliklerinin, KOBİ'lerin ihracatının arttırması ve yeni pazarlara açılabilmesini sağlamak adına daha verimli olacağı düşünülmektedir. Böyle bir inovasyon işbirliği yapısı içinde olmaya olumlu bakılmaktadır.

Yönetici: Soru 6: Bugüne kadar işletmenizin dış kaynaklardan inovasyon danışmanlığı alma konusunda herhangi bir girişimi oldu mu?

Yönetici: *Danışman tanımı iyi yapılmalıdır. Devletin yetkilendirdikleri de dâhil olmak üzere, danışmanlık firmalarında uzman diye nitelendirilen kişilerin tecrübe yetersizlikleri var. Benim danışmanlık almak istediğim konuda benden daha tecrübesiz olmamalı. Danışmanlık firmalarının daha çok ticari odaklı olduğunu düşünüyorum. Danışmanlık firmalarından edinebileceğim çok fazla fayda olmadığını tecrübelerime dayanarak söyleyebilirim. Bu yüzden çok sıcak gelmiyor bize. Geçmişte olumsuz örnekler yaşadık. Danışmanlık ücreti adı altında yüksek meblağlar talep edilebiliyor. Hem çok fazla ücret ödeyip firma olarak hem de karşılığını somut olarak alamadığımız örnekler yaşadık. Hakkı ile yapılırsa çalışmak isterim ama mevcut durumda çok sıcak bakmıyoruz. Türkiye’de sağlanan destekler bürokratik anlamda zorlayıcı. Bizde çok fazla kağıt üzerinde iş yapmanız emek ve zaman harcamanız gerekiyor. Bürokratik engeller belki daha önce yaşanmış zorluklar suistimaller nedeniyle oluştu ama bu durum KOBİ lerin yeterince desteklerden faydalanamaması sonucunu doğuruyor. Bunun ihracatın artmasının önünde engel olduğunu düşünüyorum.*

Global piyasada inovasyon konusunda çabanız olmazsa ayakta kalamazsınız. Rakiplerimiz de kendi ülkelerinde destek alıyor. Türkiye’de bu anlamda destekler çok yoğun bürokratik süreçlere tabi. Örneğin Güney Amerika ülkelerini ziyaretimiz sonrasında Ticaret Bakanlığının ihracata yönelik desteklerinden birisi olan yurt dışı Pazar araştırma desteği var, ondan yararlanmak için bir çalışma yaptık, ilgili birimlerle görüştük 55 sayfalık bir rapor hazırladık, ilettik. Ancak Şubat ayından Aralık ayına kadar beklediğimiz halde bu konuda bir dönüş alamadık. Yurtdışında teşviklerin daha kolay verildiğini duyuyoruz. Bizim kağıt üzerinde çok iş yapmamız gerekiyor. 1 seneye yakın bir süre sonuç almak için beklemek çok uzun bir süre. Bu anlamda KOBİ’lerin ihracat Pazar paylarını genişletebilmek için devlet desteklerinden daha kolay ve kısa sürede faydalanmaları gerekir.

Yetkili, daha önce dış kaynaklardan inovasyon danışmanlığı alma girişiminde bulduklarını ancak yüksek danışmanlık ücretleri, bürokratik süreçlerin karmaşıklığı ve uzun zaman alması gibi olumsuzluklar ile karşılaştıklarını ifade etmiştir. Hem özel şirketler hem de devlet kurumları aracılığı ile destek almak istediklerinde yaşanan olumsuzluklar işletmeyi kendi özkaynakları ve işletme içi uygulama ve stratejiler ile inovasyon geliştirme çabasına yöneltmiştir. Bu faktörlerin KOBİ’lerin yeterince desteklerden faydalanamaması sonucunu doğurduğu, ihracatın artmasının önünde de engel olduğunu düşündüklerini ifade etmişlerdir.

5.SONUÇ ve ÖNERİLER

Global rekabete karşı mücadele edebilmek, ekonomik açıdan büyümek, ülke refahını arttırmak gibi makro hedeflerin gerçekleştirilmesinde inovasyon kritik bir kavram olarak görülmektedir. Bir ülkedeki inovasyon yapan işletme sayısı ne kadar fazla ise o ülkedeki insanların yaşam şartları da o kadar yüksektir. (<https://www.zucder.org.tr>)

Yeni dünyada, inovasyonun kalitesi ve hızı için işbirliklerinin öneminin büyük olduğu anlaşılmaktadır. Türkiye’de mevcut işbirliklerini gerçekten değer yaratma odağıyla yapılandırmak yarımlar adına önem verilmesi gereken konulardan birisidir. (Arslanhan 2018).

Firmalar, yenilikçi oluşumları, ya kendi dâhili yaratma süreçlerinden veya harici örneğin danışmanlar ve üniversiteler gibi işbirlikçi aktörlerden faydalanarak edinebilirler (Kurdve et al., 2020: 1585). Son yıllara yerli ve yabancı çalışmalarda (Abar, 2020; Galas, 2018; Kurdve 2020; Bertello 2020; Çelik 2011; Durgut 2007; Yüksel, 2013; Sungur, 2014; Yaşar, 2020) inovasyonda işbirliği ağlarının işletmeler ve ülke ekonomileri açısından önemi vurgulanmakla beraber Türkiye’de KOBİ’lerin bu ağlara etkin şekilde dâhil olabilmelerini etkileyen faktörlerin neler olduğu konusundaki araştırmalar sınırlıdır.

Bu çalışmada Türkiye'nin ihracata katkısı en yüksek bölgesi olan Marmara bölgesindeki bir imalatçı-ihracatçı KOBİ'nin inovasyon konusundaki çabalarının ihracat performansı üzerindeki etkisini ortaya koymak ve yönetimin inovasyonda işbirliğine yönelik bakış açısının değerlendirilmesi amaçlanmıştır.

Çalışmada elde edilen bulgular önceki çalışmaları (Kılıç ve Yörükoğlu, 2020: 49) destekler nitelikte pazarlama inovasyonunun uluslararası pazar performansı üzerinde olumlu ve pozitif etkilerinin olduğu sonucunu ortaya koymaktadır.

İnovasyonun tanımı konusunda uluslararası düzeyde kabul gören kaynakların başında gelen Oslo Manual Kılavuzun' da (2005) inovasyon; "...yeni veya önemli ölçüde geliştirilmiş ürünün (mal veya hizmet) veya sürecin, yeni pazarlama yönteminin veya yeni örgütsel yöntemin işletme içi uygulamalarında, işyeri organizasyonunda veya dış ilişkilerde uygulanması" şeklinde tanımlanmıştır (Açıkalin, 2019: 10). Çalışmada elde edilen bulgulara göre işletme yeni süreç, yeni pazarlama yöntemi ve yeni ürün uygulamalarını dış pazarlarla olan ilişkilerinde uygulama yoluna gitmiş, bu yöntemlerin uygulamaya konmasının ardından ihracat pazarlarını çeşitlendirmiş, mevcut pazarlarında da satış hacmini arttırmıştır. Buna göre inovatif uygulamalar işletmenin ihracat performansını pozitif yönde etkilemiştir.

İşletme inovasyon konusundaki girişimlerini destekleyecek işletme dışı kurumlarla işbirliklerine açıktır. Bu anlamda üniversiteler ya da diğer ilgili devlet kuruluşları ile yapılacak işbirliklerinin, inovasyon ve ihracat performanslarını arttıracığına yönelik olumlu bir tutum içinde bulunduğu belirtilebilir.

Elde edilen bulgulardan yola çıkılarak, sanayi ile üniversite yada sanayi ile diğer yurtiçi aktörler arasındaki inovasyon işbirliklerinin, ihracatçı KOBİ'lerin inovasyon girişimlerini, yabancı pazarlarda rekabet güçlerini arttırmaya katkı sağlayacak biçimde daha etkili ve verimli kılabilmesi adına yapılabilecek iyileştirme önerileri şöyle sıralanabilir;

- 1) İşbirliği yapılacak kuruluşlar ile süreçlerde, işletmelerin karşı karşıya kaldığı bürokratik süreçlerin daha az zaman kaybı oluşturacak şekilde gerçekleştirilmesi
- 2) İnovasyon konusunda uzman, tecrübeli kişilerle işletmenin ve pazarının ihtiyaçlarına ve somut hedeflere yönelik çalışmalar yapılması
- 3) İşbirliği sürecine dâhil olacak kurumlar ile işletmeler arasında yakın ilişkiler kurulup, süreç öncesi planlamalarda katılımcı, yönetici fikir ve görüşlerinin de değerlendirildiği yöntemlerin geliştirilmesi.

Bunun yanında, KOBİ'lerin, yukarıda amaç ve hedefleri açıklanan Türkiye İhracatçılar Meclisi (TİM) tarafından ihracatçı işletmeler için oluşturulan İNOSUİT programı gibi uygulamalar hakkında bilgi sahibi olmaları, programdan daha fazla yararlanabilmeleri adına çalışmalar yapılabilir.

Dünya'da küresel rekabet edebilirliğin bir ölçüsü olarak kabul edilen inovasyon kabiliyetini geliştirmeye yönelik teşvik edici adımlar atmak, bu konuda özellikle sınırlı kaynak ve uzmanlığa sahip KOBİ'leri destekleyecek işbirliklerini geliştirmek, hem işletmelerin hem gelişmekte olan ülkelerin ekonomik büyüme sürecine büyük katkı sağlayacaktır.

Şirketlerin işbirliği verilerinin karşılaştırmalı olarak değerlendirildiği AB'nin Bilim, Araştırma ve İnovasyon Performansı Raporunda büyük şirketler ve KOBİ'ler ayrı ayrı analiz edilmiştir. Türkiye'de büyük şirketlerin yüzde 30'unun herhangi bir aktör ile işbirliğine girdiği, AB ortalamasının ise yüzde 55 olduğu görülmektedir. KOBİ'ler söz konusu olduğunda ise, işbirliğinin oranı düşmekte, Türkiye'de KOBİ'lerin yüzde 17'si, AB ortalamasında ise yüzde 32'si herhangi bir aktör ile işbirliği yapmaktadır (<https://www.dunya.com>). Çalışma sonucunda elde edilen bulgular çerçevesinde yapılacak iyileştirme ve düzenlemeler gelecek dönemlerde KOBİ'lerin inovasyon işbirliği ve performans yüzdesinin artmasına katkı sağlayabilir.

Çalışmanın sınırlılıkları olarak; araştırmanın yapıldığı çevrede araştırmanın konusunu oluşturan imalatçı-ihracatçı işletmelerin, ihracat yönetim kademelerinin farklı mesafelerdeki illerde bulunmasının yüz yüze görüşme yöntemi açısından yarattığı kısıtlılık nedeniyle analiz çerçevesinin sınırlı tutulmuş olması sayılabilir. Nitel araştırmalarda evreni temsil edebilecek sayıda ve düzeyde kişiyi örnekleme dâhil etmek çoğu zaman mümkün olmadığı için, bu araştırmalarda elde edilen bulgular ile sınırlı genellemeler yapılabilmektedir (Karataş, 2015: 79). İleriye dönük olarak KOBİ'lerin inovasyon yetenekleri ve

işbirliklerinin ihracat performanslarına etkisini daha fazla genellenebilir sonuçlarla ortaya koymayı sağlayacak nicel araştırma yöntemine dayalı çalışmalar yapılabilir.

İşletme Yönetiminde Kuantum Liderlik Davranışı

Dr. Emre Ünver¹

¹Kütahya Dumlupınar Üniversitesi İşletme Bölümü Doktora Mezunu, emremunver@hotmail.com,
ORCID: 0000-0002-0390-8327.

Özet: Günümüz teknoloji alanında yaşanan gelişmeler, işletme yönetimlerinde söz sahibi olan yöneticilerin yönetim alanında yaşanan yeni yaklaşımları takip etmelerini zorunlu kılmaktadır. Bu durum, günümüz işletmecilik alanında yöneticilerin liderlik davranışlarında da değişikliklerin oluşmasını sağlamaktadır. Ayrıca, örgütlerde yaşanan yenilikçi değişim ve dönüşümler sonucunda liderlerin özelliklerinin de bu kapsamda değerlendirilmesi yerinde olmaktadır. Özellikle içerisinde bulunduğumuz yüzyılda ortaya çıkan yenilikçi ve teknolojik gelişmeler, örgütsel alanda da güncellemeleri ve yeni davranış biçimlerinin oluşmasını gerekli kılmıştır. İnsan ve çevre ilişkilerine duyarlı davranış biçimine vurgu yapan kuantum liderlikte yenilikçi fikirlerin önemsenmesi, günümüz örgütlerinde üzerinde durulması gereken bir liderlik davranışı olmaktadır. Bu kapsamda çalışmada, kuantum liderlik davranışının teorik olarak ortaya konulması amaçlanmaktadır. Amaca yönelik, literatür taraması sonucunda kuantum liderlik davranışı incelenmiştir.

Anahtar Kelimeler: Kuantum Liderlik, İşletme Yönetimi, Liderlik.

1. GİRİŞ

Günümüz dünyasında ortaya çıkan iletişim ve bilgi teknolojilerinde yaşanan hızlı değişimler pek çok tutum ve davranışın öngörülebilir olmasını zorlaştırmaktadır. Bu nedenle; hızlı değişim ve dönüşüme yönelik, içinde bulunduğumuz global dünyada liderlik özelliklerinin de güncellenmesini gerekli kılmaktadır. Ayrıca; çalışma hayatının tüm alanında ortaya çıkan değişimler, günümüz işletme yönetiminde yeni liderlik davranışlarına ihtiyaç duyulmasına neden olmaktadır.

Fizik biliminde ortaya çıkan gelişmelerin, farklı disiplinlerde olduğu gibi liderlik alanındaki çalışmaları da etkilemesi 19. yüzyılın sonlarına doğru olmaktadır. Bu eğilim ile birlikte doğrunun tek olduğu bir dünyadan rasyonel düşünce biçiminin esas alındığı pozitivist düşünme biçimine geçiş yaşanmıştır. Öncülüğünü Max Planck'ın yaptığı kuantum fiziği ile önemli bir değişime adım atılmış olup, bu değişime paralel olarak meydana çıkan modern liderlik kuramlarından birisi de kuantum liderlik olmaktadır (Tufan ve Korumaz, 2020: 727-728).

Yeni bilim olarak da isimlendirilen kuantum mekaniği pek çok alanda olduğu gibi işletme ve yönetim alanında da etkisini göstermiştir. Kuantum fiziğinin ana varsayımlarından hareket ederek araştırmacılar, örgütsel yapı ve işleyişe yönelik yeni modeller dizayn etmiş, kuantum örgüt, kuantum yapı, kuantum davranış ve bu doğrultuda yönetim alanında kuantum liderlik kavramlarını oluşturmuştur (Turan ve Erçetin, 2017: 766).

2. LİDERLİK KAVRAMI

Lider ve liderlik kavramlarının tanımlanmasının oldukça güç olduğunun belirtilmesinde fayda vardır. Bununla beraber, liderlik tanımlamalarına bakıldığında, liderliğin; a) grup süreçleri, b) kişilikler, c) amaca ulaşma, ç) güç, d) davranış, e) bireylerin birbirini etkileme, f) liderin izleyenleri etkileme biçimleri temel alınarak değişik tanım ve kavramlaştırmalardan oluştuğu görülmektedir. Bu doğrultuda liderlik, bireyleri ve grubu ortak amaçlar etrafında etkileme ve harekete sevk etme süreci olarak tanımlanmaktadır (Turan, 2020: 2).

Liderlik, bir yön oluşturma, işgörenlerin o yönde ilerlemelerini motive etme süreci olarak tanımlanmaktadır. Liderlik kavramı geleceğe yöneliktir. Liderler, örgütün devamlılığını sağlamaktan, görevlerin yapılış biçimleriyle nelere değer verilmesi gerektiğini belirlemekten, vizyon oluşturmaktan ve bu vizyonun örgüt içerisinde benimsetilmesinden sorumludurlar. Liderlik, özellikle örgüt inançlarının ve değerlerinin farkında olmayı ve bunların geleceğe uygunluğunu tasarlamayı gerekli kılmaktadır. Kısaca

belirtmek gerekirse liderlik, bir vizyon ortaya koyabilme ve ilham verme süreci olarak tanımlanmaktadır (Baltaş, 2015: 130).

Liderlik, belirli hedefler etrafında bir grup insanı toplayabilme, bu hedefleri gerçekleştirmek amacıyla onları yapması gerekenler konusunda harekete geçirme bilgi ve yeteneklerin toplamı olarak ifade edilmektedir. Lider geleceği öngörebilme ve geniş çaplı bir vizyona sahip olmalıdır. Öncelikle lider, örgütün bütün kadrolarında görev alan diğer lider ve yöneticilere vizyon ve misyonu tam olarak yerleştirmeli, onlara destek ve güç sağlamalıdır (Eren, 2013: 461-462).

Liderlerin örgütlerini başarıya ulaştırabilmeleri adına, örgüt içindeki değişik meslek grupları arasında uzlaşmayı sağlamaları, etik değerlerin korunmasına izin vermeleri, onların yönetsel yeteneklerine daima katkı sağlamaları ve çevrelerinde oluşan değişimleri sürekli takip ederek örgütlerini yeniliklere hazır tutmaları önem taşımaktadır (Uğurluoğlu ve Çelik, 2009: 150).

3. KUANTUM LİDERLİK

Kuantum yönetim biçimi farklı odaklara sahip bir anlayışı ortaya koymaktadır. Maddenin yerine enerjiyi, oluş yerine gelişimi, sebepler yerine rastlantıyı, determinizm yerine yapısalcılığı ve örgütsel anlamda yeni farkındalık özelliklerini ön plana çıkartmıştır (Overman, 1996: 489).

Kuantum teorisine göre, atom altı parçacıklar birbirlerini uzaktan etkilemektedir. Bu fikir, uzak etkiye tipik olarak değinilmemesi nedeniyle bilim felsefesine aykırı olarak kabul edilmektedir. Determinist bakış açısına göre, olaylar aynı olduğunda sonuçlar da aynı olmaktadır. Buna karşılık; kuantum teorisi ise, makro düzeyde meydana gelen olayların mikro düzeyde gerçekleşmeyebileceğini ortaya koymakta ve determinizmi reddetmektedir. Yani, bir maddenin nasıl davranacağı her zaman bilinmeyebilir (Gülcan, 2015: 6).

Kuantum perspektifi, işletmelerde etkileşimin ortak hedefler ile açık ve etkin iletişimle işgörenler arasında ortaya çıktığını ortaya koymaktadır. Bu doğrultuda işletmelerde, işgörenlerin ve iş hayatında pozitif bir fark oluşturabilmek amacıyla ortak hedefler etrafında ilerlemeye katkı sağlayan liderlik yaklaşımlarına ihtiyaç duyulmaktadır. Kuantum liderlik, içinde barındırdığı özelliklerle basit bir post modern teori değil, yeni bir paradigmadır. Kuantum liderliğinin var olduğu işletme ortamlarında genel olarak belirsizlik durumu hakim olmaktadır. Kuantum liderler; işletmelerde hakim olan belirsizlik ortamında, oluşturulan ortak amaçlara ulaşmada işgörenleri harekete geçirmektedir (Kosa, 2020: 917).

Kuantum liderlik; değişimi oluşturma, zengin bilgi akışı ve örgütsel öğrenmeyi sağlayabilmek için sistemi etkileme ve örgütü çevresine bağlama konusunda aktif bir rol oynamaktadır (Morrison, 2002: 71). Kuantum liderlik; enerjiye hareket sağlayacak üretkenliğe yönelen, kontrole değil, ortaya çıkan duruma ve belirsizliğin yaratıcı potansiyeline yönelik duygulara ve sezgilere dayalı bir liderlik biçimini tanımlamaktadır. Bu yönüyle liderlik, insan fiziğinin harekete geçirilmiş biçimidir (Uzunçarşılı vd., 2000: 90).

Kuantum liderler, çalışanların mevcut yeteneklerini yakından tanır ve çalışanların yeni yollarla etkileşime geçmelerini kolaylaştırma ve etkinleştirmesiyle ilgilenmektedir. Etkili kuantum liderlerde yerleşik olarak, motivasyonun önemli olduğu ve pozitif insan etkileşiminin ahlaki ilkelerin temeli üzerine kurulduğu, böylece liderin bir ahlaki sözleşmenin parçası olduğu ve davranışlarında ahlaki bütünlüğü koruduğu anlayışı vardır (Morrison, 2002: 71).

Kuantum liderlik; geleneksel liderlik kalıplarından uzak olarak, yenilikçi ve değişime açık, sofistike (karmaşık) durumlarla baş edebilen, enerjik, yaratıcı, organizasyonu canlı ve bir arada tutmayı amaçlayan, etkileşimi ve beraber öğrenmeyi teşvik eden bir liderlik biçimi olmaktadır (Konan ve Mermer, 2021: 80).

Kuantum lider, karar vermesi gereken veya üzerinde çalıştığı bir işin eşlenik çiftlerini oluşturmalı ve verdiği kararların doğuracağı sonuçları önceden tahmin edebilmelidir. Örneğin; insan kaynakları yönetiminde, kariyer planlaması ve kariyer hızı bir eşlenik çift olarak değerlendirilmektedir. Örgütlerde

liderlerin bu gibi eşlenik çiftleri algılayabilmesi, kuantum liderliği olarak kabul edilmektedir (Soydaş, 2002: 662).

Alan yazın incelemeleri sonucunda kuantum liderlik davranışlarına yer veren ampirik çalışmaların kısıtlı sayıda olduğu görülmüştür (Erçetin vd., 2018: 112). Bu nedenle, kuantum liderliğe ilişkin araştırılması gereken pek çok özelliğin olduğu görülmektedir.

Morrison (2002: 71) çalışmasında kuantum liderlerin özelliklerini aşağıdaki biçimde ortaya koymaktadır;

- Ortak bir vizyon ortaya koymak,
- Örgüt kültürünü zenginleştirerek güçlendirmek,
- İş birliği yaparak örgütün gelişimini sağlamak,
- Öğrenen örgütü teşvik ederek desteklemek,
- Örgüt üyelerinin iyi ilişkilerini geliştirmek,
- Örgüt üyelerinin öğrenmelerini desteklemek ve yaygınlaştırmak,
- Bireyleri yetiştirmek ve birey merkezli bir örgüt geliştirmek.

Erçetin ve Kamacı (2008) çalışmalarında, klasik ve kuantum fiziğe dayalı liderlik varsayımlarını karşılaştırmalı olarak aşağıdaki Tablo 1'deki gibi göstermektedir.

Tablo 1: Klasik ve Kuantum Fiziğe Dayalı Liderlik Varsayımları

Klasik Fiziğin Varsayımları	Klasik Fiziğin Liderlik Varsayımları	Kuantum Fiziğin Varsayımları	Kuantum Fiziğinin Liderlik Varsayımları
- Dalga-parçacık ayrımı	- Liderlik, liderin özelliklerinden oluşan bir bütündür	- Parçacık-dalga ikilemi	- Liderlik, lider-izleyenler ikilemini içeren bir etkileşim alanıdır
- Sebep-sonuç ilişkisi ve kesinlik	- Liderlik, sebep-sonuç süreciyle açıklanır	- Belirsizlik ve olasılıklar	- Liderlik, yapılandırılmaz ve öngörülemez
- Enerjinin sürekliliği	- Liderlik, belirli bir kişiye atfedilen kalıcı bir niteliktir	- Enerjinin kesikliliği	- Liderlik olgusunun süreksizliği/kesikliliği
- Uygulanan kuvvete göre meydana gelen hızlanma/ivme	- Liderliğin etkisi güce bağlıdır	- Kuvvet uygulamasında sınırlama	- Liderliğin etkisi etkileşime bağlıdır

Kaynak: Erçetin ve Kamacı, 2008: 866.

Erçetin ve Kamacı (2008: 866-868) yapmış oldukları sınıflandırmada, kuantum liderlik paradigmasını aşağıdaki gibi dört boyut altında toplamaktadır:

- Liderlik, lider-izleyenler ikilemini içeren bir etkileşim alanıdır.
- Liderlik, yapılandırılmaz ve öngörülemez.
- Liderlik olgusunun süreksizliği/kesikliliği vardır.
- Liderliğin etkisi etkileşime bağlıdır.

Uzunçarşılı vd. (2000: 90) çalışmalarında kuantum liderliğin üç boyutu olduğunu belirtmiştir. Bu çalışmada boyutlar; liderlik ilişkileri, liderlik etkisinin kaynağı ve belirsizlikten oluşmakta ve şu şekilde açıklanmaktadır: Liderlik ilişkileri; kuantum liderliği karşılıklı bir etkileşim alanı olarak değerlendirmekte ve burada lider, diğerlerinin beni izlemelerini nasıl sağlayabilirim? Sorusuna cevap aramaktadır. Liderlik etkisinin kaynağında kuantum liderliğin etkisi, lider-izleyici ilişkisinden oluşmaktadır ve buradaki ortak değerler; saygı, yüksek beklentiler, bilgi ve güven gibi değerlerden oluşmaktadır. Belirsizlik ise, ortaya çıkan durumlar karşısında ne kadar fazla bilgi sahibi olunursa olsun, geleceğin önceden kestirilemeyeceğini ortaya koymaktadır.

Kuantum liderliğin ortaya çıkmasıyla oluşan, eski ve yeni değerlere yönelik karşılaştırma aşağıdaki gibi Tablo 2'de gösterilmektedir.

Tablo 2: Kuantum Liderliğe Yönelik Değerlerin Karşılaştırılması

Önceki Değerler	Yeni Değerler
Belirlilik	Belirsizlik
Öngörülebilir	Kesin olmayan
Kontrol altında tutulabilir	Güvene dayalı
İndirgemeci	Kendiliğinden oluşan
Parçalar bütünü tam olarak yansıtır	Bütün, parçaların toplamından daha büyük olmaktadır
Yukarıdan aşağıya liderlik yönetimi	Aşağıdan yukarıya liderlik yönetimi
Tepkisel	Hayal kuran ve deneysel
Kontrol altında tutulan	Kendi kendini örgütleyen

Kaynak: Uzunçarşılı vd., 2000: 91.

Yukarıda liderlik ve kuantum liderlik başlıkları altında anlatılanlar ışığında; işletme yönetiminde belirsizlik ve değişim faktörlerinin önemli hale gelmesi, liderlik özelliklerinin de bu faktörlere adapte edilmesini zorunlu hale getirmiştir. Ayrıca, işlerin karmaşıklaştığı ve geleceğin belirsizlikler içerdiği ortamlarda çalışanlarıyla insan ilişkilerine ağırlık veren, onların motivasyonlarını başarılı bir şekilde sağlayabilen kuantum liderler işletmelerine rekabet avantajı sağlayabilmektedir.

4. SONUÇ

Yönetim ve liderlik anlayışını değişik bir bakış bir açıyla değerlendiren kuantum liderlik günümüz dünyasında önemli bir kavram olarak göze çarpmaktadır. İşletme yönetimleri tarafından ortaya konulan planlama ve amaçların öngörülemez koşullarla karşılaşması kuantum liderlik özelliklerine ihtiyaç duyulmasına neden olmaktadır.

Kuantum liderler genellikle kaotik ortamlarda, çalışanları harekete geçirme ve değişime ayak uydurma gibi durumlarda etkili liderlik davranışı sergilemektedir. Bununla birlikte kuantum liderler; örgüt içi etkili iletişim sistemini oluşturarak üyeler arasında iş birliğine önem veren, çalışanların özelliklerini iyi analiz eden ve örgütsel adaleti sağlamak suretiyle üyelerinin güvenini kazanma yolunda davranışlar ortaya koymalıdır.

Günümüzün karmaşık ve belirsizlikler içeren dünyasında örgütlerde kaotik süreçlerle başa çıkmak durumunda kalan yönetici ve liderlere şu öneriler sunulmaktadır (Çakır, 2020: 41-42);

1. Örgütler davranış biçimleri pek çok seçime sahip çalışanlardan oluşmakta ve bu tür ortamda her bir bireysel davranışın örgüt tarafından öngörülemez sonuçlar doğuracağı hususu yönetici ve liderler tarafından göz önünde bulundurulmalıdır.
2. Örgütler kaosa içsel ve dışsal nedenlerden dolayı sürüklenebilmektedir. Bu nedenle, sürekli bilgi paylaşımını sağlayan iletişime açık bir yapı yönetici ve liderler tarafından oluşturulmalı ve bu süreç dinamik bir biçimde sürdürülmelidir.
3. Örgütler hedeflerine ulaşma doğrultusunda birbirleriyle bağlılığı olan çalışanlardan oluşmaktadır. Bu tür ortamlarda yönetici ve liderler ekip çalışması ve iş birliğini sürekli hale getiren bir ekip ruhu oluşturmalıdır.
4. Alınacak kararlar geleceğe yönelik belirsizlik içermesi nedeniyle örgüt içerisinde fikir alışverişine önem verilmelidir.
5. Geleceğin belirsizlik ve kaos içermesinden hareket ederek yönetici ve liderlerin geleceğin tasarlanmasına aktif olarak neyi, niçin yaptıklarını bilerek ve inisiyatif olarak katılmalıdırlar.
6. Kaotik ortamlarda örgüte öncülük edecek ve tüm çalışanlarca kabul edilmiş olan değer kültürü oluşturulmalı ve her koşulda örgütün bütün paydaşları davranışlarını bu değerleri göz önünde bulundurarak şekillendirmelidir.

Son olarak, işletme yönetiminde kuantum liderlik davranışı ortaya konulması liderlerin üyelerini daha etkin biçimde yönlendirmesini sağlamak ve bu durumdan da örgütler fayda görebilmektedir. Özellikle kriz dönemlerinde ortaya çıkan belirsiz durumlarda, kuantum liderlerin etkin davranışlar sergilemesi

İşletmelerin bu ortamı potansiyel bir fırsata çevirmelerine de zemin hazırlayabilmektedir. Bu açıdan değerlendirildiğinde, işletme yönetiminde kuantum liderlik davranışı ayrı bir öneme sahip olmaktadır.

Özet: Finansal piyasalar fon arz edenlerle fon talep edenlerin fon değişimini gerçekleştirdiği yer veya mekanizma olarak tanımlanabilir. Finansal piyasalarda fon akımı doğrudan finansman ve dolaylı finansman olmak üzere iki şekilde gerçekleşir. Doğrudan finansmanda fon arz edenlerle fon talep edenler arada finansal aracı olmadan doğrudan piyasada karşılaşarak fon değişimini gerçekleştirirler. Dolaylı finansmanda ise fon arz edenlerle fon talep edenler fon değişimini finansal aracı üzerinden gerçekleştirirler. Finansal aracı, fon fazlası olan kesimden bu fonu borç olarak alır ve fon açığı olan kesime borç olarak verir. Burada her iki kesimin de muhatabı finansal aracıdır. Finansal aracı aynı zamanda borç olarak verdiği fonun geri dönmemesi durumunda fon fazlası olan kesime borcunu ödemek zorundadır. Finansal aracı, yüklendiği geri dönmeme riski nedeni ile yapmış olduğu işleme aracılık maliyetini de eklemektedir. Bu da özellikle finansal aracılan borç alan fon açığı olan kesim için borçlanma maliyetinin yükselmesi demektir. Doğrudan finansmanda ise arada finansal aracı olmadığı için fon açığı olan yatırım yapacak şirketlerin, menkul kıymet ihraç ederek doğrudan tasarruf sahiplerinden borç alması, fon maliyetinin daha düşük olmasına neden olacağı gibi, tasarruf sahiplerinin de daha yüksek getiri elde etmesine imkan sağlayacaktır. Yatırım bankaları, tasarruf sahipleriyle, fon açığı olan yatırım yapacak şirketler arasındaki fon alışverişinin gerçekleşmesini sağlamak amacıyla kurulmaktadır. Tümüyle aracı durumundaki yatırım bankaları; pazarlanacak menkul kıymetlerin rasyonel seçimini yapmak, finansal kıymet çıkarılması yoluyla gerekli fonu sağlamaya çalışan bir işletmenin, bundan sağlayacağı fonun işletmesini garanti etmek (underwriting) ve finansal kıymeti çıkaran ortaklığa, bununla ilgili danışmanlık hizmeti sağlamak gibi hizmetler sunmaktadırlar. Bu çalışmada, yatırım bankalarının önemi ve ülke ekonomisine sağlayacağı yararlar tartışılacaktır. Bir ülkede yatırım bankalarının gelişmesi ile fon ihtiyacı olan, yatırım yapacak şirketlere daha uygun maliyetli fon kaynağı sağlanacak, tasarruf sahiplerine de daha yüksek getiri imkanı sunulabilecek ve böylece toplamda da ülke refahının artması sağlanacaktır.

Anahtar Kelimeler: Doğrudan Finansman, Finansal Araçlar, Yatırım Bankaları

The Role and Importance of Investment Banks in the Country's Economy

Abstract: Financial markets can be defined as the place or mechanism by which fund providers and fund claimants carry out the exchange of funds. In financial markets, the flow of funds occurs in two ways, direct finance and indirect finance. Direct finance, those who supply of and demand for loanable funds meet directly in the market without financial intermediaries and carry out the exchange of funds. Indirect financing those who supply of and demand for loanable funds make the exchange of funds through the financial intermediaries. Financial intermediaries borrow this fund from the surplus and lend it to the deficit. In this place, the interlocutors of both parties are financial intermediaries. The financial intermediaries also have to pay the debt of the portion of the fund that is surplus in case the fund is not returned. It adds the brokerage cost to the transaction it has made due to the default risk that its financial intermediaries is loaded in this way. This means that the borrowing cost will rise which is deficit of funds borrowing from the financial intermediary. Since there are no financial intermediaries in direct financing, borrowing directly from savers by issuing securities will cause the fund cost to be lower and will enable savers to earn higher returns. Investment banks are established to facilitate the exchange of funds between savers and companies that have deficit of funds will invest. Totally intermediary investment banks; they provide services such as making the rational selection of securities to be marketed, underwriting the operation of an enterprise trying to provide the necessary funds by issuing financial assets, and providing consultancy services to the company that issues the financial value. In this study, the importance of investment banks and their benefits to the country's economy will be discussed. With the development of investment banks in a country, a more cost effective sources of funds will be provided to companies that need funds, and higher returns will be offered to savers, and thus the country's welfare will increase in total.

Key Words: Direct finance, financial intermediaries, investment banking

1. GİRİŞ

Finansal aracılık; fon açığı olan ekonomik birime fonu sunmak için fon fazlası olan ekonomik birimden bu fonu edinme süreci olarak tanımlanabilmektedir. Finansal araçların varoluşunun birincil amacı, aracılık sürecini kolaylaştırmaktır. Ödünç verilebilir fonlar, borç verenler ve borç alanlar arasında farklı yollardan değiştirilebilir olmakla birlikte temelde iki farklı yol kullanılmaktadır. Bunlar doğrudan finansman ve dolaylı finansmandır. Doğrudan finansmanda, ödünç alanlar ve ödünç verenler, bir finansal aracı kurum veya başka bir finans kuruluşunun yardımı olmaksızın birbirleriyle doğrudan iletişim kurabilirler. Bu doğrudan finansman yöntemiyle bir anlaşma yapıldığında ödünç alan ödünç verene, hak talebini kanıtlayan bir finansal araç verir. Genellikle ödünç veren ödünç alana ait borcun geri ödenmeme riskini üstlenir ve bu risk karşılığında ek bir getiri talep eder.

Yatırım bankaları, tasarruf sahipleriyle, fon gereksiniminde olanlar arasındaki fon alışverişinin gerçekleşmesini sağlamak amacıyla kurulurlar. Tümüyle aracı durumundaki yatırım bankaları, mevduat kabul edemezler ancak yatırım yapacak şirketlere kredi kullanabilirler, şirketlerin menkul kıymet ihraçlarına aracılık yapabilirler. Yatırım bankalarının özellikle birincil piyasada sundukları hizmetler; pazarlanacak menkul kıymetlerin rasyonel seçimini yapmak, finansal kıymet çıkarılması yoluyla gerekli fonu sağlamaya çalışan bir işletmenin bundan sağlayacağı fonun işletmesini garanti etmek ve finansal kıymeti çıkararak ortaklığa, bununla ilgili danışmanlık hizmeti sağlamak olarak sayılabilmektedir.

Bu çalışmanın ilk bölümünde finansman yöntemleri kısaca açıklanacak, ikinci bölümde konu ile ilgili literatür incelemesinin ardından üçüncü bölümde yatırım bankalarının faaliyetlerine değinilecek ve son bölümde yatırım bankalarının doğrudan finansman yöntemiyle ekonomiye sağladığı katkı incelenecektir.

2. FİNANSMAN YÖNTEMLERİ

Finansal hizmetler ekonomisinin, finansal piyasalar, finansal kurumlar ve finansal araçlardan oluşan üç temel bileşeni bulunmaktadır. Genellikle, finansal sistem, fon fazlaları ve açığı olan ekonomik birimler arasında aracılık görevini görmekte ve bu sistemde bulunan kurumlar fon aktarımını ise, dolaylı ve doğrudan finansman şeklinde sağlamaktadır. Dolaylı finansman ile, fon arz eden (tasarrufçu) ile fon talep eden (kredi) birimler arasında doğrudan bir ilişki bulunmamakta ve finansal aracı kurumlar bu iki kesim arasındaki fon aktarım görevini üstlenmiştir. Bu yöntemde kullanılan mali araçlar mevduat ve kredilerdir. Doğrudan finansman ile fon arz edenlerle, fon talep eden ekonomik birimler, finansal araçlar yardımıyla direkt olarak karşılaşılır ve genellikle sermaye piyasaları araçları mali araçlar olarak kullanılırlar. Bu araçlar ise, hisse senetleri, tahviller ve finansman bonolarıdır (Uludağ ve Arıcan, 1999: 112).

3. LİTERATÜR İNCELEMESİ

Ülkemizde Kalkınma ve Yatırım Bankaları ile ilgili yapılmış çalışmalar mevcuttur. Bu bölümde bu çalışmalardan bazılarına değinilmiştir. Bunlardan Karahanoğlu (2017) tarafından yapılan çalışmada 2005 Haziran-2016 Ekim döneminde Türkiye’de aktif bir biçimde faaliyet gösteren 10 adet Kalkınma ve Yatırım Bankasının Aktif Karlılığı, Panel Data yöntemi ile analiz edilmiş, bankaların çeyrek yıllık bilanço verilerinden türetilen mikro yani bankaya özgü değişkenler ile makroekonomik değişkenler kullanılmış ve bir dizi ilginç sonuca ulaşılmıştır. Çalışmaya göre kalkınma ve yatırım bankalarının karlılığını hem makro hem de mikro faktörlerin %95 anlamlılık düzeyinde etkilediği görülmüştür. Kalkınma ve Yatırım Bankalarının karlılıkları; SYR, Kredi Başına Düşen Takibe Dönüşen Alacaklar, İşsizlik ve Yabancı Para Artışı (EUR, USD) ile ters, Aktif Başına Düşen Alınan Krediler, Aktif başına Düşen Verilen Krediler, Personel Başına Yapılan Diğer Harcamalar, Faiz Giderleri Başına Yapılan Diğer Harcamalar, Sanayi Üretim Endeksi ile doğru orantılıdır. Çalışmada, Kalkınma ve Yatırım Bankalarının karlılıklarını tahminleyen yapı panel data modeli ile ortaya konmuştur. Bu araştırma hem banka içi yani banka tarafından kontrol edilebilen ya da banka tarafından oluşturulan mikro değişkenler, hem de banka dışı global makro yapı vasıtasıyla ortaya çıkan makro değişkenlerin etkin olduğu gösterilmiştir (Karahanoğlu, 2017: 167).

Koç, Bağcı ve Işık (2016) tarafından yapılan çalışmada, Kalkınma ve Yatırım Bankalarının performans ve performans devamlılıkları aktif karlılığı (ROA) ve özkaynak karlılığı (ROE) 2002-2012 yıllarını kapsayan yıllık veriler kullanılarak ölçülmeye çalışılmıştır. Çalışma sonucuna göre, ROA (Aktif Karlılık) ve ROE (Özkaynak Karlılığı) açıklanan değişkenleri yabancı sermayeli kalkınma ve yatırım bankaları grubunda uzun

dönemde performans sürekliliği göstermiş, Kamu Sermayeli Kalkınma ve Yatırım Bankaları'nda sadece ROA'ya göre, Özel Sermayeli Yatırım ve Kalkınma Bankaları'nda ise sadece ROE'ye göre uzun dönemde performansın olduğu tespit edilmiştir (Koç vd., 2016: 227).

Coşkun (2009) tarafından yapılan çalışmada 2007-2008 finansal krizi ile birlikte ABD'li finansal araçlarda ortaya çıkan dikkat çekici finansal başarısızlık hikâyelerinin erken dönem analizleri ile bu dönem öncesinde yaşanan finansal başarısızlıklara yönelik olarak kamu müdahalesi yoluyla verilen tepkinin niteliklerinden hareketle, ABD kapitalizminin yakın geleceği değerlendirilmiştir (Coşkun, 2009: 27).

4. YATIRIM BANKALARI

Yatırım bankaları ve kalkınma bankaları genellikle gelişmekte olan ülkelerde yakından ilişkilidir. Kalkınma bankaları, özellikle menkul kıymet piyasalarının zayıf olduğu ülkelerde yatırım bankacılığının teşvik edilmesinde önemli bir rol oynayabilir. Ancak iki banka da temelde farklıdır. Yatırım bankacılığı, öncelikle yeni menkul kıymetlerin tasarlanması ve teminat altına alınması ve bunları nihai yatırımcılara satmakla ilgilidir. Yenilikçi, pazara dayalı bir yaklaşım gerektirir. Bunun aksine, kalkınma bankacılığı uzun vadeli krediler vermekle ilgilidir; uzun vadeli kredibilite analizi ile ilgilenen farklı bir zihniyet gerektirir. Biri ticaret işidir; diğeri bir varlık biriktirme işi. Her ikisi de bir ülkenin finansal piyasalarını geliştirmede önemlidir, ancak sorunları (ve fırsatları) farklılık gösterir (Hakim, 1985: 2).

Yatırım bankacılığı kavramı hakkında tek bir tanımlama yapmak oldukça zordur. Yatırım bankacılığı kavramı, kalkınma bankalarının çalışmış olduğu alanlar dışında faaliyet gösteren ve mevduat kabul etmeyen mali kuruluşlar olarak tanımlanabilmektedir. Yatırım bankacılığının daha dar anlamda tanımlanması yapılacak olursa devlet kuruluşlarının, özel şirketlerin menkul kıymet ihracını başlatan ve bu kurumlara garanti veren, tedavülünü sağlayan firmalar olarak tanımlanmaktadır. Yatırım bankacılığı kavramı kalkınma bankalarının uzantısı şeklinde ortaya çıkmış fakat bu benzerlik dışında iki banka arasında kaynak, risk ve genel hizmetler bakımından farklılıklar bulunmaktadır (Satoğlu, 2010: 12).

Yatırım bankalarının etkin işleyebilmesi için gerekli şartlar arasında sermaye piyasalarının kurulmuş ve gelişmiş olmasıdır. Bununla birlikte yatırım bankacılığının temel kriteri, sınai ve ticari kuruluşlar tarafından çıkarılan hisse senetlerinin ve tahvillerin halk tarafından satın alınmasına aracılık yapmasıdır. Bu anlamda yatırım bankaları birincil piyasalarda tahvil ve hisse senetlerinin ihracına da aracılık yapmış olması demektir. Genellikle sermaye piyasalarının gelişmiş olduğu ülkelerde faaliyet gösteren yatırım bankaları ticari bankalardan farklı olarak mevduat toplamazlar ve işletmelere kredi imkânı sunmazlar. Bu bankalar kalkınma bankalarından farklı olarak, işletmelere direk olarak kredi imkânı sunmamakta ancak işletmelerin hisse senedi veya tahvil ihracı yoluyla sermaye piyasalarından uzun vadeli kaynak sağlamalarını kolaylaştırmaktadırlar (Karaman, 2014: 35).

4.1. Yatırım Bankalarının Yapısı

"Yatırım bankası" terimi çok farklı iki geleneği kapsar. Avrupa ticaret bankaları temelde "evrensel" bankalardır: Her tür menkul kıymeti taahhüt ederler, kurumsal finansman konusunda tavsiyelerde bulunurlar ve portföy yönetimi hizmetleri sağlarlar. Aynı zamanda ticari bankacı olarak hareket ederler, mevduat alırlar (genellikle toptan) ve kredi verirler. Bazı yatırım bankaları finansal kiralama, sigorta ve risk sermayesi şirketlerine dönüşmüştür. Ancak kısa vadeli para piyasalarında büyük oyuncu olmamışlardır. Birleşik Krallıkta ayrı bir kurum sınıfının uzun süredir ön koşulu olan bir işlev olmuştur. Menkul kıymetleri dağıtmak için güçlü ağlara da sahip değillerdir. Bu faaliyet uzmanlaşmış aracı kurumlara bırakılmıştır. Buna karşılık, Kuzey Amerika yatırım bankaları (Kanada'da yatırım satıcıları olarak bilinir) yasal olarak ticari bankacılığın dışında tutulmuştur. Ancak menkul kıymetler borsası üyeleri olarak, ikincil piyasada ve para piyasalarında menkul kıymet dağıtımında ve piyasa yapımında (kendi hesaplarına alım satım) ticari bankalardan çok daha aktiftirler (Hakim, 1985: 2).

4.2. Yatırım Bankalarının Faaliyetleri

Yatırım bankalarının faaliyetleri temel olarak 3 ana başlık altında toplanabilmektedir. Bunlar; halka arz aracılığı, birleşmeler ve devralmalar ve piyasa yapıcılık ve menkul kıymet alım-satımıdır. Halka arz aracılığı faaliyetinde, yatırım bankaları firmalara halka arz için gerekli koşulların sağlanmasına ve bu bilgilerin toplanmasına, halka arz için doğru zamanın belirlenmesine, menkul kıymetin fiyatının belirlenmesi konularında yardımcı olmaktadır. Birleşmeler ve devralmalarda, firmaların çoğunluk hisselerinin satın alınması devredilmesi, firmaya bağlı şirketlerin elden çıkarılması konusunda gerekli aracılık faaliyetlerin yürütülmesinde yardımcı olmaktadır. Piyasa yapıcılık ve menkul kıymet alım-satımında ise, menkul kıymetlerin piyasada pazarlanmasında etkili rol oynamak ve bu süreçte piyasada oluşacak fiyat dalgalanmaları ile menkul kıymetlerin aynı yatırımcılar tarafından ele geçirilmesi gibi risklerden korumayı amaçlamakta ve kısa vadeli ihtiyaçların karşılanması için menkul kıymet alım-satımlarını gerçekleştirmektedirler (Şenel ve Şekeroğlu, 2019: 567).

Gelişmekte olan ülkelerin çoğunda, yatırım bankaları, gelişmekte olan bir finans sektörünün ihtiyaçlarına veya ticari bankalar tarafından sağlanan mevcut hizmetlerdeki boşluklara yanıt olarak gelişmiştir. Kanada, Hong Kong, Kore Cumhuriyeti ve Tayland gibi bazı ülkelerde büyümeleri merkez bankalarının ve hükümetlerin girişimleriyle desteklenmiştir. Yatırım bankaları tipik olarak yerel menkul kıymetler piyasasına menkul kıymetler yüklenimi dahil olmak üzere bir dizi hizmet sağlar. Bu hizmetler; menkul kıymetlerin ikincil piyasalarda pazarlanması, para piyasası faaliyetleri, kurumsal danışmanlık faaliyetleri, portföy yönetimi, risk sermayesi finansmanı ve leasing olarak sayılabilmektedir (Hakim, 1985: 11).

Menkul kıymet yüklenimi (underwriting): Yüklenim (underwriting), hükümetler veya şirketler için uzun vadeli ve kısa vadeli sermayeyi sigortalamak olarak ifade edilebilmekte ve geleneksel yatırım bankacılığının merkezinde yer almaktadır (Hakim, 1985: 11).

Menkul kıymetlerin ikincil piyasada pazarlanması: Güçlü bir ikincil piyasa, yatırımcılara menkul kıymetlerini hızlı ve ucuza satabileceklerine dair güven verir. Sonuç olarak, tasarruflarını uzun vadeli menkul kıymetlere yatırma olasılıkları daha yüksektir. Bu nedenle, birincil pazarın geliştirilmesinde güçlü bir ikincil pazar çok önemlidir. Yatırım bankaları, hem piyasa yapıcıları hem de aracılar olarak hareket ederek ikincil piyasayı teşvik etmeye yardımcı olabilmektedirler (Hakim, 1985: 11). Gelişmekte olan ülkelerde, ikincil menkul kıymetler piyasası, alıcı ve satıcıları eşleştirmenin zorluğu nedeniyle genellikle çok zayıftır. Yani tahvil ve hisse senedi fiyatları tek bir günde yüzde 10 ila 20 arasında dalgalanabilir. Dar pazarın bir nedeni, emeklilik fonları ve sigorta şirketleri gibi kurumsal yatırımcıların olmamasıdır. Bunun yerine, piyasaya, uzun vadeli yatırımdan çok spekülasyonla ilgilenen deneyimsiz özel yatırımcılar hakimdir. Diğer bir neden ise şirketlerin yeterli finansal açıklama yapmaması olabilmektedir. Bu, gerçek yatırımcıların belirli menkul kıymetlerin değerine ilişkin objektif bir görüş oluşturmasını zorlaştırır. Zayıf altyapı düzenlemeleri de diğer bir faktör olabilmektedir. Bazı ülkelerde, komisyoncuların veya yatırım bankacılarının piyasa yapıcı olarak hareket etmelerine izin verilmez veya piyasa yapıcılık faaliyetlerini desteklemek için borç para almaları için herhangi bir düzenleme bulunmamaktadır. Yatırım bankası gibi uzman bir finans şirketinin kurulması bu tür sorunların üstesinden gelmeye yardımcı olabilmektedir (Hakim, 1985: 12).

Para piyasası faaliyetleri: Para piyasası faaliyetleri, kısa vadeli menkul kıymetlerle ilgili faaliyetleri içermektedir. Bu menkul kıymetlerden bazıları hazine bonoları, devlet tahvilleri, mevduat sertifikaları olarak sayılabilmektedir (Hakim, 1985: 12).

Kurumsal danışmanlık faaliyetleri: Gelişmekte olan ülkelerde şirketler ve genel olarak ekonomik eğilimler hakkında bilgi edinmek zor olduğundan, kurumsal finansal hizmetlerin gerçekleştirilmesi hem zor hem de çok talep görmektedir. İşletmeler olgunlaştıkça ve profesyonel yöneticiler asil sahip-girişimcilerden görevi devraldıkça bu talebin artması muhtemeldir. Müşterilerle yakın ilişkiler ve bir yatırım bankasının araştırma sağlarken geliştirdiği pazar hakkında ayrıntılı bilgi sahibi olması, başka iş türlerini elde etmesine yardımcı olur. İlişkiler, çoğu yatırım bankacılığı işinin anahtarıdır; güvenilir bir danışman haline gelen bir yatırım bankası, bir şirketin mali durumlarını yeniden yapılandırmasını veya bir devralma gerçekleştirmesini önerdiğinde dinlenecektir. Ayrıca, şirketin bazı yeni finansal planlar hazırlaması durumunda yeni işler için ilk sırada yer alacak (Hakim, 1985: 12). Proje finansmanı, önemli bir danışmanlık çalışması kaynağı olabilir. Yatırım bankası hem bir danışman (proje risklerini belirleme,

teknik ortakları çekme ve devlet kurumlarıyla ilgilenme) hem de finans düzenleyicisi (kredi verenleri belirleme ve finansal paketi yapılandırma) olarak hareket edebilir. (Hakim, 1985: 13).

Portföy Yönetimi: Menkul kıymet piyasaları büyüdükçe, kurumsal yatırımcılar ve varlıklı bireyler profesyonel yatırım tavsiyesine ihtiyaç duyacaktır. Kurumsal tavsiyelerde olduğu gibi, bu hizmeti başarılı bir şekilde sağlamak, yüksek kaliteli ekonomik ve finansal araştırma yapmaya bağlıdır. Gelişmekte olan bir borsada profesyonel para yönetimi riskin yüksek olması sebebiyle tehlikeli bir iştir. Çoğu hisse senedi piyasasının geçtiği ilk (hareketsiz) aşamada, hisselerin temel değerleri normalde iyidir ancak piyasa çok likit değildir. Yatırım fonlarına ve diğer kurumsal para yönetimi türlerine olan ilgi genellikle takip eden spekülasyon patlaması sırasında (veya hatta sonuna yakın) ortaya çıkar. Ancak hisse senedi fiyatları o zamana kadar belirli seviyelere yükseldiğinden, yatırım yönetimi hizmetleri sunmaya başlamanın zamanı değil. Spekülasyon patlamayı izleyen konsolidasyon aşaması daha uygun olabilir, ancak yatırımcıların piyasaya olan güveni, hisse senedi fiyatlarındaki ani düşüş nedeniyle muhtemelen zayıflamış olacaktır. Bununla birlikte, patlama ve düşüş döngüsü, şirketler tarafından daha fazla mali açıklama ihtiyacını ortaya çıkarabilmektedir. Kurumsal yatırım ihtiyacı da bu aşamada kabul edilmekte ve hükümetler bunun için teşvikler sunabilmektedir. Bu tür değişiklikler, yatırım bankaları tarafından sağlanan profesyonel yatırım tavsiyesi için zemin hazırlayabilmektedir (Hakim, 1985: 13).

Sunulan Diğer Hizmetler: Yatırım bankaları genellikle risk sermayesi finansmanını üstlenmek için iyi bir konumdadır. Risk sermayesi, bir yatırım bankasının becerilerini kurumsal yeniden yapılandırmalarda, birleşmelerde ve satın almalarda kullanmasına izin verir. Başarılı yeni şirketler ayrıca yatırım bankalarına karlı gelecek müşterileri sağlar. Ancak yüksek riskler söz konusudur, bu nedenle bir yatırım bankasının sermayesinin yalnızca küçük bir bölümü risk sermayesine tahsis edilmeli ve yatırım bankaları, yatırımlarına bağlı kalmaya istekli olmalıdır. Deneyimler, kazanan olduğunu kanıtlayan risk sermayesi yatırımlarının bile olgunlaşmasının uzun zaman aldığını göstermektedir (Hakim, 1985: 13).

Gelişen yatırım bankaları ve başarılı kalkınma bankaları hem sağlıklı sermaye piyasalarını hem de daha verimli bir ekonomiyi teşvik etmek için önemlidir. Temelde farklı sorunları olan farklı türdeki kurumlardır ve sonunda ayrı kurumlar olarak geliştirilmeleri gerekir. Ancak birçok açıdan rolleri birbirini tamamlayıcı niteliktedir. Yatırım bankalarının faaliyet gösterecekleri sağlıklı bir menkul kıymetler piyasasına ihtiyaçları vardır; kalkınma bankaları bunu sağlamak için politikaların geliştirilmesine yardımcı olabilmektedir. Kalkınma bankaları, bir yatırım bankacılığı işini sıfırdan başlatmak için gerekli olan başlangıç sermayesini ve ekipmanı da sağlayabilir. Ayrıca, küçük ve büyüyen şirketlere erişimleri ile kalkınma bankaları, yatırım bankaları için gelecekteki müşteriler için önemli kaynaklar olabilmektedir. Kalkınma bankaları, özellikle en küçük ve en yoksul gelişmekte olan ülkelerde uzun vadeli kredi verme için temel bir mekanizma iken yatırım bankaları, daha gelişmiş ekonomilerde finansal piyasaları güçlendirir ve yeni yatırım, çıktı ve istihdam fırsatlarını genişletebilmektedir. Gelişen yatırım bankaları, borçlulara ve borç verenlere uluslararası sermaye piyasalarındaki artan fırsatlara ilişkin bir pencere de sağlayabilmektedir (Hakim, 1985: 19).

5. YATIRIM BANKALARININ ARACI OLDUĞU DOĞRUDAN FİNANSMAN YÖNTEMİNİN TOPLUM REFAHINA SAĞLADIĞI KATKI: FENERBAHÇE SPORTİF AŞ'NİN TAHVİL İHRACI ÖRNEĞİ

Fenerbahçe Sportif AŞ Şubat 2012'de doğrudan finansman yöntemi kullanarak 100 milyon TL'lik tahvil ihraç ederek borçlanma yolunu tercih etmiş ve talep toplamıştır. Bu döneme ait ilgili faiz oranları Tablo 1'de gösterilmiştir.

Tablo 1: Fenerbahçe Sportif AŞ'nin Tahvil İhraç Ettiği Döneme Ait Veriler

Fenerbahçe Sportif AŞ'nin Tahvil Faiz Oranı*	Ticari Kredi Faiz Oranı**	Mevduat Faiz Oranı***
%13,1	%14,5	%11,4

Kaynaklar: *<https://www.dunya.com/gundem/fener039in-tahviline-101-milyon-tl-talep-haberi-167493>

** <https://evds2.tcmb.gov.tr/index.php?evds/dashboard/341>

***<http://www.tcmb.gov.tr/wps/wcm/connect/6121b7aa-7946-4353-b0f2-9cbab7e289b2/TurkLirasi.html?MOD=AJPERES>,

Tablo 1'e göre göre Fenerbahçe Sportif AŞ'nin ihraç ettiği tahvilin faiz oranı %13,1 olurken bankalarda ticari kredi faiz oranı yaklaşık olarak %14,5, mevduat faiz oranı yaklaşık olarak %11,4 olarak gerçekleşmiştir. Ticari kredi faiz oranı, Fenerbahçe Sportif AŞ'nin dolaylı finansman yöntemi olan banka kredisini tercih etmesi durumunda karşılaştığı maliyeti gösterirken mevduat faiz oranı da tahvil satın alacak tasarruf sahiplerinin ihraç edilen tahvile göre riski daha düşük olan banka mevduat hesabını tercih etmeleri durumunda elde edecekleri faiz gelirini göstermektedir.

Fenerbahçe Sportif AŞ, doğrudan finansman yöntemi kullanarak tahvil ihraç etmesi sonucu dolaylı finansman yöntemi olan banka ticari kredisine göre yaklaşık 1,4 puanlık maliyet avantajı elde etmiş, bu da yaklaşık (100 milyon x %1,4) 1 milyon 400 bin TL'nin Fenerbahçe Sportif AŞ'nin kasasında kalmasını sağlamıştır. Böylece Fenerbahçe Sportif AŞ doğrudan finansman yöntemi ile başka harcamalarında kullanarak ekonomiye aktaracağı bir tutarı tasarruf etmiştir.

Tasarruf sahipleri riski banka mevduatına göre biraz daha yüksek olan tahvil satın alarak banka mevduat faiz oranı ile ihraç edilen tahvil faiz oranı farkı olan yaklaşık 1,7 puan daha fazla faiz geliri elde edeceklerdir. Bu da tasarruf sahiplerine kullanabilecekleri (100 milyon x %1,7) 1 milyon 700 bin TL'lik ilave faiz geliri sağlamıştır. Bu çerçevede doğrudan finansman yöntemiyle tahvil ihraç eden şirketin maliyet tasarrufu olan 1 milyon 400 bin TL ile tahvil satın alan tasarruf sahibinin elde etmiş olduğu ilave faiz geliri olan 1 milyon 700 bin TL toplamı olan 3 milyon 100 bin TL ekonomiye ilave kaynak/harcama olarak aktarılmış olacaktır. Ortaya çıkan bu 3 milyon 100 bin TL'lik ilave kaynağın doğrudan finansman yönteminin toplumun refahına sağladığı katkı olarak değerlendirilmesi mümkündür.

6. SONUÇ

Doğrudan finansman, fon arz eden tasarruf sahipleri ile fon talep eden yatırımcıların arada finansal aracı olmadan fon değişimini gerçekleştirdiği bir finansman yöntemidir. Bu yöntemde, fon arz eden tasarruf sahipleri ödünç verdikleri fonların geri dönmeme risklerini kendileri üstlenirken bu risk karşılığı dolaylı finansman yöntemine göre daha yüksek getiri elde etme imkanına sahiptirler. Aracısız finansman olarak da tanımlanan doğrudan finansman yönteminde finansal aracı fon değiş tokuşunda herhangi bir risk üstlenmemekte sadece fonun el değişimini sağlamaya aracılık etmektedir. Yatırım bankaları temelde halka arza aracılık, birleşmeler ve devralmalar ile piyasa yapıcılık ve menkul kıymet alım-satımı hizmetlerini sunarak doğrudan finansman yönteminde rol alan finansal araçlardır. Yatırım bankalarının gelişmesi ülke ekonomisinde yer alan yatırım yapacak şirketlere daha uygun maliyetli fon kaynağı, tasarruf sahiplerine de daha yüksek getiri sağlayabilecektir. Bu çalışmada yatırım bankalarının doğrudan finansmanda aracılık yaparak ülke ekonomisine sağlayabileceği katkı Fenerbahçe Sportif AŞ'nin Şubat 2012'de gerçekleştirmiş olduğu tahvil ihracı örneği ile incelenmiştir. Buna göre fon ihtiyacı olan şirket doğrudan finansman yöntemi kullanarak tahvil ihraç ettiğinde; dolaylı finansman yöntemi olan banka ticari kredisine göre yaklaşık 1,4 puanlık maliyet avantajı elde etmiş, bu da yaklaşık (100 milyon x %1,4) 1 milyon 400 bin TL'nin Fenerbahçe Sportif AŞ'nin kasasında kalmasını sağlamıştır. Böylece Fenerbahçe Sportif AŞ doğrudan finansman yöntemi ile başka harcamalarında kullanarak ekonomiye aktaracağı bir tutarı tasarruf etmiştir. Aynı örnekte tasarruf sahipleri riski banka mevduatına göre biraz daha yüksek olan şirketin ihraç etmiş olduğu tahvili satın alarak banka mevduat faiz oranı ile ihraç edilen tahvil faiz oranı farkı olan yaklaşık 1,7 puan daha fazla faiz geliri elde etmişlerdir. Bu da tasarruf sahiplerine kullanabilecekleri (100 milyon x %1,7) 1 milyon 700 bin TL'lik ilave faiz geliri sağlamıştır. Bu çerçevede doğrudan finansman yöntemiyle tahvil ihraç eden şirketin maliyet tasarrufu olan 1 milyon 400 bin TL ile tahvil satın alan tasarruf sahibinin elde etmiş olduğu ilave faiz geliri olan 1 milyon 700 bin TL toplamı olan 3 milyon 100 bin TL ekonomiye ilave kaynak/harcama olarak aktarılma imkanı sağlamış olacaktır. Ortaya çıkan bu 3 milyon 100 bin TL'lik ilave kaynağın doğrudan finansman yönteminin toplumun refahına sağladığı katkı olarak değerlendirilmesi mümkündür.

Özet: Bireylerin boş zamanlarını değerlendirme araçlarından biri olan televizyon izleme alışkanlığı, günümüzde yerini dijital mecralardaki yayınları izleme alışkanlığına bırakmıştır. Bu noktada dünyada ve Türkiye’de, dijital platformlar arasında en çok kullanılmakta olan Netflix, kullanıcılarına pek çok avantaj sağlamaktadır. Bu avantajlar, Netflix kullanıcılarının dizi veya içerik seçme davranışlarını etkilemektedir. Bu çalışmanın amacı, kullanıcıların demografik özelliklerine ve Netflix platformunu kullanma ilişkilerine göre dizi veya film seçimini etkileyen faktörlerin farklılık gösterip göstermediğini incelemektir. Bu amaç ile gerçekleştirilen çalışmada online anket yöntemi kullanılarak 266 katılımcı ile görüşülmüştür. Elde edilen veriler T-Testi ve varyans analizi kullanılarak analiz edilmiştir. Yapılan analizlerde, katılımcıların cinsiyetine, eğitim durumuna, Netflix izleme sıklığına ve Netflix’i başkası ile paylaşma durumuna göre farklılık gösterdiği belirlenmiştir.

Anahtar Kelimeler: Netflix, Netflix İçerik Seçme Davranışı, Demografik Özellikler

Examining the Factors Affecting Program Selection in Digital Platforms: The Case of Netflix

Abstract: The habit of watching television, which is one of the tools of making use of individuals' spare time, has now been replaced by the habit of watching broadcasts in digital channels. At this point, Netflix, one of the most used digital platforms in the world and in Turkey, provides many advantages to its users and these advantages affect the behavior of Netflix users in choosing series or content. The purpose of this study is to examine whether the factors affecting these behaviors according to the demographic characteristics of the users and their relationship to using the Netflix platform, and the choice of TV series or movies differ. In the study conducted for this purpose, 266 participants were interviewed using the online survey method. The data obtained were analyzed using T-test and analysis of variance. According to the analysis, it has been determined that the participants differ according to their gender, education level, Netflix viewing frequency and sharing Netflix with someone else.

Key Words: Netflix, Netflix Content Selection Behavior, Demographic Features

1.GİRİŞ

Dijital platformlar; izleyiciye dilediği yerde, dilediği zaman, dilediği içeriğe ulaşabilme imkânı veren servis araçlarıdır. Aboneliğe dayalı video izleme servisleri (Netflix, Blu TV vb.), sözleşmeli içerik izleme servisleri (Itunes vb.) ve reklama dayalı video izleme servisleri (Youtube, Puhu TV vb.) olarak üç kategoriye ayrılır (Yüncüoğlu, 2019:35). Dijital platformlara akıllı televizyon, bilgisayar gibi elektronik aletler dışında çoğu bireyin yanında taşıdığı cep telefon, tablet gibi küçük elektronik aletlerden de erişim sağlamak mümkündür.

Zaman içerisinde değişen koşullar, teknolojinin dönüşümüyle birlikte gelişim göstermektedir. Bu gelişimlerin getirisi olarak ortaya çıkmış bir kavram olan “Eğlence sektörü” hızı ve dinamiği sayesinde, tüketicilerin ilgisini kısa sürede çekmiş, 21.yüzyılda doruğa ulaşmıştır (Sarı & Petek, 2020: 245). Akıllı cihazlar ve internet, şüphesiz en çok bu sektörde dönüşüm yaratmıştır. Günlük hayatta yapılan alışveriş, bankacılık, sosyalleşme vb. birçok işlemler artık internet ortamındaki alternatif uygulamalar ile yapılmaktadır. Bunlar dışında dijital platformların sağladığı kolaylıklar ve zengin içerikler, bireyleri geleneksel TV izleme alışkanlıklarından uzaklaştırmaya başlamıştır.

Dünyada ve ülkemizde akıllı cihazlar sayesinde internete istenilen yer ve zamanda erişebilmek oldukça kolay bir hale gelmiştir. Avuç içi kadar küçülen bilgisayarlar, boyutlarının aksine büyük işlevler

gerçekleştirmektedir (Kırık & Çelebioğlu, 2019: 522). Bu kolaylık, televizyon izleme alışkanlıklarımızın değişim göstermesinde belirleyici bir etkidir. Netflix Türkiye’den 37 bin 56 katılımcı ile yaptığı araştırmasında, Türk kullanıcıların %77’sinin sadece evlerinde değil, işe gidip gelirken, otobüs ya da uçak ile yolculuk yaparken de mobil cihazlardan film ve dizi seyrettikleri sonucuna varmıştır (Marketing Türkiye, 2018). Yani çevrimiçi izleyiciler, geleneksel izleyicilere göre daha aktif ve dinamiktir. Beklenti ve ihtiyaçlarıyla hareket etme eğilimindedirler. Geleneksel televizyon yerine dijital platformları tercih eden “Yeni nesil izleyici” aynı zamanda hem tüketici hem üretici olabilmektedir (Aydın, 2019: 1169). Bu sebeple dijital ortamlardaki içerikler tüketici istekleri doğrultusunda şekillenir.

Bunun yanı sıra internet reklam pazarında ise tüm geleneksel normları yıkacak türden hızlı bir büyüme görülmektedir (Muradoğlu, 2017:88). Bu doğal süreç sonucunda internet dizilerinin başlı başına bir pazar olduğu fark edilmiştir ve firmalar yatırımlarını bu mecralara taşımaya başlamıştır. Türkiye’de çekilen birtakım diziler daha önce YouTube aracılığıyla yayınlanmış fakat kurguları çok beğenilmediği için bu yayınlar gerekli ilgiyi görememiştir. Daha sonra tekrar YouTube üzerinden profesyonel olmayan oyuncu kadrosu ile Adana Sıfır Bir- Bir zamanlar Adana’da dizisi yayınlanmış ve milyonlarca izlenme rakamına ulaşınca en azından platforma dikkat çekilmiş fakat beklenen ilgi uzun süreli olmamıştır.

Türkiye’deki dijital platformlar, YouTube’taki gelişmeler dışında, 2016 yılında Netflix’in Türkiye’ye erişiminin açılmasıyla kurulmaya ve şekillenmeye başlamıştır. Aynı yıl içerisinde önce “Blu TV” ile Doğan Medya Grubu, “Puhu TV” ile Doğuş Grubu, ardından Acun Ilıcalı ile “Exxen” ve GainMedya “Gain” faaliyete geçmiştir.

Bu çalışmanın amacı Netflix platformunu kullanan tüketicilerin hangi faktörleri dikkate alarak dizi veya film (program) seçtiğini tespit etmektir. Literatür çalışmalarında yapılan araştırmalar genellikle Netflix ve dijitalleşme ile ilgilidir. Netflix kullanıcılarının dizi, film veya belgesel izleme tercihlerini araştıran bir çalışma bulunmamaktadır. Ayrıca, bu çalışmada, kullanıcıların demografik özelliklerine ve Netflix platformunu kullanma ilişkilerine göre dizi, film veya belgesel izleme seçimini etkileyen faktörlerin farklılık gösterip göstermediği incelenmiştir.

2. LİTERATÜR TARAMASI

Dijital platformlar, teknoloji ile büyüyen Y ve Z kuşağının sıkça etkileşim halinde olduğu yeni medya ortamlarıdır. Bu platformlar sayesinde kullanıcılar, tek bir ortama taşınarak geleneksel televizyon alışkanlıklarını bırakmaya başlamıştır (Sarı & Sancaklı, 2020: 245).

Netflix’in Türkiye pazarına girmesi, sektörde büyük değişiklik yaratmış, benzeri platformların faaliyete geçmesinde öncü olmuştur (Çağıl & Kara, 2019: 11). Blu TV istenilen içeriğin, istenilen yer ve zamandan izlenebilmesi bakımından Türkiye’nin ilk yerel dijital platformudur. Netflix gibi aylık abonelik sistemi bulunmaktadır. Sektördeki alternatif platformlardan farklı olarak dizi, film vb. içeriklerin dışında, televizyon canlı yayın akışını izleme fırsatı sunmaktadır. Exxen, 1 Ocak 2021 tarihiyle yayına başlayan en yeni dijital platformdur. Türk yapımı dizilerle birlikte Türk yapımı filmler, yarışmalar ve Talk Show programlarını içermektedir. Aylık abonelik sistemi ile çalışmaktadır. Puhu TV ve Gain diğer dijital platformların aksine, kullanıcıların içeriklere ulaşabilmesi için abonelik sistemini kullanmamaktadır. Maddi gelir için reklamları kullanmaktadır. Videolar arası geçilemeyen reklamlar, içeriklerde ürün yerleştirme vb. yöntemleri vardır. Bütün dijital platformlardan farklı olarak Gain, sadece telefonlardan izlenebilmektedir ve canlı yayın açma özelliği vardır.

Netflix 1997 yılında Amerika Birleşik Devlet’inde kurulmuştur. Dünya genelinde 190’dan fazla ülkede erişimi vardır. Digitalage sayfasının yayınladığı açıklamaya göre 2021 yılı için aktif abone sayısı 203.6 milyondur (Digitalage, 2021). Netflix Türkiye Kamu Politikaları Direktörü Pelin Mavili’nin açıklamalarına göre Türkiye’deki abone sayısı 3,5 milyonu geçmiş durumdadır. Netflix içeriklerini tercih etme davranışı kişiden kişiye değişmektedir. Bu değişimde demografik özelliklerin etkisi olduğu gibi bireysel ihtiyaçlar, firmanın reklam uygulamaları vb. faktörler de etkili olmaktadır. Bir araştırma sonucunda, dizi, film vb. içerikler izlerken davranışları incelenen bireylerin rahatladıkları ve zihinlerinin aktif halde olmadığı rapor edilmiştir (Özel & Durmaz, 2021: 365). Birey bu şekilde kendini ödüllendirdiğini düşünmektedir. Bir diğer araştırma, bireylerin yalnızlık hislerini giderebilmek için sosyal medya üzerinden ilişkilerini geliştirebilir

veya içerik izleme süresini arttırarak bir kaçış yolu yaratabilmektedir (Çakır & Çakır, 2013: 142). Bireyler günlük hayatın stres ve sorumluluğundan kaçmak için de içerik izlemektedirler (Berfin & Çetin, 2016: 29).

Netflix dizi veya film seçme davranışını ölçmek için geliştirilen hipotezler, Netflix kullanıcıları ile yapılan öntestler ve daha önce yapılan araştırmalar incelenerek gerçekleştirilmiştir. Araştırma yöntemi olarak uygulanan nitel yöntem Netflix kullanıcıları ile görüşülerek oluşturulmuştur. Kullanıcılar ile görüşmeler sonucunda kategoriler ve alt kategoriler oluşturulmuştur. Bu kategoriler aralarındaki benzerlik ve farklılıklara göre araştırma sonucunda istenilen verilere ulaşabilmek amacıyla boyutlara ayrılmıştır (Gürmeriç, 2019: 92). Netflix kullanıcıları ile yapılan mülakatlar sonucunda dört boyut oluşturulmuştur. Bu boyutlar; ürün özellikleri, firma uygulamaları, ağızdan ağıza pazarlama ve tüketici ihtiyaçları faktörleridir. Ürün özellikleri boyutu, Netflix'teki dizi veya filmlerin konusu, süresi, oyuncu kadrosu gibi içerik özellikleridir. Firma uygulamaları boyutu, Netflix uygulamasının, kullanıcıya özel eşleştirme yapması, içerikleri kategoriye ayırmasıdır. Ağızdan ağıza pazarlama boyutu, Netflix kullanıcısı veya kullanıcı olmayan bireylerin, uygulama hakkında yaptıkları yorum ve deneyimlerini aktarmasıdır. Tüketici ihtiyaçları boyutu, tüketicilerin istekleri, beklentileri ve ihtiyaçlarıdır. Daha sonra her bir faktör için ankette kullanılacak sorular ve hipotezler geliştirilmiştir.

Yapılan araştırmada kullanılan hipotezler şu şekildedir;

H1: Netflix içerik seçiminde a) ürün özellikleri, b) Netflix müşterisi olmayan kişilerin yapmış olduğu ağızdan ağıza pazarlama, c) Netflix müşterisi olan kişilerin yapmış olduğu ağızdan ağıza pazarlama, d) Tüketici tercihleri, e) Firmanın yapmış olduğu reklam uygulamaları ve f) Firmanın Netflix programı üzerinden yaptığı uygulamalar katılımcıların cinsiyetine göre farklılık göstermektedir.

H2: Netflix içerik seçiminde a) ürün özellikleri, b) Netflix müşterisi olmayan kişilerin yapmış olduğu ağızdan ağıza pazarlama, c) Netflix müşterisi olan kişilerin yapmış olduğu ağızdan ağıza pazarlama, d) Tüketici tercihleri, e) Firmanın yapmış olduğu reklam uygulamaları ve f) Firmanın Netflix programı üzerinden yaptığı uygulamalar katılımcıların eğitime göre farklılık göstermektedir.

H3: Netflix içerik seçiminde a) ürün özellikleri, b) Netflix müşterisi olmayan kişilerin yapmış olduğu ağızdan ağıza pazarlama, c) Netflix müşterisi olan kişilerin yapmış olduğu ağızdan ağıza pazarlama, d) Tüketici tercihleri, e) Firmanın yapmış olduğu reklam uygulamaları ve f) Firmanın Netflix programı üzerinden yaptığı uygulamalar katılımcıların Netflix'i başka biriyle paylaşma durumuna göre farklılık göstermektedir.

H4: Netflix içerik seçiminde a) ürün özellikleri faktörü, b) Netflix müşterisi olmayan kişilerin yapmış olduğu ağızdan ağıza pazarlama, c) Netflix müşterisi olan kişilerin yapmış olduğu ağızdan ağıza pazarlama, d) Tüketici tercihleri faktörü, e) Firmanın yapmış olduğu reklam uygulamaları ve f) Firmanın Netflix programı üzerinden yaptığı uygulamalar katılımcıların Netflix izleme sürelerine göre farklılık göstermektedir.

3.ARAŞTIRMANIN YÖNTEMİ

Bu çalışma, kullanıcıların demografik özelliklerine ve Netflix platformunu kullanma ilişkilerine göre dizi, film veya belgesel izleme seçimini etkileyen faktörlerin farklılık gösterip göstermediğini araştırmak amacıyla yapılmıştır. Bu amaca ulaşmak için anket yöntemi uygulanmıştır. Anket 26 sorudan ve 5'li likert tarzda oluşturulmuştur. Sorular, online ortamlarda yalnızca Netflix kullanıcılarına, 19 Mayıs 2020- 26 Nisan 2020 tarihleri arasında uygulanmıştır.

Araştırmada kullanılan ölçek sorularının tamamı ayrı aşamalar ile oluşturulmuştur. Netflix firmasının ve Türkiye'de erişim sağlayan diğer benzeri platformların, kendi internet sitesi ve sosyal medya gibi dijital platformlar üzerinden yaptığı uygulamalar, reklamlar ve bunlar için yapılan araştırmalar incelenmiştir. Elde edilen veriler ile ölçeğin taslağı oluşturulmuştur. Daha sonra taslağı geliştirmek için Netflix kullanıcıları arasından seçilmiş 35 birey ile öntest yapılmıştır. Öntest uygulanırken mülakat yöntemi kullanılmıştır. Bu bireylere, "Netflix içerikleri hakkındaki bilgilere hangi kanal aracılığıyla ulaşıyorsunuz?" "Netflix içeriğinin konusu, oyuncu kadrosu, süresi vb. özellikler, dizi veya film seçme davranışınızda etkili oluyor mu?", "Netflix uygulamasının öneri sistemi, dizi veya film seçme davranışınızda etkili oluyor mu?", "Bireysel ihtiyaçlarınız Netflix dizi veya film içeriklerini izleme davranışınızda etkili oluyor mu?"

soruları yöneltmiştir. Nitel çalışma sonucu elde edilen veriler ışığında her bir boyut için anket modeli oluşturulmuştur. Daha sonra soruların yanlış anlaşılıp anlaşılacağı vb. etkilerin test edilmesi için Netflix kullanıcılarından oluşan 35 bireye ikinci bir öntest uygulanmıştır. İkinci öntest uygulanırken tekrar mülakat yöntemi kullanılmıştır. Verilen yanıtlar ile sorular düzenlenmiştir. Tüm bu aşamalardan sonra elde edilen sorular anket formuna taşınmıştır.

Analizler SPSS programı ile gerçekleştirilmiştir. Kullanılan ölçeğin güvenilirliği açıklayıcı faktör analizi ile hesaplanmıştır. Elde edilen veriler farklılık analizlerinde kullanılmıştır. Bu farklılık analizleri, varyans (ANOVA) ve T-testi'dir.

4.BULGULAR

4.1. Demografik Özellikler

Toplam 115 erkek ve 151 adet kadın katılımcı anketi doldurmuştur. Katılımcıların eğitim seviyeleri sırasıyla %80,8'i üniversite, %14,3'ü master veya doktora, %4,5'i lise öğrencisi ve geri kalan %1'lik kısım ilköğretim öğrencisidir. Katılımcıların yaş ortalamaları 25'tir.

Netflix kullanıcılarının ortalama abonelik süreleri 19 aydır. Kullanıcıların günlük dizi izleme yüzdeleri 25,6, film izleme yüzdeleri 3,8 ve belgesel izleme yüzdeleri 1,9'dur. Yani Netflix kullanıcıları genel olarak dizi izlemektedir. Kullanıcılar genellikle Netflix içeriklerini izlerken yalnız olmayı tercih etmektedir. Kullanıcıların yalnız izleme yüzdeleri 34,6, aile ile izleme yüzdeleri 3,4 ve arkadaş ile izleme yüzdeleri 1,5 şeklindedir. Kullanıcıların Netflix'i tercih etmelerindeki en önemli faktör ise; TV'de yayınlanmayan içeriklerin bu platformda olmasıdır. (37,6) Bu faktörden sonra sırasıyla, dizi veya film seçerken karar verme kolaylığı (30,8), içerikler arası reklam olmaması (15,0), içerikleri kolay indirme seçeneği (5,3), popülerite (3,4), Türkiye'ye özel içerik üretilmesi (2,3) ve son olarak fiyat uygunluğu (1,9) gelmektedir.

4.2. Geçerlilik ve Güvenilirlik

Araştırmada kullanılan ölçeklerin geçerlilik ve güvenilirliği için açıklayıcı faktör analizi yapılmış ve Cronbach's alfa katsayısı hesaplanmıştır.

Tablo 1: Geçerlilik ve Güvenilirlik

	Faktörler ve Faktör Yükleri						Özdeğer	Açıklanan Varyans	Alpha (Güvenilirlik Katsayısı)
	1	2	3	4	5	6			
WOM5	,874								
WOM7	,859								
WOM8	,841						4,407	18,363	,890
WOM6	,823								
Tüketici3		,861							
Tüketici2		,830							
Tüketici4		,764					3,557	14,819	,805
Tüketici1		,650							
Ürün Özellikleri4			,731						
Ürün Özellikleri6			,688						
Ürün Özellikleri5			,621						
Ürün Özellikleri1			,614				2,295	9,564	,704
Ürün Özellikleri3			,537						
Ürün Özellikleri2			,481						
WOM2				,838					
WOM1				,835					
WOM3				,639			1,614	6,727	,732
WOM4				,491					
Firma Uygulamaları2					,872				
Firma Uygulamaları3					,828		1,544	6,432	,727
Firma Uygulamaları4					,505				
Firma Uygulamaları5						,782			
Firma Uygulamaları6						,751	1,311	5,463	,598
Firma Uygulamaları1						,568			

Araştırma öncesi yapılan ön çalışma sonucunda dört boyut tahmin edilmiştir. Yapılan araştırma ile bu dört boyutun gerçekte olup olmadığı ölçülmek istenmiştir. Bu dört boyut; ürün özellikleri faktörü, firma uygulamaları faktörü, ağızdan ağıza pazarlama faktörü, tüketici ihtiyaçları faktörüdür. Faktör analizi sonucunda, faktörler kendi aralarında bölünerek altı boyut oluşturmuştur. Bu faktörler ağızdan ağıza pazarlama (WOM) ve firma uygulamaları faktörleridir. WOM, Netflix müşterisi olan kullanıcı önerileri ve Netflix müşterisi olmayan kullanıcı önerileri şeklinde iki farklı boyut oluşturmuştur. Firma uygulamaları, Netflix uygulaması üzerinden markanın yaptığı (Eşleştirme, öneri vb.) faaliyetler ve Netflix firmasının sosyal mecralarda yaptığı reklamlar olmak üzere iki farklı boyut oluşturmuştur. Faktör yükleri bütün boyutlarda istenilen düzeydedir.

Faktör analizin KMO ve Bartlett's değeri 768'dir.

Yapılan analizler sonucu açıklamak istenilen alanın toplam %61'inin açıklamaktadır.

4.3. Tanımlayıcı İstatistikler

Tablo 2: Tanımlayıcı İstatistikler

	N	Ortalama	Standart Sapma
Tüketici Tercihleri	265	4,3308	,58102
Firmanın Reklam Uygulamaları	266	3,4549	,77585
Firma Uygulamaları	266	3,8835	,58867
WOM (Müşteri olanlar)	266	3,5122	,73707
WOM (Müşteri olmayanlar)	265	2,9855	1,09199
Ürün Özellikleri	266	3,7914	,64770

Yapılan analiz sonucunda Netflix kullanıcılarının içerik tercih etme davranışlarını etkileyen en önemli faktör tüketici tercihleridir (4,3308). Daha sonra sırasıyla Netflix'in platform üzerinden yaptığı uygulamalar (3,8835), ürün özellikleri (3,7914), Netflix müşterilerinin yaptığı öneriler (3,5122), Netflix'in reklam uygulamaları (3,4549) ve Netflix müşterisi olmayan kişilerin yaptıkları öneriler (2,9855) etkili olmaktadır.

4.4. Farklılık Analizleri

Araştırmada Netflix kullanıcıların dizi veya film seçme davranışlarına etki eden faktörleri tespit etme amacıyla T-Testi ve varyans (ANOVA) analizleri kullanılmıştır.

Tablo 3: Cinsiyete Göre Farklılık

	F	Anlamlılık	t	Df	Anlamlılık	Ortalamalar
Tüketici Tercihleri	,697	,405	,862	263	,389	Kadın:4,3578 Erkek:4,2957
Firma Reklam Uygulamaları	7,359	,007	3,755	264	,000	Kadın:3,6071 Erkek:3,2551
Firma Uygulamaları	1,181	,278	3,046	264	,003	Kadın:3,9779 Erkek:3,7594
WOM Müşteri Olanlar	,062	,803	1,697	264	,091	Kadın:3,5789 Erkek:3,4246
WOM Müşteri Olmayanlar	,120	,729	,785	263	,433	Kadın:3,0317 Erkek:2,9254
Ürün Özellikleri	2,5660	,110	3,856	264	,000	Kadın:3,9216 Erkek:3,6203

Cinsiyete göre Netflix içerik tercih etme davranışları incelendiğinde firma reklam uygulamaları, firma uygulamaları ve ürün özellikleri boyutları farklılık göstermektedir. Yapılan analiz sonucunda H1a, H1e ve H1f hipotezleri kabul edilirken, H1b, H1c ve H1d hipotezleri reddedilmiştir.

Tablo 4: Eğitime Göre Farklılık

	F	Anlamlılık	Ortalamalar
Tüketici Tercihleri	1,008	,366	Lise: 4,5625 Üniversite: 4,3209 Master/Doktora: 4,3092
Firma Reklam Uygulamaları	1,552	,214	Lise: 3,1111 Üniversite: 3,4868 Master/Doktora: 3,3772
Firma Uygulamalar	1,436	,240	Lise: 4,1389 Üniversite: 3,8589 Master/Doktora: 3,9288
WOM Müşteri Olanlar	3,343	,037	Lise: 2,9792 Üniversite: 3,5310 Master/Doktora:3,5614
WOM Olmayanlar	3,598	,029	Lise: 2,5000 Üniversite: 2,9424 Master/Doktora: 3,3553
Ürün Özellikleri	,015	,985	Lise: 3,797 Üniversite: 3,80000 Master/Doktora: 3,7807

Eğitime göre Netflix içerik tercih etme davranışları incelendiğinde (WOM) Netflix müşterisi olan kullanıcı önerileri ve Netflix müşterisi olmayan kullanıcı önerileri boyutları farklılık göstermektedir. Eğitim düzeyleri arasındaki farklılık için post-hoc test sonuçlarını incelenmesi gerekmektedir.

Tablo 5: Eğitime Göre Değişkenlerin Scheffe Post-Hoc Testi

	Eğitim (I)	Eğitim (J)	Anlamlılık
WOM Müşteri Olanlar	Lise	Üniversite	,041
		Master/Doktora	,057
	Üniversite	Lise	,041
		Master/Doktora	,973
	Master/Doktora	Lise	,057
		Üniversite	,973
WOM Olmayanlar	Lise	Üniversite	,388
		Master/Doktora	,060
	Üniversite	Lise	,388
		Master/Doktora	,097
	Master/Doktora	Lise	,060
		Üniversite	,097

Yapılan analiz sonucunda Netflix içerik seçiminde etkili olan faktörler, eğitime göre farklılık göstermektedir. H2b ve H2c hipotezleri kabul edilmiş, H2a, H2d H2e ve H2f hipotezleri reddedilmiştir.

Tablo 6: Netflix'i Biriyle Paylaşma Durumuna göre Farklılık

	F	Anlamlılık	Ortalamalar
Tüketici Tercihleri	,702	,496	Hayır: 4,2426 Aile: 4,3674 Arkadaş: 4,3123

Firma Reklam Uygulamaları	1,885	,154	Hayır: 3,4902 Aile: 3,5338 Arkadaş: 3,3367
Firma Uygulamaları	,234	,791	Hayır: 3,8631 Aile: 3,9073 Arkadaş: 3,8653
WOM Müşteri Olanlar	,574	,564	Hayır: 3,4338 Aile: 3,5589 Arkadaş: 3,4764
WOM Müşteri Olmayanlar	,191	,826	Hayır: 3,0515 Aile: 2,9455 Arkadaş: 3,4764
Ürün Özellikleri	4,118	,017	Hayır: 3,8382 Aile: 3,8872 Arkadaş: 3,6465

Netflix'i biriyle paylaşma durumuna göre Netflix içerik tercih etme davranışları incelendiğinde ürün özellikleri boyutu farklılık göstermektedir. Netflix paylaşma durumu düzeyleri arasındaki farklılık için post-hoc test sonuçlarını incelenmesi gerekmektedir.

Tablo 7: Netflix'i Biriyle Paylaşma Durumuna Göre Değişkenlerin Scheffe Post-Hoc Testi

	Netflix Paylaşma (I)	Netflix Paylaşma (J)	Ort. Fark (I-J)	Std.Error	Anlamlılık
Ürün Özellikleri	Hayır	Aile	-,04898	,12303	,924
		Arkadaş	,19177	,12726	,323
	Aile	Hayır	,04898	,12303	,924
		Arkadaş	,24075	,08498	,019
	Arkadaş	Hayır	-,19177	,12726	,323
		Aile	-,24075	,08498	,019

Yapılan araştırma sonucunda H3a hipotezi kabul edilmiş, H3b, H3c, H3d, H3e ve H3f hipotezleri reddedilmiştir.

Tablo 8: İçerikleri İzleme Sıklığına göre Farklılık

	F	Anlamlılık	Ortalamalar
Tüketici Tercihleri	2,739	,044	Her gün: 4,3992 Haftada 1: 4,3603 Haftada 3-4: 4,2705 Ayda 1-2: 3,9643
Firma Uygulamaları	1,433	,233	Her gün: 3,5135 Haftada 1: 3,2990 Haftada 3-4: 3,5297 Ayda 1-2: 3,3571
Firma Uygulamaları	1,285	,280	Her gün: 3,9219 Haftada 1: 3,8873 Haftada 2-3: 3,8767 Ayda 1-: 3,5952
WOM Müşteri Olan	1,863	,136	Her gün: 3,5563 Haftada 1: 3,6017 Haftada 3-4: 3,3425 Ayda 1-2: 3,6131
WOM Müşteri Olmayan	,845	,470	Her gün: 2,8977 Haftada 1-2: 3,1127 Haftada 3-4: 2,9486

			Ayda 1-2: 3,2500
Ürün Özellikleri	2,135	,096	Her gün: 3,7267 Haftada 1-2: 3,7819 Hata 3-4: 3,9384 Ayda 1-2: 3,5833

Netflix içeriklerini izleme sıklığına göre Netflix içerik tercih etme davranışları incelendiğinde tüketici tercihleri boyutu farklılık göstermektedir. Tüketici tercihleri düzeyleri arasındaki farklılık için post-hoc test sonuçlarını incelenmesi gerekmektedir.

Tablo 9: İçerikleri İzleme Sıklığına Göre Değişkenlerin Scheffe Post-Hoc Testi

	İzleme Sıklığı (I)	İzleme Sıklığı (J)	Anlamlılık
Tüketici Tercihleri	Her gün	Haftada 1-2	,979
		Haftada 3-4	,534
		Ayda 1-2	,071
	Hafta 1-2	Her gün	,979
		Haftada 3-4	,736
		Ayda 1-2	,141
	Hafta 3-4	Her gün	,534
		Haftada 1-2	,836
		Ayda 1-2	,346
Ayda 1-2	Her gün	,071	
	Haftada 1-2	,141	
		Haftada 3-4	,346

Yapılan analiz sonucunda, Netflix içerik seçiminde etkili olan faktörler, içerikleri izleme sıklığına göre farklılık göstermektedir. H4d hipotezi kabul edilmiş, H4a, H4b, H4c ve H4e ve H4F hipotezleri reddedilmiştir.

5.SONUÇ

Yapılan analizlerle birlikte Netflix kullanıcılarının, dizi veya film izleme davranışlarını etkileyen faktörlerin tespit edilmesi amaçlanmıştır. Araştırma öncesi yapılan çalışma ile dört boyut tahmin edilmiştir. Daha sonra yapılan faktör analizi sonucunda, faktörler kendi aralarında bölünerek altı boyut oluşturmuştur. Bu boyutlardan biri olan, firma uygulamaları; firmanın sosyal medya vb. üzerinden yaptığı reklamlar ve firmanın platform üzerinden kullanıcıya özel oluşturduğu özellikler olarak iki farklı boyuta dönüşmüştür. Diğer boyut olan ağızdan ağıza pazarlama ise Netflix kullanıcısı olan kişiler ve Netflix kullanıcısı olmayan kişiler tarafından yapılan öneriler olarak iki farklı boyuta dönüşmüştür.

Bu çalışmanın temel amacı, Netflix uygulamasından bir içerik izlerken tüketicilerin hangi faktörlerden etkilendiğini analiz etmektir. Yapılan araştırma sonucunda Netflix müşterilerinin dizi veya film seçme davranışını etkileyen en önemli boyut tüketici tercihleri faktörüdür. Kısaca, müşteriler dizi veya film seçerken kendi istek ve ihtiyaçlarına göre, o an ki ruh halleriyle tercih yaptıkları söylenebilir (4,33). Daha sonra müşterileri etkileyen en önemli faktör firmanın platform üzerinden yaptığı uygulamalardır. Tüketiciler Netflix'in kullanıcıya özel önerilerini, eşleştirmelerini ve oluşturduğu kategorileri dikkate almakta ve seçim yaparken bu faktörden etkilenmektedir. (3,88) Bir sonraki faktör ise ürün özellikleridir. Netflix kullanıcıların film veya dizi seçme davranışında, içeriğin oyuncu kadrosu, konusu, süresi vb. özellikleri tercih yapmasında etkili olmaktadır (3,79). Bir sonraki faktör, Netflix müşterisi olan diğer bireylerin yaptıkları dizi veya film önerileridir (3,51). Firmanın sosyal ağlar vb. üzerinden yaptıkları reklamlar (3,45) ve Netflix müşterisi olmayan diğer bireylerin yaptıkları öneriler (2,96), Netflix kullanıcılarının dizi veya film seçme davranışında en az etkili olan iki faktördür.

Cinsiyete göre farklılık incelendiğinde, kadın ve erkek cinsiyetleri arasında anlamlı farklılıklar bulunmuştur. Bu farklılıklar; ürün özellikleri, firma uygulamaları ve firmanın yaptığı reklam faaliyetleri arasındadır. Ürün özelliklerine bakarak tercih yapma alışkanlığı (Kadın: 3,92, Erkek: 3,62), firma uygulamalarına bakarak tercih yapma alışkanlığı (Kadın: 3,97, Erkek: 3,75) ve firmanın reklamlarına bakarak tercih yapma alışkanlığı (Kadın: 3,60, Erkek: 3,25) kadınlarda, erkeklere göre daha yüksektir. Netflix, kadınlara yönelik yapacağı tutundurma çalışmaları için bu üç faktörü ön plana çıkarırsa daha verimli sonuçlar elde edebilecektir.

Eğitim durumuna göre farklılıklar incelendiğinde, eğitim durumunun, dizi veya film seçme tercihi üzerinde etkisi olduğu sonucuna varılmıştır. Master/doktora (3,56) öğrencileri, lise (2,97) ve üniversite (3,53) öğrencilerine göre Netflix müşterisi olan bireylerin önerilerini daha fazla dikkate almaktadır. Aynı zamanda master/doktora öğrencileri (3,35), Netflix kullanıcısı olmayan bireylerin önerilerini yine lise (2,50) ve üniversite öğrencilerine göre daha fazla dikkate almaktadır. Eğitim seviyesi arttıkça ağızdan ağıza pazarlama faktörünün daha etkili olduğunu söyleyebilmekteyiz. Netflix, özellikle sosyal ağlar üzerinden yapacağı tutundurma çalışmaları için hedef kitlesini master/doktora ve üniversite öğrencileri olarak seçerse daha verimli sonuçlar elde edebilecektir.

Netflix uygulamasının kullanılma sıklığına göre farklılık olup olmadığı incelendiğinde, Netflix kullanılma durumunun, içerik seçme tercihlerinde etkisi olduğu saptanmıştır. Her gün içerik izlemeyi tercih eden kullanıcılar (4,39), ayda 1-2 kez içerik izlemeyi tercih eden kullanıcılara göre (3,96) Netflix'te dizi veya film seçerken, tüketici tercihleri faktörünü daha çok dikkate almaktadır. Her gün içerik izleyen bir kullanıcı, kendi istek ve beklentilerine göre tercihini yaparken, ayda 1-2 kez izleyen bir kullanıcı için diğer faktörler daha etkili olmaktadır. Bu etkiler arasında, Netflix uygulamasının sosyal medya üzerinden yaptığı reklamlar veya Netflix'e yeni yüklenen bir içeriğin merak edilmesi gösterilebilir.

Yapılan araştırma sonucunda, Netflix'i ailesi ile paylaşan kullanıcılar (3,88), arkadaşları ile paylaşan kullanıcılara (3,64) göre ürün özelliklerine daha çok dikkat etmektedir. Ailesi ile izlemeyi tercih eden kullanıcılar, içeriğin konusu, oyuncu kadrosu vb. faktörleri dikkate alarak tercih yapmaktadır. Arkadaşları ile paylaşan kullanıcıların ise diğer faktörlerden de etkilenecek kadar esneklik payları vardır.

Ar-Ge Faaliyetleri ve Vergi Gelirleri Arasındaki İlişkinin İncelenmesi: OECD Ülkelerinden Bir Örnek*

Yüksek Lisans Öğrencisi, Fuat TÖREDİ¹

¹Kırıkkale Üniversitesi, İktisadi İdari Bilimler Fakültesi, Maliye A.B.D., fuattoredi1993@gmail.com, ORCID: 0000-0001-9592-3462

Özet: Uluslararası sınırların ortadan kalktığı küresel rekabet ortamında var olmanın ana unsuru yenilikler ortaya koyabilmektir. Bu bağlamda devletler ve firmalar fark yaratabilmek ve rekabet avantajı sağlamak amacıyla teknolojik gelişmeleri yakından takip etmekte ve bu teknolojik gelişmeler doğrultusunda yeni mal ve hizmet üretebilmek için Ar-Ge faaliyetleri üzerinde yoğunlaşmaktadır. Ayrıca ekonomik büyüme üzerinde ciddi bir etkiye sahip olan teknolojik gelişmeler Ar-Ge harcamaları neticesinde ortaya çıkmaktadır. Bu çalışmanın amacı Ar-Ge faaliyetlerinin vergi gelirleri üzerindeki etkisini ortaya koymaktır. Ar-Ge faaliyetleri kısa vade de vergi gelirlerinde azalışa sebep olmaktadır. Ancak Ar-Ge faaliyetleri neticesinde ortaya çıkan yeni faaliyet alanları yeni vergiler ortaya çıkaracağından bu faaliyetler orta ve uzun vade de vergi gelirlerinde artış sağlamaktadır.

Anahtar Kelimeler: Ar-Ge Faaliyeti, Ar-Ge Harcaması, Vergi Gelirleri

1.GİRİŞ

Günümüzde Ar-Ge, devletlerin ve şirketlerin üzerine yoğunlaştığı bir kavramdır. Literatürde Ar-Ge ile ilgili birçok farklı tanım bulunmaktadır. Ar-Ge, global dünyada şirketlerin ve devletlerin fark yaratmak amacıyla yeni ürün ve üretim süreçleri meydana getirmek için sistemli bir şekilde yapılan çalışmalar olarak açıklanmaktadır (Kantarci, 2017:1). Ar-Ge faaliyetinin en önemli hedefi firmaların teknolojik ilerlemelerden faydalanarak karlılıklarını yükseltmek ve firma değerini artırmaktır (Akgün ve Akgün, 2016:2). Ar-Ge faaliyetleri firmalara sağladığı faydaların yanında önemli maliyetleri de içerisinde barındırmaktadır. Sektörlere göre farklılık göstermekle birlikte Ar-Ge faaliyetlerinden uzun sürede sonuç alınması ve başarılı bir sonuç alınmasının da garantisinin olmaması, firmaları bu tür faaliyetlerde bulunmaktan caydırıcı unsurlardan en önemlileridir (Özkan, 2007: 1).

Ar-Ge faaliyetleri ekonomik büyümeyi etkileyen faktörlerden birisidir. Ar-Ge faaliyetleri iktisadi büyümenin devamlı hale getirilmesi, yeni iş alanlarının açılmasına yardımcı olması, rekabeti kolaylaştırması, ürün çıktısını yükseltmesi aynı zamanda sosyo-ekonomik gelişmeler üzerinde etkili olmaktadır (Güneş, 2019: 161). Ülkelerin gelişmişlik seviyesi ne olursa olsun Ar-Ge faaliyetlerine yönelik olarak yapılan harcamaların GSYİH içindeki payını dönemler itibarıyla artırmaya çalıştıkları gözlemlenmektedir. Gelişmekte olan ülkelerle gelişmiş ülkeler kıyaslandığında gelişmiş ülkelerde Ar-Ge faaliyetleri için yapılan harcamaların GSYİH içindeki payı daha fazladır. Doğal olarak bu durum ekonomik büyümeyi artırmaktadır.

Vergi, ülkelerin toplumsal hizmetleri karşılayabilmesi için en fazla gereksinim duyduğu gelirlerden birisidir. Sosyal devlet anlayışının ülkelerde gelişmesi ile beraber iktisadi ve sosyal hayata müdahalenin artış göstermesi ve buna bağlı olarak fon ihtiyacının artması vergi gelirlerinin önemini artırmaktadır (Karabulut ve Şeker, 2018: 1050). Genel bütçe gelirleri arasında ciddi bir paya sahip olan vergi gelirleri gelişmekte olan ülkelerde siyasal önceliklere göre bazı dönemlerde hızlı bir şekilde artış göstermesinin yanı sıra bazı dönemlerde beklentileri karşılamakta yetersiz kalmaktadır. Gelişmiş ülkelerde vergi gelirleri iktisadi konjoktürel dalgalanmalardan etkilenmekte ve bu durumun vergi gelirleri üzerindeki etkisi yüzeysel ve kısa vadeli. Vergi gelirleri ekonominin genişleme döneminde yükselmekte iken daralma döneminde ise düşüş göstermektedir (Ekici, 2009: 201). Bu çalışma üç bölüme ayrılmıştır. İlk bölümünde Ar-Ge faaliyetlerine, Ar-Ge harcamalarına ve ikinci bölümünde ise vergi gelirlerine genel olarak yer verilmiştir. Üçüncü bölümünde ise Ar-Ge faaliyetlerinin vergi gelirlerine etkisi üzerinde durulmuştur.

* Bu çalışma yazarın yayımlanacak olan Yüksek Lisans tezinin bir ön çalışmasıdır.

2. ARAŞTIRMA VE GELİŞTİRME (AR-GE) FAALİYETLERİNE GENEL BAKIŞ

2.1. Ar-Ge'nin Tarihsel Gelişimi, Tanımı ve Türleri

Araştırma-Geliştirme (Ar-Ge) faaliyetlerinin kökeni İngiliz Sanayi Devrimine kadar dayanmaktadır. Bu değişimle birlikte ilk defa profesyonel olarak Almanya Kimya sanayii araştırma-geliştirme (Ar-Ge) faaliyetinde bulunmuştur (Göker, 2008: 3-4). Almanya Kimya sanayiinde 1870 yılında Ar-Ge firma içi birimi olarak kurumsal bir yenilik şeklinde ortaya çıkmıştır. 1870 yılından önceki dönemlerde de birçok icat yapılmış fakat Ar-Ge temelli bilimin gücünden tüm dünyanın etkilenmesi Manhattan Projesi ile kendini Hiroşima ve Nagasaki'de göstermiştir. Bu açıdan bakıldığında yenilikler Ar-Ge ile daha bilimsel ve güçlü temellere dayanmaktadır (Saraç, 2011: 41). Araştırmayı "Bilim", Geliştirmeyi 'de "Teknoloji" tarihi üzerinden okuma sonucunda Ar-Ge kavramının ifade etmek istediği faaliyetlerin, yaşının sistematik olma derecesi çok farklılık gösterse de insanlık tarihi ile benzer olduğu görülmektedir (Koçak, 2018: 9).

Ar-Ge kavramının tanımı makro açıdan ve mikro açıdan olmak üzere iki şekilde tasnif edilir. Makro açıdan Ar-ge, özünde sistematik bir çalışmaya dayanan teknik bilgi ve bilimsel bilgi birikimini yükseltmeye yönelik gayret ve yeni faaliyet alanlarında bu bilgi birikiminin kullanılması şeklinde ifade edilmektedir. Mikro Açıdan Ar-Ge ise kreatif, sistematik bir şekilde işletmelerin yeni ürün ve yeni üretim aşamalarına yönelik yaptıkları çalışmalardır (Ünal ve Seçilmiş, 2014: 203). Diğer bir ifadeyle şirketler açısından Ar-Ge'nin daha detaylı bir tanım yapılması gerekirse, şirketin çalışma alanı kapsamında teknoloji ve bilgiyi geliştirerek hem yeni bilgiler yaratmak hem de mevcut bilgilerle yeni sistemler, yeni malzemeler, yeni mamuller oluşturmak adına kullanılan bir terimdir (Aydoğan, 2015: 4).

Ar-Ge kavramı; temel araştırma, uygulamalı araştırma ve deneysel geliştirme olmak üzere üç farklı şekilde sınıflandırılmıştır. Temel araştırma; teori, hipotez ya da kuralları formülle ve test etmek amacıyla nitelikleri, yapıları ve ilişkileri analiz eder. Temel araştırmanın güdümlü araştırma ve salt araştırma olmak üzere iki türü bulunmaktadır. Salt araştırma, sadece bilginin ilerlemesi amacıyla gerçekleştirilirken; güdümlü araştırma ise geniş bir bilgi tabanı oluşturulacağı beklentisiyle gerçekleştirilir (OECD, 2002: 78). Uygulamalı araştırma, temel araştırmadan elde edilen sonuçlar kullanılarak, kar elde etme saikiyle mamul ve üretim aşamalarında kendine has ve yeni bilimsel bilgi ve teknik ortaya çıkarma hedefine yönelik araştırmalardır (Atabey, 2019: 4). Temel araştırma ile uygulamalı araştırma arasındaki en önemli fark, her iki araştırma çeşidinin hedeflerindeki farklılıktan kaynaklanmaktadır. Temel araştırmanın esas amacı bilimsel bilginin limitlerini genişletmek iken uygulamalı araştırmanın amacı ise çoğu zaman bilinen sorunlara kolay bir çözüm yolu bulma ve bir kazanç sağlamaktır (Yılmaz, 2004: 114). Deneysel geliştirme olarak adlandırılan geliştirme, temel araştırma veya uygulamalı araştırma faaliyetleri neticesinde ortaya çıkan bilgileri daha kazançlı ve daha kârlı olabilecek şekilde emtia, vasıta, hizmet veya üretime dönüştürmeye yönelik çalışmalar şeklinde ifade edilebilir (Görür, 2006: 4-5). Geliştirme; basit geliştirme, teknolojik geliştirme, bilimsel geliştirme olmak üzere kendi arasında üç ayrı kategoride incelenir. Basit Geliştirme; mesleki bilgi ve tecrübelerde daha fazla faydalanarak faydalı neticeler elde edilmesine yönelik küçük ölçekli faaliyetlerdir (Yavuz, 2004: 9). Teknolojik Geliştirme; bilimsel olarak meydana getirilen bir geliştirme türüdür (Akdemir, 1990: 219). Bilimsel Geliştirme; yaratıcılığın ve hayal gücünün olması gerektiği geliştirme türüdür (Ünal ve Seçilmiş, 2013: 13).

Ar-Ge'nin üç türü olan temel araştırma, uygulamalı araştırma ve geliştirmenin nitelikleri bakımından karşılaştırılması aşağıda Tablo 1'de gösterilmiştir.

Tablo 1: Temel Araştırma, Uygulamalı Araştırma ve Geliştirmenin Nitelikleri İtibariyle Karşılaştırılması

AR-GE Türleri	Nitelikleri			
	Temel Amaç	Odak	Kaynak	Felsefe
Temel Araştırma	Yeni bilgi ve bilimsel gerçeklikler üretmek	Yönlendirilmemiş (düşük odak)	Devlet ve üniversite laboratuvarları	Bilginin sınırını genişletmek,
Uygulamalı Araştırma	İşletmelerde kullanılabilir buluşlar yapmak	Sorunları Çözmeye yönelik (ılımlı odak)	Teknolojik öncüler	Teknolojik ilerlemenin önderi olmak
Geliştirme	İşletmelerin buluş ve yeniliklerde değişikliğe gitmesi	Özel sorunları çözmeye yönelik (yüksek odak)	Teknolojik takipçiler	Teknolojileri kullanmak ve geliştirmek

Kaynak: Akgün ve Akgün, 2016: 4.

1.2. Ar-Ge'nin Önemi, Amacı ve Ar-Ge ile İlgili Kavramlar

Ar-ge faaliyetlerine günümüzde ülkeler tarafından önem verilmesi bu faaliyetlerin kalkınma ve gelişmenin temeli olarak kabul edilen bilim ve teknoloji kabiliyetlerini artırmak amacıyla bu faaliyetler teşvik edilmektedir(Çelebi ve Kahrıman, 2011: 34). Ar-Ge faaliyetlerinin önemli olmasının sebepleri şöyle sıralanmıştır; Teknoloji gelişim hızının yükselmesi ve mamul hayat devirlerinin azalması, firmaların gelişmesi ve faaliyetlerinin giderek daha kompleks bir hal alması, küresel çapta artan rekabettir (Yılmaz, 2004: 105).

Devletlerin ve firmaların Ar-Ge faaliyetlerini devam ettirmelerinin temel amacı; ilk olarak rekabet gücünü korumak sonrada rekabet üstünlüğü sağlayabilmek için maliyetlerini azaltmalarının yanında üretim kalitesinin yükselmesiyle beraber iktisadi ve sosyal yarar elde etmektir. Bu doğrultuda yeni mamuller ve üretim aşamaları geliştirmek, iyileştirmek ve yeni uygulama bölgeleri ortaya çıkarmak Ar-Ge'nin en temel amaçlarındandır. Ar-Ge'nin ulusal amacı ise ülkelerin kaynaklarını verimli bir biçimde kullanmasını sağlamak, bilgi birikimini yükseltmek, dışa bağımlılığı düşürmek ve yerli teknolojileri icat etmektir (Canbay, 2016: 17).

Ar-Ge kavramının anlaşılması için bazı kavramların açıklanmasının iki açıdan yararı vardır. İlk olarak Ar-Ge kavramının hangi ekosistemde olduğunu belirlemek, diğer yararı ise bazı kavramların sınırından hareketle Ar-Ge kavramının çerçevesini belirlemektir (Özdiñ, 2013: 11). Ar-Ge ile ilgili olarak inovasyon (yenilik), teknoloji, patent, Ar-Ge projesi, Ar-Ge merkezi, Ar-Ge personeli gibi bazı kavramların açıklanmasında yarar vardır. AB ve OECD literatüründe inovasyon (yenilik) süreç olarak, " bir fikri pazarlanabilir bir ürün veya hizmette, yeni veya geliştirilmiş bir imalat ya da dağıtım yöntemine ya da yeni bir toplumsal hizmet yöntemine dönüştürmeyi" ifade etmektedir (Arıkan vd., 2003: 23). Teknoloji, bilgi ve becerinin pratiğe dönüştürülmesinde kullanılan vasıtaların tümünü ifade etmektedir. Diğer bir ifadeyle teknoloji her türlü bilimsel bilginin pratiğe çevrilmesidir (Kurt, 2019: 16-17). Patent, icadı bulan kişinin izni olmadan başka kimselerin bu icadı üretmesini, kullanmasını veya satmasını belirli bir müddet boyunca engelleme hakkını elinde tutmaya ve bir icat için icat sahibine verilen, sınai ve mülkiyet haklarından biridir(Oğuzkan, 2006: 6). Ar-Ge projeleri; ticari pazar payı, firmanın büyüklüğü, proje organizasyonu gibi birçok faktörlerden etkilenecek şekilde belirli mal ya da hizmeti ortaya çıkarmak ve böylece meydana çıkan ürünün teknolojisini iletirmek maksadıyla tespit edilmiş tasarımıdır. Ar-Ge projeleri daha evvelden olmayan bir üretimi yapmak için değil, mevcut olan bir üretimin geliştirilmesine amacıyla da tasarlanabilir (Görür, 2006: 8). Thomas Edison 1890'da Amerika Birleşik Devletleri'nde kurduğu General Electric Company ile kurumsal Ar-Ge faaliyetini ilk kez ortaya çıkarmıştır. Buna göre Ar-Ge faaliyetlerini bir merkezde toplayan ilk insan olarak bilinmektedir. Amerika'da Ar-Ge harcamalarının bir merkezde birleşmesi ve bu birleşmenin yüksek başarı sağlaması sayesinde diğer ülkelerde bu uygulamaya geçilmiştir(Salman, 2019: 16-17). Ar-Ge merkezi, Türk Ar-Ge literatürüne ilk olarak 5746 sayılı kanun ile girmiştir (Tekin, 2015: 228). Ar-Ge faaliyetinin açıklanması hususundaki diğer bir kavramda bu alanda istihdam edilen personel sayısıdır. Zira personel sayısının artmasıyla Ar-Ge faaliyetleri artmakta ve faaliyet neticesinde daha fazla mamul ve icat meydana çıkarılmaktadır. Bu durum ise doğrudan ekonomide olumlu etki meydana getirmekte, piyasaya sürülen her yeni mamul üretimi yükseltmekte, yeni katma değerler ortaya çıkarmakta, istihdamın yükselişine katkıda bulunmakta, ihracat miktarında yükselişe sebep olmakta ve ülke ekonomisine geliştirici yönde olumlu etkide bulunmaktadır (Özenç, 1998: 64-65).

1.3. Ar-Ge Harcamaları

Kültürel, toplumsal ve insanlar açısından Ar-Ge harcamaları bilginin yükseltilmesi veya daha önce hiç girilmemiş alanlarda bilgiyi yükseltmek amacıyla düzenli bir şekilde yaratıcı olarak yürütülen faaliyetlerle ilgili olarak gerek devlet tarafından yapılan gerekse de özel kesimin yaptığı harcamalar şeklinde açıklanmaktadır(Kantarci, 2017: 30).

Yapılan harcamaların hangilerinin Ar-Ge harcaması olduğu 5746 sayılı kanununun Araştırma, Geliştirme ve Tasarım Faaliyetlerinin Desteklenmesine İlişkin Uygulama ve Denetim Yönetmeliği'nin yedinci maddesinde ayrıntılı bir şekilde açıklanmıştır. Ar-Ge faaliyeti çerçevesinde değerlendirilen harcamalar

kısaca şunlardır; ilk madde ve malzeme giderleri, amortismanlar, personel giderleri, genel giderler, dışarıdan sağlanan fayda ve hizmetler ve vergi, resim ve harçlardır(Önder ve Yıldız, 2017: 150-151).

Ekonomik büyümeyle Ar-Ge harcamaları arasındaki ilişki üzerine yapılan çalışmalarda Ar-Ge harcamalarının ekonomik büyüme üzerinde pozitif yönde etkisinin olduğu ortaya konulmaktadır(Kaya, 2017: 49-50). Akarsu, vd.(2020: 159) çalışmasında 1996-2017 dönemi arasında 14 seçili ülkenin (Avusturya, Belçika, Bulgaristan, Çekya, Almanya, İspanya, Finlandiya, Fransa, Birleşik Krallık, Macaristan, İrlanda, Polonya, Romanya ve Türkiye) Ar-Ge harcamaları ve patent başvuruları ile ekonomik büyüme arasındaki ilişkileri panel veri yöntemiyle analiz edilmiştir. Çalışma neticesinde Ar-Ge harcamalarında %1’lik bir yükseliş seçilen ülkeler üzerinde GSYH’de % 0.87 olarak bir artış göstermektedir. Patent başvuru sayıları ile GSYH arasında az da olsa bir etki olmakla beraber aralarında negatif bir ilişki olduğu tespit edilmiştir. Gülmez ve Yardımcıoğlu, (2012: 335) çalışmasında ekonomik büyüme ile Ar-Ge harcamaları arasındaki uzun vadeli ilişkiyi 1990-2010 yılları arasında 21 OECD ülkesinin verilerinden faydalanarak panel nedensellik ve eşbütünlük metotları ile analiz etmişlerdir. Çalışma neticesinde Ar-Ge harcamalarıyla ekonomik büyüme arasında uzun vade de karşılıklı bir şekilde anlamlı bir ilişkinin olduğunu belirtmekle birlikte 21 OECD ülkesinde Ar-Ge harcamalarındaki %1’lik bir yükselişin ekonomik büyümeyi % 0.77 oranında yükselttiğini tespit etmişlerdir.

1990-2019 yılları arasında Ar-Ge harcamalarının GSYH içindeki payının bazı OECD ülkeleri üzerindeki yüzdesel dağılımı şekil 1’de gösterilmektedir

Şekil 1: Bazı OECD Ülkelerinin 1990-2019 Yıllarında Ar-Ge Harcamalarının GSYH İçindeki Payı (GSYH %’si olarak Ar-Ge Harcamaları)

Kaynak: OECD (2020), <https://data.oecd.org/rd/gross-domestic-spending-on-r-d.htm>.

Türkiye’de ve OECD ülkelerinde Ar-Ge harcamalarının GSYH içerisindeki payı şekil 1’e bakıldığında son yirmi yılda sürekli bir yükseliş içerisinde olduğu fakat gelir seviyesi yüksek ülkelerin GSYH’den Ar-Ge harcamalarına ayırdığı pay ile Türkiye’nin GSYH’den Ar-Ge harcamalarına ayırdığı pay arasında büyük fark olduğu görülmektedir. Şekil 1’e detaylı bir şekilde bakıldığında Avrupa Birliği ülkeleri, Çin, Fransa, İngiltere, Rusya ve Türkiye’nin Ar-Ge harcamalarının GSYH içerisindeki payları OECD ortalamasının altında kaldığı ancak Amerika Birleşik Devletleri, Japonya ve 2003 yılından sonra Avusturya gibi ülkelerin OECD ortalamasının üstünde kaldığı görülmektedir.

2. VERGİ GELİRLERİNE GENEL BAKIŞ

Tarihsel dönemlere bakıldığında verginin yer almadığı tek bir uygarlık bulunmamaktadır. Verginin tarihsel geçmişi yazının buluşuna ve ilkel toplumlarla ilgili arkeolojik çalışmalarda vergi izlerine rastlamak mümkündür. Yazının icadı aynı zamanda kayıt işlemlerini de başlatmış bu da vergi kavramı ve tarihinin daha kolay anlaşılmasını sağlamaktadır. Gerek yerleşik hayatın olmadığı ilkel kabilelerde gerek yerleşik

hayata geçmiş ilkel toplumlarda gerekse örgütlü çağdaş toplumlarda vergiye yer verildiği görülmektedir (Özmen, 2016: 7).

Vergi, devletin kamu harcamalarını karşılamak maksadıyla hukuki cebir altında kişilerden ve kurumlardan karşılıksız bir şekilde temin ettiği aynı ve parasal (nakdi) ödemeler olarak tanımlanmaktadır (Sandalcı ve Köstekçi, 2019: 308).

Geçmiş dönemlerde vergilerin toplanma nedeni mali temellere dayalı değil iken daha çok dini, ahlaki ve siyasi fikirlere dayanır. Modern devletlerin oluşmaya başlaması ile vergilerin toplanma nedenlerinde de değişiklik baş göstermiştir. Vergiyi haklı kılmak için farklı görüşler ileri sürülmüştür. Bu görüşler fayda teorisi ve iktidar teorisi olmak üzere iki şekilde tasnif edilmiştir (Öz, 2019: 62). Fayda teorisine göre vergi, bireylere devlet tarafından sunulan kamu hizmetlerine karşılık olarak bireylerin de geliri ya da bedeninden yapmış oldukları zorunlu ödemelerdir (Şentürk, 2017: 3). Fayda teorisi; vergiyi hizmet bedeli olarak açıklayan görüş, vergiyi sigorta primi olarak açıklayan görüş ve son olarak vergiyi genel giderlere katılma payı olarak açıklayan görüş olmak üzere üç şekilde tasnif edilmektedir. Vergiyi hizmet bedeli olarak açıklayan görüşe göre; kamu tarafından sunulan hizmetler dolayısıyla kişilerden bu hizmetten sağladıkları yarar ölçüsünde vergi alınmasıdır (Sağdıç, 2015: 11). Vergiyi sigorta primi olarak açıklayan görüşe göre; vergi, kamu tarafından temin edilen can ve mal güvenliği hizmetinin karşılığı olarak ödenen sigorta primi olarak açıklanmaktadır (Şentürk, 2017: 4). Vergiyi genel giderlere katılma payı olarak açıklayan görüşe göre ise toplum bir çeşit üreticiler birliğine benzetilmekte olup vergi ise devletçe sunulan kamu hizmetlerinin toplumsal üretime katılmasının karşılığı olarak alınan toplanan bir gelir olarak ifade edilmektedir (Öz, 2019: 63). Vergiyi açıklamada ödeme gücünü temel alan iktidar teorisine göre devletin egemenlik hakkına dayalı olarak yurttaşlarına vergi koyduğu ve bu doğrultuda yurttaşlarında devlete karşı vergi ödevinin bulunduğu vurgulanmaktadır (Kayan, 2000: 81). Başka bir ifadeyle vergi bireylerin ödeme gücü ile olmalıdır (Sağdıç, 2015: 13).

Verginin tanımı içerisinde yer alan “kamu giderlerini karşılamak” ifadesi ile verginin hizmet ettiği yegâne amaç açık bir şekilde belirtilmiştir. Verginin amaçları, verginin mali amaçları ya da mali olmayan amaçları şeklinde literatürde ikili bir tasnife tabi tutulmuştur. Mali amaç, vergilerin yalnızca kamu giderlerini finanse etmek maksadıyla başvurulan bir araç olup bununla birlikte kamu maliyesinin geleneksel fonksiyonu olarak kullanılmaktadır. Mali olmayan amaç ise verginin sosyal, ekonomik, dini, ahlaki gibi diğer saiklerle alınması şeklinde ifade edilmektedir (Karaca, 2015: 7). Vergilemeye ekonomik açıdan bakıldığında; vergi teşvikleri uygulamaları, vergi oranlarında indirim yapılması, yatırım ve tasarrufları yönlendirebilmek amacıyla vergiler bir iktisadi politikası aracı olarak kullanılabilir (Yenigün, 2012: 21-22). Sosyal amaç olarak bakıldığında; Wagner, piyasa ekonomisiyle meydana gelen gelir ve servet dağılımındaki adaletsizliklerin vergi aracılığıyla giderilebileceğini ifade etmiştir (Ata, 2001: 18). Dini faktörler devletlerin uyguladıkları vergi politikalarını etkilemektedir. Orta çağda Avrupa ülkelerinde Musevilerden ek vergiler toplanması ayrıca İslam ülkelerinde Müslümanlar farklı vergiye tabi tutulurken ve Müslüman olmayanlardan farklı vergiye tabi tutulmaktaydı (Çatalok, 2019: 30). Verginin ahlaki amacı incelendiğinde, özel tüketim vergileri ile halkın ahlakının korunması ve toplumun sağlıklı bir yaşam sürmesi hedeflenmektedir (Çetin, 2018: 6).

Vergiler birçok farklı maksatla alınmaktadır. Bu maksatlar dönemler itibarıyla değişiklik göstermekle birlikte vergilerin sınıflandırılmasını çeşitlendirmektedir. Günümüz çağdaş vergileme sistemlerinde en yaygın biçimde kullanılan tasnif şekli gelir, servet ve harcamalar üzerinden alınan vergilerin sınıflandırılmasından meydana gelmektedir (Gürbüz, 2015: 11). Devletler, kamu giderlerini karşılamak ve planlanan hedeflerini yerine getirebilmek amacıyla vergi gelirlerine gereksinim duymaktadırlar. Vergi gelirleri ise gelir üzerinden alınan vergiler, servet üzerinden alınan vergiler, mal ve hizmetler üzerinden alınan vergilerden oluşmaktadır (Tülümce ve Yavuz, 2019: 550). Gelir ve kurumlar vergisi gelir üzerinden alınan vergiler, emlak vergisi, veraset ve intikal vergisi, motorlu taşıtlar vergisi servet üzerinden alınan vergiler ise katma değer vergisi, özel tüketim vergisi, özel iletişim vergisi, banka ve sigorta muameleleri vergisi, şans oyunları vergisi, damga ve gümrük vergisi ise harcamalar üzerinden alınan vergilerdir. Bu doğrultuda Türkiye ve OECD ülkelerinde gelir üzerinden alınan vergiler, servet üzerinden alınan vergiler ve harcamalar üzerinden alınan vergilerin sınıflandırılmasına göre bu vergilerin toplam vergi gelirleri içerisindeki yüzdesel dağılımı şekil 2’de gösterilmiştir

Şekil 2: Türkiye’de ve OECD Ülkelerinde 1990-2018 Yıllarında Konuları İtibariyle Vergilerin Toplam Vergi Gelirleri İçindeki Payı (%)

Kaynak: OECD (2020), https://stats.oecd.org/Index.as#px?DataSetCode=RS_GBL

Şekil 2 incelendiğinde Türkiye’de 1990 yılında %33,5 olan gelir üzerinden alınan vergilerin toplam vergi gelirleri içerisindeki payı 2018 yılına gelindiğinde %24,2’ye gerilemiş olduğu görülmekte olup OECD ülkelerinde ise 1990 yılında %37,2 olan gelir üzerinden alınan vergilerin toplam vergi gelirleri içerisindeki payı 2018 yılı itibariyle %34,3’e gerilemiştir. Servet üzerinden alınan vergilere bakıldığında Türkiye, OECD ortalamasının altında kalmıştır. 1990 yılında %2,3 olan servet üzerinden alınan vergilerin toplam gelir vergisi içerisindeki payı 2018 yılı itibariyle %4,3 yükselmiştir. Mal ve hizmet üzerinden alınan vergiler açısından bakıldığında ise Türkiye 1994 yılından sonra OECD ortalamasının üzerine çıkmıştır. 1990 yılında mal ve hizmet üzerinden alınan vergilerin toplam vergi gelirleri içerisindeki payı Türkiye’de %27,9 iken 2018 yılı itibariyle %40,5 olup OECD ortalamasının çok üzerinde olduğu görülmektedir.

Şekil 3’de 1990 ve 2019 dönemi arasında toplam vergi gelirlerinin GSYİH içindeki payının yüzdesel dağılımı Türkiye ile OECD ortalaması karşılaştırılarak gösterilmiştir. Aynı zamanda Şekil 3’de toplam vergi gelirlerinin GSYİH içindeki payının en düşük olduğu ülke olan Meksika ile en yüksek olduğu ülke olan Danimarka gösterilmiştir.

Şekil 3: Türkiye ve OECD Ülkelerinde 1990-2019 Döneminde Toplam Vergi Gelirlerinin GSYİH İçindeki Payının Yüzdesel (%) Dağılımı

Kaynak: OECD (2020), <https://stats.oecd.org/>

Şekil 3 incelendiğinde Türkiye’deki toplam vergi gelirlerinin gayri safi yurt içi hasıla (GSYİH) içindeki payı 1990 yılından 2001 yılına kadar sürekli artış göstermiş olup 2002 yılında azalış yaşanmış fakat daha sonra 2003 yılında yükselmiş ve yatay seyretmiştir. OECD ortalamasında ise benzer şekilde 1990 yılından 2001 yılına kadar sürekli artış göstermekle birlikte 2002 yılında azalmış daha sonra 2003 yılında yükselmiş ve yatay seyretmiştir. Türkiye’nin ve Meksika’nın toplam vergi gelirlerinin GSYİH içindeki payının oransal dağılımı OECD ortalaması ile karşılaştırıldığında daima OECD ortalamasının altında kaldığı görülmekte iken Danimarka’nı toplam vergi gelirlerinin GSYİH içindeki payının yüzdesel dağılımı OECD ortalamasıyla karşılaştırıldığında daima OECD ortalamasının üzerinde seyretmiştir.

3. AR-GE FAALİYETLERİNİN VERGİ GELİRLERİNE ETKİSİ

Ar-Ge faaliyetleri için yapılan harcamalar genellikle ülkelerin vergi gelirleri üzerinde kısa dönemde negatif bir etkiye sahip iken uzun dönemde ise Ar-Ge faaliyetleri neticesinde ortaya çıkan katma değeri yüksek mal ve hizmetlerin vergi gelirlerine yönelik bu negatif etkisini yok etmektedir (Erdoğan, 2020: 48). Ar-Ge faaliyetleri, üretime ve istihdama dönüştürüldüğü sürece meydana gelen çarpan ve hızlandırıcı etkisiyle yeni faaliyet ve ürünler üzerindeki vergileri de yükseltmesinden dolayı devlet maliyesi yönünden tamamen gider olarak değerlendirilmemelidir. Ar-Ge faaliyetleri neticesinde ortaya çıkan bu yeni faaliyetler, yeni doğrudan ve dolaylı olarak vergiler meydana getireceğinden kısa vade de olmasa bile orta ve uzun vade de devlet maliyesi karlı dahi çıkabilmektedir (Efe, 2017: 234).

Ar-Ge faaliyetleri ilk olarak vergi gelirinde kayba neden olan bir vasıta olarak görülmektedir. Ar-Ge faaliyetleri üretim ve verimlilikte yükseliş sağlıyorsa, iş ve çalışma faaliyetlerinin genişlemesine neden oluyorsa bu durumda Ar-Ge faaliyetleri vergi gelirlerindeki azalışı karşıladığı gibi uzun dönemde ise vergi gelirlerinde ciddi oranlarda yükseliş sağlayabilmektedir (Candan ve Yurdadoğ, 2017: 166-167).

4.SONUÇ

Günümüz globalleşen dünyada rekabet önemli ölçüde arttığı için devletler ve firmalar varlıklarını devam ettirebilmek ve rekabet üstünlüğü sağlayıp ekonomik güçlerini artırabilmek amacıyla Ar-Ge faaliyetlerine önem vermektedir. Yapılan birçok akademik çalışma neticesinde Ar-Ge faaliyetlerine yönelik olarak yapılan harcamalar ile GSYH’nin ilişkili olduğu tespit edilmiştir. Bununla birlikte akademik olarak yapılan ampirik çalışmaların, Ar- Ge faaliyetleri için yapılan harcamaların iktisadi büyümeyi pozitif yönde etkilediği görülmektedir.

Vergi gelirleri açısından Ar-Ge faaliyetleri incelendiğinde ise Ar-Ge faaliyetleri kısa vade de devletlerin vergi gelirinde kayba neden olmaktadır. Yani Ar-Ge faaliyetleri başlangıçta devlet bütçesini olumsuz yönde etkilemektedir. Ancak Ar-Ge faaliyetleri orta ve uzun vade de devletlerin vergi gelirlerinde bir azalışa neden olmayıp kamu maliyesini olumlu yönde etkilemektedir.

adiloguzhan@trakya.edu.tr

Özet: Finansal sistemi oluşturan kuruluşlar arasında önemli bir yere sahip olan bankalar, çeşitli ürünler aracılığı ile faaliyetlerini sürdürerek bir ülkenin ekonomik büyümesinde önemli rol oynarlar. Bankacılık ürünlerinin verimliliği ve kullanım yaygınlığı, ekonominin genel olarak istikrarlı olup olmadığının göstergesi olabilir. Bu nedenle bu çalışmada toplam kredi, POS ve ATM enstrümanları için bölgesel karşılaştırılma yapılmakta ve bu karşılaştırma sonucunda meydana gelen farklılığın hangi bölgelerden kaynaklandığı incelenmektedir. Çalışma verileri, Türkiye Bankalar Birliği (TBB) tarafından sunulan verilerden elde edilmiştir. TBB, bankacılık ürünlerinin kullanımını Türkiye'yi 12 bölgeye ayırarak sınıflandırmıştır. Bölgelere göre toplam kredi miktarını karşılaştırmak için 2002-2019 yılları arası için sunulan veriler alınmıştır. Bölgelere göre kullanılan ATM ve POS sayıları ise 2010 yılı öncesine ait veri olmadığından 2010-2019 yılları arasındaki verilere göre değerlendirilmiştir. Söz konusu bankacılık ürünlerinin bölgelere göre karşılaştırılması için ANOVA/Varyans analizi ve hangi bölgeler arasında fark olduğunun tespiti için Tukey testi uygulanmıştır. Çalışma bulgularına göre İstanbul bölgesine ait ortalama toplam kredi miktarı, ATM ve POS kullanımı diğer bölgelere göre anlamlı bir şekilde yüksek orana sahiptir. Elde edilen sonuçları genel olarak değerlendirmek gerekirse bankacılık ürünlerinin kullanımı, bölgesel farklılık gösterdiği gibi bu farklılığın meydana gelmesinde bölgelere göre demografik etkenler, müşteri davranışları, müşterinin talebi, teknolojinin gelişmesi gibi faktörlerin etkili olduğu söylenebilir.

Anahtar Kelimeler: Finansal Sistem, Banka, Bankacılık, ATM, POS

Abstract: Banks which have an important place for organizing the financial system of a country play an important role in the economic growth of the country by continuing their activities through various instruments. The efficiency and widespread use of banking instruments may indicate whether the economy is generally stable. Therefore, in this study, it is aimed to determine the regional differences in the prevalence of the total loan, POS, and ATM usage. The study data were obtained from the Banks Association of Turkey. The Banks Association of Turkey classified the use of bank instruments by dividing Turkey into 12 regions. In order to compare the total loan amount use in the regions, the data are presented for the years 2002-2019 in the Banks Association of Turkey records. The number of ATM and POS use in the regions was evaluated according to the data between 2010-2019, since the data related to the number of ATM and POS before 2010 were not included in the Banks Association records. ANOVA analysis was used to compare the abovementioned bank instruments. According to the findings of the study, the average total loan amount, ATM and POS usage in the Istanbul region has a significantly higher rate when compared to other regions. The results, in general, displayed that the use of bank instruments shows regional differences; the factors for such regional differences may stem from demographic factors, customer behaviours, customer demands, and the development of technology.

Key Words: Financial System, Bank, Banking, ATM, POS

1. GİRİŞ

Bankalar mevduat kabul eden ve topladıkları bu mevduatları fon ihtiyacı olan gerçek ve tüzel kişilere kredi olarak kullandıran finansal kuruluşlardır. Bu kuruluşlarda yapılan işlemler sadece bunlarla sınırlı kalmayıp kredi/banka kartı gibi ödeme kolaylıklarının kullanımı, menkul kıymet alış-satış işlemleri, çek-senet işlemleri, kıymetli varlıkların korunması için kiralık kasa sağlanması, iç ve dış ticaret işlemlerinde aracılık yapma gibi birçok görevi de yerine getirmektedirler. Finansal yapının temel yapı taşları içerisinde önemli bir paya sahip olan bankalar, ülke ekonomisinin hızlı büyüme ve gelişim göstermesinde de önemli bir araçtır (Yetiz, 2016: 107). Bankacılık ürünlerinin verimliliği ve kullanım yaygınlığı, ekonominin genel olarak istikrarlı olup olmadığının göstergesi olabilir. Bankacılık ürünleri denilince kredi, kredi kartı, ATM, POS vb. ürünler gündeme gelmektedir. Müşterilerin bankacılık ürünlerini kullanımına yönelik birçok çalışma yapılmıştır. Örneğin Kheng ve arkadaşları (2010) tarafından yapılan çalışmada, ATM ve internet bankacılığı hizmetlerinin tercih edilen bankacılık ürünleri olduğu bulgulanmıştır ve bu iki ürünün yaygın olarak tercih edilmesi veya kullanılması banka piyasasındaki rekabet gücünü önemli derecede etkilediği

üzerinde de durulmuştur. Ancak Korkmaz ve arkadaşları tarafından yapılan çalışmada (2015) İstanbul, Ankara, Van ve İzmir illeri örnekleminde banka müşterileri ile yüz yüze görüşülerek yapılan anket çalışmasından elde edilen bulgulara göre ATM kullanımlarında katılımcıların çoğunluğu bankanın sunduğu hizmetleri yetersiz bulmuşlardır ve bunun neticesinde maddi ve manevi zarara uğradıklarını beyan etmişlerdir. Ceylan ve Durkaya (2010) tarafından yapılan 10 yıllık zaman diliminde (1998-2008) yurtiçi kredi hacmi ve ekonomik büyüme ilişkisine yönelik araştırmada banka kredilerinin ekonomik büyümeye pozitif yönde etki yaptığı tespit edilmiştir. Bu çalışmada da toplam kredi, POS ve ATM enstrümanları için bölgesel karşılaştırılma yapılmakta ve bu karşılaştırma sonucunda meydana gelen farklılığın hangi bölgelerden kaynaklandığı incelenmektedir.

Krediler

Günümüz koşullarında gerçek ve tüzel kişilerin belirli bir miktar para ile ihtiyaçlarını karşılaması oldukça zordur. Masrafların karşılanması için bir sisteme ihtiyaç vardır. Böyle bir sistemi banka ve diğer finansal kuruluşlar sağlamak ve bu sistem kredi sistemi olarak adlandırılmaktadır. Kredi, Latince inanma anlamına gelen credere kökünden gelmekte saygınlık ve güven anlamını karşılamaktadır. Kredi ve mevduat olmak üzere iki temel unsur üzerine kurulmuş olan bankacılık sisteminin içerisinde, bankalar, toplamış oldukları mevduatları en etkin biçimde kredi olarak kullanılabildikleri sürece kar edebilmektedirler. 21. yüzyılda gerçek ya da tüzel kişileri krediden ayrı düşünmek neredeyse imkansızdır. Hem bireylerin hayatı hem de ticari hayatın devamlılığı için vazgeçilemez bir koşul haline almıştır. Kredinin farklı tanımları söz konusudur. TBB'ye göre bir kimseye ödünç para vermek, karşılığını daha sonra almak kaydıyla bir mal veya hizmet vermek olarak tanımlanabilir. Bankacılıktaki tanımı, bankanın yapacağı araştırma sonucunda gerçek veya tüzel kişilere teminat karşılığı veya teminatsız olarak para, teminat veya kefalet vermek şeklinde tanınan limittir. Bunu yaparken yasaları, bankanın iç kurallarını ve kaynaklarını da göz önünde bulundurulması gerekmektedir (Söğütçü, 2011: 42-43).

ATM (Automatic Teller Machine)

1980'lerin sonuna doğru bankalar tam anlamıyla elektronik bankacılığa geçiş sağlamıştır. Kişisel bankacılık hizmetlerinin hizmete sunulmaya başlaması, müşterilerin bankaya gitmeden bankacılık işlemlerini gerçekleştirmesine olanak tanıyan ATM ile başlamıştır (Erol vd., 2015: 4). ATM aracılığı ile banka müşterileri para çekmenin yanı sıra hesaplar hakkında bilgi sahibi olma, hesaba para yatırma, hesaplar arasında transfer yapma, kredi başvurusunda bulunma, düzenli ödemeler yapma, çek defteri isteme, seyahat çekleri çıkarma, fatura ödeme gibi işlemler yapılmaktadırlar. Bankalar, ATM'lerinin karlılığını arttırmak için ATM'leri talebin az olduğu yerlerden talebin yüksek olduğu bölgelere kaydırılması ve diğer bankalarla yapılan anlaşmalarla bankaların operasyon maliyetlerini ortak ATM'ler kurarak azaltma eğilimleri gibi stratejiler uygulamaktadır. Bölgelere göre yapılan kaydırma işleminin yanı sıra spor müsabakaları için bilet, promosyon kuponları vb. stratejiler uygulayarak da getirilerini en yüksek seviyeye çıkarmayı hedeflemektedirler. İşlem esnasında soru-cevap şeklinde konuşularak müşteriye hizmet vermeleri için daha çok şube açmak zorunda kalmadan maliyetlerini azaltma eğilimi göstermişlerdir (Işın, 2006: 111-112).

POS (Point Of Sales Terminal)

POS sisteminde, alıcı ile satıcının hesapları arasında transferin sağlanması özel bir elektronik alet içine yerleştirilen plastik kartlar (kredi kartı, debit kart vb.) ile yapılmaktadır. Günümüzde bu sistemde yeni uygulamalar geliştirilmektedir. Burada fonların transferi banknot ve çek gibi fiziki şekilde değil, teknolojinin gelişip bilgisayarın ve modern haberleşme tekniklerinin hayata girmesiyle çok kısa bir süre zarfında ve kaydi şekilde elektronik yöntemlerle yapılmaktadır. (Kargın, 2006: 66-67). Yaygın bir şekilde kullanılan POS terminalleri vasıtasıyla işlem yapma, kredi kartlarının kullanım alanlarının yaygınlığı ile paralel olarak gelişme göstermiştir. Bu terminaller yardımıyla, mal ve hizmetlerin karşılıkları nakit kullanılmadan plastik kartlar aracılığıyla elektronik yollarla ödenebilmektedir. Bu işlemlerin gerçekleştirilmesi için üye işyerinin telefon hatlarıyla iletişime açık elektronik terminale ve bu terminal

için müşteri şifresi girilmesine yarayan bir klavyeye ihtiyacı vardır. Müşterinin ise bir veri taşıyıcısı ile donatılmış bir plastik karta ihtiyacı vardır (Varıcı, 2015: 76-77).

2. VERİ TASARIMI ve YÖNTEM

İki veya daha fazla gruba ait ortalamaların karşılaştırmasında parametrik bir test olan varyans analizi/ANOVA kullanılmaktadır. Varyans analizi/ANOVA'nın varsayımları veri dağılımının normal olması ve varyans homojenliği olarak sıralanabilir. Varsayımların ihlal edildiği durumlarda ise veri dönüştürme yöntemleri kullanılmalı veya parametrik olmayan analizler tercih edilmelidir (Field, 2009).

Bu çalışmada veriler TBB'den (Türkiye Bankalar Birliği) alınmıştır. Krediler 2002 yılından itibaren ihtisas kredileri (tarım, gayrimenkul, mesleki, denizcilik, turizm, diğer) ve ihtisas dışı kredileri kapsayacak şekilde toplam krediler olarak varyans analizi/ANOVA yöntemi ile analiz edilmiştir. POS ve ATM verileri ise 2010 yılı itibarıyla incelenmiş ve yine varyans analizi/ANOVA uygulanmıştır.

TBB tarafından sunulan aşağıdaki zaman aralıklarına ait veriler kullanılmıştır.

Tablo 1: Kullanılan Veri Setlerinin Ait Olduğu Zaman Aralıkları

Değişken	Aralık	Süre
Toplam Kredi	2002 – 2019	18 Yıl
ATM Sayısı	2010 - 2019	10 Yıl
POS Sayısı	2010 - 2019	10 Yıl

Çalışmada kullanılan veriler normal dağılım göstermediği için tüm değişkenler log dönüşüm yöntemiyle dönüştürülmüş, varyans analizi/ANOVA dönüştürülmüş veriyle gerçekleştirilmiştir. Dönüştürülen verinin normal dağılımın yanı sıra varyans homojenliğine de sahip olduğu görülmüştür ($p > 0,05$). Hangi gruplar arasında anlamlı fark olduğunun tespiti için Tukey Post Hoc testinden yararlanılmıştır.

3. BULGULAR

3.1. Bölgelerin Toplam Kredi Miktarı Bakımından Karşılaştırılması

2002 – 2019 yılları için TBB tarafından sunulmuş olan toplam kredi verileri incelendiğinde, 18 yıllık dönemde ortalama kredi miktarının 8289857,583 TL ($SS = 21824162,30$) olduğu, minimum yıllık toplam kredi miktarının 5488,49 TL maksimum yıllık toplam kredi miktarının ise 194993982 TL olduğu görülmektedir.

Toplam kredi miktarı verisinin bölgelere göre dağılımı aşağıda sunulmuştur.

Tablo 2: Toplam Kredinin Bölgelere Göre Dağılımı

Bölge	N	O	SS	Min	Maks
İstanbul	18	43404440,664	59021244,598	251245,640	194993982
Batı Anadolu	18	13117835,680	17869208,864	75543,240	56720151
Ege	18	11187929,039	15692349,479	68322,360	49872394
Akdeniz	18	8907314,166	13003092,355	60620,490	43303891
Doğu Marmara	18	7564969,839	10133381,977	46245,100	33376533
Batı Karadeniz	18	3169485,493	4633144,192	20476,990	15008232
Güneydoğu Anadolu	18	2942575,515	4426445,063	23061,660	15344967
Batı Marmara	18	2780828,811	4078944,510	18434,060	12976898
Orta Anadolu	18	2534893,363	3653624,733	17298,080	12068028

Doğu Karadeniz	18	2017423,338	2492015,352	11105,630	7931609
Ortadoğu Anadolu	18	1062538,961	1565679,014	8048,360	5229942
Kuzeydoğu Anadolu	18	788056,126	1136070,129	5488,490	3699186
Toplam	216	8289857,583	21824162,303	5488,490	194993982

Tabloda görüldüğü gibi, 2002 – 2019 arasındaki 18 yıllık dönemde en yüksek toplam kredi ortalamasının İstanbul bölgesinde (O = 43404440,664, SS = 59021244,598), en düşük toplam kredi ortalamasının ise Kuzeydoğu Anadolu bölgesinde (O = 43404440,664, SS = 59021244,598) gözlenmiştir. İstanbul, Batı Anadolu, Ege ve Akdeniz bölgelerinin ortalama kredi miktarının üzerinde, diğer bölgelerin ise aynı değerin altında kaldığı görülmüştür.

Toplam kredi miktarı değişkeninin bölgelere göre karşılaştırıldığı varyans analizi/ANOVA sonuçları aşağıda sunulmuştur.

Tablo 3: Toplam Kredi Miktarının Bölgelere Göre Karşılaştırılması

Değişken	Varyans Kaynağı	KT	SD	KO	F	P
Toplam Kredi (Lg10)	Gruplar arası	49,763	11	4,524	3,798	0,000
	Grup içi	242,987	204	1,191		
	Toplam	292,750	215			

Varyans analizi/ANOVA analizi sonuçları toplam kredi miktarı değişkeninin bölgelere göre farklılık gösterdiğini ortaya çıkarmıştır (F = 3,798, p < 0,001). Tukey Post Hoc testlerine göre aşağıdaki bölgeler arasındaki farkların anlamlı olduğu saptanmıştır.

Tablo 4: Tukey Testi Sonuçları

Bölge 1	Bölge 2	Fark	p
İstanbul	Batı Marmara	1,235	0,039
	Orta Anadolu	1,256	0,032
	Doğu Karadeniz	1,353	0,013
	Kuzeydoğu Anadolu	1,736	0,000
	Ortadoğu Anadolu	1,611	0,001
Batı Anadolu	Kuzeydoğu Anadolu	1,230	0,040

Tukey testi sonuçlarına göre İstanbul bölgesine ait ortalama toplam kredi miktarı Batı Marmara, Orta Anadolu, Doğu Karadeniz, Kuzeydoğu Anadolu ve Orta Anadolu bölgelerinden anlamlı bir şekilde daha yüksektir (p < 0,05). Ayrıca Batı Anadolu bölgesine ait toplam kredi miktarının Kuzeydoğu Anadolu bölgesinden anlamlı şekilde daha yüksek olduğu görülmüştür (p < 0,05). Toplam kredi miktarı için diğer bölgeler arasında anlamlı bir fark saptanmamıştır (p > 0,05).

3.2. Bölgelerin ATM Sayıları Bakımından Karşılaştırılması

2010 – 2019 yılları için TBB tarafından sağlanan ATM verileri, 10 yıllık dönemde bölgelere göre ortalama ATM sayısının 3301,033 (SS = 2823,926), minimum ATM sayısının 416, maksimum ATM sayısının 11933 olduğunu göstermektedir. 10 yıllık dönemde ATM sayılarının bölgelere göre dağılımı aşağıda sunulmuştur.

Tablo 5: Ortalama ATM Sayılarının Bölgelere Göre Dağılımı

Bölge	N	O	SS	Min	Maks
İstanbul	10	10300,300	1668,049	7180	11933
Ege	10	6254,400	1130,388	4257	7358
Batı Karadeniz	10	4568,900	856,617	3030	5405
Doğu Marmara	10	4368,200	746,586	3037	5095
Akdeniz	10	4364,700	899,355	2734	5233
Batı Anadolu	10	2065,300	380,859	1375	2453
Batı Marmara	10	1896,300	367,152	1254	2262
Kuzeydoğu Anadolu	10	1685,100	395,414	1032	2063
Güneydoğu Anadolu	10	1484,200	307,759	965	1788
Orta Anadolu	10	1113,100	224,084	708	1351
Ortadoğu Anadolu	10	888,200	200,582	553	1101
Doğu Karadeniz	10	623,700	127,453	416	749
Toplam	120	3301,033	2823,926	416	11933

Tabloda görüldüğü gibi, 2010-2019 arasındaki 10 yıllık dönemde en yüksek ATM sayısı ortalaması İstanbul bölgesinde (O = 10300,300, SS = 1668,049), en düşük ATM sayısı ortalaması ise Doğu Karadeniz bölgesinde (O = 623,700, SS = 127,453) saptanmıştır. İstanbul, Ege, Batı Karadeniz, Doğu Marmara ve Akdeniz bölgelerinin ATM sayısı ülke ortalamasının üzerinde, diğer bölgelerin ise aynı değerin altında kaldığı görülmüştür. Varyans analizi sonuçları aşağıda sunulmuştur.

Tablo 6: ATM Sayılarının Bölgelere Göre Karşılaştırılması

Değişken	Varyans Kaynağı	KT	SD	KO	F	P
ATM Sayısı (Lg10)	Gruplar arası	15,189	11	1,381	157,609	0,000
	Grup içi	0,946	108	0,009		
	Toplam	16,135	119			

Varyans analizi/ANOVA sonuçları ATM sayılarının bölgelere göre anlamlı bir şekilde farklılaştığını göstermiştir (F = 157,609, p < 0,001). Hangi bölgeler arasında fark olduğunun tespiti için yapılan Tukey testi sonuçları aşağıda gösterilmiştir.

Tablo 7: Tukey Testi Sonuçları

Bölge 1	Bölge 2	Fark	p

Tukey testi sonuçları incelendiğinde, İstanbul ve Kuzeydoğu Anadolu bölgelerindeki ATM sayılarının tüm bölgelerden anlamlı şekilde farklı olduğu görülmektedir ($p < 0,05$). Batı Marmara bölgesindeki ATM sayılarının İstanbul, Ege, Doğu Marmara, Batı Anadolu, Akdeniz, Orta Anadolu, Doğu Karadeniz, Kuzeydoğu Anadolu ve Ortadoğu Anadolu bölgelerinden farklı olduğu görülmüştür ($p < 0,05$). Bu bölgedeki ATM sayıları Batı Karadeniz ve Güneydoğu Anadolu bölgelerinden anlamlı bir şekilde ayrılmamaktadır ($p > 0,05$). Ege bölgesindeki ATM sayılarının Akdeniz bölgesi dışındaki ($p > 0,05$) tüm bölgelerden anlamlı şekilde farklı olduğu görülmüştür ($p < 0,05$). Doğu Marmara bölgesindeki ATM sayılarının İstanbul, Batı Marmara, Ege, Orta Anadolu, Batı Karadeniz, Doğu Karadeniz, Kuzeydoğu Anadolu, Ortadoğu Anadolu ve Güneydoğu Anadolu bölgelerinden anlamlı bir şekilde farklılaştığı ($p < 0,05$), Batı Anadolu ve Akdeniz bölgelerindeki ATM sayılarıyla ise farklı olmadığı saptanmıştır ($p > 0,05$). Batı Anadolu bölgesindeki ATM sayılarının İstanbul, Batı Marmara, Ege, Orta Anadolu, Batı Karadeniz, Doğu Karadeniz, Kuzeydoğu Anadolu, Ortadoğu Anadolu ve Güneydoğu Anadolu bölgelerinden anlamlı bir şekilde farklı olduğu belirlenmiştir ($p < 0,05$). Batı Anadolu, Doğu Marmara ve Akdeniz bölgelerindeki ATM sayıları arasında anlamlı bir fark olmadığı görülmüştür ($p > 0,05$). Akdeniz bölgesindeki ATM sayılarının Orta Anadolu, Batı Karadeniz, Doğu Karadeniz, Kuzeydoğu Anadolu, Ortadoğu Anadolu ve Güneydoğu Anadolu bölgelerinden anlamlı bir biçimde farklı olduğu saptanmıştır ($p < 0,05$). Diğer yandan, Ege, Doğu Marmara ve Batı Anadolu bölgelerindeki ATM sayıları ile Akdeniz bölgesindeki ATM sayıları arasında anlamlı bir fark bulunmamaktadır ($p > 0,05$).

Orta Anadolu bölgesindeki ATM sayılarının İstanbul, Batı Marmara, Ege, Doğu Marmara, Batı Anadolu, Akdeniz, Kuzeydoğu Anadolu ve Ortadoğu Anadolu bölgelerinden farklı olduğu görülmüştür ($p < 0,05$). Orta Anadolu'daki ATM sayısı Batı Karadeniz, Doğu Karadeniz ve Güneydoğu Anadolu bölgelerindeki ATM sayıları ile anlamlı bir farklılık göstermemektedir ($p > 0,05$). Batı Karadeniz bölgesindeki ATM sayılarının İstanbul, Ege, Doğu Marmara, Batı Anadolu, Akdeniz, Doğu Karadeniz, Kuzeydoğu Anadolu ve Ortadoğu Anadolu bölgelerinden anlamlı şekilde farklı olduğu görülmüştür ($p < 0,05$). Batı Marmara, Orta Anadolu ve Güneydoğu Anadolu bölgeleriyle ise ATM sayıları bakımından farklılık bulunmamaktadır ($p > 0,05$). Doğu Karadeniz bölgesindeki ATM sayılarının Orta Anadolu ve Ortadoğu Anadolu bölgeleri ($p > 0,05$) dışındaki tüm bölgelerden anlamlı bir şekilde farklı olduğu görülmüştür ($p < 0,05$). Ortadoğu Anadolu bölgesindeki ATM sayılarının Doğu Karadeniz dışındaki ($p > 0,05$) tüm bölgelerden farklı olduğu saptanmıştır ($p < 0,05$).

Güneydoğu Anadolu bölgesindeki ATM sayılarının İstanbul, Ege, Doğu Marmara, Batı Anadolu, Akdeniz, Doğu Karadeniz, Kuzeydoğu Anadolu ve Ortadoğu Anadolu bölgelerinden farklı olduğu belirlenmiştir ($p <$

0,05).Bu bölgedeki ATM sayılarının Batı Marmara, Orta Anadolu ve Batı Karadeniz bölgelerinden anlamlı bir şekilde farklılaşmadığı görülmüştür ($p > 0,05$).

3.3. Bölgelerin POS Sayıları Bakımından Karşılaştırılması

2010 – 2019 yılları için TBB tarafından sunulan POS verileri incelendiğinde, 10 yıllık dönemde ortalama POS sayısının 204155,139 ($SS = 185974,794$), yıllara göre minimum POS sayısının 26978, maksimum POS sayısının 962117 olduğu gözlenmiştir.

Toplam POS sayısının bölgelere göre dağılımı aşağıda sunulmuştur.

Tablo 8: Ortalama POS Sayılarının Bölgelere Göre Dağılımı

Bölge	N	O	SS	Min	Maks
İstanbul	10	706084,482	117668,464	566110	962117
Ege	10	360422,158	34215,428	289282	404236
Akdeniz	10	301637,146	22090,258	263147	329671
Batı Anadolu	10	266470,768	25453,474	226788	307462
Doğu Marmara	10	220297,646	19912,589	185523	250787
Batı Karadeniz	10	125590,130	9602,856	111140	139703
Güneydoğu Anadolu	10	107190,056	14661,031	86245	130998
Batı Marmara	10	104484,596	11028,680	84744	119237
Orta Anadolu	10	96811,858	11742,443	73792	114314
Doğu Karadeniz	10	76075,206	13596,254	61046	108886
Ortadoğu Anadolu	10	51248,226	8907,681	39530	66069
Kuzeydoğu Anadolu	10	33549,398	4370,303	26978	40540
Toplam	120	204155,139	185974,794	26978	962117

Tablo incelendiğinde, 2010-2019 arasındaki en yüksek POS sayısı ortalamasının İstanbul bölgesinde ($O = 706084,482$, $SS = 117668,464$), en düşük POS sayısı ortalamasının ise Kuzeydoğu Anadolu bölgesinde ($O = 33549,398$, $SS = 4370,303$) görülmüştür. İstanbul, Ege, Akdeniz, Batı Anadolu ve Doğu Marmara bölgelerinin POS sayısı ülke ortalamasının üzerinde, diğer bölgelerin ise ortalamasının altında olduğu görülmüştür. Varyans analizi/ANOVA sonuçları aşağıda sunulmuştur.

Tablo 9: POS Sayılarının Bölgelere Göre Karşılaştırılması

Değişken	Varyans Kaynağı	KT	SD	KO	F	P
POS Sayısı (Lg10)	Gruplar arası	15,961	11	1,451	503,906	0,000
	Grup içi	0,311	108	0,003		
	Toplam	16,272	119			

Varyans analizi/ANOVA sonuçlarına göre bölgeler arasında POS sayılarına göre farklılık bulunmaktadır ($F = 503,906$, $p < 0,001$). Aralarında POS Sayılarına göre farklılık bulunan bölgeleri gösteren Tukey test sonuçları aşağıda sunulmuştur.

Tablo 10: Tukey Testi Sonuçları

Bölge 1	Bölge 2	Fark	p

Sonuçlar incelendiğinde, İstanbul, Doğu Marmara, Doğu Karadeniz, Kuzeydoğu Anadolu ve Ortadoğu Anadolu bölgelerindeki POS sayılarının karşılaştırıldıkları diğer tüm bölgelerden anlamlı bir şekilde farklı olduğu görülmektedir ($p < 0,05$). Batı Marmara bölgesindeki POS sayılarının Orta Anadolu ve Güneydoğu Anadolu ($p > 0,05$) hariç olmak üzere tüm bölgelerden anlamlı şekilde farklı olduğu saptanmıştır ($p < 0,05$). Ege ve Batı Anadolu bölgelerindeki POS sayılarının Akdeniz bölgesinden farklı olmadığı ($p > 0,05$) ancak karşılaştırıldıkları diğer tüm bölgelerden farklı oldukları görülmüştür ($p < 0,05$). Aynı şekilde Akdeniz bölgesi de POS sayıları bakımından Ege ve Batı Anadolu bölgeleri hariç ($p > 0,05$) olmak üzere tüm bölgelerle farklılık göstermektedir. Orta Anadolu bölgesindeki POS sayılarının Batı Marmara ve Güneydoğu Anadolu ile anlamlı bir farklılık göstermediği ($p > 0,05$), diğer tüm bölgelerden ise anlamlı biçimde farklı olduğu saptanmıştır ($p < 0,05$). Batı Karadeniz bölgesindeki POS sayılarının Güneydoğu Anadolu ($p > 0,05$) dışındaki tüm bölgelerden anlamlı biçimde farklılaştığı görülmüştür ($p < 0,05$). Güneydoğu Anadolu bölgesindeki POS sayılarının Batı Marmara, Orta Anadolu ve Batı Karadeniz bölgelerinden anlamlı bir şekilde ayrıldığı ($p > 0,05$), diğer bölgelerden ise anlamlı bir şekilde farklı olduğu görülmüştür ($p < 0,05$).

4.SONUÇ

İstanbul bölgesine ait ortalama toplam kredi miktarı Batı Marmara, Orta Anadolu, Doğu Karadeniz, Kuzeydoğu Anadolu ve Orta Anadolu bölgelerinden anlamlı bir şekilde daha yüksektir. Ayrıca Batı Anadolu bölgesine ait toplam kredi miktarının Kuzeydoğu Anadolu bölgesinden anlamlı şekilde daha yüksek olduğu görülmüştür. ATM sayılarında Kuzeydoğu Anadolu ve İstanbul bölgeleri tüm bölgelerden anlamlı şekilde farklılık göstermektedir. POS sayıları sonuçları incelendiğinde ise İstanbul, Doğu Marmara, Doğu Karadeniz, Kuzeydoğu Anadolu ve Ortadoğu Anadolu bölgelerindeki POS sayılarının karşılaştırıldıkları diğer tüm bölgelerden anlamlı bir şekilde farklı olduğu görülmektedir.

Elde edilen sonuçları genel olarak değerlendirmek gerekirse İstanbul bölgesine ait ortalama toplam kredi miktarı, POS ve ATM sayıları diğer bölgelere göre anlamlı bir şekilde farklılık göstermektedir. Bu farklılık toplam kredi ortalama miktarının, ATM ve POS sayılarının bu bölgede daha yüksek olmasıyla ortaya çıkmıştır. Nüfus oranının fazla olması bireysel olarak ürünlerin kullanımını etkileyeceği gibi ticaretin ve sanayinin daha fazla gelişme göstermiş olması da bu artışı etkileyerek diğer bölgelerle anlamlı bir şekilde farkın ortaya çıkmasında rol oynayabilir. Bunun yanı sıra Doğu Karadeniz bölgesinde ise ATM sayısı ortalamasının az olduğu gözlemlenmiştir. Bu durum bölgenin coğrafi yapısı ile açıklanabilir.

Bankacılık ürünlerinin kullanımı, bölgesel farklılık gösterdiği gibi bu farklılığın meydana gelmesinde bölgelere göre demografik etkenler, müşteri davranışları, müşterinin talebi, teknolojinin gelişmesi, bölgenin coğrafi yapısı gibi faktörlerin etkili olduğu söylenebilir.

Özet: İnsanlığın sağlığı gezegenimizin sağlığı ile yakından ilişkilidir. Covid 19 süreci bu ilişkinin ne kadar hassas olduğunu bir kere daha vurgulamıştır. İklimsel değişikliğe en fazla etki kentlerden gelmektedir. Kentsel yaşam biçimleri sera gazı emisyonlarının temel kaynağıdır. Yapılan tahminlere göre global CO2 emisyonlarının %75'i kentsel aktivitelerden kaynaklanmaktadır. Birleşmiş Milletler Küresel Sürdürülebilirlik Raporu Gündem 2030'da küresel çöp miktarı, kompozisyonu ve nasıl yönetildiği göz önünde bulundurularak 2016 yılında 1,6 milyar ton CO2 eşdeğerinde sera gazının çöp işlenmesi ve boşaltılmasından kaynaklandığı ortaya konulmuştur. Eğer dünya genelinde bir iyileştirme olmazsa katı atıklardan kaynaklı emisyonların 2050 yılında 2,38 milyar ton CO2 eşdeğerinde olacağı tahmin edilmektedir.

Artan çöp miktarlarının temelinde "planlı eskitme" stratejisi yer almaktadır. Kısa sürede bozulan, kırılan ürünler, hızla eskijen kıyafetlerin üretildiği bu ekonomik strateji tüketimi artırırken dünya kaynakların tüketimini de artırmakta ve de sürekli daha fazla çöp üretilmesine neden olmaktadır. İyi yönetilemeyen çöp hem insan hem de çevrenin sağlığı için tehdit oluşturmaktadır. Ülkeler düşük gelir seviyesinden orta ve yüksek gelir seviyelerine doğru geliştikçe çöp yönetim biçimleri de evrimleşmektedir. Ancak bolluğun artmasıyla birlikte kentsel alanlara hareketin artması ülkelerde kişi başına çöp üretim seviyelerini arttırmaktadır. Hızlı büyüme gösteren ülkelerde çöpün yarısından fazlasının açık bir şekilde atılması; bu büyüme oranları ile çevre, sağlık ve bolluk üzerindeki olası etkileri acil müdahale gerektirmektedir.

Dünya genelinde sürdürülebilir tüketim ve üretim modellerine geçilmesi ile kaynak etkinliği artırılarak, sürdürülebilir yaşam biçimleri teşvik edilerek ekonomik gelişmenin çevreyi bozması engellenebilir. Çöpün olmadığı bir kapalı sistem doğayı örnek alan bir sistemdir. Bu sistemin temel ilkeleri döngüsel ekonomi; materyallerin ve ürünlerin çöpe gitmek yerine yeni bir kullanım döngüsünün parçası olması; çeşitlilik içeren sistemlerin daha dayanıklı olması, yenilenebilir enerji kaynaklarının kullanılması ve de bütünsel bir sistemin kurulması ilkeleri olmalıdır.

Anahtar Kelimeler: Atık Yönetimi, Sürdürülebilir Ekonomi, Sıfır Atık, Döngüsel Ekonomi

Abstract: The health of humans is closed related with the health of the planet. The Covid 19 pandemic has shown/emphasized once more how delicate this relationship is. The greater effect to climate change is from cities. Urban lifestyles are the main source of greenhouse gas emissions. It is estimated that 75% of global CO2 emissions arise from urban activities. In the United Nations Global Sustainability Report Agenda 2030, considering the global waste amount, composition and how it is managed, it was revealed that 1.6 billion tons of CO2 equivalent greenhouse gas in 2016 was caused by the processing and discharging of waste. If there is no improvement around the world, t emissions from wastes are estimated to be 2,38 billion tons of CO2 equivalent in 2050.

The "planned obsolescence" strategy is the main reason for the increasing amounts of waste. This economic strategy, in which products are produced to deteriorate and break in a short time; clothes to worn out rapidly aiming to increase consumption, it also increases the consumption of world resources and causes continuous generation of more waste each year. Waste when it is not managed properly create a serious threat both for the health of human and the environment. Waste management patterns evolves as countries evolve from low income to middle- and high-income levels. Open disposal of more than half of the waste in fast-growing countries; with these growth rates and their potential impact on the environment, health and abundance requires immediate intervention.

With the adoption of sustainable consumption and production models worldwide, resource efficiency can be increased, and sustainable lifestyles can be encouraged therefore economic development from harming the environment will be prevented. A closed where there is no waste is a system which takes nature as example. The main principles of this system must be the principles of circular economy which include materials and products being part of a new usage cycle instead of going to waste, formation of more durable diverse systems, the use of renewable energy sources, and the establishment of a holistic system.

Key Words: Waste Management, Sustainable Economy, Zero Waste, Circular Economy.

1. GİRİŞ

Gezegeneğimizin sağlığını insanoğlunun sağlığıyla olan bağlantısı bilinmektedir. Bu bağın gücü Covid 19 süreci ile bir kere daha oldukça sert bir biçimde vurgulanmıştır. Pandemi dünyanın kaynaklarının her yerden alarm verdiği bir noktada gelmiştir. İnsanlık olarak artık kentsel yaşam biçimlerimizin eylemlerinden doğan sonuçların sorumluluğunu almamız gerektiğini de açıkça göstermiştir.

İklimsel değişiklik değerlerine baktığımızda 2013-2017 yılları arasında global sıcaklığın tarihteki en yüksek değerlerine ulaştığını görüyoruz. Green (2018) Birleşmiş Milletler Sürdürülebilir Gelişme 2019 Raporu'nda 2018 yılının kayıtlara geçmiş en sıcak yıl olduğu ve karbondioksit seviyelerinin artmaya devam ettiği belirtilmiştir. Okyanuslarda asidite oranının sanayi öncesi dönemlere göre %26 daha yüksek olduğu ve de CO2 emisyonları bu şekilde devam ederse 2100 yılına kadar %100 den %150'ye kadar çıkabileceğinin tahmin edildiği de yine bu raporda belirtilmiştir (United Nations, 2020). İklimsel değişikliğe en fazla etki kentlerden gelmektedir ve kentsel yaşam biçimleri sera gazı emisyonlarının temel kaynağıdır. Yapılan tahminlere göre global CO2 emisyonlarının %75'i kentsel aktivelere kaynaklanmaktadır (United Nations Environment Programme, n.d.).

Şekil 1: Çöp miktarları

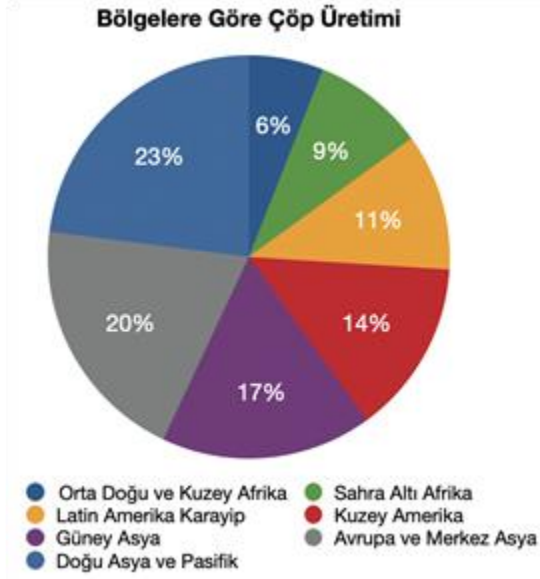

Kaynak: (The World Bank, n.d.)

Birleşmiş Milletler Global Sürdürülebilirlik Raporu Gündem 2030'da global çöp miktarı, kompozisyonu ve nasıl yönetildiği göz önünde bulundurularak 2016 yılında 1,6 milyar ton CO₂ eşdeğerinde sera gazının çöp işlenmesi ve boşaltılmasından kaynaklandığı ortaya konulmuştur (Şekil 1). Bu değer global emisyonların %5'ini oluşturmaktadır. Besin çöprü ise toplam emisyonların %50'sini oluşturmaktadır. Eğer dünya genelinde bir iyileştirme olmaz ise katı atıklardan kaynaklı emisyonların 2050 yılında 2,38 milyar ton CO₂ eşdeğerinde olacağı tahmin edilmektedir (The World Bank, n.d.).

2. KÜRESEL ÇÖP KAVRAMI: MEVCUT DURUM

Kentleşme süreciyle birlikte çöp konusu kentsel mekanlar için daha ön plana çıkmıştır. Kamu sağlığı açısından çöp; yerel yönetimlerin yasayla belirlenen görevleri arasında önemli bir konumdur. Çöp miktarlarının giderek artması çevresel bir sorun olarak bilinmektedir. Buna ek olarak okyanusların kirlenmesi ve su kaynaklarının tıkanması sel vb. olayların oluşmasına; meydana gelen hastalıkların daha hızlı yayılmasına yol açmaktadır. Çöp miktarlarının iyi yönetilememesi durumu bilmeden çöpleri yiyen hayvanların zarar görmesi ve de ekonomik gelişmenin yavaşlaması gibi negatif etkiler yaratabilmektedir.

Şekil 2: Bölgelere Göre Çöp Üretim Oranları

Kaynak: Kaza ve diğerleri, 2018

Dünya geneline bakıldığında ülkeler düşük-gelir seviyesinden orta-gelir ve yüksek gelir seviyelerine doğru geliştikçe çöp yönetim biçimleri de evrilmektedir. Ancak bolluğun artması ile kentsel alanlara doğru hareketin de artması ülkelerde çöp üretim seviyelerini arttırmakta olduğu görülmüştür. (Şekil 2, Şekil 3) Yerel yönetimlerin bu konuda politika ve plan üretme sürecinde çöpün nasıl üretildiği, üretilen çöplerin çeşitlerinin detaylı analizler ile anlaşılması, en uygun çöp yönetim yöntemlerini ve planlarını belirlemeleri açısından önemlidir. Çöp üretimi düşük gelir gruplarında yüksek gelir gruplarına oranla daha hızlı artış göstermektedir. Düşük gelir grubu ülkelerindeki toplam çöp üretiminin 2050 yılına kadar 3 kat daha fazla artacağı öngörülmüştür. Doğu Asya ve Pasifik bölgesi dünya çöpünün %23'ünü; Orta Doğu ve Kuzey Afrika bölgesi ise %6'sını üretmektedir (Kaza v.d.; 2018).

Şekil 3: Bölgelere Göre Çöp Miktarları

Kaynak: Kaza v.d., 2018

Hızlı büyüme gösteren bölgeler olan Sahra Altı Afrika, Güney Asya, Orta Doğu ve Kuzey Afrika’da 2050 yılına kadar çöp üretiminin üç kat artacağı beklenmektedir. (Şekil 4) Bu bölgelerde çöpün yarısından fazlası açık bir şekilde atılmaktadır ve özellikle bu durum bu büyüme oranları ile çevre, sağlık ve bolluk üzerindeki olası etkileri acil müdahale gerektirmektedir (Kaza v.d., 2018).

Şekil 4: Bölgelere Göre 2050 yılı için Öngörülen Çöp Miktarları.

3. KÜRESEL ÇÖP SORUNUNUN NEDENLERİ / TEMELLERİ

Birleşmiş Milletler Global Sürdürülebilirlik Raporu Gündem 2030’da global ekonominin itici gücü olan tüketim ve üretim modellerinin doğal çevreyi ve kaynakları kullanma biçiminin gezegenimiz üzerinde yıpratıcı ve yok edici etkileri olduğu ve geçmiş yüzyılda gerçekleşen ekonomik ve sosyal ilerlemenin beraberinde çevresel bozulmayı da getirdiği ifade edilmiştir (United Nations (n.d.), 2021)

Aynı raporda, her sene dünya genelinde üretilen besinin –yaklaşık olarak 1,3 milyar ton- tüketicilerin ve işletmelerin çöp kutularında çürümekte ya da taşınma ve ekin biçme uygulamaları sırasında bozulmakta olduğu vurgulanmıştır. Eğer dünya nüfusu 2050 yılına kadar 9,6 milyara ulaşırsa, mevcut yaşama biçimlerinin sürdürülmesi için gereken doğal kaynakların 3 gezegen gerektireceğine önemle dikkat çekilmiştir (United Nations (n.d.), 2021). Çöp artık küresel bir sorun olarak kabul edilmekte; çöp/atık ekonomisi konusu farklı yönleriyle ele alınmaktadır. Belediye çöplerinin uluslararası ticareti, küresel ortamda çöplerin işlenmesi ve akışı “çevresel adalet” konusuna da dikkat çekmektedir (Moore, 2011;133).

Çöp/atık yönetimine ilişkin genel ilkeleri şöyle özetlemek mümkündür;

- Çöp/atık üretiminin ve tehlike özelliğine ilişkin: çöp/atık üretiminin azaltılmasına yönelik çalışmaların yapılması, tehlikeli içeriklerin mümkün olduğu kadar üretim aşamasında da azaltılmasını içerir. Temiz üretim teknolojilerinin kullanılması teşvik edilir.
- Farklı türdeki atıkların kaynağında ayrıştırılması ve toplanması: Bu ilkenin uygulanması hastalıkların yayılmasını önleme, çalışan sağlığı ve güvenliğini sağlama, yerel kaynakların daha etkin kullanılması, çevreyi koruma, bertaraf maliyetlerini düşürme gibi faydalar sağlar.
- Bertaraf ilkesi: Atıkların lisanslı geri kazanım ve bertaraf tesislerinde uygun yöntem ve teknolojiler kullanılarak bertaraf edilmesi ile kayıt altına alma, uygun koşullarda bertaraf etmeyi sağlar.

- Belediyeye ilişkin ilke; çöp/atık yönetimi en geniş bölgenin faydası gözetilerek gerçekleştirilir. Kanunlarda gösterilen kurum ve kuruluşların sorumlulukları vardır (Atık Yönetmeliği, 2015).

Çöp sürecini yönetme de farklı stratejiler mevcuttur. "Planlı eskitme" tüketim stratejisi, ürünün yaşam süresinin kısaltılması ve de tüketici davranışlarını etkileyerek tüketimin hızla ve artarak devam etmesini sağlamayı içerir. Bu stratejiyi temel alan ekonomik sistem/tüketim ekonomisi artan çöp miktarlarının temel nedenidir. Kısa sürede bozulan, kırılan ürünler, hızla eskiyen kıyafetlerin üretildiği bu ekonomik strateji tüketimi artırırken dünya kaynakların tüketimini de artırmakta ve de sürekli daha fazla çöp üretilmesine neden olmaktadır (Basel Convention, 2012).

4. SONUÇ: ÇÖZÜM ÖNERİLERİ

Çevresel değişimdeki tehdit ekonominin içinde insan ve doğa arasındaki ilişkinin; kentlerin ve kasabaların, beslenme sistemlerinin ve enerji sistemlerinin yeniden biçimlenmesini gerektirmektedir (Bieri v.d., 2020). Birleşmiş Milletler Çevre Programı (UNEP) sürdürülebilir ekonominin tüketim ve üretim biçimlerinin fakirliğin azalmasına; düşük karbonlu ve yeşil ekonomiye geçişe de büyük ölçüde katkıda bulunacağını öngörmektedir. Dünya genelinde sürdürülebilir tüketim ve üretim modellerine geçmek küresel çöp miktarlarının sıfıra yaklaşacak değerlere gelmesini sağlayacaktır. Kaynak etkinliğini arttırmak ve sürdürülebilir yaşam biçimlerini teşvik etmek, ekonomik gelişmenin çevreyi bozmasını engelleyecektir (United Nations (n.d.) Birleşmiş Milletler Çevre Programı Sürdürülebilir Gelişme Hedeflerinden "Sorumlu Tüketim ve Üretim" başlıklı 12. Hedefinin Covid 19 ile ilişkili olarak eklenen kısmında mevcut krizin hem insanlar hem de gezegenin yararına işleyen daha sürdürülebilir bir ekonomiye geçiş için bir fırsat sunmakta olduğu ifade edilmektedir. United Nations (n.d.)

Sürdürülebilir ekonomiye geçerken "çöpü azaltmak" ve "çöpü önlemek" kavramlarının net anlaşılması gerekmektedir. Ve güncel durumda bu iki terim arasındaki ayrımın net yapılamadığı gözlenmektedir. Çöp yönetiminde genel yaklaşım ürünlerin kullanım ömrü sonlandıktan sonrasına ilişkindir. Çöp oluştuğunda kaynaklar (enerji, malzemeler) tüketilmiştir ve de insan ve çevre üzerinde de etkileri oluşmuştur. Bu aşamada artık anlamlı değişim için geç kalınmıştır. Ancak bu aşamada geri dönüşüm ve insinerasyon atık sahalarına gidecek olan çöpün azaltılması konusunda etkili yöntemlerdir. Bu yöntemler çöpün üretilmesini sınırlamamaktadır sadece ileriye yönelik etkilerin oluşmasını engellemektedir. Çöp üretiminin gerçekten engellenmesi sadece imalat biçimlerimizin değil aynı zamanda çöp üretme biçimlerimizin yani tüketim alışkanlıklarımızın da değişmesini gerektirir (Basel Convention, 2012).

Birleşmiş Milletler Çevre Programı Sürdürülebilir Gelişme Hedefleri raporunda Covid 19 virüsünün ortaya çıkmasının insan ve doğa arasındaki ilişkiyi kuvvetle vurguladığı; insanoğlunun sınırsız ihtiyaçlarının gezegenin karşılama kapasitesi sınırlarını aştığı; doğayı zorlamanın sınırlarının anlaşılması ve saygı gösterilmesi gerektiği vurgulanmıştır. Bu sınırların tüketim ve üretim modellerimize yansımaları gereğinden hareketle Covid 19 sosyal değişim için bir katalizör olabilir. Üretim ve tüketim modellerimizi daha sürdürülebilir uygulamalara geçirecek daha iyi yapılar kurmamız gereklidir. Basel Convention (2012). Üretim süreçlerinin yeniden yaratılmasında "Beşikten Beşiğe" (Cradle to Cradle) yaklaşımının uyarlanması en rasyonel çözümlerden biridir (Sorkin, 2015).

Çöp yerel olarak ele alınmalıdır. Daha da önemli olan çöpü üreten sistemin doğası ve değeri sorgulanmalıdır. Çöpün olmadığı bir kapalı sistem doğayı örnek alan, –bir orman gibi- ekosistemin kendinin yeniden inşa etmesine olanak veren bir sistem olmalıdır. Doğayı örnek alan bu sistem içinde tasarladığımız her şey dayanıklı olacak şekilde (tüketim ekonomisinden özgür) ya da ömrünü tamamladıktan sonra başka bir kullanım için dönüştürülebilir olmalıdır. Bu geri dönüşüm ya da yeniden kullanımın da ötesine geçerek en baştan çöp üretmeyen bir sistemin tasarımını gerektirecektir (Sorkin, 2015)

Bu sistemin temel ilkeleri Döngüsel Ekonomi; materyallerin ve ürünlerin çöpe gitmek yerine yeni bir kullanım döngüsünün parçası olması; çeşitlilik içeren sistemlerin daha dayanıklı olması, yenilenebilir enerji kaynaklarının kullanılması ve de bütünsel bir sistemin kurulması ilkeleri olmalıdır (United Nations Environment Programme n.d.) Hem üreticinin hem de tüketicinin sorumluluğu önemlidir. Döngülerin kapatılması temel hedeftir. Ekonomik sistem içinde giren ve çıkanın eşit olması anlamına gelmektedir. Nüfusun artışı tüketimin ve de çöp üretiminin ya da kirliliğin ve kaynakların tüketilmesinin artmasına

olan direkt etkisini değiştirmek gerekmektedir (Basel Convention, 2012). Birleşmiş Milletler Çevre Programı'nın (UNEP) pandemi sürecinde artan çöp miktarlarına yönelik kısa vadeli stratejileri arasında ülkelerin ulusal çöp yönetimi kapasitelerinin değerlendirmesini yaparak Covid 19'a yönelik boşlukları doldurmak üzere çözüm üretmeleri; 3S Stratejisini (Sınıflandırma, Segregasyon, Saklama) özellikle de Covid 19 çöplerine yönelik sıkı bir şekilde uygulamaları yer almaktadır (United Nations, 2020)

Uzun vadeli önlemler arasında ise ileriye yönelik çöp yönetimi acil durumlarına daha etkin karşılık verebilmek için sağlam bir yasal ve kurumsal temel oluşturmak; pandeminin kişisel ve tıbbi donanımların üretim ve tüketimini arttıracak olması nedeni ile UNEP'in tıp sektöründe döngüsellik sağlamak ve tek kullanımlı ürünlerin daha iyi idare edebilmeleri için destek sağlaması; Covid 19 çöpleri ile diğer çöplerin ayrılması, toplanması ve idaresi için daha sağlam sistemlerin kurulması ve bireylere kullanılmış tıbbi donanımları güvenli bir şekilde nasıl atacaklarına dair rehberlik sağlanması gibi konular yer almaktadır (United Nations, 2020)

Tüketicilerin Yöresel Gıdalar İçin Gıda Güvenliği Algısı: Bir Literatür Araştırması

Zir. Müh. Haktan Can KAYACAN¹

Prof. Dr. Nevin DEMİRBAŞ²

¹EÜ, FBE, Tarım Ekonomisi ABD, YL Programı, haktan-2101@hotmail.com, ORCID: 0000-0001-7399-5932

²EÜ, Zir. Fakültesi, Tarım Ekonomisi Bölümü, nevin.demirbas@ege.edu.tr, ORCID: 0000-0002-0541-1437

Özet: Yöresel gıda, coğrafi açıdan bir bölge veya yöreye özgü olan, ün ve karakteristik özelliklerini bölgede oluşan bilgi ve geleneklerden alan ürünler olarak tanımlanabilir. Yöresel gıda ürünleri yaratmış oldukları katma değer, istihdam ve dış ticaretteki payları ile Türkiye ekonomisinde önemli bir yere sahiptir. Nitekim, Coğrafi İşaret (Cİ) koruması altında bulunan yöresel ürünlerden sadece beş tanesi olan Giresun fıındığı, Malatya kayısı, Ege sultanı kuru üzümü, Ege inciri ve Antep fıstığı ihracat gelirlerinin toplamı, Türkiye tarım ürünleri ihracat gelirinin yaklaşık %60'ını oluşturmaktadır. Son yıllarda yöresel gıdaları satın almada tüketici talebi artış göstermekte ve yöresel gıdalar, gıda tüketiminde en dinamik sektörlerden biri olarak dikkat çekmektedir. Tüm gıda ürünlerinde olduğu gibi, yöresel gıda üretiminde ve tüketiminde de önemli kaygılardan biri gıda güvenliğidir. Bu çalışmanın amacı, yöresel gıda ürünleri için gıda güvenliği açısından tüketici algısının belirlenmesidir. Bu amaçla, 2000-2020 yılları arasında Dünya'da ve Türkiye'de yöresel gıda ürünlerinde gıda güvenliği konusunda yapılmış çalışmalar; Elsevier, Google Akademik ve Ulusal Tez Merkezi gibi önemli veri tabanlarında araştırılmıştır. Elde edilen literatür; yöntem, kapsam ve sonuçları itibarıyla yıllar bazında bir çizelge halinde yorumlanmıştır. Araştırma sonuçları bir bütün olarak değerlendirildiğinde, yöresel gıda ürünlerine olan ilginin giderek arttığı, özellikle Cİ uygulamalarının, gıda güvenliği algısı açısından yöresel ürünlere değer kattığı belirlenmiştir. Özellikle Cİ amblemi olmayan ürünler için gıda güvenliği algısının daha negatif olduğu belirlenmiştir. Tarım ürünlerinin Cİ ile satılması tüketicilerin algısında kalite ve güveni temsil ettiği için daha yüksek fiyatla satılabilmektedir. Sonuçta, coğrafi işaretli ürünler ile tüketiciler kaliteli ve güvenilir ürün tüketirken, üreticiler de önemli bir gelir artışı sağlayabilmektedir. Bu nedenle, Türkiye'de coğrafi işaretli yöresel ürün potansiyelinin etkin bir şekilde harekete geçirilmesi önerilmektedir.

Anahtar Kelimeler: Yöresel Gıdalar, Gıda Güvenliği, Tüketici Algısı, Coğrafi İşaret

Consumers' Perception of Food Safety for Local Foods: A Literature Research

Abstract: Local food can be defined as products that are geographically specific to a region, and take their reputation and characteristics from the knowledge and traditions formed in the region. Local food products as well as the added value they have created and has an important place in Turkey's economy with its share of employment and foreign trade. Indeed, total export revenue of five of the regional products protected geographical indication (GI) which they are Giresun's hazelnuts, Malatya apricots, Aegean sultana raisins, Aegean figs and pistachios constitutes about 60% of the agricultural product export revenues of Turkey. In recent years, consumer demands for purchasing local foods have increased and these foods attract attention as one of the most dynamic sectors in food consumption. As with all food products, one of the important concerns in the local food production and consumption is food safety. The aim of this study is to determine consumer perception in terms of food safety for local food products. For this purpose, literatures in the world and in Turkey have been investigated in the major databases such as Elsevier, Google Scholar and National Thesis Center for the period of the years 2000-2020 on food safety for local food products. The obtained literature has been interpreted in a table on the basis of years in terms of the methods, the scopes and the results. When the results of the research are evaluated as a whole, it has been determined that consumer interest in local food products has gradually increased and especially GI practices add value to local products in terms of food safety perception. It has been determined that the food safety perception is more negative especially for products without geographical indication. Since selling agricultural products with GI represents quality and trust in consumers' perception, they can be sold at higher prices. As a result, while consumers are consuming quality and reliable products with geographical indicated products, producers can also achieve a significant increase in income. Therefore, the potential of the rich local products in Turkey, it will be possible to evaluate more effectively with the application of geographical indications.

Keywords: Local Foods, Food Safety, Consumer Perception, Geographical Indication

1.GİRİŞ

1.1.Konunun Önemi

“Belli bir coğrafi bölgede yer alan, karakteristik özellikleriyle çevreden ayrılan bir yer, sınırlı bölüm” olarak tanımlanan (Türk Dil Kurumu, 2009) yöre kavramına bağlı olarak yöresel ürünler, değişik bölgelerde üretilen ve üretildiği yöreye has tat, aroma ve bileşim gibi özelliklere sahip olan ürünler olarak tanımlanmaktadır (Tan, 2009). Daha geniş bir tanımla yöresel, bölgesel ya da geleneksel ürünler; coğrafi açıdan bir bölge veya yöreye özgü, ün ve kalitelerini buranın doğal koşulları ya da bölgesel özelliklerinden oluşan bilgi, deneyim ve geleneklerinden alan, o bölgedeki hammadde ve üretim girdilerini kullanmak, bu alandaki ekonomik gelişim ile istihdamı teşvik etmek suretiyle üretilen ürünler olarak tanımlanmaktadır (Dorant and Leonhäuser 2004: 93-106; Demirbaş vd., 2006: 47-55).

“Yöresel gıda ürünleri” ülke ekonomisine hatırı sayılır gelir sağlayan, ülke tanıtımına katkısı olan katma değerli ürünlerdir. Dünyada yetiştirilen birçok yerel ürün, yetiştiği ve üretildiği yörenin adı ile tanınmaktadır. Ürünlerin tanınmasında ve kalitesinin bilinmesinde, yetiştikleri yerin doğal, beşerî ve çevre koşullarının etkisiyle birlikte yöre insanın bilgi, beceri, deneyim ve tecrübeleriyle geleneklerinin birleştirilmesi de önemlidir. Bu birleşenler bir araya gelerek bu tipik ürünlerin “yöresel ürün” olarak adlandırılmasını sağlamaktadır. Üretilen ve yetiştirilen bölgelerle özdeşleşmiş olan ürünler tüketiciler tarafından o yöreye duyulan güven nedeniyle tercih edilmekte, ürünün adıyla birlikte hangi yöreye ait olduğunun belirtilmesiyle tüketicide bir güven oluşturmaktadır (Cerrahoğlu, 2015: 213). Türkiye için yöresel gıda ürünleri; Malatya kayısı, Aydın inciri, Ayvalık zeytinyağı, Antalya portakalı, Nevşehir üzümü ve Giresun fıncığı en değerli özellikli ihraç ürünleri arasındadır (Ertan, 2010: 166). Yöresel gıda ürünleri yaratmış oldukları katma değer, istihdam ve dış ticaretteki payları ile Türkiye ekonomisinde önemli bir yere de sahiptir. Nitekim, coğrafi işaret (Cİ koruması altında bulunan yöresel ürünlerden sadece beşi (Giresun fıncığı, Malatya kayısı, Ege sultani kuru üzümü, Ege inciri ve Antep fıstığı) 2,5 milyar dolara ulaşan dış satım değeri ile Türkiye tarım ürünleri ihracat gelirinin yaklaşık %60’ını oluşturmaktadır (Tekelioğlu ve Demirer, 2008: 715-730).

Cİ belirgin bir niteliği, ünü veya diğer özellikleri itibarıyla kökenin bulunduğu bir yöre, alan, bölge veya ülke ile bütünleşmiş bir ürünü gösteren ad veya işaretlerdir. Bu nedenle yöresel ürünler dendiğinde ilk akla gelen Cİ kavramı ve uygulamalarıdır. Bu açıdan değerlendirildiğinde, Cİ ile koruma altına alınmış yöresel gıda ürünleri, Türkiye ekonomisi için önemli bir potansiyel oluşturduğu belirtilebilir. Çünkü bu ürünlerin korunması ve üretimiyle yaratılan istihdam ve katma değer bölge nüfusunun ekonomik kalkınmasında önemli bir rol oynamaktadır. Yaratılan katma değer ise kırsal ve kent arasındaki gelir farkının kapanması ve bölgeler arasındaki gelir dağılımı üzerinde olumlu etkileri nedeniyle son derece önemlidir (Kantaroğlu ve Demirbaş, 2018: 514).

Son yıllarda tüm dünyada ve özellikle Avrupa’da gıda tüketiminde en dinamik sektörlerden birisi yöresel ürünler sektörüdür (Kantaroğlu ve Demirbaş, 2018: 515). Tüketicilerin yaşam biçimlerinin değişmesine bağlı olarak, yeni tatlar, yeni ürünler, güvenli gıda, daha az işlenmiş ve daha az katkı içeren gıda talep etmeleri de bu artışa neden olan unsurlar arasındadır (Taşdan vd, 2014: 363-386). Özellikle gelişmiş ülkelerde, yöresel yiyecekleri satın almada tüketici talepleri artış göstermekte ve gıda tüketiminde en dinamik sektörlerden biri olarak yöresel yiyecek sektörü dikkat çekmektedir. Tüketicilerin küresel gıda sistemindeki çevresel etkiler, sürdürülebilirlik, sağlık ve gıda güvenliği gibi olumsuz gelişmeler nedeniyle de yöresel yiyeceklerle olan ilgisinin arttığı ifade edilmektedir (Feagan, 2007: 23-42; Autio et al., 2013: 564-568; Birch et al., 2018: 221-228). Bilindiği gibi, toplumlarda iklim değişikliği üzerinde tüketicilerin etkisinin azaltılmasına yönelik büyük bir ilgi oluşmaya başlamış ve tüketiciler ürün ve beslenme alışkanlıklarının küresel ısınmaya etkisi üzerinde daha fazla farkındalık oluşmaya başlamıştır. Bu anlamda yöresel olarak yetiştirilen, üretilen ve halka sunulan gıda ürünlerinin taze olarak tüketilmesi muhtemel olduğundan, bu paketleme, işleme ve soğutmanın ihtiyaçlarını azaltma anlamına gelmektedir. Daha az nakliye ve ambalajlamaya neden olan daha az atık ve böylece karbon ayak izinin azaltılması ve doğal çevrenin korunması özellikleriyle yöresel gıdalar diğer gıdalara göre daha çok tercih edilmektedir (Türkmen ve Ayaz, 2019: 119-219).

Gıda güvenliği giderek önemi artan bir halk sağlığı konusudur. Tüm dünyada hükümetler gıda güvenliğini arttırmak için yoğun bir çaba göstermektedirler. Bu çabalar büyüyen gıda güvenliği sorunlarına ve artan

tüketici endişelerine karşılıktır (Dünya Sağlık Örgütü, 2007). Yöresel gıda üretiminde ve tüketiminde de önemli noktalardan biri tüketilen gıdanın güvenli olmasının gerektiğidir (Bordeleau et al., 2016: 529-538). İnsanlar; çevresel etkiler, sürdürülebilirlik, sağlık ve gıda güvenliği gibi konuların mevcut küresel gıda sistemleri için olumsuz sonuçlarından dolayı endişe duymaktadır. Tüm dünyada artan endüstriyel gıda üretimlerine duyulan güvensizlik, birçok tüketicinin daha fazla “yerel gıda” kaynağına yönelmesine neden olmaktadır (Sormaz vd, 2020: 538-551). Nitekim, Avrupalı tüketicilerin ortalama %30'unun yöresel gıda ürünlerini tercih ettiği ve bu oranın Fransa'da %85, İspanya'da ise %79 düzeyine çıktığı tespit edilmiştir (Graca and Albisu, 2001: 469-488). Yine, son yıllarda yapılan çalışmalar tüketicilerin yöresel ürünleri benzerlerine göre daha lezzetli, güvenli, sağlıklı ve kaliteli bulduklarını ve bu ürünlerin pazarlanmasının yerel üreticilere ve çevreye faydaları olduğunu göstermektedir (Loureiro and McCluskey, 2000: 309–320; Tregear et al., 2007: 12-22; Knight, 2013: 29-39; Albayram, vd., 2014: 237-251; Kadanalı ve ark., 2016: 9-16). Tüketimdeki hem miktar hem de çeşitlilik yönlü artış eğiliminin süreceği dikkate alındığında, tazelik, lezzet ve yerel özellikleriyle tüketiciler tarafından giderek daha fazla tercih edilen yöresel gıdalar için tüketicilerin gıda güvenliği algısının incelenmesi önemli görülmektedir.

1.2 Çalışmanın Önemi

Son yıllarda coğrafi açıdan bir bölge ya da bir yöreye özgü olan ve üretimi, pişirmesi, tüketimi, sunumu ve tadı farklı olan yöresel yiyeceklere talep artışı yaşanmaktadır (Carpio and Isengildina-Massa, 2008: 412-426; Darby et al., 2008: 476-486; Hardesty, 2008: 1289–1295; Ayaz, 2018: 22-38). Buna bağlı olarak Cı alan ürün sayısı giderek artmakta, tüketicilerin bu ürünlere olan talebi de hızla büyümektedir (Feagan, 2007: 23-42; Darby et al., 2008: 476-486; Hardesty, 2008: 1289–1295; Carpio and Isengildina-Massa, 2008: 412-426; Şahin ve Meral, 2012: 88-92; Autio et al., 2013: 564-568; Birch et al., 2018: 221-228; Kantaroğlu ve Demirbaş, 2018: 514-520). Bununla birlikte, talebi artan bu ürünlerde önemli sorunlardan biri tüketicilerin gıda güvenliği açısından kaygı duymasındır. (Pirog and Rasmussen, 2008: 294-1854; Cömert ve Özata, 2016: 538-551; Kadanalı ve Dağdemir, 2016: 9-16; Ayaz ve Türkmen, 2019: 119-219; Sancak, 2019: 7). Türkiye’de ve uluslararası literatürde yöresel gıda ürünleri için gıda güvenliği ekseninde hazırlanmış bir çalışmaya rastlanmamıştır. Bu nedenle, bu çalışma bu alandaki sorunlara tartışma olanağı sağlaması bakımından önemlidir.

1.3 Çalışmanın Amacı

Bu araştırmanın amacı, yöresel gıda ürünleri için gıda güvenliği açısından tüketici algısının belirlenmesidir. Tüketicilerin gıda güvenliğine yönelik algılarının geniş bir ulusal ve uluslararası literatür taraması sonucu ortaya çıkarılması amaçlanmaktadır.

1.4 Çalışmanın Kapsamı

Araştırmanın ürün kapsamı yöresel gıda ürünleridir. Araştırmada, ulusal ve uluslararası literatür kapsama alınmıştır. Çalışmada gıda güvenliği algısı tüketiciler için değerlendirilmiş ve 2000-2020 yılları arasındaki dönemde yapılan çalışmalar kapsama alınmıştır. Literatür incelendiğinde “yöresel”, “bölgesel”, “yerel” ya da “geleneksel” gıda ürün kavramları için ayırt edici bir tanım olmadığı görülmektedir. Bu çalışmada ağırlıklı olarak “yerel” veya “yöresel” kavramları kullanılmıştır.

1.5 Materyal ve Yöntem

2000-2020 yılları arasında Dünya’da ve Türkiye’de yöresel gıda ürünlerinde gıda güvenliği konusunda yapılmış çalışmalar Elsevier, Google Akademik ve Ulusal Tez Merkezi gibi önemli veri tabanlarında araştırılmıştır.

Tarama terimleri; “yöresel gıda”, “local food”, “yerel gıda”, “regional food”, “gıda güvenliği”, “food safety”, “yöresel ürün”, “tüketici algısı”, “yerel yemek” ve “yerel yiyecek” olarak belirlenmiş ve bu terimler üzerinden veri tabanları üzerinden araştırma yapılmış ve elde edilen literatür, yöntem, kapsam ve sonuçları itibarıyla yıllar bazında bir çizelge halinde gösterilmiştir.

2. GIDA GÜVENLİĞİ VE YÖRESEL GIDALAR İÇİN ÖNEMİ

Gıda Güvenliği, en basit tanımı ile amaçları doğrultusunda üretildiğinde veya tüketildiğinde gıdanın tüketiciye zarar vermeyeceği süreci ifade etmekte olup; Dünya Sağlık Örgütü (WHO), Gıda Tarım Örgütü (FAO) ve Codex Alimentarius Uzmanlar Komisyonu gıda güvenliğini, sağlıklı ve kusursuz gıda üretimini sağlamak amacıyla gıdaların üretim, işleme, muhafaza, taşıma ve dağıtım aşamalarında gerekli kurallara uyulması ve önlemlerin alınması' olarak nitelendirmişlerdir (FAO and WHO, 2015). Gıda güvenliği; üretimden başlamak üzere ürünlerin işleme, depolama, dağıtım, hazırlama, pişirme ve tüketme işlemine kadar olan bütün fiziksel, biyolojik ve kimyasal tehlikelerden korunmasıyla sağlanmaktadır (Eryılmaz, vd., 2018: 237-245).

Tüm dünyada olduğu gibi, Türkiye’de de sağlık ve doğal yaşam kaygıları ile yerleşme eğilimindeki artış, yöresel gıda ürünlerinin tüketimini artırmaktadır. Bu süreçte, gıda güvenliği ise sadece yöresel gıdaların değil tüm gıda ürünlerinin tüketimini etkileyen en önemli etkenlerden birisi olmuştur. Gelecekte tüketimdeki hem miktar hem de çeşitlilik yönlü artışın süreceği dikkate alındığında, tüketicilerin yöresel gıdalarda da gıda güvenliği algıları oldukça önemli hale gelmektedir (Taşdan vd, 2014: 363-386).

3.YÖRESEL GIDA KAVRAMI

3.1.Yöresel Gıdaların Yerel Ekonomiye Katkısı

Yöresel gıda coğrafi açıdan bir bölge veya yöreye özgü olan, ün ve kalitelerini buranın doğal koşulları ve bölgesel özelliklerinden oluşan bilgi ve geleneklerinden alan ürünler olarak tanımlanmaktadır (Schneider ve Ceritoğlu, 2010). Türkiye, yöresel gıda ürünleri açısından değerlendirildiğinde oldukça zengin bir ülke durumundadır. Türkiye’nin çeşitli bölgelerinde coğrafik yapı, ekolojik ve iklim özellikleri, tarımsal faaliyetlerin çeşidine göre, farklı yöresel gıda ürünlerinin üretilmesine imkân vermektedir. Bu yöresel ürünler, üretildiği bölgeye göre birbirinden tamamen farklı olacağı gibi, aynı ürünün üretildiği bölgenin özelliğine, üretim tekniğine ve hammaddesine göre ayırt edici özellikte olması da mümkündür (Kuşat, 2012: 261-275).

Yöresel gıda ürünlerinin üretildikleri bölgelerdeki küçük işletmelerin ekonomik sürdürülebilirliğine yaptığı katkılar yerel ekonominin canlandırılmasını sağlamaktadır (Bilge vd, 2019). Bu ürünleri benzerlerinden ayıran nitelikleri, onların geleneksel ürün özelliği taşımalarına neden olmaktadır. Hem ulusal hem de uluslararası pazarlarda tüketicilerin, yeni tatlarla yönelik arayışları ile ürün çeşitliliği, güvenilir gıda, daha az işlenmiş ve daha az katkı maddeleri içeren doğal gıda ürünleri talepleri (Demirbaş vd., 2006), yöresel gıda ürünleri sektörünün önemini iyice arttırmaktadır (Kuşat, 2012: 261-275).

Yöresel gıdalar pazarda farklılık yaratma ve ürün çeşitlendirmesi, kırsal kalkınmaya ekonomik, istihdam, turizm ve tanıtım gibi birçok açıdan katkıları nedeniyle önem taşımaktadır (Altuntaş, 2016: 167).

3.2. Yöresel Ürün Mevzuatında Gıda Güvenliğinin Yeri

Türkiye’nin sahip olduğu zengin yöresel ürün varlığının korunabilmesi için gerekli yasal düzenleme, 27.06.1995 tarihinde yürürlüğe giren 555 sayılı Coğrafi İşaretlerin 60 Korunması Hakkında Kanun Hükmünde Kararname ile gerçekleştirilmiştir. Yasa tescilleri vermek üzere Türk Patent Enstitüsü’nü görevlendirmiştir (Tekelioğlu ve Demirel 2008: 715-730). Bu Kanun Hükmünde Kararnamenin amaç ve kapsamı “Doğal ürünler, tarım, maden ve el sanatları ürünleri ile sanayi ürünlerinden bu Kanun Hükmünde Kararnamede yer alan tanımlara ve koşullara uygun her türlü ürünün coğrafi işaretlerle korunmasına ilişkin kuralları ve şartları kapsar” şeklinde belirlenmiştir. 555 sayılı KHK ile aynı dönemde çıkan 556 Sayılı Markaların Korunması Hakkında Kanun Hükmünde Kararname’de de coğrafi işaretlerin korunmasına yönelik hususlara yer verilmiş, coğrafi işaretlerin mülkiyet hakkının marka şeklinde tek bir kişiye verilemeyeceği ve markaların coğrafi kaynağı yanıltıcı şekilde olamayacağı gibi hususlar hükme bağlanmıştır (Altuntaş, 2016: 60).

Bu Kanun Hükmünde Kararname kapsamında coğrafi işaretler, menşe adı ve mahreç işareti olarak ikiye ayrılmıştır. Bir ürünün menşei olan yöre, alan veya bölge adı, aşağıdaki şartların birlikte karşılanması durumunda "menşe adını" belirtir: Bu kapsam,

- a) Coğrafi sınırları belirlenmiş bir yöre, alan, bölge veya çok özel durumlarda ülkeden kaynaklanan bir ürün olması;
- b) Tüm veya esas nitelik veya özellikleri bu yöre, alan veya bölgeye özgü doğa ve beşerî unsurlardan kaynaklanan bir ürün olması ve
- c) Üretimi, işlenmesi ve diğer işlemlerinin tümüyle bu yöre, alan veya bölge sınırları içinde yapılan bir ürün olması (Mevzuat Bilgi Sistemi, 2021) ile belirtilmektedir.

Örneğin, "Afyon Kaymağı" ait olduğu coğrafi bölgenin dışında üretilemez. Çünkü ürün niteliklerini, ancak ait olduğu yöre içinde üretildiği takdirde kazanabilmektedir (Türk Patent ve Marka Kurumu, 2019).

Üçüncü fıkrada belirtilen koşulları karşılayan ve belirli bir yöre, alan veya bölgeden kaynaklanan bir ürünü belirtmek için geleneksel olarak kullanılan güncel dilde yerleşmiş coğrafi veya coğrafi olmayan adlar da menşe adları olarak kullanılabilir. Bir ürünün menşei olan yöre, alan veya bölge adı, aşağıdaki şartların karşılanması durumunda "mahreç işareti" göstergesini belirtir:

- a) Coğrafi sınırları belirlenmiş bir yöre, alan veya bölgeden kaynaklanan bir ürün olması;
- b) Belirgin bir niteliği, ünü veya diğer özellikleri itibarıyla bu yöre, alan veya bölge ile özdeşleşmiş bir ürün olması;
- c) Üretimi, işlenmesi ve diğer işlemlerinden en az birinin belirlenmiş yöre, alan veya bölge sınırları içinde yapılan bir ürün olması (Mevzuat Bilgi Sistemi, 2021).

Örnek "Antakya Künefesi": Coğrafi sınır olarak Antakya belirtilmiştir. Künefede kullanılan peynir Antakya yöresine özgü tuzsuz inek peyniri olması gerekmektedir (Türk Patent ve Marka Kurumu, 2019).

AB, tarımsal ürünler ve gıda maddelerine yönelik kalite politikalarına dair 2081/92 ve 2082/92 sayılı yönetmeliklerini 14 Temmuz 1992'de çıkarmıştır. Bu yönetmelikler, AB'nin Ortak Tarım Politikası (OTP)'nda da miktar kaygısından ziyade kalite kaygısının, ayrıca üretim fazlasını bertaraf etmek üzere arz ve talebi dengelemeye yönelik uygulamaların öne çıktığının ilk belirtileridir. Söz konusu iki yönetmelik, aslında AB'nin OTP'de radikal değişimin başlangıcı ve aynı zamanda kalite yaklaşımının birer parçasıdır. Başlangıçta sadece birer yasal araç gibi gözüken bu yönetmeliklerin etkileri, 90'lı yılların başında çok net bir biçimde belirlenememiştir. Ancak, sonraki yıllarda yapılan araştırmalarda bu düzenlemelerin tüketiciler ve üreticiler açısından olumlu katkıları olduğu saptanmıştır. Bu uygulamalarda eksik olan husus, etiketlerin sadece ürünlerin üretildikleri yeri veya adlarını belirtmesiydi. Bunlara ek bir diğer husus ise, ürünlerin geleneksel birtakım özelliklere sahip olmalarıydı. Gelişmiş teknolojiden ötürü, ürünün ismi ve geldiği yer tescillenmesine rağmen, büyük firmalar bu ürünleri kolaylıkla sahiplenebilirdi. Ancak ürünün hangi şekilde üretildiği ve geleneksel bazı öğelere sahip olup olmadığı AB'nin yetkili kurumlarınca onaylanırsa hem yerel üreticiler korunur hem de kırsal kalkınmaya bir katkı sağlanabilirdi. Bu amaçla 2082/92 sayılı yönetmelikte bahsedilen TSG ibaresinin ürünlerin etiketlerine konması kararlaştırılmıştır. Bu ibarelerin tam olarak ne anlama geldiği aşağıda açıklanmıştır (Demirbaş vd, 2006: 47-55).

Protected Designation of Origin (PDO), gıda maddesinin üretim, işleme ve hazırlanma aşamalarının otoritelerce kabul görmüş bir yöntemle ve belirtilen coğrafi bölgede gerçekleştirildiğini ifade etmektedir.

Protected Geographical Indication (PGI), coğrafik illentinin üretim, işleme veya hazırlık aşamalarından herhangi birinde olmasını gerektiren bir ifadedir.

Traditional Speciality Guaranteed (TSG), ürünün orijinini değil, ancak geleneksel karakterini ya içerik ya da üretim yöntemi açısından vurgulamaktadır (Demirbaş vd, 2006: 47-55).

4. YÖRESEL GIDA ÜRÜNLERİNDE GIDA GÜVENLİĞİ ALGISINA İLİŞKİN LİTERATÜR ARAŞTIRMASI SONUÇLARI

2000-2020 yılları arasında Dünya’da ve Türkiye’de yöresel gıda ürünlerinde gıda güvenliği konusunda yapılmış çalışmalar Elsevier, Google Akademik ve Ulusal Tez Merkezi gibi önemli veri tabanlarında araştırılmıştır. Tarama terimleri; “yöresel gıda”, “local food”, “yerel gıda”, “regional food”, “gıda güvenliği”, “food safety”, “yöresel ürün”, “tüketici algısı”, “yerel yemek” ve “yerel yiyecek” olarak belirlenmiş ve bu terimler üzerinden veri tabanları üzerinden araştırma yapılmış ve elde edilen literatür, yöntem, kapsam ve sonuçları itibariyle yıllar bazında bir Çizelge kullanılarak gösterilmiştir (Çizelge 1).

Çizelge 1.Yöresel Gıda Ürünlerinde Gıda Güvenliği Algısı

Yıl	Yazar(lar)	Anket Sayısı	Ülke/il/ ilçe	Yöntem	Bulgular	Algı
2000	Loureiro and McCluskey	157	ABD / Washington	Coğrafi İşaretli Yöresel Gıda	1-Tüketiciler yöresel gıda ürünlerini benzerlerine göre daha lezzetli, güvenli, sağlıklı ve kaliteli bulmaktadır. 2-Tüketiciler, yöresel gıda ürünlerini genellikle seyahatlerinde doğrudan yöresinden satın almakı tercih etmekte, yöresi dışında satılan ürünlere güvenmemektedir.	(+)
2006	Darby, Battle, Ernst and Roe	530	Kaliforniya / Long Beach	Ayrım yok	Katılımcıların yerel gıdaları satın alma nedenleri; tazelik, tat ve güvenlik bulmalarıdır.	(+)
2007	Henseleit, Kubitzki and Teuber	3000	Almanya	Coğrafi İşaretli Yöresel Gıda	Tüketiciler yöresel gıdaları daha güvenli ve kaliteli olduğu için tercih etmektedir.	(+)
2008	Pirog and Rasmussen	755	ABD / Iowa	Coğrafi İşaretli Yöresel Gıda	Ankete katılanların %74’ü yöresel/ bölgesel gıdaları, ulusal ve küresel gıda zincirlerinin ürünlerine göre daha güvenli bulmaktadır.	(+)
2009	Sajiki, Sawauchi, Masuda, Tokoro, Iwamoto, Nakatani and Yamamoto	799	Japonya / Hokkaido	Ayrım yok	Yöresel ürünler tazeliği, lezzeti, fiyatı, güvenilir ve sağlıklı oluşu ve çevreye daha duyarlı üretilmesi gibi özellikleri nedeniyle tüketilmektedir.	(+)

2010	Schneider ve Ceritoğlu	400	Türkiye / İstanbul	Coğrafi İşaretli Yöresel Gıda	Ürünün fiziksel ve fonksiyonel özelliklerini ifade eden içsel kalite değişkenleri tarafından açıklanan “Ürün Özellikleri ve Kalite Boyutu”nda tüketicilerin yöresel gıda ürünlerini diğer ürünlere göre daha sağlıklı, doğal, taze, kaliteli ve lezzetli algıladıkları görülmüştür.	(+)
2013	Knight	877	Kanada / Halifax	Ayırım yok	Tüketiciler yerel yiyecekleri daha taze, daha lezzetli, daha sağlıklı, daha güvenli ve daha az mesafede ulaşabildikleri ve doğal çevrenin korunması özellikleri sebebiyle tüketmektedir.	(+)
2014	Arsil, Li and Bruwer	65	Endonezya	Coğrafi İşaretli Yöresel Gıda	Yöresel gıdaların, ürün kalitesi, tüketici sağlığı ve güvenliği, yerel halkın refah düzeyini arttırmak, sosyal eşitliğe teşvik etmek gibi özellikleri tüketicilerin yöresel ürünleri tercih etme isteğini olumlu yönde etkilemektedir.	(+)
2014	Albayram, Mattas and Tsakiridou	271	İzmir	Coğrafi İşaretli Yöresel Gıda	Tüketicilerin yöresel gıda ürünlerine olan güveni yöresel olmayanlara göre daha fazladır ve tüketiciler Ci etiketi bulunan yöresel ürünleri daha güvenli bulmaktadırlar.	(+)
2014	Taşdan, Albayrak, Gürer, Özer, Albayrak and Güldal	260	Türkiye / Ankara	Ayırım yok	Tüketicilerin büyük bölümü geleneksel gıdaları yöresel gıdalar, doğal gıdalar, eski zamanlardan beri tüketilen gıdalar gibi ifadelerle tanımlamaktadır. Tüketicilerin geleneksel gıdaları sağlıklı, kaliteli ve güvenilir bulduğu, daha az katkı maddesi	(+)

					ve koruyucu içerdiğini, daha az işlenmiş olduğunu düşündüğü vurgulanmıştır.	
2016	Aprile, Vincenzina, Caputo, Rodolfo and Nayga Jr	200	İtalya/ Napoli	Ayrim yok	Tüketicilerin yerel gıdalarla ilişkilendirmek için yaygın olarak kullandığı kalite özellikleri tazelik, tat, besleyici, güvenli ve sağlıklı olmasıdır.	(+)
2016	Cömert and Özata	250	Türkiye	Ayrim yok	Katılımcıların restoran seçimlerini etkileyen en önemli unsur 'yöresel gıdaların daha lezzetli oluşu' ve 'restoranda hammaddenin yöreden temin edilmesi' ifadeleri olmuştur. Bu ifadeleri 'yöresel gıdalar daha tazedir' ve 'yöresel gıdalar daha güvenilirdir' takip etmektedir. Katılımcıların %89,6'sı yöresel gıdaları diğer ürünlere göre daha taze ve güvenilir bulmuşlardır.	(+)
2016	Kadanalı ve Dağdemir	288	Türkiye/ Erzurum	Coğrafi İşaretli Yöresel ürün	Ankete katılan tüketicilerin %32,3'ü yöresel gıdaları güvenilir bulduklarını, tüketicilerin %67,7'si ise coğrafi işaretli yöresel gıdaları güvenli bulmadıklarını ifade etmiştir.	(-)
2019	Ayaz Türkmen ve	457	Türkiye/ Karabük	Ayrim yok	Tüketicilerin %23'ünün yöresel gıdaları satın alma nedeni, bu ürünleri daha güvenli bulmalarıdır. Tüketicilerin daha büyük bir oranı (%77) ise yöresel gıdaları güvenli bulmadıklarını ifade	(-)

					etmişlerdir.	
2019	Jensen, Christensen, Denver, Ditlevsen Lassen and Teuber	1515	Denmark, Frederiksberg	Coğrafi İşaret	Tüketiciler yerel gıdaları hem daha lezzetli hem daha taze, yüksek gıda güvenliği ve ayrıca azaltılmış çevresel etkiler gibi ürün ve süreç kalitesi açısından faydaları nedeniyle genellikle olumlu bir şekilde algılamaktadır.	(+)
2019	Sancak	147	Türkiye Ankara /	Coğrafi İşaret	Ankete katılan tüketicilerin %18'i coğrafi işaretli yöresel gıdaların diğer ürünlere göre daha sağlıklı ve güvenilir olduğunu düşündüklerini belirtmişlerdir. %82'si ise coğrafi işaretli yöresel ürünleri sağlıklı ve güvenilir bulmamaktadır.	(-)
2020	Sormaz, Özata ve Madenci	510	Türkiye Tekirdağ /	Ayırım yok	Katılımcılar, yöresel gıdaları daha lezzetli, daha sağlıklı, daha taze ve daha güvenilir bulmuştur.	(+)

5. SONUÇ VE ÖNERİLER

Araştırma için taranan literatürde Türkiye’de yapılan çalışmaların ikisinde (Schneider ve Ceritoğlu, 2010: 29-52; Albayram vd, 2014: 237-251), yöresel gıdaların coğrafi işaretlerle ilişkilendirildiğinde gıda güvenliği algısının pozitif olduğu, coğrafi işaretlerle ilişkilendirilmeyen geriye kalan üç çalışmada (Taşdan vd., 2014: 363-386; Cömert ve Özata, 2016: 538-551 ; Sormaz vd., 2020: 538-551) buna rağmen, yöresel ürünler için gıda güvenliği algısının pozitif olduğu, ancak diğer iki çalışmada ise (Kadanalı ve Dağdemir, 2016: 9-16; Ayaz ve Türkmen, 2019: 119-219; Sancak, 2019: 65), yöresel ürünler için gıda güvenliği algısının negatif belirlenmiştir.

Uluslararası literatür incelendiğinde, coğrafi işaretle bağlantı kuran dört çalışmada, (Loureiro and McCluskey, 2000: 309–320; Henseleit et al, 2007: 54-67; Pirog and Rasmussen, 2008: 294-1854; Arsil et al, 2014: 107-124), yöresel ürünler için gıda güvenliği algısının pozitif olduğu, ancak diğer beş çalışmada ise (Darby et al, 2006: 23-26 ; Sajiki et al, 2009:1-8 ; Knight, 2013: 29-39 ; Aprile et al, 2016:19-42 ; Jensen et al, 2019: 255-265) coğrafi işaret, iyi tarım uygulamaları, ekolojik tarımla herhangi bir ilgi kurulmadığı halde yöresel ürünler için gıda güvenliği algısının pozitif olduğu bulunmuştur.

Araştırma sonuçları bir bütün olarak değerlendirildiğinde, yöresel gıda ürünlerine olan ilginin giderek arttığı, özellikle Cİ uygulamalarının gıda güvenliği algısı açısından yöresel ürünlere değer kattığı ifade edilebilir. Türkiye’de ve dünyada hemen hemen her yörenin özgün bir ürünü bulunmakta ve bu ürünler

kaynak gösterilen coğrafi bölge ile aynı isimle anılmaktadır. Yöresel ürünlerin güvenilirliği Cİ tarafından korunmakta ve tüketicilerin gıda güvenliği algılarını pozitif olarak etkilemektedir (Orhan, 2010: 243-254). Tarım ve gıda ürünlerinin Cİ amblemi ile satılması tüketicilerin algısında kalite ve güveni temsil ettiği için yüksek fiyatla satın alınmakta, böylece tüketiciler kaliteli ve güvenilir ürün tüketirken, üreticiler de önemli gelir artışı sağlayabilmektedir (Şahin ve Meral, 2012: 88-92).

Coğrafi işaret amblemlerinin yöresel ürün ambalajlarının üzerinde kullanılması tüketicilerin güvensizliğini ortadan kaldıracak önemli bir araçtır. Bu işaretin anlamının bilinmemesi, yöresel ürünler pazarlamasının büyük oranda kendi yöreleri ile sınırlandırılacağı anlamına gelmektedir. Ancak, yöresel ürünlerin satışı kendi bölgeleri ile sınırlı kalırsa bölgesel kalkınmaya yeterince katkı sağlayamayacaktır. Coğrafi işaretlerin anlamının bilinmesi bu sınırlamayı ortadan kaldıracak ve tüketicilere almış oldukları ürünün gerçek yöresi ile bağlantılı olduğunun garantisini verecek olan bir uygulamadır. Dolayısıyla, öncelikle tüketicilerin coğrafi işaretlerin anlamını öğrenmeleri yöresel ürünlerin kendi yörelerinden çıkarak daha geniş bir pazarda güvenle satılmalarının en önemli koşullarından biri olarak görülmelidir. Bu bağlamda, kamu spotları ya da kamu bütçeli tanıtım ve bilgilendirme projeleri geliştirilmesi, ayrıca coğrafi işarete sahip ya da ürünlerinin coğrafi işaretlerinin alınması ile ilgilenen kurum ve kuruluşların tüketicileri bu konuda bilinçlendirmeye yönelik reklam ve tanıtım kampanyaları yürütmeleri faydalı olabilecektir (Dokuzlu vd, 2019: 97-108).

Organic Livestock Production and Marketing

Hasan Vural¹

¹Prof.Dr., Uludağ University, Faculty of Agriculture, Bursa, Turkey. hvural@uludag.edu.tr

Abstract: Organic agricultural production has been gaining importance in Turkey in recent years and has been an alternative to traditional agricultural production. Organic agriculture in Turkey is affected by the same general issues that affect Turkish agriculture. The most important problems of the Turkish agriculture can be identified as lack of organization and marketing followed by lack of education for farmers. In organic livestock production the most important issue should be considered as marketing and marketing research. In this study, marketing problems of organic agriculture and organic livestock production in Turkey is examined and some suggestions are made as a solution to these problems.

Key Words: organic agriculture, animal products, marketing of organic products

1.Introduction

The production system, which is defined as organic or ecological agriculture, is named differently, but is generally used synonymously. Ecological agriculture which comprises human and environmentally friendly production systems, aimed at reestablishing the natural balance that has disappeared as a result of erroneous practices in the ecological system. Ecological agriculture is a form of production not only just aimed at increasing the quantity but also raising the quality of the product. This type of production system recommends the use of synthetic chemicals, hormones and mineral fertilizers, as well as organic and green fertilizing, alternation, conservation of soil, increasing the resistance of plants, benefiting from natural enemies, suggesting the establishment of all these facilities in a closed system (İlter vd. 1996). The main purpose of organic farming is to produce all kinds of food, nutrients as well as sheltering and clothing materials in a way that will not damage the human health "Gündüz ve Kaya (2007)".

Organic foods include vegetable and animal food. Furthermore, in order for a product to be organic, it is necessary to make the necessary checks and certifications by the control and/or certification body authorized by the Ministry of Agriculture and Rural Affairs. Products which are also referred to natural products, village products, such as the term are not organic products.

Organic agriculture is increasingly widespread in all countries. But we can not say that it is too fast. Because a significant part of the world's population is starving, the majority of them are low income and income distribution can not improve in any country. As can be understood from this situation, the increase is directly relevant to the income of the people. At the 16th World Fruit and Vegetables Show (Fruit Logistica) in Hamburg between 7 and 9 February 2008, showed no increase in demand for organic products "Vural (2008)". The main reason for the increase in demand for organic products is that in the United States and in the European Union countries, consumers increasingly pay more attention to healthy consumption of food and protection of the environment. The volume of organic trade tends to grow fast, especially in Europe, North America and Japan. In order to comply with these developments in the European Community, the Ministry of Agriculture and Rural Affairs has begun to work on the preparation of the Regulation in cooperation with various institutions and organizations and the "Regulation on the Production of Plant and Animal Products with Ecological Methods" published and entered into force in the Official Gazette No. 22145 dated 24.12.1994. An amendment was made with the regulation published in the Official Gazette dated 29.06.1995 and numbered 22328 in order to prevent the problems encountered in practice in some of the provisions of this Regulation and to enforce the sanctions to be applied against defects and faults to be made during organic farming activities. Then, the "Regulation on the Principles and Implementation of Organic Agriculture" published and entered into force in the Official Gazette dated July 11, 2002 numbered 24812. The draft law on the production, consumption and inspection of organic products has been included in the government's urgent action plan and "Organic Farming Law" numbered 5262 has been published in Official Gazette

No. 25659 dated 03.12.2004. "Regulation on the Principles and Implementation of Organic Agriculture" prepared in accordance with this Law published and entered into force in the Official Gazette No. 25841 and dated 10.06. 2005.

2. Material and Method

In this study statistical data of official institutions were used in the preparation of the table. There are not many surveys of marketing of organic agricultural products in our country. For this reason, economic analyzes of the costs and revenues in marketing are not presented. It is clear that there is a need for marketing research in this area in many regions. After marketing services and marketing methods were presented in this study, it was tried to suggest necessary solutions to be taken in accordance with marketing approaches.

3. Production of organic products in Turkey

Although Turkey has very favorable conditions in terms of organic agriculture production, its share in the world organic product market is very low. Turkey is also confronted with many production and marketing problems. Global environmental disasters in recent years and the 2008 economic crisis have created a potential to increase problems in the mid-term. For this reason, some measures are required for organic product marketing. Organic farming activities in Turkey has started with the European companies to demand organic farming products and to introduce this production technique in the mid-1980s. For this reason, in the first years the aim of organic farming was to meet the intended export demands and enter new markets.

However, the increasing interest in healthy products in our country has resulted in an increasing demand in the country, and this demand has become on a steady upward trend. It is normal for this increase in demand to continue with the condition that the prices of organic products are not too high compared to the market prices of traditional products. In addition, by following trends in world markets organic agricultural production needs to be shaped.

As of 2008, organic farming of 247 varieties was carried out by 15 thousand producers in 166.9 thousand hectares of area, 57.4 thousand hectares of natural collection area and 530 thousand tons of crops were obtained "İGEME (2009)". While the amount of exports this year was 8.6 thousand tons, this export revenue generated 27 million \$. However, the fact that most of the companies marketing organic products are located in western regions, especially in the Aegean, limits the widespread use of organic production in the North and East regions.

Turkey has two important advantages in exporting organic agricultural products. Besides foreign companies, there are domestic companies which are both manufacturing and exporting. The Export Promotion Center and some exporters' associations are engaged in supporting activities such as preparing brochures, articles and providing information "Nicely (2001)". Most of the organic products produced in Turkey go to foreign markets. The most important foreign markets are the EU countries with an 80% share and the United States with a 15% share. In the EU countries, Germany is in the first place with a market share of 60%. Apart from those countries, northern European countries, Canada and Japan are remarkable markets. The number of companies importing and exporting in the field of organic agriculture in Turkey continues to increase and reached 167 in 2006.

The production and marketing of organic products is based on the "contract manufacturing" model, which is signed between the manufacturer and the buyer or seller of the organic product. In Turkey, the majority of this production is aimed at export demand. But in other countries consumption is very high in the domestic market.

4. Marketing of organic livestock products

The basis of marketing is; "Market intelligence gathering", "market segmentation and target market selection", "product planning and development", "pricing", "distribution" and "promotion". A concise

description of marketing is; "Marketing is the planning and implementation process for the development, pricing, promotion and dissemination of goods, services and ideas in order to realize marketing, personal and organizational exchanges (changes)" (Akat, 2008). Although Turkey has various advantages in organic agriculture and food production, it is seen that production in quantity, and quality can not meet the needs and desires of targeted markets. The best proof of this is that only 2% of the organic agricultural products produced in 2007 were exported. There is also an imbalance between product variety and product quantities.

Major market constraints of organic products; the lack of government support, the support of semi-organic products, the lack of infrastructure to improve quality, high certification costs, lack of market knowledge, lack of producer unity and economic scale are insufficient for the market.

The main marketing services of organic animal products are as follows: Market and marketing research - animal selection and production (production and marketing planning) - **transport** - cutting - **processing** - classification - packaging - labeling - **storage** - promotion - statistical data compilation - control - marketing accounting and financing - **sales**. The basic marketing operations are marked in bold.

In accordance with the Regulation on Storage and Carriage, it is also necessary to comply with the provisions of the Law on the Adoption of the Law on the Production, Consumption and Inspection of Foodstuffs No 5179 on Amendment of Decree Law and the Turkish Food Codex Regulation published in the Official Gazette dated 16/11/1997 and numbered 23172. The inspection and control of the storage and transport vehicles in organic farming activities is carried out by the Organic Agriculture Units and the Authorized Organization.

No product that does not have a "Product Certificate" indicating that it is an organic raw material and / or an organic processed product that has not been produced under the provisions of the Regulation can not be marketed as an organic product. An entrepreneur who sells every organic product has to certify each party sale with a product certificate. These products are sold with an explicit indication that they are organic products. Organic products must bear one of the logos specified in the regulation in the domestic market.

It is important to prioritize buyers as they determine the marketing strategies of producers in the marketing of agricultural products. As production scale grows, marketing opportunities are increasing. First of all, contracted production seems to be the most guaranteed marketing method. In addition to this, sales can be done using supermarket chains and hypermarkets, producer markets, e-commerce, tourist attractions, merchants, organic product processing facilities, exporters, cooperatives and producer associations as well as retail outlets.

Businesses must first have market knowledge to form marketing strategies. Although some organic crops (such as cotton, wheat, lentil, olive) have a higher organic production than other crops, they are not included in the exported crops. As it can be understood from this situation, market research in this sector is not given importance. Whereas businesses compete to acquire market information to compete, the needs and desires of target consumers have to determine and produce according to the results they have. **Growth in the market depends on the size and maturity of the market. The key factor in organic product marketing is QUALITY.**

An important part of organic production in Turkey consists of main products. Product diversity and product segments (food product diversity) should be increased to grow the market. Products with higher added value (such as animal products) should be preferred. It will be useful to follow appropriate policies for niche marketing approach. A "**market development strategy**" should be followed for existing products entering the period of maturity or decline in product life cycle.

Generated exports are usually carried out according to demand from the outside market, and a specific market segment or sections are not selected as targets in advance. At the end of the external market surveys to be carried out, "**target market selection**" strategies appropriate to business resources should be adopted. This will ensure that business resources will be used more efficiently because there will be no focus on one or more market segments.

Research should be conducted on the following marketing strategies in competitive countries. For this reason, competition analyzes should be carried out with the support of private and state institutions and the enterprises should determine "price and distribution strategies" according to the results. A complete and reliable database on organic agriculture in Turkey should be established. With high quality and value added products, market segments of high income groups should be targeted. This will increase the likelihood of monitoring the "**high price strategy**".

There are very few publicity efforts in Turkey's organic agriculture market. Therefore, attention should be given to promotional activities. Particularly should be participated regularly and effectively in foreign fairs "Vural (2009)". Consumer education and awareness-raising activities should be performed primarily for the inadequacy of domestic demand. For this, businesses should actively participate in various social projects. Most importantly, they should become a trademark in national and international markets.

The most important problems of agriculture in our country are organizing and marketing. For this reason, firstly organizing farmers, organizing cooperatives or associations is an important first step for marketing. Lack of organizing is also the main cause of the retardation experienced in animal husbandry. Thus, buyers will have a bargaining advantage over them. It is essential to solve the above marketing problems and to implement the proposed solution proposals. A stand-alone business can not always be a brand, and it can not easily meet the huge cost of marketing costs that will make it easier to compete.

Exports in organic production and marketing are carried out in different ways:

1. The production project is carried out by a company located in the country and products are processed, packaged and exported by this company.
2. The production project is established by a foreign organization from abroad, the products obtained are handled by the contracted local company as a fason and the products are exported to the project owner company, the processing company and the export company.
3. The production project is established by a foreign organization from abroad and the products obtained are processed in facilities established by the foreign firm either in Turkey alone or jointly, or exported to the project company by the processing company or exporting company.

In a small number of applications, producers also certify their products by contacting the control and certification firm and sell them in the free market. An important problem encountered in Turkey's agricultural exports is that domestic companies enter into competition with each other. It is necessary for private companies that make organic production not to enter wrong competition with each other either in the domestic trade or in the foreign trade only in terms of breaking the price. This issue is especially important for farmers. No wrong competition should be created between producers. For this, joint production and marketing policies must be established nationwide by the union supra-institutions.

We can list some important operations that must be done in domestic and foreign marketing as; being a brand, having a website, participating in fairs, preparing a catalog, conducting a good manager, market and marketing research, developing good packaging, developing product segments, getting a standard document.

In organic production, the relationship between cost and sales price is important. The reason why the cost is relatively high compared to the conventional products; more need for human labor in organic production, lower efficiency, loss of product and revenue, cost of control and organization. For this reason, it is necessary to pay attention to the marketing of the products at the level that will bring profit to the producers.

Regulations in the production and marketing process in organic production are important. Binding to them is vital to the success of marketing. These regulations need to be audited by internationally recognized control and certification bodies. 13 internationally recognized control and certification firms operate in Turkey. These companies are obliged to control the activities in the field of organic agriculture "Koç ve Babadoğan (2007)". When we look at the data of organic agricultural products processed in Turkey, it is seen that domestic consumption, which was 4 990 tons in 2002, increased to

66 250 tons in 2006. The main reasons for increased consumption in the domestic market are as follows“Ataseven ve Güneş (2008)”.

- Consumers in the domestic market are increasingly willing to consume healthy, nutritious and delicious food,
- The increase of interest in the number of consumers in these products,
- Thanks to the developing technology and communication possibilities, the organic products are recognized by more and more consumers and therefore become widespread.

Unregistered economy is causing great damage to agriculture and food marketing. The end result is that the competitive economy is not functioning. The state must take necessary measures to ensure that the existence of the unregistered economy is not maintained in the organic product market. Because this situation causes loss of income in the enterprises and therefore loss of production. In addition, consumers can consume different types of products as organic products, which can lead to confounding confidence in the organic products and pose a great risk to the future of organic products.

Considering that today's low cost and high quality production is a competitive advantage in the framework of World Trade Organization rules, it is necessary to conduct market research in organic commodity trade, to identify product groups with development potential and to follow advanced marketing strategies. In the development of this production, education has great proposition

The increase in the number of trainees in this field is of great importance in terms of marketing and marketing strategies. It is necessary to create and develop a research infrastructure for the creation of the educational process and consciousness as well as the production of the consumer, the up-to-date information network maintenance, the creation of target markets, and the utilization of the advantages of these areas (Vural, 2014). It is important to monitor technological developments to succeed in international markets.

5. Conclusion

Production of organic agricultural products, which started with a contracted farming system in Turkey, has begun to be supported by production methods realized by independent projects after the endeavors of demand creation efforts like traditional products. However, in spite of the current diversity, production quantities are far from enough for domestic and foreign markets. For this reason, production needs to be increased. However, there are still unresolved marketing issues. Manufacturers need to develop their marketing policies and marketing strategies for domestic and international sales. Different marketing strategies may need to be implemented for domestic and foreign markets. There is a need for the state to take measures in terms of the proper operation of markets, as well as to provide training and financing support to producers to assist in the production, infrastructure and marketing.

Türkiye’de Tohumculuk Sektörünün Gelişimi

Prof.Dr.Hasan Vural¹

¹Bursa Uludağ Üniversitesi Ziraat Fakültesi Tarım Ekonomisi Bölümü, hvural@uludag.edu.tr

Özet: Ülkemizde tohumculuk sektörünün geleceğe dönük ümit verici olan ulaştığı seviye ve gelişim dikkate alındığında yakalanan ivmenin korunması ve ileriye götürülmesi zorunluluğu, içinde bulunduğumuz bu süreçte tarım sektörünün sahip olduğu ve giderek artan stratejik önemi dikkate alındığında daha da önem kazanmıştır. Tohum fiyatlarındaki artışını, kullanılan ıslah yöntemlerine, firmaların tohum eldesi için harcadıkları çıktılara bağlı olarak değiştirmektedir. En önemli unsurlardan biri rekabettir. Bundan sonra izlenecek hedef ve stratejiler ise; ülkemizde AB ile uyumlu, çağdaş ve günümüzün gereklerine uygun olarak yapılanmış, uluslararası rekabete açık, köklü ve gelişmiş kuruluşların mevcut olduğu tohumculuk sektörünü geliştirmektir. Tohumculuk sektörü bu amaçla sektör olarak bir bütünlük içinde geliştirilmeli ve desteklenmelidir. 1982 ile 1985 yılları arasında bir dizi yasal düzenleme ile tohumculuk faaliyetleri serbest bırakıldıktan sonra ülkemiz tohumculuk endüstrisi hızla büyüyerek, tohumculuk sektörünün 2017 yılı ticaret hacmi 1,4 milyar USD’ye ulaşmıştır. (TÜİK 2018) Hükümet politikalarına bağlı olarak, tohumculuk pazarımızda önümüzdeki yıllarda özellikle yem bitkileri ve serin iklim tahıllarında artışlar görülecektir. Türkiye tohumculuk pazarını oluşturan en önemli ürün bileşenleri tahıllar, endüstri ve yem bitkileri ile sebzelerdir.

1. Giriş

Tohumluk mübadelesi tarımın tarihi kadar eski olmasına rağmen ticari amaçlı tohumluk alışverişinin geçmişi hayli yenidir ve son birkaç yüzyıla dayanmaktadır. Yüzyıllardır mahsulden ayrılan tohumluklar kullanılıyorken, bu uygulama ABD ve bazı AB ülkelerinde 19 uncu yüzyıldan itibaren çoğu ürünlerde giderek azalmış ve tohumluk ticari nitelikli bir özellik kazanmaya başlamıştır. 20’nci yüzyılın ilk çeyreğinden sonra gelişmiş ülkelerde özel sektör girişimciliğine dayalı tohumculuk kuruluşları yaygınlaşmış ve de özellikle son çeyreğinde pek çok ülke ve ürün grubunda kamu, tohumluk üretim ve dağıtım sistemlerinden çekilerek yerini özel kuruluşlara bırakmıştır. Bunu izleyen benzer bir eğilim çeşit geliştirme alanında gözlemlenmiş ve 1970’lerden sonra özel tohumculuk kuruluşları Ar-ge konusunda önemli yatırımlar yapmaya başlamıştır. Günümüzde özellikle gelişmiş ülkelerde yeni bitki çeşitlerinin geliştirilmesi ve biyolojik yenilikler özel tohumculuk şirketleri tarafından sağlanmaktadır. Dünya tohumculuğunun gelişmesinde bilimsel ve teknolojik gelişmeler daima önemli ve belirleyici olmuştur. 19’ uncu yüzyılda temelleri atılan genetik bilimi, sistematik bitki ıslahı ve çeşit geliştirme faaliyetlerine giden yolu açmıştır. 20’ nci yüzyıl başında uygulamaya konulan hibrid (melez) teknolojisi ise özel sektör girişimciliği ve ticari tohumculuk arasındaki en etkili ve güçlü köprülerden birini kurmuştur. 20’ nci yüzyıl sonunda ise modern biyoteknoloji ve rekombinant DNA teknolojileri ile tohumculuk yeni ve çok güçlü bir ivme kazanmıştır. Günümüzde tohumluk endüstrisi artan nüfusun gıda güvenliğinin sağlanması açısından tartışılmaz ve vazgeçilmez bir yenilik ve verimlilik kaynağı haline gelmiştir. (Tigem 2011 Tohumculuk Sektör Raporu, Sayfa 6) Ülkemiz tarımında planlı ve sistemli ilk tohumculuk faaliyetleri Cumhuriyet ile birlikte başlamıştır. Ancak 1960’lı yıllara kadar bu konuda sağlanan gelişmeler daha ziyade bazı türlerde yürütülen çeşit geliştirme çabaları ve sınırlı miktarda tohumluk üretiminden 10 öteye gidememiştir. Bir ülkede tohumculuk endüstrisinin oluşum ve gelişiminde bu husustaki yasal çerçeve ile hukuki ve idari düzenlemelerin rolü büyüktür. Tohumluk üretimi, özel teşebbüs, serbest ticaret, araştırma, teknoloji transferi ve ıslahçı hakları gibi konularda açık seçik, objektif kurallar getiren ve çağın ihtiyaçlarına cevap verebilen düzenlemeler tohumculuk endüstrisini olumlu yönde etkilemektedir. Tohumluk üretim ve ticareti ülkemizde uzun yıllar yasal bir çerçeveden yoksun olarak devam etmiştir. Bir ülkede tohumculuk endüstrisinin oluşum ve gelişiminde bu husustaki yasal çerçeve ile hukuki ve idari düzenlemelerin rolü büyüktür. Türkiye, Cumhuriyet ile birlikte tarihindeki ilk planlı ve sistemli denilebilecek olan tohumculuk faaliyetlerine başlamıştır. 1923 ile 1960 yılları arasında daha plansız bir tedarik hüküm sürmüştür. Türkiye’de ilk bitki ıslah çalışmaları ve kaliteli tohumluk üretimleri 1926 yılında tohum ıslah istasyonlarının kuruluşu ile başlamış, ancak 1950’lere gelinceye kadar yalnızca serin iklim tahıllarına odaklanan çeşit geliştirme ve tohumluk üretim çalışmaları ile sınırlı kalmıştır. İzleyen yıllarda, kamu araştırma programlarına hem daha çok sayıda tür dahil edilmiş, hem de üretilen tohumlukların miktarı artmıştır. Bu yıllar arasındaki faaliyetlerin yalnızca tohum üretimi ile sınırlı kalması bir yenilenme

ihtiyacını doğurmuş ve 1963 yılında 308 sayılı Tohumların Kontrol ve Sertifikasyonu Hakkındaki Kanun yürürlüğe girmiştir. Türkiye aynı yıl ISTA'ya, 1966 yılında da OECD sertifikasyon sistemine üye olmuştur. (Tigem 2011 Tohumculuk Sektör Raporu, s. 6) 1984 yılında tohumculuk sektörünün libere edilmesi sektör için önemli bir viraj olmuştur. Özel sektör tohumculuk şirketlerinin özellikle endüstri bitkileri ve sebze tohumculuğundaki başarılı sonuçları üreticiler tarafından beğeni ile karşılanmıştır. Özellikle hastalıklara dayanım ve verim farkları biranda yeni çeşitlerin tüm ülkede aranmasına neden olmuştur. 1989 yılında bazı türlerde AB ile eşdeğerlik statüsü alındıktan sonra 2001 yılında Ankara'da kurulmuş olan TTSM, ISTA tarafından akredite laboratuvar olarak kabul edilmiştir. Bazı üçgüller hariç, Türkiye halen OECD tarla ve yem bitkileri tohumluk programlarının tümüne iştirak etmektedir. 2007 yılında ise Türkiye bazı sebze tohumluklarında OECD sistemine dahil olmuş ve AB eşdeğerliği 2012 yılına kadar uzatılmıştır. Ülkemiz aynı zamanda Uluslararası ISF, UPOV gibi tohumculukla ilgili kuruluşlara üyedir. (TTSM, Ankara) Tohumculuk hizmetleri ülkemizde Gıda, Tarım ve Hayvancılık Bakanlığı'na bağlı kuruluşlar tarafından farklı yetki alanları çerçevesinde yürütülmekte ve kontrol edilmektedir. 11 Tohumculuk politikalarının oluşturulması, ülkesel üretim, tedarik ve dağıtım programlarının yapılması, tescil ve üretim izinleri, tohumculuk danışma ve ihtisas komisyonları gibi hususlar BÜGEM tarafından incelenirken; her türlü hastalık ve zararlı kontrolleri, analizleri KORGEM, çeşit geliştirme ve her türlü araştırma faaliyetleri TAPGM, hayvansal ve tarımsal üretimler de TİGEM tarafından yapılmaktadır (SARAÇOĞLU, 2013).

2. Tohumculuğun Mevcut Durumu

Ülkemizde araştırma ve geliştirme çalışmaları uzun yıllardır sürdürülmektedir. İlk zamanlarda sadece Bakanlığa bağlı enstitüler tarafından çeşit geliştirme faaliyetleri yapılmışken, bu çalışmaları özel tohumculuk şirketleri büyük bir başarı ile sürdürmüşlerdir. Bu çalışmalar sonucunda birçok bitki türünde yeni çeşitler geliştirilmiştir. Buğday ve arpa gibi kullanım miktarı bakımından ekonomik öneme sahip ürünlerde ıslah çalışmaları Cumhuriyet'in kuruluşundan sonra hız kazanmış, bu alanda çeşit geliştirme yanında yetiştirme teknikleri konusunda da önemli sonuçlar elde edilmiştir. Geliştirilen çeşitlerin birçoğu çiftçimiz tarafından hala kullanılmaktadır. Patates, hibrid sebzeler ve yem bitkilerinde ise çeşit geliştirme çalışmaları yetersiz kalmış, tedarik ihtiyacı ithalat ile çözülmeye çalışılmıştır; diğer endüstri bitkileri ürünlerde ise büyük başarı elde edilmiştir.

5553 Sayılı Tohumculuk Kanunu'nun Sektöre Getirdiği Yenilikler:

- Tohumluklara kalite güvencesi,
- Tohumlukların uluslararası normlarda kayıt, tescil ve sertifikasyonu,
- Tohumluk üretim ve ticareti ile ilgili düzenlemeleri yapmayı,
- Bakanlıkça gerekli görülen hallerde istisnai uygulama ve yetki devri,
- Tohumculuk sektörünün yapılandırılması ve geliştirilmesi.

Tohumculuk faaliyetlerinin yasal dayanağını teşkil eden diğer önemli kanunlar:

- 2004 yılında çıkartılan 5042 Sayılı Yeni Bitki Çeşitlerine Ait Islahçı Haklarının Korunmasına İlişkin Kanun,
- 2010 yılında çıkarılan 5977 Sayılı Biyogüvenlik Kanunu,
- 2010 yılında çıkartılan 5996 Sayılı Veteriner Hizmetleri, Bitki Sağlığı, Gıda ve Yem Kanunları ile ve bu kanunlara göre çıkarılan yönetmelikler ile sektörün mevzuat altyapısı oluşturulmuştur.

Türkiye, tohumluk üretimi konusunda özellikle son yıllarda çok önemli bir noktaya gelmiştir. Tarla bitkileri tohumluklarının (özellikle H.Ayçiçeği ve H.Mısır) ve sebze bitkileri tohumluklarının (özellikle H.Domates, H.Biber, H.Hıyar) sahip olduğu hibridlik oranı, safiyet, vb ürünün kalitesi ile ilgili olumlu gelişmeler nedeniyle tüm Dünya'da özellikle aranan ülke pozisyonuna gelmiştir. Ülkemizin sahip olduğu klima ve iş gücünün mükemmel birleşimi sonucu bu başarı elde edilmiştir. İhracat üretimlerinin her geçen gün artması; buradan elde edilen döviz girdisini etkilemektedir. Bu sayede ithalat ve ihracat arasındaki fark her geçen gün kapanmaktadır. Ancak ithalat rakamının azaltılması hiçbir zaman kapıları 13 kapatmak anlamında olmamalıdır. Bu kısa vadede yapılacağı sanılan faydadan daha çok zarar verecektir. Buğday arpa gibi kendine döllen bitkilerin sertifikalı tohumluklarının üretimi nispeten her

geçen yıl artmaktadır. Ancak fazla olmasına rağmen bu ürünlerin sertifikalı tohumluklarına çiftçiden gelen talep hala gerçek kullanım oranına göre çok düşüktür. Ülkemizde tohumlukların pazarlaması özellikler son yıllarda daha da işlevsel hale gelmiştir. Özel firmalar, kurum ve kuruluşlar üretmiş oldukları tohumluklarını kendi özel bayileri veya bölge distribütörleri yanı sıra Pankobirlik, Tarım Kredi Kooperatifleri ve Tarım Satış Kooperatifleri kanallarıyla pazarlamaktadır. Araştırma ve geliştirme alanında karşılaşılan problemlerin başında tescil edilen yeni çeşitlerin çiftçiye intikalindeki güçlükler gelmektedir. Bunun yanında, uzun yıllar süren araştırma çalışmaları sonucunda elde edilen yetiştirme teknikleri ile ilgili bilgilerin de çiftçiye ulaştırılma oranı oldukça düşüktür. Geliştirilen yeni çeşitlerin tanıtımının yapılmasında ve pazara sunulmasında problemlerle karşılaşılmaktadır. çekinilmemektedir.

3. Dünya Tohumculuk Endüstrisinin Gelişimi

Tarımın keşfi insanlık tarihindeki en önemli dönemeçlerden biridir ve tohum mübadelesi de bu tarihe eşlik etmiştir. Ancak ticari amaçlı tohum alışverişi son birkaç yüzyıla dayanmaktadır. Yüzyıllardır mahsulden ayrılan ürün tohum olarak kullanılıyorken, 19 uncu yüzyıldan itibaren ABD ve bazı AB ülkelerinde nitelikli tohum üretimi ve kullanımına başlanılarak, tohum ticari bir değer kazanmıştır. 20 nci yüzyılın ilk çeyreğinden sonra gelişmiş ülkelerde tohumculuk kuruluşları yaygınlaşmış ve 1970'lerden sonra Ar-Ge konusunda önemli yatırımlar yapılmaya başlanılmıştır. Özellikle gelişmiş ülkelerde verim ve kalite yönüyle öne çıkan yeni bitki çeşitleri geliştirilmiştir. Dünya tohumculuğunun gelişmesinde bilimsel ve teknolojik gelişmeler daima önemli ve belirleyici olmuştur. 19 uncu yüzyılda temelleri atılan genetik bilimi, sistematik bitki ıslahı ve çeşit geliştirme faaliyetlerine giden yolu açmıştır.

3.1. Dünya Tohum Pazarı

Tarımsal üretimin bir girdisi olarak tohum ticareti 1970'lere kadar dünya ticaretinde küçük bir pay almıştır. Bu dönemde bir yandan ülkelerin çoğunun tohum konusunu stratejik ve milli bir konu olarak değerlendirmesi, diğer yandan tohumculuk endüstrisinin o zamanki uluslararası organizasyon yapısının zayıflığı, karantina konularına farklı yaklaşımları, Ar-Ge imkanları, deniz aşırı üretim kapasitesi ile uluslararası dağıtım, pazarlama vasıtalarının yetersizliği ve ülkesel tohumculuk düzenlemelerinin farklılığı tohum dış ticaretini kısıtlayıcı unsurlar olarak öne çıkmıştır.

3.2. Uluslararası Tohum Ticareti

Uluslararası tohum ticareti, tohumculuk sektöründe sağlanan gelişmelere paralel olarak son çeyrek yüzyılda önemli artışlar göstermiştir. Bu artışta, farklı ekolojilere uygun yeni çeşitler, tohum üretiminde ihtisaslaşma ve tohumculuk teknolojisinde sağlanan gelişmeler gibi öğeler etkili olmuştur. 1970–2016 yılları arasında uluslararası tohum ticareti 12 kat artmıştır.

4. Türkiye’de Tohumculuk Sektörü

Türkiye, kıtaları birbirine bağlayan stratejik konumu, genç nüfusu, bereketli toprakları ve eşsiz iklimi ile önemli bir tarım potansiyeline sahiptir. Ülkemizde tarım sektörü, insanların beslenmesi, istihdamı, ekonomiye katkısı ve ihracat potansiyeli bakımından büyük önem taşımaktadır. Türkiye’de ilk bitki ıslah çalışmaları ve kaliteli tohum üretimleri 1926 yılında tohum ıslah istasyonlarının kuruluşu ile başlamış ancak, 1950’lere gelinceye kadar yalnızca serin iklim tahıllarına odaklanan çeşit geliştirme ve tohum üretim çalışmaları ile sınırlı kalmıştır. İzleyen yıllarda kamu araştırma programlarına hem daha çok sayıda tohum türü ve çeşidi dahil edilmiş hem de üretilen tohumların miktarı artırılmıştır. Türkiye’de, 1980’li yılların başlarında tohumculuk sektörü ile ilgili temel politikalarda önemli değişiklikler yapılarak, kamu esaslı bir tohum tedarik sisteminden özel girişimi esas alan bir tohum endüstrisi modeline geçilmiştir. Ekonominin serbestleştirilmesi ve tohumluğun dış ticaretteki kısıtlamalarının kaldırılması sonucunda özel sektör yatırımlarının önü açılmış, yerli veya yabancı pek çok tohumculuk firması ya doğrudan ya da ortaklıklar yoluyla sektöre girmiştir. Sonuçta özel tohumculuk firmalarının sayısı, kapasitesi ve faaliyetleri kısa sürede hızla artarak ulusal tohumculuk endüstrisi özel sektör ağırlıklı bir konuma gelmiştir. Türkiye tohum tedarik sistemi içerisinde kamu tohumculuk kuruluşları halihazırda buğday, arpa ve bazı yem bitkileri gibi kendine döllen bitkilere odaklanan sınırlı bir üretim ve dağıtım faaliyeti içerisinde. Son yıllar itibarıyla, özel tohumculuk şirketleri bu türlerde de pazar paylarını önemli ölçüde arttırmaya başlamışlardır. Türkiye’de Gıda Tarım ve Hayvancılık Bakanlığı tarafından 2018 yılı itibarıyla yetkilendirilmiş 695 tohumculuk kuruluşu bulunmaktadır. Büyük bir kısmını özel sektör firmalarının oluşturduğu bu kuruluşlar arasında sermaye yapısı, istihdam durumu, üretim ve işleme kapasitesi, çeşit geliştirme ve temini, ürün yelpazesi ve endüstriyel entegrasyon derecesi bakımından önemli farklılıklar bulunmaktadır. Türkiye çok uzun zamandan beri küresel ve bölgesel tohumculuk organizasyonları ile yakın temas ve etkileşim içerisinde. Ülkemiz 1963 yılında ISTA (Uluslararası Tohum Test Birliği), 1968 yılında ise (tarla bitkileri ve yem bitkileri kategorilerinde olmak üzere) OECD (Kalkınma ve İşbirliği Teşkilatı) sertifikasyon sistemine dahil olmuştur. Cumhuriyetle birlikte başlayan tohumculuk çalışmaları son yıllarda yeni bir boyut kazanmıştır. Cumhuriyetin kuruluşundan 2004 yılına kadar yaşanan gelişmeler sonucunda tohumculukla ilgili mevzuat ihtiyaçlara cevap veremediği için ülkemizde 2004 yılında “5042 sayılı Yeni Bitki Çeşitlerine Ait Islahçı Haklarının Korunmasına İlişkin Kanun” ve 2006 yılında “5553 sayılı Tohumculuk Kanunu” kabul edilerek, sektörün işleyişine yönelik olarak hukuksal alt yapıda bir takım düzenlemeler yapılmasıyla bu kanunla ilgili olarak kurulan alt birlikler tarımsal anlamda güçlü kurumlar olarak çalışmalar yapmaktadır. Bu kanunlarla, bitkisel üretimde verimliliği ve kaliteyi artırmak, tohumlara kalite güvencesi sağlamak, tohum ticaretini ve sektörü yeniden düzenlemek hedeflenmiştir. Böylece, ilk kez sertifikalı tohum üreticilerine destek verilmeye başlanmış, tarla bitkileri, bağ-bahçe bitkileri, orman

bitki türleri ve diğer bitki türleri çoğaltım materyaline ait çeşitlerin ve genetik kaynakların kayıt altına alınması, tohumlarının üretimi, sertifikasyonu, ticareti, piyasa denetimi ve kurumsal yapılanmaları ile ilgili düzenlemelerin yapılması sağlanmıştır.

5. Türkiye Tohum Ticareti

Türkiye’de özel sektör tohumculuğu oldukça yenidir. 1980 yılından önce ülkede yalnızca iki özel şirket faaliyet göstermekte ve bunların toplam sertifikalı tohum ticareti içerisindeki payları %2 civarında iken her türlü tohum üretim ve dağıtımını kamu kuruluşları tarafından yapılmakta ve fiyatlar Devlet tarafından belirlenmekteydi. Üreticiler tarafından kullanılan çoğu türlerde mahsulden tohum kullanımı yaygındı ve hibrit tohum kullanımı bilinmiyordu. Kamu tarafından hemen hemen bedelsiz dağıtılan ticari tohumların genetik kaliteleri genelde çok düşüktü ve “tohum ticareti hacmi” yok denecek kadar azdı. 1982 ile 1985 yılları arasında bir dizi yasal düzenleme ile tohumculuk faaliyetleri serbest bırakıldıktan sonra ülkemiz tohumculuk endüstrisi hızla büyüyen, tohumculuk sektörünün 2017 yılı ticaret hacmi 1,4 milyar USD’ye ulaşmıştır. (TUİK 2018) Hükümet politikalarına bağlı olarak, tohumculuk pazarımızda önümüzdeki yıllarda özellikle yem bitkileri ve serin iklim tahıllarında artışlar görülecektir. Türkiye tohumculuk pazarını oluşturan en önemli ürün bileşenleri tahıllar, endüstri ve yem bitkileri ile sebzelerdir.

6. Türkiye Tohum Dış Ticareti

Türkiye’de 1980 öncesinde hem ithalatta hem de ihracatta son derece sınırlı bir tohum dış ticareti söz konusu olmuştur. Toplam bir kaç milyon dolarlık bir hacme sahip olan tohum ithalatı büyük ölçüde kamu kuruluşları tarafından yapılmıştır. Gıda Tarım ve Hayvancılık Bakanlığı verilerine göre Türkiye’nin 2002 yılında tohum ithalatı 55,3 milyon USD iken 2017 yılında 185,2 milyon USD’ye ulaşmıştır. 2017 yılı tohum ithalat değerinin en önemli kalemini %59 ile sebze tohumu oluştururken, bunu %8 ile hibrit mısır, %7 ile yem bitkileri, %6 ile ayçiçeği, %6 ile çim ve çayırotu izlemekte ve kalan %14’ünü ise diğer çeşitler oluşturmaktadır. Mısır tohumunun ithalatı, ağırlıklı olarak hibrit tohum üretiminin yurt içerisinde yapılabilmesi için ihtiyaç duyulan elit ve anaç kademedeki tohumları kapsamaktadır. Türkiye’de 1980 öncesinde tohum ihracatı neredeyse yok denilecek kadar azdır. Ancak, zaman içerisinde tohum ihracat kapasitesi önemli bir gelişme göstermiştir. TİGEM işletmelerinde özel sektör firmaları ile yapılan ortak tohum üretimleri buna büyük katkı sağlamaktadır. 2002 yılında 17,3 milyon USD olan tohum ihracatı 2017 yılında 136,2 milyon USD’ye çıkarak yaklaşık 8 kat artış göstermiştir. 2017 yılı tohum ihracat değerinin en önemli kalemini %56 ile ayçiçeği tohumu oluştururken, bunu %17 ile hibrit mısır, %14 ile sebze bitkileri ve kalan %13’ünü ise diğer çeşitler oluşturmaktadır. Görüldüğü gibi toplam ihracatın yaklaşık % 86’sı tarla, % 14’ü ise sebze bitkisi türlerine aittir. Tarla bitkilerinde başlıca ihracat kalemleri ayçiçeği, mısır ve pamuk olup ihracatın yapıldığı başlıca ülkeler ise Almanya, İngiltere, BAE, Irak, ABD, ve İtalya’dır. Son yıllarda ülkemizde üretilen patates, yem bitkileri, çayırotu, mısır, ayçiçeği ve pamuk sertifikalı tohumları yüksek kaliteye sahip olması nedeniyle dış pazarda her yıl artan oranda rağbet görmekte, bunun yanında domates, biber, salatalık, kavun, karpuz olarak sebze tohumluğu ihracatı da artmaktadır.

7. Dünya ve Türkiye Tohum Ticaretinin Karşılaştırılması

Türkiye'nin 2002 yılındaki tohum ithalatı değeri 55,3 milyon USD iken 2017 yılında %235 artarak 185,2 milyon USD' ye ulaşmıştır. İhracatı ise 2002 yılında 17,3 milyon USD iken 2017 yılında %687 artarak 136,2

milyon USD' ye yükselmiştir. Bu durum ihracatın ithalata göre daha fazla bir artış trendinde olduğunu göstermektedir. Ülkemizin tohum ihracatının ithalatı karşılama oranı 2002 yılında %31,3 iken bu oran 2017 yılında %74'e yükselmiştir.

Tablo 3. Türkiye'nin tohum ithalat ve ihracat değeri (1.000 USD)

	2002	2012	2015	2016	2017

8.Tohumculuk Sektörünün SWOT Analizi Yöntemiyle Değerlendirilmesi

Tohumculuk sektöründeki mevcut dinamik yapı SWOT analizi yöntemi aracılığıyla aşağıda ayrıntılı olarak değerlendirilmiştir:

Güçlü Yönler :	Zayıf Yönler:
Kamuya ait izolasyon sorunu olmayan geniş tarım işletmelerin özel Şirketlere tohumluk üretimi için kiralanabilmesi,	27 milyon adet parçalı araziye sahip küçük işletmelerin olması, Girdi maliyetlerinin her geçen gün yükselişi,

<p>Organik tarım ve iyi tarım uygulamaları sistemlerinin bitkisel üretimde giderek yaygınlaşması,</p> <p>Bitkisel üretime sağlanan desteklemeler,</p> <p>Tarımda AR-GE'ye yönelik çalışmaların varlığı,</p> <p>Sanayinin tarımla iç içe girmiş olması.</p> <p>Tarımsal sanayinin gelişmesine yönelik yatırımların varlığı,</p> <p>Pek çok konuda devlet desteklerinin varlığı,</p> <p>Yetiştirilmiş teknik elemanın varlığı,</p> <p>Türkiye'nin zengin tarım topraklarına, stratejik bölgesel konuma, işgücüne, deniz ve iç su kaynaklarına ve tohumluk üretimi için elverişli çok değişik ekolojilere sahip olması,</p> <p>Geleneksel tarımsal üretimin azalmış olması,</p> <p>Genç ve dinamik nüfusu, artan refah seviyesi yanında, büyük tüketici komşu ülkelerin varlığı nedeni ile sürekli artan tarımsal ürün dış satımı sonucunda tarım sektörü büyüme ve gelişme yolunda olup yurt içi tohumluk pazarı sürekli genişlemesi</p> <p>Ekonominin diğer alanlarında olduğu gibi tohumculuk sektöründe de örgütlü, deneyimli, gelişmiş Dünya ile yakın ilişkili dinamik bir özel sektör ve nitelikli işgücü bulunması,</p> <p>Sahip olduğu küçük ölçekli firmalar değişen şartlara hızla uyum sağlayabilmekte, gelişmiş ülke firmalarına göre çok daha dinamik davranabilmesi</p>	<p>Tarımsal üretimde ülkesel planlama eksikliği,</p> <p>Üretici organizasyonlarının etkin ve güçlü olmaması,</p> <p>AR-GE'ye yeterince kaynak ayrılmaması, ayrıca özel sektörün gerek kamu ve gerekse üniversiteler ile ortak Ar-Ge projeleri yapma ve sonuçlandırma geleneğinin olmaması,</p> <p>Tarım ürünlerinde piyasa düzenleme ve müdahale kuruluşlarının yetersizliği,</p> <p>Girdi kullanımında dışa bağımlılık,</p> <p>Bitki ıslahında yetersizlik,</p> <p>Teknoloji kullanımının tüm bölgelerde eşit olmayan dağılımı,</p> <p>Özellikle depolama ve pazarlama alt yapısının yetersizliği,</p> <p>Sertifikalı tohum ve fidan kullanımının bir türlü gerçek anlamda istenen seviyeye gelememesi,</p> <p>Üretim tekniklerinin yanlış kullanılması ve üreticilerin teknik eğitim seviyesinin yetersizliği.</p> <p>Sektördeki sermaye birikimi yetersiz, firmaların ölçeği ise küçüktür. Hazine, özel sektör araştırma çalışmalarına yeterli finansal ve teknik desteği verememektedir,</p> <p>Üniversitelerimizin sayıca bol olmasına karşın yetiştirdikleri elemanların niteliklerinin düşük olması, ihtisas konusu tohum olan bölümlerin açılmamış olmasıdır.</p> <p>Her geçen gün artan önem ve değerini tüketiciye anlatamaması. Zayıf ve yetersiz reklam .</p>
<p><u>Fırsatlar:</u></p> <p>En önemli fırsat; insan gücü: Çalışkan, kıvrak zekalı, takip eden genç bir nesil.</p> <p>Teşvik, hibe, kredi ve diğer desteklerin sağladığı</p>	<p><u>Tehditler:</u></p> <p>Tarım politikalarında beklentinin bir türlü karşılanamamış olması,</p> <p>Çevre faktörlerinin olumsuz etkilenmesi,</p>

<p>önem anlaşıldığı için devamının olması,</p> <p>Yeni çıkarılacak olan miras kanunu ile arazi bölünmelerine engel olunması; toplulaştırma faaliyetlerinin hız kazanmış olması,</p> <p>Her geçen gün artan gıda talebi nedeniyle bitkisel üretimin daha önemli hale gelmesi,</p> <p>Tarımsal AR-GE çalışmalarının özel sektöre açılması</p> <p>Havza bazlı üretim planlamasının hayata geçmiş olması,</p> <p>Tarımın bir cazibe merkezi olarak farklı sektörlerden tarım sektörüne sermaye girişinin artması,</p> <p>Sulu tarım yapılan arazilerin artması,</p> <p>Ulusal ve Uluslararası örgütlerle işbirliği imkanlarının artması, Tüketici taleplerinin ve bilincinin artmasıyla değişen arz yapısı,</p> <p>Tarım sektörünün enflasyon risk artışının, diğerlerine göre daha az agresif olması,</p> <p>Üreticilerin eğitim seviyesinin eskiye nazaran yüksek olması,</p> <p>Verim ve kalitenin beraber talep oranının artış göstermesi,</p> <p>Bilinçli girdi kullanımı,</p>	<p>Vahşi sulama politikasının bir türlü terk ediliyor olmaması,</p> <p>Ürün fiyat dalgalanmaları ve uluslararası spekülasyonlar,</p> <p>Üretim maliyet artışları,</p> <p>Tarım arazisinin tarım dışı kullanımı,</p> <p>İşgücünün yetersiz olması ve her geçen gün işçi bulma zorluklar</p> <p>Dünya'daki ekonomik ve siyasi krizler ve dış pazar zorlukları,</p> <p>Özelleştirilmede yaşanan sıkıntılar, özelleştirme sonrası yaşanan işletme problemleri,</p> <p>Tarım sektörünü ilgilendiren konularda yetki dağınıklığı,</p> <p>Tarım alanlarının amaç dışı kullanımı,</p> <p>Lojistik maliyetlerinin yüksekliği,</p> <p>Kırsal alanda değişen demografik yapı ve genç nüfusun tarıma azalan ilgisi,</p> <p>Medya kaynaklı bilgi kirliliği, bunun düzelmesinin zorlukları,</p>
---	---

Analiz sonucunda dikkat çekici zayıf yönler ve tehditler bulunmasına rağmen; özellikle Türkiye'nin zengin tarım topraklarına, stratejik bölgesel konuma, işgücüne, deniz ve iç su kaynaklarına ve tohumluk üretimi için elverişli çok değişik ekolojilere sahip olması, genç ve dinamik nüfusu, artan refah seviyesi yanında, büyük tüketici komşu ülkelerin varlığı nedeni ile sürekli artan tarımsal ürün dış satımı sonucunda tarım sektörü büyüme ve gelişme yolunda olup yurt içi tohumluk pazarı sürekli genişlemesi, ekonominin diğer alanlarında olduğu gibi tohumculuk sektöründe de örgütlü, deneyimli, gelişmiş Dünya ile yakın ilişkili dinamik bir özel sektör ve nitelikli işgücü bulunması, gibi faktörlerin oldukça etkin olması tohumculuk sektörünün gelecekte daha da güçlenerek gelişeceğini göstermektedir.

Özet: Bu çalışmanın amacı, taksi şoförlerinin agresif kişilik yapılarının öfkeli araç kullanımı üzerindeki etkisinin ortaya konulmasıdır. Anket yöntemi ile toplanan veriler SPSS 25 nicel analiz programı ile analize tabi tutulmuştur. Analiz sonucunda taksi şoförlerinin agresif kişilik özelliği arttıkça öfkeli araç kullanımının arttığı saptanmıştır. Ayrıca, taksi şoförlerinin agresif kişiliğinin öfkeli araç kullanımı üzerinde anlamlı bir etkisi olduğu tespit edilmiştir.

Anahtar Kelimeler: Agresif kişilik yapısı, öfkeli araç kullanımı, taksi şoförleri

1-GİRİŞ

İnsanlar, ruhsal ve dış görünüşleri itibarıyla çeşitlilik arz ederler. Bu görünüşlerinin birbirlerine bağlandıkları nokta ise insanların davranışlarıdır. Çoğu insan bu davranışları sayesinde hemcinslerince tanınır ve kategorize edilirler. İnsan davranışlarının en belirgin kökenlerinden biri ise onların kişilik yapılarıdır. Bu kişilik yapılarının sınıflandırmasında kullanılan ölçütler, ancak insanların sosyal etkileşimlerinde gizlidir (Allport ve Allport, 1921:7). Çevresiyle sürekli etkileşim halinde bulunan insanoğlu her zaman aynı duygu durumunda bulunmamaktadır. Kimi zaman neşeli kimi zaman üzgün, kimi zaman sakin kimi zaman ise sinirli bir yapıdadır. Çocukluğundan itibaren yaşadığı olaylar neticesinde kişilik yapısı belirginleşmeye başlayan insanın yaşadığı bu olaylar, onun kişiliğinin yapıtaşlarını oluşturmaktadır. Bu nedenle insanlar kişilik yapılarının gerektirdiği davranışları sergilerler. Saldırgan kişilik yapısı da insanoğlunun belirlenen kişilik yapılarından biridir (Allport ve Allport, 1921:7; McCrae ve Costa, 1991,1995).

Saldırgan kişilik yapısı üzerine yapılan çalışmaların 20. yy.'ın başlarından günümüze değin devam ettiği bilinmektedir. Her ne kadar insan davranışları içerisinde popüler bir konu olarak görünse de konu hakkında sorulması gereken soruların başında “neden benzer konudaki çalışmaların büyük bir çoğunluğunun 1960 ve 1970’lerde yapıldığı” (Rule ve Nesdale, 1976:851) gelmektedir. Her ne kadar 1945 yılında sona eren II. Dünya savaşının toplumlarda yarattığı etkilerin neden olduğu görülebilse de insandaki agresif kişilik yapısına yönelik bilimsel çalışmaların 1960 ve 1970’lerde yapılmalarının ana nedenlerinin başında Amerika Birleşik Devletlerinin Vietnam’daki yenilgisi sonucu neredeyse tüm dünyada ortaya çıkan savaş karşıtı, özgürlükçü gençlik hareketleri gösterilebilir (Johnson ve Feinberg, 1980). Konunun Yönetim Organizasyon yazınına girmesinin ise “ekonomik” nedenlerin temelinde insanın bulunduğu görüşüyle başladığı söylenebilir. Bu değişimde insanı bir “robot” gibi gören klasik yönetim anlayışı (Taylor, 1913; Drury, 1915:188) terk edilerek insanı, insan ilişkilerini ve insan davranışlarını ön plana çıkaran neo-klasik yönetim anlayışı (Sığrı ve Gürbüz, 2017:13) kabul edilmiştir. Bu kapsamda örgütsel davranış üzerine yapılan çalışmalarda sosyoloji, sosyal psikoloji ve psikoloji bilimlerinden de yoğun olarak faydalanılmaktadır. Agresif kişilik yapısı ve davranışı da bu uygulamalara paralel olarak üzerinde çalışılan bir konu olarak karşımıza çıkmaktadır.

Bu çalışmada taksi şoförlerinin agresif kişilik özelliklerinin trafikte araçlarını kullanarak gösterdikleri davranışları üzerindeki etkileri konu edilmiştir. Çalışmanın ilk bakışta yönetim organizasyon yazınındaki “örgütsel” yönüyle pek de bir ilişkisinin bulunmadığı düşünülebilir. Oysaki taksicilik bir meslektir ve çalışma alanı bir yerleşim yerinde mevcut olan cadde ve sokaklardır. Diğer taraftan bir taksicinin işyeri öncelikle kendi aracının içi olmakla birlikte bağlı bulunduğu taksi durağıdır. Dolayısıyla taksicilerin trafikteki davranışları “meslekleri” açısından bakıldığında “örgütsel” olarak değerlendirilebilir.

Çalışma iki bölümden oluşmaktadır. Birinci bölümde agresiflikle ilgili kavramsal ve tanımsal analizlerin yanı sıra asgresiflik biçimlerine yer verilecektir. Çalışmanın ikinci bölümünde ise Hakkârî Merkez ve en büyük ilçesi olan Yüksekova’da faal olarak çalışan taksi şoförleri üzerinde yapılan alan çalışmasından bahsedilerek ve elde edilen sonuçlar değerlendirilecektir.

1-Kavramsal İnceleme

1-1-Tematik Analiz

Diğer tüm bilimsel konularda olduğu gibi agresiflik hakkında yapılan çalışmalar da bir takım teoriler geliştirilerek sürekliliklerini günümüze kadar devam ettirmişlerdir. Buna göre agresif kişilik yapısı hakkında da geçmişte bir takım teorilerin ortaya atıldığını görmekteyiz. Bu teorilere göz gezdirildiğinde “Agresif davranış öğrenilir mi yoksa canlının kendi içinde var olan ve kuşaklararası geçiş yapan kalıtsal bir özellik midir ya da çevresel etkenler mi canlının agresif olmasına neden olmaktadır?” şeklindeki sorulara yanıt vermek amacıyla ortaya atıldıkları görülmektedir. Teorilerin ilki, diğer bir takım duyuşsal yapılarda olduğu gibi agresifliğin de bir “içgüdü (instinct)” olduğudur. Bu teoriyi ortaya atan bilim insanları genelde Sigmund Freud ve Konrad Lorenz gösterilse de, bunlardan çok önceleri insanların bir takım davranış kalıplarının onların sahip oldukları içgüdülerde gizli olduğuna dair açıklamaların varlığı bilinmektedir. Davranışın oluşum sürecini çalışmasında açıklayan William James, duyuşların davranışları oluşturduğunu ve bu davranışların organizmanın tamamı tarafından gösterildiğini ifade etmektedir (1890:694). William James, agresifliği her ne kadar tam olarak açıklamaları içinde belirtmese de her içgüdü’nün bir dürtü olduğundan (1890:701) ve insanların hayvanlardan daha fazla dürtülerinin bulunduğundan (1890:704) bahsetmektedir. Her iki açıklamasını birleştiren James, içgüdüsel davranış olarak adlandırılan hareketlerin refleks’in yapısına uyumlu olduğunu belirtmektedir (1890:700). William James açıklamalarında insanın canavarların en insafsız gaddarı olduğunu belirterek, onun iyi ve kötü iki ruhundan bahsetmektedir. İnsanın kötü tarafını kavgacılık (pugnacity), asabiyet (anger), kızma (resentment) şeklindeki içgüdüler ile açıklamaya çalışan James, insanın bunlar olmadan yaşayamayacağını belirtmektedir (1890:717). William McDougall ise özellikle hayvanlar ve insanlar üzerinde yaptığı karşılaştırmalı çalışmasında, davranışları “eğilim”in bir sonucu olarak nitelendirmekle birlikte bu eğilimin aslında “içgüdü” olduğunu belirtmektedir (1923:26). Ona göre bu içgüdü içerisinde bir enerjiyi barındırmakta ve bu enerji kimi zaman vücut tarafından salıverilmektedir. Bu salıverilme ise “davranış”tır. Ona göre kontrol edilebilen agresifliğin de içinde bulunduğu duyuşlar vücut davranışı olarak gösterilmese dahi zihinsel olarak kabul edilebilmektedir (1923:224).

Agresifliğin, James ve McDougall tarafından içgüdü temeliyle incelenmesi sonrasında Sigmund Freud ve Konrad Lorenz tarafından da benzer yol kullanılarak incelendiği görülmektedir. Freud içgüdü kavramını önceleri “cinsellik” ve “kendini savunma” olmak üzere iki kategoride açıklarken “eğer obje istenmeyen duyuşların kaynağı ise bu durumun sonuç itibarıyla insanda agresif eğilime ve o objeyi yok etme isteğine neden olur” şeklinde ifade kullanmıştır (1915:137). Daha sonraları bu ikilemi bırakan Freud, “hayatın başlangıcı ve onunla aynı yönde olan biyolojik spekülasyonlardan başlamak üzere, yaşayan varlığı korumaya yönelik içgüdü’nün yanı sıra başka bir tane daha olmalıdır. Ters içgüdü o birimleri dağıtmak ve onları ilk hallerine, organik olmayan durumlarına dönmeleri için uğraş veren bir içgüdüdür. Kısaca, Eros gibi bir de ölüm içgüdü’sü vardır.” şeklindeki ifadesiyle “yaşam” ve “ölüm” içgüdü’sü şeklinde bir sınıflandırma yapmıştır (Freud, 1962:65-66). Görüldüğü üzere Freud kısaca insanın kendisini veya başkalarını yok etme eğiliminde olduğunu belirtmektedir (akt. Fromm,1973:15). Ona göre ölüm içgüdü’sü agresifliğe karşılık gelmektedir (Kermani,1977:201). “Civilization and Its Discontents” isimli eserinde agresiflik kavramına hayli yer verdiği görülen Freud’a göre agresiflik, varlıkların doğasında ve içselliğinde bulunan, bağımsız ve kendileri haricindekilere karşı kullandıkları bir içgüdü olmasının yanı sıra bu içgüdü’nün engellenmesi insanda kendisini yok etme (self-destruction) davranışına nede olmaktadır (1962:66). Konrad Lorenz ise agresifliği “On Aggression” isimli eserinde incelemiştir. Freud gibi o da agresifliği belirli bir uyarıcıya dönük reaksiyon olarak değil de insanın içinde önceden beridir var olan bir enerji musluğundan beslenen içgüdü olarak değerlendirmektedir. Ona göre agresifliği tehlikeli yapan içgüdü’nün kendiliğinden oluşmasıdır (2002:47). Hartmann ve arkadaşları tarafından yapılan diğer bir çalışmada da (1947) Freud ve Lorenz’inkine benzer ifadeler kullanıldığı görülmektedir. Canlıların içinde var olan enerji dürtüsünün “agresiflik” olarak tanımlandığı çalışmada (s.12), ego veya süper-ego içinde

yer alan nötr enerjinin libido veya agresiflikten kaynaklanabileceği veya bu ikisine dönüştürülebileceği ifade edilmiştir (s.15). Melanie Klein da Freud gibi ölüm içgüdüsünün agresiflikle aynı anlama geldiğine dair açıklamalarda bulunmakla birlikte (1975:62) iştah, kıskançlık ve hasetliği ölüm içgüdüsünün klinik dışavurumları olarak belirtmektedir (1975:176). Bu çalışmaya paralel olarak Sicher ve Mosak tarafından yapılan başka bir çalışmada ise agresiflik iştah (yeme isteği) tarafından pekiştirilen fiziksel ve psikolojik bir hayatta kalma nedenidir (1967: 235). Cinsellik ve agresifliğin canlı organizmalarda bulunan iki ana güç olarak belirtildiği Anna Freud tarafından yapılan çalışmada ise bu güçlerin sahip oldukları enerjinin dış dünyadaki nedenlere bağlı olarak bedenden çıkış yaptığına dair ifadeler yer almaktadır (1947:39-41).

Dollard ve arkadaşları tarafından yapılan bir çalışmada ise çevresel etmenleri içine alan bir teori ileri sürüldüğü görülmektedir (1939). Bu çalışmada kısaca canlıların yaşamlarının belirli bir amaç doğrultusunda olduğu (yemek, içmek vb. gibi) ve davranışlarının da bu amaçları gerçekleştirmeye dönük olduğundan hareketle, bu amaçlarına ulaşmalarına engel olunduğunda (frustration) canlıların bu durumun üstesinden gelebilmek için agresif davranış gösterdikleri ifade edilmiştir. Diğer bir ifade ile engellenme agresif davranışa neden olmaktadır (Dollard ve diğ., 1939:1). Bu açıklamaları ışığında Dollard ve arkadaşları agresifliği kısaca “engellenmeye cevap olarak bir organizmaya zarar verme amacındaki hareket” şeklinde tanımlamaktadırlar (1939:11). W.Ronald D. Fairbairn de Freud’un yaptığı ikilemi reddederek “ölüm içgüdü” olmadığını, agresifliğin engelleme ya da yoksun bırakılmaya karşı bir reaksiyon olduğunu belirtmektedir (1963:244). Dollard ve arkadaşları tarafından öne sürülen “engellenme-agresiflik (frustration-aggression)” teorisi belirli bir zaman sonra Leonard Berkowitz tarafından tekrar formüle edilmiştir. Berkowitz ileri sürdüğü yeni formülüzasyonunu şu şekilde açıklamaktadır: Engellenme sonucu oluşan zihinsel reaksiyon-ki bu “kızgınlık (anger)” olarak isimlendirilir- ancak agresif hareketlere hazırlık oluşturmaktadır. Diğer taraftan bu hazırlık olsa dahi, uygun işaretler ve şimdiki veya önceki kızgınlığa neden olan azmettiricilerle birlikteki uyarıcılar olmadıkça agresif karşılıklar oluşmayacaktır. Agresif yanıtın gücü, uyarıcının azmettirme fonksiyonu ile agresiflik hazırlığının derecesine bağlıdır (1965:308). Kısaca engellenmeyi itici olarak niteleyen Berkowitz, bunların agresif eğilimleri ancak negatif etki oluşturdukları ölçüde meydana getirdiklerini, buna paralel olarak engelleme ile birlikte başka etmenlerin de bulunması gerektiğini belirtmektedir. Bu etmenleri, aşığılamalar, endişeler, istenmeyen çevresel etmenler veya diğer itici olaylar ve şartlar olarak ifade etmektedir (Berkowitz, 1962:104).

Agresif davranış kalıbının temel dayanaklarından biri de onun öğrenilen/tecrübe edilen bir olgu olduğuna dair ileri sürülen teoridir. Miller ve Dollard’a insan davranışı öğrenilir (1941:1). Bu kapsamda agresiflik içinde yer alan ve engellemeye karşı düşünsel reaksiyon olarak adlandırılan “asabiyet (anger)” da öğrenilebilir bir dürtüdür (1941:61). Sosyal şartlar kişilik özelliği taşıyan biri için bu kişiliğin gelişmesine etki etmektedir. Agresif kişiler sosyal hayatta yükselmek için mücadele ettikleri süre boyunca kendilerinden üst konumda bulunan kişilerin davranışlarını ve alışkanlıklarını taklit ederek amaçlarına ulaşmaya çalışmaktadırlar (1941:6). Agresif davranış kalıbının öğrenilebilir olduğuna yönelik kendinden en fazla söz ettiren bir diğer çalışma da Bandura ve Walters tarafından yapılan çalışmadır. Çocuklar üzerinde yapılan bu çalışma sonucunda Bandura ve Walters, agresif davranışın taklit yoluyla öğrenildiği sonucuna varmışlardır (1963:60). Daha sonraları Bandura tarafından yapılan açıklamalarda da agresif davranışın doğrudan ya da dolaylı çevresel tecrübeler yoluyla öğrenildiği veya devam ettirildiği, agresifliğin öğrenilmesinin pekiştirici tesadüfler ve cezalandırmalar tarafından diğer davranışların öğrenilmesinde olduğu gibi kontrol altına alındığı ifade edilmiştir (1973:57). Kural olarak pekiştirilen davranışın tekrarlandığını, pekiştirilmeyenlerin ise yok olduklarını ifade eden Leonard D. Eron tarafından yapılan çalışmalarda (1994:5) ise laboratuvarında öğrenildiği gibi doğal alanlarda da dolaylı öğrenmenin meydana geldiği, agresif davranışın da özellikle ebeveynler, öğretmenler ve yaşlılar gibi çeşitli sosyalleşme elemanlarından alınan “eğitimler” yoluyla öğrenildiği ileri sürülmektedir (1961:296). Ashley Montagu da Darwin’in “doğal seleksiyon” teorisini eleştirerek, “davranışların canlılar tarafından öğrenildiği” tezine destek vermekte olup, canlıların çevrelerine, öğrenme veya deneyim yoluyla uyum sağladıklarını belirtmektedir (1962:xii-xiii). Buradan hareketle sosyal organizasyonlarda, insanların, davranışlarını daha önceden bilinen ya da o an için deneyimlenen durumlara uyumlu hale getirdiğini ifade etmektedir (1970:23).

Agresiflik ile ilgili yapılan açıklamaları belirli başlıklar halinde toplamak mümkündür. Bu kapsamda;

-Görüldüğü üzere agresiflik sadece zihinsel bir dürtü değildir. Fakat biyolojik kökeni de bulunan bir dürtüdür.

-Agresif davranış belirli süreci içermekte ve bu sürecin belirli bir takım unsurları bulunmaktadır. Bunlar kısaca, harekete geçiren bir uyarıcı, yanıtın amaçsal ve hedef odaklı karakteri ve arzular, istekler, anlamlar ve eğilimler ile olan içsel ilişkidir.

-Agresif davranışın yaygın olan bileşeni belirli bir zorluğun üstesinden gelinmesine yönelik amaçtır.

- Agresif davranış, kendisine etki eden korku, engellenme, endişe, şehvet, sevgi, kızgınlık veya hiddet gibi durumları barındırmaktadır (Rizzuto ve diğ.,1993:30-32).

Kısaca agresif davranış, belirli bir engelleme, agresif bir modele öykünme veya çevresel etmenler yoluyla ortaya çıkmaktadır (Cohen, 1971:71).

Yazın incelendiğinde genel olarak agresifliğin tanımı üzerinde kesin bir fikir birliği olmadığı bu nedenle yapılan tanımların ise genellikle taşıdığı görülmektedir. Bunun temel nedenleri arasında agresifliğin neye göre ele alındığı gelmektedir. Günlük hayatta yaşanan kimi olaylarla karşılaşıldığında gösterilen kimi davranışlar agresif olarak algılanırken kimi davranışlar için bu mümkün görünmemektedir. Diğer yandan bir davranış olarak agresifliğin taraflar açısından da belirsizliği tanımsal olarak karmaşaya neden olmaktadır. Agresif davranışı gösteren kişiye göre bu davranış “savunma” olarak görülürken, karşı taraf için “agresif” olarak kabul edilmektedir (Ichheiser, 1950:127). Bunun yanında agresif davranışın isteğe bağlı ya da herhangi bir emir üzerine (polis, asker vb. olduğu gibi) gösterilip gösterilmediği de tanımda zorluk oluşturmaktadır (Kaufmann,1965:353).Ayrıca agresifliğin birtakım farklı kelimeler ile aynı anlamda kullanılması da tanımsal analizi zorlaştırmaktadır. Örneğin, agresiflik kelimesinin yerine genel olarak düşmanlık (Buss ve Durkee, 1957:343; Weiss, 1959:4; Kelly, 1965:200; Buss & Perry, 1992), asabiyet, nefret, sinirlilik (Thompson, 1959:10), sadizm, kindarlık, öç alma, baskıcılık (Landman, 1959:13;) gibi kelimelerin kullanıldığı görülmektedir. Yazın içerisinde yapılan tanımların da genelde agresif davranışın hedefi olan tarafın bakış açısıyla yapıldıkları anlaşılmaktadır.

1-2-Tanımsal Analiz

Agresifliği temel bir içgüdüsel dürtü olarak belirten Adler, çalışmalarında, bu dürtüyü öncelikle güç arzusu olarak belirtmiş sonraları ise üstünlük ve mükemmeliyet çabası olarak ifade etmiştir (akt. Lundin, 1989:35-36, 97-99). Dollard ve arkadaşları tarafından yapılan tanıma göre ise agresiflik, “bir organizmaya zarar vermek için yapılan amaç tepkili harekettir” (1939:11). Buss ise agresifliği “zehirli uyarıcıyı başka bir organizmaya atan reaksiyon” olarak tanımlamaktadır (1961:3). Agresiflik Kaufmann tarafından, agresif davranışın tarifleriyle ifade etmektedir. Ona göre agresif davranış, herhangi bir objeye yönlendirilen, saldırgan tarafından hedefine ulaşması yönünde sübjektif ihtimali bulunan, hedefe ulaşmasındaki engelleri ortadan kaldıracı bir harekettir (1965:353). Kahn ve Kirk’e göre agresif dürtü, doğuştan biyolojik kökenleri olan, hareketi doğrudan odaklanmış, harekete geçirici dürtüdür (1968:567). Robert Baron agresifliği bir davranış kalıbı olarak değerlendirerek onu; sakınan bir başka canlı varlığa zarar veya hasar verme amacına yönelik davranış şekli olarak tanımlamaktadır (1977:7). Miller ise agresifliği, sinirle (anger) hareket etmek şeklinde ifade etmektedir (1979:99). Eron ve arkadaşlarınca yapılan tanımda ise agresiflik, diğer insana zarar veren veya onu kızdıran harekettir (Eron ve diğ., 1978:215). Moyer ise Buss’ın yaptığı tarife benzer bir tarif kullanarak agresifliği, zararlı bir dürtüye şiddetli bir karşılık verme veya yıkıcı davranmayı içeren başka bir organizmaya yönelik açık davranış olarak tanımlamaktadır (1977:332).

1-3-Agresiflik Biçimleri

Agresiflik hakkındaki çalışmalar incelendiğinde iki farklı tarzda sınıflandırıldığı görülmektedir. Bunlardan birinci sınıflandırmalar agresifliğin birebir kendi sınıflandırmasıdır. Diğer sınıflandırma tarzı ise agresifliğin içinde var olan formlar yoluyla yapılan sınıflandırmadır. Bu çalışmalara kısaca değinmek konunun daha iyi açıklanmasında faydalı olacaktır.

Saul Rosenzweig engellemeye yönelik agresif karşılıkları iki başlık altında toplamaktadır. Bunlar uyumlu ve toplum yanlısı olan ihtiyaç- devamlılığıdır ki bu agresiflik engellenen kişinin ihtiyaçlarının akıbeti ile

ilgilidir. Diğeri ise yine engellenen kişinin kişiliğinin akıbeti ile ilgili olan ve uyumsuz/antisosyal özellik gösteren ego-savunmacılığıdır (1941:347).

Buss agresifliği farklı şekillerde sınıflandırmaktadır. Ona göre fiziksel ve sözlü agresifliğin yanı sıra aktif ve pasif agresiflik ile doğrudan ve dolaylı agresiflik bulunmaktadır. Çoğu agresifliği aktif olarak değerlendiren Buss, çoğu pasif agresifliğin ise doğrudan olduğunu belirtmektedir (1961:8).

Agresifliği kendi arasında sınıflayanların başında Moyer (1971:225; 1977:332-333) gelmektedir. Moyer tarafından yapılan ayırmada agresiflik; erkekler arası agresiflik, korku sebebiyle agresiflik, asabi agresiflik, anneye ait agresiflik, cinsel içerikli agresiflik, yırtıcı agresifliği, araçsal agresiflik gibi başlıklar altında toplanmıştır. Moyer, cinsler arasında farklılık olmakla birlikte, aynı türden olup da saldırıyı gerçekleştirecek olan erkeğe göre yabancı olan başka bir erkeğin var olması durumunda erkekler arası agresifliğin oluştuğunu belirtmektedir. Korku sebebiyle agresiflik ise kaçışa yeltenilip bunun mümkün olmaması durumunda oluşmaktadır. Moyer asabi agresifliği aşırı (extreme) ve daha az aşırı (less extreme) olarak iki biçimde ifade etmektedir. Aşırı olan asabi agresiflik kaçmadan yapılan bir saldırıyı içerirken, daha az aşırı olan agresiflik ise “üzüntü” veya “gönülsüz saldırıyı” içermektedir. Aynı çalışmada anneye ait agresiflik iki farklı dürtünün çatışmasından ortaya çıktığı belirtilmektedir. Bunlardan birincisi yavrunun korunmasına yönelik anatomik içgüdü diğeri ise yavruya dönük tehdittir. Cinsel içerikli agresiflik, cinsel karşılığı oluşturan aynı güdüleyici tarafından meydana getirilen yok edici karşılığı içermektedir. Yırtıcı saldırganlığı, hayvanların doğal av objesinin varlığı hareketine geçirmektedir. Avın hareketi saldırı hareketinin ihtimalini yükseltmektedir. Araçsal agresiflik yukarıda belirtilen saldırgan karşılıkların çevrede meydana getirdiği değişikliği yine aynı şekilde özellikle hayvanlardaki saldırganlık davranışını artırma ihtimali üzerine oluşmaktadır. Kısaca araçsal agresiflik, öğrenilmiş bir karşılıktır.

Leo Rangell agresifliği hareket tarzına göre ayırma tabi tutarak yapıcı (constructive) ve yıkıcı (destructive) şeklinde iki başlık altında toplamaktadır (1972:5). Yıkıcı agresifliğin içgüdüsel bir kökeni var iken, yapıcı agresiflik egonun hizmetinde ortaya çıkarılmaktadır.

Diğeri bir sınıflandırmada agresiflik yine iki başlık altında incelenmiştir. Bunlar “fiziksel” ve “sözlü” agresifliktir (Bjorkqvist, Osterman & Lagerspetz, 1994). Fiziksel agresiflik doğrudan vücut ile gösterilirken, sözlü agresiflik ise genelde dedikodu yapmak, şikayet etmek, fısıldayarak konuşmak, yalan yanlış söylenti yaymak, alay etmek, iğneleme, takma isimler kullanmak yoluyla gösterilmektedir. Ramirez ve Andreu bu sınıflandırmaya, yüz hareketleri veya vücut pozisyonları ile gösterilen “jest veya postürel” agresifliği de eklemektedirler (2003:130).

Vitaro, Brendgen ve Barker ise bu çalışmanın daha öncesinde belirtilen engelleme-agresiflik teorisi ile davranışların öğrenildiğine yönelik teoriyi temel alarak yaptıkları sınıflandırmada, engellenmenin öncesi ve sonrasını düşündükleri görülmektedir. Bu kapsamda bu bilim insanlarına göre agresiflik reaktif (reactive) ve proaktif (proactive) olarak ayrılmaktadır (2006:15). Reaktif agresiflik genelde sinirlilik (anger) ile birlikte engelleme ve provokasyon sonrası oluşurken, proaktif agresiflik ise pekiştirilmiş/öğrenilmiş çevresel etmenlerin yönlendirmesiyle oluşabilmektedir.

Belki de agresifliğin çeşitleri ile ilgili bu başlığın altında asabiyet (anger) ve düşmanlık (hostility) kavramlarına ayrı bir yer verilmelidir. Bunun en önemli nedenleri arasında agresifliğin çoğunlukla bu iki kavram ile beraber anılmasındandır. Dollard ve arkadaşlarının yaptığı çalışmayı (1939) başlangıç noktası olarak alan Berkowitz’e göre asabiyet engelleme ile agresiflik arasında bulunmaktadır. Engelleme, agresif davranışın ihtimalini artıran bir dürtüye hizmet eden asabiyete neden olmaktadır (1962:32). Asabiyet bir hoşnutsuzluk duygusudur (Miller, 1979:99).

Kaufmann asabiyeti beş maddede açıklamaktadır (1965:356). Ona göre;

- Asabiyet değişmeyen duygusal uyarılma durumudur. Belirsiz veya riskli davranışa neden olan dağınık uyumsuz öfkeli bir karşılıktır.
- Asabiyet klasik şartlanma sonucu oluşur. Öncelikle belirsiz duygusal uyarılmalar belirli dürtü durumlarına şartlandırılır.
- Asabiyet başlangıçta duygusal uyarılmadan bağımsız belirli hazırlayıcı karşılıklara şartlanmıştır.
- Hazırlayıcı agresif karşılıklara eşlik eden asabiyet başlangıçta ve kasten araçsal olabilir.

-Asabiyet kusuru gidermenin bir yolu olarak agresifliği takip eder, böylece, kusur azaltan bir karşılıktır.

Düşmanlık ise dostane olmayan davranış şeklidir (Miller, 1979:99). Zillmann'a göre düşmanca davranış, bir insanın, sakınan diğer insana yönelik vücutsal hasar ve fiziksel acı zarar vermeye dönük hareketi haricindeki herhangi ve her hareketidir (1979:33). Kelly ise düşmanlığı, kişisel yapı içinde bulunan teorik bir sistem, kendi hayatının yapısındaki yatırımlarını korumak için insan tarafından tasarlanan insafsız üstlenme olarak tanımlamaktadır (1965:200).

Burada şu farklılığı önemle vurgulamak gerekmektedir. Düşmanlık ve asabiyet her ne kadar agresiflik çatısı altında birleşmiş olsalar da aralarındaki en önemli fark bunların süreleridir. Buss'a göre, asabiyetten farklı olarak düşmanlığın belirli bir devamlılığı bulunmaktadır. Asabi reaksiyon süresi ne kadar uzun ise asabiyet ile düşmanlık birlikteliği o kadar fazladır (1961:15).

2-METODOLOJİ

2-1- Araştırmanın Amacı

Agresiflik bir kişilik yapısı olarak kabul edildiğinde çalışanlar ve onların mesleki davranışları üzerinde de etkileri olduğu kabul edilmelidir. Taksi şoförleri meslekleri gereği sürekli toplum içerisinde yer alan, meslek hayatlarının çoğunu araç içerisinde ve yoğun trafikte geçiren çalışanlardır. Her ne kadar yoğun çevresel etmenlerin etkisi altında bulunsalar da taşıdıkları veya araç dışında bulunan insanların hayatlarının devamı açısından araçlarını trafik kurallarına uygun şekilde kullanmaları beklenir. Bu açıklamalardan hareketle araştırmanın amacı taksi şoförlerinin agresif kişilik yapılarının öfkeli araç kullanımı üzerindeki etkisinin ortaya konulmasıdır.

2-2- Örneklem, Veri Toplama Yöntem ve Aracı

İşyerinde agresiflik kavramını Neuman ve Baron (1998:391) bireylerin hâlihazırda beraber çalıştıkları veya daha önceden beraberce çalıştıkları kişilere karşı zarar vermeye dönük gayretleri olarak tanımlamaktadırlar. Bu tanım çalışmamız ve bu çalışmadan sonra yapılacak araştırmalar açısından eksiktir. Bu tanımdaki “beraber çalışılan veya çalışılmış olan” ifadesinin yanı sıra çalışanların işlerini yaparken karşılaşmış olduğu kişileri de bu ifade de kullanmak gerekirdi. Bunu şu şekilde açıklamak mümkündür. Önceki açıklamalarda da ifade ettiğimiz üzere örneğin polis ve asker gibi agresif davranışı içsel olarak değil belirli emre göre yerine getirenler, bu davranışlarını mesleklerinin bir gereği olarak sadece toplumda karşılaştıkları ve toplumsal kurallara uymayan insanlara karşı yapmaktadırlar. Dolayısıyla bu insanlar onların meslekte beraber çalıştıkları insanlar olmayıp meslek dışında fakat emre göre olsa dahi agresif tavra maruz kalan insanlardır. Bu nedenle mevcut çalışmada Hakkâri Merkez ilçesi ve en büyük ilçesi olan Yüksekova'daki taksi şoförlerinin kendi meslekleri içerisinde beraber çalıştıkları insanlardan çok trafikte mecburen karşılaştıkları diğer araçları kullananlara karşı öfkeli davranışları ele alınmıştır.

Mevcut araştırma tanımsal niteliktedir. Araştırmada tesadüfi olmayan örnekleme yöntemlerinden kolayda örnekleme yöntemi tercih edilmiştir. Bu kapsamda, Mart-Nisan 2021 tarihleri arasında 184 taksiciden yüz yüze anket yöntemiyle veri toplanmıştır. Anket üç bölümden oluşmaktadır. İlk bölümde demografik değişkenlere ilişkin sorular yer almaktadır. İkinci bölümde Buss ve Durkee'nin (1957) “Agresiflik Ölçeği” soruları yer almaktadır. Anketin üçüncü bölümünde “Öfkeli Araç Kullanımı” değişkenine ait sorular yer almaktadır. Sullman vd. (2013) tarafından geliştirilen ölçek soruları kullanılmıştır. Anket formunu oluşturan ölçek sorularının cevapları beşli Likert ölçeğine göre derecelenmiştir. Derecelendirmeler “ 1- Hiç önemli değil, 2-önemli değil, 3-orta derecede önemli 4-önemli, 5- çok önemli” şeklindedir. Anket soruları 5'li Likert tipi ölçekle ölçülmeye çalışılmıştır. Toplanan veriler nicel analiz programı olan SPSS 25 ile analiz edilmiştir. Veri analizinde kullanılan istatistiksel yöntemler; frekans dağılımları, keşfedici faktör analizi, güvenilirlik analizi ve çoklu regresyon analizidir.

2-3- Araştırmanın Bulguları

Katılımcıların demografik özelliklerini ortaya koymak üzere frekans dağılımları incelenmiştir. Sonuçlar Tablo 1'deki gibi ortaya çıkmıştır.

Tablo 1: Anketi Cevaplayan Taksi Şoförlerinin Demografik Yapılarına İlişkin Frekans Dağılımları

		Frekans	Yüzde
Cinsiyet	Erkek	184	100
	20-29	44	23,9
Yaş	30-39	74	40,2
	40 yaş ve üzeri	66	35,9
	Ortaokul	50	27,2
Eğitim Seviyesi	Lise	81	44,0
	Üniversite	44	23,9
	Yüksek Lisans	7	3,8
	Doktora	2	1,1
Tecrübe	2 yılın altında	24	13
	3-5 yıl	37	20,1
	6-9 yıl	43	23,4
	10 yıl ve üzeri	80	43,5

Tablo 1’de görüldüğü üzere, anketi cevaplayanların %100’ü erkek; %23,9’u 20-29 yaş arasında, %40,2’si 30-39 yaş arasında, %35,9’u 40 yaş ve üzerindedir. Katılımcıların %23,9’u üniversite, %3,8’i yüksek lisans ve % 1,1’i doktora eğitim seviyesindedir. Son olarak, katılımcıların % 20,1’i 3-5 yıl arası, 23,4’ü 6-9 yıl arası, % 43,5’i 10 yıl üzeri tecrübeye sahiptir.

Agresif kişilik ölçeğinin faktör yapısını ve güvenilirliğini belirlemek üzere açımlayıcı faktör analizi uygulanmıştır. Sonuçlar Tablo 2’deki gibidir.

Tablo 2: Agresif Kişilik Yapısı Ölçeğine İlişkin Keşfedici Faktör ve Güvenilirlik Analizi Sonuçları

	Madde Sayısı	11
	Kaiser-Meyer-Olkin Örneklem Yeterliliği	,857
Bartlett Küresellik Testi	Ki-Kare	1009,071
	Bartlett Küresellik Testi	55
	p	,000
	Güvenilirlik Katsayısı (Alpha)	0,872

Tablo 2’de görüldüğü üzere veri seti faktör analizine uygundur ($KMO > 0,70$). Faktör analizi sonucunda agresif kişilik ölçeğini oluşturan maddelerin tek boyutta toplandığı görülmüştür. Kaiser-Meyer-Olkin örneklem yeterliliği katsayısı 0,857; güvenilirlik katsayısı (Cronbach’s Alpha) 0,872 olarak tespit edilmiştir.

Öfkeli araç kullanımı ölçeğinin faktör yapısını ve güvenilirliğini belirlemek üzere açımlayıcı faktör analizi uygulanmıştır. Sonuçlar Tablo 3’deki gibidir.

Tablo 3: Öfkeli Araç Kullanımı Ölçeğine İlişkin Keşfedici Faktör ve Güvenilirlik Analizi Sonuçları

	Madde Sayısı	11
	Kaiser-Meyer-Olkin Örneklem Yeterliliği	0,892
Bartlett Küresellik Testi	Ki-Kare	1539,548
	Serbestlik Derecesi	55
	p	,000
	Güvenilirlik Katsayısı (Alpha)	0,924

Veri seti faktör analizine uygundur ($KMO > 0,70$). Faktör analizi sonucunda öfkeli araç kullanımı ölçeğini oluşturan maddelerin tek boyutta toplandığı görülmüştür. Kaiser-Meyer-Olkin örneklem yeterliliği katsayısı 0,892; güvenilirlik katsayısı (Cronbach's Alpha) 0,924 olarak tespit edilmiştir.

Agresif kişilik yapısının ve öfkeli araç kullanımının yaşa göre farklılık gösterip göstermediğini belirlemek üzere tek yönlü varyans analizi (ANOVA) yapılmıştır. Sonuçlar Tablo 4'deki gibidir.

Tablo 4: Agresif Kişilik Yapısının ve Öfkeli Araç Kullanımının Yaşa Göre Farklılığına İlişkin Tek Yönlü Varyans Analizi (ANOVA)

		Kareler Toplamı	Serbestlik Derecesi	Ortalama Kare	F	p
Agresif Kişilik Yapısı	Gruplar Arasında	4,065	2	2,033	2,688	,071
	Gruplar İçerisinde	136,856	181	,756		
	Toplam	140,921	183			
Öfkeli Araç Kullanımı	Gruplar Arasında	2,363	2	1,182	2,256	,108
	Gruplar İçerisinde	94,796	181	,524		
	Toplam	97,159	183			

Fark yok ($p > 0,05$)

Tablo 4'de görüldüğü gibi, analiz sonucunda agresif kişilik yapısında ve öfkeli araç kullanımında yaşa göre istatistiksel olarak anlamlı bir farklılık tespit edilmemiştir.

Agresif kişilik yapısının ve öfkeli araç kullanımının eğitim seviyesine göre farklılık gösterip göstermediğini belirlemek üzere Kruskal Wallis testi yapılmıştır. Sonuçlar Tablo 5'deki gibidir.

Tablo 5: Agresif Kişilik Yapısının ve Öfkeli Araç Kullanımının Eğitim Seviyesine Göre Farklılığına İlişkin Kruskal Wallis Testi

	Agresif Kişilik Yapısı	Öfkeli Araç Kullanımı
Ki-Kare	7,924	9,281
Serbestlik Derecesi	4	4
p	,094	,054

($p > 0,05$).

Tablo 5'de görüldüğü gibi, analiz sonucunda agresif kişilik yapısında ve öfkeli araç kullanımında eğitime göre istatistiksel olarak anlamlı bir farklılık tespit edilmemiştir.

Agresif kişilik yapısının ve öfkeli araç kullanımının tecrübeye göre farklılık gösterip göstermediğini belirlemek üzere Kruskal Wallis testi yapılmıştır. Sonuçlar Tablo 6'daki gibidir.

Tablo 6: Agresif Kişilik Yapısının ve Öfkeli Araç Kullanımının Tecrübeye Göre Farklılığına İlişkin Kruskal Wallis Testi

	Agresif Kişilik Yapısı	Öfkeli Araç Kullanımı
Ki-Kare	1,812	6,604
Serbestlik Derecesi	3	3
p	,612	,086

($p > 0,05$)

Tablo 6'da görüldüğü gibi, analiz sonucunda agresif kişilik yapısında ve öfkeli araç kullanımında tecrübeye göre istatistiksel olarak anlamlı bir farklılık tespit edilmemiştir.

Araştırmada kullanılan ölçeklerin birbirleriyle gösterdiği ilişkileri ortaya koyabilmek amacıyla Pearson Korelasyon analizi kullanılmıştır. Analiz sonucunda elde edilen korelasyon katsayılarına Tablo 7'de yer verilmiştir.

Tablo 7: Agresif Kişilik Yapısı ile Öfkeli Araç Kullanımı Arasındaki İlişkiye Yönelik Korelasyon Analizi

	Agresif Kişilik Yapısı	Öfkeli Araç Kullanımı	
Agresif Kişilik Yapısı	Korelasyon Katsayısı (Pearson)	1	0,562
	p		0,000
	N	184	184
Öfkeli Araç Kullanımı	Korelasyon Katsayısı (Pearson)	0,562	1
	P	0,000	
	N	184	184

Tablo 7’de görüldüğü üzere, agresif kişilik ile öfkeli araç kullanımı arasında pozitif yönlü orta düzeyde (Pearson Korelasyon Katsayısı=0,562) anlamlı ($p<0,05$) bir ilişki olduğu tespit edilmiştir.

Agresif kişilik yapısının öfkeli araç kullanımı üzerinde istatistiksel olarak anlamlı bir etkisi olup olmadığını belirlemek üzere çoklu regresyon analizi uygulanmıştır. Analiz sonuçları Tablo 8’te özetlenmiştir.

Tablo 8: Agresif Kişilik Yapısının Öfkeli Araç Kullanımı Üzerindeki Etkisine İlişkin Çoklu Regresyon Analizi

R	R ²	F	p	Bağımsız Değişken	Beta	Standart Hata	t	P
0,562	0,315	83,834	0,000	Agresif Kişilik	0,562	0,051	9,156	0,000
Sabit: 0,547								
Bağımlı Değişken: Öfkeli Araç Kullanımı								

Tablo 8’de görüldüğü üzere, agresif kişiliğin öfkeli araç kullanımı üzerinde %31,5 düzeyinde anlamlı ($p<0,05$) pozitif yönlü bir etkisi olduğu tespit edilmiştir.

Sonuç

Yapılan çalışmada elde edilen sonuçlar hakkındaki nihai değerlendirmelere geçmeden önce şu konu üzerinde durulmalıdır. Bu çalışmanın yazındaki mevcut çalışmalardan farklı ve benzer yanları bulunmaktadır. Benzer yanı bireylerin kişilik ve davranışları arasındaki ilişkinin saptanmasına yönelik yapılmış olmasıdır. Farklı yanı ise kişilik ve davranış arasındaki ilişkilerin varlık ya da yokluklarının taksi şoförlerinin trafikte araç kullanırken onları nasıl etkilediğidir. Bu kapsamda yazında mevcut bulunan araştırmalara burada değinmekte fayda bulunmaktadır. Seymour Feshbach (1978:450), kişilik ve davranış arasında bir ilişkinin bulunmadığını, aksine kişilerin davranışlarının genel olarak sosyo-kültürel ve çevresel değişkenlerden etkilendiğini belirtmektedir. Yine kişilik ve davranış arasında bir ilişki tespit edemeyen Dan Olweus (1979:873) ise, davranışın, kişinin yaşadığı durumları bilişsel süzgecinden geçirerek meydana geldiğinden bahsederek, olumsuz davranış gösterilen yerde olumlu davranışların da gösterilebildiğini belirtmektedir. Bu nedenle davranışı kişilik yönünden değil yaşanan olayların ve durumların özellikleri açısından açıklamaktadır. Diğer taraftan Neuman ve Baron (1998:405) da çevresel ve durumsal etmenlerin yanı sıra bireysel özelliklerin de agresif davranış kalıbı ile yakından ilişkili olduğunu belirtmektedirler. Bu çalışmalardan da açıkça anlaşılacağı üzere kişilik ve agresif davranış arasındaki ilişki ile alakalı kesin bir sonuç elde edilmiş görünmemektedir.

Araştırmanın amacı, taksi şoförlerinin agresif kişilik yapısının öfkeli araç kullanımı üzerindeki etkisinin ortaya konulmasıdır. Analizler sonucunda agresif kişilik yapısında ve öfkeli araç kullanımında yaş, eğitim seviyesi ve tecrübe gibi demografik özellikler açısından istatistiksel olarak anlamlı bir farklılık tespit edilmemiştir. Bu tespit ana nedeni ise trafikte yapılan hataların sadece karşıdaki sürücüyü değil

sürücünün kendisini de olumsuz yönde etkileyecek olmasına dair bilinç olarak düşünülebilir. Diğer taraftan trafik kurallarının belirli kalıplardan oluşmasının da bu durumda etkili olduğu belirtilebilir. Örneğin trafik, “sürücü” kavramı içerisinde demografik özellikleri barındırmamaktadır. Aracı kullanan, demografik özelliklerinden çok kişinin bir “birey” olarak kendisidir, onun içsel ve bilişsel olarak yaşadıklarını ve gördüklerini nasıl yorumladığıdır. Bu nedenle taksi şoförlerinin agresif kişilik yapısı ve öfkeli araç kullanımı arasındaki ilişkinin tespiti sonucunda agresif kişilik yapısı ile öfkeli araç kullanımı arasında pozitif yönlü orta düzeyde anlamlı bir ilişki olduğu; agresif kişilik özelliği arttıkça öfkeli araç kullanımının arttığı saptanmıştır.

Bu çalışma bu kişilik ve davranış arasındaki ilişkinin olup olmadığı yönündeki belirsizliğin giderilmesinde yardımcı olabilecek niteliktedir. Şöyle ki: trafikte meydana gelen ve agresif davranış gösterilmesine neden olan durumlar her zaman değil anlık gelişmektedir. Bu sebeple eğer agresif kişilik ile agresif davranış arasında bir ilişki var ise bu anlık durumlar beklenilmeden taksi şoförleri araçlarını agresif şekilde kullanabileceklerdir. Diğer taraftan agresif kişilik ile agresif davranış arasında bir ilişki yok şeklinde bir sonuç var ise taksi şoförleri o taktirde trafikteki bu anlık huzursuzlukları bir güdülenme aracı olarak algılayacaktır. Dolayısıyla meydana gelen “algılama” yine şoförlerin içsel ve bilişsel durumları ile ilgili olduğundan, bu durum bizi Freud’un açıklamalarına geri götürecektir. Bahsedilen bilgiler ışığında bu çalışma, gelecekteki benzer araştırmalara konunun detaylandırılması yönünde fayda sağlayarak toplu bir açıklama sunmaktadır.

Türk-Alman Şiirinde Göç Sonrası Yeni Kimlik Arayışı

Prof. Dr. Hikmet ASUTAY¹

¹Trakya Üniversitesi Eğitim Fakültesi Alman Dili Eğitimi, hikmetasutay@yahoo.de
ORCID-NO: 0000-0002-0533-7708

Özet: Altmışıncı yılını bu yıl tamamlayacak olan Almanya'ya göç serüveninin uzun yolculuğunda giderek kökleşen ve çeşitlenen Türk Alman yazını doğmuş ve gelişmiştir. Bir zamanların "gurbetçi yazını" olarak anılan Türk-Alman edebiyatı yazın da kendi içinde dört kuşak ve farklı yazın türlerini kendi içinde oluşturmuştur. Şiir tarzı da bu edebiyat içinde başından beri önemli bir yer edinmiştir. Gurbetçiliğin önemli bir ifade aracı olarak şiir, Türk Alman edebiyatı içinde üç kuşak boyunca kendine özgü ayrı bir yer edinmiştir. Birinci ve ikinci kuşak Türk Alman şiirlerinde vatan özlemi, hasret ve kimlik kaygıları konu edilmiştir. Üçüncü kuşak yani günümüz Türk Alman şiirinde ise yeniden bir kimlik sorunsalının konu edildiği görülmektedir. Bu yeni kimlik sorgulaması Avrupalı Türklerin kendi yerini sorgulamak anlamını da taşımaktadır. İki dillilik, iki vatanlılık ve tüm bunlara rağmen yabancılik duygusu iyiden iyiye kendini giderek hissettirmektedir. İki kültürlü ve hatta Almanya gibi çok kültürlü toplum yapısı içinde çokkültürlülük konusu biçimsel olarak dile de yansımış ve iki dilli şiirler de yazılmaya başlanmıştır. Altmış yılı doldurmasına rağmen Avrupalı Türkler kendilerini izole edilmiş, yalnızlaştırılmış ve ötekileştirilmiş hissetmektedirler. Tamer Düzyol ve Taudy Pathmanathan'ın derledikleri "Haymatlos" şiir kitabında farklı kültürlere ait ama Almanyalı pek çok şairin şiirleri yer almaktadır. Hemen hepsinin ortak noktası ise pek değişmemiş olan ötekileştirme süreci ve bunun yarattığı bunalımlardır. Eleştirel bir yaklaşımla dile getirilen yabancılik, düşmanlık ve vatansızlık duyguları, yeni dönem Türk Alman şiirinin başlıca karakteristiği durumuna gelmiştir. Bu çalışmada da vatansızlık izleği seçilen şiirler bağlamında ele alınmıştır.

Anahtar Kelimeler: Türk Alman Yazını, Göç Yazını, Almanya, Şiir, vatansızlık.

The Search for a New Identity in Turkish-German Poetry after Migration

Abstract: On the long journey of immigration to Germany, which will complete its sixtieth year this year, the Turkish-German summer, which gradually takes root and diversifies, was born and developed. Turkish-German literature, once known as "migrant literature", has created four generations and different types of literature within itself. The style of poetry has also gained an important place in this literature from the very beginning. As an important means of expression of migration, poetry has gained a distinct place in Turkish-German literature for three generations. In the first and second generation Turkish German poems, homesickness, longing and identity concerns are the subjects. In the third generation, that is, today's Turkish-German poetry, it is seen that a problematic of identity has become the subject again. This new identity questioning also means questioning the place of European Turks. Bilingualism, bilingualism, and despite all this, the feeling of foreignness makes itself felt more and more. The issue of multiculturalism in a bicultural and even a multicultural society like Germany has been reflected in the language formally and bilingual poems have started to be written as well. Although it is sixty years old, European Turks feel isolated, isolated and marginalized. The poetry book "Haymatlos" compiled by Tamer Düzyol and Taudy Pathmanathan includes the poems of many German poets belonging to different cultures. The common point of almost all of them is the unchanged marginalization process and the crises it created. Feelings of strangeness, hostility and statelessness expressed with an e-critical approach have become the main characteristic of Turkish-German poetry in the new period. In this study, the theme of statelessness is discussed in the context of selected poems.

Keywords: Turkish German Literature, Immigration Literature, Germany, Poetry, statelessness.

1. GİRİŞ

Bu yıl altmışıncı yılının kutlandığı Almanya'ya ekonomik göçün edebiyatı bağlamında Türk-Alman şiiri altmış yıllık gelişim öyküsüyle beraber geçirdiği evreler de kısaca derlenmeye çalışılmıştır. 30 Ekim 1961 tarihinde Ankara antlaşmasıyla diğer ülkelerle birlikte Türkiye'den de ilk işçi kabileleri trenlerle Almanya'ya yola koyulmuştur. Kara tren yolculukları ilerleyen yıllarda gurbetçilerin kendi özel araçlarıyla uzun ve yorucu asfalt yolculuklarına dönüşmüş, acı tatlı pek çok yolculuk hikâyelerine kaynaklık etmiş ve halen de devam etmektedir. Altmışlı yılların Türkiye'sinde hızlı bir biçimde köyden kentlere göçlerin yaşandığı ortamda gurbetçilerin çoğu köylerinden henüz şehir yüzü görmeden Avrupa'ya Almanya'ya geçici bir süreliğine yola koyulurken gurbeti vatan edebileceklerini belki de hiç düşünmemişlerdi.

Almanlar da bu geçici işgücünün kalıcı olacağını düşünmemişti doğrusu. Onlar Max Frisch'in deyimiyle "yalnızca işgücü istemişlerdi ama insanlar gelmişti". Anadolu'dan kalkıp yollara dökülen yüzlerce gurbetçi bambaşka bir dünyaya yola koyulmuş, dilini bilmediği bambaşka bir kültürle karşılaşmışlardı. Almanlar için de durum aynıydı. Doğudan, bambaşka bir dünyadan hiç bilmedikleri, tanımadıkları ve dillerini bilmedikleri yabancılarla karşılaşmışlardı. Farklı kültürlerin karşılaşma noktasında elbette dilsizlik, iletişimsizlik ve yabancılaşma gibi çok büyük sorunlarla karşılaşmışlardı bu insanlar. Dertlerini vücut diliyle anlatmaktaydılar. Almanya'da birinci kuşak göçmen yazını neredeyse tamamen Türkçe yazılmaktaydı. Ancak günümüze gelene kadar ikinci kuşakta Türkçe ve Almanca eserler yarı yarıya bir orana sahip iken, üçüncü kuşakta artık eserlerin neredeyse tamamının Almanca yazıldığı görülmektedir. Almanca yazan üçüncü kuşak sayesinde Alman yazını içinde kendine bir yer ettiği ama diğer taraftan da Türk okurlara uzaklaştığı söylenebilir. Çevirileri olabildiğince az sayıdadır. Bunun da başlıca nedeni, eserlerin içeriklerinin doğrudan Türk okura hitap etmemesi sayılabilir. Bugün için üçüncü kuşak yazını Alman yazınının bir parçası sayılmakta Türk-Alman yazını gibi bir takım isimlerle anılmaktadır. Son dönemlerde de göç sonrası Türk-Alman yazını gibi belirtmeler de kullanılmaktadır (Bkz. Karakuş, Yeşilada vd.).

Kavram belirlenmesinde yine Almanyalı Türkler'in etkisinin olduğu düşünülmektedir. Birinci kuşak bağlamında ilk Almanya'ya gidenler gerçek anlamda konuk işçi olarak gitmişlerdi. Bir süre çalışıp, kazandıkları parayla memleketlerine dönmek başlıca amaçları idi. Bu yüzden o dönemin yazını da konuk işçi yazını olarak anılmış, bugün de aynı terim birinci kuşak için kullanılmaktadır. Seksenli yıllardan itibaren ise değişen şartlar, memlekette getirilen eş ve çocuklar derken konukluk süreci giderek uzamış, yerini zamanla yeni yurtlarında kalıcılığa bırakmıştır. Bu anlamda kesin dönüş pek çok Almanyalı Türk için mitleşmiştir, denebilir. Değişen bu yeni koşullarıyla konuk işçi yazını, Almanya'da kalıcı olmaya başlayan yabancıların yazınına belirtmek için yabancı yazını olarak anılmaya başlandı. Elbette bu yazın iki kutuplu olup bir tarafı Türk, diğer tarafı da içinde yaşadığı Alman toplumu olduğundan, toplumsal ve kültürel olarak bir arada yaşamanın yarattığı kültürlerarasılık kavramı gelişmiştir. Bu yüzden göçmen yazınının adı da kültürlerarası yazın olarak anılmaya başlanmıştır.

2. GÖÇMEN YAZININDA ŞİİR

Türk Alman yazını ya da Türk Göçmen yazını bağlamında her bir metin türüne örnekler bulunmaktadır. Bugün için şiir, roman, oyun, deneme, vb. yazın türlerinde pek çok çeşitlenme görülmektedir. Nitekim ikiyüze yakın Almanya'da yaşayan Türk kökenli sanatçı bulunmaktadır ve hemen her türde eserler verildiği görülmektedir. Ayrıca yazın türleri içinde konusal ayrımlarda da çeşitlilik mevcuttur; örneğin çocuk ve gençlik yazını, kadın göçmen yazını vd. gibi. Tüm bu anılan türler içinde şiirin geleneksel bir yanı ve de yeri olduğu değerlendirilmektedir. Brezina'nın (2003) belirttiği gibi göçmen yazını şiirle başlamıştır denebilir. Almanya'ya Türk göçünün başladığı altmışlı yıllarda en kısa, öz ve en çabuk yazılan şiir türünde eserlerin verilmiş olması rastlantı olmasa gerek. Göçe düzülen türküler, şarkılar da sayılırsa; iş, göç ve en önemlisi de ayrılıklarla başlayan göç süreci, yaban ellerde kendini memleket özlemine, eş ve çocuklara özleme bırakmıştır. Bu anlamda Türk Alman yazınında ilk şiirler, birinci kuşağın yazar ve şairlerinden gelmiştir, örneğin; Yüksel Pazarkaya, Aras Ören gibi. Bu ilk şiirlerde birinci kuşağın temel konuları olan vatan özlemi, yabancılık vb. gibi konular ele alınmış ve şiir türü bu duygulara tercümanlık işlevini üstlenerek ifade aracı olmuştur.

İkinci kuşak Türk Alman yazınında diğer yazın türleri arasında şiir de yerini korumaktadır ve ikinci kuşağın temel sorunu olan kimlik sorunsalını dile getirmekte ve sorgulamakta bir ifade aracıdır. Söz konusu kimlik sorunsalı, hiçbir yere ait olamama ile birlikte her iki kültüre de aitlik hissi gibi varoluşsal çelişki barındırmaktadır içinde. Bu ikilem neredeyse tüm ikinci kuşak şair ve yazarlarında belirgin olarak gözlemlenir. Özellikle de kimlik sorunu, iki kültür arasında kalmışlık gibi sorunlar Türk-Alman şiirinde de bolca dile getirilmiştir. Bu sorunsal ikinci kuşaktan günümüze kadar pek çok şairin dizelerinde dile getirilmiştir. Tüm bu dizelerde köklerini arayan bir söylemin var olduğu ifade edilebilir.

3. ŞİİR VE YENİ KİMLİK ARAYIŞI

Göçmen yazınında kimlik sorunsalı ikinci kuşak sanatçılarındaki yoğun bir şekilde ele alınmış ve konularının çoğu bu ekseninde oluşmuş idi. Bu kimlik sorunsalının temel konusu ise iki kültür arasında kalmışlığın yarattığı ikilem ve çatışmalar ile belli bir yere ait olamamak idi. Üçüncü kuşak, yani günümüz sanatçıların

eserlerine bakıldığında ise yeniden fakat bu sefer farklı bir kimlik sorunsalının oluştuğu görülmektedir. Üçüncü kuşakta kimlik belirgindir ve bu Almanyalılıktır. Avrupalı Türkler olarak kendilerini tanımlayan bu kuşağın çoğunluğu Almanya’da doğmuş, büyümüş ve orada yaşamaktadırlar. Memleketleri, doğdukları yer olan Almanya’dır. Fakat dışsal etkilerle, Almanya’nın gündelik siyaseti, giderek yükselen yabancı düşmanlığının etkisiyle dışlanmışlık duygusuna kapılan Almanyalı Türklerde farklı kimlik sorunları da böylelikle doğmuş görülmektedir. 2020 yılında ikinci baskısını yapan “Haymatlos” kitabında farklı kültürlerden ya da azınlıklardan pek çok şair bir araya gelerek eserlerini tek kitapta birleştirdiler ve bu yeni kimlik sorununu konu ettiler.

3. 1. YENİ KİMLİK ARAYIŞI SORUNU OLARAK VATANSIZLIK

“Haymatlos” kitabının başlığı vatansızlık anlamına gelmektedir. Kısaca Almanyalı Türklerin vatansızlık duygularını ifade ettiği söylenebilir. Tamer Düzyol ve Taudy Pathmanathan’ın hazırladıkları kitapta farklı kültürlerden toplam 49 sanatçının şiirleri yer almaktadır. Bazıları bir, birçoğu da birden fazla şiir ile kitaba katkıda bulunmuşlardır. Bu şairlerin neredeyse tamamı “Heimat” yani vatan kavramını ele almaktadır eserlerinde. Eserlerde gözlemlenen en önemli ve göze çarpan özelliklerin başında ise dekonstruktif bir yöntemle dille oynamalıdır. Bazı iki dilli karma yazım, bazı bilerek yanlış yazımlara yer verilen eserlerde biçimsel olarak da yabancılaşmanın ve ötekileştirmenin farklı bir ifadesi kullanılmıştır denebilir. Eser başlıklarına bakıldığında “Heimat”(vatan), “Heimatgedicht”(memleket şiiri), “Haymatlos”(vatansız), “Home”(ev / vatan), “Heimat(los)” (vatan(sız)), “Mayn Heimat ist (yanlış yazımla vatanım...) gibi vatan içerikli başlıkların oldukça yer ettiği görülür. Bunun yanında kimlik kavramına gönderme yapan eser başlıkları da bulunmaktadır; “Identity”, “Woher kommst Du” vd.

Gülay Gün’e ait “Heimat(los)” adlı şiire bakıldığında;

*“Heimat... Heimat ist schwierig
Heimat ist lose
Heima at
Atma
Bitte nicht
Haymat
Memleket
Memleket doğduğun yer değil, doğduğun yerdir
Ich bin ja satt
Satt
Satt
Hab’s satt
Hab den Rassismus satt. Die Tode satt. Die Hetze satt.
Satt!
Nicht mehr, kann nicht mehr essen, bin doch satt
Mein Haymat.
was?
Mein Haymat
Wo?
Da!
Zack!
Zwei Löcher im Pass
Çöpe at
Atma
bitte nicht.
Zack!
Ein Stempel im Pass.
(Heimatlos)
Kampa at / Atma / bitte nicht*

(s. 142-143)

Memleket kavramı ile başlayan şiir, “zordur memleket” içeriğiyle devam etmektedir. İlginç olarak iki dilli şiirlere de örnektir. Almanca çağrışımla birlikte Türkçe olarak iki sözcük bir yerde kullanılmış ve “Hayma at” ifadesiyle Almanyalı Türklerin konuşma dilinde yurda at anlamı yaratılmıştır. Yurt burada barınak ya da göçmenlerin bir arada toplu kaldıkları yerlerdir. Hemen ardından Türkçe olarak gelen ve Almanca

devam eden atma, lütfen gibi rica, yalvarma bildiren ifadeler var. Kısa bir memleket tanımına yer verirken aslında göçmenlerin neden orada olduklarına dair gönderme de yapılmış olabilir diye yorumlanabilir. Doymak için Almanya'ya geldiler anlam çıkarımı yapılabilir. "Satt" sözcüğü ile devam eden şiirin bölümünde sözcüğün anlamı aynı zamanda "artık yeter", "burama geldi" gibi anlamlar da içerdiğinden, "Satt" ifadesi sıklıkla tekrarlanarak vurgulanmıştır, aynı "yeter, yeter, yeter...." der gibi ifade çağrıştırılmıştır. Memleket dediğin simgesel olarak kâğıt üzerinde bir mühür... İmgesiyle tüm o bürokratik süreçlere, göçmenliğin yaşamak zorunda kaldığı bilgi, belge evrak çöplüğüne de gönderme yapmaktadır.

Tamer Düzyol ve Taudy Pathmanathan'ın da şiirlerinin bulunduğu kitapta yer alan önsözlerinde vatansızlık konusu ve kimlik çatışmalarına yer verilmiş tüm bu duygular "Kanakstan" kavramıyla Almanyalı Türkleri jargon gündelik diline gönderme yapılarak o dille dile getirildiği açıklanmıştır. Bu anlamda Kanakstan kavramı aynı zamanda vatansızların, kendilerini ötekileştirilmiş hissedenlerin vatani olarak da yorumlanabilir. Simgesel olarak kitap, vatansızların memleketi ya da memleketsizliği olmuş durumdadır. Şairlerin önemle vurguladıkları bir konu da "Rassismus" kavramı yani ırkçılıktır. Önsözde de ırkçılığa karşı bir karşıt hareket, ifade karşı duruş olarak gösterilmektedir kitap; "Haymatlos politik ve karşıttır, güçlüdür, özgündür ve yeni bir duruş, yeni bir yerdir" olarak tanımlanır önsözde. Bu bakımdan gerek yazın, gerek siyasal anlamda da bir program iddiası taşır. Şiirler arasında geçen Semra Ertan'ın şiiri "Mein Name ist Ausländer" (benim adım yabancı) şiiri de baskın kültür olarak Alman toplumunun düşünce kalıplarında sınırlandırılan yabancı imgesine vurgu yapmaktadır;

*"Ich arbeite hier
Ich weiss wie ich arbeite
Die Deutschen wissen es auch

Meine Arbeit ist schwer
Meine Arbeit ist schmutzig
Das gefällt mir nicht, sage ich
"wenn dir die Arbeit nicht gefällt,
Geh in deine Heimat", sagen sie (...) (s. 166-167)*

Burada çalışıyorum ve nasıl çalıştığımı ben biliyorum, Almanlar da biliyor. İşim ağır, işim pis diyorum, hoşuma gitmiyor. İş beğenmiyorsan memleketine dön diyorlar (Almanlar) olarak çevrilebilecek şiirde yabancı bir işçinin durumu ve bu durumda Almanların bakışı yansıtılmaktadır. Sadece işgücü olarak görülen, orada uzun yıllardır yaşayan ve orayı yurt edinmiş olmasına rağmen "yabancı" olarak görülen bireyin haykırışıdır bu. İronik olarak da "benim adım yabancı" ifadesiyle baskın kültürün kalıplı düşüncesini, önyargısını dile getirmektedir.

Aynı eser içinde yer alan Yasmin Taheri adlı sanatçının şiiri "Auf der Suche nach Heimat"(s. 131) son dönem tartışılan varoluşsal memleket, vatan kavramlarına gönderme yapmaktadır:

Uzunca yazılmış şiirin kendi içinde bölümleri bulunmakta ve her bir bölümde varoluşsal sorular sorulmaktadır. Birinci bölümde ev sahibine seslenir bir retorik oluşturulmuş ve senin köklerin burada söylemiyle vatansızlık duygusu dile getirilmiştir. İkinci bölümde "was ist Heimat?" sorusuyla devam eden dizelerde ise kalmak değil, ayaklanıp, harekete geçip gitmek kavramı üzerinde durulmaktadır. İlerleyen dizelerde bu duygunun gerekçeleri sıralanmakta ve öne sürülen fikirler, yol ve yolculuk kavramına odaklanmaktadır:

*"(...)
Die Wahrheit ist,
Ich bin ein Reisender,
Der sich zwischen der Welten auch mal verirrt,
Fehler macht und gerne umherschwirrt.
(...)
Die Wahrheit ist, ich bin ein Reisender und der Weg ist meine*

Heimat” (age. s. 133)

Dizeler boyunca yapılan sorgulamalar sonucu gelinen nokta gezginciliktir. Yollarda olmak memleketin diğer adı olmuştur. Yolları memleket eden bir anlayışın ifadesi dile getirilmektedir.

4. SONUÇ

Altmış yıllık bir yazın birikimi içinde farklı ad ve kavramlarla anılan ve ilk başlarda yazın dünyasındaki çevrelerce çok ciddiye alınmayan Türk-Alman yazını zamanla oldukça geniş çeşitliliği ve birikimiyle adından söz ettirir hale gelmiştir. Bu birikim içinde şiir de kendi yolunu çizmiş, altmış yıllık süreçte üç kuşak boyu evrilerek günümüze kadar gelmiştir. Günümüzde Türk Alman şiiri daha uluslararası ve çokkültürlü bir yapıya bürünmüştür denebilir. Bu yapının en önemli göstergesi de “Haymatlos” tarzında son yıllarda ortaya konan eserlerdir. Bu yazınsal ürünlerin çoğunda yalnızca Türk değil, diğer kültürlerden sanatçılar da eserleriyle varlık göstermektedir. Ev sahibi Almanların da bu yazın bağlamında yer aldıkları görülmektedir. Böylelikle “postmigration” ya da “kültürlerarası yazın” olarak tanımlanan göç sonrası yazın bağlamında yeni arayışlar, yeni varoluş biçimlerinin ortaya çıktığı görülmektedir. Yazın dünyasında yaşanan tüm bu yenilikler hem Alman yazını hem de Türk yazın dünyasına zenginlikler kattığı değerlendirilmektedir.

J. D. Salinger ile E. Serbes'in Eserlerinin Ergen Roman Bağlamında Karşılaştırmalı İncelemesi

Prof. Dr. Hikmet ASUTAY¹

¹ Trakya Üniversitesi Eğitim Fakültesi Alman Dili Eğitimi Anabilim Dalı, Edirne. E-Posta: hikmetasutay@yahoo.de. ORCID-NO: 0000-0002-0533-7708

Özet: Ergen roman, ergenlerin bunalımlı geçiş dönemlerini ya doğrudan konu olarak ele alır ve öyküleştirebilir ya da ergenlik süreci bağlamında yaşadıkları bir takım ilk veya kilit ya da sınır deneyimlerini metinleştirmektedir. Her durumda ergen kişinin yetişkinliğe geçiş döneminde edinmeye çalıştığı yeni kimliğin varoluş sancuları asıl ve yan olaylarla metinleştirilerek öyküleştirebilir. Bu araştırmanın konusu Amerikan yazınının önemli isimlerinden olan Jerome David Salinger'in "Çavdar Tarlasında Çocuklar" romanı ile Türk yazınından olan aynı zamanda "Behzat Ç." gibi tanınan bir dizinin senaristi olan Emrah Serbes'in "Erken Kaybedenler" romanı gençlik yazınbilimi açısından incelenmiştir. Her iki romanında konusu ergenlik çağında olan kişilerin yaşamlarından bunalımlı ergenlik dönemleri sürecinde yaşadıkları belli bir kriz dönemi konu edilmiştir. Kişiler diyebiliyoruz çünkü ne çocukturlar ne de gençtirler. Araştırmanın amacı çocuk ve gençlik yazınındaki bu eserleri karşılaştırarak söz konusu bunalımlı ergenlik dönemlerinin öykünüş ve kurgulama biçimlerinin ortaya konmasıdır. Araştırmanın evrenini çocuk ve gençlik yazını, örneklemi ise J. D. Salinger'in "Çavdar Tarlasında Çocuklar" ve Emrah Serbes'in "Erken Kaybedenler" romanı oluşturmaktadır. Çalışmanın sınırlılığı ergenlik, çocuk ve gençlik yazını, "Çavdar Tarlasında Çocuklar" adlı eser ile "Erken kaybedenler" romanı ile sınırlandırılmıştır. Araştırma konusu olan eserlerde dil, üslup ve karakterlerin isyankâr, asi ve eleştirel tavırlar birbirlerine benzerlik taşımaktadır. Her iki romandaki karakterler de ergenlik çağındadır. Emrah Serbes'in "Erken Kaybedenler" kitabı sekiz öyküden oluşmaktadır. Bu öykülerdeki bazı karakterler ve J. D. Salinger'in "Çavdar Tarlasında Çocuklar" kitabındaki karakter de yakını kaybettikleri için intikam, öfke ve nefret gibi olumsuz duyguları hissederler. Eserlerdeki farklılıklar ise birisi Türk diğeri Amerikan yazını olduğu için dil farklılığı, kültürel, toplumsal, dini, coğrafya gibi farklılıklar göstermektedir.

Anahtar Kelimeler: Ergenlik, Çocuk ve Gençlik Edebiyatı, Gençlik, Edebiyat

Comparative Analysis of J. D. Salinger and E. Serbes Works in the Context of Adolescent Novels

Abstract: On the long journey of immigration to Germany, which will complete its sixtieth year this year, the Turkish-German summer, which gradually takes root and diversifies, was born and developed. Turkish-German literature, once known as "migrant literature", has created four generations and different types of literature within itself. The style of poetry has also gained an important place in this literature from the very beginning. As an important means of expression of migration, poetry has gained a distinct place in Turkish-German literature for three generations. In the first and second generation Turkish German poems, homesickness, longing and identity concerns are the subjects. In the third generation, that is, today's Turkish-German poetry, it is seen that a problematic of identity has become the subject again. This new identity questioning also means questioning the place of European Turks. Bilingualism, bilingualism, and despite all this, the feeling of foreignness makes itself felt more and more. The issue of multiculturalism in a bicultural and even a multicultural society like Germany has been reflected in the language formally and bilingual poems have started to be written as well. Although it is sixty years old, European Turks feel isolated, isolated and marginalized. The poetry book "Haymatlos" compiled by Tamer Düzyol and Taudy Pathmanathan includes the poems of many German poets belonging to different cultures. The common point of almost all of them is the unchanged marginalization process and the crises it created. Feelings of strangeness, hostility and statelessness expressed with an e-critical approach have become the main characteristic of Turkish-German poetry in the new period. In this study, the theme of statelessness is discussed in the context of selected poems.

Keywords: Turkish German Literature, Immigration Literature, Germany, Poetry, statelessness. Key Words: Key Word, Key Word, Key Word

1. GİRİŞ

Gençlik-yazınsal eserlerde birçok alan ve konuların yanı sıra asıl ağırlık konusu ergen kişinin kendi ergenlik dünyası, bunalımları ve bu süreçte yaşadığı çatışma, çelişki ve ikilemlerdir. Tüm bunlar roman

türleri içinde polisiye, macera, fantastik, sorun odaklı vb. içinde belli bir takım olay kurguları etrafında yer alır ama başkahraman olan ergen kişinin dünyası içinde metinleştirilir. Ergenlik konuları Avrupa ve Amerika'da olduğu gibi Türkiye'de de giderek önem kazanmış ve daha çok ergen romanlar yayımlanır olmuştur. Oluşan bu yazınsal birikim zamanla genel olarak yazınbilimin doğmasını sağlamış bu kavram altında ayrıca gençlik yazın bilimi gibi bir alt alanın doğmasını da sonuçlandırmıştır. Bu araştırmada 1951 yılında J. D. Salinger tarafından yazılan "The Catcher in the Rye", Türkçe başlık çevirisi ilk olarak Can yayınlarında "Gönülçelen" başlığı ile yayımlanmış (çev. Adnan Benk) daha sonra YKY tarafından yayımlanan eser Coşkun Yerli'nin çevirisi ile "Çavdar Tarlasında Çocuklar" başlığıyla yayımlanmıştır. Emrah Serbes tarafından yazılan "Erken Kaybedenler" romanı da 2009 yılında yayımlanmıştır. Bu çalışmadaki amaç Türk yazınında yazılmış Ergen Romanı ile Amerikan yazını eseri olan ergen romanını gençlik yazınbilimi açısından incelemektir. Her iki eserde kendi toplumuna ait kültürel motiflere yer verilmiştir, ergenler bir taraftan yetişkinlere, arkadaşlarına ve dünyaya olumsuz bir gözler bakarken diğer taraftan umutla bakmaktadır, bu durum da onların ergenlik bunalımı içerisinde yaşadığı olumlu ve olumsuz olayları romanlara yansıtmaktadır. Bu araştırmada ergenliğin bilimsel olarak tanımı yapıлып yazın alanındaki yeri incelenecektir. Daha sonra her iki eserden bahsedilip karşılaştırma yapılacaktır.

2. ERGENLİK KAVRAM VE AÇIKLAMASI

Araştırmanın bu bölümünde bütün insanların yaşamış olduğu fizyolojik bir dönem olan ergenlik döneminden bahsedilecektir. Türk dil kurumuna göre ergenlik "Cinsel organların fizyolojik gelişmesiyle başlayan, buluşma ermişlikle yetişkinlik arasındaki dönem, yeni yetmelik, ergenlik çağı" (Türk Dil Kurumu) anlamına gelmektedir. Birey doğduğu andan itibaren ölümüne kadar birçok fiziksel ve ruhsal değişiklikler gösterir, ergenlik durumu da bireyin çocukluğu ile yetişkinliğe geçişi sırasında kalan bir dönemdir. Yapılan araştırmalara bakıldığında ergenlik yaş ortalaması 12-18 hatta bu rakam 11-22 gibi farklılıklar göstermektedir. Her şey 12 yaşında değil bireyin doğumundan itibaren başlamaktadır. "O yüzden her şey ergenlik döneminde başlamıyor, ergenlik döneminde bitiyor. Çocukluk döneminden itibaren birtakım şeyler oluşmaya başlıyor, ama ergenlik dönemi bu oluşumları yaşadığımız son dönemdir" (Öztürk, 2011: 4). Ergenlik döneminde fiziksel, ruhsal, cinsel olarak bireyde farklılıklar meydana geliyor. Bireylerde bu farklılıklar içerisinde değişmeye başlıyor. "Bu değişkenlik içerisinde tabii zaman zaman bir şok olma, şaşırma, bedeninden şikâyet etme, kendini beğenmeme, kendini sorgulama, büyümeye karşı itiraz ve red söz konusu olabileceği gibi, ergen, bir süre sonra bu yeni tabloya alışmaya ve barışık yaşamaya da başlayabiliyor" (Öztürk, 2011: 5). P. Blos'un yaptığı ayrımlara göre ergenlik dönemi beş bölüme ayrılmaktadır:

- *Ön ergenlik* (Präadoleszenz)
- *Erken ergenlik* (Frühadoleszenz)
- *Asıl ergenlik* (eigentliche Adoleszenz)
- *Geç ergenlik* (Spätadoleszenz)
- *Ergenlik sonrası dönem* (Postadoleszenz)

Bunların içerisinde ergenlik sonrası dönem (Postadoleszenz), yetişkinlik ile gençlik dönemleri arasında yer alan bir geçiş sürecidir. En önemli özelliği de, deneyim ve yaşantıdır. Bu dönemin uzaması veya kısılması, kişilerin yetişkinler dünyasına geçişteki uyum sürecine karşı gösterdikleri kabul ya da karşıt tutumlarına bağlıdır. Ancak burada toplumsal roller, toplumsal-kültürel etkenler de önemli rol oynar. Bu bakımdan kesin yaş sınırlamaları yapılmamakla beraber, günümüzde çocukluk çağının erken bitişi ve gençlik döneminin uzaması nedeniyle, ergenlik çağının yaş ortalaması 12 ile 30 yaş arası olarak gösterilmektedir (Sauerbaum 1999: 205). Bu yaş sınırlaması, toplumsal değişimlere bağlı olarak değişir. U. Abraham da (1998: 95) erinliği ruhsal-bedensel, ergenliği de ruhsal-toplumsal olgu olarak tanımlar. Ayrıca Abraham, ergenlik dönemini bir insan için gelişim dönemi değil, tersine ara dönem; ara konum olarak betimler (Abraham 1998: 95). Böylelikle ergenlik, Abraham'ın deyimiyle kimliğin, ya da benliğin ikinci doğuşudur. Özyer ise bu yaş sınırlamasını ülkemiz gençliği için 14-25 olarak göstermektedir (Özyer 1994: 62). Ancak günümüz değişen yaşam ve toplumsal koşullar bağlamında ergenlik dönemi için 12-30 yaş sınırlamasını yapılabilir.

Kıscacası ergenlik kavramı, bireyin doğuşundan itibaren başlayan yaşantısı, ailesi, çevresi, olumlu ve olumsuz her türlü fiziksel ve ruhsal olayların ergenlik döneminde belirgin bir şekilde meydana gelmesi demektir . Yaşanmış olumlu ve olumsuzlukların ergenlik dönemiyle ortaya çıkıp ergenlik dönemi sonunda artık bir birey yetişkin olarak topluma girer. Bu bağlamda ergenlik dönemi yalnızca fiziksel-biyolojik bir süreç değil, psikolojik-toplumsal bir dönemdir aynı zamanda.

3. YAZIN ALANINDA ERGENLİK

Araştırmanın bu bölümünde ergenlik kavramının yazın dünyası içindeki yeri incelenecektir. Ergenlik terimi İngilizcede “Adolescence”, Almancada ise “Adoleszenz” olarak Literatüre geçmiştir. Türkçede de “Adölesan” olarak da kullanılır ergenlik terimi. Ancak Türkçe kavram olarak Ergen Roman, Ergen Yazın denmesi daha doğru olacaktır. Yazınsal eserlere bakıldığında farklı türlerden konular yazınsal eserlerde yer bulmuştur. Tarihi, felsefi, mitolojik, dini, sosyolojik, gençlik ve çocuk gibi birçok alan konusu yazında yer almıştır. Ergenlik konusu da yazınsal eserlerde kendine ergenlik romanı olarak yer bulmuştur. Ergenlik romanı konusunun tanımına bakılacak olursa “Ergenlik romanı genel olarak eser başkışisi olan ergen kahramanın kimlik sürecini ve ergenlik dönemini yaşadığı süreçte söz konusu olan ergenlik bunalımları ile kimlik bunalımları çerçevesinde gerçekleşen gençlik ya da ergenlik dünyasına özgü olayları konu edinen gençlik romanlarıdır, diye tanımlanabilir” (Asutay, 2013: 8). Ayrıca Ergenlik Roman türleri Eğitim Romanı, Gelişim Romanı ve Jeans Yazını olarak üç ayrı kısımdan oluşmaktadır (bk. Asutay, 2013: 9). J.D. Salinger’in bu romanı da gençlik edebiyatı tarihsel dönemler açısından yetmişli yıllardaki öğrenci hareketleri dönemine denk gelmektedir ve bu nedenle “Jeans Roman” olarak anılmaktadır (Bkz. Dodorer 1980).

3. 1. J. D. SALİNGER’İN “ÇAVDAR TARLASINDA ÇOCUKLAR” ADLI ESERİNİN İNCELENMESİ

Jerome David Salinger 1 Ocak 1919 yılında New York’ta dünyaya gelmiştir. Salinger’ in babası Polonyalı bir Yahudi, annesi ise yarı İrlandalıydı. Ayrıca kendisinden 8 yaş büyük bir ablası vardı. İlkokulunu Mc Burney okulunda bitirdi ve okul yıllarındayken okul tiyatrolarında yer alıyordu, bu yüzden ailesi onun oyuncu olacağını düşünüyordu. Valley Forge Military Akademi’yi kazandığı zaman baskıcı annesinden uzaklaşabileceği için çok sevinmişti. McBurney’ de okurken okul gazetesinde yazıyordu. Bu dönemlerde kısa hikâyelerine başlayan J.D. Salinger yatılı okulda okuduğu için hikâyelerini gizli gizli yatağın içinde örtünün altında yazıyordu. 1936 yılında New York Üniversitesi’ni kazandı. Daha sonra okuldan ayrılıp babasının işine döndü. Babası onu Viyana’ya gönderdi. Hitler’in Avusturya’ya girmeden 1 ay öncesinden orayı terk eden Salinger, ertesi yıl Collegeville Ursinus Üniversitesi’ne gitti. Burada da sadece 1 dönem okuyabilen Salinger 1939 yılında Colombia Üniversitesi’nde yazarlık okumaya başladı. Burada ilk yayını “The Young Folk” hikâyesiyle yaptı. Salinger 1942’de ABD’nin II. Dünya savaşına girmesinden birkaç ay sonra orduya katıldı. Burada Ernest Hemingway ile tanıştı ve savaşın çirkin yüzünü gördüğünden dolayı ruhsal çöküntüye giren Salinger bir süre hastanede tedavi gördü. 1951 yılında başyapıtı olan “The catcher in the Rye” adlı kitabı basıldı. Bu kitap eleştirmenler tarafından sevilme de okuyucuların ilgisini çekmişti. Bir süre sonra tanınmaya başlayan Salinger toplumun ilgisinden sıkıldığı için New York’tan New Hampshire’ e taşındı. Agresif tavrı ve gözlerden uzak yaşamıyla tanınan Salinger, 1980 yılından sonra hiçbir gazeteye röportaj vermedi. 27 Ocak 2010 yılında Cornish, New Hampshire, ABD’de hayatını kaybetti.

Kitapları:

1948 - Muz Balığı için Mükemmel Bir Gün

1948 – Sarsak Dayı Connecticut’ta

1948 – Eskimolarla Savaştan Hemen Önce

1949 – Gülen Adam

1949 – Teknede

1950 – Esme için – Sevgi ve Yoksunlukla

1951 – Çavdar Tarlasında Çocuklar / Gönülçelen

1951 – *Yeşil Gözlüm, Al Dudaklım*

1952 – *De Daumier-Smith'in Mavi Dönemi*

1953 – *Dokuz Öykü*

1955 – *Franny*

1955 - *Yükseltin Tavan Kirişini, Ustalar*

1957 – *Zooey*

1959 – *Seymour: Bir Giriş*

1961 – *Franny ve Zooey*

1963 – *Yükseltin Tavan Kirişini, Ustalar ve Seymour: Bir Giriş (Biyografi.info).*

1951 yılında J. D. Salinger tarafından yazılan orijinal ismiyle "The Catcher in the Rye" kitabı Salingerin başyapıtı diyebileceğimiz bir eserdir. Bu kitap Çoşkun Yerli tarafından dilimize "Çavdar Tarlasında Çocuklar" olarak çevrilmiştir. Kitabın ana karakteri Holden Caulfield adında bir ergendir. Hikâye, Holden Caulfield tarafından ilk ağızdan anlatılıyor. Hikâye, Caulfield'in Pencey Prep adındaki okulundan kovulmasıyla başlar. Daha önceden iki okuldan kovulduğu için ailesinin yanında gidip yüzleşmekten korkar ve eve gitmez. İlk olarak eski tarih hocası olan Mr. Spencer'a gider ama orda hocası canını sıkıldığı için yurda geri döner ve yurtda arkadaşlarıyla arası kötü olur kavga ederler ve yurdu terk eder. Holden Caulfield ergenliğin de etkisinde olduğu için biraz agresif, her şeyi ve herkesi eleştiren bir tiptir. İnsanların samimiyetsiz olduklarını düşünür. Holden Caulfield nerede doğduğunu ve nasıl rezil bir çocukluk geçirdiğini ve anne ve babasının nasıl tanıştığını, tüm David Copperfield zırvallıklarını filan da bilmek istersiniz diyerek pek bu konuları anlatmak istemediğini ve bu "zımbırtılardan" sıkıldığını ve ailesinin ne kadar alingan insanlar olduğunu anlatmaktadır.

"If you really want to hear about it, the first thing you'll probably want to know is where I was born, and what my lousy childhood was like, and how my parents were occupied and all before they had me, and all that David Copperfield kind of crap, but I don't feel like going into it, if you want to know the truth. In the first place, that stuff bores me, and in the second place, my parents would have about two hemorrhages apiece if I told anything pretty personal about them. They're quite touchy about anything like that, especially my father. They're nice and all—I'm not saying that—but they're also touchy as hell" (Salinger, 1: 1951).

Holden yurdu da terk ettikten sonra New York'a gider. New York'a gider gitmez tanıdıklarıyla konuşur ve orada deyim yerindeyse gününü gün eder. Daha sonra ergenliğin vermiş olduğu hislerden dolayı cinsel duyguları artar ve kadın satıcılarıyla kız konusunda anlaşma yapmaya başlar. Ama Holden'ın hevesi kaçır ve başına gelmeyen kalmaz. Burada kadın satıcısının ona gönderdiği kızla yaşanılardan bahsedilmektedir. Yaşanılanlar kendisini üzer. Buradan anlaşılacağı gibi Holden ne kadar agresif, eleştiren ve asi birisi olursa olsun temiz düşüncelerini kaybetmediği anlamına gelmektedir;

"Sure," I said right away. I was only too glad to get up and do something. I took her dress over to the closet and hung it up for her. It was funny. It made me feel sort of sad when I hung it up. I thought of her going in a store and buying it, and nobody in the store knowing she was a prostitute and all. The salesman probably just thought she was a regular girl when she bought it. It made me feel sad as hell—I don't know why exactly" (Salinger, 56: 1951).

Holden eski bir kız arkadaşı olan Sally Hayes ile çıkmaya başlar ve birlikte güzel zaman geçirirler. Birlikte tiyatroya ve buz pateni yapmaya giderler. Sally artık onun hem sevgili hem de dert ortağı olmuştur.

"You ought to go to a boys' school sometime. Try it sometime," I said. "It's full of phonies, and all you do is study so that you can learn enough to be smart enough to be able to buy a goddam Cadillac some day, and you have to keep making believe you give a damn if the football team loses, and all you do is talk about girls and liquor and sex all day, and everybody sticks together in these dirty little goddam cliques. The guys that are on the basketball team stick together, the Catholics stick together, the goddam intellectuals stick together, the guys that play bridge stick together. Even the guys that belong to the goddam Book-of-the-Month Club stick together. If you try to have a little intelligent—" (s.76).

Sally ile konuşan Holden burada eleştiri yaparken insanların samimiyetsiz ve sahtekâr olduklarından bahsetmektedir. Ayrıca insanların ömrü boyunca çalışıp sadece Cadillac marka bir araba alabilecek paraya sahip olacağını, sabahtan akşama kadar içkiden ve seksten başka bir şey konuşmadıklarını,

basketbol takımı, katolikler, entelektüeller kulübü gibi herkesin birbirini farklı gruplara dayanarak tuttuğunu söyleyerek bir eleştiride bulunmaktadır. Holden Sally ile uzaklara gidip yeni bir hayata başlamak ister. Sally ise bu fikrin doğru olmadığı ve halen çocuk olarak sayıldıklarını düşünür ve parasız kalıp ölebileceklerini düşünür. Ergenliğin de vermiş olduğu asilikle ve kendine fazla güvenen Holden Sally'e de hakaret edip onun kalbini kırar.

Herkese ve her şeye bu kadar agresif davranıp eleştiren Holden'ın hayattaki tek değer verdiği kişi kız kardeşi olan Phoebe'dir. New York'tan, Sally'den ve okuldan bunalmış olan Holden gizlice eve girip Phoebe'yi görmeye karar verir. Phoebe ile görüşür ve New York'ta çok para harcadığından parası kalmayan Holden'a kız kardeşi biriktirdiği paraları verir. Phoebe ile de her şeyi konuşur. Phoebe ona neden okula gitmediğini sorar. Cevap olarak birçok nedeninin olduğunu söyleyen Holden, başlar okulunu ve arkadaşlarını kötülemeye. Bu kötülemelerinin altında yatan en büyük neden ise dışlanmışlık hissi ve kendisinin korkak olduğunu düşünmesidir.

"For instance, if you were having a bull session in somebody's room, and somebody wanted to come in, nobody'd let them in if they were some dopey, pimply guy. Everybody was always locking their door when somebody wanted to come in. And they had this goddam secret fraternity that I was too yellow not to join. There was this one pimply, boring guy, Robert Ackley, that wanted to get in. He kept trying to join, and they wouldn't let him. Just because he was boring and pimply. I don't even feel like talking about it. It was a stinking school. Take my word" (s. 97-98).

Anne ve babası geldiği için Holden evden kaçmak zorunda kalır. Harcayacak çok parası olmadığından dolayı Holden başka bir öğretmeni olan Mr. Antolini'nin evine gider. Öğretmeni Holden'a karşı çok olumlu davranır ve geleceği için iyi öğütler verir. Çok yorgun olan Holden uyumaya başlar ve bir anda alnının okşandığını hissederek gözlerini açar. Alnın okşayan öğretmenidir ve okşaması nedeniyle öğretmenin eşcinsel olduğunu düşünen Holden evden kaçar. Ergenliğin vermiş olduğu bunalımdan dolayı Holden'ın hayali otostop çekip uzaklara gitmek ve orada sağır ve dilsiz taklidi yaparak farklı bir hayat sürmektir. Bunu yapmadan önce kimseye borçlu kalmak istemeyen Holden kardeşinden aldığı parayı vermek için kardeşinin okuduğu okula gider. Beklenmeyen bir durum yaşanır kardeşi de onunla birlikte uzaklara gitmek ister ve hatta bavulunu bile hazırlamıştır ama Holden çok sevdiği kız kardeşi Phoebe'ye kötü örnek olmamak için bu hayalinden vazgeçer. Holden Caulfield son olarak psikolojik tedavi görüp yeni dönemde okula devam edecektir.

4. EMRAH SERBES "ERKEN KAYBEDENLER"

Ünlü Türk dizisi olan "Behzat Ç."nin yazarı Emrah Serbes 1981 yılında Yalova'da doğmuştur. Akdeniz Üniversitesi Turizm İşletmeciliği ve Otelcilik Yüksekokulu'nu yarım bırakan Serbes, Ankara Üniversitesi Dil-Tarih Coğrafya Fakültesi, Tiyatro Teoremi ve Tarihi Anabilim Dalı Bölümünden mezun olmuştur. Öğrencilik yıllarında BirGün gazetesi için söyleşiler kaleme alan Serbes, Radikal 2 için de tiyatro eleştirileri yazmıştır. Hayvan dergisinin Ankara muhabirliğini de yapmıştır. Ahmet İnam ve Cengiz Güleç ile birlikte gerçekleştirdikleri "Şen Profesörler: Metaforla Saadet Olmaz" (Say Yayınları, 2006) adıyla kitaplaştırmıştır. "Her Temas İz Bırakır" adlı ilk romanı 2006 yılında yayınlandı. Serbes, güncel siyasi gelişmeleri de ele alan ve sert mesajlar veren Behzat Ç. Seni kalbime gömdüm adlı polisiye dizinin senaristliğini yapmıştır. İzmir'de 22 Eylül 2017 tarihinde otomobil sürücüsü ve kızının öldüğü trafik kazasını kendisinin yaptığını itiraf ederek teslim olmuş ve tutuklanmıştır.

Kitapları:

2006 – *Her Temas İz Bırakır*

2006 – *Şen Profesörler: Metaforla Saadet Olmaz*

2008 – *Son Hafriyat*

2009 – *Erken Kaybedenler*

2012 – *Hikâyem Paramparça*

2014 – *Deliduman*

Filmler ve Dizileri:

Senaryo:

2010 – *Şen Yuva (TV Dizisi)*

2011 – *Behzat Ç. : Seni Kalbime Gömdüm (Sinema Filmi)*

Oyuncu:

2010 -2011 – *Behzat Ç. Bir Ankara Polisiyesi 2. Sezon (Çilingir) (TV Dizisi)*

Eser:

2010 – *Behzat Ç. Bir Ankara Polisiyesi 1. Sezon (TV Dizisi)*

2011 – *Behzat Ç. Seni Kalbime Gömdüm (Sinema Filmi)*

2013 – *Behzat Ç. Ankara Yanıyor (Sinema Filmi)* (Biyografi.info)

Emrah Serbes'in "Erken Kaybedenler" adlı romanı 2009 yılında yayınlanmıştır. Bu romanda toplam 8 öykü vardır ve öykülerin tamamında başkarakterler 7 ile 17 yaş arasında genç ve çocukların gözünden öyküler anlatılmaktadır.

4. 1. "ANNEANNEMİN SON ÖLÜMÜ" ÖYKÜSÜ

Buradaki konu anne ve babasını trafik kazası sonucu kaybeden bir ergenin öyküsünü anlatmaktadır. Ergenin anneannesiyle arasında garip ama duygusal bir bağ vardır. Buradaki ergen de ergenliğin vermiş olduğu etkiyle asi ve agresif bir karakterdir. Herkesi ve her şeyi eleştirmekten kaçınmaz. Anneannesi de kendisi gibi eleştirilere açık olduğundan ve onun gibi biraz da asabi olduğundan ayrıca hayatta sadece anneannesi kaldığından ve onu çok sevdiğinden anneannesine çok bağlı bir karakterdir.

"Cinin yarısını içtim, yere kustuktan sonra anneanneme haksızlık yaptığımı düşündüm. Kaç sefer kardan adam yapmıştık bahçede. Bayramın birinde Çeşme'ye tatile bile gitmiştik. Kuşadası'nda yer yoktu. Ben bütün rezervasyon işlerini internetten yapmıştım. Hatta oradayken yat turuna bile çıkmıştık, anneannem denize kusmuştu, yine ölüyordu az daha. Kimin için? Tabii ki de benim için. Ayrıca o, bütün dünyaya posta atmış bir insan. Pazarcının yüzüne ezik domatesleri fırlatmıştı bir kere. Bugün eli bıçaklı psikopat pazarcının yüzüne domates fırlatan insan, Roma devrinde yaşasa Spartaküs'ün orudusuna katılmaz mıydı?" (Serbes, 2009: 15).

4. 2. "ZANNETİĞİN GİBİ DEĞİL" ÖYKÜSÜ

Bu öyküye okumaya ilk başlanıldığı zaman başkarakterini yetişkin birisiymiş gibi anlaşılabilir. Çünkü bara gitmiş, içkisini istemiş, hal ve hareketleriyle tıpkı bir yetişkin edasıyla olan karakter sadece 14 yaşındadır:

"Barın kuytu köşesinde Nilüfer'i gördüm. Böyle kasvetli gecelerde tanıdık bir genç kızla karşılaşmak çok hoştur. Beni görünce ayağa kalktı, ince beline iki parmağımla dokunup yanaklarından öptüm, yanına oturdum. Bir an gözleri ışıldadı. O arada baş dönmesi gibi bir şeyler de hissetmiş olabilir. Zira yanaklarını öperken kokusunu içime çekince benim bile biraz başım dönmüştü. Zaten benim gibi görmüş geçirmiş adamlar için aşk, bir genç kızın baştan çıkmak üzere olduğu anlarda başlar" (s. 25).

Buradaki öyküde karakter kendisini büyük gibi hisseder ve babasını mafyaların öldürdüğünü düşünerek buna karşın abisinin de babalarının intikamını almadığı için abisini pek sevmez ve onu küçük düşürür, ayrıca abisinin kız arkadaşı olan Nilüfer'e ilgisi de vardır. Bu öykü bağlamında ergen romanın özelliklerinden olan yetişkinliğe geçiş sürecinde ergen bireyin yaşadığı ilklerin metinleştirilmesi görülmektedir.

4. 3. "KORHAN AĞBI'NIN KARDEŞİ" ÖYKÜSÜ

Bu öyküde 90'lı yılların klasik mahalle arası hikâyesi anlatılmaktadır. Genç bir çocuğun mahallenin abisi diyebileceğimiz kişinin kız kardeşine ergenliğin de vermiş olduğu etkiyle ilgi duyması. Bu anlamda ergenlik döneminde yaşanan ilklerden biri olan karşı cinsten birini sevmek, âşık olmak konuları, mahalle kültürü adı verilen gençlik alt kültür çevresinde ele alınmıştır denebilir. Bu bağlamda ergenlerin alt kültür çevrelerinin romanlarda yer ya da mekân olarak dile getirilmesi de ergen roman özelliklerindedir. Ergen romanın doğal özelliği olarak kurgular ergenin kendi alt çevrelerinde geçer. Bu alt çevreler ayrıca ergenlerin bir yere ya da bir gruba ait olma reflekslerinin hayata geçirildiği ortamlardır. Ergenlerin sosyalleşmelerini yaşadıkları, kendi aralarında oluşturdukları ortak pek çok özelliklerini bulabildikleri yerlerdir. Bu alt çevrelerin özellikleri, toplum bütünü içinde kendine özgü bir takım dil, ağız, moda, giyim, kuşam ya da fikir benzerlikleri ile oluşturdukları ergen alt kültür çevreleridir.

4. 4. “DENİZİN ÇAĞRISI” ÖYKÜSÜ

‘Denizin Çağrısı’ küçükken herkesin yaşadığı bir öykü olarak anlatılmaktadır. Küçük bir çocuğun ailesiyle birlikte havanın sıcak olmasından dolayı gününbirlik bir tatil olarak denize gitmelerinden bahsedilmektedir. Buradaki öyküde denize gitmeden önce aile büyüklerinin denize gidileceğini söylemesinden itibaren heyecan yapılmaya başlıyor. Aslında dışarıdan bakıldığında basit bir aktivite olan denize gitmek küçük bir çocuğun gözünde çok büyük ve eğlenceli durum haline gelmektedir.

“Çok lüzum görmedikçe konuşmuyorduk. Babama dikkatle bakıp devamını getirmesini bekledik.

“Tatile gidiyoruz.”

“Nereye?”

“Adaya”

“Yabadabada!” diyerek bağurdım.

Şakkadak bir canlılık geldi üstüme. Annem evvelsi hafta, “Herkes tatile gitti, biz denize ayağımızı bile sokamadık,” diyerek ağlamıştı. Cümleyi kurarken vurguyu ayak kısmına yüklemişti” (s.65)

Çocukluğa dair bir takım yaşantıların paylaşılması ise yine ergen romanlarında görülen çocukluktan kopamayış, yer yer ayrılma, yer yer geri dönüş özlemlerinin dile getirildiği dönemlerdir. Bu dönemde ergen birey hem yetişkin olmak ister bir an önce, hem de istemez. Çocukluktan bir an önce çıkmak ister, bazı zamanlar ise çocukluğuna sığınmak, geri dönmek ister. Bu çelişki ve tutarsızlık, ergenliğin temel özelliklerinden biridir ve ergen bireyde bunalımların doğmasına neden olur.

4. 5. “CAHİDE” ÖYKÜSÜ

Bu öyküde kapı komşusuna âşık olan bir çocuk saflığıyla ergenlik arzularının harmanlandığı bir tür yetişkinliğe geçiş öyküsüdür. Cahide’yi etkilemek için elinden geleni yapar tabii onun yaşıtı olan altı yedi arkadaş da Cahide’ye karşı boş değildir. Buradaki öykü klasik mahalle öykülerinden birisidir:

“Tamam, iki arkadaşın aynı kızı sevmesini anlarım, hüznü bir atmosfer olur o zaman ama kardeşim altı yedi kişi birden de olmaz ki ya! On- on bir yaşlarındaysan, aynı sokakta oturup aynı okula gidiyorsan özel hayat diye bir şey arama zaten. Birini sevmeye başladın mı hep beraber seviyorsun, nefret ettin mi hep beraber. Biri ağacın dibine işemeye başlasa herkes çıkarıyor malı meydana. Ne kadar iğrenç olursan o kadar itibar kazanıyorsun” (s. 81).

Romanda dile getirilen mahalle kavramı, yukarıda da değinilen ergenlerin alt kültür çevrelerinden biri ve belki de en geleneksel olanıdır. Bu alt kültür çevresinde yaşanan pek çok ilk deneyimlerden biri olarak yine aşk, sevgi konusu dile getirilmiştir. Ergenler arasında rastlanılır tarzda aynı kızı seven pek çok ergen birey söz konusudur.

4. 6. “ÜST KATTAKİ TERÖRİST” ÖYKÜSÜ

‘Üst Kattaki Terörist’ öyküsü toplumsal bir öykü olarak düşünülebilir ve önyargıları da içinde barındıran bir öyküdür. Buradaki genç karakterin abisi yirmi yaşındayken bu vatan için şehit düşmüştür. Daha yedi yaşındayken abisinin ay yıldızlı tabutunu görüp teröristlerden nefret eder ve cenaze sırasında ailesine bağırmanın, ağlamayın diye kızan çocuk bir anda ülkenin gündemine oturmuştur. Abisini çok sevdiğini ve acısını içinde sakladığını anlatır. Öyküde geçen ailenin de üst komşusu üniversite öğrencisi bir gençtir. Bu genç sosyalist, saç sakalı birbirine geçmiş olduğundan ve evine kızlar, Kürtçe konuşan insanlar girip çıktığından aile de bunların terörist olabileceğini düşünmüştür. Özellikle öykünün ana karakteri olan Nurettin, üniversiteli genci öldürme planı yapar.

“Geceleri İngiliz anahtarıyla üst kata giden kalorifer borularına vurup ürkütücü sesler çıkartıyordum. En sonunda dayanamadım., bizim dükkana gittim.

“Öldürelim onu baba”, dedim. “Ağbimin öcünü alalım.”

Babam, “Allah’ından bulsun,” dedi.

“Bulmaz. Sen öldürmeyeceksen ben öldüreyim. Türklük şuur ve gururu bunu gerektirir.”

“Otur oturduğun yerde.”

“Silahını ver, ben öldüreceğim. On iki yaşındayım, çok yatmam, çıkarım” (s. 90).

Daha sonra kendisi mücadele etmeye çalışır üst kattaki komşusu olan Semihle. Onun evine gider onunla tanışır ve kendisini de takdim eder. Ona ve arkadaşlarına sürekli muhalefet olur, hep onların karşısında güçlü durur, kendini ezdirtmemeye çalışır, düşüncelerinde bile onları öldürmek ister ve onları abisinin katili olduğunu düşünmekten kendini alıkoyamaz. Zamanla üst kattaki komşusu olan Semih'e gidip gelmekten onlara alışmıştır, tabii onlar da Nurettin'e alışmıştır. Birlikte vakit geçirmeye başlarlar ve Nurettin'in önyargıları kırılır. Son olarak Semih okuldan uzaklaştırma aldığı için boşa kira ödememek için memleketine döner ve bu duruma Nurettin çok üzülerek vedalaşırlar.

4. 7. “ALÇAKGÖNÜLLÜ ARZULAR” ÖYKÜSÜ

'Zannettiğin gibi değil' öyküsü ile benzerlikler taşır. İngilizce dersi zayıf olan bir çocuğa ailesi İngilizcesi düzelsin diyerek üniversiteli kız öğrenciden çocukları için özel ders alırlar. Ergenliğinden vermiş olduğu duygularla çocuk üniversiteli gençten hoşlanır. Ders vermeye devam etsin düşüncesiyle ve üniversiteli öğrenci olan Gizem böbürlenmesin diyerek sınavdan bilerek düşük not alır. Tekrardan İngilizce özel ders aldirmek isteyen aile başka hoca ararlar ama çocuk Gizem'den ders almak ister.

4. 8. “KİMİ SEVSEM ÇIKMAZ” ÖYKÜSÜ

Babasıyla beraber dükkânlarında çalışan bir çocuğun öğretmeni ve öğretmeninin iki kızı arasında yaşananları okurken bir yandan da ailenin ve dükkânın hikâyesine misafir olunur. Diğerlerine göre gerçekçilik payı düşük olan bu öykü, yine de okuyucuyu şaşırtmayı ve duygulandırmayı başarmaktadır.

5. İKİ ESERİN KARŞILAŞTIRMALI İNCELENMESİ

Araştırmanın bu bölümünde J.D. Salinger'in "Çavdar Tarlasında Çocuklar" ile Emrah Serbes'in "Erken Kaybedenler" adlı romanları karşılaştırmalı olarak ele alınacaktır.

İncelenen her iki roman da gençlik edebiyatı roman türlerinden ergenlik romanlarıdır. Dil, üslup bakımından sade, anlaşılır ve argo kelimeler içermektedir. Bu da gençlik ya da ergen jargonunun metinleştirilmiş biçimidir denebilir. Her iki romanda da anlatıcı ilk ağızdan anlatır ve ana karakterler ergenlik çağındaki kişilerdir. Ergenliğin vermiş olduğu fiziksel ve ruhsal değişimler sonucu karakterler isyankâr ve eleştirel yapıdadır. Romanlar içerisinde benzerlik taşıyan örnekler verilecek olursa her iki romandaki başkarakterler barmenlerden hoşlanmazlar. Holden Caulfield karakteri barmenleri kasıntı, kendini önemli zanneden kişiler olarak görür ve onlardan hiç haz etmez.

"If you sat around there long enough and heard all the phonies applauding and all, you got to hate everybody in the world, I swear you did. The bartender was a louse, too. He was a big snob. He didn't talk to you at all hardly unless you were a big shot or a celebrity or something. If you were a big shot or a celebrity or something, then he was even more nauseating. He'd go up to you and say, with this big charming smile, like he was a helluva swell guy if you knew him, "Well! How's Connecticut?" or "How's Florida?" It was a terrible place, I'm not kidding. I cut out going there entirely, gradually" (Salinger, 1951: 82-83).

Serbes'in "Erken Kaybedenler" kitabındaki "Zannettiğin Gibi Değil" Öyküsünde de başkarakter barmenleri sevmez.

"Barın önünde durmuş, herhangi birinin çıkmasını bekliyordum. El ele tutuşmuş iki sevgili çıkarken kapıyı tutup girdim, barmene bakmadan yürüdüm. Barmenleri sevmem, genellikle gıcık insanlardır. Dünyanın en önemli işinin kokteyl yapmak olduğunu zanneden, bu yanılığının büyüyle de kasım kadım kasılan tiplerdir; yüzlerini görmeye bile tahammül edemiyorum" (Serbes, 2009: 25).

Yakınlarının ölümüne küçük yaşlarda şahit olanların öfke, intikam, özlem gibi duygular baskın gelmiştir. Mesela Holden'in kardeşini kaybetmesi, "Zannettiğin Gibi Değil" öyküsünde karakterin babasını kaybetmesi, "Anneannemin Son Ölümü"nde Anne, Babası ve sonra Anneannesini kaybetmesi, "Üst Kattaki Terörist"te ise karakterin abisini kaybetmesi. En büyük benzerliklerden birisi de her iki kitabın dilinde argo, küfür, sokak ağzı ve abartılar çok fazladır. Serbes'in romanındaki "Üst Kattaki Terörist" öyküsü toplumsal bir öykü olmasıyla ve bu öyküdeki konuda terör, milliyetçilik kavramları geçmesinden ve gelişme çağındaki çocuklarında bu kavramları öğrenmesinden dolayı "Çavdar Tarlasındaki Çocuklar" romanından farklılık göstermektedir. Coğrafya, kültür, toplumsal farklılıklar bu duruma örnek olabilir.

6. SONUÇ

Bu çalışmada ilk olarak çocuk ve gençlik yazını eserlerinden olan Amerikan yazınından J. D. Salinger'in "Çavdar Tarlasında Çocuklar" özgün başlığıyla "The Catcher in the Rye" kitabı ve Türk yazınından Emrah Serbes'in "Erken Kaybedenler" kitabı incelenmiştir. Ergenlik konusu her iki kitapta da ele alınmıştır, ergenlik çağındaki kişilerin iç dünyası, düşünceleri ve yaşadıkları olaylar anlatılmıştır. Kültürel, toplumsal ve coğrafi farklılıklar olsa da ergenlik dönemindekilerin iç dünyası, duyguları, düşünceleri, arzuları, dış dünyaya ve yetişkinlere bakışları neredeyse aynıdır. Dil ve üslup yönünden benzerlik gösteren kitaplarda argo kelimeler, sokak ağzı ve yaşadıkları sorunlar betimlenerek kaleme alınmıştır. Bu anlamda metinleştirilen dil, karakteristik olarak gençlik jargonu diyebileceğimiz ergenlerin yaşlarıyla tercih ettikleri bir tür alt-kültür ağzıdır. Literatür taramasında ergenlik kavramından bahsedilirken genellikle ergenlik çağı 12-18 yaş arası olarak bilinirken bunun farklı yaşlarda olduğunu da iddia edenler olmuştur. Her iki romandaki karakterlerde bu ergenlik çağı yaş ortalamasına uygundur. Yetişkin gibi davranırlar ve kendilerinin artık yetişkin bir birey olduklarını savunurlar ama yetişkin değildirler. Bu durumda onlarda eksiklikler meydana getirmektedir. Kendilerinin özgür olamadıklarını hissederler.

ORCID: 0000-0003-0297-0580

Özet: Sosyal sermaye, beşeri sermayenin bağlamsal altyapısını oluşturmaktadır. Sosyal sermayeye sahip olan çalışanlar ağ kurma, iş birliği yapma, bilgi paylaşma ve kaynaklara erişme açısından daha avantajlı olabilirler. Sosyal sermayenin geliştirilmesi ve doğru kullanımı çalışanların ve örgütlerin amaçlarına ulaşmasına katkı sağlamaktadır. Bu bağlamda araştırmanın amacı, sosyal sermayenin çalışanların iş performansı üzerindeki etkisinin tespit edilmesidir. Araştırmada nicel araştırma yöntemi kullanılmıştır. Araştırmanın evreni, bir kamu kurumunda görevli personel olmaktadır. Araştırmada kolayda örneklem yöntemi kullanılmış ve gönüllü olarak 169 katılımcı araştırmaya katılmıştır. Araştırma verileri anket formu aracılığıyla toplanmıştır. Anket formu; katılımcıları tanımlayıcı bilgiler, sosyal sermaye ölçeği (Subramaniam ve Youndt, 2005) ve çalışan iş performansı ölçeğinden (Na-Nan vd., 2018) oluşmaktadır. Araştırma verilerinin analizinde SPSS V.22.0 programı kullanılmıştır. Analizler sırasıyla; demografik özelliklerine ilişkin frekans analizi, ölçeklerin güvenilirliğini belirlemek için Cronbach's Alpha katsayısı, değişkenler arasındaki ilişki korelasyon analizi ve sosyal sermayenin iş performansı ve alt boyutları üzerine olan etkisini belirlemek için basit doğrusal regresyon analizi yapılmıştır. Araştırmada sosyal sermayenin çalışanların iş performansını kalite, miktar ve zaman açısından istatistiksel olarak anlamlı ve pozitif yönde bir etkisinin olduğu sonucuna ulaşılmıştır. Çalışanların sosyal sermayelerini geliştirilmesi aynı zamanda iş performanslarının kalite, miktar ve zaman olarak da geliştirilmesine katkı sağlayacaktır. Bu bağlamda hem örgütler ve yöneticiler hem de çalışanlar amaçlarına ulaşmak için sosyal sermayelerini geliştirmek için çaba göstermelidir.

Anahtar Kelimeler: Sosyal Sermaye, Çalışan Performansı, İş Performansı, Kamu Yönetimi

The Effect of Social Capital on Employees' Job Performance

Abstract: Social capital constitutes the contextual infrastructure of human capital. Employees with social capital may be more advantageous in terms of networking, collaboration, sharing information, and accessing resources. The development and appropriate use of social capital contributes to the achievement of employees' and organizations' goals. In this context, the purpose of the research is to determine the effect of social capital on employees' job performance. The quantitative research method was used in the research. The universe of the research consists of personnel working in a public institution. The convenience sampling method was used in the study and 169 participants voluntarily participated in the study. Research data were collected through a questionnaire. Survey form; consists of the descriptive information of the participants, social capital scale (Subramaniam & Youndt, 2005), and employee work performance scale (Na-Nan et al., 2018). SPSS V.22.0 program was used in the analysis of the research data. Analyzes, respectively; frequency analysis related to demographic features, Cronbach's Alpha coefficient to determine the reliability of the scales, correlation analysis of the relationship between variables, and simple linear regression analysis to determine the effect of social capital on job performance and sub-dimensions. In the study, it was concluded that social capital has a statistically significant and positive effect on the work performance of employees in terms of quality, amount, and time. Improving the social capital of the employees will also contribute to the improvement of work performance in terms of quality, quantity, and time. In this context, both organizations, managers, and employees should strive to improve their social capital in order to achieve their goals.

Key Words: Social Capital, Employee Performance, Job Performance, Public Administration

1. GİRİŞ

İnsanoğlunun geçirdiği her büyük teknolojik ilerleme sosyal, ekonomik, siyasal, kültürel vb. tüm alanlarda hâkim yapı ve paradigmaları dönüştürmüştür. Bu bağlamda insanoğlunun avcı-toplayıcı, tarım ve sanayi toplumu aşamalarından geçerek içinde bulunduğumuz bilgi toplumu aşamasına geldiği kabul edilmektedir. Bu toplumun temel ayırıcı özellikleri bilginin bir meta haline gelmesi ve klasik üretim faktörlerinin -emek, sermaye, doğal kaynaklar ve girişimci- yanında beşinci faktör olarak görülmesidir

(Arıkboğa, 2003: 70; Bassi ve Van Buren, 1999: 415). Tarihsel olarak, klasik sermaye teorileri sermayenin somut olduğunu varsaymıştır. Neo-sermaye olarak adlandırılan günümüz sermayesi ise kapsamını bilgi yönetimi ve bilgi teknolojisi, yapılar, ağlara gömülü sosyal ilişkiler ve kaynaklar, bilgi akışı ile çalışanların kendi yetenekleri, becerileri ve bilgileri olarak genişletmiştir (Storberg, 2002: 469).

Bilgi toplumunun ekonomisi ve örgüt yapısında temel kaynaklar sadece maddi ve finansal olanlar değildir. Aynı zamanda maddi olmayan varlıklar da örgütlerin temel kaynakları, sermayeleri olarak kabul edilmektedir. Örgütler varlıklarının devamı için kıymetli, zor elde edilen, kullanmakla tükenmeyen ve olmazsa olmaz maddi olmayan kaynaklara sahip olmak zorundadır. Bir çatı kavram olarak “entelektüel sermaye” ile ifade edilen bu varlıkların yapısal sermaye, beşerî sermaye, sosyal sermaye, müşteri sermayesi gibi farklı sermaye türlerinden oluştuğu kabul edilmektedir (Gupta vd., 2019: 78; Brooking, 1996: 12; Stewart, 1997: xıı).

Sosyal sermaye, çeşitli biçimleri ve bağlarıyla maddi olmayan sermaye türlerinin en göze çarpan biçimlerinden birisidir (Lin, 2004: 24). Sosyal ilişkilerin potansiyel üretkenliği ve kişisel kaynaklara yapabileceği katkı, sosyal ve ekonomik açıdan değerli kabul edilmektedir. Sosyal ağlara gömülü olan kaynakların ortaya çıkarılıp kullanılması hem bireylere hem de toplumlara fayda sağlamaktadır. Bu bağlamda sosyal sermaye “sosyal ağ üyelerinin potansiyel olarak sahip olduğu ve bu ağ üyeleriyle sosyal ilişkiler içerisinde karşılıklı yatırımların bir sonucu olarak, birey veya bireylerin kullanımına sunulabilecek olası her türlü kaynağı” ifade etmektedir (Van Der Gaag ve Webber, 2008: 29).

Sosyal sermayenin ana fikri, sosyal ağların değerli bir varlık olduğudur. Ağlar insanların karşılıklı avantaj sağlamak için birbirleriyle -sadece doğrudan tanıdıkları insanlarla değil- iş birliği yapmalarını sağlamaktadır (Field, 2008: 14). Sosyal ilişkiler yalnızca sosyal yapıların bileşenleri olarak görülmemekte, aynı zamanda bireyler için kaynak olarak da görülmektedir (Coleman, 1994: 300). Bu bağlamda sosyal sermaye bireyler için olduğu kadar örgütler için de üretken bir girdi olarak da kabul edilmekte ve diğer sermaye türleri üzerinde olumlu etkide bulunduğu düşünülmektedir (Schmid ve Robison, 1995: 64). Sosyal sermaye en fazla beşerî sermaye ile ilişkilendirilmektedir. Sosyal sermaye ve beşerî sermaye birbirlerinin tamamlayıcıları olarak görülmektedir (Coleman, 1994; Field, 2008; Flap, 2002). Çünkü bireylerin sosyal sermayesi diğer kaynakların getirisini de artırmaktadır. Sosyal sermayenin üretkenlik özelliği, ağ tarafından sağlanan diğer kaynaklardan, özellikle beşerî sermaye ve mali sermayeden kâr elde etme fırsatları yaratmaktadır (Flap, 2002:36).

Beşerî sermaye örgütlerde yeri zor dolan ve asıl katma değeri yaratan sermayedir. Bilgi ekonomisinde örgütlerin inovasyon, yenilik ve rekabet avantajının kaynağıdır. Örgüt çalışanın bilgi, beceri, yetenek, deneyim, kültür ve yaratıcılığı gibi ona ait bileşenlerden oluşmaktadır. Günümüz örgütleri için en başta gelen zorluklardan birisi beşerî sermayeyi elde etmek ve tutmaktır. Çünkü örgütlerin gücünün ve performansının beşerî sermayenin gücü ve performansı ile doğru orantılı olduğu kabul edilmektedir (Becker, 1993: 16; Oliver, 2001: 8; Stewart, 1997: 99). Bilgi çağında örgütlerin hızla değişen iç ve dış çevreye uyum sağlayabilmeleri, beşerî sermayelerinin performansına bağlı hale gelmiştir (Daryoush vd., 2013: 100-101). Bu bağlamda özellikle son dönemde çalışanların iş performansı örgütler için hayati bir konu haline almıştır. Örgütler ister özel sektörde isterse kamu sektöründe yer alsınlar, çalışanlarının performanslarını artırmak için yoğun çaba harcamaktadır. Bu araştırmada da sosyal sermayenin çalışanların iş performansı üzerindeki etkileri ortaya konulmaya çalışılmıştır.

2. KAVRAMSAL ÇERÇEVE

2.1. Sosyal Sermaye

Sermaye, piyasa kaynaklı bir kavramdır. Lin (2004: 24), sermayeyi “beklenen getirileri olan kaynak yatırımı” olarak tanımlamaktadır. Sermaye kaynakların bir süreç içerisinde iki kez işlenmesiyle ortaya çıkmaktadır. İlk aşama kaynakların bir yatırım olarak üretilmesi ya da değiştirilmesi, ikinci aşama ise üretilen ya da değiştirilen bu kaynakların kâr amacıyla pazara sürülmesidir. Sermayenin merkezinde yer alan kaynak kavramı somut (para, toprak makine) veya soyut (insan, yetenek, uzmanlık, ağlar) olabilmektedir. Sosyal sermaye de soyut kaynakların birikimi, kullanımı ve dağıtımına ilişkin ortaya konulan sermaye yaklaşımlarının başında gelmektedir (Storberg, 2002: 469).

Sosyal sermaye literatürde farklı bakış açıları ile ele alınıp tanımlanmıştır. Bourdieu (1977: 503), sosyal sermayeyi daha çok toplumsal sınıf ya da statü açısından ele almış ve “sosyal açıdan önemli konumlardaki müşterileri çekmek için vazgeçilmez olan ve örneğin para birimi gibi hizmet edebilen bir kaynak” olarak tarif etmiştir. İleriki dönemlerde bu tanımını geliştirmiş ve sosyal sermayeyi “az çok kurumsallaşmış karşılıklı tanıma ve onaylama ilişkilerinden oluşan, kalıcı bir ağa sahip olması nedeniyle bir bireye veya bir gruba tahakkuk eden fiili veya sanal kaynakların toplamı” olarak tanımlamıştır (Bourdieu ve Wacquant, 1992: 119). Benzer bir yaklaşım Loury (1987) tarafından da dile getirilmiştir. Loury (1987: 254), sosyal sermayeyi toplumsal eşitsizliklerin sebeplerinden biri olarak ele almış ve “bireylere ebeveynlerinden geçen ve onların toplumsal statülerinden kaynaklanan, bireylerin daha sonraki yaşam üretkenliklerine etki eden tüm avantajlar” olarak ifade etmiştir.

Sosyal sermayeye bir diğer farklı yaklaşım, onu bireysel ve toplumsal bir varlık olarak gören yaklaşımdır. Bu bağlamda ilk değinilmesi gereken kişi Coleman (1988)’dir. Coleman’a göre sosyal sermaye işlevi ile tanımlanmalıdır. Sosyal sermaye tek bir varlıktan değil, iki temel unsuru olan çeşitli ve farklı varlıklardan oluşmaktadır. Sosyal sermayenin temel unsurları üretken olması ve yokluğunda mümkün olmayan belirli amaçlara ulaşılmasını mümkün kılmasıdır. Bu bağlamda sosyal sermaye “sosyal yapının birtakım yönlerinden oluşan ve bu yapı içerisindeki bireysel ve kurumsal aktörlerin eylemlerini kolaylaştıran kaynaklardır (Coleman, 1988: 98).” Putnam, (1993: 35) sosyal sermayeyi “karşılıklı yarar için koordinasyonu ve iş birliğini kolaylaştıran ağlar, normlar ve güven gibi sosyal organizasyonun özellikleri” olarak ele almış ve daha toplumsal bir bakış açısı getirmiştir.

Lin (2004) ise sosyal sermayeye ilişkin yapısal-bilişsel bir yaklaşım geliştirmiştir. Lin (2004: 4) sosyal sermayeyi “faaliyetler için aktörler tarafından erişilen ve kullanılan sosyal ağlara gömülü kaynaklar” olarak tanımlamıştır. Bu tanımlamada iki temel nokta bulunmaktadır. İlki sosyal sermaye bireylerden ziyade sosyal ilişkilerde gömülü kaynakları temsil etmektedir. İkincisi ise bu tür kaynaklara erişim ve bu kaynakların kullanımı bireylerin becerisine bağlıdır (Lin, 2004). Bir başka ifadeyle birey sosyal ağlar içerisinde kendisine yararlı kaynakların bulunduğu ve bu kaynakları kullanmanın kendisine fayda sağlayacağını farkında olmalıdır.

Gerek sosyal sermayeye ilişkin tanımlar gerekse geniş literatür dikkate alındığında bu sermaye türünün birtakım özelliklerini ortaya koymak mümkündür (Bourdieu, 1977; Coleman, 1988; Coleman, 1994; Field, 2008; Flap, 2002; Lin, 2004; Putnam, 1993; Storberg, 2002; Seibert vd., 2001; Sandefur ve Laumann, 1998; Schmid ve Robison, 1995; Van Der Gaag ve Webber, 2008):

- Sosyal sermaye bireyler ve örgütler için maddi olmayan varlıkların başında gelmektedir.
- Sosyal sermaye sosyal ağlar içerisindeki kaynaklardan oluşmaktadır.
- Sosyal sermaye sosyal yapının bir ürünüdür.
- Sosyal sermaye bir kamu malıdır. Ondan yararlananların mülkü değildir.
- Farklı hedeflere ulaşmak için farklı sosyal sermaye türlerinden yararlanılabilir.
- Sosyal sermaye sosyal ağlar içerisindeki insanların karşılıklı ilişkileri sonucu ortaya çıkmaktadır.
- Sosyal sermaye üretken bir varlıktır.
- Sosyal sermaye yenilenmediği takdirde zaman içerisinde değer kaybeden bir sermaye türüdür.
- Sosyal sermaye fiziki sermaye, beşerî sermaye gibi diğer sermaye türleri ile yakından ilişkilidir ve onların getirisini artırmaktadır.
- Sosyal sermayenin büyüklüğü, zenginliği ve kalitesi bireylerin dahil oldukları ağlar ve iletişim kurdukları diğer bireylerin nitelik ve niceliğiyle doğru orantılıdır.
- Sosyal sermaye birey için doğuştan kazanılan bir avantaj olabileceği gibi sonradan da elde edilebilen bir varlık türüdür.
- Sosyal ağlarda paylaşılan ortak değerler, hedefler ve amaçlar sosyal sermayenin merkezinde yer almaktadır.
- Sosyal sermayeden yararlanmak bilinçli bir tercih gerektirmektedir.
- Sosyal sermaye sadece bireyler için değil örgütler için de önemli bir sermaye türüdür.
- Sosyal sermaye, statü ve refah için üretim işlevinin bir parçasıdır.
- Sosyal sermaye gelecekteki faydalara yönelik bir yatırımdır.
- Sosyal sermayeye getirilen en büyük eleştiri onun eşitsiz dağılımıdır.

Flap (2002: 34)'a göre sosyal sermaye bireylere amaçlarına ulaşabilmek için daha iyi donanmalarını sağlayacak sosyal kaynakları sağlamaktadır ve bunun bir sonucu olarak bireyler amaçlarını gerçekleştirilmede araçsal değerine göre sosyal sermayeye yatırım yapmaktadır. Çünkü çıkarların elde edilmesi bencillikten geçmemektedir. Bireylerin hedef ve amaçlara ulaşmada bağımsız hareket etmeleri mümkün değildir (Coleman, 1994: 301). İnsanlar birbirleriyle bağlantı kurarak ve bunu zaman içinde devam ettirerek, kendi başlarına başaramadıkları ya da ancak büyük güçlkle başarabilecekleri şeyleri elde etmek için birlikte çalışmaları gerekmektedir. Bu nedenle bireyler çeşitli ağlar üzerinden iletişime geçmekte ve ağlardaki diğer üyelerle ortak değerleri paylaşmaktadır. Bu ağlar bireyler için bir kaynak oluşturdukları ölçüde sosyal sermaye de ortaya çıkmaktadır (Field, 2008: 1).

Sosyal sermaye karşılıklı fayda için koordinasyonu ve iş birliğini kolaylaştıran ağlar, normlar ve güven gibi sosyal organizasyonun bileşenlerini içermektedir. Dolayısıyla fiziksel ve beşerî sermayeye yapılan yatırımların getirisini artırmaktadır (Putnam, 1993: 35). Bunun sonucu olarak sosyal sermayenin örgütsel performansa olumlu katkıda bulunduğu kabul edilmektedir. Özellikle son dönemde iş yeniliği ve bilgi alışverişini sağlamada ağ yapılarının önemi yadsınamaz bir gerçek olarak ortaya çıkmıştır (Field, 2008: 60). Sosyal sermaye, maddi ve manevi kaynaklara erişim sağladığı için örgüt üyeleri için önemlidir. Kuruluş, aktörlerinin sosyal sermayesinden yararlanır çünkü sosyal ağlar bilgi akışını sağlar, eylemleri koordine eder ve iş birliğini kolaylaştırır (Matiaske, 2013: ix).

Bilgi ve kaynaklara daha fazla erişim ise çalışanları güçlendirmekte daha yüksek motivasyon ve bireysel performansa, bir başka ifade ile iş performansına katkıda bulunmaktadır. Ayrıca bireyin organizasyonel itibarının artmasına ve organizasyonda daha güçlü veya etkili olarak algılanmasına yardımcı olmaktadır. Bu bağlamda bireyin sosyal ağlarının ve bu ağlardaki kaynakların gücü hem örgütün geleceği hem de bireyin kariyeri ile doğrudan ilişkilidir (Seibert vd., 2001: 224).

2.2. İş Performansı

Çağdaş örgütler bilgi temelli bir yapıya sahiptir. Dolayısıyla örgütler çalışanlarının bilgi ve becerilerini sürekli olarak güncellemek durumundadır. Sürekli ve hızlı değişen çevreye uyum sağlamak için çalışanlara yatırım yapmak kurumsal gelişimde önemli bir sorun haline gelmiştir. (Daryoush vd., 2013: 100-101). Bu noktada çalışanların iş performansı özellikle endüstriyel ve örgütsel psikolojinin temel konularından birisi haline almıştır. Bireysel iş performansı, ekip ve örgütsel performansın temelini oluşturmakta ve bu nedenle çoğu örgütsel müdahale, bireysel iş performansını etkilemeyi amaçlamaktadır (Harari ve Viswesvaran, 2018: 55). Örgütler personel seçerken daha iyi performans göstermesi muhtemel olanlara yönelmekte, birçok eğitim programı iş performansını geliştirmek için tasarlanmakta ve personelin değerlendirilmesi için performans yönetim sistemleri kurulmaktadır (Viswesvaran ve Ones, 2000: 216).

Performans, bireyin özel görevinin veya iş hedeflerinin doğrudan sonucudur (Locke, 1970: 484). Bu bağlamda iş performansı “çalışanların dahil olduğu veya ortaya çıkardığı, kurumsal hedeflerle bağlantılı olan ve bunlara katkıda bulunan ölçeklenebilir eylemleri, davranışları ve sonuçları” ifade etmektedir (Viswesvaran ve Ones, 2000: 216). Motowidlo ve Kell (2013: 82), ise iş performansını “bir bireyin standart bir süre boyunca yürüttüğü ayrı davranışsal bölümlerin, bireyin organizasyonu için toplam beklenen değeri” olarak tanımlamıştır. Onlara göre performans bir davranışın özelliğidir ve bu davranışın en önemli özelliği örgüt için beklenen bir değer olmasıdır.

Örgütsel bakış açısından performansın üç temel özelliğinin bulunduğu ileri sürülmektedir: İlki performans sonuçlardan ziyade eylem ya da davranışla ilgilidir. İkincisi bu davranış periyodiktir yani süreklilik arz etmektedir. Üçüncü ve son olarak da performans bağlama dayalıdır. Bir başka ifade ile görevlerin gerçekleştirildiği iş yeri ortamına uygun davranışlardan kaynaklanmaktadır (Campbell, 2012: 163; Daryoush vd., 2013:100).

Campbell (2012: 162) iş performansının örgüt ve birey açısından farklı anlamlara geldiğini belirtmiştir. Ona göre örgüt açısından iş performansı bireylerin gönüllü iş miktarı, ekip performansı, ekip canlılığı, kurumsal birim etkinliği ve bireylerin, ekiplerin ve örgüt birimlerinin verimliliğinden oluşmaktadır. Bireysel bakış açısından iş performansı ise kariyer (mesleki başarı), çalışmanın sonuçlarından memnuniyet, adil muamele ve genel sağlık ve refah unsurları anlamına gelmektedir. Campbell (2012),

ayrıca iş performansının altında yatan, yani iş performansını belirleyen sekiz faktör saymaktadır. Bunlar işe özgü teknik görev yeterliliği, işe özel olmayan teknik görev yeterliliği, yazılı ve sözlü iletişim görev yeterliliği, çaba göstermek, kişisel disiplinin sürdürülmesi (verimsiz çalışma davranışı), meslektaş ve ekip performansını kolaylaştırmak, denetim / liderlik ve yönetim / idaredir (Campbell, 2012: 167-169).

Örgütlerde çalışanların iş performansı farklı boyutlar/türlere altında ele alınmaktadır. Ancak en temel boyutlar görev performansı ve bağlamsal performanstır. Görev performansı, bir kişinin örgüt performansına katkısını kapsamaktadır. Resmi ödül sisteminin parçası olan eylemleri ifade etmekte ve örgütteki iş tanımlarında belirtilen gereksinimleri vurgulamaktadır. Bununla birlikte örgüt ve çalışma hayatında sadece resmi iş gerekliliklerine uymak yeterli olmamakta çoğu zaman resmi olanın ötesine geçmek gerekmektedir. Bağlamsal performans resmi olmayan boyutu oluşturmaktadır. Bağlamsal performans, örgütsel performansa doğrudan katkı sağlamayan ancak örgütsel, sosyal ve psikolojik ortamı destekleyen davranışlardan oluşmaktadır. Görev performansı ve bağlamsal performans arasında üç temel fark bulunmaktadır: Öncelikle görev performansı işe özelken, bağlamsal performans davranışı örgütteki iş dışında her türden eylemde görülebilmektedir. İkincisi görev performansı esas olarak yetenek tarafından belirlenirken, bağlamsal performans temelde motivasyon ve kişilik tarafından belirlenmektedir. Üçüncüsü ise görev performansı rol içi bir davranıştır dolayısıyla resmi iş tanımının bir parçasıdır. Bağlamsal performans ise ekstra rol davranışıdır yani isteğe bağlıdır. Bu nedenle genellikle resmi ödül sistemleri tarafından ödüllendirilmemekte veya yönetim tarafından doğrudan veya dolaylı olarak değerlendirilmemektedir (Sonnentag vd., 2008: 428-429).

Bilgi ekonomisinin bir sonucu olarak örgütlerde yaratıcılık ve yenilik performansın kritik belirleyicileri haline gelmiştir. Özellikle yaratıcı ve yenilikçi beşerî sermayenin örgütlere katkısı son dönemde iş performansı içerisine bu iki boyutun eklenmesine neden olmuştur. Bu bağlamda çalışanların fikir üretme yeterliliği ve gücüne atıf yapan yaratıcı performans ve üretilen fikri uygulamaya aktarmadaki yeterliliği ifade eden yenilikçi performans olarak iki performans boyutundan daha söz edilmektedir (Harari ve Viswesvaran, 2018: 56).

Örgütlerde performanstaki bireysel farklılıklar iş performansı çalışmalarının önemli bir kısmını oluşturmaktadır. Campbell, (2012: 170-172) performanstaki farklılıkların doğrudan ve dolaylı belirleyicilerin bir fonksiyonu olduğunu vurgulamaktadır. Doğrudan belirleyiciler mevcut işle ilgili bilgi ve becerilerdir. Örneğin belirli bir iş ile ilgili olarak bilgi ve yeteneğe sahip olmak o işi yapmayı seçme ve buna yatırım yapma olasılığını artırabilmektedir. Dolaylı belirleyiciler, doğrudan belirleyicilerde bireysel farklılıklar üreten her şeydir. Bunun içerisinde IQ, kişilik, eğitim, hedef belirleme, ödül tercihleri, öz yeterlik gibi unsurlar yer almaktadır. Performansın ölçeğini yalnızca doğrudan belirleyicileri etkileyerek değiştirebilirler.

Performans, örgütün hedeflerini gerçekleştirilmesinde fark yaratabilecek davranışları ifade etmektedir. Performans alanı, örgütsel hedef başarısı üzerinde olumlu ya da olumsuz etkileri olabilecek davranışları kapsamaktadır. Bu nedenle, herhangi bir çalışan için performans alanındaki davranışlar örgütsel hedefin başarılmasına yardımcı olabilecek davranışlar ya da bu hedefi engelleyebilecek davranışlar arasında geniş bir yelpazeyi kapsamaktadır (Motowidlo ve Kell, 2013: 84). Dolayısıyla bireylerin iş performansına etki eden her türlü unsur örgütler için hayati önem arz etmektedir. Sosyal sermaye de bu bağlamda üzerinde durulması gereken başta gelen unsurlardan birisidir.

3. YÖNTEM

Bu araştırmanın amacı, sosyal sermayenin çalışanların iş performansı üzerindeki etkisinin tespit edilmesidir. Araştırmada nicel araştırma yöntemi kullanılmıştır. Araştırma verileri anket formu aracılığıyla toplanmıştır. Anket formu katılımcıları tanımlayıcı bilgiler, sosyal sermaye ölçeği ve çalışan iş performansı ölçeklerinde oluşmaktadır. Katılımcıların demografik özelliklerine yönelik cinsiyet, yaş, medeni durum ve eğitim durumu açık uçlu olarak sorulmuştur. Çalışan iş performansı ölçeği, Na-Nan ve diğerleri (2018) tarafından geliştirilmiştir. Ölçekte yer alan ilk beş ifade iş kalitesi boyutunu, sonraki 4 ifade iş miktarı boyutunu ve en son 4 ifade ise iş zamanı boyutunu ölçmektedir. Ölçek, üç faktör altında toplam 13 ifadeden oluşmaktadır. Sosyal sermaye ölçeği, Subramaniam ve Youndt (2005) tarafından geliştirilen entelektüel sermaye ölçeğindeki sosyal sermaye ile ilgili 5 ifade kullanılmıştır. Ölçek Özdemir

ve Taşçı (2007) tarafından Türk kültürüne uyarlanmıştır. Araştırmada kullanılan ölçekler 5’li Likert (1= kesinlikle katılmıyorum ile 5= kesinlikle katılıyorum) tipindedir.

Araştırmanın evrenini bir kamu kurumunda görevli personel oluşturmaktadır. Araştırmada kolayda örneklem yöntemi kullanılmış ve gönüllü olarak 174 katılımcı araştırmaya katılmıştır. Anket formları üzerinde yapılan incelemede 5 anket formu analiz dışı bırakılmış olup 169 katılımcıdan elde edilen veriler analiz edilmiştir. Araştırma verilerinin analizinde SPSS V.22.0 programı kullanılmıştır. Analizler sırasıyla; demografik özelliklerine ilişkin frekans analizi, ölçeklerin güvenilirliğini belirlemek için Cronbach alpha ($C\alpha$) katsayısı, değişkenler arasındaki ilişki korelasyon analizi ve sosyal sermayenin iş performansı ve alt boyutları üzerine olan etkisini belirlemek için basit doğrusal regresyon analizi yapılmıştır. Araştırmada kullanılan ölçeklerin güvenilirliği için $C\alpha > 0.70$ kabul edilmiştir (Nunnally & Bernstein, 1994). Verilerin normallik varsayımında Skewness ve Kurtosis değerleri (+1,500 ve -1,500) dikkate alınmıştır (Tabachnick ve Fidell, 2013). Bulguların değerlendirilmesinde $< 0,05$ anlamlılık düzeyi ve % 95 güven aralığı kabul edilmiştir.

4. BULGULAR

4.1. Katılımcıların Demografik Özellikleri

Araştırmanın katılımcılarına ilişkin tanımlayıcı istatistikler Tablo 1’ de özet halinde verilmiştir. Araştırma katılımcılarının %95,9’u kadın, %74,6’sı evlidir. Araştırmaya katılanların yaşı 21 ile 59 arasında değişmekle birlikte ortalama yaşı $37,71 \pm 6,44$ yıldır. Katılımcıların yarıdan fazlası (%52,7) 30-39 yaş aralığındadır. Katılımcıların %59,2’si lisans mezunudur.

Tablo 1: Katılımcıların Tanımlayıcı İstatistikleri

Değişken	Frekans	%	Değişken	Frekans	%
Cinsiyet			Medeni Durum		
Kadın	162	95,9	Evli	126	74,6
Erkek	7	4,1	Bekâr	43	25,4
Yaş (min=21; max=59; ort=37,71 ± 6,44)			Eğitim Durumu		
20-29	19	11,2	Lise	34	20,1
30-39	89	52,7	Ön lisans	25	14,8
40-49	49	29,0	Lisans	100	59,2
50 ve üzeri	12	7,1	Lisansüstü	10	5,9
Toplam	169	100	Toplam	169	100

4.2. Ölçeklere İlişkin Tanımlayıcı İstatistikler ve Güvenilirlik Analizleri

Ölçeklerin güvenilirlikleri $C\alpha$ Katsayısı, normal dağılım ise skewness ve kurtosis değerleri kullanılarak incelenmiştir. Araştırmanın değişkenleri ile ilgili min-max, ortalama, standart sapma, skewness, kurtosis ve $C\alpha$ değerleri Tablo 2’de sunulmuştur.

Tablo 2. Ölçeklere İlişkin Tanımlayıcı İstatistikler (n=169)

Ölçekler/Boyutlar	İfade Sayısı	Min-max	Mean	SD	Skewness	Kurtosis	$C\alpha$
Sosyal Sermaye	5	1-5	3,63	,93	-,827	,239	,924
İş Performansı	13	1,38-5	3,57	,84	-,499	-,228	,941
İş Kalitesi	5	1,20-5	3,63	,84	-,480	-,109	,844
İş Miktarı	4	1-5	3,43	,93	-,362	-,174	,866
İş Zamanı	4	1-5	3,64	,97	-,595	-,430	,890

Katılımcıların araştırma değişkenlerine verdikleri puanların ortalaması; sosyal sermaye $3,63 \pm 0,93$, iş performansı genel ortalaması $3,57 \pm 0,84$ ve iş performansı alt boyutlarından iş kalitesi $3,63 \pm 0,84$, iş miktarı $3,43 \pm 0,93$, iş zamanı $3,64 \pm 0,97$ 'dir. Ortalamaların değerlendirilmesinde beşli Likert tipli ölçeklere yönelik kesim noktaları ($4/5=0,80$) kullanılmıştır. Buna göre ortalamalar 1,00-1,79 "çok düşük", 1,80-2,59 "düşük", 2,60-3,39 "orta", 3,40-4,19 "yüksek" ve 4,20-5,00 "çok yüksek" olmak üzere beş düzeyde değerlendirilmiştir. Buna göre katılımcıların sosyal sermaye ve iş performansı düzeylerinin "yüksek" olduğu söylenebilir. Araştırmanın değişkenlerinin Çarpıklık (Skewness) değerleri -0,877 ile -0,362 ve Basıklık (Kurtosis) değerleri -0,430 ile 0,239 aralığındadır. Bu değerler ile araştırma verilerinin normal dağılım gösterdiği kabul edilmiştir. Araştırma değişkenlerinin $C\alpha$ katsayıları; sosyal sermaye 0,924, iş performansı 0,941 ve alt boyutlarından iş kalitesi 0,844, iş miktarı 0,866, iş zamanı 0,890'dır. Araştırmada kullanılan ölçekler yüksek güvenilirlik düzeyine sahiptir ($C\alpha > 0,70$).

4.3. Korelasyon Analizi

Tablo 3: Sosyal Sermaye ile İş Performansı Değişkenlerine İlişkin Korelasyon Analizi

	Değişkenler	1	2	3	4	5
1	Sosyal Sermaye	1				
2	İş Performansı	,756**	1			
3	İş Kalitesi	,745**	,925**	1		
4	İş Miktarı	,643**	,934**	,805**	1	
5	İş Zamanı	,705**	,915**	,748**	,797**	1

**p<0,01, *p<0,05

Sosyal sermaye ile iş performansı ve alt boyutları arasındaki ilişki korelasyon analizi ile incelenmiştir. Korelasyon analizinin sonucuna göre; sosyal sermaye ile iş performansı ve alt boyutları arasında pozitif yönde anlamlı ilişkiler bulunmuştur (Tablo 3).

4.4. Regresyon Analizi

Sosyal sermayenin iş performansı ve alt boyutları üzerine olan etkisini belirlemek için basit doğrusal regresyon analizi yapılmıştır. Analiz sonuçları Tablo 4'te verilmiştir.

Tablo 4: Regresyon Analizleri

Bağımsız Değişken	Bağımlı Değişkenler			
	İş Performansı	İş Kalitesi	İş Miktarı	İş Zamanı
Sosyal Sermaye				
Constant	1,091	1,191	1,096	,962
β	,684	,672	,644	,738
P	,000	,000	,000	,000
Model F	223,444	208,788	117,622	164,584
R ²	,572	,556	,413	,496

Sosyal sermayenin iş performansı üzerine etkisine yönelik kurulan basit doğrusal regresyon modeli, istatistiksel olarak anlamlı bulunmuştur ($F=223,444$, $p<0,01$). Regresyon analizine göre, sosyal sermayenin iş performansı üzerinde pozitif yönde anlamlı bir etkisi bulunmaktadır ($\beta=0,684$, $p<0,01$). Sosyal sermayenin +1 birim artmasının iş performansını 0,684 birim artıracığı anlaşılmaktadır. Bağımlı değişken olan iş performansının açıklanmasında sosyal sermayenin önemli bir faktör olduğu tespit edilmiştir. Sosyal sermaye, iş performansındaki değişimin %57,2'sini ($R^2= 0,572$) açıklayabilmektedir.

Sosyal sermayenin iş kalitesi üzerine etkisine yönelik kurulan basit doğrusal regresyon modeli, istatistiksel olarak anlamlı bulunmuştur ($F=208,788$, $p<0,01$). Regresyon analizine göre, sosyal sermayenin iş kalitesi üzerinde pozitif yönde anlamlı bir etkisi bulunmaktadır ($\beta=0,672$, $p<0,01$). Sosyal sermayenin +1 birim artmasının iş kalitesini 0,672 birim artıracığı anlaşılmaktadır. Bağımlı değişken olan

iş kalitesinin açıklanmasında sosyal sermayenin önemli bir faktör olduğu tespit edilmiştir. Sosyal sermaye, iş kalitesindeki değişimin %55,6'sını ($R^2= 0,556$) açıklayabilmektedir.

Sosyal sermayenin iş miktarı üzerine etkisine yönelik kurulan basit doğrusal regresyon modeli, istatistiksel olarak anlamlı bulunmuştur ($F=117,622$, $p<0.01$). Regresyon analizine göre, sosyal sermayenin iş miktarı üzerinde pozitif yönde anlamlı bir etkisi bulunmaktadır ($\beta=0,644$, $p<0.01$). Sosyal sermayenin +1 birim artmasının iş miktarını 0,644 birim artıracığı anlaşılmaktadır. Bağımlı değişken olan iş miktarının açıklanmasında sosyal sermayenin önemli bir faktör olduğu tespit edilmiştir. Sosyal sermaye, iş miktarındaki değişimin %41,3'ünü ($R^2= 0,413$) açıklayabilmektedir.

Sosyal sermayenin iş zamanı üzerine etkisine yönelik kurulan basit doğrusal regresyon modeli, istatistiksel olarak anlamlı bulunmuştur ($F=164,584$, $p<0.01$). Regresyon analizine göre, sosyal sermayenin iş zamanı üzerinde pozitif yönde anlamlı bir etkisi bulunmaktadır ($\beta=0,738$, $p<0.01$). Sosyal sermayenin +1 birim artmasının iş zamanını 0,738 birim artıracığı anlaşılmaktadır. Bağımlı değişken olan iş zamanının açıklanmasında sosyal sermayenin önemli bir faktör olduğu tespit edilmiştir. Sosyal sermaye, iş zamanındaki değişimin %49,6'sını ($R^2= 0,496$) açıklayabilmektedir.

5. TARTIŞMA, SONUÇ VE ÖNERİLER

Günümüzde sosyal sermayenin, bireylerin iş hayatlarında başarılı olabilmelerine önemli katkılar yaptığı ve bu nedenle sosyal ve ekonomik olarak değerli olduğu kabul edilmektedir. Sosyal sermaye aynı zamanda beşerî sermayenin bağlamsal altyapısını da oluşturmaktadır. Sosyal sermayeye sahip olan bireyler ağ kurma, iş birliği yapma ve kaynaklara erişme açısından daha avantajlı hale gelmektedirler. Sosyal sermayenin sağladığı bu avantajlar, çalışanların bireysel ve örgütsel amaçlara ulaşmasında katkıda bulunmaktadır.

Bu araştırmada sosyal sermayenin çalışanların iş performansı üzerindeki etkisinin tespit edilmesi amaçlanmıştır. Çalışanların iş performansı; kalite, miktar ve zaman olarak değerlendirilmiştir. Araştırmada sosyal sermayenin çalışanların iş performansında kalite, miktar ve zaman açısından istatistiksel olarak anlamlı ve pozitif yönde bir etkisinin olduğu sonucuna ulaşılmıştır. Araştırmanın bu bulgusu, literatürdeki farklı araştırma sonuçlarıyla benzerdir. Moran (2005) tarafından yapılan araştırmada yöneticilerin sosyal sermayelerinin ve güvene dayalı ilişkilerinin yönetsel görev performansını olumlu olarak etkilediği tespit edilmiştir. Leana ve Pil (2006) tarafından öğretmenler üzerinde yapılan araştırmada hem iç sosyal sermayenin (öğretmenler arasındaki ilişkiler) hem de dış sosyal sermayenin (müdür ve dış paydaşlar arasındaki ilişkiler) örgütsel performansı ve öğrenci başarısını etkilediği sonucuna ulaşılmıştır. Girişimcilerin sahip olduğu sosyal sermaye girişimin performansını, hayatta kalma, kâr ve yaratılan istihdam ölçütleri açısından olumlu bir şekilde etkilemektedir. Diğer bir deyişle girişimcilerin sosyal sermayesi işletmelerin hayatta kalma süresini, elde edilen kârı ve istihdam edilen personel sayısını artırmaktadır (Bosma vd., 2004). Farklı olarak Felício ve diğerleri (2014) tarafından yapılan araştırmada, sosyal sermayenin başarının elde edilmesi için gerekli koşulların oluşturulmasında önemli olduğunu ancak örgütsel performans üzerinde doğrudan bir etkisinin olmadığı tespit edilmiştir. Sosyal sermayeyi üç boyutta ele alan araştırmalarda ise sosyal sermayenin bilişsel ve ilişkisel boyutlarının performansla pozitif yönde ilişkili olduğunu, ancak sosyal sermayenin yapısal boyutunun performansla ilgisi olmadığını göstermektedir (Li vd., 2014; Andrews, 2010; Batjargal, 2003). Araştırmada çalışanların sosyal sermayelerinin geliştirilmesinin aynı zamanda iş performanslarının kalite, miktar ve zaman olarak da geliştirilmesine katkı sağlayacağı sonucuna ulaşılmıştır. Sosyal sermayenin geliştirilmesi ve doğru kullanımı çalışanların ve örgütlerin amaçlarına ulaşmasına katkı sağlamaktadır. Örgütsel bağlamda, güvene dayalı ilişki, bilgi paylaşımı ve yardımlaşmayı destekleyen örgütsel kültür ve iklimin oluşturulması sosyal sermayenin gelişmesini ve katkısını artırabilir. Bu bağlamda hem örgütler ve yöneticiler hem de çalışanlar sosyal sermayelerini geliştirmek için çaba göstermelidir.

UFRS Kapsamında Bitcoin Muhasebesinin Değerlendirilmesi

Dr.Öğr. Üyesi İlknur ESKİN

¹Trakya Üniversitesi, Uzunköprü UBYO, Muhasebe ve Finans Yönetimi, ilknureskin@trakya.edu.tr

ORCID ID: 0000-0003-2306-7315

Özet: Blok zinciri teknolojisi iş modellerinde önemli değişimlere ve dönüşümlere neden olma potansiyeline sahip olmasından dolayı 21. yüzyılın en önemli teknolojik yeniliklerinden biri olarak kabul edilmektedir. Blok zinciri teknolojisi finans, sağlık, gıda ve enerji sektörlerinde geniş uygulama alanlarına sahip olmakla birlikte, yaygın olarak kripto paranın doğuşunu oluşturan bir sistem olarak bilinmektedir.

Günümüzde kripto paralar artan değeri ve işlem hacimleri nedeniyle ülkelerin gündem konularından biri olmuştur. Bu durum kripto paraların muhasebeleştirilmesi konusunu da tartışmaya açmıştır. Kripto paraların muhasebeleştirilmesi konusunda küresel kurum ve kuruluşlar tarafından herhangi bir düzenleme olmadığı için konu farklı açılardan ele alınmaktadır. Bu çalışmanın amacı kripto paraların en önemli temsilcilerinden biri olan bitcoinin muhasebeleştirme konusunu uluslararası finansal raporlama standartları (UFRS) kapsamında incelemek ve bu konuda değerlendirme yapmaktır. Bu amaç doğrultusunda UFRS kapsamında bitcoinin muhasebesi ile ilgili literatürdeki görüşler incelenmiştir. Çalışmada, bitcoin ve altcoinlerin yabancı para birimi, stok ve maddi olmayan duran varlık olarak kayıt altına alma görüşlerinin ön plana çıktığı belirlenmiştir.

Anahtar Kelimeler: Kripto Paralar, Bitcoin, Uluslararası Finansal Raporlama Standartları.

An Assessment of Bitcoin Accounting under IFRS

Abstract: Blockchain technology is regarded as one of the most important technological innovations of the 21st century due to its potential to cause significant changes and transformations in business models. Blockchain technology has wide application areas in the finance, health, food and energy sectors, but it is widely known as the system that created cryptocurrency.

Today, cryptocurrencies have become one of the agenda topics of countries due to their increasing value and transaction volumes. This situation has also opened the issue of accounting for cryptocurrencies for discussion. The issue is handled from different aspects for there is no regulation by global institutions and organizations regarding the accounting of cryptocurrencies. The aim of the study is to examine the accounting of bitcoin, one of the most important representatives of cryptocurrencies, within the scope of international financial reporting standards (IFRS) and make an assessment on this issue. For this purpose, the opinions in the literature on the accounting of bitcoin under IFRS have been examined. As a result of the study, it was determined that the opinions of recording bitcoin and altcoins in accounts as foreign currency, inventory and intangible fixed asset came to the forefront.

Keywords: Cryptocurrencies, Bitcoin, International Financial Reporting Standards.

1. GİRİŞ

Bitcoin ve diğer kripto paralar yeni nesil finansal sistemin araçları olarak kabul edilmektedir. Dünyada 35 milyondan fazla bitcoin cüzdanı vardır ve bitcoin otel rezervasyonu, kitap, uçak bileti vb. gibi birçok alanda bir ödeme aracı olarak kullanılmaktadır. Bitcoin ticareti Ocak 2020’de 930 milyar doları aşmıştır (Brauneis vd. 2021:23). Türkiye’de de kripto paralara olan talep her geçen gün artmaktadır. Bilgi Teknolojileri ve İletişim Kurumu’nun Eylül 2020 raporuna göre Türkiye’de 2020 yılında 2.400.000’den fazla kişi kripto paraya yatırım yapmıştır. Rapora göre, Türkiye dünya genelinde kripto para kullanan ülkelerin yer aldığı listede 14’üncü sırada yer almaktadır.

Kripto paranın yatırım amacı dışında farklı kullanım alanlarının oluşması kripto paranın muhasebeleştirilmesi konusunda farklı görüşlerin oluşmasına neden olmuştur. Bu çalışmanın amacı, UFRS kapsamında kripto paraların en önemli temsilcilerinden biri olan bitcoinin muhasebeleştirme konusunu literatürdeki görüşler doğrultusunda incelemektir. Çalışmanın birinci kısmında; blok zinciri teknolojisi ve bitcoin açıklanmıştır. İkinci kısımda literatür özetlenmiştir. Üçüncü kısımda; bitcoinin muhasebeleştirilmesi literatürde ve IASB komitesi tarafından açıklanan yaklaşımlar doğrultusunda incelenmiştir. Dördüncü kısımda, Türkiye’de kripto para ile ilgili yasal düzenlemeler incelenmiştir. Sonuç bölümünde ise, çalışmanın genel değerlendirilmesi yapılmıştır.

2.BLOK ZİNCİRİ TEKNOLOJİSİ ve BİTCOİN

Bu bölümde blok zinciri teknolojisi ve bitcoinin özellikleri açıklanmıştır.

2.1. Blok Zinciri Teknolojisi

Blockchain teknolojisi, Türkçeye blok zinciri olarak geçmiştir. Blok zinciri tüm işlemlerin ve sayısal verilerin halka açık bir dijital blok ağında depolandığı, dağıtık bir veri tabanıdır. Sistem içerisinde veri barındıran her bir blok için dijital imza ve kriptografik özel algoritmalar kullanılmaktadır (Kimani vd, 2020:2). Veri barındıran bloklar bir araya gelerek bir zincir oluşturmaktadır. Bu zincire blok zinciri denilmektedir (Özdoğan ve Karğın, 2018:162).

Blok zinciri merkezi otorite olmadan çalışmakta ve bilgiler ağı oluşturan her bir blokta tutulmaktadır. Bir blok zincirindeki veriler her düğümde ayrı ayrı saklanmaktadır ve her bir işlem sonrası bu düğümlerdeki verilerin tutarlılığı sağlanmaktadır. Blok zincirine eklenen yeni bloğun ağdaki paydaşlar tarafından onaylanması verilerin silinmesini engellemektedir. Blok zincirindeki her blok, verilerin bütünlüğü için önceki bloğun hash'ini içermektedir. Hash, bloğun içeriğini tanımlayan benzersiz bir değerdir. Bloğun hash değeri, bloktaki herhangi bir veri değiştiğinde değişmektedir. Yeni hashi bir sonraki blokta önceden depolanmış hash'dan farklı olduğunda, herhangi bir veri değişikliği yapıldığı tespit edilmektedir (Sanka vd, 2021: 181).

Blok zinciri, 21. yüzyılın en önemli teknolojik yeniliklerinden biri olarak kabul edilmektedir. Çok geniş çalışma alanına sahip olan blok zincirinin gelecekte finans sektöründe (borsa, sigorta), işletmenin operasyonları ve yönetim konularında (muhasebe, denetim, tedarik zinciri), sağlık hizmetleri ve kamu yönetiminde (doğumlar, tapu tescili) daha yoğun bir şekilde kullanılacağı tahmin edilmektedir (Kimani vd, 2020:2). Deloitte'nin (2019) küresel blok zinciri raporu, blok zincirinin işletmelerin en önemli gündem konusu olduğunu kanıtlamaktadır. Raporda, 1386 tane yüksek gelirli şirketin % 86'sının blok zincirini temel konu olarak benimsediği, % 53'ünün blok zincirini en önemli beş stratejik önceliğinden biri olarak gördüğü belirtilmektedir.

Son yıllarda blok zinciri teknolojisinin muhasebe ve denetim alanına etkileri tartışılmaktadır. Yu vd. (2018) blok zinciri teknolojisinin işletmelerin muhasebe sürecini şeffaf hale getireceğini, raporlama kalitesini artıracak ve işletmeler ile paydaşları arasındaki bilgi asimetrisini azaltacağını iddia etmişlerdir. Bonson ve Bednarova (2019) blok zinciri teknolojisinin muhasebe verilerini otomatik kontrolünü sağladığı için güvenilirlik konusunda çözümler sunacağını belirtmişlerdir. Ayrıca, akıllı sözleşmelerle işlemlerin otomatikleşmesi ile maliyetlerin düşeceği, hataların azalacağı, manipülasyonları önleneceği ve bilginin anında paylaşılmasını sağladığı için bilgi bütünlüğünü geliştirileceği ifade edilmiştir.

2.2. Bitcoin

Kripto paranın doğuşuna temel teşkil eden sistem blok zinciri teknolojisidir. İlk kripto para olan Bitcoin, 2008'de Satoshi Nakamoto takma adını kullanan ve gerçek kimliği bilinmeyen kişi veya grup tarafından yayımlanan makale ile ortaya çıkmıştır. Bitcoin, tamamen sanal ortamda üretilen ve işletilen bir sistem olarak teknik anlamdaki güven sorununu blok zinciri teknolojisi ile çözmektedir (Dulupçu vd., 2017:2245). Bitcoin'in çalışma sistemi kriptoloji yöntemine dayanmaktadır. Para transfer işlemi, merkezi bir sunucu olmadan bilgisayar sistemleri arasında dosya paylaşımına dayanmaktadır. Bu prensibin adı eşitler arası (peer to peer) elektronik para transferidir (Temelli, 2019: 109). Bitcoin, herhangi bir ülkeye veya kişiye bağlı kalmadan internet ortamında değiştirilebilen, şifrelenmiş dijital cüzdanlarda saklanan, arz ve talebe göre kuru değişen ve alım satımı mümkün olan dijital bir olgudur (Durmuş ve Polat, 2018: 661).

Bitcoin'in reel paralardan üstünlüğü, herhangi bir ülkenin merkez bankasına bağlı olmadığı için hiçbir ülkenin ekonomik durumundan etkilenmemesidir. Ayrıca, bitcoin hesaplarının kime ait olduğu bilinmediği ve bir merkezi otorite tarafından izlenip denetlenmediği için hesapların dondurulması, el konulması gibi tehditlerle karşılaşmak mümkün değildir. Diğer taraftan, kimlik bilgilerinin gizliliği, bir otoritenin denetimi altında olmaması, bu sistemi her türlü yasa dışı finansal transfere açık hale getirmektedir (www.mahfiegilmez.com).

Blok zinciri ağında Bitcoin ile benzer sisteme sahip "alt -coin" (alternatif coin) adı verilen birçok kripto para bulunmaktadır. Bunlar içinde bitcoin piyasa değeri, fiyatı ve dolaşımdaki arzı en yüksek olan kripto

paradır. Bitcoin’den sonra sırasıyla Ethereum, Binance Coin, Dogecoin ve XRP en yüksek piyasa değerine sahip kripto paralar gelmektedir (Tablo 1).

Tablo 1: En Değerli 5 Kripto Para Birimi

İSİM	PİYASA DEĞERİ (TL)	FİYAT (TL)	DOLAŞIMDAKİ ARZI
1.Bitcoin	9.005.251.421.187	481.728,57	18.701.300 BTC
2.Ethereum	3.350.796.284.836	28.930,48	115.760.969 ETH
3.Binance Coin	829.045.163.347	5.397,29	153.432.897 BNB
4.Dogecoin DOGE	642.104.573.750	5,00	129.475.242.412 DOGE
5.XRP	632.622.837.147	13,88	45.404.028.640 XRP

Kaynak: <https://coinmarketcap.com/coins/> (06.05.2021)

Kripto paraları ödeme aracı olarak kabul eden, değişimini yapan kişi ve organizasyonlar coinmap.org ve worldcoinindex.com gibi sitelerden takip edilebilmektedir (Yalçın, 2020: 105). Türkiye’de Türk Lirası ile kripto para alım ve satımı yapılan 12 adet Türk Bitcoin borsası mevcuttur. Bu borsalardan Paribu, Btcturk, Paritex işlem hacmi bakımından en yüksek değere sahip borsalardır (coin-turk.com, 06.05.2021).

Bitcoin alım-satımında en çok kullanılan para birimleri incelendiğinde, işlem hacmine göre sırasıyla ABD Doları, Kore Wonu, Euro, Japon Yeni, İngiliz Sterlini ve Türk Lirası olduğu görülmektedir (www.coinhills.com; 06.05.2021). Türk Lirası’nın bu sıralamada altıncı sırada yer alması Türkiye’de bitcoine olan talebin ne kadar yüksek olduğunu göstermektedir. Öte yandan, bitcoinin arkasında fiziksel bir güç (şirket/devlet veya değeri karşılığı altın/gümüş rezervi) bulunmamasına rağmen, yıllar içinde nasıl bu kadar yayıldığı ve değer kazandığı tartışma konularından biridir. Bu konu “ sübjektif değer” teorisi ile açıklanmaktadır. Bu teori, bir mal veya hizmetin değerinin o mal veya hizmeti üretmek için harcanan emek ile doğru orantılı olmadığını savunmaktadır. Buna göre nesnelere anlam kazandıran veya değerli kılan şey, bizim onlara verdiğimiz önem ve değerdir. Bitcoin’in yayılım hızı ve kullanıcı sayısındaki artış sosyal medyanın gücüne bağlanmaktadır (Çizmeci ve Göver, 2020: 321).

Bitcoine olan ilginin artması sistemin güçlü zayıf yönlerini de tartışmaya açmıştır. Ergüden (2020) göre bitcoinin güçlü ve zayıf yönleri şunlardır:

Güçlü yönleri:

- Bitcoin, birçok yönden dünyanın en iyi ödeme mekanizmasıdır,
- Merkezi olmadığı ve herhangi bir devlete ve merkez bankasına bağlı olmadığı için bağımsızdır,
- Manipülasyondan ve enflasyondan etkilenmez,
- Değerini enflasyona göre ayarlayan bir merkez bankası yoktur,
- Para doğrudan kişi veya kurumun hesabına gönderildiği için herhangi bir aracı kuruma ihtiyaç duyulmaz,
- Aracı kurumlar olmadığı için işlem maliyeti düşüktür,
- Hızlı ve direkt transfer sistemi zamandan tasarruf sağlar,
- Hesaplar gizlidir,
- Sistem özel bir şifreleme yöntemine dayandığından hırsızlık meydana gelse bile bu sistemin emsallerine göre daha güvenli olduğu kabul edilir,
- Toplam arz limiti 21 milyondur,
- Değerindeki hızlı artış, alım satım yapanlar dışında meraklı kitleler yaratabilir.

Zayıf yönleri:

- Fiziksel değildir, sadece yazılım ve koddur,
- Denetim mekanizmasının olmaması nedeniyle riskler vardır,

- Miktarının 21 milyonu geçememesinden dolayı paranın işlevlerini göstermesi mümkün değildir,
- Bitcoin arzını artıran madencilik sisteminin yarattığı riskler vardır,
- Dağıtık defter sistemi kripto para biriminin kullanımını zorlaştırabilir,
- Bitcoin fiyatındaki günlük değişim paranın gerçek değeri hakkında tam fikir vermez,
- Yatırımcılar için ciddi fiyat riski taşır,
- Dijital cüzdanlar bilgisayar korsanlarının saldırılarına açıktır.
- Anonim olma özelliği, özellikle vergi kaçakçılığı, silah satışı gibi yasa dışı sitelerde kontrolsüz ve sınırsız işlemleri kolaylaştırır.

3.LİTERATÜRDE BİTCOİN MUHASEBESİ

Literatürde kripto para konusunda farklı disiplinlerde yapılan çalışmalar mevcuttur. Bu araştırmada kripto paranın muhasebe ilkeleri, bitcoin özelinde incelenmesinden dolayı literatür bu konu çerçevesinde incelenmiştir.

Tan ve Low (2017) çalışmalarında bitcoinin muhasebeleştirilmesinde elde tutma amacının esas alınması gerektiğini savunmuşlardır. Söz konusu çalışmada, bitcoini alıp satarak fiyat değişimlerinden gelir elde eden işletmelerin bitcoini döviz cinsinden para birimi olarak raporlayabileceği ifade edilmiştir. Diğer taraftan madenci ve yatırımcılardan aldığı bitcoini belirli bir komisyon karşılığında yatırımcılara satan işletmelerin bitcoini ticari mal olarak raporlayabileceği belirtilmiştir.

Şahin (2018) çalışmasında kripto paraların muhasebeleştirilmesi konusunu UFRS kapsamında değerlendirmiştir. Söz konusu çalışmada kripto paralar nakit ve nakit benzeri, finansal araçlar, satış amaçlı elde tutulan duran varlıklar, maddi olmayan duran varlık ve stok standartları kapsamında incelenmiş ve mevcut durumda kripto paraların maddi olmayan duran varlıklar olarak muhasebeleştirilmenin en uygun yöntem olduğu belirtilmiştir.

Prochazka (2018) çalışmasında UFRS kapsamında kripto paraların muhasebeleştirme modellerinin değerlendirmesini yapmıştır. Çalışmada, yatırım amaçlı elde tutulan kripto paraların yüksek volatilitesi nedeniyle gerçeğe uygun değere göre değerlemenin en uygun ölçüm olduğu, merkezi otoriteler kripto paraları para olarak kabul etmese de kripto paraların yabancı para birimi olarak raporlama yapılabileceği belirtilmiştir.

Serçemeli (2018) çalışmasında kripto paraların muhasebeleştirilmesi ve vergilendirilmesi konularını değerlendirmiştir. Söz konusu çalışmada, kripto paraların kullanım alanı ve şeklinin muhasebeleştirmede dikkate alınması gerektiği vurgulanmıştır. Özün önceliği kavramına göre bitcoinin ticari mal, hazır değer veya menkul kıymet olarak değerlendirilmesi ve buna göre muhasebeleştirilmesi önerilmiştir.

Yumuşaker (2019) çalışmasında kripto paraların ödeme aracı olarak kullanıldığında yabancı para olarak değerlendirilebileceği ve bu durumda kripto paraların “108 Diğer Hazır Değerler” hesabında muhasebeleştirilebileceğini, emtia olarak elinde tutulması durumunda ise “157 Diğer Stoklar” hesabında muhasebeleştirilebileceğini belirtmiştir.

Pelucio-Grecco vd. (2020) çalışmalarında Ram (2016) tarafından belirlenen bitcoinin özelliklerine bağlı olarak, UFRS kapsamında bitcoinin nasıl sınıflandırılacağını araştırmışlardır. Ram bitcoinin özelliklerini şu şekilde açıklamıştır: tüm işlemler dijitaldir, merkezi otorite yoktur, sadece dijital ortamda vardır, kolay devredilebilir, farklı borsalarda farklı fiyatları vardır, mal ve hizmet alımında ödeme aracı olarak kullanılabilir, spekülasyon amaçları için kullanılabilir, yatırım aracı olarak kullanılabilir, üretilebilir (madencilik), volatilitesi yüksektir, arzı sınırlıdır, gerçek değerini tespit etmek zordur, makroekonomik değişkenlerden etkilenmez, takas edilebilir, para birimi olarak satılabilir veya sözleşmeye dayalı hak olarak görülebilir, mal ve hizmetlerin üretiminde veya tedarikinde kullanılan bir varlık olarak değerlendirilebilir (Ram, 2016 aktaran Pelucio-Gerecco vd., 2020). Söz konusu çalışmada bu özellikler çerçevesinde bitcoin yabancı para, finansal varlıklar ve maddi olmayan duran varlık başlıklarında değerlendirilmiştir. Çalışmada, bitcoinin yabancı paranın özelliğini taşımasından dolayı yabancı para olarak sınıflandırılabilirliği önerilmiştir.

Shehada ve Shehada (2020) çalışmalarında mevcut UFRS kapsamında kripto paraların muhasebeleştirilmesinde karşılaşılan zorlukları tartışmışlardır. Söz konusu çalışmada, literatürde kripto paraların muhasebeleştirilmesi konusunda ortak bir görüşün olmadığı, mevcut UFRS'nin kripto paraların muhasebeleştirilmesi konusunda eksikliklerinin olduğu, işletmelerin iş modellerine bağlı olarak kripto paraların farklı kullanımının olduğu ve bu durumun kripto paraların muhasebeleştirilme yönteminde farklılık yarattığı belirtilmiştir.

Aslan (2020) çalışmasında kripto paraların muhasebeleştirilmesi konusunu küresel meslek örgütlerinin, düzenleyici kuruluşların, denetim firmalarının görüşleri doğrultusunda incelemiş ve bu görüşlerin değerlendirmesini yapmıştır. Söz konusu çalışmada küresel muhasebe kurum ve kuruluşlarının kripto paraların maddi olmayan duran varlık olarak sınıflandırılması konusunda hem fikir oldukları ifade edilmiştir. Çalışmada kripto paraların iş modeline bağlı olarak, TMS 2 Stoklar kapsamına girmeyen diğer stoklarda kayıt altına alınmasının uygun olacağı görüşünün hakim olduğu belirtilmiştir. Ayrıca, kripto paraların nakit ve nakit benzerleri ve finansal araç özelliği taşımadığı konusunda ortak bir görüşün olduğu belirtilmiştir.

Yüksel (2020) çalışmasında Uluslararası Finansal Raporlama Standartları Yorumlama Komitesi'nin kripto paraların satılmak amacıyla elde tutulması durumunda stoklar standardı kapsamında, diğer durumlarda ise maddi olmayan duran varlık standardı kapsamında değerlendirileceğine dair geçici kararını belirtmiş ve konuyu örnek olaylarla açıklamıştır.

Eren vd. (2020) çalışmalarında kripto paraların muhasebeleştirilmesi konusunu UFRS kapsamında değerlendirmişlerdir. Çalışmada, kripto paralar nakit ve nakit benzeri, nakit olmayan finansal varlık, yatırım amaçlı gayrimenkul, maddi olmayan duran varlık ve stok standartları kapsamında incelenmiştir.

Güdelci (2020) çalışmasında kripto paraların muhasebeleştirilmesi konusunu UFRS kapsamında incelemiştir. Söz konusu çalışmada kripto paraların "maddi olmayan duran varlık" olarak sınıflandırmanın muhasebe açısından en doğru seçenek olduğu belirtilmiştir.

Gül (2020) çalışmasında literatürdeki yaklaşımlar doğrultusunda kripto paraların muhasebeleştirme konusunu değerlendirmiştir. Söz konusu çalışmada kripto paraların para olarak sınıflandırmanın en uygun yaklaşım olduğu belirtilmiştir.

Yalçın (2020) çalışmasında kripto paraların madencilik yapan, kripto paraları değişim aracı olarak kullanan ve ticaretini yapan işletmelerin bu işlemlerinin muhasebeleştirilmesi ve raporlanması konularını Muhasebe Sistemi Uygulaması Genel Tebliği ve Uluslararası Muhasebe Standartları hükümlerine göre değerlendirmiştir.

Ergüden (2020) çalışmasında kripto paraların muhasebeleştirilmesi konusunu UFRS kapsamında incelemiştir. Söz konusu çalışmada kripto paranın maddi olmayan duran varlık olarak sınıflandırmanın mevcut durumda en uygun yöntem olduğu belirtilmiştir.

4. ULUSLARARASI FİNANSAL RAPORLAMA STANDARTLARI KAPSAMINDA BİTCOİN'İN MUHASEBELEŞTİRİLMESİ

Uluslararası Muhasebe Standartlar Kurulu (IASB), kripto paraların nasıl muhasebeleştirileceğine dair standartlarda bir düzenleme yapmamıştır. Ancak, IASB bünyesindeki komite, Haziran 2019 tarihli ajandasında kripto paraların muhasebeleştirilmesine ilişkin açıklamalarda bulunmuştur. Komite öncelikle kripto paraların özelliklerini açıklamış, daha sonra kripto paraların muhasebeleştirilmesinde mevcut standartlardan hangilerinin kullanılabileceğini belirtmiştir. Komite tarafından kripto paraların özellikleri şu şekilde açıklanmıştır:

- Kripto para, dağıtık defterlere kaydedilen ve güvenliği için kriptoloji kullanılan dijital ve sanal bir para birimidir,
- Kripto para, herhangi bir yasal otorite tarafından düzenlenmez,
- Kripto para, sahibi ile karşı taraf arasında bir sözleşme gerektirmez.

Komite, ticari amaçla elde tutulan kripto paraların stok olarak değerlendirileceğini, aksi takdirde maddi olmayan duran varlıklar olarak değerlendirileceğini belirtmiştir (www.ifrs.org).

Denetim şirketi Ernst & Young (2019) kripto paraların iş modeline bağlı olarak Nakit ve Nakit Benzerleri, Finansal Araçlar, Stoklar, Maddi Olmayan Varlıklar, Muhasebe Politikaları, Muhasebe Tahminlerinde Değişikler ve Hatalar standardı kapsamında sınıflandırılabileceğini önermiştir.

Bu bölümde, bitcoinin muhasebeleştirilmesi literatürde ve IASB komitesi tarafından açıklanan yaklaşımlar doğrultusunda incelenmiştir. Bitcoinin muhasebeleştirilmesi UFRS kapsamında aşağıdaki başlıklarda açıklanmıştır:

- Nakit ve nakit benzerleri
- Finansal Araçlar
- Emtia
- Maddi Olmayan Duran Varlıklar

4.1. Nakit ve Nakit Benzeri

TMS 7’de Nakit Akış Tabloları standardında nakit, “işletmelerdeki nakitlerle vadesiz mevduat olarak ifade edilirken, nakit benzerleri kısa vadeli yükümlülüklerin yerine getirilmesi amacıyla elde tutulan ve kolayca nakde çevrilebilen, değerindeki değişim riski önemsiz olan yatırımlar” olarak ifade edilmektedir.

IASB Komitesi, TMS 32 Finansal Araçlar Standardında yer alan finansal varlık tanımına atıfta bulunarak, kripto paraların şu anda nakit özelliği bulunmadığından nakit olarak tanımlanamayacağını açıklamıştır. Komite, bazı kripto paraların mal veya hizmet karşılığında kullanılabileceğini, ancak tüm işlemlerin ölçülmesi ve finansal tablolara yansıtılmasında esas alınamayacağını ve bir değişim aracı olarak tanımlanamayacağını belirtmiştir.

Şahin (2018) ve Ergüden (2020) göre kripto paralar aşırı dalgalanması nedeniyle, TMS 7’de yer alan nakit benzerleri kavramında yer alan “değerindeki değişim riski önemsiz yatırım” ifadesini karşılamamaktadır. Ayrıca, kripto paraların çoğunlukla yatırım amacıyla elde tutulması nedeniyle nakit benzeri özelliği taşımamaktadır. Günay ve Kargı (2018), paranın değişim, yatırım ve tasarruf aracı ve değer ölçüsü olma gibi işlevlerinin olduğunu, ancak kripto paraların değişim aracı ve değer ölçüsü olma işlevlerini sınırlı düzeyde yerine getirmesinden dolayı mevcut durumda para olarak tanımlanamayacağını belirtmişlerdir.

Eren vd. (2020), kripto paraların TMS 7’de yer alan tanımına uygun olmadığı için kripto paraların nakit ve nakit benzerleri olarak muhasebeleştirilemeyeceğini belirtmiştir. Güldenci (2020) de kripto paraların değerinin herhangi bir merkezi bir otoriteye bağlı olmadığını, arz ve talep doğrultusunda belirlendiğini ve bu nedenle TMS 7’de yer alan nakit ve nakit benzerleri tanımlarını karşılamadığını belirtmiştir. Ayrıca, bazı durumlarda kripto paraların nakde dönüştürülmesi ile ilgili kısıtlamaların olmasından dolayı kripto paraların nakit veya nakit benzerleri olarak muhasebeleştirilemeyeceğini ifade etmiştir.

Yalçın (2020), yukarıdaki görüşlerden farklı görüş bildirmiştir. Söz konusu çalışmada, sattığı mal ve hizmet karşılığında alınan kripto paraların nakit benzeri olarak raporlanabileceğini belirtmiştir. Mal ve hizmet satışı karşılığında alınan kripto paraların likiditesinin düşük ve değişim riskinin yüksek olmasının nakit benzeri olarak raporlamaya engel olmayacağı belirtilmiştir.

4.2. Finansal Araçlar

TMS 32 Finansal Araçlar standardında finansal araç;” bir işletmenin finansal varlığı ile diğer bir işletmenin finansal borcunda ya da özkaynağa dayalı finansal aracında artışa neden olan herhangi bir sözleşme” şeklinde tanımlanmıştır.

IASB Komitesi, kripto parayı elinde tutana sözleşmeye bağlı bir hak veya yükümlülük getirmeyeceğinden ve başka bir işletmenin özkaynağa dayalı aracı olmadığından finansal araç olarak tanımlanamayacağını ifade etmiştir.

Güdelci (2020) ve Ergüden (2020) kripto parayı elinde tutanlar ile sistemdeki diğer yatırımcılar arasında sözleşmeye dayalı bir ilişki olmadığından kripto paraların finansal araç olarak değerlendirilemeyeceğini belirtmişlerdir. Diğer taraftan Eren vd. (2020) kripto paraların alınıp satılması amacıyla sözleşmelerin yapılması durumunda kripto paraların finansal araç olarak tanımlanabileceğini ifade etmişlerdir.

4.3. Emtia

TMS 2 Stoklar Standardı'nda stoklar; "normal iş akışı içinde satılmak üzere elde tutulan, satılmak üzere üretilmekte olan, üretim sürecinde veya hizmet sunumunda kullanılacak hammadde ve malzeme şeklinde" tanımlanmıştır. IASB Komitesi, kripto paraların iş akışı içinde satılmak üzere elde tutulması durumunda (ticari amaçla) TMS 2 Stoklar Standardının uygulanacağını belirtmiştir. Ayrıca kripto para ticaretinde aracılık yapan işletmelerin kripto para birimini satış maliyetleri düşülmüş gerçeğe uygun değer üzerinden ölçüm yapacağını ifade etmiştir.

Şahin (2018), kripto paraların TMS 2 standardı kapsamında satılmak amacıyla elde bulunduran stoklar kapsamında değerlendirilebileceğini, ancak kripto para kullanan işletmelerin birçoğunun faaliyet konusunun kripto para ticareti olmadığından kripto paraların stok kapsamında değerlendirmenin doğru olmayacağını belirtmiştir. Kripto paraların stok olarak muhasebeleştirilmesi durumunda değerlendirme işlemlerinin zor olacağı da ifade edilmiştir. Ergüden (2020) günümüzde kripto para kullanan birçok işletmenin kripto para ticareti yapmadığı için kripto paranın stok olarak tanımlanamayacağını belirtmiştir. Güdelci (2020) ise, başkalarının kripto para almalarına aracılık eden broker ve trader olarak ifade edilen işletmelerin kripto paraları stok olarak muhasebeleştirmelerinin ve bunları satış maliyeti düşürülmüş gerçeğe uygun değer yöntemine göre değerlendirme yapmalarının doğru olacağını belirtmiştir.

Yalçın (2020) mülkiyetinde olmayan kripto paraların alım ve satımını yapan işletmelerin bu paraları konsinye mal olarak kaydedilebileceğini belirtmiştir. Kripto paraların ticaretini yapan, mülkiyetinde olan kripto paraların TMS 2 stoklar standardına göre sınıflandırılacağını ve raporlanacağını belirtmiştir. Ayrıca, kripto paraların satış gelirleri ve kur farklarının hasılat olarak kayıtlara alınacağı ifade edilmiştir.

4.4. Maddi Olmayan Duran Varlıklar

TMS 38 Maddi Olmayan Duran Varlıklar Standardı'nda maddi olmayan duran varlıklar; "fiziksel özelliği olmayan, tanımlanabilir parasal olmayan varlıklar" şeklinde tanımlanmıştır. Bu standarda göre, maddi olmayan duran varlığın aktive alınabilmesi için, varlığın diğer varlıklardan ayrı olarak belirlenebilir olması, kontrol edilebilir olması, gelecekte ekonomik yarar sağlaması ve maliyetinin güvenilir bir şekilde ölçülmesi gerekmektedir.

IASB Komitesi, kripto para, sahibine sabit veya belirlenebilir miktarda para birimi alma hakkı vermeme koşulu ile sahibinden ayrılabilirdiği veya devredilebilirdiği gerekçesiyle UMS 38 Maddi Olmayan Duran Varlıklar Standardının uygulanmasını önermiştir. Komite, ticari amaçla elde tutulan kripto paraların stok olarak değerlendirileceğini, aksi takdirde maddi olmayan duran varlıklar olarak değerlendirileceğini belirtmiştir (www.ifrs.org, 2021). Bu açıklamada komitenin kripto paraları maddi olmayan duran varlık olarak tanımlamasında maddi olmayan duran varlıkların belirlenebilir özelliğini dikkate aldığını ifade edebiliriz. TMS 38 standardında bir varlığın belirlenebilir olması iki kritere göre değerlendirilmektedir. Birinci kritere göre, varlığın işletmeden ayrılabilmesi, bireysel veya işletmenin bu yönde niyetinin varlığına bakılmaksızın ilgili sözleşme, tanımlanabilir varlık veya borçla birlikte satılabilir, devredilebilir, lisans altına alınabilir, kiralanabilir veya takas edilebilir olmasıdır. İkinci kritere göre, söz konusu hakların işletmeden veya diğer haklar ve yükümlülüklerden ayrılabilmesi veya devredilmesine bakılmaksızın, sözleşmede yer alan haklardan veya diğer yasal haklardan kaynaklanması gerekmektedir (TMS 38, md 11-12).

Şahin (2018), Eren vd. (2020) ve Ergüden (2020) kripto paraların TMS 38 standardı kapsamında maddi olmayan duran varlık özelliğini taşıdığını belirtmektedirler. Eren vd. (2020) çalışmalarında, kripto paralar satın alındığında standart kapsamında maliyet esasına göre muhasebeleştirileceğini, sonraki dönemlerde maliyet veya yeniden değerlendirme yöntemlerine göre değerlendirme yapılacağını belirtmişlerdir. Şahin (2018) çalışmasında, dönem sonunda kripto paraların piyasa verileri çerçevesinde yeniden değerlendirme yapılabileceğini ve yeniden değerlendirme sonucunda ortaya çıkabilecek artış veya azalışların kapsamlı gelir tablosunda muhasebeleştirilebileceğini belirtmiştir. Bu görüşleri destekleyen Ergüden (2020), kripto paraların belirli bir ekonomik ömrü olmadığı için amortisman tabii tutulmayacağını belirtmiştir.

5. TÜRKİYE'DE YASAL DÜZENLEMELER

Ülkemizde ödeme ve elektronik para hizmetlerinin yasal altyapısı 6493 sayılı "Ödeme ve Menkul Kıymet Mutabakat Sistemleri, Ödeme Hizmetleri ve Elektronik Para Kuruluşları Hakkında Kanun" ile

oluşturulmuştur. Kanunun amacı “ödeme ve menkul kıymet mutabakat sistemlerine, ödeme hizmetlerine, ödeme kuruluşlarına ve elektronik para kuruluşlarına ilişkin usul ve esasları düzenlemek” olarak belirtilmiştir. Kanun’da elektronik paranın tanımı yapılmıştır. Buna göre elektronik para “ elektronik para ihraç eden kuruluş tarafından kabul edilen fon karşılığı ihraç edilen, elektronik olarak saklanan, bu Kanunda tanımlanan ödeme işlemlerini gerçekleştirmek için kullanılan ve elektronik para ihraç eden kuruluş dışındaki gerçek ve tüzel kişiler tarafından da ödeme aracı olarak kabul edilen parasal değeri” şeklinde tanımlanmıştır. Kanunun yürürlüğe girmesi ardından Bankacılık Düzenleme Denetleme Kurumu (BDDK) tarafından bitcoin ile ilgili açıklama yapmıştır. BDDK, bitcoinin mevcut yapısı ve işleyişi nedeniyle bu Kanun kapsamında elektronik para olarak değerlendirilemeyeceğini ve bu nedenle söz konusu Kanun kapsamında gözetim ve denetimin mümkün olmadığını açıklamıştır (BDDK, 2013/32 sayılı basın açıklaması)

Sermaye Piyasası Kurumu (SPK), 2018 yılında yayımladığı bülteninde, “kripto para satışı” veya “token satışı” olarak ifade edilen, blok-zinciri teknolojisi kullanarak para toplama uygulamalarının Kurumun düzenleme ve gözetim alanı dışında kaldığını açıklamıştır. Söz konusu bültende SPK ICO (kripto para birimlerini kullanan fon türüdür) ’ların çok yüksek riskli ve spekülasyon yatırımlar olmasından dolayı dijital varlık almayı düşünen yatırımcıların bu riskleri dikkate almaları gerektiği vurgulanmıştır (SPK, 2018/42 sayılı bülten).

Yatırımcıların kripto paralara olan ilgisinin artması bu konunun ülkemizin gündeminde kalmasına neden olmuştur. Bu konudaki hedefler On birinci Kalkınma Planında (2019-2023) belirtilmiştir. Kalkınma planında “blok zincir tabanlı dijital merkez bankası parası uygulamaya konulacağı, blok zincir uygulamalarının yaygınlaştırılmasını teminen ulaştırma ve gümrük hizmetlerinde gerekli hukuki ve fiziki altyapı çalışmalarının tamamlanacağı” belirtilmiştir (www.sbb.gov.tr). Bu gelişmelere bağlı olarak Türkiye Cumhuriyeti Merkez Bankası yönetimi tarafından dijital para projesinin kavramsal çerçevesinin tamamlandığı, 2021 yılının ikinci yarısında bu konuda pilot testlere başlanacağı açıklanmıştır (www.cnnturk.com). Öte yandan 16 Nisan 2021 tarihli Resmi Gazete ’de yayımlanan “ Ödemelerde Kripto Varlıkların Kullanılmamasına Dair Yönetmelik” ile kripto paraların ödeme aracı olarak kullanılması yasaklanmıştır. Bu yönetmelikte kripto varlık tanımına yer verilmiş, kripto varlık “dağıtık defter teknolojisi veya benzer bir teknoloji kullanılarak sanal olarak oluşturulup dijital ağlar üzerinden dağıtım yapılan, ancak itibari para, kaydi para, elektronik para, ödeme aracı, menkul kıymet veya diğer sermaye piyasası aracı olarak nitelendirilmeyen gayri maddi varlıklar” şeklinde tanımlanmıştır. Bu yönetmeliğin kripto varlıkların kullanılacağı iş modellerini engelleyeceği ve bu alanda yapılacak teknolojik yatırımların askıya alınmasında etkili olacağı düşünülmektedir (www.cnnturk.com).

6.SONUÇ

Çalışmada, bitcoinin UFRS kapsamında nasıl muhasebeleştirileceği konusu literatürde yer alan görüşler doğrultusunda incelenmiştir. Bu bağlamda bitcoin muhasebesi nakit ve nakit benzerleri, finansal araçlar, emtia ve maddi olmayan duran varlık başlıklarında değerlendirilmiştir. Kripto paraların finansal araç özelliği taşımadığına dair genel bir görüş vardır. Öte yandan, kripto paraların yabancı para birimi, stok ve maddi olmayan duran varlık olarak kayıt altına alma görüşlerinin ön plana çıktığı belirlenmiştir. Bu görüşleri savunanlar, sattıkları mal ve hizmet karşılığında alınan kripto paraların nakit benzeri olarak raporlanabileceğini, kripto para ticareti yapan işletmelerin kripto paralarını emtia olarak raporlayabileceğini, bunların dışındaki amaçlar için elinde tutulan kripto paraların maddi olmayan duran varlık olarak raporlanabileceğini belirtmişlerdir. IASB Komitesi de ticari amaçla elde tutulan kripto paraların stok olarak değerlendirileceğini, aksi takdirde maddi olmayan duran varlıklar olarak değerlendirileceğini belirtmiştir. Denetim şirketi Ernst & Young (2019), Tan & Low (2017) ve Serçemeli (2018) kripto paraların iş modeline bağlı olarak muhasebeleştirilmesi gerektiğini önermişlerdir.

Sonuç olarak, IASB’nin kripto paraların nasıl muhasebeleştirileceği konusunda standartlarda bir düzenleme yapmayarak, mevcut standartlardan hangilerinin kullanılabilmesi konusunda sadece görüş bildirmesi, bu konudaki tartışmaların hem ulusal hem de uluslararası düzeyde devam edeceğini göstermektedir. Ayrıca, Türkiye’de kripto paraların ödeme aracı olarak kullanılmasının yasaklanması kripto varlıkların kullanılacağı iş modellerinin tekrar gözden geçirilmesine neden olacaktır.

Türkiye’de Savunma Sanayi Sorunları Üzerine Bir İnceleme

YL Öğr. İrem Doğan¹

Doç. Dr. Nuri Baltacı²

¹Gümüşhane Üniversitesi/ Sosyal Bilimler Enstitüsü, İktisat, ddoganirem@gmail.com, ORCID:0000-0002-2546-4552

²Gümüşhane Üniversitesi/ Sosyal Bilimler Enstitüsü, İktisat, nbaltaci@gumushane.edu.tr, ORCID:0000-0002-7001-2889

Özet: Saldırlara karşı güç kullanma ve müdafaa gösterme olarak tanımlanan savunma, ulusal açıdan devletlerin egemenliğini sürdürebilmeleri için diğer devletlere karşı korunmak amacıyla uygulanan adımlardır. Savunma sanayindeki önemli firmalar çok kolay bir şekilde tanımlanabilirken, tüm savunma sanayini analiz etmeye çalışıldığında kavramsal ve pratik problemlerle karşılaşılacaktır. Çünkü savunma sanayi sektörü temel özellikleri ve birleşik ekonomik faaliyetleri ile toplandığında karmaşık bir yapıyı temsil etmektedir. Savunma sanayi ile ilgili çalışmalara bakıldığında Türk savunma sanayiinin gelişimi önünde engel teşkil eden nedenler tam olarak incelenmemektedir. Çalışmada savunma sanayi sektörünün gelişim süreci açıklanarak çalışma ile amaçlanan Türk savunma sanayinin gelişmesine engel olan unsurlar tespit edilerek değerlendirilmiştir. Savunma sanayide herkesçe öngörülen sebepler dışında göz ardı edilen veya henüz bahsedilmeyen sorunlarda ele alınmıştır. Türk savunma sanayiinin gelişimi ile ilgili sorunlar, ekonomik sorunlar /politik ve sosyal sorunlar başlıkları altında detaylı bir şekilde incelenmiştir. Birinci başlık altında özellikle istihdam, tedarik ve pazar sorunları incelenmiştir. İkinci başlık adı altında ise terör, kopya, gizlilik, ar-ge konularında yaşanan sorunlar ele alınmıştır.

Anahtar Kelimeler: Savunma Sanayi, Savunma Harcamaları, Ekonomi

1. GİRİŞ

Bir ülkenin bilimsel altyapısını anlamak için savunma sanayi sektöründe incelemeler yapmak yanlış bir adım olmayacaktır. Savunma sektörü için tüm sanayi kollarının lokomotifi benzetmesini yapmak mümkündür. Savunma sanayi sektörünün hiçbir zaman gündemden düşmeyeceği sürekli olarak açıklanmaktadır. Bu durum sektörün ülkeler için ne derece önemli olduğunu göstermektedir (Demirel, 2012: 10). Savunma sanayinde firmaların piyasa değerinde yaşanacak önemli değişiklikler savunma sanayinin önem düzeyini de etkilemektedir. Birçok çalışma, savunma sanayinin değişen doğasına büyük önem vermektedir. Soğuk Savaşın sona ermesinden bu yana, hemen hemen tüm savunma şirketleri serbest piyasa ekonomisinden etkilenmektedir. Ayrıca savunma sanayii sektöründe yaşanan yapısal değişikliklerinin ve yoğunlaşma süreçlerinin, sektörün oluşturduğu tutumunu kaybettiği iddia edilmektedir (Blancard, 2008: 15).

Saldırlara karşı güç kullanma ve müdafaa gösterme olarak tanımlanan savunma, ulusal açıdan devletlerin egemenliğini sürdürebilmeleri için diğer devletlere karşı korunmak amacıyla uygulanan adımlardır. Savunma hizmetleri devlet imkanları ile sağlanır ve toplumdaki herkes bu imkanlardan faydalanabilmektedir (Baran, 2018: 58). Sadece bir müşteriyi dikkate alan, en gelişmiş teknolojilerin kullanıldığı, bu durumda da sistemsel geliştiricilerin çok pahalı olduğu, aynı zamanda ulusal egemenliği içerisinde barındırdığı için ülkelerin teknolojiyi kullanma konusunda çok titiz davrandığı savunma sanayii alanındaki gelişmelerin incelenmesi farklılık gösterecektir. Ülkeler için öncelikli amaç içerde güçlü bir sanayi altyapısı oluşturmak ve bu sanayii altyapısını uluslararası rekabette tartışılmaz kılmaktır. Bunu yaparken de uluslararası alanda dengeli bir iş birliği yapacak kadar teknoloji düzeyine ulaşılması gerekmektedir (Ziylan, 2004: 6). Türkiye’de savunma sanayi sektörünün temelleri Osmanlı Devleti’nin Yükselme Dönemi itibarıyla önemini arttırmıştır. Ancak, zamanla Osmanlı Devleti’nin teknoloji ve sanayi sektöründe batıdan daha geride kalması sebebi ile savunma sanayi sektörü olması gereken seviyenin gerisinde kalmıştır. Bu ekonomik ve teknolojik gerilemelere rağmen, savunma sanayinin gelişimi adına Cumhuriyet’in ilk dönemlerinde bazı adımlar atılmıştır (Temiz, 2012: 3).

Savunma sanayi sektörünün gelişimi adına yapılan NATO üyeliği ise Türkiye’nin milli savunma sistemlerinin geliştirilmesi yönünde atılacak adımlarını terk etmesine sebep olmuştur. Özellikle NATO’ya dâhil olunduktan sonra askeri yardımlar, hibeler ve dış alımlar daha çok yeni gelişim sürecinde olan ülke savunma sanayi sektörünün gelişiminin gerilemesine sebep olmuştur (Pınar, 2018: 2350). Türkiye’nin

kendi menfaatleri için atamadığı adımlar uluslararası bir gerilim yaramakta ve bu gerilim 1974 senesine gelindiğinde Kıbrıs Barış Harekâtı ile en üst seviyesine ulaşmıştır. Bunun sonucunda yaşanan ambargo ile Türkiye'nin yerli üretimde ısrarının ne derece önemli olduğu buradan fark edilmektedir (SSB, 2019). Savunma sanayii sektörü son yıllarda önemli üretim adımları atmış ve iş birliği yaptığı sektörlerle beraber güçlü bir yapılanma oluşturmaktadır. Bu çalışmada, savunma sanayiinin gelişimi literatür taramaları ile desteklenerek açıklanacak ve Türkiye'de faaliyette bulunan savunma sanayii şirketlerinin incelenmesi ile savunma sanayii sektörünün sorunları hakkında daha somut bulgular elde edilebilecektir. Savunma sanayi sorunları ekonomik, siyasal ve sosyal sorunlar başlıkları altında detaylı olarak incelenecektir.

2. SAVUNMA KAVRAMI

Saldırılara karşı güç kullanma ve müdafaa gösterme olarak tanımlanan savunma, ulusal açıdan devletlerin egemenliğini sürdürebilmeleri için diğer devletlere karşı korunmak amacıyla uygulanan adımlardır. Savunma hizmetleri devlet imkanları ile sağlanır ve toplumdaki herkes bu imkanlardan faydalanabilmektedir (Baran, 2018: 58). Savunma, geleneksel bir tam kamusal hizmetler içerisinde yer almaktadır. Savunma hizmetlerinden ülkede yaşayan herkes eşit olarak yararlanabilmektedir. Yani savunma hizmetleri ülke içerisinde bölünmez katkılar sağlamaktadır. Savunmanın saldırıdan vazgeçirme özelliğinin bulunması, ülkenin her yerine eşit olarak dağılacağını göstermektedir. Bunun sayesinde, bedel ödemeyen kimselerin savunma hizmetinden yararlanamayacak olması diye bir durum söz konusu değildir (Demir, 2011: 4). Savunma kavramı anlamsal açıdan güvenlik kavramı ile paralel olarak açıklanabilmektedir. Dünya üzerinde yaşayan tüm canlılar kendi konforları ve düzenleri için karşılaşılabilecekleri her türlü tehdit anında önlem ve koruma içgüdüleriyle hareket edebilmektedir. Bu durum her canlının kendi güvenliği için yaptığı savunma kavramıyla açıklanabilmektedir (Doğdu, 2018: 6). Konu ile ilgili yapılmış diğer çalışmalarda incelendiğinde savunma kavramına dair net bir tanımın kurulmadığı anlaşılmaktadır. Bu durumun sebebi, savunma hizmetlerini gerçekleştirirken ülkelerin herhangi bir kısıtlanmayla karşı karşıya kalmamasıdır. Bu bakımdan savunma kavramının kapsamı, niteliği ve tanımı ülkeler arasında değişiklik göstermektedir. Örneğin bazı ülkeler savunma harcamaları içerisinde yer alacak kalemleri farklı harcama türleri içerisinde dahil edebilmektedir (Çambel, 2017: 3).

2.1. Savunma Sanayinin Tanımı

Savunma sanayinin kavramı üzerinde herkes tarafından kabul görmüş kesin bir tanımı henüz bulunmamaktadır. Çünkü savunma sanayinde üretilen ürünler çok farklı alanları içermektedir ve firmaların ürettiği ürünlerin hangilerinin savunma sanayi sektörü içerisinde yer alacağı belirsizlik konusudur. Başka bir tanıma göre ise savunma sanayi, Millî Savunma Bakanlığı, hükümet ve özel sektörün askeri ihtiyaçları karşılamak için ar-ge, tasarım, üretim kabiliyeti olan ve askeri silah sistemleri, alt sistemleri, bileşenleri ve parçalarını idame ettirmek için dünyadaki bütün endüstriyel karmaşıklığı içinde barındıran sektördür. Savunma sanayi ülkelerinin bağımsızlıkları açısından önemli bir kavramdır. Diğer yandan ülkelerin kendi savunma sanayi hizmetlerini oluşturmaları için gereken projeler Cumhuriyetin ilk yıllarına denk gelmektedir. Ancak 1945 yılı ve sonrası dönemde ABD ülkelere savunma yardımı adı altında gösterdiği hizmetler ülkelerin savunma sanayilerinin gelişiminde engel olmaktadır ve oluşturulacak projelerinin son bulmasına neden olacaktır. 1974 Kıbrıs Barış Harekâtı sonrasında ülkeler tekrardan projelerini gündeme getirmek için çaba göstermeye başlasalar da herhangi bir sonuç elde edilememektedir. Günümüze gelindiğinde ise milli savunma araçları kullanılarak yeni adımlar atılmaya çalışılmaktadır (Çambel, 2017: 3).

Savunma sanayi sektörü genellikle gelişmiş ülkelerde bulunmaktadır. Belirli gruplar veya sektörler olarak gelişim gösteren bir alandır ve ülkelerin silah üretiminde belli bir oranda kendilerine yetecek kadar faaliyet göstermeyi amaçlamaktadır. Savunma sanayindeki önemli firmalar çok kolay bir şekilde tanımlanabilirken, tüm savunma sanayini analiz etmeye çalışıldığında kavramsal ve pratik problemlerle karşılaşılacaktır. Çünkü savunma sanayi sektörü temel özellikleri ve birleşik ekonomik faaliyetleri ile toplandığında karmaşık bir yapıyı temsil etmektedir. Bütün bunların dışında bu firmalar nerede kurulurlarsa kurulsunlar diğer piyasalardan farklı olarak hükümete hizmet etmekteledir yani burada hükümet tek alıcı güncüdedir (Sezgin, 2018: 8).

2.2. Türk Savunma Sanayi Sektörünün Tarihsel Gelişimi

Türkiye’de savunma sanayi sektörünün temelleri Osmanlı Devleti’nin Yükselme Dönemi itibariyle önemini arttırmıştır. Ancak, zamanla Osmanlı Devleti’nin teknoloji ve sanayi sektöründe batıdan daha geride kalması sebebi ile savunma sanayi sektörü olması gereken seviyenin gerisinde kalmıştır. Bu ekonomik ve teknolojik gerilemelere rağmen, savunma sanayinin gelişimi adına Cumhuriyet’in ilk dönemlerinde bazı adımlar atılmıştır. Bunların başında MKEK gelmektedir. Aynı zamanda silah, mühimmat ve havacılık gibi sektörlerde kayda değer yatırımlar yapılmıştır (Temiz, 2012: 3). Savunma sanayi sektörünün gelişimi adına yapılan NATO üyeliği Türkiye’nin milli savunma sistemlerinin geliştirilmesi yönünde atılacak adımlarını terk etmesine sebep olmuştur. Özellikle NATO’ya dâhil olunduktan sonra askeri yardımlar, hibeler ve dış alımlar daha çok yeni gelişim sürecinde olan ülke savunma sanayi sektörünün gelişiminin gerilemesine sebep olmuştur (Pınar, 2018: 2349). Türkiye’nin kendi menfaatleri için atmadığı adımlar uluslararası bir gerilim yaramakta ve bu gerilim 1974 senesine gelindiğinde Kıbrıs Barış Harekâtı ile en üst seviyesine ulaşmıştır. Bunun sonucunda yaşanan ambargo ile Türkiye’nin yerli üretimde ısrarının ne derece önemli olduğu buradan fark edilmektedir. Bu durumun sonucu olarak öncesinde Deniz ve Hava Kuvvetlerini Güçlendirme Vakfına ek olarak Kara Kuvvetlerine Güçlendirme Vakfı kurulmuştur. Kurulan bu vakıfların sayesinde Türkiye’nin ortak payda da buluşması amacıyla Aselsan, Havelsan, Aspilsan gibi kurumların faaliyetleri başlamıştır (SSB, 2019). 1972 yılına gelindiğinde “TÜBİTAK Savunma Sanayii Araştırma ve Geliştirme Enstitüsü” ismi ile faaliyete geçen kurumun ismi “Savunma Sanayii – Geliştirme” olarak değiştirilmiş ve dış ilişkilerde aktif olarak rol alacak Ar-Ge çalışmalarını sürdürmesi için çaba gösterilmiştir. Türkiye aynı zamanda sanayi sektörü altyapısında önemli gelişmeler kaydederken savunma sanayi sektörüne olan finansman kaynağında artışa gitmek gerektiği düşüncesi gündeme gelmektedir. Bu 1985 yılında, 3238 Sayılı Kanun ile Milli Savunma Bakanlığı’na bağlı “Savunma Sanayii Geliştirme ve Destekleme İdaresi Başkanlığı” kurulmuştur. Ayrıca 1989 hükmünde kararname ile SAGEB, yine MSB’ye bağlı Savunma Sanayii Müsteşarlığı (SSM) ismini alarak yeniden düzenlenmiştir. SSM’nin kuruluşunun ana amacına yönelik olarak 3238 Sayılı Savunma Sanayii Hakkında Kanun’un ifade ettiği; modern bir savunma sanayi sistemi ve TSK’nın modernizasyonudur (Ziylan, 2004: 6).

3. LİTERATÜR ARAŞTIRMASI

Ülkelerin sahip olacağı güçlü bir savunma sanayi sistemi o ülkenin güçlü bir ekonomiye sahip olacağını gösterir. Ancak ülkelerin gelişmişlik düzeyleri, ekonomik etkinin beklenildiği gibi olumlu sonuçlanmasına engel olabilecektir. Türkiye savunma sanayi teçhizatı üretimi yapan şirketleri ile dünya listesinde önemli derecelere gelmeye başlamıştır. Yapılan incelemeler ile savunma sanayi sektöründe oluşabilecek sorunlar hakkında daha doğru bilgiler elde edilmiş olacaktır. Türkiye’nin jeopolitik konumu büyük öneme sahiptir ve bu önemli konumu değerlendirebilmesi ise savunma sanayii ile doğru orantılıdır. Bu sebeple son dönemler de Türkiye’nin de içerisinde yer aldığı savunma sanayii konusu üzerine çalışmalar gitgide artış göstermektedir. Ekonomi üzerinde yapmış olduğu olumlu etkilere bakacak olursak savunma projelerinde gerekli teminlerin sağlanması, aynı zamanda bütçe sorununa yol açılmaması ve kaynak tahsisinde etkinliği kaybetmeden devletin sağlayacağı destek ve teşviklerle projelerin sürekliliği sağlanacaktır. Savunma sanayiine ilişkin çalışmalar incelendiğinde aşağıdaki gibi üç başlık altında toparlanabileceği ifade edilebilir.

3.1. Teorik Temelleri Ortaya Koyan Çalışmalar

Heberling (1994), Savunma sanayiye ayrılan bütçelerin ve düşman tehditlerinin azaltılmaya başlandığı dönemlerde güçlü bir savunma sanayi üssünün korunmasına ilişkin sorunlar ortaya çıkmıştır. Bu çalışma, savunma sanayi politikası hedeflerini açıklamakta ve bu hedeflerin aynı anda gerçekleştirilemeyeceğini savunmaktadır. Savunma sanayi politikası hedefleri arasında güçlü bir üretim üssü oluşturma, üretim kabiliyeti sağlama, savunma teknolojisinde öncü bir lider olma ve savunma firmaları arasında kabul edilebilir bir rekabet ortamının oluşması vardır. İşte burada asıl sorun bu dört hedefin toplu olarak elde edilemez olmasıdır. Gerekli olan ise bu dört hedefi sağlayacak bir savunma sanayi politikası gerçekleştirmektir. Brauer (1998), gelişmekte olan ülkelerin savunma sanayii sistemlerini konu aldığı çalışmada, savunma sanayi de ekonomik ve ekonomik olmayan amaçlarının neler olduğunu, yerli halkın bundan ekonomik bir fayda sağlanıp sağlanmadığı incelenmiştir. Aynı zamanda savunma sanayii

sistemlerinin gelişiminin siyasi bağlantılara değil ekonomik güce bağlı olduğu görüşünü savunmaktadır. Blancard (2018), Savunma sanayinde firmaların piyasa değerinde yaşanacak önemli değişiklikler savunma sanayinin önem düzeyini de etkilemektedir. Birçok çalışma, savunma sanayinin değişen doğasına büyük önem vermektedir. Soğuk Savaşın sona ermesinden bu yana, hemen hemen tüm savunma şirketleri serbest piyasa ekonomisinden etkilenmiştir ayrıca savunma sanayii sektöründe yaşanan yapısal değişikliklerinin ve yoğunlaşma süreçlerinin, sektörün oluşturduğu tutumunu kaybettiği iddia edilir. Neuman (2006), Silah üreten ülkeler, savunma sanayi hiyerarşisindeki eski konumlarına bakılmaksızın, savunma sanayilerini modernize etmek için gereken ileri teknolojiler için ABD'ye giderek daha fazla bağımlı hale geldiler. Bu artan bağımlılık, Birleşik Devletlere kayda değer doğrudan ve dolaylı politik görevler edinmelerinin yolunu açmıştır. Savunma sanayinde kamusal olarak listelenmiş en büyük 58 şirketlerin 1995-2005 yılları arasındaki etkinlik düzeyleri çalışılmıştır. Savunma sektörünün hisse senetleri üzerindeki etkisinin incelendiği çalışmada son olarak 11 Eylül terör saldırılarının savunma şirketleri üzerindeki etkisi incelenmiştir.

3.2. Savunma Sanayinin Ekonomi Üzerindeki Etkisini İnceleyen Çalışmalar

Türk (2006) Savunma harcamaları öncelikle ekonomik gelişme için gerekli politik istikrarı sağlamaktadır. Diğer taraftan sivil sektöre de açık olabilecek yol, hastane, hava alanı, köprü gibi altyapılar; ülke halkının modern beceri ve davranışlar kazanmasına yol açan beşeri yatırımlar; savunma sektörünün olmaması durumunda sivil sektörün yaratması gereken giyim, yiyecek, haritalama, meteoroloji gibi mal ve hizmetler savunma harcamaları tarafından sağlanabilmektedir. Demir (2011), sivil ve askeri savunma harcamalarının ekonomik büyüme üzerinde nasıl bir etkisi olduğu şayet etkiliyorsa ne yönde olduğu incelenmiştir. Fakat doğru sonuçlara ulaşılması konusunda birkaç kısıt olduğu sonucuna varılmıştır. İlk kısıt çalışmanın 2004–2007 yılları arasındaki verilerle sınırlı olmasıdır ki çalışma il bazında yürütülmüştür. İkinci olarak savunma harcamalarının her ülkede farklı kurumlar aracılığıyla yapılmasından kaynaklı ortak bir tanımın oluşturulamamasıdır. Baran (2018), Türkiye’de 1980 öncesi dönemde dışa bağımlılık yaşanırken 1980 yılından itibaren dışa bağımlılıktan zamanla uzaklaşmıştır. Çalışmada Türkiye’nin savunma sanayi sektörü kapsamlı bir şekilde incelenmiş, savunma sanayide meydana gelen değişiklikler, AR-GE faaliyetleri, savunma sanayi sektöründe oluşan harcama rakamları açıklanmıştır. Kakaşçı ve Orhan (2018) Türkiye, jeopolitik konumu itibari ile dünyanın en riskli bölgelerinden birinde bulunmaktadır. Bu konumun yaşattığı tehditler ülkemizi, askeri güç açısından caydırıcı bir pozisyon almasını sağlamıştır. 3238 sayılı kanun ile 1985 yılında Savunma Sanayii Müsteşarlığı’nın kurulması ile Türk Savunma Sanayii sektörü gelişim içerisinde olduğunu kanıtlamıştır. Aynı zamanda Türk Savunma sanayii ürün ve pazar çeşitliliği bakımından gayet büyük bir potansiyele sahiptir. Bu gücünün geliştirilmesi ve ihracat düzeyinin artırılması için yeni yöntemlere ihtiyaç vardır. Çalışmada, Savunma Sanayisinde önem arz eden ülkelerin savunma sanayi ve ihracat yöntemleri dikkate alınarak aktif olan savunma sanayisinin ihracat düzeylerinin geliştirilmesinin nasıl sağlanacağı açıklanmıştır.

3.3. Savunma Sanayi Sektöründe Türkiye’yi İnceleyen Çalışmalar

Ziylan (2001), Bir ülkenin savunma gücü; ulusal silahlı kuvvetleri ve bu kuvveti destekleyen güçlü bir savunma sanayiinin varlığına bağlıdır. Savunma sanayiinin gücü ise ülkelerin teknolojik düzeyi ile doğru orantılıdır. O halde amacımız ülkemizin teknolojik düzeyini yükseltmek olmalıdır. Özgün teknoloji üretimi Devletçe desteklenmeli ve Türk Savunma Sanayii Politikası ve Stratejisi Esaslarında belirtilen ilkeler aynen uygulanmalıdır. Sezgin (2018), Savunma sanayi sektöründe üretilecek olan mal ve hizmetler yapıları itibariyle tam rekabet koşullarının işlemediği piyasalardır. Genelde alıcının sadece devlet olduğu monopson koşulları geçerlidir. Alıcının ve satıcının tek olduğu monopol-monopson durumlarda yaygın olarak görülür. Bu piyasada etkinlik koşulları çoğu zaman sağlanamamaktadır. Pınar (2018), Türkiye'nin savunma sanayi sistemlerine daha önem vermesinin doğru olacağını vurgulayan çalışmada Türk Savunma Sanayi'nin gelişiminde Türk dış politikasının ne derece önem arz ettiği açıklanmaya çalışılmıştır ve Türk dış politikasının savunma sanayi üzerinde olumlu yönden herhangi bir etkisi olup olmadığı sorusuna cevap aranmaktadır. Sonuçta çok eski dönemlere gitmeden incelemeler yapıldığında Türkiye'nin savunma sanayi alanındaki gelişmelerin Türk dış politikasını olumlu yönde etkilediği sonucuna varılmıştır.

4. SAVUNMA SANAYİNİN EKONOMİK ETKİLERİ

Bir ülkenin güçlü bir savunma sanayiye sahip olması o ülkenin güçlü bir ekonomisi olduğunun önemli bir göstergesidir. Aynı zamanda bu güçlü savunma sanayiye yine güçlü bir ekonomi ile desteklemek devamlılık açısından önemlidir (Canbay, 2010: 15). Savunma sanayi sektörü alanında yapılacak her türlü yatırım, Türkiye'nin ekonomik anlamda gelişmesi sağlayacağı projelerle birlikte ele alınmalıdır. Savunma sanayi sektöründe teknik açımda gelişmişlik gösteremeyen ülkeler dış dünyadan sürekli bir yardıma ihtiyaç duymaktadır. Bu durumdaki ülkeleri dış borca sürüklemektedir ve savunma sanayi dış ticarete büyük bir öneme sahiptir. Bu nedenle savunma sanayi ülkelerin ekonomik gücü ile doğru orantılı bir şekilde güç kazanmaktadır. Savunma sanayinde gelişmiş bir ülke sektörünün ihtiyaçlarını karşılayacak gücü elinde bulunduruyor demektir (Şişman, 2017: 228). Savunma Sanayi sektörü performans verilerinde tüm alanlarda ciro, yurt dışı satış gelirleri, alınan siparişler, ithalat, ürün ve teknoloji geliştirme harcamaları ve istihdamda pozitif gelişmelerin olduğu ve sektörün gelişme gösterme sürecine girdiği söylenebilmektedir. İthalat düzeyinde yaşanan artışın sektörün cirosu ile karşılaştırıldığında paralel bir gelişme içerisinde olduğu gözlemlenmektedir.

Tablo 1: 2018 Yılı Performansına Genel Bakış

Ciro	8.761 Milyon \$
Yurtdışı Satış Gelirleri	2.188 Milyon \$
Alınan Siparişler	12.204 Milyon \$
İthalat	2.449 Milyon \$
Ürün-Teknoloji Geliştirme	1.448 Milyon \$
İstihdam	67.239 Milyon \$

Kaynak: 2018 yılı Sektör Performans Raporu, SASAD.

2017 yılında savunma sanayi alanında faaliyet gösteren kişi ve kurumların aldığı yeni sipariş tutarı 8.055 M\$ idi. Bu tutarda 2018 yılında bir artış (51,51%) oluşmuş ve alınan siparişlerin toplamı 12.204 M\$ civarında gerçekleşmiştir. 2017 yılı ihracat tutarı 1.739 M\$, 2018 yılı ihracat tutarı ise 2.035M\$ ile önceki yıla oranla %17'lik bir artış göstermiştir. 2018 yılında %34,4 lük bir artış oluşmuştur. Yurtdışı satış gelirlerindeki en büyük payın diğer ülkeler pazarlarında olması sektör oyuncularının Pazar oluşturma çabalarının pozitif ilerlediğinin göstergesi olarak değerlendirilmesi daha doğru olacaktır. 2013-2018 yılları arasında Bileşik Yıllık Ortalama Büyüme Hızı 5,6% olarak tespit edilmiştir. 2012-2017 yılları arası için %2,32'idi. 2018 yılındaki olumlu gelişme bu veride de önemli bir düzelme sağlamıştır.

Tablo 2. Son 6 Yıl Toplam Yurtdışı Satış Geliri Tablosu

Yıllar	Toplam	%Değişim (2013)	%Değişim (Yıllık)
2013	1.570 \$		
2014	1.855 \$	%18,15	%18,15
2015	1.929 \$	%22,87	%3,99
2016	1.953 \$	%24,39	%1,24
2017	1.824 \$	%16,18	%-6,62
2018	2.188 \$	%39,36	%20,2

Kaynak: 2018 yılı Sektör Performans Raporu, SASAD

İthalatta, 2017 verisine göre 59% artış yaşanmasının nedeni olarak artan toplam satış tutarı içerisindeki yurt dışı girdi miktarı düzeyinin seviyesi ile ilgili olduğu değerlendirilmektedir. Sektöre yönelik siparişlerin ağırlıklı olarak yurt içinden geldiği, yurt dışı bağlantıların henüz istenilen (beklenen) düzeye ulaşamadığı düşünülmektedir. Yurt dışı pazarlarda daha önemli gelişmeler sağlamak için sanayi sektörü ile devlet ikili

ilişkisi büyük önem taşımaktadır. Şekilden de görüldüğü üzere 2018 yılında ithalat rakamı 2,449 milyon \$ seviyesine ulaşmıştır. İthalatın %50,6'sı Avrupa'dan, %41,8'i ABD'den, %7,6'sı ise diğer ülkelerden yapılmıştır (Savunma ve Havacılık Sanayi Performans Raporu, 2018). Şekilden de görüldüğü üzere 2018 yılında ithalat rakamı 2,449 milyon \$ seviyesine ulaşmıştır. İthalatın %50,6'sı Avrupa'dan, %41,8'i ABD'den, %7,6'sı ise diğer ülkelerden yapılmıştır (Savunma ve Havacılık Sanayi Performans Raporu, 2018).

Şekil 5. İthalatın Gelişimi 2013-2018 (Milyon \$)

Kaynak: 2018 yılı Sektör Performans Raporu, SASAD.

5. SAVUNMA SANAYİDE EKONOMİK SORUNLAR

Savunma sanayi sektöründe gösterilen gelişmeler bir ülkenin politik olarak ilerlemesine katkı sağlayacaktır. Her ülkenin yaptığı savunma harcamaları ekonomi üzerinde etkisini devamlı olarak göstermektedir. Bu sebeple yapılan birçok araştırmada savunma sanayi sektörünün işsizlik, enflasyon, dış ticaret, ekonomik büyüme gibi göstergelerle arasında ki ilişkiler ele alınmaktadır. Aynı zamanda savunma harcaması yapacak olan devletlerin ülkenin içerisinde bulunduğu ekonomik ortamında alacağı kararlarda etkili olacağı düşünülmektedir (Çıkmalar, 2006: 121). Savunma harcamalarının önemini vurgulayan çalışmalarının yanında ekonomi olumsuz etkilediği görüşleri de mevcuttur. Bu gibi düşünceler makine-teçhizat ve savunma sektörüne yapılan diğer harcamaların ekonomi üzerinde olumsuz etkileri olduğu görüşündelerdir (Demir, 2001: 13).

Gelişmiş bir savunma sanayi sektörüne sahip olan ülkelerin savunma harcamalarını yaparken ekonomik göstergelerden etkilenmediği anlaşılmaktadır. Aynı zamanda gelişmekte olan bir ülkenin savunma sistemlerinin ne kadar gelişmiş olduğu ülkenin kişi başına düşen gelir seviyesi ile paraleldir. Bir ülkenin savunma sanayisi gelişme göstermiyorsa sektör ihtiyacını dışarıdan sağlıyor demektir. Ancak gelişmekte olan ülkelerde savunma sanayi sektörü ülkenin dış dünyaya karşı aldığı tehditleri önlemek için kullanılan bir sistem olma amacının dışına çıkamamaktadır (Gümüşdaş, 2010: 89).

5.1. İstihdam Sorunu

Savunma sanayi ve istihdam arasındaki ilişki ülkelerin ekonomilerini anlama konusunda önemli bir gösterge haline gelmektedir. Savunma sanayi sektörüne yapılacak olan her bir harcama talepte artış sağlayacak ekonomi ilerleyeceği için istihdam düzeyinde de artış görülecektir. Bu durumda paralel bir ilişki olduğu sonucu ortaya çıkacaktır.

Şekil 7. Savunma Harcamaları ve İstihdam Oranı

Kaynak: World Bank, <https://data.worldbank.org>, 1991-2019.

1991-2019 yılları arasındaki Türkiye'nin savunma harcaması düzeyleri ve istihdam oranları şekil üzerinde hazırlanmıştır. Şekle göre savunma harcamalarında gerçekleşen artışın istihdam oluşturma açısından negatif bir etki gösterdiği ortaya çıkmaktadır. Bu sebeple istihdam ve savunma harcamaları düzeyleri arasındaki ilişkininde negatif olduğunu söylemek mümkündür. Yıllar itibari ile istihdam düzeyinde sürekli bir artış yaşanırken savunma harcamaları azalma eğilimindedir. Şekilde 1993 yılı incelendiğinde iki faktör arasındaki ilişkinin aksi bir durumla karşılaştığı görülmektedir. Savunma harcamaları ve istihdam oranları arasındaki negatif yönlü ilişkinin sebebini savunma harcamalarının niteliğine bağlamak mümkündür. Çünkü sektöre dair harcamalar incelendiğinde savunma harcamalarının aslında büyük bir kısmının çalışan harcamalarını içerdiği görülmektedir. Savunma harcamalarına yatırım yapmak isteyen ülkeler sermayesi yüksek, ileri teknoloji ile oluşturulan silahlar ve makineler için bütçe ayırmak zorunda kalmaktadır ve buda istihdamı negatif yönde etkilemektedir. Aynı zamanda istihdamı olumsuz etkileyen bir diğer nokta ise sermaye yoğun bir üretim sağlanacağı için nitelikli işgücüne olan ihtiyaç artacaktır. Bu durum Türkiye gibi gelişmekte olan ülkeler için olumsuz sonuçlar doğurmaktadır (Budak, 2018: 34).

5.2. Tedarik Sorunu

Savunma sanayi üzerine yapılan bir araştırmada göz ardı edilemeyecek bir konuda tedarik süreci ve savunma sanayi sektörü arasında oluşan bağlantıdır. Ülkede savunma sanayinin geliştirilmesi ve bir sistem dahilinde faaliyet gösterebilmesi tedarik süreci ile bağlantılı bir şekilde işlemek zorundadır (Ziylan, 1998: 130). Tedarik faaliyetlerinin tek merkezden yapılmaması veya merkezileşmenin sağlanamaması, tedarik makamının gücünü azaltmaktadır. Buna karşın tek elden yönetime dair hala bir kuruluş varlığını sürdürmemektedir. Bu sebeple sanayileşme süreci bu durumdan negatif etkilenmek durumundadır (Demirel, 2012: 22). Körfez Savaşı bilinen ilk bilgi savaşlarından biri olma özelliği taşımaktadır. Savaşın dönüşüm içerisine girmesine sebep olduğu bir alanda tedarik sürecidir. Buda demek oluyor ki donanımdan ziyade artık yazılım tedariki önemli hale gelecektir. Tedarik sürecinin yazılım kısmında güvenilirliğin sağlanamaması sürecin doğru işlememesi adına yapılacak ilk yanıştır. Tedarik politikalarının zamanla dönüşüm geçirip teknoloji ile birlikte kendi yenilemesi gerekir sürekli aynı politikaları kullanmak risk oluşturmaktadır. Savunma sistemlerini karşılaştıkça negatif bir duruma karşı önlem alabileceği bir tedarik politikası içerisinde kurmak gereklidir (Ziylan, 2004: 83).

Sektörün ihtiyaçlarının belirlenmesi tedarik aşamasında büyük bir öneme sahiptir. Ancak sanayi ile bağlantılı bir şekilde tedarik süreci başlamadan direk satın alma başlamakta ve ihtiyaç dışında satın almalar gerçeklemektedir. Sistem doğrudan alma üzerine kurulu olması sebebi ile herhangi bir şekilde uygulamaya konacak AR-GE çalışmaları zaman alan bir süreç olması sebebi ile bu tarz çalışmaların önünde engel teşkil etmektedir. Oluşturulan tedarik programları her adımı içine alan bütünsel bir yaklaşım ile sürdürülememektedir. Dolayısıyla her aşamada yapılması gereken incelemeler detaylı bir şekilde ele alınamamaktadır. Buda bitmiş bir ürünün tedarikinin son safhada anlaşılmasına neden olmakta ve hem alıcı hem de satıcı mağduriyet yaşamaktadır (Ziylan, 1998: 70).

5.3. Pazar Sorunu

Savunma sanayi sektöründe müşteri konumunda bulunan kesim devlettir. Bu bir manada savunma sanayi sektörünü diğer sektörlerden farklı kılmaktadır. Devletin tek alıcı olması konusu firmaların teşvik, istihdam, teknoloji gibi alanlarda başvuracağı tek merkez olması demektir (Canbay, 2010: 11). Savunma sanayi sektörünün pazar içerisinde var olmasını destekleyen en önemli unsurlardan biriside milli kaynaklar aracılığıyla yürütülen bir sistemin oturtulmasıdır. Standardizasyon ihtiyacı, fiyatlardaki yükseliş, ekonomide yaşanan durgunluk, korumacılık, ülkeler arasındaki teknolojik ilerleme düzeylerinde yaşanan farklar Türkiye'yi ve diğer Avrupa ülkelerini kimi zaman standart bir silah pazarı oluşturma fikrine yöneltmiştir. Silah sistemleri (tabanca, tüfek, telsiz vs.) üretimi yüksek miktarlarda yapılırken havacılık, komuta kontrol, elektronik harp gibi alanlarda üretim sınırlı bir şekilde yapılmaktadır. Çünkü bu tarz sistemlerin üretimi için uzman bir kadro ve uzun bir zaman gerekmektedir (Gümüüşdaş, 2010: 22).

Sektörün üretiminde yaşanan zaman sorunları üretimin uzun bir dönemde gerçekleşmesine neden olmaktadır. Yaşanacak herhangi bir aksaklıkta stok olarak yan ürün veya hammadde miktarı normalden fazla tutulmak zorundadır. Bu da üreticinin parasını yüksek miktarlarda işletmek zorunda kalması demektir. Hem mali olarak yük olması hem de zaman alması sebebi ile üretici firmalara bir finansman sorunu yaratması sektörün önemli bir sorunudur (Uzun, 2007: 16). Savunma sanayi pazarı önemli ölçüde

dış ilişkiler kuran bir pazar oluşturmaktadır. Türkiye'nin ikili anlaşma gerçekleştirdiği her ülke ile sağlam bir temel oturtması gerekmektedir. Herhangi bir sektörde yaşanan ihracat-ithalat ilişkisinden ziyade diplomatik bir ilişki yaşanmak zorundadır. Pazarlama gerçekleştirecek her üretici firma sektöre dair fuarlara katılma bilincinde olmalıdır. Savunma sanayi sektöründe gizlilik konusunun öneminden kaynaklı olarak bu tür etkinliklerde sakıncalı bir durum yaşanması da ihtimaller arasındadır (Zengin, 2010: 15).

5.4. Nitelikli Eleman Temini Konusunda Oluşabilecek Sorunlar

Ülke içerisinde modern bir silah sistemi oluşturmak için gerekli olan en önemli koşullardan birisi nitelikli elemanın varlığıdır. Savunma sanayi sektörü incelendiğinde üretim sürecinde kalifiye elemanın işgücünde etkin olarak faaliyet gösterdiği anlaşılmaktadır. Dış ilişkilerde teknoloji takibini yaparak bağlantılar kurmak bu aşamada konunun ne denli önemli olduğunu gösteren bir gerçektir. Bu sebeple çalışanları teşvik edici belirli eğitimler yardımı ile işgücünü canlı tutmak gereklidir. Nitelikli işgücü oluşturulmaya çalışırken bu işgücünün sivil ekonomide bir istihdam kaybı yaratacağını da söylemek mümkündür (Saraçöz, 2018: 28).

Savunma sanayinde ileri düzey teknoloji kullanma ihtiyacı, sektörde faaliyet gösteren kuruluşların üretim, kalite, kontrol ve daha birçok alanda nitelikli eleman çalıştırması gerektiği anlamına gelmektedir. İşgücünün beklentilerini karşılayamayan sektörde beyin göçü gibi durumlarla karşılaşmak çok rastlanılan bir durum haline gelmektedir. Ayrıca ürünün yapım aşamasının uzun zamanlar alması yine işgücünü başka sektörlere doğru kaymasına sebep olmaktadır (Keskin, 2007: 16). Türkiye'de iyi üniversitelerde eğitim alan ve mezun olanlar içerisinde birçok yetenekli insan gücü bulunmaktadır. Ancak bu sayı sektör için yeterli düzeyde değildir. Bu yetenekli insan gücünü beyin göçü ile kaybetmemek adına planlı bir sistem kurarak bu kişilerden en üst seviyede fayda sağlanması gerekmektedir. Savunma sanayi alanında faaliyet gösteren kuruluşların alt dallarının sayısında artışa gidilmeden aksine daha az alt dal ile nitelikli elemanların kuruluşlar içerisinde dağılmasını engellemek gereklidir (Uzun, 2007: 111).

6. SİYASAL VE SOSYAL SORUNLAR

Her ülkede olduğu gibi Türkiye'de siyasi rejim savunma sanayi sektörünü etkileyen önemli unsurlardandır. Savunma hizmetleri tam kamusal mal olarak değerlendirildiğinden sektörde arz veya talepte yaşanan değişiklikler siyasi otoriteler aracılığı ile dengelenmektedir. Bu durum siyasi otoritenin tamamen bütçe hakkında tek başına karar vermesi demektir. Örneğin; Soğuk Savaş döneminde yaşanan silahlanma ve harcama düzeylerindeki artış diğer ülkeleri de risk altına sokmuştur. Diğer ülkeler aynı şekilde silahlanmaya gitmek zorunda kalmıştır. Devamında Rusya'nın siyasi rejiminin değişmesi ile risk azalma eğilimine geçmiştir ve birçok ülke silahlanma ve harcama düzeylerini düşürmüştür (Budak, 2018: 12). Siyasal sorunlar olarak; sıcak ve soğuk savaş tehditleri, siyasi otoritelerin çıkarları adına adım atmaları, seçim dönemlerinde politik ekonomiler uygulanması, çıkar ve baskı gruplarının devletten fayda sağlama stratejileridir. Sosyal sorunlar ise; nüfusun artışı, gelir dağılımında yaşanan dengesizlikler, geri kalmış bölgeler sorunu, konut sorunu, terör, sosyal yardım ve hizmetlerin sağlanmasında yaşanan aksaklıklar, sosyal güvenlik hizmetleri, teknolojik değişimler olarak sıralanabilir (Çıkinlar, 2006: 12).

6.1. Coğrafi Konum Sebebi ile Oluşabilecek Sorunlar

Jeopolitik kavramı, ülkelerin uyguladıkları politikaları ve coğrafi konumlarını belirleyen ilişkileri anlatan bir kavram olarak açıklanır. Türkiye'nin içerisinde bulunduğu coğrafi konumu ülkeyi devamlı olarak savunma yapma mecburiyetinde bırakmaktadır. Bu sebeple de ülkenin savunma yatırım düzeylerinde önemli yükselişler yaşanmasına engel olmaktadır. Soğuk Savaş döneminde savaşın sona ermesi itibari ile oraya çıkan jeopolitik boşlukla Orta Asya, Orta Doğu, Balkanlar ve Kafkaslar gibi bölgelere yeni roller yüklenmesine sebep olmuştur. Türkiye'de bulunduğu konum sebebi ile bu karmaşık durumdan kendisini soyutlayamamaktadır (Bayraktar, 2019: 17). Türkiye, Asya ile Avrupa kıtalarını birbirine bağlayan, birçok ülkenin ticaret yaptığı güzergâh üzerinde konumlanma özelliği taşıyan bir ülkedir. İstanbul ve Çanakkale boğazları Türkiye'nin Karadeniz'de ticaret yapabilmesinde önemli rol oynamaktadır. Aynı zamanda petrol rezervi olan ülkeler ile komşu konumundadır. Bu durum savunma harcamalarının yönlendirilmesinde etkili bir faktördür (Budak, 2018: 10).

Bazı ülkelerin Türkiye'ye karşı yaptıkları girişimler ve aynı zamanda ülke içerisinde yaşanan terör gibi bölücü faaliyetler ülkenin iktisadi olarak belli seviyelerin üzerine çıkması gerçeğini gözle önüne sermektedir. Bu sebeple Türkiye'ye komşu pozisyonda yer alan ülkeler ile olan politikalarda sıfır sorun seviyelerini görmek gerekmektedir. Son birkaç yılda İran, Irak ve Suriye gibi ülkelerle yaşanan sorunlar artık dış politikadan ayrı olacak şekilde bir yol izlenmesi gerektiğini göstermektedir (Doğdu, 2018: 53). Türkiye'nin jeopolitik, jeostratejik konumu ve ülkenin kendi benliğine yapılacak her türlü tehdit aslında savunma sektörünün ne denli geliştirilmesi gerektiğine farkındalık yaratan bir unsur haline gelmektedir. Her ülke gibi Türkiye'de bu tür tehditlere karşı kendisini korumak adına yapılan tehdit boyutunda savunma harcama düzeyini de buna paralel olarak arttırması gerekmektedir (Gümüşdağ, 2010: 82). Sonuçta Türkiye gibi jeostratejik konumda yer alan bir ülke aynı zamanda istikrar ve bütünleştirici rol oynamaktadır. Bunu sürdürülebilir hale getirmek ülkenin uygulayacağı savunma politikaları sağlanacaktır

6.2. Yer Seçimi Konusunda Oluşabilecek Sorunlar

Kamu ve TSK bünyesindeki savunma sanayi kuruluşları, kâr amacı güden ticari kuruluşlar olmadıklarından, sanayi işletmeciliğinin gerektirdiği hızlı hareket kabiliyetine sahip değildirler. Karar alma süreçleri bir hayli uzundur. Yüksek teknolojik imkân ve kabiliyetlere sahip bulunmasına rağmen sivil amaçlı üretimleri düşük seviyededir. Araştırma ve geliştirmeleri yok denecek ölçüdedir. Dışa bağımlılığı azaltabilecek kalifiye personel ile güncel teçhizat yatırımlarından ve teşvikten yoksun fakat istihdam ve kapasite yönünden savunma sanayii alanındaki en büyük milli kuruluşlardır. Kamu Sermayeli Savunma Sanayii ve Vakıf Kuruluşları, büyük bir bölümü sınırlı parasal güce sahip, sektöre hevesli ancak, elinden tutabilecek teknolojik bilgi ve stratejilere sahip güç ve imkanlardan yoksun bulunmaktadır. Yabancı Ortaklı Özel Sektör Kuruluşlarının tamamı belirli bir proje için kurulmuş ve sadece projede öngörülen üretimi yapmak üzere faaliyet gösteren kuruluşlardır. Bu kuruluşlar, amaçlanan teknoloji üretimine yeterli ilgi gösterememekte, güç ve gayretini sözleşmelerdeki montaj ağırlıklı sayısal üretim misyonları ile sınırlı tutmaktadır (Canbay, 2010: 50-114).

Savunma sanayiindeki bir firmanın riski, silah geliştirme veya üretimi için yapılan sözleşmenin herhangi bir nedenle iptal edilme veya tekrarlanmama ihtimalindeki belirsizlikten oluşmaktadır. Savunma sanayii firmaları için, sahaların her birinde en son kararlar, genellikle devletin ilgili kadrolarına aittir. Yönetim kadrosu, üretilecek silah ve miktarı, ürünün fiyatı ve müşterinin seçimi hakkında bağımsız olarak karar veremez. Savunma sanayii firmalarının Gayri Safi Milli Hasıla (GSMH) üzerindeki etkisinin pek önemi yoktur. Çünkü gerek günlük hayat gerekse ilerideki üretim için faydalı olmayan mal ve hizmetleri kapsamaktadır. Bu nedenle askeri çıktılar bunun tipik örneğini oluştururlar. Savunma sanayii firmaları genel olarak sivil üretime tamamen dönüşüm esnekliğine sahip değildirler. Bu firmalar, karmaşık teknolojilere sahip mallar üreten modern tesislere ve yüksek nitelikli işgücüne sahiptir. Savunma sanayi üretimi için mevcut fabrikalarda özel üretim hatları kurulmakta, hatta bazı durumlarda yeni ve özel üretim tesisleri yapılmaktadır. Birçok kez, projeler için teklif verme çalışmaları bile birkaç milyon dolarlık bir harcamayı gerektirmekte ve bu kapsamda müşterinin önerilen sistemleri incelemesi, değerlendirmesi ile aday sistemlerin test edilmesi bazen yıllarca sürmektedir. Fiziki yetersizlikler ve arsa temini konusu sektörün faaliyet gösterdiği yerlerde örneğin; dağlık ve ormanlık bir yapıya sahip olunması sektörü olumsuz yönde etkileyen unsurlardandır. Bu sebeple üretim alanı sınırlı kalmaktadır. Kuruluş yerleri için üretime özel sanayi sitesi oluşturulması gerekmektedir (Keskin, 2007: 20).

6.3. Ar-Ge ve İnovasyon Sorunu

Savunma sanayi sektöründe teknoloji ve katma değeri yüksek olan sektörlerdendir. Sektörde üretim yapmak firmalar için maliyetli olmakta ve Ar-Ge konusunda her firma merkezi yönetimler aracılığıyla desteklenmek durumunda kalmaktadır. Devler firmaları desteklerken yapılan Ar-Ge faaliyetlerini askeri alanda kullanmak amacı da gütmektedir. Ayrıca savunma sektöründe devlet aslında önemli müşteridir. Üretilecek silahların kalitesinin ve performansının önemi firmaların ileri teknoloji kullanması zorunluluğu yaşamalarına sebep olmaktadır. Talep odaklı bir sektör olması sebebi ile devlet firmaları hangi alana yönlendirirse o alanda üretim yapmak durumundalardır (Baran, 2018: 70). Savunma sanayi sektöründe eğitim, kalifiye eleman, öğrenme ve donanım gibi alanlarda yapılacak yeni girişimler aslında Ar-Ge için bir kaynak oluşturulmasının gerekliliği göstermektedir. Sektörde o gün en iyi silah sistemlerine sahip olan bir firma bir süre sonra o sistemin kullanım dışı olarak görülmesi sorunuyla karşı karşıyadır (Canbay, 2010: 150). Ar-Ge faaliyetleri gerçekleştirilemeyen bir ülke aslında yabancı bir şirketin oluşturduğu silah

sistemleri ile ilerlemektedir. Sektöre dair bir diğer sorun tedarik faaliyetlerinin Ar-Ge merkezli olarak gerçekleştirilmemesidir. Ülkemizde maalesef ileri düzeyde bir Ar-Ge yapılanmasından söz edilememektedir (Özlü, 2006: 303).

Sektörde faaliyet gösteren firmalar Ar-Ge konusunda diğer sektörlerden daha önemli adımlar atmak durumundadır. Firmanın mevcut sistemleri ilerleyen teknoloji ile değerini kaybetmekle karşı karşıya kalacaktır ve bu durumda eldeki sistemleri kullanmak mümkün olmayacaktır. Bu doğrultuda firmaların sürekli bir gelişim halinde olup teknolojiyi takip etmesi ve Ar-Ge faaliyetlerine ağırlık vermesi gerekmektedir (Salman, 2019: 23). Savunma sanayi sektörünün Ürün ve Teknoloji Geliştirme harcamalarında önceki yıllara göre artmaya devam etmesi ileriye dönük beklentileri olumlu yönde etkileyecektir. Ürün Geliştirme ile Teknoloji Geliştirme harcamaları incelendiğinde diğer yıllara benzer olarak Ürün Geliştirme ağırlıklı şekilde ilerletilmektedir. SSB'nin üzerinde çalıştığı Üretim Teknolojilerini Geliştirme Programı Teknoloji Geliştirme Çalışmalarına olumlu yönde etkili olacağı düşünülmektedir. Tablo 4'de Ürün ve Teknoloji Geliştirme harcamalarındaki toplamda pozitif ilerlemeyi, öz kaynaktan yapılan harcamalar ile birlikte görebilmek mümkündür. 2018 yılında 289 M\$ olan özkaynak karşılıkları 2019 yılına gelindiğinde 331 M\$ olduğu görülmektedir. 14.5% oranındaki artış öz kaynak harcaması olması nedeni ile önemlidir. Proje kaynaklarından ve teşviklerden desteklenen harcamalarda ise 23%'lük artış olduğu görülmektedir. ÜGTG çalışmalarına devlet desteğinin yoğun bir şekilde devam ettiğini söylemek mümkündür.

Tablo 4. Ürün ve Teknoloji Geliştirme Harcamaları (Milyon \$)

Kaynak: SASAD Performans Raporu, 2019

6.4. Savunma Sanayinde Offset Uygulamaları Sorunu

Offset kelimesi, yüksek teknoloji ile ilerleyen savunma sanayi gibi bazı sektörlerin ödemeler dengesi üzerinde yaratacağı negatif etkileri gidermek için ihracat ve döviz düzeyinde artış yaşanmasını sağlayacak işlemler olarak açıklanabilir. Bu dönemde offset uygulamaları ülkelerin döviz kıtlığından çıkmaları, sanayi standartları ve düzeylerini attırarak ülke içinde katma değer yaratarak rekabet gücünü mal ve hizmet düzeyinde yükseltmeyi sağlamaktadır (Saraçöz, 2018: 40).

Türkiye'de offset uygulamalarını iki şekilde görmek mümkündür. Bunlar; doğrudan ve dolaylı olmak ayrılmaktadır. Doğrudan uygulamalarda ithal edilen ürün ve bu ürün ile benzer özellikler taşıyan başka bir ürünün offset yükümlülüğü olan firma aracılığıyla ihraç edilmesidir. Dolaylı off-set, ülkede var olan ihraç edilmesinde sorun yaşanan ürünlerin ihale ile bir firmaya aktarılıp firmanın ürünü kendi piyasasında tutması veya ihracata konu etmesi olarak gerçekleşen bir piyasa sürecidir. Her devlet ithal ettiği ürünlerde yaşanacak herhangi olumsuzluğun önüne geçebilmek için offset uygulamalarını tercih ederler. Gelişmekte olan birçok ülke döviz kıtlığı sebebi ile birçok alımda bu uygulamalara yönelmektedir. Ancak bu sadece gelişmekte olan ülkelerin bu uygulamaları yaptığı anlamına gelmemelidir. Yapılan uygulamalar ülke içerisinde yer alan teknolojik gelişmelerle doğru orantılı ilerlemektedir ifadesi yanlış bir görüş olmayacaktır. Bu bağlamda yapılan kontratın derecesi, rekabet düzeyleri fark etmeksizin ikili olarak bir anlaşma sağlamamış bir ülkenin tam manası ile uygulamalardan faydalanabilmesi mümkün olmayacaktır. Offset uygulamalarının gelişmekte olan bir ülkede neden yapıldığı sorusuna cevap olarak istihdam düzeyinde yeterli seviyeye ulaşma hedefi, teknoloji düzeylerinin artırılması, ödemeler dengesinde olumlu etkiler yaratılması verilebilir (Özlü, 2006: 311).

Offset uygulamalarında aksayan durumları sıralamak gerekirse; SSB ile MSB arasında düzenli koordinasyon kurulmaması çünkü SSB faaliyetlerini bağımsız olarak yürütmektedir. SSB geniş çaplı olarak bir değerlendirme yapma konusunda yeterli ihtisas sahibi değildir. Ticaret Bakanlığı dolaylı offset uygulamalarına daha yakın bir pozisyon da görünse de offset uygulamalarına karşı aktif olmadan gözlem yaparak devam etmeyi tercih etmektedir. Ancak son durumda aktif bir rol almanın gerekliliği göz ardı edilemeyecektir. Uygulanacak offset adımları birlikte hareket etme ve yetki konusunda yetersizlik sebebi ile doğru bir şekilde ilettilmesinde güçlük yaşanmakta ve bazı kayıplar yaşanmasının önüne geçmek mümkün olmamaktadır (TÜSİAD, 1999: 66).

6.5. Kopya Sorunu

Savunma sanayinde kopyalanan ürünlerin orijinali üretilen ülkenin ihracatında veya üretiminde aksaklık yaşamasına sebep olmamaktadır. Çünkü kopyalanan ürün hiçbir zaman üretilen ülkedeki kadar verimli bir kullanım sağlamayacaktır. Ürünlerin kopyalanmış olduğu gerçeği kopyayı yapan ülkenin prestijini zedelemenin yanında asıl üretici firmalara prestij sağlamış olacaktır. Buda kopya yapan ülke için önemli bir sorun haline gelecektir. Savunma sanayi sektöründe geride kalan veya sektöre yeni girmiş firmalar tarafından kopyalama ürün kullanımının yüksek olduğunu söylemek mümkündür. Örneğin; NUROL Makine tarafından geliştirilen Ejder Yalçın isimli zırhlı araç Özbek bir firma tarafından kopyalanmaya çalışıldığı kamuoyuna yansımıştır. Buradaki önemli husus kopya ile karşılaşılan durumlarda sorun firma ile sınır kalmakta bu durum kopya gerçekleştirilen ülkenin kendisini bağlamamaktadır. Kopyayı yapan firmaların ana hedefleri buldukları coğrafyada ve daha fazlasında pazar payına sahip olabilmektir. Yine aynı şekilde OTOKAR tarafından geliştirilen kendini kanıtlamış kobra, geçmişte Çinli bir firma tarafından kopyalanmaya çalışılmış bir diğer Türk zırhlı araçtır. Çinli bir firma tarafından kopyalanmaya çalışılan kobra zırhlı araca Çinli firma Wolf adını verdi. Savunma sanayinde kopya Türk savunma sanayinde karşılaşılan bir durum haline gelmektedir. Ancak ülkelerin kopyaladıkları ürünü kendi ihtiyaçlarını görmek dışında sağladığı fayda yoktur. Çünkü hiçbir kopya ürün aynı başarıyı yakalayamamaktadır. Çinli firmanın Wolf zırhlı aracında iç pazarda ihtiyaçları karşıladığı ancak ihracat yönünden herhangi bir ilerleme kaydedemediği gözlemlenmektedir (Savunma Hattı, 2021).

6.6. Terör Sorunu

Türkiye gibi birçok ülke güvenlik ihtiyacı karşılamak için yapacağı harcamaları savunma hizmetlerine giden bir kaynak olarak görmektedir. Bu durumda ülkede etkinlik sorunu ile karşı karşıya kalmaktadır. Savunma sanayi sektörüne yapılan her bir harcama hem ülkenin içerisinde hem de dış dünyada söz hakkı almasında önemli rol oynamaktadır. Bu bağlamda harcamaların bir egemenlik unsuru ifade ettiğini söylemek mümkündür. Böylece savunma sanayiye yapılan harcamalar bazen ülkelerin milli gelirlerinden taviz vermesine bile sebep olabilmektedir. Bu alanda araştırma gerçekleştiren Özçelik vd. terörizmin savunma harcamalarına olan etkisini analiz etmektedir. 126 ülkeyi baz alarak yapılan çalışmada 10 milyon kişi başına düşen terör olayları sayısı ile bir inceleme gerçekleştirilmiştir. Bu incelemede sayı ne kadar fazla ise aslında terör riski algısının da o derece arttığını göstermektedir. Ülkeler bazında bakıldığında yüzölçümü büyük ülkelerin savunma harcamalarının daha miktarda olduğu görülmektedir. Aslında yüzölçümünün harcamaları arttırdığı düşüncesinin doğru olmadığı açıklanmaktadır (Özçelik ve Önder, 2016: 38).

Her bir terör olayı ülkenin güvenlik konusunda tedbirler alması gerektiğine dair bir işarettir. Türk Silahlı Kuvvetleri ve Emniyet Genel Müdürlüğü'nün ülke içerisinde ve dışarısında gerçekleştirdiği operasyonlarda kullandıkları ekipmanlar konusunda tedarik sorunu ile karşı karşıya kalmaktadırlar. Buda her ülkenin ekipman temin etme de kendisinin rol oynaması gerektiğinin göstergesidir. Türkiye'nin Kıbrıs Barış Harekâtı sonrası ambargo süreci, PKK terörüyle mücadele ederken Irak ve Suriye merkezli yaşanan silah, politik ve ekonomik yaptırımlarda Türkiye'nin savunma sanayi alanında millileştirme politikalarını sürdürmesini gerektiren önemli sebeplerdir (Topal, 2020: 72).

6.7. Gizlilik Sorunu

Savunma sektörünün en önemli unsurlarından birisi stratejik bilgi konusunda gizli kalmaktır. Ülke içerisinde kullanılan savunma sistemleri sürekli olarak gizli tutulmaktadır. Aksi bir durumda ülkenin stratejik tüm bilgileri diğer ülkeler tarafından kullanılabilir bu durum kullanılan sistemlerin etkisini azaltmış olacaktır. Savunma sektöründe belirli bir düzeyi yakalayamayan ülkeler sistemlerini başka

ülkelerden sağlamakta ve sürecin tüm aksaklıklarıyla yine sistemi sağlayan ülke ilgilenmektedir. Gelişmiş ülkelere bakıldığında savunma sanayi firmalarında faaliyet gösteren üreticileri genellikle ülke içerisinde seçmeye tercih ettikleri görülür bu yine gizlilik konusunda sorun yaşanmaması adına atılmış adımlardır. Türkiye'nin bir dönem millileştirme politikaları yapmak amacıyla yabancı yatırımcılara ülke içerisinde yer vermemiştir. Ancak silah talebinde azalma konusu yatırımların düzeyini de negatif yönde etkilemiş bu durumda birçok firma kapanmıştır. Bu durumda gelişmiş ülkeler dışında diğer ülkelerin belirli sınırlar altında yabancı sermayeden yararlanması gerektiği sonucu çıkmaktadır. Gizlilik ilkesinin doğru ilerlemesi için ülkenin yeterli teknolojik düzeye sahip olması ve kaynak konusunda yeterli düzeyde olması gereklidir aksi takdirde doğru bir politika uygulanamayacaktır (Elemana, 2015: 12).

Savunma sanayiinde gizlilik kriteri son yıllarda üzerinde daha fazla durulan konu haline gelmektedir. Bu doğrultu da korunma amacıyla 29 Haziran 2004 tarihinde "savunma sanayi güvenliği kanunu" adı ile yeni bir kanun çıkartılmıştır. Ülkede var olan yabancı yatırımcıların firmalarda sahip oldukları hisseler aslında firmanın gizlilik konusunda bilgi sahibi olduğu anlamına gelmektedir. Bu durum ülkeyi yabancı yatırımcılara karşı bağımlı hale getirmektedir (Özlü, 2006: 300).

7. SONUÇ

Çeşitli sanayi kollarının bir araya gelmesiyle oluşturulan savunma sanayi sektörü her ülke için görmezden gelinmeyen bir sektör olarak bilinmektedir. Çünkü savunma sanayi sektörüne dair yapılan her bir yatırım ülke ekonomisine kalkınmasına da yapıyor demektir. Türkiye, henüz savunma teçhizatını tamamen karşılayacak bir pozisyonda olmasa da gelecekte yapılacak doğru adımlarla gerekli altyapıyı sağlaması mümkündür. Sanayileşme konusunda en önemli adımlardan birisi bilim ve teknolojiyi kullanarak ürün geliştirmektir. Türkiye'nin bunu doğru olarak yapması bütçe konusunda da iyileştirmeler yapabilmesi ile sonuçlanacaktır. Ülke içerisinde yapılan her üretim Türkiye için daha az maliyet demektir. Çalışmanın amacı, Türk savunma sanayinin gelişmesine engel olan unsurlar tespit edilerek değerlendirilmesidir. Savunma sanayide herkesçe öngörülen sebepler dışında göz ardı edilen veya henüz bahsedilmeyen sorunlarda ele alınmıştır. Türk savunma sanayinin gelişimi ile ilgili sorunlar, ekonomik sorunlar /politik ve sosyal sorunlar başlıkları altında detaylı bir şekilde incelenmiştir. Birinci başlık altında özellikle istihdam, tedarik ve pazar sorunları incelenmiştir. İkinci başlık adı altında ise terör, kopya, gizlilik, ar-ge konularında yaşanan sorunlar ele alınmıştır.

Bu çalışma Gümüşhane Üniversitesi, Bilimsel Araştırma Projeleri (BAP) Koordinatörlüğü'nce desteklenmiştir. Proje No: 20.F2911.02.01. "Türkiye'de Savunma Sanayi Sorunlarının Bütünleştirilmiş AHS-KFG Yöntemiyle Belirlenmesi ve Çözüm Önerilerinin Geliştirilmesi" başlıklı ve Doç. Dr. İskender Peker'in yürütücülüğünde sahadan yürütülmeye devam etmektedir. Savunma sanayi alanında faaliyet gösteren Girsan Makina ve Hafif Silah Sanayi Ticaret A.Ş (GİRSAN) ve Trabzon Silah Sanayi A.Ş (TİSAŞ) yetkilileri ile yüz-yüze görüşmeler gerçekleştirilmiştir. Bu görüşmeler neticesinde savunma sanayisinde öne çıkan bazı sorunlar tespit edilmiştir. Bunlar; savunma sanayi sektörünün yüksek enerjiye ihtiyaç duyması bunu Türkiye'de karşılayacak alt yapılara sahip olunmaması enerji konusunda ithalatı zorunlu kılacak sorunlar ortaya çıkarmaktadır ve buda devlet için artı bir yük haline gelmektedir. Teknik bilgi ve beceriyi geliştirecek okul, enstitü gibi eğitim kurumlarının yeterli sayı ve donanımda olmaması, bilgi ve donanım sahibi kişilerin beyin göçü durumlarına karşı engel koyulamamaktadır. Ülke içerisinde yaşanan terör gibi olayların ekonomiyi olumsuz yönde etkileyerek savunma sanayinin gelişmesinde engel teşkil etmesi, savunma sanayi sektöründe gizlilik ilkesinin var olması firmaların üretim sürecini zorlaştırmaktadır. Satın alınan mühimmat miktarının yüksek olmasına ve savunma sanayiye hizmet amaçlı alınmasına rağmen Makine Kimya Endüstrisinin fiyatlarını sivil kullanıcı ile eşdeğer tutmasından dolayı ürün test maliyetlerinin yüksekliği, tüfek üretimin de kullanılan bazı malzemelerin ülke içinde üretimi yapılmaması, kalifiye eleman sayısının az olması, tedarikçi sayısının azlığı dolayısı ile siparişlerde gecikme sorunu yaşanması olarak sıralanmaktadır.

Küreselleşme ve Geri Dönüşümü Olmayan Kredilerin İncelenmesi: Oecd Örneği¹

Kübra Aydın¹

¹ Kırkkale Üniversitesi Sosyal Bilimler Enstitüsü Maliye A.B.D. Yüksek Lisans Öğrencisi
kbraaydnli5@gmail.com, ORCID:000-0002-6535-3857

Özet: küreselleşme son yıllarda üzerinde durulan ve çokça tartışılan bir kavram haline gelmiştir. Özellikle 1980 yılından sonra yaşanan gelişmeler sonucu küreselleşme her durumun kaynağı haline gelmiş ve her alanı etkilemiştir. Dünyanın tek bir ekonomik yönden etkiler hale gelmiştir. Özellikle bankacılık sektörünün piyasalar üzerinde fon aktarma gibi derin bir göreve sahip olması yatırımcıların finansman kaynağı olması ve yaşanan geri dönüşü olmayan kredi problemleri hem bankacılık sektörünü hemde ülkelerin makro ekonomik göstergelerini olumsuz etkilemektedir. Bu çalışmanın amacı küreselleşme ile birlikte gelişen ve derin işlevlere sahip olan bankacılık sektöründe yaşanan geri dönüşü olmayan kredi sorununun nedenleri, çeşitleri ve kredilerin geri dönüşü olmayan kredilerin makro ekonomik göstergelerle etkileri hakkında bilgi vermektir.

Anahtar Kelimeler: Küreselleşme, küreselleşme süreci, küreselleşmenin etkileri, geri dönüşü olmayan krediler

1. GİRİŞ

Küreselleşme kavramı sosyal bilimler literatüründe karşımıza çokça çıkmaktadır. Küreselleşmenin olduğu ve ne zaman başladığı hususunda ortak bir tanım olmamakla birlikte genel olarak insanların hiçbir sınır gözetmeksizin birbirleriyle etkileşim halinde olma, sınırsızlaşma durumu olarak ifade edilmektedir. Sovyetler birliğinin yıkılması ile birlikte ivme kazanan küreselleşme sosyal, kültürel, teknolojik, siyasal ve ekonomi olmak üzere birçok alanda etkili olmuştur. Teknolojinin gelişmesi ile birlikte insanlar başka kültürlerden haberdar olmuş ve o kültürlerle etkileşim haline girmiştir. Zamanla birbirinden beslenen kültürler giderek birbirine benzer hale gelmiştir. Zaman içerisinde bir kültürün giyim, eğlence, yemek gibi sosyal yaşam standartları değişmiş ve dünya genelinde kabul gören standartlar doğrultusunda hareket edilir duruma gelinmiştir. literatürde sıkça örnek verilen fastfood yemek yeme alışkanlığı kültürel-sosyal küreselleşmeye bir örnek teşkil etmektedir. Küreselleşme sadece sosyo-kültürel alanı etkilememiş ülkelerin siyasi yapısını ve ekonomiyi de etkilemiştir. Küreselleşme en çok ekonomi alanında kendini göstermiştir. Ticaretin gelişmesi ve ulus aşırı düzeyde gerçekleşmesi, finansal piyasaların uluslararası düzeyde işlem görmesi küreselleşmenin ekonomi alanına getirdiği yeniliklerdir. Finansal piyasalar içerisinde en önemli paya sahip olan bankacılık sistemi reel ekonomi üzerinde etkili bir sistem olarak karşımıza çıkmaktadır. Piyasaya fon aktarma gibi önemli bir fonksiyonu olan bankalar bu fon aktarma işlemini kredi tahsis ederek yapmaktadırlar. Bankalar kredi talep eden kişi veya kuruluşlara kredi tahsis etmekte bu işlemi yaparken de risk altına girmektedirler. Kredi tahsis eden ve talep eden arasında gerçekleşen bir anlaşma ile yapılan kredi verme işleminde kredi alan kişinin anlaşma şartlarına uymaması geri dönüşü olmayan kredi problemini doğurmaktadır. Geri dönüşü olmayan krediler tanım olarak kredi alan kişinin anlaşma şartlarında belirtilen ödeme zamanına uymayarak anapara veya faizinin zamanında ödenmemesi veya eksik ödenmesi durumudur. Geri dönüşü olmayan kredilerin banka envanterlerinde yer alması bankacılık sistemini ve hatta reel ekonomiyi olumsuz etkilemektedir. Geri dönüşü olmayan krediler ile makro ekonomik göstergeler arasında ilişki olmasından dolayı böyle bir problemin göz ardı edilmesi reel ekonomide krizlere sebep olup, piyasada tahribatlar yaratacaktır.

Bu çalışmamızda ilk olarak küreselleşme kavramı, tarihçesi, küreselleşmenin etki ettiği kültürel, siyasal, teknolojik ekonomi alanlarından, küreselleşmenin avantaj- dezavantajından, küreselleşmenin nasıl ölçüldüğü ve dünyadaki boyutları incelenmiştir. İkinci olarak geri dönüşü olmayan kredilerin tanımı, nedeni bankacılık sektörüne ve reel ekonomiye olan etkileri üzerinde durulmuştur. Ve son olarak OECD ülkelerinde geri dönüşü olmayan kredilerin durumu grafiksel olarak incelenmiştir.

¹ Bu çalışma yazarın yüksek lisans tezinin bir ön çalışmasıdır.

2. KÜRESELLEŞME KAVRAMI

Küreselleşme son zamanlarda her alanda karşımıza çıkan ve çokça tartışılan bir olgu haline gelmiştir. Küreselleşme her alanda varlığını hissettirmesinden dolayı küreselleşme üzerine yapılmış birçok tanım mevcuttur. Bu tanımlardan bazıları şu şekildedir;

Küreselleşme üzerine bu kadar çok farklı tanımlamaların olmasının sebebi kavramın yeni ve dinamik olması ile birlikte kavram üstüne yapılan çalışmaların neticesinde ortak bir tanımlama yapılması söz konusu değildir. Örneğin; Amerika milli savunma enstitüsü yaptığı bir açıklamada; malların, hizmetlerin, paranın, teknolojinin, kültürün ulusal sınırlar dışına çıkartılması olarak tanımlanmış yine aynı enstitü yaptığı açıklamada küreselleşmenin devletlerarasında büyük bir bütünleşmeyi sağladığını ve tüm etkileşimlerin uluslararası hale geldiğini söylemiştir (Öymen, 2000: 27).

Dünyada yaşayan toplumlar ve devletlerarasındaki karşılıklı iletişim, etkileşim ve bağımlılığının sürekli artması durumu küreselleşme olarak ifade edilir (Bayar, 2008: 25).

Diğer bir tanıma göre küreselleşme, ülkeler arasındaki ilişkilerin iyileştirilmesi sosyal ve ekonomik değerlerin ülke sınırını aşarak ülke sınırını aşarak ülkeler arasına yayılmasına ve farklılıkların ortadan kalkmasına sebebiyet veren sosyal, siyasal ve kültürel değerler ile birlikte kaynakların bütünleşmesine ve bir olmasına denir (Akgönül, 2001: 135).

Küreselleşme ne kadar çok alana konu olsa da teknolojik gelişmeler ekonomik ve siyasal etmenler küreselleşmeye asıl sebep olarak gösterilmektedir. Gelişen teknoloji ile birlikte bilgi alım satımı uluslar arası camiada hız kazanmış bu sayede küresel değerlerin oluşumu hız kazanmıştır (Yurdabakan, 2002: 63).

Başka bir tanıma göre, küreselleşme ile birlikte değişen, gelişen ve serbestleşen sermaye hareketlerini çok fazla devletin benimsemesi veya zorla benimsemiş olması uluslar arası ticarete sermaye hareketliliğinin denetimlerini yavaş yavaş azaltan bir yapıya dönüştürmüştür. Bunun neticesinde uluslar arası ticarete bütünleşme programları uygulanmaya başlanmış buda piyasanın serbestliğini arttırmış ve ulus ötesi şirketlerin etkinliğinin artmasına katkı sağlamıştır (Aydın, 2003: 84).

2.1. Küreselleşme Sürecinin Tarihi Gelişimi

Küreselleşme kavramının tanımı gibi başlangıcı hakkında da tek bir ifadenin olduğunu söylemek oldukça güçtür. Kavram olarak etkilediği alanların çok çeşitli olmasından dolayı tarihin başlangıcını da belirlemek her bilim dalı için farklılık göstermektedir.

Kavram ve süreç olarak küreselleşmenin ne zaman başladığı hangi aşamalardan geçtiği nasıl bir yol izlediği konusunda net değildir. Bununla birlikte göç hareketlerinin başlaması, kervanların kurtulması, hayvanların evcilleştirilerek ulaşımda kullanılması baharat ve ipek yolu gibi ticaret yollarını kullanarak uluslararası ticaretin yapılmaya başlanması ve deniz yolunu kullanarak yeni bölgelerin keşfedilmesi gibi çok eskiye dayanan bir yapıya sahiptir (Aktel, 2001: 195).

Küreselleşme süreç olarak çok eskilere dayanmasına rağmen kavram olarak 1960'larda kullanılmaya başlanmış, 1980'lerden sonrada sıklıkla kullanılmaya başlanmıştır (İçli, 2001: 63).

Küreselleşme konusunda diğer bir yaklaşımda küreselleşmenin Avrupa da coğrafi keşiflerle beraber tarih sahnesine çıktığı görüşüdür (Kazgan, 2002: 27).

Sürecin hızlanmasını sağlayan olayların başında bölgeselleşme ve bütünleşme akımı gelmektedir. Çok yönlü üretim, finansal ve ticari bağımlılığın gelişmesi küreselleşmeyi hızlandırdığı gibi bir yandan da benzer nitelikler gösteren aynı coğrafi bölgedeki devletleri bölgesel ilişkiler içerisinde olmasına zorlamıştır (DPT, 2005: 5).

İfade edildiği gibi küreselleşme sürecinde zaman ve mekân kavramlarından münezzehe olduğundan her sebep iç içe geçmiş durumdadır. Bilişimin ve teknolojinin ilerlemesi ülkelerin bilimde ve ilimde fikir olarak da birbirine komşu olmuştur ve birbirini etkiler hale gelmiştir (Durul, 2008: 57-59).

Küreselleşme sürecinde var olan farklı yaklaşımlardan biride küreselleşmenin modernleşme ve kapitalizm ile birlikte ortaya çıktığı sanayi ötesi toplum kapitalizmin getirdiği sistemin çözülmesi ile birlikte son yıllarda kendini gösteren biçimsel bir yaklaşımdır (Köse, 2003: 7).

Bu görüşe göre küreselleşme kapitalist görüş ile liberal görüşün dünya geneline yayılmasıdır. Küreselleşmenin tarihi için kapitalizmin tarihinin belirlenmesi gerekmektedir (Savaş, 2004: 5).

Sanayileşme sonucu ortaya çıkan yeni sektörlerin çekişmeli rekabeti sonucunda hızla değişen Pazar alanları ve yeni Pazar alanı arayışları ile gelişmiş ülkelerde yaşanan siyasi çöküşlerin diğer ülkeleri etkilemesi küreselleşmenin boyutunu giderek arttırmıştır (Bayar, 2008: 27).

2.2. Küreselleşmenin Etkilediği Alanlar

Küreselleşme tanımsal olarak ekonominin, kültürün, teknolojinin ve siyasetin entegrasyonu olarak ifade edildiğinden araştırmacılar genel olarak bu dört başlık üzerinden küreselleşmenin boyutlarının ne olduğunu incelemektedir (Yaman, 2019: 424).

Bu açıdan incelendiğinde küreselleşmeyi, kültürel küreselleşme, siyasal küreselleşme ve teknolojik küreselleşme adı altında incelenecektir.

2.2.1. Kültürel Küreselleşme

Kültür, millet kavramını oluşturan önemli bir olgudur. bilgiyi, sanatı, ahlakı, örf ve ananeleri insanın içinde bulunduğu toplumdaki elde ettiği bütün alışkanlıklarını kapsayan atalarından miras kalan değerler bütünüdür (Kafesoğlu, 2005: 15).

Milletlerin yaşam biçimi olarak ifade edilen kültürel küreselleşme ile birbirini sürekli etkilemektedir. Küreselleşme getirdiği argümanlarla kültürü etkilemekte, kültür ise yaşadığı büyük dönüşümlerle küreselleşmeye katkıda bulunmaktadır. Özetle küreselleşme kavramının oluşmasında öncü olan milletlerin sahip oldukları bilgi birikimlerini, tecrübelerini aktarması ve bunların benimsenmesi küresel kültürü oluşturmaktadır (Talas ve Kaya, 2007: 152).

Kültürel küreselleşme ise sömürgecilik ile birlikte hız kazanmış misyonerlik faaliyetleriyle yüz yüze iletişim ve etkileşimle beraber 19.yy'da kısmen gelişmiş 20. yüzyılın son çeyreğinde ise olağan üstü bir boyutta artma fırsatı bulmuştur (Mahiroğulları, 2005: 1278).

Günümüzde pek çok insan değişen ve gelişen televizyon ve internet ağlarıyla beraber çok fazla kültürü tanımaktadır. Gelişen bu ağlar zaman geçtikçe algımızı değiştirmekte çeşitli haberler ve deneyimler ile birlikte bilgi yoğunluğu kalabalıklaşarak yoğunlaşacaktır. Bu yoğunlaşma sentezlerin karışımına ve kültürel hibritleşmeye yol açacaktır (İçli, 2001: 168).

Küreselleşme dünyayı tekipleştirmekte yemekten giyinmeye eğlenceden tatile kadar her alanda birbirine benzeyen bir dünya oluşturmaktadır. Fakat milletlerin var olması için geçmişin ve geleceğin kavranılmasında kültürel değerlerin korunması ve yerel kültürün tamamen yok olmasını engellemek açısından önemlidir (Koçdemir, 2012: 289).

2.2.2. Siyasal Küreselleşme

İkinci dünya savaşından sonra hızla yayılmaya başlayan ulus ve ulus devlet anlayışı dünya genelinde kabul gören bir anlayış haline gelmiştir. Bu noktada önemli olan konuyu standartlaşan bu anlayışın var olan egemenlik anlayışın derecede değiştirdiği veya dönüşüm içerisine soktuğunun bilinmesi önem arz etmektedir (Davutoğlu, 2008: 4-5).

Ulus kavramının bilinmesi her alanda varlığını hissettiren küreselleşmenin ulus-devlet yapısında ne gibi etkilere sebep olduğunun bilinmesi açısından önem arz etmektedir. Kavram olarak ulus, devlet yapısının özerkliğini ve mutlak egemenliğini içermektedir. Ulus- devletin küreselleşmenin siyasi alanda etkili

olduğu devletlerin birbirleri ile olan etkileşimin birbirinden bağımsız olmayacağı sorunu ortaya çıkarmıştır (Esgin, 2001: 186).

Bu süreci niteleyen demokrasi bilişim teknolojilerinin ilerlemesi ile birlikte ülke vatandaşlarının demokrasiye olan değerlerini geliştirmiştir. Fakat küreselleşme her alanda etkili olmakta özellikle ekonominin de küreselleşmesi ile birlikte ulu-devlet yapısında tahribatlar gözlemlenmeye başlamıştır. Devletler birbirleri ile bütünleşmiş hale gelmiş ve uluslararası ilişkilerde ulus-devletten bağımsız ve güçlü hale gelmiş ve uluslararası örgütler karşımıza çıkmakta bu durum ise var olan egemenlik anlayışını değiştirmektedir (Yıldırım, 2004: 46).

Başka bir açıdan bakıldığında küreselleşme ile birlikte ortaya çıkan demokrasi anlayışıdır. Küreselleşme var olan demokrasi ve sivil toplum gibi kavramların yapısını değiştirmektedir. Küreselleşmenin getirdiği demokrasi anlayışı çoğulcu demokrasi anlayışıdır. Bu anlayış devletin ulusal ve uluslararası rolünün ayrımlı olduğundan dolayı ortaya çıktığını bu yüzden çoğulcu bir yapıya dönüşmesi gerektiği bu dönüşümün uluslararası ilişkilerinde de sürdürmesi gerektiği olarak karşımıza çıkmaktadır (Eken, 2006: 253).

Bu bağlamda küreselleşme ile beraber ulus devlet yapısı mutlak egemenlik otoritesini yitirmiş ve yetkisini ulus üstü kuruluşlarla bölüşmeye başlamıştır. Otorite etkinliğinin azalması, ulus üstü kuruluşların karşılıklı etkileşimi sonucunda tek bir yapıya sahip olan devletin fonksiyonları değişime uğramakta ve yerini uluslararası üst kuruluşların yönetiminde öne çıkması süreci başlamıştır (Çelik, 2012: 69).

2.2.3. Teknolojik Küreselleşme

Teknoloji zaman içerisinde toplumsal, sosyal ve ekonomik yaşam üzerinde önemli rol oynayan unsurlardan biri haline gelmiştir. Öyleki 20. yüzyılın son çeyreğinde varlığını önemli derecede hissettiren gelişmelerin yaşanması ve hızla yayılması yeni bir devrin başladığını göstermektedir. Yeni bir dönem olarak adlandırılan bu dönem yaşamın her alanında kendini göstermektedir. Teknoloji küreselleşme ile beraber iletişim ve bilgi alanında ilerlemesi paralelinde yeni ekonomik alanlar ortaya çıkarmış olup dünya genelinde ülkelerin gerçekleştirmesi gereken bir araç haline gelmiştir (Çeviker ve Sarıdoğan, 2006: 479).

Var olan sistem üzerine etkili ve söz sahibi olan küreselleşme her alanda varlığını hissettirmektedir. Ticaretin ulus-aşırı olması iç pazarın gelişimi ve makro ekonomik gelişmelerin büyümeye sebep olması, ulus-devlet yapısındaki değişimler her boyutun içerisinde teknolojinin payı oldukça büyüktür. Bu nedenle bazı ekonomistler teknolojik gelişmeyi "küreselleşmenin motoru" olarak nitelemektedirler (Uysal, 1999: 10).

Gelişen ve ilerleyen teknoloji zamanla her üretim faktörüne etki etmiş ve yeniden dönüşüme uğramıştır. küreselleşme ile birlikte piyasada var olan rekabet küresel düzeye gelmiş ve işletmeler kendi ülkesi ile birlikte başka ülkeler ile de rekabet eder konuma gelmiştir (Zerenler vd., 2007: 656).

Günümüzde firmaların, şirketlerin piyasada etkin rol almasının ön koşulu teknolojiyle ilişkilendirilmektedir. Teknoloji ile bağları ne kadar kuvvetli ise piyasada da o denli kuvvetli ilerleme kaydetmiş olmaktadır. Ülkelerin teknoloji alanında takındıkları tavır teknoloji üretip üretmemesi bu alanda uyguladıkları değişim ve gelişim politikaları ülkeleri birbirinden ayıran önemli bir kıstas haline almıştır (DPT, 2000: 7).

2.2.4. Ekonomik Küreselleşme

Küreselleşme başlangıcından bu zamana kadar geçen süreçte ekonomi alanında yapılan önerilerin çoğu ekonomi ile bağdaştırılmıştır. Zaman ilerledikçe dünyanın tek bir Pazar haline gelmesi, iş gücünün ucuzlaması, sermayenin serbest dolaşımı ve katı kurallarının olmaması ekonomilerin küresel alanlara uyum sağlaması küreselleşmeyi ekonomi ile bütünleştirmiştir (Çelik, 2012: 68).

Küresel ekonomi ülke ekonomilerinin dünya ekonomileri ile bütünleşmesini ifade eder. Ekonomik serbestleşme sürecinin hızlanması ve yayılması sürecinde; mal, hizmetler ve uluslararası sermaye hareketleri ile ilgili sınır dışı işlemler giderek artmış ve teknoloji hızlı bir şekilde yayılmaya başlamıştır (Aydemir ve Kaya, 2007: 268).

Küreselleşme olgusunun içerisinde yer alan ekonomik gelişmeler yadsınamaz şekilde önem arz etmektedir. Ekonomik küreselleşme denildiğinde akla, ticari ve finansal serbestliğin ulus-aşırı olması gelmektedir. Ticari serbestleşme, devlet kontrolünde olan mal ve hizmet ticaretinin devlet kontrolünden çıkması ve ticaretin dünya genelinde serbestliğinin sağlanmasını amaçlayan bir yaklaşımdır. Finansal serbestleşme ise, ilk olarak yerel finansal öğelerin ve yurt içinde yer alan bankaların devlet kontrolü dışında yer alması ve yurt içi finansal piyasaların uluslararası piyasada işlem görmesini hedefleyen politikalar (Dağdelen, 2004: 6).

Küreselleşme ile beraber ekonomik ilişkilerin gelişmesi ve dünya genelinde yayılması ile birlikte ticaretin serbest olması, yatırımları arttırmak için yapılan ve düzenlenen politikalar ülkelerin makro ekonomik hedeflerini gerçekleştirmede attığı önemli adımlardan biridir. Ülkelerin attığı bu adımlar yadsınamaz şekilde önemlidir. Bu gibi adımlar insanların yaşam standartları ile alakalı bir durumdur. Bu yüzden küreselleşmenin ekonomik boyutu küreselleşmeyi anlamsız açısından oldukça önemlidir (Ateş, 2006: 127).

Bretton Woods sisteminin yıkılması ile birlikte ekonomide meydana gelen küreselleşme kendini gösterir hale geldi sistemin yıkılması ile beraber, esnek kur sisteminin işler hale gelmesi ve kur değişimleri ihtimalleri doğrultusunda yeni bir pazara kazanma pazarı oluşturmuştur. Döviz işlemlerinin uluslararası düzeyde gelişim göstermesi bilgisayar teknolojisinin gelişmesiyle birlikte büyük bir döviz piyasası oluşturdu. Bu gelişmelerin neticesinde sermaye piyasaları uluslararası düzeyde serbestleşmiş ve finansal piyasalar birbirleri ile bağımlı hale gelmiştir (Ganiev, 2014: 119).

Sovyetler birliğinin dağılması ile birlikte serbest piyasa ekonomisi uygulamaları benimsenmiş ve sermaye akımları milletlerarası düzeyde gerçekleşmeye başlamıştır. Gelişmiş ve gelişmekte olan bu politikaların zaman geçtikçe sistem olarak birbirine benzemekte aynılaştırmaktadır (Bayraç, 2003: 47).

Sonuç olarak ekonomik küreselleşme, piyasa ekonomisinin gelişmesini, uluslararası ekonomik örgütlenmenin hız kazanmasını, serbest ticaretin geniş coğrafyalara yayılmasını, sermaye hareketliliğinin serbest piyasa ekonomisinden dolayı serbest duruma gelmesini ve çok uluslu şirketlerin çalışma alanlarının bu doğrultuda geliştirilmesini beraberinde getirmiştir (Aktel, 2001: 197).

2.2.5. Küreselleşmenin Avantaj Ve Dezavantajı

Küreselleşme dünyada kullanılan mali kaynakların, teknolojinin gelişmesi ile birlikte tüm dünyada dinamik bir şekilde kullanılmasında katkı sağlamış ve tüm mali piyasaların bütünleşmesine katkı sağlayarak maliyetleri de azalmıştır. Maliyeti azalan piyasaların verimlilikleri arttırmış ve yeni yatırım olanakları meydana getirmiştir. Piyasa da gelişen bu olumlu etkenler rekabeti arttırmış gelişmekte olan ülkelerin ekonomik yapısının sanayisini tamamlamış ülkelerin ekonomisi ile yarışır hale getirmiş ve gelişmekte olan ülkelerin sermaye akımlarından faydalanma imkânı oluşturmuştur (Erçel, 2000: 3-4).

Kapitalizmin yaygınlaşmaya başlamasından itibaren dünya üzerinde var olan üretim yapısını değiştirmiştir. İş gücünü coğrafi olarak ayıran küreselleşmede hammadde, ulaşım, üretim gibi aşamalar tek bir merkeze bağlı farklı ülkelerde şubeler sistemiyle gerçekleşmesi hukuksal olarak çatışmalara sebebiyet vermekte ve bu gibi şirketlerin denetimini zorlaştırmaktadır. Sermayenin ülkelerarası rahatça dolaşması yeni bir dönem girdiğimizi göstermekte ve bu dönemde birçok kavrama yüklenen mananın değiştiğini özellikle ekonomide başlayan bu değişimin sosyo-kültürel alandan ulus-devlet anlayışına kadar her alanı değişime uğratarak zayıflattığı görülmektedir (Kürkçü, 2013: 10).

2.2.5. Küreselleşmenin Ölçülmesi Ve Dünyadaki Boyutları

Küreselleşme ile ilgili tanımlara bakıldığında genel olarak ortak söylemler mevcuttur. Bu ortaklık, teknolojinin ilerlemesi ile birlikte ülke ekonomilerinin ulus aşırı olduğu sermaye akışının serbestleştiği

ticaretin önündeki engellerin kalkması gibi gelişmelere paralel olarak sosyo-kültürel ve siyasi olarak da ülkeler değişimin içerisine oluşlarından (Yay vd., 2016: 582).

Küreselleşme düzeylerini ölçen birçok kurum vardır fakat en doğru sonuçlar veren endeksler KOF küreselleşme endeksidir. KOF küreselleşme endeksi her sene ülkelerin genel küreselleşme düzeyini ölçer bu ölçüm sonucunda belirli ağırlık derecesine göre değer almaktadır bu değerler 0-100 arasında olan değerlerdir. Bu değer Aralığında 0; küreselleşmenin gerçekleşmediği, 100 ise küreselleşmenin tam olarak gerçekleştiğini ifade etmektedir (Eren ve Çütcü, 2018: 49).

Grafik 1: Küreselleşmenin Dünyadaki Boyutu

Kaynakça: KOF (<https://kof.ethz.ch/en/forecasts-and-indicators.html>) küreselleşme endeksinin verileri kullanılarak tarafınca hazırlanmıştır

KOF küreselleşme endeksinin verilerinden faydalanılarak oluşturulan dünyada küreselleşmenin boyutu Grafik 1'de gösterilmiştir. Grafik 1970 yılından başlayarak beşer yıllık aralıkla hesaplanmış verilerden oluşmaktadır. Grafikte yatay çizgide yıllar dikey çizgide ise küreselleşmenin değerleri (derecesi) verilmiştir. Dünya, Asya, Avrupa ve Türkiye'nin küreselleşme değerlerine yer verilmiştir. Avrupa küreselleşme sıralamasında birincidir. Hemen ikinci sırada Türkiye yer almaktadır. Türkiye dünya geneli küreselleşme seviyesinin üzerinde bir küreselleşme seviyesinin üzerinde bir küreselleşme seviyesinin üzerinde bir küreselleşme değeri gerçekleştirmekte bunda bulunduğu coğrafi konumdan ve izlediği politikalarından kaynaklandığı bilinmektedir.

3. GERİ DÖNÜŞÜ OLMAYAN KREDİLER

Küreselleşme süreci ile birlikte ekonomi alanında özellikle finans alanında yaşanan ve değişen gelişmeler ülke ekonomilerini derinden etkileyen bir duruma haline gelmiştir. Özellikle bankacılık sektörünün piyasaların üzerinde fon aktarma gibi bir işlevi olması yatırımcıların finansman bankaları finansman aracı olarak görmesine ve banka politikaları doğrultusunda hareket ettikleri gözlemlenmektedir. Bankacılık sektöründe meydana gelen olumlu ya da olumsuz etkilerin ülkelerin makro ekonomik göstergelerini de etkilemektedir.

Finansal sistem içerisinde yer alan bankacılık sektörünün ekonomi üzerinde yadsınamaz derecede olumlu etkileri vardır. Bankalar kişi ve kurumlardan aldıkları fonlarla yatırım yapan şirketlere veya kredi imkânlarının geri ödenmesine yönelik önemli risk altına girmektedirler. Kredi talebinde bulunanlar ile bankalar arasında başlatılan hukuki işlemin başlaması sonucu geri dönüşü olmayan kredileri ortaya çıkarmıştır (Lök, 2018: 196).

Bir kredinin geri dönüşü olmayan kredi olarak adlandırılması için ödenmesi gereken tarih üzerinden belirli zamanın geçmesi gerekmektedir. Geçen sürenin ise birkaç gün ya da ayın gecikmesi değil banka ile kredi alacak kişinin arasında imzalanan sözleşmede belirtilen ödeme şartlarının ciddi oranda ihlali durumunda krediler geri dönüşü olmayan krediler grubuna dâhil olur (Erkan, 2015: 9)

3.2. Geri Dönüşü Olmayan Kredilerin Nedenleri

20. yüzyılın sonlarına doğru hızla gelişen finansal küreselleşme, genellikle gelişmekte olan ülkelerin dış açılma hamlelerinin yaşandığı ve sermaye hareketlerinin uluslar arası sistemde serbestçe hareket etmesi şeklinde gelişmiştir. Finansal küreselleşme ile birlikte özellikle gelişmekte olan ülke ekonomilerinin bu gelişen sistem içerisindeki amacı, istihdamı ve tasarruf oranlarını arttırmak, büyümeyi gerçekleştirmek, milli gelir kalemlerinde olumlu gelişmeler yaratmak ve buna paralel olarak da ülke refahını arttırmayı amaçlamışlardır. Ne yazık ki istenilen amaçlar gerçekleşememiş ödemeler dengesindeki açıklar ve tasarruf oranlarındaki hızlı düşüş ülkeler de ekonomik krizlerin oluşmasına neden olmuştur. Bu krizlerin ülke ekonomisinde en çok etki eden ve milli gelir kalemlerini etkileyeni bankacılık krizleridir. Bankaların yaşadığı kriz sonrasında banka bilançolarında meydana gelen olumsuz durumlar neticesinde geri dönüşü olmayan kredilerin oranları hızla artmış ve bankaları dolaylı olarak ülke ekonomilerini olumsuz yönde etkilemiştir (Karamustafa, 2019: 58).

Geri dönüşü olmayan kredilerin nedenlerini dört faktörler altında gruplandırabiliriz bunlar;

- Bankaya Özgü Faktörler; yetersiz izleme ve istihbarata sahip olması, değersiz teminatlar, yetersiz mali analiz ve değerlendirme, erken yada geç reaksiyon bankaya özgü faktörler arasında yer almaktadır.
- Borçluya Özgü Faktörler; fiyatlandırma ve pazarlama politikası, yönetim becerisi, borç ödeme kapasitesi ve gelir değişikliği, grev ve diğer mahalli etmenler borçluya özgü faktörler arasındadır.
- Doğal Faktörler; deprem, sel, kuraklık gibi doğal afetlerden dolayı kredilerin geri dönüşü olmayan krediler grubuna dahil olabilmektir.
- Genel Siyasi Ve Ekonomik Faktörler; hükümet politika ve teşvikleri, ekonomik ve siyasi krizler, para, maliye ve gelir politikası bu faktörler arasında yer almaktadır.

Bankaya özgü faktörler içsel faktörler kapsamında değerlendirilmektedir. İçsel faktörler bankanın kontrol altına alabildiği yönetimini başarılı bir şekilde sağladığı kredi kaynağıdır. Kredi alan müşterilerin faaliyetlerinin analizinin yetersiz olması ve teminatlandırmada yaşanan problemleri içermektedir (Altıntaş, 2012: 19).

3.3. Geri Dönüşü Olmayan Kredilerin Bankaya Etkileri

Bankaların temel gayesi fon arz ve talep edenler arasındaki köprüyü kurmaktadır. Bundan dolayı bankalar sağlanacak fonların miktar, zaman, faiz gibi etmenler içerisinde düzenlemeler yapıp ifade edilen etmenlerin nitelikli kullanılmasını sağlayacaktır. Bankalar uzmanı oldukları fon değerlendirme sistemleri ile birlikte fon arz edenlerin nitelikli kullanılmasını sağlayacaktır. Bankalar uzmanı oldukları fon değerlendirme sistemleri ile birlikte fon arz edenlerin tek başına yapamayacakları işleri deneyimlerini kullanarak rahatlıkla yapabilmektedirler. Bu işlemleri yaparken kar amacı gütmelerinin yanı sıra bu konuda güven tesis eden bir birim olduklarından yaptıkları bu işlemleri düşük risk ile yapma amacı gütmektedirler. Bankalar kredi tahsis ederken yaşadığı asimetrik bilgi sorunu nedeniyle tahsisin ilk aşamasında gereken araştırmalarda ve işlemlerde yaşanabilecek bir hatanın dönem dönem bankaları zorlamaktadır. Banka yaşadığı bir hata yüzünden geri dönüşü olmayan kredi sorunu yaşamakta ve bu sorun banka varlıklarının değerini düşürerek banka karlılığını olumsuz etkilemektedir (Selimler, 2015: 132).

Banka aktiflerinde yer alan geri dönüşü olmayan kredilerin varlığı bankanın maliyetlerinin artmasına neden olacaktır. Bankanın likitide dengesini sağlamaması, banka büyümesinin gerçekleşmemesi, sorunlu kredilerin tahsili için yapılan hukuki harcamaların olması ve banka envanterlerinin olumsuz etkilenmesi bankaların maliyetlerinde artış meydana getirerek karlılık üzerinde negatif bir etki yaratacaktır (Seval, 1990: 275).

3.4. Geri Dönüşü Olmayan Kredilerin Ekonomiye Etkileri

Sipahi (2003)'e göre geri dönüşü olmayan kredilerin ülke ekonomisinde yarattığı problemler;

- Tahsili geciken alacakların varlığı banka karlılık oranlarında düşüş meydana getirecektir. Karlılığı düşen bankalar faiz arttırma yoluna gidecek ve artan faizlerde maliyet enflasyonuna neden olacaktır.
- Geri dönüşü olmayan kredi nedeniyle bankalar yükümlülüklerini yerine getiremeyecek ve zamanla karlılığı düşecektir karlılığı düşen bankadan alınan vergi oranların da azalma meydana gelecektir.
- Banka iflaslarının da sebebi olana tahsil edilmemiş krediler banka sistemlerindeki dengesiz tutumlar mevduat sahiplerini ve kredi borçlularını olumsuz etkileyerek piyasada şok etkisi yaratacaktır.
- Geri dönüşü olmayan kredi oranlarının artışı sonucu banka yapısı önemli hasar görecektir ve fon talebinde bulunan sektöre kredi tahsis edemeyecek bu durum ise ülke ekonomisinde yatırımları etkileyecektir (Sipahi, 2003: 21-22).

3.5. OECD Ülkelerinde Geri Dönüşü Olmayan Kredilerin Durumu

Türk bankacılık sisteminin yaşadığı 2000-2001 krizleri sonucunda bankacılık sektörü ağır bir darbe almış ve yeniden toplanmak ve güçlenmek için yapısal değişiklikler yaşamışlardır. bu krizden sonra yapısını sağlam bir şekilde bir şekilde kuran ve ilerleyen Türk bankacılık sistemi dünya ekonomisinde seyreden rakamlardan daha az seviyelerde azalış gözlemlenmektedir (Karamustafa, 2019: 73).

Grafik 2: Gelişmiş OECD Ülkelerinin Geri Dönüşümü Olmayan Kredi Payı %

Kaynakça:worldbank,(<https://databank.worldbank.org/reports.aspx?source=2&series=FB.AST.NPER.ZS&country=>).

Grafik 2’de ifade edildiği üzere gelişmiş ülkelerin içerisinde geri dönüşü olmayan kredilerin 2005 yılında payının en yüksek olduğu ülke % 4,1’lik bir payla Almanya olmuştur. 2009 yılına kadar geçen dönemde geri dönüşü olmayan kredilerin yüksek pay yine Almanya devletine aittir. Fakat 2009 yılında % 4,22’lik bir payla en yüksek orana sahip ülke Fransa olmuştur. 2011 yılında Amerika’nın bankacılık sisteminde yaşadığı problemler sonucu en yüksek oranı % 4,96 oranında bir payla yerini almıştır. 2012-2018 yılları arasında Fransa’nın içerisinde en yüksek paya sahip ülke olmuştur. 2005-2018 yılları arasında geri dönüşü olmayan kredi oranları en düşük olan ülkelerin geri dönüşü olmayan kredi paylarında ciddi bir artış görülmemiştir. Gelişmiş ülkeler genellikle Kanada, İsviçre, Norveç ve Avusturyadır.

Grafik 3: Gelişmekte Olan OECD Ülkelerinin Geri Dönüşü Olmayan Kredi Payı %

Kaynakça:Worldbank,(<https://databank.worldbank.org/reports.aspx?source=2&series=FB.AST.NPER.ZS&country=>)

Grafik 3’de gelişmekte olan bazı OECD ülkelerinin geri dönüşü olmayan kredi oranını incelediğimizde, 2005-2018 yılları arasında en yüksek orana sahip olan Yunanistan’dır. Ortalama %35 civarında bir banka açığı olan Yunanistan’ın ekonomisi ve reel sektörü ciddi etkilenmektedir. Türkiye ve Macaristan’ın geri dönüş olmayan kredi payı hemen hemen aynı oranda artmaktadır. Kore cumhuriyeti ve Meksika’nın oranları genellikle % 0,6 oranları civarındadır. Kore Cumhuriyeti’nin sağlam bankacılık sistemlerinde de giderek iyileşmesini sağlamaktır.

Grafik 4: Ülke Grupları Bazında Geri Dönüşü Olmayan Kredilerin Payı %

Kaynakça:Worldbank,(<https://databank.worldbank.org/reports.aspx?source=2&series=FB.AST.NPER.ZS&country=>).

Grafik 4’de görüldüğü üzere 2005-2008 yılları arasında yapılan geri dönüşü olmayan kredi paylarının en yüksek olan ülke Türkiye’dir. 2009 yılından sonra yaşanan kriz sonucu Amerika’nın oranlarında ciddi bir artış gözlemlenmiştir. 2010 yılında % 3,8 civarlarına kadar düşen geri dönüşü olmayan kredi oranları çoğu Avrupa birliği ülkelerinden aşağıda bir gerileme sağlamıştır. Şayet bunun 2001 ve 2008 bankacılık sektöründe yaşanan krizler sonucu yapılandırılan bankacılık sektörünün sağlam bir şekilde piyasada varlığını sürdürmektedir.

4. SONUÇ

Ülkeler arasında sınırsızlık durumu olarak ifade edilen küreselleşme kavramı 20. yüzyılda varlığını iyice hissettirmiştir. Teknolojinin gelişmesi ile birlikte insanlar kendi kültürlerinden ve sosyal çevrelerinden başka kültürlerle de tanışmış ve etkileşim haline girmişlerdir. Bu etkileşim ile beraber zamanla birbirlerinden etkilenmiş ve birbirinin kültüründen beslenmiştir. Giyimden, teknolojik üretime, yeme alışkanlıklarından eğlence alışkanlıklarına kadar birbirine benzemeye başlayan dünya giderek tek tipleşmeye başlamıştır. İfade edilen bu durum sadece teknolojik ve kültürel olarak gelişmemekte devletlerin siyasi yapısını da etkilemektedir. Devletler gelişerek ilerleyen bu durum karşısında yeni politikalar oluşturmakta ve uygulamaktadır. Küreselleşme daha çok ekonomi alanında kendini göstermiştir. Ekonominin küreselleşmeye başlaması ülkeler arasında ticaretin serbestleşmesi, finansal piyasaların bağımsızlaşması gibi durumlar ekonominin ülkeler arasındaki bağımlılığı ve etkileşimi daha çok arttırmıştır. Finansal piyasaların serbestleşmesi bu piyasalarda yaşanan olumlu ve olumsuz herhangi bir durumda ülke ekonomilerini etkiler hale gelmiştir. Reel ekonomi için fon kaynağı olan bankacılık sistemi finansal piyasalar içerisinde en güçlü ve etkili bir yere sahiptir. Bankacılık sisteminde yaşanan olumsuz bir durumdan reel ekonomi ciddi bir şekilde etkilenmektedir. Bankacılık sistemi kişilere, şirketlere ve yatırımcılara fon aktarmaktadır. Sağlanan bu fon aktarma işlemi kredi veren ve kredi alan arasında yapılan karşılıklı anlaşma ile yapılmaktadır. Kredi alan kişi veya kurumlar anlaşmada belirtilen anapara veya faizinin zamanında ödememesi veya eksik ödemesi durumu olarak ifade edilen geri dönüşü olmayan kredi problemi ile karşılaşmaktadır. Bu problem hem bankacılık sistemine hemde reel ekonomide tahrip edici etkiler meydana getirmektedir. Bankaların aktif kalemlerinde bulunan geri dönüşü olmayan krediler bankacılık sisteminde maliyetleri arttırarak bankaların likitide dengesinde tahribatlar yaratacaktır. Oluşacak bu tahribatlar bankaların büyümesini geciktirecektir. Gerçekleşen bu tahribat reel ekonomide ise maliyet enflasyonunun artmasına sebebiyet vererek ekonomik büyüme, döviz kuru, enflasyon, işsizlik gibi makroekonomik göstergeler ile geri dönüşü olmayan krediler arasında olumsuz etkiler meydana getirecektir. Olumsuz etkilerin oluşması ülke refahını düşürerek mali krizlerin yaşanmasına neden olacaktır. Bu sorunun yaşanmaması için bankaların uygulayacağı politikaları hem ülke hemde kredi sağladığı kesim için doğru, sağlam ve güvenilir bir şekilde oluşturması gerekmektedir. Ayrıca bankalar kredi tahsis ederken kredi verdiği kişi ya da kurumları iyi araştırmalı, asimetrik bilginin oluşmasını engellemelidir. Banka uygulanan veya uygulanacak ekonomi politikalarını değerlendirerek ülke ekonomisinin geleceğini iyi okumalıdır. Bu doğruluda oluşturulacak politikaları sistemli bir şekilde uyguladıkları takdirde geri dönüşü olmayan kredi problemi hem bankacılık sektöründe hemde reel ekonomi üzerinde derin etkiler oluşturmayacaktır.

Özet: Netflix'in 2007 yılından itibaren DVD kiralama işletmesinden internet tabanlı servis sağlayıcı bir platforma dönüşümü, film endüstrisindeki paydaşlar arasında, sinema salonu işletmelerinin endüstrideki ana dağıtım kanalı olup olamayacağına dair tartışmalara neden olmaktadır. Dijital servis sağlayıcı platformlardaki büyüme piyasada rekabete sebebiyet verdiğinden, müşterilere fiyat avantajı ve daha kaliteli hizmet de sunulabilmektedir. Üstelik, akıllı telefonlar/televizyonlar ve tabletlerdeki gelişmeler ve bu cihazların daha yaygın kullanımı, ayrıca internet kullanıcı sayısı ve hızındaki artışlar, dijital servis sağlayıcıların eğlence sektörü içindeki pazar payını da giderek artırmaktadır. Buna karşın Covid-19 önlemleri kapsamında faaliyetleri sınırlandırılan sinema salonlarında, 2020 yılı ikinci çeyreğinden itibaren gişe gelirleri düşmeye başlamıştır. Gerçektende global gişe hasılatı 2020 yılında, 2019 yılına göre yaklaşık %70 dolaylarında azalmıştır. Bu çalışma, öncelikle sinema salonu işletmelerinin mali performansı üzerinde etkide bulunan faktörleri ele almaktadır. Dünyanın en büyük sinema salonu işletmesinin mali tabloları ve sektör raporları kullanılarak, sektörün finansal sürdürülebilirliğinin tespiti ve geleceğe ilişkin bir projeksiyon çizilmesi amaçlanmıştır.

Anahtar Kelimeler: Sinema Salonu İşletmeleri, Finansal Sürdürülebilirlik, Dijital Teknolojiler

Assessment of Financial Sustainability of Movie Theatre Enterprises

Abstract: With Netflix's transformation from a DVD rental service to an internet based digital service provider since 2007, film industry stakeholders have been arguing whether movie theaters will be the main distribution channel in the industry. Since the growth in digital service platforms causing more market competition, customers are provided with price advantages and more qualified services. Moreover, the market share of digital service providers in the entertainment industry has been increasing due to technological developments in smart phones/televisions and tablets and widespread use of these devices as well as the increase in internet users and speed. In contrast, movie theaters, whose activities have been restricted in the context of Covid-19 measures, are negatively impacted in terms of box office revenues since the second quarter of 2020. As a matter of fact, global box office revenue has dropped by around 70% in 2020 compared to 2019. This study primarily addresses the factors that influence the financial performance of movie theater enterprises. By using the financial statements of the world's largest movie theater company and industry insights, it is aimed to explore the financial sustainability of industry and to draw a future projection.

Key words: Movie Theater Enterprises, Financial Sustainability, Digital Technologies

1. GİRİŞ

Dijital teknolojinin eğlence endüstrisindeki son yükselişi endüstri paydaşları arasında şüphe uyandırmaya başlamış ve filmlerin dağıtım kanalları açısından değerlendirildiğinde sinema salonu işletmelerinin birincil kanal olarak kullanıp kullanılmayacağına ilişkin soru işaretleri yaratmıştır (Weinberg vd., 2019). Nitekim dijital teknolojinin gelişimi sadece sinema salonu işletmelerini de etkilememiş, özellikle Netflix'in 1997 yılında DVD kiralama ve mail yolu ile dağıtım şirketi olarak faaliyetine başlayıp 2007 yılında ise internet tabanlı servis sağlayıcı bir platforma dönüşmesi, kablolu TV ile video kaset ve DVD kiralama sektörlerinde yıkıcı bir etki doğurmuştur (Dysenhaus, 2020). Bunun yanı sıra, TV ve mobil cihazlardaki teknolojik gelişmeler de eğlence endüstrisindeki dönüşüme etki etmiştir. Özellikle genç izleyiciler, akıllı telefon ve tabletlerden erişilebilen akışa uygun içeriklerle daha fazla ilgilenir hale gelmiştir (Lang, 2017).

Yaşanan tüm teknolojik gelişmelere ve dijital servis sağlayıcıların çeşitlenmesine rağmen, sinema salonlarında negatif etkilenmenin minimum düzeyde kalacağı ve yaşanan bu inovasyon akımının sinema endüstrisini yok etmeyeceği belirtilse (Whitten, 2019) ve örneğin Hindistan'da sinema salonlarında film

izlemenin sosyalleşmenin önemli bir parçası olduğu ve gişe hasılatı ölçmenin performans ölçme metriği olarak film endüstrisi tarafından halen kullanılabilceği ifade edilse de (Sharma, 2020) bilhassa Covid-19'un etkisiyle sinema salonu işletmelerinin ölçme bile ciddi kan kaybı yaşadığı bir döneme girmiş bulunmaktayız.

Sinema salonu işletmelerinin durumu Türkiye açısından değerlendirildiğinde, sinema salonlarının son 5 yıllık toplam hasılat gelirleri 2019 yılına kadar her yıl büyüme kat etmesine rağmen toplam seyirci sayısı 2015-2019 yılları arasındaki dönemde düşüş trendi göstermektedir. 2020 yılına bakıldığında ise toplam hasılat bir önceki yıla nazaran yaklaşık %70 azalış göstermiştir. Aynı şekilde seyirci sayısı da salonlarının kapalı kalması nedeniyle 2019 yılına nazaran yaklaşık %71 oranında küçülme yaşamıştır (BoxofficeTurkey, 2021). Bu durum seyircilerin dijital servislere yöneldiğini ve Covid-19 öncesi dönemdeki hasılat artışının ise seyirci kaynaklı olmayıp bilet fiyatı artışlarıyla ilgili olduğunu kanıtlar niteliktedir.

Bu çalışmada, piyasa büyüklüğü açısından dünyanın en büyük 2 sinema salonu işletmesinin finansal performansları sürdürülebilirlik açısından değerlendirilerek, sektörde yaşanan gelişmeler ışığında geleceğe dair bir projeksiyon çizilmesi amaçlanmıştır. Çalışmanın devamında, öncelikle film ve sinema salonlarının tarihçesine yer verilmiş, takiben sinema salonlarına ilgiyi azaltan faktörler açıklanmış, sonrasında Kuzey Amerika'da faaliyet gösteren ve New York Borsasında işlem gören AMC Entertainment Holding ile Avrupa'da faaliyet gösteren ve Londra Borsasında işlem gören Cineworld PLC şirketlerinin finansal tabloları mali analiz yöntemleriyle tahlil edilmiştir.

2. FİLMİN VE SİNEMA SALONLARININ TARİHÇESİ

Dünyadaki film çekimine dönük ilk deneme, Eadweard Muybridge tarafından 1878 yılında gerçekleştirilen "Hareket Halindeki At" isimli çalışmadır. Kaliforniya'daki bir at yarışında fotoğrafçılığın yeni çağını başlatan Muybridge, bir yarış atının hareket halinde iken çok sayıda fotoğraf makinesiyle çekimlerini yaparak, hareketi gösterebilmek için seri halindeki fotoğrafları kullanmıştır. Atın koşacağı güzergahtaki duvarları beyaza boyayan, beyaz perdeler asan ve zemine beyaz mermer tozu döken Muybridge, bu sayede siyah atın arka planını izole etmiştir. Fiziksel hareketi tespit etmek üzere her biri bir fotoğraf makinesine bağlanan on iki kabloyu güzergaha yerleştirmiş ve atın çektiği arabanın tekerleri bu kablolar üzerinden geçtiğinde fotoğraf makineleri peşi sıra çekim yaparak hareketin farklı evrelerini yakalamışlardır. Zoopraksiskop adlı makineyi de icat eden Muybridge, ilkel GIF-benzeri bir koşan at görüntüsü oluşturmuştur. Bu sayede, süratle koşan atın dört ayağı da aynı anda yerden kesiliyor mu şeklindeki o zamanların popüler tartışma sorusuna da 'Evet' şeklinde bilimsel bir yanıt verilmiştir (Shah, 2018).

Guinness Rekorlar Kitabı'na göre günümüze kadar ulaşan en eski film ise 1888 tarihli yaklaşık 2 saniyelik "Roundhay Bahçe Manzarası" olup, bu film Fransız mucit Louis Le Prince'in aile üyelerinin bir bahçede oynamalarını göstermektedir (Guinness World Records, 2021). Eser, Le Prince'in tasarladığı tek lensli bir fotoğraf makinesi ve Eastman'ın saniyede 12 karelik kağıt filmi kullanılarak yapılmıştır (HistoryofInformation.com, 2021; Science Museum Group, 2021). Dünyadaki halka açık ilk ticari film gösteriminde ise Fransız Lumiere kardeşlerin 1895 yapımı "Bir Trenin Gelişi" isimli yaklaşık 50 saniyelik filmi, Paris'teki Grand Cafe'de gösterilmiş olup, filmi izleyenlerden bazılarının trenin gerçekten kafeye girdiğini zannederek koltuklarından sıçradıkları ve paniğe kapıldıkları aktarılmıştır (DW, 2021). Gösterimde kullanılan sinematograf ise, Lumiere kardeşlerin, filmin ilk gösteriminden birkaç ay önce patentini aldıkları hem bir fotoğraf makinesi hem de projektör olan bir cihazdı (DW, 2021). Thomas A. Edison ve asistanı William K. L. Dickson tarafından 1890 yılında icat edilen ve 453 kg ağırlığa sahip olup, bataryayla faaliyet gösteren Kinetoskop'a kıyasla, Lumiere kardeşlerin cihazı elle çevrilir, hafif ve daha portatifdi (Britannica, 2021).

1896'da Edison Company, ticari film çağını başlatmış olup, genellikle bir dakikadan kısa süren ve hareketli görüntülerden oluşan koleksiyonlar, dansçılar-komedyenler gibi canlı performansları da içeren varyete showlarının bir parçası olarak gösteriliyordu (History.com, 2021). ABD'de sadece film gösterimine odaklanmış ilk salon ise 1902 tarihinde Thomas L. Tally tarafından Los Angeles'da açılan The Electric Theater'dir (Los Angeles Theatres, 2021). Tipik anlamıyla dünyadaki ilk sinema filmi salonu olarak genel kabul gören Nickelodeon ise, 19 Haziran 1905 tarihinde ABD'nin Pittsburgh şehrinde Harry Davis tarafından açılmıştır. Bu salonda sessiz kısa filmler gösterime girmiştir. Davis, Fransız Lumiere

kardeşlerden bir sinematograf satın almış ve yüz sandalye ile bir piyanonun çerçevesiyle bir ekrana baktığı salonunu, herkesin katlanabileceği bir maliyetle hizmete sokmuştur. Burada ilk gösterilen film ise 10 dakikalık “Büyük Tren Hırsızlığı” olmuştur. Filmin sonunda aktör George Barnes’ın revolverini makinenin lensine doğrularak yakın mesafeden ateş etmesi ise izleyicilerde büyük bir heyecan oluşturmuştur. Varyete tiyatroları gibi günde iki kere sahnelenmek zorunda kalmayan salon, oyunculara da performansları için bir ödeme yapmak durumunda kalmadığı gibi, sabah sekizden gece yarısına kadar pek çok sayıda gösterimde bulunma imkanını elde etmiştir. Davis’in işleri çok iyi gitmiş ve aylar içerisinde Pittsburgh’da 10’dan fazla salon açmıştır. Salonların popülerliğine istinaden iki yıl içerisinde ABD’de 8.000’den fazla salon açılmıştır. Üstelik projeksiyondaki ilerlemeler daha büyük ekranları mümkün kılmış, ayrıca filmlere ilk başlarda piyano eşlik ederken, sonraları orkestra eşlik etmeye başlamış, daha sonraları da orkestanın yerini filmlerde ses almıştır (Mondello, 2005). Nitekim hem ses hem görüntünün birlikte kaydedildiği 1927 yapımı “Jazz Şarkıcısı” isimli film, dünyanın ilk sesli filmi olması itibarıyla sinema tarihinde bir dönüm noktasını da oluşturmuştur (Sönmez, 2019).

Türkiye’deki film ve sinemanın tarihçesi ise Osmanlı İmparatorluğu’nun son dönemlerine uzanmaktadır. İmparatorluk döneminde ilk film gösterimi 1896 yılında Yıldız Sarayında Hanedan mensuplarına yönelik olarak gerçekleştirilmiş, 1896 yılının sonlarında Galatasaray’daki Sponeck Birahanesi ilk halka açık film gösterimine ev sahipliği yapmış, film çekimi ve gösterimine ilişkin ilk düzenleme 1903 tarihinde yayımlanmış, 1908 tarihinde İstanbul Tepebaşı’nda ilk yerleşik sinema salonu hizmete açılmış, sinema temalı ilk süreli yayın olan ‘Sinema’ dergisi 1914 tarihinde yayınlanmaya başlamış ve ilk kurmaca filmlerin çekimi 1917 tarihinde tamamlanmıştır (Türk Sineması Araştırmaları, 2015).

Sinema endüstrisinin, 100 yıllık tarihi boyunca diğer eğlence sektörü oyuncuları ile karşılaştırıldığında birçok rekabetçi avantajı bulunmaktaydı. Bunlardan ilki ABD’de 1950 yıllarına kadar sinema endüstrisinin film endüstrisi için perakende pazarı niteliği taşımasıydı. Bu yıllara kadar filmler yalnızca sinema salonlarında izleniyordu. Sektörün bir diğer rekabetçi avantajı ise alternatif film dağıtım sektörlerinin ve büyük ekranlı televizyon teknolojisinin piyasada tutulmaya başlamasına kadar olan süreçte film izleme tercihinde birincil ortamın sinema salonlarının olmasıdır (Silver ve McDonnell, 2007). Fakat, internet hizmetlerinin gelişmesi birçok şirkete; web kullanıcılarını abonelere dönüştüren bir platform olabilmeleri için çeşitli iş fırsatları sunmaktadır. Özellikle çevrimiçi medya pazarı rekabet halindeki birçok büyük teknoloji şirketine ev sahipliği yaparak son yıllarda çarpıcı bir şekilde büyüme göstermiştir. Pazarda rekabet içerisinde bulunan bu oyuncular, birçok farklı iş modeli ile tüketicilere hizmet sağlamaktadır. Bu modeller tüketicilerin ödeyeceği aylık ücretler, reklama dayalı gelir modeli veya karma iş modellerinden oluşabilmektedir (Carroni ve Paolini, 2020).

3. SİNEMA SALONLARINA İLGİYİ AZALTAN FAKTÖRLER

3.1. TV ve Mobil Cihazlardaki Teknolojik Gelişmeler

TV’ler, siyah beyaz TV’den 1950’lerdeki renkli TV’ye, 1970’lerdeki Video Ev Sisteminin (Video Home System, VHS) entegrasyonundan, 1990’lardaki Video CD ve DVD oynatıcıların entegrasyonuna, 2000’lerdeki Blu-ray Disk oynatıcıların piyasaya çıkmasından yine 2000’lerdeki analog TV’lerden dijital TV’lere geçişe, 2010’larda akıllı TV ve 3D TV’lerin seri üretimine geçilmesinden, 292 inç dev TV’lerin bile satılmaya başlamasına kadar büyük bir evrimi kat etmiş ve kat etmeye de devam etmektedir. Gerek 4K Ultra HD görüntü teknolojisi gerek 3D altyapısı gerek üstün ses sistemleri gerekse akıllı TV’ler vasıtasıyla internet tabanlı servis sağlayıcı platformlara erişilebilirlik, ev içi eğlenceyi giderek cezbedici kılmakta ve geleneksel TV alışkanlıklarını da büyük değişimlere uğratmaktadır. Gerçekten de Netflix içeriklerinin, yüzde 70’i TV üzerinden izlenmektedir (Kafka, 2018).

Kişilerin ekran başında geçirdikleri vakit TV’den de ibaret değildir. Nitekim, bilgisayar, telefon ve tabletler cihazların ekranlarında da kişiler yoğun bir şekilde vakit geçirmektedir. Gerçekten de ABD’de kişiler giderek daha fazla mobil cihazlar başında vakit geçirmeye başlamış olup, 2014’de bir kişinin TV başında geçirdiği vakit 4 saat 20 dakika iken, mobil cihazlarda geçirdiği vakit günlük 2 saat 32 dakika olarak gerçekleşmiş, ancak 2020’de mobil cihazlarda geçirilen süre TV başında geçirilen süreyi 32 dakika aşmış bulunmaktadır (Zalani, 2021). Mobil cihazlardan bilhassa akıllı telefonların daha yoğun bir şekilde kullanımı, özellikle sınırsız mobil data planları neticesinde kişilerin akıllı telefonları aracılığıyla film ve TV şovları izleme oranında da bir artış yaşanmasına yol açmaktadır. Gerçekten de ABD’de hane halkının %30’u haftalık olarak akıllı telefonları üzerinde Premium video içeriği izlemektedir (Marketing Charts,

2020). Üstelik akıllı telefonlardaki baş döndürücü teknolojik gelişmeler göz önüne alındığında, telefonlardan film ve TV şovlarının izlenmesinin daha da yaygınlaşacağı beklenebilir.

3.2. Stream Platformları Arasındaki Rekabetin Kaliteyi Artırması Ve Maliyetleri Düşürmesi

Netflix ve onunla beraber diğer video hizmetlerine abonelik talebi uygulamalarının (Subscription Video on Demand) yükselişi geleneksel medya sektörü aktörlerini kökten etkilemiştir. Video hizmetlerine abonelik talebi uygulamalarının küresel boyutta ölçeklenmesi ile beraber kablolu TV sağlayıcıları rekabetçi kalabilmek adına iş modellerini ve fiyatlama stratejilerini gözden geçirmek durumunda kalmıştır. Temmuz 2016'da kablolu TV sağlayıcısı Comcast'ın Netflix'le dekoder uygulaması üzerinde anlaşması, Avustralyalı kablolu TV sağlayıcısı Foxtel'in Netflix'in pazara girmesinden aylar önce abonelik ücretlerini yarıya indirmesi tüm bunlara örnek teşkil etmektedir (McKenzie vd., 2019). İnternet servis sağlayıcıların sinema endüstrisi üzerindeki etkisi de bir başka tartışma konusudur. Yeni teknolojik devlerin, eğlenceyi mobil cihazlar gibi küçük ekranlara taşıyabilmesi sayesinde sinema sektörünün geleceğinin tehlikeye gireceği belirtilmiştir (Richwine, 2019).

3.3. İnternet Hızı ve Erişilebilirlikteki Artış ile İnternete Erişim Maliyetindeki Düşüş

1990'lı yıllarda yaşanan internet devrimi ve bilgisayar endüstrisinin gelişimi dünyada birçok sektörü değiştirdiği gibi film dağıtım ve gösterimi servislerini de derinden etkilemiştir. Bu durum video kasetler ve dijital kayıt araçlarının başlatmış olduğu dijital görüntüleme servislerinden çevrimiçi (online) görüntüleme servislerine geçişe zemin hazırlamıştır (Chen, 2019). Dolayısıyla internet hızındaki artış, daha fazla sayıda insanın daha düşük maliyetlerle internete erişebiliyor olması, filmlerin online izlenebilirlik potansiyelini de artırmaktadır.

Gerçekte dünyada internet hızı yıllar itibariyle büyük bir artış sergilemektedir. Örneğin ABD'de 2013 yılında sabit genişbant ortalama indirme hızı 31 Mbps iken (Supan, 2020), 2021 yılı Mart ayı itibariyle 182 Mbps'ye yükselmiştir (Speedtest, 2021). Sabit genişbant global indirme hızı ortalaması da 2020 yılı Mart ayında 74,65 Mbps iken, 2021 yılı Mart ayında 98,67 Mbps'ye çıkmıştır (Speedtest, 2021). 5. nesil mobil telekomünikasyon hizmeti (5G) ise; hızı artırıp, gecikmeyi azaltan ve kablosuz hizmetlerin esnekliğini geliştirip, 20 Gbps'lik teorik azami hıza sahip olan, ayrıca daha az hizmet götürülen kırsal alanlar ile talebin 4G teknolojisinin bugünkü kapasitesini aştığı şehirlerde bağlanabilirliği iyileştiren bir teknolojidir (CISCO, 2021). Örneğin, Avustralya 5G'yi 2019 yılında başlattıktan sonra dünyadaki en büyük mobil hız seviyelerini elde etmiş, nitekim medyan 5G indirme hızı 2021 yılının ilk çeyreğinde 283,56 Mbps ye ulaşmıştır (Fomon, 2021).

İnternetin hızının artmasının yanı sıra internet erişilebilirliği de yıllar itibariyle giderek artmaktadır. Gerçekten de global olarak 2000 yılında 413 milyon kişi internete erişebilirken, bu rakam 2010 yılında 2 milyar kişiye (Statista, 2019), 2021 yılı Ocak ayı itibariyle de 4,66 milyar kişiye yükselmiştir (Statista, 2021). Dolayısıyla dünya nüfusunun yaklaşık %60'ı internete erişim sağlayabilir hale gelmiştir ve bu oranın ilerleyen yıllarda daha da artması beklenmektedir. Öte yandan, gelişmiş ülkelerdeki nüfusun internete erişimi ise %90'lara yakındır (Statista, 2020).

İnternet erişilebilirliğinin bir fonksiyonu ise internet hizmetinin mali katlanılabilirliğidir. İnternet erişim maliyetlerini odak noktasına alan ve düşük / orta gelire sahip 72 ülkenin yer aldığı Affordability Drivers Index (ADI)'e göre, ortalama ADI skoru 2014'ten 2020'ye %13,6 artmıştır. Afrika her ne kadar bölgesel olarak en düşük ADI skoruna sahip olsa da 2019'dan 2020'ye skor artışındaki en büyük ilerlemeyi sağlamıştır. Endeksteki ülkelerin mobil genişbant fiyatları son 5 yılda belirgin düşüşler yaşamış, 1GB verinin ortalama maliyeti 2015'den 2020'ye kadar yarı yarıya azalma sergilemiştir (A4AI, 2021).

3.4. Film Korsanlığı ve Dijital Platformlar

Dijital servislerin medya endüstrisini etkilediğine ilişkin birçok çalışma bulunmaktadır. Yasadışı dosya paylaşımı ve çevrimiçi korsanlığın, yasal satışların en azından bir miktar azalmasına yol açtığı birçok farklı çalışma ile tespit edilmiştir (Bai ve Waldfogel, 2012; Rob ve Waldfogel, 2004). Korsan indirme ve paylaşma uygulamaları ile film sektörü de mücadele etmektedir. 2017 yılındaki HBO yapımcısına ait olan Game of Thrones sezon finali 16.1 milyon yasal kullanıcılar tarafından izlenirken, 143 milyon indirme ise illegal yollarla yapıldığı, serinin tüm bölümleri içinse milyarlarca illegal indirmenin yapıldığı tahmin edilmektedir (Andrews, 2017).

4. UYGULAMA

4.1. Veri Seti ve Metodoloji

Çalışmada, dünyanın en büyük 2 sinema salonu işletmesinin finansal tabloları mali analiz yöntemleriyle analiz edilmiştir. 2015 ve 2019 yılları arasındaki finansal tablolar oran analizi yöntemiyle analiz edilmiş ve işletmelerin 5 yıllık finansal performansı değerlendirilmiştir. Pandemi etkisinin finansal tablolardaki etkisini gözlemleyebilmek adına 2015-2020 yılları arasındaki seçilmiş rasyolar trend analiz yöntemiyle incelenmiştir.

AMC Entertainment Holding; Kuzey Amerika kıtasında faaliyet gösteren ve New York borsasında işlem gören pazar büyüklüğü açısından dünyanın en büyük sinema salonu işletmesidir. Cineworld PLC ise Avrupa'da faaliyet gösteren ve Londra borsasında işlem gören Pazar büyüklüğü açısından dünyanın en büyük 2. sinema salonu işletmesidir. Mali analiz, sektör gidişatını anlamak ve geleceğe yönelik çıkarımlarda bulunmak adına uygulanacaktır. Çalışmada kullanılan veriler Reuters Eikon veri terminalinden ve resmi Reuters web adresinden elde edilmiştir.

Mali Analiz Yöntemleri

Mali (finansal) analiz, bir işletmenin hem güncel durumunu hem de geçmiş performansını değerlendirerek gelecekle ilgili işletme planlamasına ışık tutabilecek bilgiler elde edilmesine olanak sağlar (Aydın, 2012: 85). Yatırımcılar açısından değerlendirildiğinde ise bir şirketin pazar değerini ve borç yükümlülüklerinin zamanında ödenip ödenemeyeceğini göreceli olarak olasılığını belirleyen ise gelecekteki kazançlar ve temettülerdir. Bu noktada yatırımcılar, geleceğin bir göstergesi olarak geçmiş performansa güvenmekte ve menkul kıymet fiyatlarına henüz yansımamış olan temel değeri yakalamak amacıyla gelecek beyanlarda görülecek kazanç ve kredi kalitesi ölçütlerine göre hareket etmelidir (Fridson ve Alvarez, 2011; 215).

Mali analizde nihai hedefi ve bu amaca ulaşmak için gerekli adımları belirlemek ve anlamak esastır. Analistin ilgili verileri nerede bulacağını ve verileri nasıl işleyip analiz edeceğini ve bu sonuçları nasıl yorumlayacağını bilmesi gerekmektedir (Robinson vd., 2015: 292). Analistler, bir firmayı değerlendirmek için genellikle iki farklı yola başvururlar. Bunlar; firmanın zaman içindeki performansını inceleyerek kendisiyle karşılaştırma yapmak ya da firmayı ortak bir finansal oranlar seti kullanarak benzer rakipleriyle karşılaştırmaktır (Berk ve DeMarzo, 2017: 69; Robinson vd., 2015: 296).

Oran Analizi

Oran analizi, finansal analizin en popüler ve yaygın olarak kullanılan araçları arasındadır. Bir oran, iki miktar arasındaki matematiksel bir ilişkiyi ifade eder. Bir oranın hesaplanması basit bir aritmetik işlem iken, yorumlamak daha karmaşıktır. Hesaplanan oranın ekonomik açıdan önemli bir ilişkiye işaret etmesi oran analizini anlamlı kılmak için bir gerekliliktir (Subramanyam, 2014: 33). Oranları hesaplamak için kesin formüller belirleyen veya standart bir oran analizi listesi yayımlayan yetkili bir kurum bulunmamaktadır. Analistler arasında hatta veritabanına göre bile isimleri veya formülleri değişebilse de literatürde yaygın olarak kullanımı kabul edilen oranlar bulunmaktadır (Robinson vd., 2015: 301; Gok vd., 2019).

Literatürde sık kullanılan oranlar aşağıdaki gibidir (Berk ve DeMarzo, 2017: 69):

- **Karlılık Oranları:** Bu rasyolar satışlar ve yatırım üzerinden sağlanan kazançlar şeklinde hesaplanarak karın yeterliliğini ve yönetimin performansını ölçmek için kullanılır. Satışların karlılığı, toplam aktiflerin karlılığı ve öz sermayenin karlılığı gibi rasyolar örnek gösterilebilir (Erdoğan, 2009: 9).
- **Likidite Oranları:** Firmanın ödeme gücünü ve likiditesini değerlendirmek için genellikle bilançodaki bilgiler kullanılır. Bu rasyolar, alacaklıların firmanın kısa vadeli ihtiyaçlarını karşılamak için yeterli işletme sermayesine sahip olup olmadığını değerlendirmeleri amacıyla bir firmanın cari varlıklarını ve cari borçlarını karşılaştırır. Cari rasyo oranları ve çabuk (asit-test) rasyo örnek gösterilebilir (Berk ve DeMarzo, 2017: 71).
- **Faaliyet Oranları:** Bir işletmenin varlıklarına sağladıkları getiriye kıyasla ne kadar yatırım yaptıklarını ve bu varlıkların ne derece verimli kullanıldıklarını tespit etmeye yarayan rasyolardır. Alacakların

ortalama tahsis süresi, alacak devir hızı, stok devir hızı, toplam varlıkların devir hızı gibi rasyolar örnek gösterilebilir (Aydın, 2012: 92).

- Kaldıraç ve Borç Oranları: İşletmenin borçla finanse edilmesini ve sabit giderlerini karşılama oranını ölçmeye yarayan bu rasyolara; borcun toplam aktiflere rasyosu, kazancın faiz giderlerine rasyosu ve kazancın sabit giderlere olan rasyoları örnek gösterilebilmektedir (Erdoğan, 2009: 8).
- Çalışmada kullanılan rasyolar ise:
- Brüt Kar Marjı: İşletmenin gerçekleştirdiği satışlardan satılan malların maliyeti çıktıktan sonra sonucun net satış bedeline bölünmesiyle hesaplanır. İşletme satışlarının nispi karlılığını ölçmek için kullanılır (Aydın, 2012: 99).
- FAVÖK Kar Marjı: İşletmenin faiz ve vergi öncesi karının net satış bedeline bölünmesi sonucu hesaplanır. İşletmenin finansman kararlarının kar marjına olan etkisini hesaba katmadan kar marjını ölçmeye yarar (Aydın, 2012: 99).
- Faaliyet Kar Marjı: İşletmenin yalnızca faaliyetleri sonucu elde ettiği karın (faiz ve diğer gelir kalemleri olmaksızın) net satış bedeline bölünmesi sonucu hesaplanır (Fridson ve Alvarez, 2011; 278).
- Vergi Öncesi Kar Marjı: İşletme dönem karının gelir vergisi ile toplanıp net satış bedeline bölünmesi ile hesaplanır (Fridson ve Alvarez, 2011; 278).
- Net Kar Marjı: İşletmenin net dönem karının net satış bedeline bölünmesi sonucu hesaplanır (Fridson ve Alvarez, 2011; 278).
- Cari Oran: İşletmenin dönen varlıklarının kısa vadeli yabancı kaynaklara bölünmesi sonucu hesaplanır ve işletmenin kısa vadeli borçlarını ödeyebilme gücünün ölçülmesinde kullanılır. Özellikle üretim işletmelerinde oranın 2 olması beklenir (Aydın, 2012: 99; Gündoğdu, 2018: 93).
- Asit-Test Oranı: Bir işletmenin en likit varlıklarının işletmenin sahip olduğu yükümlülüklerle karşılaştırılması amacıyla, bilançodaki stok kalemi ve diğer dönen varlıklar grubu hariç dönen varlıkların tamamının kısa vadeli yabancı kaynaklara bölünmesiyle hesaplanır. Genellikle bu oranın 1 çıkması arzu edilmektedir (Gündoğdu, 2018: 93).
- Faiz Karşılama Oranı: İşletmenin yabancı kaynak kullanımı olması durumunda ödemekle yükümlü olduğu faiz giderlerini karşılama gücünü gösterir. Vergiden önceki kar ile faiz giderlerinin toplamının faiz giderlerine bölünmesi sonucu hesaplanır (Gündoğdu, 2018: 100).
- Toplam Varlıkların Öz Sermayeye Oranı: Bir işletmenin faaliyetleri için ihtiyaç duyduğu fonların kompozisyonunda; dış kaynakların mı yoksa öz sermayenin mi ağırlıklı olduğunu ölçmeye yarar. Oran ne kadar yükselirse işletmenin fonlama tercihinde dış kaynak kullanımına yoğunlaştığı tespit edilir (Stotz, 2020).
- Borçların Öz Sermayeye Oranı: Toplam borç ve finansal yükümlülüklerin toplam öz sermayeye karşı ağırlığını hesaplayan bir kaldıraç oranıdır. Bu oran şirketin sermaye yapısının borçlara mı yoksa öz kaynağa mı yöneldiğinin bir göstergesidir (CFI, 2021).
- Uzun Vadeli Borçların Toplam Sermayeye Oranı: Bir finansal kaldıraç göstergesi olarak uzun vadeli borçların toplam kullanılabilir sermayeye (uzun vadeli borç, imtiyazlı hisse senedi ve adi hisse senedi) bölünmesiyle hesaplanır (Hayes, 2020).
- Alacak Devir Hızı: Bu oran alacakların bir yılda kaç kez döndüğünü göstermektedir. Oranın artması alacakların bir yılda içerisinde o kadar kez geri döndüğünü ifade etmektedir. Net satışlar kaleminin ortalama ticari alacaklara bölünmesiyle hesaplanır (Gündoğdu, 2018: 196).
- Alacakların Ortalama Tahsil Süresi: Alacak devir hızı oranının 365'e bölünmesi sonucu hesaplanır. Gün bazında ölçüm yapmak için kullanılır (Gündoğdu, 2018: 196).

- Stok Devir Hızı: Bu rasyo işletme stoklarının likiditesini ölçmek için kullanılmakta olup stoklar ve satışlar arasındaki ilişki göstermektedir. Satışların maliyetinin ortalama stok kalemine bölünmesi ile hesaplanır (Aydın, 2012: 94).
- Stokta Bekleme Süresi: Stok devir hızı oranının 365'e bölünmesi sonucu hesaplanır. Gün bazında ölçüm yapmak için kullanılır (Gündoğdu, 2018: 201).
- Maddi Duran Varlık Devir Oranı: Net satışların maddi duran varlıklara bölünmesi sonucu hesaplanan bu rasyo işletmenin faaliyetlerine devam edebilmesi için ihtiyaç duyduğu duran varlıkların yapısı hakkında bilgi vermektedir (Akaytay, vd., 2015).
- Yatırılan Sermaye Getirisi: Bir yatırıma yatırılan sermayeden kazanılan getiriyi ölçmeye yarar. İşletmenin faiz ve vergi öncesi karının vergi oranı ile düzeltilmesi sonucu oluşan faaliyet gelirinin; yatırılan sermayenin defter bedeline bölünmesi sonucu hesaplanır. Yatırılan sermaye ise duran varlıklar ile nakit olmayan net çalışma sermayesinin toplamı sonucu bulunur (Damodaran, 2007: 7-8).

Trend Analizi

İşletmenin yıllık finansal tablolarından yararlanılarak hazırlanan oran analizlerinin karşılaştırılması işletmenin performansına dair bir izlenim vermektedir. Trend analizi işletmenin kendi birkaç yıllık oran analizleri arasında yapılabileceği gibi önemli rasyoların pazardaki diğer firmalarla ya da sanayi ortalaması ile de karşılaştırılması mümkündür (Erdoğan, 2009: 10).

4.2. Bulgular ve Yorum

Tablo 1'de 2015-2019 dönemine ilişkin AMC Entertainment Holding'e ait sıklıkla kullanılan oran analizleri gösterilmiştir.

Tablo 1: AMC Entertainment Holding Oran Analizi

Oran Analizi	Endüstrinin Ortalama Rasyoları	2019	2018	2017	2016	2015
Karlılık Oranları						
Brüt Kar Marjı	54.5%	63.8%	63.7%	63.5%	61.9%	61.0%
FAVÖK Kar Marjı	14.6%	12.5%	15.5%	14.7%	16.5%	16.1%
Faaliyet Kar Marjı	3.1%	2.5%	4.9%	2.0%	6.6%	7.7%
Vergi Öncesi Kar Marjı	1.6%	(3.1%)	2.3%	(6.6%)	4.6%	5.5%
Net Kar Marjı	0.6%	(2.7%)	2.0%	(12.0%)	3.5%	3.5%
Likidite Oranları						
Asit Test Oranı	1.08	0.33	0.56	0.59	0.55	0.56
Cari Oran	1.42	0.35	0.59	0.62	0.57	0.58
Faiz Karşılama Oranı	0.8	0.8	1	0.8	2.2	2.3
Borç ve Kaldıraç Oranları						
Aktifler/Özkaynaklar	2.20	11.26	6.79	4.64	4.3	3.3
Borçlar/Özkaynaklar	0.29	4	3.91	2.42	2.31	1.4

Uzun vadeli borçlar/ Toplam Sermaye	22.0%	79.5%	78.4%	69.5%	68.6%	57.8%
Faaliyet Oranları						
Alacakların Devir Hızı	10.2	19.9	18.8	19.5	19.7	28.3
Ortalama Tahsil Süresi	35.7	18.4	19.5	18.7	18.6	12.9
Stok Devir Hızı	35.6	54.4	57.3	58.9	57.2	93.8
Stokta Bekleme Süresi	10.5	6.7	6.4	6.2	6.4	3.9
Maddi Duran Varlık Devir Oranı	8.67	1.04	1.77	1.65	1.45	2.21
Yatırılan Sermaye Getirisi	-	(1.5%)	1.3%	(7.7%)	1.9%	2.4%

Kaynak: Reuters Eikon (2020)

Karlılık oranları değerlendirildiğinde, işletmenin 2015 yılından itibaren brüt kar marjını yükselttiği gözlemlenmektedir. Ayrıca bu oran sektör ortalamasının da üstünde oluşmaktadır. FAVÖK kar marjı ve faaliyet kar marjı dikkate alındığında ise, işletmenin sektör ortalamasının altında kaldığı görülmektedir. Faaliyet kar marjının düşüş trendi içerisinde olması işletmenin rekabetçi avantajının yıllar boyunca azaldığının bir göstergesi olarak yorumlanabilir. Faaliyet kar marjındaki düşüş trendine paralel olarak FAVÖK kar marjında da düşüş trendi gözlemlenmektedir. Brüt kar marjının yükseliş trendi içerisinde olduğu bir dönemde FAVÖK ve faaliyet kar marjının düşüş göstermesi işletmenin faaliyet giderlerinin yüksek olması ile vergi ve faiz yükümlülüklerine işaret etmektedir. Vergi öncesi ve net kar marjı rasyolarının sektör ortalamalarının altında kalması ve 2019 yılında negatif sonuçlanması operasyonel verimliliğinin azaldığını göstermektedir.

Likidite oranları incelendiğinde, cari oranın sektör ortalamasından oldukça düşük olduğu gözlemlenmektedir. Bu durum işletmenin dönen varlıklarının kısa vadeli borçlarını karşılamadığını göstermektedir. Asit-test oranına bakıldığında ise işletmenin likiditesi daha düşük varlıklarının (stoklar) dönen varlıklardan çıkarıldıktan sonraki kısa vadeli borçlarını ödeme gücü hesaplanmıştır. Bu oranının genellikle 1 olması arzu edilen bir durumdur. İşletmenin kısa vadeli yabancı kaynak yükümlüklerini dönen varlıkları ile yeterince karşılayamayacağı bu rasyoda da tespit edilmiştir. İşletmenin yabancı kaynak kullanımından doğan faiz yükümlülüklerini ödeme gücü ise faiz karşılama oranı ile tespit edilebilir. Faiz karşılama oranı dönem net karının faiz giderleri ile toplanıp faiz giderlerine bölünmesi sonucu elde edildiği için bu oranın 1'den büyük olması beklenir. İşletmenin 2017 yılından itibaren bir mali yıl hariç olmak üzere faiz giderlerini karşılayacak karlılığa ulaşmadığı görülmektedir.

Borç ve kaldıraç oranları içerisinde yer alan aktif/özkaynak rasyosu firmanın aktiflerinin ne kadarının özkaynakları ile finanse edildiğini gösteren bir kaldıraç rasyosudur. Bu oranın 2'den büyük olması firmanın özkaynak kullanımından daha fazla borçlanmaya gittiğine işaret edebilmektedir. Sektör ortalamasının 2'ye yakın bir oranda gerçekleştiği görülmekteyken, işletmenin 2015 yılından itibaren faaliyetlerinin finansmanında dış kaynak kullanımına ağırlık verdiği borçlar/özkaynak rasyosundan da tespit edilmektedir. İşletmenin 2019 yılı itibarıyla özkaynaklarının 4 katı kadar kısa ve uzun vadeli borç yükümlülüğü bulunmaktadır. Uzun vadeli borçların, uzun vadeli borçlar ve özkaynak toplamına bölünmesi sonucu oluşan rasyo da işletmenin sermaye yapısında uzun vadeli yükümlülüklerinin önemini göstermektedir. Bu oranın 0,5'den büyük ve sektör ortalamasının üstünde oluşması, uzun dönem borçlanmanın işletmenin finansmanında özkaynak kullanımına göre daha önemli bir yer tuttuğunu göstermektedir. Bu durum işletmeyi rakiplerine göre daha riskli bir konuma sokmaktadır.

Alacak devir hızı ve ortalama tahsil süresi değerlendirildiğinde işletmenin dönen varlık likiditesinin sektör ortalamasından daha iyi performans gösterdiği görülmektedir. Aynı şekilde stok devir hızı ve stok

bekleme süresi; işletmenin stok yönetiminin sektör ortalamasından daha iyi olduğunu ve işletme varlıklarının verimli kullanıldığına işaret etmektedir. Duran varlıklar değerlendirildiğinde, işletmenin yıllar boyunca giderek artan bir şekilde maddi duran varlıklara yatırım yaptığı görülmektedir. Bu durum işletmenin duran varlık likiditesini olumsuz etkilemektedir. Yatırımcılar tarafından işletmeye yapılan yatırımın verimli kullanıp kullanılmadığını değerlendirmede kullanılan yatırılan sermaye getirisi oranı (ROIC) son 5 yılda 2 kez negatif getiri sağlamasından dolayı işletmenin dış kaynak kullanımının karlılığı tetiklemediği ve kaynakların verimsiz kullanıldığı söylenebilmektedir.

Pandemi döneminin AMC Entertainment Holding işletme performansı üzerindeki etkisini gözlemlemek adına trend analizi yapılmış ve aşağıda gösterilmiştir.

Şekil 1: AMC Entertainment Holding Net Kar Marjı Trend Analizi

Kaynak: Reuters Eikon (2020), Reuters (2021)

İşletmenin net kar marjının pandemi döneminin olumsuz etkisiyle beraber (-%25) 'lere kadar düştüğü görülmektedir. Dönem net karının negatif oluşması ve net satış bedelinin azalması net kar marjının düşmesine sebep olmuştur.

Şekil 2: AMC Entertainment Holding Seçilmiş Rasyolar Trend Analizi

Kaynak: Reuters Eikon (2020), Reuters (2021)

2020 yılında sinema salonu işletmelerinin kapalı kalması işletmenin finansal rasyolarını oldukça negatif etkilemiştir. Borçlar/Özkaynaklar rasyosu işletmenin 2020 yıl sonu bilançosunda negatif özkaynak oluşması neticesinde -2 oranında gerçekleşmiştir. Bu durum işletmenin maddi duran varlıklarının değerinin o varlıkları finanse eden kredi veya ipotek değerinin altına düşmesi sonucu gerçekleşir. Pandemi dönemi sinema salonu işletmelerinin duran varlık yatırımlarının negatif etkilendiği bu rasyodan da görülmektedir. Aynı zamanda alacak ve stok devir hızının azalması işletmenin varlık yönetiminde zorluklar çektiğini işaret etmektedir.

Tablo 2’de 2015-2019 dönemine ilişkin Cineworld PLC’nin sıklıkla kullanılan oran analizleri gösterilmiştir.

Tablo 2: Cineworld PLC Oran Analizi

Oran Analizi	Endüstrinin Ortalama Rasyoları	2019	2018	2017	2016	2015
Karlılık Oranları						
Brüt Kar Marjı	57.5%	37.1%	24.1%	26.4%	26.7%	28.5%
FAVÖK Kar Marjı	32.9%	34.7%	21.6%	22.2%	21.4%	22.0%
Faaliyet Kar Marjı	16.2%	16.6%	12.0%	14.4%	14.1%	14.6%
Vergi Öncesi Kar Marjı	11.7%	4.9%	8.5%	13.5%	12.3%	14.1%
Net Kar Marjı	9.5%	4.1%	6.9%	11.3%	10.3%	11.5%
Likidite Oranları						
Asit Test Oranı	0.97	0.28	0.53	0.79	0.62	0.76
Cari Oran	1.59	0.3	0.56	0.85	0.67	0.82
Faiz Karşılama Oranı	10.4	1.6	3.6	16.7	12.2	10
Borç ve Kaldıraç Oranları						
Aktifler/Özkaynaklar	2.07	4.24	2.84	1.82	1.95	2.05
Borçlar/Özkaynaklar	0.25	2.66	1.18	0.45	0.51	0.58
Uzun vadeli borçlar/ Toplam Sermaye	12.5%	68.4%	53.1%	29.5%	32.1%	34.7%
Faaliyet Oranları						
Alacakların Devir Hızı	5.0	18.4	27.8	23.1	23.4	25
Ortalama Tahsil Süresi	76.6	19.9	13.2	15.8	15.6	14.6
Stok Devir Hızı	13.2	80.5	127.6	65	61.6	60.4
Stokta Bekleme Süresi	27.7	4.5	2.9	5.6	5.9	6

Maddi Duran Varlık Devir Oranı	6.26	1.1	2.62	1.83	2.03	2.22
Yatırılan Sermaye Getirisi	-	1.9%	5.6%	8.7%	8.2%	9.0%

Kaynak: Reuters Eikon (2020)

İşletmenin 2015 yılından itibaren AMC Entertainment Holding'e (AMC) benzer şekilde brüt kar marjını yükselttiği gözlemlenmektedir. Ayrıca bu oran sektör ortalamasının da üstünde oluşmaktadır. Ayrıca FAVÖK kar marjı ve faaliyet kar marjı dikkate alındığında ise, işletmenin sektör ortalamasının üstünde getiri sağladığı da görülmektedir. Bu rasyolar özellikle 2019 yılında bir önceki yıla nazaran anlamlı bir artış göstermiştir. Bu durum işletmenin sektördeki rekabetçi avantajını güçlendirmesine işaret olabilir. Faaliyet karı ile vergi öncesi kar marjının arasındaki anlamlı sayılabilecek farklılık işletmenin faiz gelirlerinin önemini de göstermektedir.

Likidite oranları incelendiğinde, cari oranın sektör ortalamasından oldukça düşük olduğu gözlenmektedir. Bu durum işletmenin dönen varlıklarının kısa vadeli borçlarını karşılamadığını göstermektedir. İşletmenin likiditesi daha düşük varlıklarının kısa vadeli borçları ödeme gücünü gösteren asit-test oranı; sektör ortalaması olarak beklenen 1 değerinde gerçekleşmesine rağmen işletmenin rasyosu 2015 yılından itibaren düşüş kaydetmiştir. Kısa vadeli yabancı kaynak yükümlüklerinin işletme dönen varlıkları ile yeterince karşılanamayacağı görülmektedir. Faiz karşılama oranının daha önce belirtildiği gibi 1'den büyük olması beklenmektedir. İşletmenin uzun yıllar boyunca faiz karşılama gücü sektör ortalamasının üzerinde seyretmesine rağmen 2019 yılında anlamlı bir düşüş yaşamıştır. İşletme net kar marjının 2015 yılından itibaren azalış trendine girmesi faiz karşılama oranlarındaki düşüşü açıklamaktadır.

Aktif/özkaynak rasyosunun son 2 yıllık finansal bilançosunda 2'den büyük olması işletmenin dış kaynak finansmanına yöneldiğinin bir işaretidir. Borçlar/özkaynak rasyosu özellikle 2018 yılından sonra artış göstermiş ve şirketin borç yükümlülüğü 2019 yılı itibarıyla özkaynak tutarının 2,66 katına ulaşmıştır. Uzun vadeli borçların toplam sermayeye oranının 0,5'den büyük ve sektör ortalamasının üstünde oluşması, uzun dönem borçlanmanın işletmenin finansmanında özkaynak kullanımına göre daha önemli bir yer tuttuğunu göstermektedir. Özellikle sektör ortalamasının anlamlı bir farkla üstünde gerçekleşen bu oran işletmeyi rakiplerine nazaran daha riskli hale getirmektedir.

Alacak devir hızı ve ortalama tahsis süresi incelendiğinde yıllar boyunca alacak devir hızının düşmesine rağmen işletmenin dönen varlık likiditesinin sektör ortalamasına nazaran daha iyi bir performans gösterdiği görülmektedir. Aynı şekilde stok devir hızı ve stok bekleme süresi; işletmenin stok yönetiminin sektör ortalamasından daha iyi olduğunu ve işletme varlıklarının verimli kullanıldığına işaret etmektedir. Duran varlıklar değerlendirildiğinde, işletmenin yıllar boyunca giderek artan bir şekilde maddi duran varlıklara yatırım yaptığı görülmektedir. Bu durum işletmenin duran varlık likiditesini olumsuz etkilemektedir. Yatırımcılar tarafından işletmeye yapılan yatırımın verimli kullanıp kullanılmadığını değerlendirmede kullanılan yatırılan sermaye getirisi oranı (ROIC) son 5 yılda yatırımcılara pozitif getiri sunmuştur. ROIC oranlarının yıllar boyunca düşüş trendine girmesi işletme karlılığının ve rekabetçi avantajının azalmaya başladığının göstergesidir.

Pandemi döneminin Cineworld PLC işletme performansı üzerindeki etkisini gözlemlemek adına trend analizi yapılmış ve aşağıda gösterilmiştir.

Şekil 3: Cineworld PLC Net Kar Marjı Trend Analizi

Kaynak: Reuters Eikon (2020), Reuters (2021)

İşletmenin AMC Entertainment Holding'e benzer şekilde 2020 yılında pandeminin olumsuz etkisiyle beraber negatif kar marjına sahip olduğu görülmektedir. İşletme dönem karının negatif gerçekleşmesinin bir nedeni olarak salonların kapalı olmasına rağmen işletmenin sabit gider harcamalarının olması gösterilebilir.

Şekil 4: Cineworld PLC Seçilmiş Rasyolar Trend Analizi

Kaynak: Reuters Eikon (2020), Reuters (2021)

Alacak ve stok devir hızı rasyolarının 2018 yılından sonraki azalışı işletme varlık yönetiminin verimsizleşmeye ve varlık likiditesinin azalmaya başladığının bir göstergesidir. Pandemi dönemi boyunca kapalı kalan salonların finansal tablolara olumsuz etkisi borçlar/özkaynaklar rasyosundan da görülmektedir. 2020 yılında borçlar/özkaynaklar rasyosu bir önceki yıla oranla 14 kat artış göstermiştir. İşletmenin 2020 yılında özkaynak büyüklüğünün 38 katı borç yükümlülüğü bulunmaktadır.

5. SONUÇ

Oran analizleri sonucu işletmelerin karlılık rasyolarının 2015 yılından itibaren düşüş trendi içinde olduğu görülmektedir. Aynı şekilde işletmelerin likidite oranları da düşüş eğilimi içerisinde ve her geçen mali yılda işletmelerin kısa vadeli yükümlülüklerini karşılama zorlukları artmaktadır. İşletmelerin sermaye yapısı incelendiğinde borç yükümlülüklerinin yıllar boyunca artmış olduğu görülmektedir. Tüm bu durumlar sinema salonu işletmelerinin film endüstrisindeki rekabetçi avantajının azaldığının göstergelerinden biridir.

Sinema salonu işletmelerinin endüstrideki rekabetçiliğinin azalmasında STREAM platformlarının yükselişi de etkili olmuştur. TV ve mobil cihazlarda yaşanan teknolojik gelişmeler, internet hızının artışı, dijital platformlar arasındaki rekabetin maliyetleri düşürmesi gibi birçok faktör STREAM platformlarına olan talebi artırmıştır. Bu durum Türkiye’de de olduğu gibi birçok ülkede sinema salonu izleyici sayılarının azalmasındaki temel sebeplerden biridir.

Pandemi etkilerinin özellikle sinema salonu işletmelerini büyük ölçekte negatif etkilemesi STREAM platformlarının büyümesine katkı sağlamıştır. Önümüzdeki süreçte sinema salonu işletmelerinin mali yapılarında pandemi dönemine kıyasla düzelmeye beklense de sektörün uzun vadeli projeksiyonunda salon işletmeciliğinin rekabetçi gücünün azalacağı ve STREAM platformlarında talep artışı yaşanacağı beklenmektedir.

Özet: Ticarette dışa açıklığın ekonomik büyüme üzerine etkisi, uzun yıllardır mevcut literatürde tartışma konusudur. Bazı çalışmalarda bu etkinin olumlu, bazılarında ise önemsiz ve hatta olumsuz olduğu görülmüştür. Ulaşılan bu karma sonuçlar ise, analitik çerçeveye ve ülkeye özgü özelliklere atfedilmektedir. Bu çalışmada ise, 1970-2018 döneminde Türkiye’de ticarette dışa açıklığın ekonomik büyüme üzerindeki etkisi araştırılmaktadır. Değişkenlerin birim kök analizi için Ng-Peron birim kök testi tercih edilmiş ve değişkenlerin birinci farkı alındığında durağan hale geldiği bulgusuna ulaşılmıştır. Değişkenler arasında eşbütünlüğün olup olmadığı Hatemi J- Irandoust saklı eşbütünlük yaklaşımı yardımıyla belirlenmiştir. Ampirik bulgular ticarette dışa açıklık + bileşeni ile ekonomik büyüme + bileşeni arasında bir saklı eşbütünlüğün varlığına işaret etmektedir. Değişkenlerin uzun dönem katsayılarının tahmininde FMOLS tahmin tekniği dikkate alınmıştır. Ampirik bulgular aynı zamanda ticarette dışa açıklık + bileşeni ile ekonomik büyüme + bileşeni arasında anlamlı bir ilişkinin olduğunu ortaya koymaktadır. Çalışmada ticarette dışa açıklık + bileşeni ile ekonomik büyüme + bileşeni arasında çift yönlü bir nedenselliğin varlığına rastlanılmıştır. Elde edilen sonuçlara göre politika önerileri sunmak mümkündür.

Anahtar Kelimeler: Ticarette Dışa Açıklık, Ekonomik Büyüme, Saklı Eşbütünlük Analizi, Nedensellik

1. GİRİŞ

1980’li yıllardan itibaren gelişmekte olan ekonomilerin büyük bir kısmında ticari ve finansal alanda liberalleşme yani liberal ekonomi politikaları hızlı bir şekilde uygulanmaya başlamıştır. Nitekim Tornell vd. (2003), gelişmekte olan ekonomilerin öncelikle ticaretin serbestleştirilmesi ile serbestleşme politikalarına başladığını bunu da tipik olarak finansal serbestleşmenin izlediğini ortaya koymuşlardır.

Dışa dönük ekonomik büyüme literatürü önemli çalışmaları bünyesinde barındırmaktadır. Örneğin Edwards (1998), genellikle ihracat ve ithalat toplamının GSYİH’ ye oranı olarak almış, bunun mal, hizmet, sermaye, emek, bilgi ve fikir alışverişini kolaylaştırdığını ifade etmiştir. Yakın zamanda yapılan bir incelemede, Grabner ve ark. (2018), ticaret açıklığını ekonominin fiili dışa yöneliminin bir ölçüsü olarak görmüş, daha yüksek ticaret açıklığı seviyelerinin daha yüksek uluslararası finansal piyasalar entegrasyonu ile ilişkili olduğuna dikkati çekmiştir.

Ekonomi literatüründe dış ticaret destekleyici büyüme hipotezi, ticarette dışa açıklığın gelişmiş ekonomilerden gelişmekte olan ekonomilere doğru ileri teknoloji ve bilgi birikiminin akacağını bunun toplam faktör verimliliğini teşvik ederek ekonomik büyümeyi hızlandıracağı görüşündedir. Bu nedenle bu hipotez aynı zamanda ticari dışa açıklıktan ekonomik büyümeye doğru işleyen bir nedenselliğin varlığını kabul etmektedir. Chang vd. (2009), ticaret açıklığı ile ekonomik büyüme arasındaki ilişkinin farklı ülkeler arasında istikrarlı bir durum arz etmediğini, ülkenin yapısal özelliklerinin iki değişken arasındaki nedensel ilişkilerin doğasını önemli ölçüde etkileyebileceğini savunmuştur. Shayanewako (2018), dış ticaret-büyüme bağlantısı konusunda bir fikir birliği olmadığını, sonuçların ülkeler, veriler ve deneysel tekniklere bağlı olarak farklı olabileceğini ortaya koymuştur.

Bu arka plan göz önüne alındığında, bu çalışma Türkiye örneğinde ticarette dışa açıklık ile ekonomik büyüme arasındaki asimetrik ilişkileri eşbütünlük ve nedensellik analizi bağlamında incelemektedir. Burada değişkenlerin birim kök özelliklerinin belirlenmesinde ADF ve PP testleri kullanılmaktadır. Değişkenler arasındaki asimetrik eşbütünlüğün varlığı Hatemi J-Irandoust (2012) saklı eşbütünlük testi ile araştırılmaktadır. Değişkenleri katsayılarının tahmininde FMOLS tahmin yöntemi kullanılmıştır.

Değişkenler arasındaki asimetrik nedensellik ilişkisi saklı hata düzeltme modeli bağlamında belirlenmektedir.

Bu çerçevede çalışmanın bundan sonraki kısımları şu şekilde tasarlanmıştır. İkinci bölümde ampirik literatür üzerinde durulmaktadır. Üçüncü bölüm çalışmada kullanılan model ve veri setini içermektedir. Dördüncü bölümde analizlerden elde edilen sonuçlara yer verilmektedir. Sonuç kısmı ile çalışma sona ermektedir.

2. LİTERATÜR TARAMASI

Krueger (1978) ülkeler arası çalışmalarda, ticaretin serbestleştirilmesinin, uzun vadede verimliliği ve üretkenliği artırmaya yol açan endüstrilerde uzmanlaşmayı teşvik ettiğini göstermiştir. Tyler (1981), OPEC ve orta gelirli ülkeler örneğinde imalat sanayi ihracatındaki bir büyümenin, ekonomik büyümeyi artıran teknolojik ilerlemeye yol açtığını öne sürmüştür.

Nishimizu ve Robinson (1984), Japonya, Kore, Türkiye ve Yugoslavya örneğinde, ihracattaki büyümenin rekabet gücünü ve ölçek ekonomilerini artırarak toplam faktör verimliliğini artırdığını, ithalatın büyümesinin ise toplam faktör verimliliğindeki büyümeyi yavaşlattığını ortaya koymuştur. Romer (1990), 90 ülkenin kesit verilerini kullanarak ticarette dışa açıklık ve ekonomik büyüme arasındaki ilişkiyi araştırmış ticarette dışa açıklığın yerli üretimi artırmak için çok çeşitli yenilikler elde etmeye yardımcı olabileceğini ve ekonomik büyümeye yol açabileceğini ileri sürmektedir.

Irwin ve Tervio (2002) dış ticaret-büyüme bağıını I. Dünya Savaşı öncesi verileri kullanarak test etmişlerdir. Savaşlar arası ve savaş sonrası dönemler, ticarette dışa açıklığın ekonomik büyümeyi canlandırdığına işaret etmişlerdir. Awokuse (2008) ticarette dışa açıklık ve ekonomik performans arasındaki nedensellik ilişkisini Granger nedensellik yaklaşımı ve etki-tepki fonksiyonları ile Arjantin, Kolombiya ve Peru'da incelemiştir. Ampirik sonuçlar, ithalattan reel ekonomik büyümeye giden nedensel bağı, ihracattan reel ekonomik büyümeye uzanan Granger-nedensel ilişkisinden daha güçlü olduğunu ortaya koymuştur. Dahası, ekonomik büyümeden ihracata ve ithalata kadar ters nedensellik ilişkisi için kanıtlar elde etmiştir.

Kim ve Lin (2009), enstrüman değişkenli eşik regresyon analizini uygulayarak, 61 ülkenin verilerini kullanarak ticarette dışa açıklığın ekonomik büyümeye katkıda bulunup bulunmadığını test etmişlerdir. Ampirik kanıtlar, ekonomik büyüme ile uluslararası ticaret arasında istikrarlı bir ilişki olduğunu göstermiştir. Das ve Paul (2011) 12 yükselen Asya ekonomisinde ticarette dışa açıklığın ekonomik büyüme üzerindeki etkisini araştırmak için GMM yaklaşımını uygulamışlardır. Bulgular, ticarette dışa açıklığın ekonomik büyüme üzerinde olumlu bir etkisi olduğunu göstermiştir. Buna ek olarak, Chansomphou ve Ichihashi (2011), Asya mali krizinden önce ve sonra Güney Doğu Asya ekonomilerinin ekonomik büyümesi üzerinde ticarette dışa açıklığının etkisini araştırmak için yapısal kırılmalı eşbütünleşme yaklaşımını kullanmışlardır. Bulguları, finansal krizin Malezya, Endonezya ve Filipinler ekonomilerini etkilediğini, Tayland'ın ise ekonomik kriz öncesi ve sonrası performansının daha iyi olduğunu belirlemiştir. Ayrıca, ticarette dışa açıklığın Endonezya ve Malezya örneğinde çıktı üzerinde olumlu bir etkisi olduğunu, ancak Tayland örneğinde bu etkinin daha küçük olduğunu, ticarette dışa açıklığın Filipinler'deki ekonomik büyümeyi ekonomik krizden önce hızlandırdığını tespit etmiştir.

Kim vd. (2011), düşük ve yüksek gelirli ülkelerde dış ticaret-büyüme bağlantısını eşik regresyon yaklaşımını uygulayarak yeniden araştırmışlardır. Elde ettikleri sonuçlar, ticarette dışa açıklığın yüksek gelirli ülkelerde kapitalizasyonu, finansal gelişmeyi, üretkenliği ve ekonomik büyümeyi artırdığını ve düşük gelirli ülkelerde etkinin negatif ve istatistiksel olarak anlamlı olduğunu ortaya koymuşlardır.

Shazbaz (2012), Pakistan için bir Cobb-Douglas üretim fonksiyonu kullanarak ticarette dışa açıklık ve ekonomik büyüme arasındaki ilişkiyi analiz etmiştir. Bu çalışma ticarette dışa açıklığı temsilen ihracat, ithalat, ticaret hadleri ve kişi başına ticaret değişkenlerini kullanmıştır. Ampirik sonuçlar, Pakistan için büyümeye dayalı ihracat, büyümeye dayalı ithalat ve büyümeye dayalı ticaret hipotezlerini destekler niteliktedir. Bojanic (2012), finansal gelişme ve finansal kalkınmanın, 1940-2010 döneminde Bolivya için ekonomik büyümenin Granger nedeni olduğunu bulmuştur.

Kar vd. (2014), 1989-2007 dönemlerinde Türkiye'deki ticaret serbestleşmesi, finansal gelişme ve ekonomik büyüme arasındaki ilişkiyi hem doğrusal hem de doğrusal olmayan Granger nedensellik

testlerini kullanarak analiz etmişlerdir. Ampirik sonuçları, Türkiye'de ticaret, finansal gelişme ve ekonomik büyüme arasında çift yönlü nedensel ilişkinin varlığını ortaya koymuştur.

Hye ve Lau (2015), ARDL modelini kullanarak Hindistan'da ticarete dışa açıklık ve ekonomik büyüme arasındaki ilişkiyi ampirik olarak incelemişlerdir. Ticarete dışa açıklığın ekonomik büyüme üzerindeki etkisinin örneklem dönemine göre zamana göre değiştiğini ve ticarete dışa açıklığın reel ekonomik büyümeyi kısa vadede olumlu etkilediğini göstermişlerdir. Bununla birlikte, ekonomik büyüme, uzun vadede ticarete dışa açıklıktan olumsuz etkilenmiştir, bu da literatürde büyümeyi azaltıcı ihracat (veya açıklık) hipotezine karşılık gelmektedir.

Çeliköz vd. (2017), 1980-2016 dönemi için Türkiye'deki ticaret açıklığı ve ekonomik büyüme arasındaki Granger-nedensellik ilişkisini incelemek için eşbütünleşme testi ve bir vektör hata düzeltme modeli (VECM) kullanmışlardır. Yazarlar, kısa vadede ticarete dışa açıklıktan ekonomik büyümeye tek yönlü Granger nedenselliği tespit etmişlerdir.

Eren ve Ünal (2019), Engle-Granger ve Gregory-Hansen eşbütünleşme testleri ve Toda-Yamamoto nedensellik yaklaşımını kullanarak, 1960-2016 döneminde Türkiye'de ticaret açıklığı ile ekonomik büyüme arasındaki ilişkiyi incelemişlerdir. Bulgular gösteriyor ki, ekonomik büyümeden ticarete dışa açıklığa doğru tek yönlü bir nedensellik söz konusudur.

3. MODEL, VERİ SETİ VE METODOLOJİ

1970-2018 dönemini kapsayan bu çalışmada Türkiye'de ticarete dışa açıklığın ekonomik büyüme üzerindeki etkisi incelenmektedir. Bu ilişkiyi inceleyebilmek için doğrusal bir regresyon denklemi kullanılmıştır. Regresyon denkleminde bağımsız değişken ticarete dışa açıklık (ihracat ve ithalat toplamının GSYİH'ya oranı olarak) ve bağımlı değişken olarak ekonomik büyümeyi temsilen kişi başına reel gelir (2010 sabit dolar fiyatlarıyla) kullanılmıştır. Bu serilere ilişkin veriler Dünya Bankası Dünya Kalkınma Göstergeleri web sitesinden temin edilmiştir. Değişkenler logaritması alınarak ampirik analizler gerçekleştirilmiştir.

Çalışmanın ampirik metodolojisi üç ana kısımdan oluşmakta olup, birinci olarak değişkenlerin logaritmik değerleriyle ADF ve PP birim kök analizi yapılmakta ve değişkenlerin durağanlığı incelenmektedir. Değişkenler arasındaki uzun dönem ilişkisinin varlığı Johansen eşbütünleşme testi kullanılarak incelenmiştir. Arasında eşbütünleşmenin tespit edilemediği bu değişkenler arasında saklı bir eşbütünleşmenin olup olmadığı değişkenlerin + ve – bileşenleri dikkate alınarak Hatemi J-Irandoust (2012) saklı eşbütünleşme testi kullanılarak analiz edilmektedir. Metodolojinin ikinci kısmında elde edilen pozitif ve negatif bileşenlerin uzun dönem katsayıları Phillips- Hansen (1990) FMOLS tahmincisi ile tahmin edilmiştir. Analizin son aşamasında ise değişkenlerin pozitif ve negatif serileri (bileşenleri) arasında Granger-Yoon (2002) tarafından geliştirilen saklı hata düzeltme modeli kullanılarak asimetric nedensellik ilişkisi incelenmiştir.

4. BULGULAR

Ticarete dışa açıklık ile ekonomik büyüme değişkenlerinin durağanlık analizinde kullanılan ADF ve PP test sonuçları Tablo 1'de yer almaktadır. Değişkenlerin durağanlık testlerinde sabit ve sabit-trendli modeller kullanılmıştır. Ayrıca birim kök test istatistiğinin örnek değeri SIC kriterine göre belirlenmiştir. Buna göre Tablo 1'de de görüldüğü gibi birinci farkları alınarak yapılan durağanlık test sonuçlarına göre serilerin birinci farkında durağan olduğu görülmektedir.

Tablo 1: Birim Kök Test Sonuçları

Değişkenler	ADF		PP	
	Sabitli	Sabitli-trendli	Sabitli	Sabitli-trendli
LNGDP	0.515	-1.837	0.554	-1.925
LNTRADE	-1.841	-2.416	-1.845	-2.416
Δ LNGDP	-6.643***	-6.687***	-6.644***	-6.685***
Δ LNTRADE	-5.953***	-5.890***	-6.029***	-5.949***

Not: ADF testinde optimal gecikme uzunluğu SIC kriteri kullanılarak otomatik olarak belirlenmiştir. PP testinde band genişliği için Newey-West metodu kullanılmıştır. ***, %1 düzeyinde anlamlılığı ifade etmektedir.

Tablo 1 sonuçlarından yol çıkarak serilerin birinci farkında durağan olduğu sonucuna ulaşıldıktan sonra analizin bir sonraki adımı olan seriler arasındaki eşbütünleşme ilişkisinin incelenmesi gerekmektedir. Tablo 2’ de gösterilen VAR analizine göre uygun gecikme uzunluğu, farklı kriterler de dikkate alındığında, 1 olarak belirlenmiştir. Bu sonuç, seriler arasındaki eşbütünleşmenin analizinde Johansen testinin kullanılmasına imkân sunmaktadır.

Tablo 2: VAR Modeli Gecikme Uzunluğu Belirleme

Gecikme Uzunluğu	LR	FPE	AIC	SIC	HQ
0	NA	0.000359	-2.256300	-2.176794	-2.226517
1	245.709	1.41e-06*	-7.796555*	-7.558037*	-7.707205*
2	1.971886*	1.60e-06	-7.670737	-7.273206	-7.521820
3	5.821994	1.65e-06	-7.646106	-7.089563	-7.437622

Johansen eşbütünleşme testi kullanılarak ticarete dışa açıklık ve ekonomik büyüme değişkenleri arasında bir uzun dönem ilişkisinin olup olmadığı incelenmiştir. Tablo 3’ de bulunan sonuçlara göre değişkenlerin logaritmik ilk değerleri arasında herhangi bir eşbütünleşmenin yani uzun dönem ilişkisinin olmadığı anlaşılmıştır.

Tablo 3: Johansen Eşbütünleşme Test Sonuçları

	İz istatistiği	Max. Öz değer istatistiği
R=1	5.923	5.728
R≤1	0.195	0.195

İki değişken arasında bir saklı eşbütünleşmenin olup olmadığını belirleyebilmek için serileri + ve – bileşenlerine ayırarak söz konusu bileşenler arasında bir eşbütünleşmenin olup olmadığını araştırılması gerekir. Saklı eşbütünleşmenin ilk aşamasında değişkenlerin + ve – bileşenlerinin birinci farkta durağan olması gerekmektedir. Tablo 4’deki sonuçlar her iki değişkenin + ve – bileşenlerinin birinci farkta durağan olduğu tespit edilmiştir.

Tablo 4: Serilerin Birim Kök Sonuçları (+ ve - Bileşenleri)

Birinci farkında durağan olduğu tespit edilen ticarete dışa açıklık ile ekonomik büyüme değişkenlerinin + ve – bileşenleri arasında bir eşbütünleşmenin araştırılmasında Hatemi J-Irondoust testi kullanılmıştır. Tablo 5’ te yer alan sonuçlara göre ticarete dışa açıklığın (+) bileşeni ile ekonomik büyüme (+) bileşeni arasında bir eşbütünleşmenin olduğu belirlenmiştir. Bu nedenle bu iki seri arasında asimetric bir eşbütünleşmenin olduğu kanısına varılmıştır.

Tablo 5: Hatemi J- Irandoust Saklı Eşbütünleşme Analiz sonuçları (+ ve - Bileşenleri)

R=1	10.101	8.123
R≤1	1.979	1.979

Not: ** % 5 düzeyinde anlamlılığı ifade eder.

Yapılan analiz sonuçlarına göre elde edilen bulgulardan yola çıkarak ticarete dışa açıklığın (+) serileri ile ekonomik büyümenin (+) serileri arasında bir saklı eşbütünleşme ilişkisinin varlığı tespit edildiğinden analizin bir sonraki adımı olan söz konusu serilerin uzun dönem katsayıları FMOLS tahmincisi kullanılarak elde edilmiştir. Bulgular Tablo 6' da yer almaktadır. Tablo 6 sonuçlarına göre ise, ticarete dışa açıklığın (+) serisi dikkate alındığında ilgili katsayı 0.637 olarak tahmin edilmiştir. Bu durum ticarete dışa açıklığın (+) serisinde meydana gelen %1' lik bir artış ekonomik büyüme (+) serisinde 0.637'lik bir artışa neden olacağını ifade etmektedir. Diğer taraftan ekonomik büyüme (+) bileşeni katsayısı 1.987 olarak belirlenmiş böylece ters yönde de bir pozitif ilişkinin varlığı ortaya konmuştur.

Tablo 6: Uzun Dönem Tahminleri (FMOLS Tahmincisi)

LNTRADE+	LNGDP+
0.637***	1.984***

Not: ***, %1 düzeyinde anlamlılığı gösterir.

Ticarete dışa açıklığın (+) bileşeni ile ekonomik büyümenin (+) bileşeni arasında bir uzun dönem ilişkisinin ardından da bu ilişkinin katsayısının belirlenmesi bir sonraki aşama olan seriler arasındaki nedensellik ilişkisinin araştırılmasına izin vermiştir. Bu amaçla kurulan saklı hata düzeltme modeli sonuçları Tablo 7'de verilmektedir. Tablo 7 sonuçlarına bakıldığında bağımlı değişken ticari dışa açıklık (+) bileşeni dikkate alındığında ECT katsayısının negatif ve istatistiksel olarak anlamlı olduğu sonucuna varılmıştır. Bu durum ekonomik büyüme (+) serisinden bağımlı değişken olan ticarete dışa açıklığın (+) serisine doğru uzun dönem asimetrik nedenselliğin olduğunu ortaya koymaktadır.

Tablo 7: Saklı Hata Düzeltme Modeli Tahmin Sonuçları (Bağımlı Değişken: LNTRADE+)

Değişkenler	Katsayılar	Standart Hata	t-istatistiği	Olasılık
Sabit	0.133727	0.026607	5.026033	0.0000
ECT _{t-1}	-0.117337	0.045911	-2.555755	0.0154
GDP _{t-1}	-0.685687	0.557286	-1.230403	0.2272
GDP _{t-2}	-1.758739	0.549027	-3.203372	0.0030
TRADE _{t-3}	-0.216875	0.162170	-1.337331	0.1903

Yapılan ampirik çalışmanın son aşaması olan, bağımlı değişken ekonomik büyüme (+) serisi ve bağımsız değişken ticarete dışa açıklık (+) serisi arasındaki saklı hata düzeltme modeli sonuçları ise Tablo 8’de yer almaktadır. Elde edilen bulgular, ECT katsayısının bulunamamasından dolayı, değişkenler arasında asimetrik bir nedenselliğin olmadığını ortaya koymuştur.

Tablo 8: Saklı Hata Düzeltme Modeli Tahmin Sonuçları (Bağımlı Değişken: LNGDP+)

Değişkenler	Katsayılar	Standart Hata	t-istatistiği	Olasılık
Sabit	0.020872	0.003559	5.865370	0.0000
TRADE _{t-4}	-0.281485	0.163382	-1.722869	0.0926
GDP _{t-1}	-0.061341	0.039719	-1.544349	0.1304

5. SONUÇ

Yapılan ampirik çalışmada Türkiye’de ticarete dışa açıklığın ekonomik büyüme üzerindeki etkisi araştırılmıştır. İncelenen değişkenlerin öncelikle logaritmik değerleri alınmış ve değişkenlerin durağanlık analizi ADF ve PP birim kök testleriyle sınanmıştır. Değişkenlerin birinci farkında durağan olduğu tespit edilmiştir. Daha sonra değişkenlerin logaritmik ilk halleri Johansen eşbütünleşme testiyle incelenerek değişkenler arasında herhangi bir eşbütünleşme ilişkisinin varlığı tespit edilememiştir. Buna göre ampirik çalışma Hatemi J-Irandoust saklı eşbütünleşme testi ile devam etmiştir. Saklı eşbütünleşme testi sonucuna göre ticarete dışa açıklığın (+) bileşeni ile ekonomik büyüme (+) bileşeni arasında bir eşbütünleşmenin varlığı belirlenmiştir. Daha sonra değişkenlerin uzun dönem katsayıları FMOLS tahmincisi kullanılarak belirlenmiştir. FMOLS tahmin sonuçlarına göre, bağımsız değişken olarak ticarete dışa açıklığın (+) serisi dikkate alındığında, ekonomik büyüme (+) serisinin katsayısı 0.637 olarak tespit edilmiş ve ticarete dışa açıklığın (+) serisinde meydana gelen % 1’ lik bir artışın ekonomik büyümenin (+) serisinde 0.637’ lik bir artışa neden olacağı sonucuna ulaşılmıştır. Daha sonra değişkenlerle saklı hata düzeltme modeli kurularak değişkenler arasındaki uzun dönem asimetrik ilişkinin varlığı araştırılmıştır. Yapılan analiz sonucuna göre ise saklı hata düzeltme modelinde ECT katsayısının negatif ve istatistiki olarak anlamlı bulunmasından dolayı ekonomik büyüme (+) bileşeninden ticarete dışa açıklığının (+) bileşenine doğru asimetrik bir nedenselliğin varlığı tespit edilmiştir. Fakat ters yönde herhangi bir asimetrik nedensellik belirlenememiştir.

Ekonomi teorisinde, ticarete dışa açıklık ve ekonomik büyüme arasındaki ilişkiyi anlamak için dış ticaret kaynaklı büyüme ve büyümeye dayalı dış ticaret olmak üzere iki hipotez öne sürülmektedir. Çalışmada ticarete dışa açıklığın (+) bileşeni ile ekonomik büyümenin (+) bileşeni arasında uzun dönemde pozitif bir ilişkinin tespit edilmiş olması ekonomik büyümenin en önemli belirleyicisinin ticari dışa açıklık olduğunu ortaya koymaktadır. Dolayısıyla dış ticaret kaynaklı ekonomik büyüme hipotezinin desteklendiği anlamına gelmektedir. Bu nedenle ekonomik büyümeyi hızlandırmak istiyorsa politika yapıcıları dışa açık ekonomi politikaları izlemeye devam etmelidirler.

Özet: Enerji tüm canlıların yaşamı için gerekli olduğu gibi, sürdürülebilir bir ekonomik büyüme için de temel girdilerden biri olarak kabul edilmektedir. Bu çalışmada tarımsal enerji tüketimi ile ekonomik büyüme arasındaki ilişki incelenmiştir. Türkiye ekonomisi dikkate alınarak 1990-2018 dönemine ait yıllık veriler kullanılmıştır. Değişkenlerin durağanlık analizi ADF ve PP birim kök testi ile gerçekleştirilmiş ve değişkenlerin birinci farkında durağan olduğu tespit edilmiştir. Değişkenler arasındaki uzun dönem ilişkisi yeni nesil testlerden biri olan Hatemi J-Irandoust saklı eşbütünleme testi kullanılarak analiz edilmiştir. Sonuçlar tarımsal enerji tüketimi + bileşeni ile ekonomik büyüme + bileşeni arasında bir eşbütünleşmenin varlığını belirlemiştir. Uzun dönem katsayıları FMOLS tahmincisi kullanılarak, nedensellik ilişkileri de saklı hata düzeltme modeline dayalı asimetrik nedensellik testi ile incelenmiştir. Elde edilen ampirik sonuçlara göre, tarımsal enerji tüketimi + bileşeni ekonomik büyüme + bileşenini uzun dönemde pozitif etkilemektedir. Ayrıca, ekonomik büyüme + bileşeninden tarımsal enerji tüketimi + bileşenine doğru işleyen tek yönlü bir asimetrik nedensellik söz konusudur. Çalışma, Türkiye ekonomisi için bazı politika tavsiyeleri sunabilmektedir.

Anahtar Kelimeler: Tarımsal Enerji Tüketimi, Ekonomik Büyüme, Saklı Eşbütünleşme, Saklı Hata Düzeltme Modeli

1. GİRİŞ

Enerji, ilkel çağlardan beri tüm canlıların kullandığı önemli bir faktör olmuştur. Üretim ve tüketim faaliyetlerinde temel girdi olarak varlığının kabul edilmesi, ekonomik büyüme ve kalkınmanın itici gücü olup olmadığı konusunu tartışmaya açmıştır. Modern ekonominin başlangıcı kabul edilen Adam Smith'den günümüze kadar klasik iktisatçılar başta olmak üzere ana akım iktisatçıların büyük bir kısmı, büyüme ve kalkınmanın temel girdisi olarak fiziksel sermaye, emek ve doğal kaynaklar üzerinde durmuşlardır. Ancak 19. yüzyılda küreselleşmenin de etkisiyle sanayileşmiş ülkeler enerjinin iktisadi büyümenin temel girdilerinden bir olduğunu fark etmişlerdir. Sanayi devrimiyle enerji ihtiyacının artış göstermesi ve birinci dünya savaşıyla devam etmesi, diğer taraftan 1973 ve 1979 yıllarında meydana gelen enerji darboğazları, enerjinin ekonomideki yerinin fark edilmesinde etkili olmuştur.

Yaşanan petrol krizleriyle birlikte enerjinin önemi arttığı gibi enerji kaynakları bakımından yetersiz olan ülkeler enerji politikalarında değişime gitmek zorunda kalmıştır. Ekonominin her sektörü için kullanılan fosil yakıtların rezerv bakımından sorgulanması ve tükenebilir olması ülkeleri yeni arayışlara sürüklemiştir.

Enerji faktörü literatürde farklı makroekonomik serilerle ilişkilendirilip ekonometrik uygulamalara temel değişken olmuştur. Bu çalışmada tarımsal enerji tüketimi-ekonomik büyüme arasındaki ilişki Türkiye ekonomisi için 1990-2018 döneminde zaman serisi teknikleri kullanılarak araştırılmaktadır. Zaman serisi yöntemlerinden birim kök, asimetrik eşbütünleşme, uzun dönem tahmini ve asimetrik nedensellik analizleri çerçevesinde söz konusu ilişki test edilmektedir.

2. TARIMSAL ENERJİ TÜKETİMİ İLE EKONOMİK BÜYÜME ARASINDAKİ İLİŞKİ: AMPİRİK LİTERATÜR

Ampirik çalışmalar enerji tüketimi-ekonomik büyüme ilişkisi üzerinde yoğunlaşmakla birlikte küçük bir bölümünün tarımsal enerji tüketimi ile ekonomik büyüme arasındaki ilişkinin araştırılmasına yöneldiği görülmektedir. Moghaddasi vd. (2018) İran tarımsal sektörü üzerinde durmuştur. İran tarımı uzun yıllardır enerji faktörünü yoğun şekilde kullanmaktadır. Bundan dolayı büyüme ve ihracat bakımından önemli sonuçlar doğurabileceği belirtilmektedir. Bu çalışmada 1967-2015 dönemi dikkate alınarak, nedensellik ve eşbütünleşme analiz teknikleri kullanılmıştır. Elde edilen ampirik sonuçlara göre enerji

tüketiminden ekonomik büyümeye doğru tek taraflı bir nedensellik sonucuna varılmıştır. Diğer taraftan modele dâhil edilen ihracat unsuru ile enerji tüketimi arasında her hangi bir nedenselliğin varlığı tespit edilememiştir. Başka bir bulguya göre tarım alanında kullanılan enerji miktarının %1 oranında artması uzun dönemde tarımsal büyümeyi %1.29 oranında artırmaktadır.

Sebri ve Abid (2012) çalışmalarında tarım ekonomisinde enerjinin rolüne değinmişlerdir. Tunus ekonomisini dikkate alarak enerji tüketimi, tarım sektörü ve ekonomik büyüme gibi değişkenleri kullanarak aralarındaki ilişkiyi araştırmışlardır. Çalışmada 1980-2007 dönemine ait veriler kullanılmıştır. Kullanılan Granger nedensellik testine göre enerjinin bileşenleri arasında (petrol ve elektrik tüketimi) direk bir ilişkinin varlığı bulunmuştur. Ayrıca, ticari açıklık ve enerji tüketimi tarımsal katma değerın nedenidir. Böylece enerjiden büyümeye ve ticaretten büyümeye doğru Tunus tarım sektöründe bir nedensellik söz konusudur.

Chandio vd. (2018) 1984-2016 dönemini kapsayacak şekilde Pakistan’da enerji tüketimi ile tarımsal ekonomik büyüme arasındaki ilişkiyi incelemişlerdir. Bu çalışmada ARDL yaklaşımı kullanılmış, Pakistan tarımsal ekonomisi üzerinde değişkenlerin uzun dönem ve kısa dönem ilişkilerine bakılmıştır. Çalışmanın bulguları gösteriyor ki, uzun ve kısa dönemde tarımsal ekonomik büyüme gaz ve elektrik tüketimi tarafından pozitif olarak etkilenmektedir. Uzun dönemde gaz ve elektrik tüketimi elastikiyet katsayıları sırasıyla 0.906 ve 0.421, kısa dönemde ise 0.59 ve 0.276 olarak tahmin edilmiştir.

Moghaddasi ve Paur (2016) 1974-2012 dönemine ait yıllık verileri kullanarak Solow artığı çerçevesinde tarımsal üretim ile enerji tüketimi arasındaki ilişkiyi incelemişlerdir. Cobb-Dauglas üretim fonksiyonu tahmininden elde edilen sonuçlar gösteriyor ki, emek, sermaye ve enerji değişkenlerinde meydana gelen %1’lik bir değişim tarımsal katma değerinde sırasıyla %4.07, %0.09 ve %0.49 bir değişime yol açmaktadır. Bu durum emek, sermaye ve enerjinin tarımsal katma değerın dolayısıyla tarımsal üretimin önemli belirleyicileri olduğunu kanıtlamaktadır.

Shahbaz vd. (2016) 1972-2011 döneminde Pakistan’da, ekonomik büyüme, tarım ve modern sektör büyümesi, finansal gelişme ile enerji tüketimi arasındaki ilişkiyi analiz etmişlerdir. Çalışmada ARDL sınır testi ve Granger nedensellik tekniğinden istifade edilmiştir. Nedensellik testi sonucuna göre genel ekonomik büyüme enerji talebinin nedenidir. Diğer taraftan modern sektördeki büyüme ile enerji tüketimi, finansal gelişme ile enerji tüketimi arasında çift yönlü bir nedenselliğin varlığı tespit edilmiştir. Ayrıca, enerji tüketimi tarımsal büyümenin nedenidir.

Akyol (2020) tarımsal üretimde kullanılan enerji tüketimi ve tarımsal katma değer değişkenleri arasındaki ilişkiyi araştırmıştır. Modele dâhil edilen ülkeler AB’ye üye ve geçiş ekonomileri olan 10 ülkedir. Çalışmada 2019-2017 periyoduna ait yıllık veriler kullanılmış ve Panel veri teknikleri ile ilişkiler test edilmiştir. Elde edilen ampirik bulgulara göre, tarımsal enerji tüketimi tarımsal katma değer üzerinde pozitif bir etkiye sahip olup, tarımsal enerji tüketiminin tarımsal büyümeyi artırdığı şeklinde yorumlanabilir.

3. MODEL ve VERİ SETİ

Türkiye ekonomisi üzerinde tarımsal enerji tüketimi ve ekonomik büyüme arasındaki ilişkiyi test edebilmek için aşağıdaki gibi bir doğrusal regresyon denklemi dikkate alınmıştır:

$$LNGDP_t = \beta_0 + \beta_1 LNTARIM_ENERJİ_t + u_t \quad (1)$$

$$LNTARIM_ENERJİ_t = \beta_0 + \beta_1 LNGDP_t + u_t \quad (2)$$

Yukarıdaki modelde β_0 sabit terimi, u_t ise hata terimini göstermektedir. GDP kişi başına reel geliri (2010 sabit \$ fiyatlarıyla) tarımsal enerji tüketimi ise tarım sektöründe kullanılan toplam enerji tüketimi ifade etmektedir. Kişi başına reel gelir Dünya Bankası Dünya Kalkınma Göstergeleri veri sitesinden, tarımsal enerji tüketimi verileri ise Uluslararası Enerji Ajansından elde edilmiştir. Bu çalışmada 1990-2018 dönemine ait yıllık veriler kullanılmıştır. Tüm değişkenler logaritmaları alındıktan sonra analizlere dâhil edilmişlerdir.

4. METODOLOJİ

Çalışmada ilk olarak, değişkenlerin birim kök analizi ADF ve PP birim kök testleriyle gerçekleştirilmektedir. İkinci olarak, değişkenler arasındaki uzun dönem (eşbütünleşme) ilişkisinin varlığı

Johansen (1990) eşbütünleşme testi ile incelenmektedir. Değişkenlerin + ve – bileşenleri arasındaki eşbütünleşme ilişkisi Hatemi-j & Irandoust (2012) saklı eşbütünleşme yaklaşımı ile araştırılmaktadır. Değişkenlerin uzun dönem katsayıları Phillips-Hansen(1990) FMOLS tahmincisi ile nedensellik ilişkisi ise Granger-Yoon (2002) tarafından geliştirilen saklı hata düzeltme modeli ile araştırılmaktadır.

5. BULGULAR

Tarımsal alanda kullanılan enerji tüketimi ile ekonomik büyüme değişkenlerinin durağanlık analizinin ADF ve PP test sonuçları Tablo 1’de sunulmaktadır. Birim kök test sonuçlarına göre değişkenlerin düzey değerlerinde durağan olmadığı görülmektedir. Ancak serilerin birinci farkları alınarak yapılan durağanlık testi değişkenlerin birinci farkında durağan olduğunu ortaya koymaktadır. Bu sonuç değişkenlerin eşbütünleşme analizi için Johansen testinin, Hatemi J-Irandoust saklı eşbütünleşme testinin ve saklı hata düzeltme modelinin kullanılmasına imkân tanımaktadır.

Tablo 1: Birim Kök Test Sonuçları

Değişkenler	ADF		PP	
	Sabitli	Sabitli-trendli	Sabitli	Sabitli-trendli
LNGDP	1.087	-1.506	1.562	-2.724
LNTARIM_ENERGY	-1.585	-3.012	-1.594	-2.123
Δ LNGDP	-9.123***	-9.483***	-9.047***	-15.587***
Δ LNTARIM_ENERGY	-7.073***	-7.738***	-6.914***	-7.738***

Not: ADF testinde optimal gecikme uzunluğu AIC kriteri kullanılarak otomatik olarak belirlenmiştir. PP testinde band genişliği için Newey-West metodu kullanılmıştır. ***, %1 düzeyinde anlamlılığı ifade eder.

Değişkenlerin birinci farkında durağanlık göstermesi seriler arasında eş bütünleşmenin varlığını test edebilmek için Johansen eşbütünleşme testinin kullanımına izin vermektedir. Yapılan VAR analizi sonucuna göre, Tablo 2’den de görüleceği üzere, serilerin gecikme uzunluğu 2 olarak bulunmuş bu sonuç bir sonraki aşama olan Johansen eşbütünleşme testinde kullanılmıştır.

Tablo 2: Var Gecikme Uzunluğu Belirleme

Gecikme uzunluğu	LR	FPE	AIC	SIC	HQ
0	NA	2.39e-05	-4.965	-4.868	-4.937
1	84.929	8.12e-07	-8.350	-8.059	-8.266
2	10.792	6.66e-07*	-8.556*	-8.072*	-8.417*
3	0.370*	9.04e-07	-8.268	-7.590	-8.073

Not: *, optimal gecikme uzunluğunu ifade eder.

Modele dâhil edilen tarımsal enerji kullanımı ve ekonomik büyüme değişkenleri arasında bir uzun dönem ilişkisinin var olup olmadığı Johansen eşbütünleşme testi ile sınımlanmaktadır. Ancak değişkenlerin pozitif ve negatif bileşenleriyle bir işlem yapabilmek için öncelikle seriler arasında bir eşbütünleşmenin olmaması gerekmektedir. Tablo 3’te sunulan Johansen eşbütünleşme testi sonuçlarına göre seriler arasında herhangi bir eşbütünleşme ilişkisine rastlanmamıştır. Ancak saklı bir eşbütünleşmenin olup olmadığı serilerin + ve – bileşenleri arasında saklı eşbütünleşme testi olan Hatemi J-Irandoust testinin kullanılmasını gerektirmektedir. Bunun ön şartı da serilerin + ve – bileşenlerinin de birinci farkında durağan olmasıdır.

Tablo 3: Johansen Eşbütünleşme Test Sonuçları

	İz istatistiği	Max. Öz değer istatistiği
R=1	12.428	8.182
R≤1	4.246	4.246

Tablo 4’ten görüleceği üzere, yapılan birim kök analizinde serilerin + ve – bileşenlerinin düzeyde durağan olmadığı birinci farkları alındığında durağan olduğu tespit edilmiştir. Bu sonuç söz konusu seriler arasında saklı bir eşbütünleşme analizi yapılmasına izin vermektedir.

Tablo 4: Serilerin Birim Kök Sonuçları (+ ve - Bileşenleri)

Bileşenlerine ayrıştırılan serilerin birim kök analizleri yapıldıktan sonra söz konusu seriler arasında Johansen eşbütünleşme testi kullanılarak bir eşbütünleşme ilişkisinin olup olmadığı araştırıldığında bu teknik Hatemi J-Irandoust saklı eşbütünleşme testi olarak bilinir. Tablo 5'ten elde edilen bulgulara göre; tarımsal enerji tüketimi + serisi ile ekonomik büyüme + serisi arasında eşbütünleşmenin varlığı tespit edilmiştir. Ancak tarımsal enerji tüketimi - serisi ile ekonomik büyüme - serisi arasında uzun dönemde bir ilişkinin varlığı tespit edilememiştir. Değişkenlerin – serilerinde eşbütünleşmenin varlığı söz konusu olmadığı için bundan sonraki aşamada bu seriler için uzun dönem katsayıları ve nedensellik ilişkisi tahmin edilmemiştir.

Tablo 5: Hatemi J- Irandoust Saklı Eşbütünleşme Analiz sonuçları (+ ve - Bileşenleri)

Türkiye ekonomisi dikkate alınarak yapılan analizde serilerin + bileşenleri arasında uzun dönemli bir ilişkinin tespit edilmesinden sonra söz konusu serilerin uzun dönem katsayıları FMOLS tahmin tekniğiyle tahmin edilmiş ve Tablo 6'da gösterilmiştir. Modelde bağımsız değişken olarak tarımsal enerji tüketimi + serisi, bağımlı değişken olarak ise ekonomik büyüme + serisi alınmıştır. Bu durumda tarımsal enerji tüketimi + serisi katsayısı 0.519 olarak bulunmuştur. Elde edilen bu sonuç tarımsal enerji tüketimi + serisinde meydana gelen %1'lik bir artışın, ekonomik büyüme + serisinde 0.519 oranında bir artış sağladığı anlamına gelmektedir. Diğer taraftan ekonomi büyüme + serisi ile tarımsal enerji tüketimi + serisi arasında da pozitif bir ilişki söz konusudur. Bu ilişki katsayısı 1.332 olarak belirlenmiştir.

Tablo 6: Uzun Dönem Katsayı Tahminleri (Tahmin Yöntemi: FMOLS)

	LNTARIM_ENERGY+	LNGDP +
	0.519***	1.332***

Not: ***, %1 düzeyinde anlamlılığı ifade eder.

Ampirik analizde tarımsal enerji tüketimi + serisi ile ekonomik büyüme + serisi arasında uzun dönem ilişkisinin varlığı tespit edildiğinden dolayı nedensellik analizi olan saklı hata düzeltme modelinde de bu seriler dikkate alınmış, çıkan sonuçlar Tablo 7'de sunulmuştur. Bağımlı değişken tarımsal enerji tüketimi + serisi, bağımsız değişken ise ekonomik büyüme + serisi alındığında hata düzeltme katsayısı olan ECT - 0.331 yani negatif ve istatistiksel olarak anlamlı olduğu görülmektedir. Bu durum ekonomik büyüme +

serisinden tarımsal enerji tüketimi + serisine doğru uzun dönemli bir asimetric nedenselliğin varlığını ortaya koymaktadır.

Tablo 7: Saklı Hata Düzeltme Modeli Tahmin Sonuçları (Bağımlı Değişken: LNTARIM_ENERGY+)

Değişkenler	Katsayılar	Standart Hata	t-istatistiği	Olasılık

6. SONUÇ

Bu çalışmada tarımsal enerji tüketiminin ekonomik büyüme üzerindeki etkisi Türkiye örneğinde 1990-2018 periyodunda araştırılmıştır. Değişkenlerin ADF ve PP birim kök testleriyle durağanlık analizi gerçekleştirilmiştir. Değişkenlerin birinci farkta durağanlığı tespit edilmiştir. Johansen eşbütünleşme testi ile uzun dönem ilişkisi incelenmiş ve değişkenler arasında herhangi bir ilişki bulunamamıştır. Bu durum analizi bir sonraki aşama olan Hatemi-j & Iranoust saklı eşbütünleşme testine götürmektedir. Değişkenlerin bileşenleri olan pozitif ve negatif bileşenleri birinci farkta durağan bulunmuş, gerçekleştirilen saklı eşbütünleşme analizi sonucunda hem + bileşenler hem de – bileşenler arasında eşbütünleşmenin varlığı ortaya çıkarılmıştır. Değişkenlerin uzun dönem katsayıları FMOLS tahmincisi ile tahmin edilmiştir. Bu aşamada elde edilen sonuçlara göre; tarımsal enerji tüketimi + bileşeni ile ekonomik büyüme + bileşeni arasında uzun dönemde pozitif bir ilişki tespit edilmiştir. Yani, tarımsal enerji tüketimi + serisinde meydana gelen %1’lik bir artış, ekonomik büyüme + serisini uzun dönemde 0.519 oranında artırmaktadır. Ayrıca, ters yönde de pozitif bir ilişki tespit edilmiştir. Saklı hata düzeltme modeli tahmin sonuçları ise ekonomik büyüme + serisinden tarımsal enerji tüketimi + serisine doğru uzun dönemli bir asimetric nedenselliğin varlığını kanıtlamaktadır.

Ekonomik büyüme + serisinden tarımsal enerji tüketimi + serisine doğru uzun dönemli bir asimetric nedenselliğin tespit edilmiş olması aslında enerji-büyüme konusundaki dört temel hipotezden biri olan “koruma hipotezi” ni destekleyen bir kanıt olarak değerlendirilebilir.

Bu çalışmanın temel kısıtı sadece tarım sektörü enerji tüketimi-ekonomik büyüme ilişkisini incelemesidir. Bundan sonraki çalışmalar sanayi ve hizmetler sektörünü de analize dahil ederek her bir sektör için ampirik bulgular elde edebilir ve karşılaştırmalı politika önerileri sunabilir. Ayrıca bu çalışmalar genel olarak enerji tüketimi yerine fosil ve yenilenebilir enerji olarak enerji faktörünü iki kısma ayırarak sektörlerin ekonomik büyüme üzerindeki etkilerini daha geniş bir perspektiften tahmin edebilir.

Özet: Kayseri TR72 Bölgesi içinde bulunan ve bölgedeki diğer illerle karşılaştırıldığında ihracat alanında öncü olan bir ildir. Kayseri’de ihracat üzerinde Covid-19 Pandemi sürecinin etkilerinin araştırıldığı bu çalışmada, teorik bilgilerin oluşturulmasında Türkiye İstatistik Kurumu, Kayseri Ticaret Odası, Kayseri Sanayi Odası, Kayseri Organize Sanayi Bölge Müdürlüğü, Kayseri Serbest Bölge Müdürlüğü, Kayseri Esnaf ve Sanatkarlar Odası yayın ve verilerinden yararlanılmıştır. Çalışmanın uygulama aşamasında anket ve yüz yüze görüşme yöntemleri kullanılmış, Kayseri il merkezinde faaliyet gösteren 253 firmadan geri dönüş alınmıştır. Pandemi nedeniyle anket soruları elektronik ortamda düzenlenmiş, anketi cevaplayacak kişilerin belirlenmesinde Kayseri Sanayi Odası ve firma yetkilileri ile yapılan görüşmelerden yararlanılmıştır. Anket çalışması sonrasında firma yetkililerinin pandemi sürecinde ihracat ile ilgili görüş ve önerilerini alabilmek amacıyla ikili görüşmeler yapılmış, bu görüşmelerden elde edilen bilgiler uygulama sonuçları bölümünde belirtilmiştir. Çalışmada farklı sektörlerden, farklı büyüklüklerde faaliyet gösteren bu firmalardan ihracat yapılarına ilişkin kapsamlı bilgiler elde edilmiş, bunun yanı sıra pandemi öncesi ve sonrası ihracat süreçlerinin karşılaştırılmasına katkı sağlamıştır.

Anahtar kelimeler: Covid-19, İhracat, Dış Ticaret, Kayseri’de ihracat.

The Effects of the COVID-19 Pandemic Process on Exports: The Case of Kayseri Province

Abstract: Kayseri is a leading province in the field of export when compared to other provinces in the TR72 region. In this study, in which the effects of the Covid-19 pandemic process on exports in Kayseri were used the publications and data of the Turkish Statistical Institute, Kayseri Chamber of Commerce, Kayseri Chamber of Industry, Kayseri Organized Industrial Zone Directorate, Kayseri Free Zone Directorate, Kayseri Chamber of Tradesmen and Craftsmen. In the implementation phase of the study were used a questionnaire and face-to-face interview methods, feedback was received from 253 companies operating in Kayseri city center. Due to the pandemic, the survey questions were arranged electronically, and interviews with the Kayseri Chamber of Industry and company officials were used to determine the people who would answer the survey. After the survey, bilateral meetings were held in order to get the opinions and suggestions of the company officials about exports during the pandemic process, and the information obtained from these interviews is stated in the application results section. In the study, comprehensive information on export structures was obtained from these companies operating in different sizes and from different sectors, as well as contributing to the comparison of export processes before and after the pandemic.

Keywords: Covid-19, Export, Foreign Trade, Export in Kayseri.

1. GİRİŞ

Örgütü (World Health Organization, WHO) tarafından 11 Şubat 2020’de SARS-CoV-2 olarak tanımlanmıştır. Dünya Sağlık Örgütü 11 Şubat 2020 tarihinde bu salgını Covid-19 pandemisi olarak adlandırmıştır. Covid-19 pandemisi henüz dünyada sağlık sektörü başta olmak üzere, tüm sektörleri etkilemektedir. Bu kapsamda ülkelerde mal ticareti azalmış, ihracat gerilemiştir. İhracat döviz geliri yaratan bir işlemdir. Ülkeler ihracat yaparak gelir düzeylerini ve istihdam hacmini artırmaktadır. İhracatla döviz rezervleri de yükselmektedir. İhracatın azalması tüm bu olumlu etkilerin azalmasına neden olmaktadır. Bu nedenle Covid-19 pandemisinin ihracat üzerindeki etkilerinin incelenmesi ve tedbir alınması önem taşımaktadır.

* Bu çalışma, 2209-A Lisans Öğrenci Projesi kapsamında 2020-2021 (2. Dönem) ‘1919B012001234’ numarası ile TÜBİTAK tarafından desteklenen proje kapsamında hazırlanmıştır. Proje yürütücüsü Mürüvet SAÇÇIOĞLU, proje danışmanı Doç. Dr. Dilek SÜREKÇİ YAMAÇLI’dır.

2020 yılında pandemi ile birlikte dünya hasılası azaldı, ülke gelirleri geriledi. Dış ticarette yavaşlama yaşandı. Türkiye İhracatçılar Meclisi 2021 yılı raporuna göre dış ticaret alanında izolasyon ve sosyal mesafe düzenlemeleri sektörler arasında farklı etkiler ortaya çıkarmıştır. Pandeminin en ağır hissedildiği sektörün hizmet sektörü olduğu gözlenmiştir. Bu kapsamda ulaştırma, ticaret, konaklama, restoran, kültür, sanat ve eğlence gibi hizmet sektörlerimde gelir daralmaları yaşanmıştır. Raporda, tarım ve hayvancılık alanında pandeminin etkilerin daha hafif olduğu gözlenmektedir. Özellikle pandemiden daha fazla etkilenen sektörlerde, devlet desteklerine rağmen, özellikle KOBİ'lerin oldukça zor süreçlerden geçtiğininin altı çizilmiştir.

Pandeminin dış ticaret alanında pek çok değişikliğe yol açacağı kesindir. Örneğin Dünya Bankasının, "Dünya Kalkınma Raporu 2019: İşin Değişen Doğası" raporunda, teknolojinin ticareti giderek daha fazla şekillendirdiği, işgücü piyasasında insan yerine robotların daha fazla kullanıldığı, insanların eğitime ve sağlığına daha fazla yatırım yapılmasının zorunlu hale geldiği belirtilmiştir.

Dünya Ekonomik Forumu (World Economic Forum, WEF) "İstihdamın Geleceği Raporu 2020" adlı çalışmada 2020 yılında üretimde %33 robot, %67 insan şeklinde olan dağılımın 2025 yılında %47 robot %53 insan şeklinde değişeceğini tahmin etmektedir. Buna bağlı olarak gelecekte mevcut mesleklerin bazılarının yok olacağı belirtilmektedir. Rapora göre teknoloji işgücü üzerinde baskı yaratsa da yeni iş kolları yaratacak ve bunun yanı sıra üretkenliği arttırmakta ve etkili kamu hizmetleri sunmanın yolunu açacaktır.

Bu çalışmanın ikinci bölümünde literatür ve araştırma alanı yer almakta, üçüncü bölümde araştırma konusu, amacı ve yöntemi tanımlanmakta, dördüncü bölümde anket sonuçlarına ve yüz yüze görüşme raporu bulgularına yer verilmekte, çalışma sonuç bölümü ile tamamlanmaktadır.

1. LİTERATÜR VE ARAŞTIRMA ALANI

Literatürde, KOBİ'lerin ihracat kapasitesi ve dış ticarette yaşadığı sorunlara yönelik çalışmalar mevcuttur. Fakat pandemi döneminde dış ticaret alanında yapılan çalışmalar henüz sınırlı sayıdadır. Bununla birlikte ihracat ile ilgili sektörel ve yerel/bölgesel düzeyde yürütülen çalışmalar oldukça azdır. Özellikle içinde bulunduğumuz pandemi çok uzun bir süredir olağan üstü bir süreç yaşanmasına yol açmış, pandeminin etkilerinin net olarak görülebilmesi önem kazanmıştır.

İncelenen çalışmalardan Yılmaz ve Bayram (2020), e-ticaret ve ihracat verilerini kullanarak Covid-19 pandemi döneminde Türkiye'deki elektronik ticareti incelemişlerdir. Çalışmada en çok e-ihracatı yapılan ürün kategorisinin hazır giyim olduğu, seyahat ve turizmin salgın öncesi dönemde e-ticarette en çok tercih edilen ürün kategorisi iken salgın döneminde en fazla gerileme yaşayan sektör olduğu belirtilmiştir. Dicle Kalkınma Ajansı (DKA), Strateji Geliştirme ve Planlama Birimi tarafından hazırlanan TRC3 Bölgesinde Covid-19 Salgınının Ekonomik ve Sosyal Etkileri Araştırma Raporunda (2020) Bölge ihracatçılarının Irak'taki müşteri firmalar haricinde diğer ülkelerdeki müşteri profillerinde değişimler olduğu sonucuna ulaşılmıştır. Bu değişimin kısa vadeli mi yoksa kalıcı mı olduğu uzun vadede pandemi sürecine bağlı olarak da belirlenebileceği görüşü iletilmiştir. Alkin (2020) pandemi sonrası yeni normal süreçte, e-ticaret ve e-ihracat'ın altın çağı yaşayacağını belirtmiş, güçlü dijital platformların diğerlerine göre avantaj sağlayacağını ileri sürmüştür. Bu kapsamda, ülkelerin dünyanın farklı yerlerinde Ticaret Merkezleri açmak yerine, Lojistik Merkezleri açmaya yoğunlaşmaları önerilmiştir. Yıldırım (2020) Covid-19 pandemisinin dış ticarete etkilerini incelemiş ve Türkiye gibi ithalata bağımlılığın yüksek olduğu ülkelerin, pandemi sürecinden olumsuz etkileneceğini ileri sürülmüş ve sıkı iktisadi politikaların uygulaması gerektiğini belirtmiştir. Adıgüzel (2020) Covid-19 pandemisinin Türkiye ekonomisine etkilerini makroekonomik bir yaklaşımla incelemiş ve süreçte yaşanan olumsuz etkilere yönelik politikalar geliştirilmeyi amaçladığı çalışmada, Covid-19 pandemisinin üretim, istihdam, gelir, kar, ihracat cari denge, bütçe dengesi ve merkezi yönetim borç yükü değişkenleri olumsuz etkilediği sonucuna ulaşmıştır.

Bu çalışmanın araştırmanın alanı Kayseri il merkezidir. Kayseri'de Kayseri Ticaret Odası'nın aktif 13.420, Kayseri Sanayi Odası'nın 1.394 ve Kayseri Ticaret Borsası'nın 874 üyesi bulunmaktadır. Kayseri Esnaf ve Sanatkarlar Odasına kayıtlı 41 oda ve 26.840 faal üye mevcuttur. 62 adet yabancı sermayeli firma Kayseri'de faaliyet göstermektedir. Kayseri'de 3 adet Organize Sanayi Bölgesi bulunmaktadır. Kayseri Organize Sanayi Bölgesinde 845, Mimar Sinan Organize Sanayi Bölgesinde 50, Kayseri Serbest Bölgesinde

38 işletme üretim yapmaktadır(Kayseri Ticaret Odası, Kayseri Sanayi Odası, Kayseri Esnaf ve Sanatkarlar Odası, Kayseri Organize Sanayi Bölge Müdürlüğü, Kayseri Serbest Bölge Müdürlüğü web sayfalarında yer alan verilerden yararlanılmıştır. Erişim Tarihi: 01.12.2021). Serbest Bölgenin en önemli tesisleri ofis büro mobilyaları, sac boru ve profil, elektrostatik toz boya, yatak-baza, dayanıklı tüketim malları, alüminyum iletken tel tesisleri, beyaz eşya üretim fabrikası gibi üretim ağırlıklı tesislerden oluşmaktadır. (<https://www.kayser.com.tr/tr>, Erişim Tarihi: 01.02.2020). Bölge illerinde Kayseri’de sanayi gelişmiş durumdadır. İl karayolu, demiryolu ve havayolu ulaşım imkânlarıyla önemli bir lojistik merkez olarak kabul edilmektedir. Kayseri orta ve ileri teknoloji ürün ihracatında Türkiye’nin 12. ihracatçı ili durumundadır. Kayseri’de ihracatçı firma sayısı son üç yıla göre incelendiğinde, 2016 yılında 1.129, 2017 yılında 1.254, 2018 yılında 1.275’dir. Bu dönemde ihracatçı firma sayısı arttığı görülmektedir (<https://www.kayso.org.tr/tr>, Erişim Tarihi: 01.01.2021).

Tablo 1. 2013-2020 Dönemi İhracat Verileri (bin dolar)

	2013	2014	2015	2016	2017	2018	2019	2020
Kayseri	1.889.386	2.120.071	1.809.533	1.743.457	1.876.654	2.362.967	2.496.210	2.625.518

Kaynak: İhracatta ülke verileri, <https://ticaret.gov.tr/istatistikler/dis-ticaret-istatistikleri>

Tablo 2’ye göre, Kayseri’de 2019 yılı aralık ayı itibariyle, 2018 yılında da olduğu gibi, ihracat pazarında ilk sırada olan ülke Irak’tır. Almanya, İtalya, ABD, İsrail, Fas gibi ülkelerle olan ticarete artış göstermiştir. 2018 yılı verilerine göre ortalama 2,1 milyar dolar ihracat içerisinde, 245 milyon dolarla Irak en fazla ihracat yapılan ülke olmuştur. Daha sonra, 98 milyon dolarla Almanya, 80 milyon dolarla İtalya, 101 milyon dolarla Belçika takip etmektedir. Belçika ise 2018 ve 2019 yılları karşılaştırıldığında büyük bir farkla düşüş yaşamıştır.

Tablo 3. Kayseri İhracatında İlk On Mala Ait Bilgiler

Kaynak: Ticaret Bakanlığı, 2018-2019, <https://ticaret.gov.tr/istatistikler/dis-ticaret-istatistikleri>.

Tablo 3'e göre, Kayseri'de 2018-2019 döneminde mobilya, demir ve demir dışı metaller, çelik, kimyevi maddeler ve mamulleri, makine ve aksamları, elektrik elektronik hizmeti ve halı ihracatında artış, savunma ve havacılık sanayii, madencilik ürünleri ihracatında azalma söz konusudur.

Tablo 4. Kayseri'de İhracatta Öncü Sektörler (Ocak 2019 -Ocak 2020)

Süs bitkileri	%30,5
Yaş Meyve Sebze	%28,6
Fındık ve Mamulleri	%21,7
Halı	%21,4
Gemi ve Yat	%18,4
Mobilya	%15,5

Kaynak: Kayseri Ticaret Odası, İhracatı artıran sektörler, <https://www.kayserito.org.tr>, Regesta 2019-2020.

Tablo 4'e göre, 2019 yılı için Kayseri'de ihracatta öncü sektörler bakıldığında; süs bitkileri %31 oranla en üst sırada yer alırken, yaş meyve ve sebze %28, fındık ve mamulleri %22 oranı ile ikinci ve üçüncü sırayı aldığı görülmektedir. Mobilya sektörü ise aynı yıl için %16 oranı ile altıncı sırada yer almıştır.

2. ARAŞTIRMA KONUSU, AMACI VE YÖNTEMİ

Araştırmanın konusu Covid-19 Pandemisinin ihracata etkilerinin belirlenmesidir. Araştırmanın amacı, Kayseri ilinde pandemi sürecinde ihracat işlemlerinde yaşanan olumlu-olumsuz unsurları belirlemek ve gerek il gerek bölge gerekse Türkiye için önem taşıyan istikrarlı ekonomik büyüme ve dış dengeye fayda sağlayacak sonuçlara ulaşabilmektir. Araştırmanın uygulama aşamasında il merkezinde faaliyet gösteren farklı sektörlerdeki firmaların görüşlerinin alınmış olması araştırma sonuçlarının sektör bazlı okunabilmesine de imkan sağlamıştır.

Araştırma konusunun teorik bölümünde Türkiye İstatistik Kurumu, Kayseri Ticaret Odası, Kayseri Sanayi Odası, Kayseri Organize Sanayi Bölge Müdürlüğü, Kayseri Serbest Bölge Müdürlüğü, Kayseri Esnaf ve Sanatkarlar Odası yayın ve verilerinden yararlanılmıştır. Araştırmanın uygulama bölümünde anket ve yüz yüze görüşme yöntemleri kullanılmıştır. Anket soruları, tek yanıtı, birden fazla yanıtı ve açık uçlu sorular olarak düzenlenmiştir. Tek yanıtı sorular, yalnızca bir yanıt verilen sorulardır. Birden fazla yanıtı çoktan seçmeli sorularda, katılımcıların kendileri için geçerli olan tüm seçenekleri işaretlediği sorulardır. Açık uçlu sorular, katılımcıların yanıtlarını bir yorum kutusuna yazması istenen ve önceden belirlenmiş

cevap seçenekleri olmayan sorulardır. Örneklem seçiminde, Erdoğan-Yazıcıoğlu (2004:50) tarafından hazırlanan seçim kriterleri kullanılmıştır. Kayseri Sanayi Odasına kayıtlı 1.394 işletme bulunmaktadır.

Kaynak: Yazıcıoğlu ve Erdoğan, 2004, s.50.

Örneklem hacminin belirlenmesinde, Yazıcıoğlu ve Erdoğan (2004:50) çalışmasından yararlanılmıştır. Tablo 5'de görülebileceği üzere, Yazıcıoğlu ve Erdoğan, örnekleme hatasını azaltmak için örneklem büyüklüğünün artırılması gerektiğini, diğer yandan seçilen hata payına göre belli bir değerden sonra örneklem büyüklüğünün artmasına gerek olmadığını ileri sürmektedirler. Bu kapsamda, anket yapılacak firma, sayısı 253 olarak belirlenmiştir. Anket sonuçları değerlendirilirken ankete verilen cevapların yüzde dağılımı kullanılmıştır. Alınması gereken tedbirlerin belirlenmesi aşamasında ise anket çalışması sonuçları yanında 25 firma yetkilisi ile ikili görüşmeler yapılarak, yetkililerin görüşleri raporlandırılmıştır.

3. UYGULAMA SONUÇLARI

Projenin uygulama aşamasında anket ve yüzyüze görüşme formlarına bağlı sonuçlar yer almaktadır. Aşağıda anket uygulaması sonuçları, ankette yer alan sorular da belirtilerek, aşağıda sunulmuştur:

Soru 1: Şirketteki görevinizi belirtiniz? sorusuna, 253 firma katılmıştır. Bunlardan 127 kişi (%50,2) Yönetici/Müdür, 25 kişi (%9,9) dış ticaret bölümü çalışanı, 73 kişi (%28,9) çalışan, 28 kişi (%11,1) Diğer çalışan olarak yanıt vermiştir.

1. Şirketteki görevinizi belirtiniz.
253 yanıt

SORU 2: Şirketin Hukuki Statüsünü belirtiniz? sorusuna, 251 firma yanıtlamıştır. Bunlardan 104 kişi (%41,4) Gerçek kişi ticari işletmesi (Şahıs Şirketi), 89 kişi (%35,5) Anonim şirket, 49 kişi (%19,5) Limited şirket, 9 kişi (%3,6) Diğer şirkettir.

2. Şirketin hukuki statüsünü belirtiniz.
251 yanıt

SORU 3: Şirketin faaliyet alanını belirtiniz? sorusuna, 249 firma yanıtlamıştır. Ankete katılan firmaların faaliyet alanları sırasıyla Diğer Sanayi Ürünleri, Mobilya kâğıt orman ürünleri ve Hazır Giyim Konfeksiyon ürünleridir.

SORU 4: Şirketin Faaliyet Yılıni belirtiniz? sorusuna, 252 firma yanıt vermiş, firmaların yüksek oranda 10-15 aralığında (%31,7) ve 15 üzeri (%31) yıldır faaliyet gösterildiği bilgisine ulaşılmıştır. Bu kapsamda ankete katılan firmaların %62,7'si 10 yıl ve üzeri faaliyet gösteren firmalardır.

4. Şirketin faaliyet yılını belirtiniz.
252 yanıt

SORU 5: Şirketinizde Covid-19 salgını öncesinde toplam çalışan sayısını belirtiniz? sorusuna, 252 firma yanıt vermiştir. 1-9 aralığında çalışan sayısı 105 kişi (%41,7), 10-49 aralığında 85 kişi (%33,7), 50-249 aralığında çalışan sayısı 38 (%15,1), 250-499 aralığında çalışan sayısı 15 kişi (%6), 500 ve üzeri aralığında çalışan sayısı 9 kişi (%3,6) olarak cevaplamıştır. Firmaların ortalama %75'nin pandemi öncesinde 1-49 kişi çalıştırdığı görülmektedir. Firmaların %10'u 250 ve üzeri kişi çalıştırmaktadır.

5. Şirketinizde Covid-19 salgını öncesinde toplam çalışan sayısını belirtiniz.
252 yanıt

SORU 6: Şirketinizde Covid-19 salgını süresi içinde tam zamanlı çalışan sayısını belirtiniz? sorusuna, 253 firma yanıtlamıştır. 1-9 aralığında çalışan sayısı 119 kişi (%47), 10-49 aralığında 73 kişi (%28,9), 50-249 aralığında çalışan sayısı 44 kişi (%17,4), 250-499 aralığında 7 kişi (%2,7), 500 ve daha fazla çalışan sayısı olan 10 kişi (%4) cevaplamıştır. Pandemi sürecinde 1-9 arasında çalışan tam zamanlı sayısında artış, diğer gruplarda azalma söz konusudur. Bu sonuç, tam zamanlı çalışan sayısının azaldığını göstermektedir.

6. Şirketinizde Covid-19 salgını süresi içinde tam zamanlı çalışan sayısını belirtiniz.
253 yanıt

SORU 7: Şirketinizde Covid-19 salgını öncesinde esnek zamanlı çalışan personel sayısını belirtiniz? sorusuna, 251 firma yanıtlamıştır. 1-9 aralığında çalışan sayısı 137 kişi (%55,2), 10-49 aralığında 62 kişi (%25), 50-249 aralığında çalışan sayısı 31 kişi (%12,5), 250-499 aralığında 13 kişi (%5,2), 500 ve daha fazlasına 5 kişi (%2) cevaplamıştır.

7. Şirketinizde Covid-19 salgını öncesinde esnek zamanlı çalışan personel sayısını belirtiniz.
248 yanıt

SORU 8: Şirketinizde dış ticaret departmanı bulunmakta mıdır? sorusuna, 253 firma yanıtlamıştır. Bunlardan 109 kişi (%43,3) evet, 143 kişi (%56,7) hayır cevabını vermişlerdir. Bu sonuç, Kayseri'de ticaret performansının artırılabilirliğini göstermektedir.

SORU 9: Şirketinizde Covid-19 salgını öncesinde dış ticaret departmanında çalışan sayısını belirtiniz? sorusuna, 252 firma yanıt vermiştir. Bunlardan 0 seçeneğini işaretleyen 130 kişi (%51,6), 1-2 aralığında 37 kişi (%14,7), 3-5 aralığında 56 kişi (%22,2), 7-10 aralığında 20 kişi (%7,9), 10 ve üzeri seçeneğini işaretleyen 9 kişi (%3,6) cevaplamıştır.

9. Şirketinizde Covid-19 salgını öncesinde dış ticaret departmanında çalışan sayısını belirtiniz.
252 yanıt

SORU 10: Şirketinizde Covid-19 salgını süresince dış ticaret departmanında çalışan sayısını belirtiniz? sorusuna, 252 firma yanıtlamıştır. Bunlardan 0 seçeneğini işaretleyen 130 kişi (%51,6), 1-2 aralığında 58 kişi (%23), 3-5 aralığında 39 kişi (%15,5), 7-10 aralığında 19 kişi (%7,5), 10 ve üzeri işaretleyen 6 kişi (%2,4) cevaplamıştır.

(%2,4) çalışan sayısını belirtmişlerdir. Bu sonuçlar kapsamında, dış ticaret departmanı olan şirketlerde pandemi sürecinde dış ticaret eleman sayısında da azalma yaşandığı görülmektedir.

10. Şirketinizde Covid-19 salgını süresince dış ticaret departmanında çalışan sayısını belirtiniz.
252 yanıt

SORU 11: Şirketiniz İhracat yapıyor mu? sorusuna, 249 firma yanıt vermiştir. Ankete katılan 163 firma ihracat yaptığını belirtirken, 86 firma ihracat yapmadığını belirtmiştir.

SORU 12: Şirketinizde ihracatını yaptığınız ürünler nelerdir? sorusuna, 213 firma yanıt vermiştir. Buna göre ilk üç sektör Diğer Sanayi Ürünleri, Mobilya kağıt orman ürünleri ve Hazır Giyim Konfeksiyon ürünleri olarak sıralanmaktadır.

SORU 13: Covid-19 pandemisi öncesinde İhracat yaptığınız ilk 5 ülkeyi sıralayınız? sorusuna, 168 firma yanıt vermiştir. Ankete katılan firmalara göre, en fazla ihracat yapılan ülkeler içinde ilk sırada Almanya gelmektedir. İlk beş ülke sıralaması; Almanya, Çin, Azerbaycan, ABD, Fransa 'dır.

SORU 14: Covid-19 pandemisi süresince İhracat yaptığınız ilk 5 ülkeyi sıralayınız? sorusuna, 164 firma yanıt vermiştir. Ankete katılan firmalara göre, en fazla ihracat yapılan ülkeler içinde ilk sırada Almanya gelmektedir. İlk beş ülke sıralaması; Almanya, Çin, Azerbaycan, ABD, İngiltere' dir. Bu kapsamda pandemi öncesi ve pandemi süreci içinde ihracat yapılan ülke sıralamasında bir farklılık gerçekleşmediği belirlenmiştir.

SORU 15: Covid-19 pandemisi öncesinde en fazla ihraç ettiğiniz ürünler nelerdir? sorusuna, 167 firma yanıt vermiştir. Ankete katılan firmalara göre, en fazla ihraç edilen ürünler içinde Mobilya, Hazır giyim, Yaş meyve ve sebze gelmektedir.

SORU 16: Covid-19 pandemisi süresince en fazla ihraç ettiğiniz ürünler nelerdir? sorusuna, 167 firma yanıt vermiştir. Ankete katılan firmalara göre, en fazla ihraç edilen ürünler içerisinde Sağlık ve Medikal ürünleri, Mobilya kağıt orman ürünleri, Yaş meyve ve sebze, Hazır giyim konfeksiyon ürünleri gelmektedir. Bu kapsamda pandemi öncesi ve pandemi süreci içinde ihracat edilen ürünlerde, Sağlık ve Medikal ürünler kapsamında farklılık sözkonusudur.

SORU 17: Covid-19 pandemisi öncesinde ihracat desteklerinden hangisi/hangilerinden yararlandınız? sorusuna 243 firma yanıt vermiştir. Firmaların verdiği cevaplara göre, Hiç yararlanmadık 128, Yurtiçi uluslararası fuar desteği 69, Yurt dışı uluslararası fuar desteği 45, Yurt dışı ofis mağaza açma yardımı 7, Eğitim yardımları 26, İstihdam desteği 67, Ar-ge desteği 61, KOSGEB faizsiz ihracat kredisinden 26, diğer olarak işaretleyen 18 firmanın ihracat desteklerinden yararlandığı görülmüştür.

17. Covid-19 pandemisi öncesinde ihracat desteklerinden hangisi/hangilerinden yararlandınız?
243 yanıt

SORU 18: Covid-19 pandemisi sürecinde ihracat desteklerinden hangisi/hangilerinden yararlandınız? sorusuna 240 firma yanıt vermiştir. Firmaların verdiği cevaplara göre, Hiç yararlanmadık 179, Yurtiçi uluslararası fuar desteği 20, Yurt dışı uluslararası fuar desteği 17, Yurt dışı ofis mağaza açma yardımı 4, Eğitim yardımları 13, İstihdam desteği 26, Ar-ge desteği 25, KOSGEB faizsiz ihracat kredisinden 12, diğer cevabını veren 15 firmanın ihracat desteklerinden yararlandığı görülmüştür. Pandemi süresinde şirketlerin destek almına yönlendirilmesi, bu konuda bilgilendirici eğitimlerin verilmesi ihracatı olumlu etkileyecek önemli bir kanal olarak görülmektedir.

SORU 19:

Covid-19 pandemisi öncesinde ihracat kapasitenizi belirtiniz? sorusuna 207 firma yanıtlamıştır. %1-10 aralığında ihracat kapasitesi 81 firma (%39,1), %11-20 aralığında 43 firma (%20,8), %21-30 aralığında 29 firma (%14), %31-40 aralığında 29 firma (%14), %41-50 aralığında 9 firma (%4,3), %51-60 aralığında ise 13 firma (%6,3) cevaplamıştır.

SORU 20: Covid-19 pandemisi sürecinde ihracat kapasitenizi belirtiniz? sorusuna 209 firma yanıtlamıştır.

%1-10 aralığında ihracat kapasitesi 93 firma (%44,5), %11-20 aralığında 43 firma (%20,6), %21-30 aralığında 24 firma (%11,5), %31-40 aralığında 25 firma (%12), %41-50 aralığında 9 firma (%4,3), %51-60 aralığında 2 firma (%1), %60 ve üzeri aralığında 8 firma (%3,8), işletmemizin faaliyeti durmuştur olarak söyleyen ise 5 firma (%2,4) ihracat kapasitesini belirtmişlerdir. Pandemi öncesi ihracat kapasitesi yüksek olan firmalar (%20 ve üzerinde olan firmalar), pandemi sürecinde daha düşük ihracat kapasitesi ile çalışabilmişlerdir.

SORU 21: Covid-19 pandemisi sürecinde sorun yaşadığınız alanları belirtiniz? sorusuna, 241 firma yanıtlamıştır. Firmaların verdiği cevaplara göre İhracat geliri kaybı 99, Dış ticaret yaptığımız müşterilerin kaybı 53, Nakit akışının yavaşlaması 193, Üretim kapasitesinin gerilemesi 113, esnek çalışmaya bağlı istihdam kaybı 70, işten çıkarmaya bağlı istihdam kaybı 54, Hijyen malzemeleri tedarikinde sorun yaşanması 69, diğer olarak işaretleyen ise 25 firma sorun yaşadığı alanları belirttiği görülmüştür.

SORU 22: Covid-19 pandemisi sürecinde, ihracatınızı artırmak için aldığınız tedbirler kapsamında aşağıdaki seçenekleri işaretleyiniz? sorusuna, 236 firma yanıtlamıştır. Firmaların verdiği cevaplara göre Yeni Pazar aramaktayız diyen firma sayısı 167, Yeni müşteri aramaktayız 182, İhraç malları fiyatlarını düşürerek rekabet ediyoruz 106, KOBİ kredilerinden yararlanıyoruz 55, İthal malı kullanımını azaltıyoruz 42 ve diğer cevabını işaretleyen ise 72 firma ihracatını artırmak için aldığı tedbirleri belirttiği görülmüştür.

22. Covid-19 pandemisi sürecinde, ihracatınızı artırmak için aldığınız tedbirler kapsamında aşağıdaki seçenekleri işaretleyiniz?
236 yanıt

Uygulama bölümünün yüz yüze görüşme yöntemi kullanımı pandemi nedeniyle online olarak ve ikili görüşme şeklinde gerçekleşmiştir. 25 firma sahibi ile görüşme yapılmış ve pandemi sürecinde ihracat ile ilgili yaşadıkları sorunlar, beklentileri ve çözüm önerileri raporlanmıştır. Görüşmelerin standart bir yapı kazanması amacıyla firma yetkililerine aşağıda belirtilen üç soru sorulmuş, alınan cevaplar aşağıda özetlenmiştir:

İkili Görüşme, Soru 1: Pandemi sürecinde ihracat işlemlerinde sorun yaşadınız mı? Sorun yaşamanızın nedenleri nelerdir? sorusuna, 17 firma ihracat konusunda sıkıntı yaşadıklarını söyleyerek evet, ihracat yapmayan 8 firma ise sıkıntı yaşamadıklarını söyleyerek hayır cevabını vermişlerdir. İhracat konusunda sorun yaşayan 17 firmaya yaşadıkları sorunları, 5 firma pandemi sürecinde nakit akışının yavaşladığını, 4 firma ihracat gelirinde düşüş yaşandığını ve üretim kapasitesinin düştüğünü, 8 firma ise hijyen malzemeleri tedarikinde sorun yaşadıklarını belirterek cevaplamıştır.

İkili Görüşme, Soru 2: İhracatı artırmak için çözüm önerileriniz nelerdir? sorusuna, 15 firma Yeni müşteriler bulmak demişlerdir; yeni müşteriler de uluslararası fuarlar, e-ticaret siteleri, işletme ve rakiplerdeki bilgiler, devlet kurumlarının ve STK'ların yardım ve destekleri ile sağlanmaktadır, 7 firma ülkelerin dış ticaret dengelerinin korunması ve ülke içindeki ekonomik faaliyetlerin canlanması karlılığın artmasını sağlamak, olarak cevap vermiş, 4 firma iç fiyatların yüksek bularak düşürülmesi gerektiğini belirtmiştir. 9 firma döviz kurunun düşürülmesi gerektiğini, 5 firma ithal malı kullanımının azaltılmasını ve kar marjlarını değil pazar paylarını artırmanın da doğru bir çözüm önerisi olacağını belirtmişlerdir.

İkili Görüşme, Soru 3: Önerileriniz nelerdir? sorusuna, firmalardan alınan cevaplar şöyledir; ihracatın teşvik edilmesi, ihraç pazarlarının geliştirilmesi ve dünya ihracatındaki payımızın artırılması, uluslararası piyasalara açılan işletmelerin rekabet güçlerinin artırılması, uygun kredilerle üretici firmaların desteklenmesi, yurtiçi ve yurtdışı fuarlarına katılım imkanı sağlanmasıdır.

4. SONUÇ

İhracat yapısındaki olumlu gelişmeler ülke ekonomisi ile doğrudan ilişkili olmakta ve ülkenin makroekonomik değişkenlerini olumlu etkileyebilmektedir. Pandeminin etkilerini azaltmak, çalışma hayatının ve istihdamın önündeki olumsuz sürecin atlatmasını sağlamak içinde bulunduğumuz dönemde alınan tedbirlere bağlıdır.

Bu çalışmada Kayseri ilindeki firmaların pandemi sürecinin ihracat üzerindeki etkisinin ve alınabilecek tedbirler incelenmeye çalışılmıştır. Bunu gerçekleştirirken Kayseri Sanayi Odası ve firma yetkilileri ile görüşülerek araştırmada anket yapılması için gerekli firma listesi oluşturulmuştur. Ankete katılan kişiler

büyük ölçüde yönetici, müdür ve üst düzey kişiler olması anketin güvenilirliğini artırmıştır. Firmaların hukuki yapısı ağırlıklı olarak gerçek kişi ticari işletmesi (şahıs şirketi) biçimindedir. Ankete katılan firmaların faaliyet alanları sırasıyla Diğer Sanayi Ürünleri, Mobilya kâğıt orman ürünleri ve Hazır Giyim Konfeksiyon ürünleridir. Ankete katılan firmaların %62,7'si 10 yıl ve üzeri faaliyet gösteren firmalardır. Firmaların ortalama %75'nin pandemi öncesinde 1-49 kişi çalıştırdığı görülmektedir. Firmaların %10'u 250 ve üzeri kişi çalıştırmaktadır. Pandemi sürecinde 1-9 arasında çalışan tam zamanlı sayısında artış, diğer gruplarda azalma söz konusudur. Bu sonuç, tam zamanlı çalışan sayısının azaldığını göstermektedir. Firmalarda Covid-19 salgını öncesinde esnek zamanlı çalışan sayısı 1-9 aralığında diğer gruplara göre daha yüksektir (%55,2). Pandemi süresince ise kapanma sürecine bağlı olarak esnek çalışan sayısı yüksektir. Dış ticaret departmanı bulunan firma sayısı 109 kişi (%43,3) iken bulunmayan firma sayısı 143 kişi (%56,7) olup, bu bulgu ihracat potansiyelinin geliştirilmesi gerektiğini ortaya kaymaktadır. Ankete katılan 163 firma ihracat yaptığını belirtirken, 86 firma ihracat yapmadığını belirtmiştir. İhraç yapan firmaların en fazla ihraç ettiği ürünler içerisinde sağlık ve medikal ürünleri, mobilya kâğıt orman ürünleri, yaş meyve ve sebze, hazır giyim konfeksiyon ürünleri ilk sıralarda yer aldığı belirlenmiştir. Bu kapsamda pandemi öncesi ve pandemi süreci içinde ihracat edilen ürünlerde özellikle sağlık ve medikal ürünler kapsamında farıllık yaşandığı görülmektedir. Ankete katılan firmalara göre, pandemi öncesinde en fazla ihracat yapılan ülke Almanya'dır. İhracatta ilk on ülke sıralaması; Almanya, Çin, Azerbaycan, ABD, Fransa, Gürcistan, Suudi Arabistan, Cezayir, Mısır ve İngiltere'dir. Pandemi sürecinde de benzer şekilde ihracat yapılan ülkeler sıralamasında, İngiltere dışında, benzer eğilim söz konusudur.

Diğer bir sonuç, pandemi öncesinde özellikle ihracat kapasitesi yüksek çalışan (%20 ve üzerinde olan) firmaların pandemide ihracat hacminde diğerlerine göre daha fazla azalma olduğu yönündedir. Covid-19 pandemisi öncesinde ve sonrasında ihracat desteklerinden yararlanan firma sayısı düşüktür. Bu sonuç ihracat desteklerine yönelik firmaların yeterli bilgi ve girişimde olmadıklarını göstermiştir. Diğer bir bulgu ankete katılan firmalarda dış ticaret departmanının bulunmadığı veya yeterli olmadığı yönündedir. Öte yandan pandemi süresince firmalar ihracatta gelir ve müşterileri kaybı yaşadıklarını, nakit akışında sorun yaşadıklarını, üretim kapasitelerinin azaldığını, istihdam kaybı yaşadıklarını, hijyen malzemeleri tedarikinde sorun yaşadıklarını belirtmişlerdir. Bu kapsamda firmaların pandemi sürecinde ihracatı artırmak için yeni pazar ve müşteri aradıkları ve ithal malı kullanımını azalttıkları belirlenmiştir.

25 firma ile yapılan yüz yüze görüşme raporlarına göre; firmalar için nakit akışının yavaşlaması, ihracat gelirlerinin azalması, üretim kapasitesinin düşmesi, hijyen malzemeleri tedarikinde sorun yaşayanların olması firmaların pandemi süresinde yaşadıkları sıkıntıların başında gelmektedir. Firmalar ihracatı artırmak için çözüm önerisi olarak yeni müşteriler bulmak gerektiğini belirtmiş, bunun ise uluslararası fuarlara katılım, e-ticaret sitelerinden müşteri bulma, işletme ve rakiplerdeki bilgilerin paylaşımı, devlet kurumlarının ve STK'ların yardım ve destekleri ile sağlanabileceğini belirtmişlerdir. Bu süreçte bazı firmalar iç fiyatları yüksek bulmakta, bazıları döviz kurunun düşürülmesi gerektiğini belirtmektedir. Firmalar, pazar paylarının artırılması için de destek beklemektedir.

Gerek anket gereke ikili görüşmelerden elde edilen sonuçlara göre; Kayseri ilinde firmaların yenilikçi olması, girişimcilik kültürünün benimsenmesi, dış ticaret elemanı çalıştırması, bu elemanların eğitimi için katılacakları programları teşvik etmesi gerekmektedir. Firmaların dış pazarı araştırarak, yeni müşteri bulabilecek düzeyde İngilizce bilen ve dış ticaret uzmanlığı olan personele ihtiyacı vardır. Girişimcilik, iktisadi konjonktür gibi kavramlar üzerine eğitim veren üniversite, kamu ve STK'lar ile iletişime geçilecek firmalarda farkındalık oluşturulmalıdır. Ayrıca özellikle kriz dönemlerinde finansman çok önemlidir. Bu sorunun çözümünde uzun vadeli, düşük faizli ve ödemesi pandemi sonrası başlayacak krediler nakit akışını canlandırarak bir etki yaratacaktır. İhracat yapan işletmeleri özellikle desteklemek gerekmektedir. Bu kapsamda işletmelerin, pandemi bitene kadar, ayakta kalabilmek ve yeni normal hayata uyum sağlayabilmek için alt yapı desteğine, vergi borçlarının ertelenmesine, devlet teşviklerine ve destek kredilerine ihtiyaç duyacağı da öngörülmektedir.

Özet: Geleneksel iş modelleri yerine sosyal ve çevresel konuların da dikkate alınmasıyla ortaya çıkan sürdürülebilir kalkınma programlarının gerçekleştirilmesi finans sektörü ön plana çıkmaktadır. Çevresel, sosyal ve ekonomik etken olan sürdürülebilirlik stratejisi uzun dönem ele alındığında kurumlara yarar sağlamaktadır. Sürdürülebilir finans anlayışının etkinleştirilmesi için yasal düzenlemeler yapılması ve bilgi eksikliklerinin giderilmesinin yanı sıra finansal kurumlarda sürdürülebilirlik algısının pekişmesi ve bu algının kalkınma politikalarına da yansması gerekmektedir. Finansal kaynakların dağıtımında yer alan bankacılık sektörünün sürdürülebilirlik için gerekli olan kaynakları sağlaması gerekmektedir. İş süreçlerinin iklimsel değişikliklere göre şekillenmesi kapsamında, bankacılık faaliyetleri de değişim içine girmektedir. Bu çerçevede, sürdürülebilir kalkınma sürecinde gelişmekte olan ülkelerde bankaların rolü önem arz etmektedir. Bankacılık faaliyetlerinin sürdürülebilirliğinde savunucu bankacılık, önleyici bankacılık, saldırgan bankacılık ve sürdürülebilir bankacılık olamk üzere dört aşama bulunmakta ve sürdürülebilirlik aşamasında karar verme işlemi yapılırken finansal getirden ziyade sürdürülebilirlik sonuçları üzerinde durulmaktadır. Çalışma kapsamında, Türkiye’de bankacılık sektöründe faaliyet gösteren kurumların sürdürülebilirlik stratejilerin Gri ilişkisel analiz yöntemi kullanılarak ortaya çıkartılması amaçlanmaktadır.

Anahtar kelimeler: Sürdürülebilirlik, Bankacılık sektörü, Gri ilişkisel analiz

Sustainability Assessment of Banks: The Gray Relative Analysis Method

Abstract: The financial sector comes to the fore in the realization of sustainable development programs that emerge by taking into account social and environmental issues instead of traditional business models. Sustainability strategy, an environmental, social and economic factor, benefits organizations in the long term. In order to activate the sustainable finance approach, legal regulations should be made and information deficiencies should be eliminated, as well as the sustainability perception in financial institutions should be reinforced and this perception should be reflected in the development policies. Bank sector involved in the distribution of financial resources must provide the necessary resources for sustainability. Banking activities are also undergoing changes within the scope of shaping business processes according to climatic changes. In this framework, the role of banks in sustainable development process is important. In developing countries. There are four stages in the sustainability of banking activities: defensive banking, preventive banking, aggressive banking and sustainable banking. During the decision-making process at the sustainability stage, the focus is on sustainability results rather than financial returns. Within the scope of the study, it is aimed to reveal the sustainability strategies of institutions operating in the banking sector in Turkey by using the Gray relational analysis method.

Keywords: Sustainability, Banking sector, Gray relational analysis

1. GİRİŞ

Üretim ve çeşitliliğin devamlılığı sağlanırken gelecekteki ihtiyaçlardan ödün verilmemesi temeline dayanan sürdürülebilirlik olgusu, kaynakların verimli kullanılmasıyla çevresel bozulmanın en alt düzeye indirilerek ekonomik ve sosyal gelişimin/kalkınmanın sağlanması esasına dayanmaktadır. Bankacılık sektörü, özellikle teknolojik gelişmeler sonucunda, gelişmekte olan ülkelerin finansal sistemleri içinde önemli artan bir paya sahip olmaktadır. Bu çerçevede, bankaların sunduğu hizmetlerin insana, çevreye ve sosyal yapıya etkisi olduğundan yola çıkılarak sürdürülebilir kalkınma sürecine de katkı sağlaması gerekmektedir. Sürdürülebilirlik kavramı bankacılık sektöründe sorumluluk kavramını istikrarlı ekonomilerin temeline oturturken; bankacılık sektöründe itibar ve rekabet üstünlüğü de sağlamaktadır. Sürdürülebilir bankacılık kavramı, ekonomik modellerin ve büyüme stratejilerin gözden geçirilerek,

ticaret sonucu ortaya çıkan sanayileşme faaliyetlerine, iklim değişikliklerine ve ekolojik dengeye dolaylı olarak katkı sağlayabilmektedir.

Uçkun ve Girginer (2011), kamu bankaları içinde en yüksek performansın Türkiye Cumhuriyeti Ziraat Bankası A.Ş.'ne ve özel bankalarda ise en yüksek performansın Anadolubank A.Ş.'ne ait olduğunu ifade etmektedir. Özçelik ve Avcı (2011) sürdürülebilirlik performanslarına göre en iyi bankalar sırasıyla Türkiye Sınai Kalkınma Bankası A.Ş., Türkiye Garanti Bankası A.Ş. ve Akbank T.A.Ş. olarak belirlemektedir. Altan ve Candoğan (2014), performans karşılaştırılmasında gri ilişki analiz ve geleneksel analiz sonuçlarının birbirinin tersi olarak elde edildiğini göstermektedir. Özbek (2015), sırasıyla QNB Finansbank A.Ş. , Denizbank A.Ş., HSBC Bank A.Ş. ve ING Bank A.Ş.'nin en iyi kurumsal sürdürülebilirlik performansına sahip yabancı sermayeli bankalar olduğunu göstermektedir. Ömürbek ve diğ.(2017), ARAS, MOOSRA ve COPRAS yöntemlerini kullanarak sürdürülebilirlik performansı en iyi olan bankanın Türkiye Cumhuriyeti Ziraat Bankası A.Ş. olurken; Türkiye Vakıflar Bankası T.A.O. sürdürülebilir performans açısından kötü olduğunu belirtmektedir. Eren ve diğ. (2017), büyük ölçekli bankalar arasından Türkiye Cumhuriyeti Ziraat Bankası A.Ş.'nin, orta ölçekli bankalar arasında QNB Finansbank A.Ş.'nin ve küçük ölçekli bankalar arasında ise Anadolubank A.Ş.'nin performans değerlerinin yüksek olduğunu vurgulamaktadır. Yüksel ve diğ. (2017), performans karşılaştırılmasında gri ilişki analiz ve MOORA yöntemiyle elde edilen sonuçların benzer olduğunu göstermektedir. Aras ve diğ.(2018), sırasıyla Türkiye Garanti Bankası A.Ş., Türkiye Finans Katılım Bankası A.Ş ve Şekerbank T.A.Ş. 'in sürdürülebilirlik performansına sahip bankalar olduğunu göstermektedir. Yıldız ve Öztel (2018), kurumsal sürdürülebilirlik araştırmasında ekonomik performansın 2014 yılında, çevresel performansının 2015 yılında ve sosyal performansın 2016 yılında en iyi değerlerde olduğunu göstermektedir. Gözkonan ve diğ.(2019), TOPSIS ve gri-ilişkisel analiz yöntemlerini kullanarak sürdürülebilir performansın geleneksel bankalar içinde Akbank T.A.Ş. ve katılım bankalarının içinde ise Kuveyt Türk Katılım Bankası A.Ş olduğunu göstermektedir. Ecer (2019), sırasıyla Türkiye İş Bankası A.Ş., Akbank T.A.Ş., Türk Ekonomi Bankası A.Ş., Yapı ve Kredi Bankası A.Ş. ve Şekerbank T.A.Ş.'nin en iyi kurumsal sürdürülebilirlik performansına sahip özel sermayeli bankalar olduğunu göstermektedir. Ayçin ve Orçun (2019), 2016 yılına göre sürdürülebilirlik performansı en iyi bankalar sırasıyla Türkiye Cumhuriyeti Ziraat Bankası A.Ş, Türkiye İş Bankası A.Ş , Türkiye Garanti Bankası A.Ş. olurken ; 2017 yılında Türkiye Cumhuriyeti Ziraat Bankası A.Ş, Türkiye İş Bankası A.Ş., Türk Ekonomi Bankası A.Ş. olmaktadır. Topak ve Çanakçıoğlu (2019), performansı en yüksek bankaların sırasıyla , Türkiye Cumhuriyeti Ziraat Bankası A.Ş, Türkiye İş Bankası A.Ş. ve Türkiye Cumhuriyeti Garanti Bankası A.Ş. olduğunu belirtmektedir.

Çalışma kapsamında, ilgilenilen kriterler ile alternatiflerin belirlenerek değerlendirme, sıralama ve seçim yapma işlevine yardımcı olan çok kriterli karar verme yöntemlerinden entropi yöntemi kullanılarak ağırlıklandırma yapılan gri-ilişkisel analiz yöntemiyle bankalara ilişkin sürdürülebilirlik performansları incelenmektedir. Çalışmanın ilk bölümünde konuya giriş yapıldıktan sonra, ikinci bölümde sürdürülebilir performansın belirlenmesinde kullanılan ekonometrik yöntem değinilmektedir. Üçüncü bölümde bankalara ilişkin sürdürülebilirlik performansları karşılaştırıldıktan sonra, son bölümde bulgular ve önerilere yer verilmektedir.

2. Ekonometrik Metodoloji

Sistemdeki düzensizliğin ve belirsizliğin ölçüsü olarak tanımlanan entropi, veriler tarafından sağlanan faydalı bilgi miktarını ölçmektedir (Wu, 2011). Farklı indeks boyutlarının eş-ölçülemezlik üzerindeki etkilerini yok etmek amacıyla fayda-maliyet indekslerine göre kriterler

$$r_{ij} = x_{ij} / \max_{ij} \quad (i=1, \dots, m; j=1, \dots, n) \quad (1)$$

$$r_{ij} = \min_{ij} / x_{ij} \quad (i=1, \dots, m; j=1, \dots, n) \quad (2)$$

şeklinde standartlaştırılmaktadır. Farklı ölçü birimlerindeki aykırılıkları yok etmek için normalizasyon yapılarak, alternatifler i , kriterler j , verilen fayda değerleri a_{ij} olmak üzere

$$P_{ij} = \frac{a_{ij}}{\sum_{i=1}^m a_{ij}}; \forall j \quad (3)$$

elde edilmektedir. Entropi katsayısı $k = (\ln(n))^{-1}$ ve normalize edilmiş değerler P_{ij} olmak üzere

$$E_j = -k \sum_{i=1}^m [P_{ij} \ln P_{ij}]; \forall j \quad (4)$$

elde edilmektedir. \forall_j için $d_j = 1 - E_j$ belirsizliği göstermek üzere j. kriterinin önem derecesi olarak W_j ağırlıkları

$$W_j = \frac{d_j}{\sum_{j=1}^n d_j}; \forall j \quad (5)$$

şeklinde gösterilmektedir. Deng (1982), gri sistem teorisinden yola çıkarak gri ilişki analizini ortaya koymaktadır. Bilginin netliğini göstermek için renkler (bilinen bilgiler beyaz, kısmen bilinen bilgiler gri, hiç bilinmeyen bilgiler siyah) kullanılmaktadır (Lui ve Lin, 2010). Karar matrisi

$$\begin{bmatrix} x_1(1) & x_1(2) & \dots & x_1(n) \\ x_2(1) & x_2(2) & \dots & x_2(n) \\ \vdots & \vdots & \ddots & \vdots \\ x_n(1) & x_n(2) & \dots & x_n(n) \end{bmatrix} \quad (6)$$

şeklinde oluşturulduktan sonra, j.kriterin normalize değerleri içindeki en büyük değeri $x_0(j)$ olmak üzere referans serisi

$$x_0 = (x_0(1), x_0(2), \dots, x_0(j), \dots, x_0(n))$$

şeklinde ifade edilmektedir. j.kriterin hedef değeri $x_{0b}(j)$ ve $\max x_i(j) \geq x_{0b}(j) \geq \min x_i(j)$ olmak üzere Kriter değerinin normalize işlemi sonucunda büyük çıkması uygunsa,

$$x_i^* = \frac{x_i(j) - \min x_i(j)}{\max x_i(j) - \min x_i(j)} \quad (7)$$

Kriter değerinin normalize işleminin sonra küçük çıkması uygun ise,

$$x_i^*(j) = \frac{\max x_i(j) - x_i(j)}{\max x_i(j) - \min x_i(j)} \quad (8)$$

Kriter değerinin normalize işleminin ardından ortalama bir değer alması uygun ise,

$$x_i^*(j) = \frac{|x_i(j) - x_{0b}(j)|}{|\max x_i(j) - x_{0b}(j)|} \quad (9)$$

kullanılmakta ve karar matrisi

$$X_i^* = \begin{bmatrix} x_1^*(1) & x_1^*(2) & \dots & x_1^*(n) \\ x_2^*(1) & x_2^*(2) & \dots & x_2^*(n) \\ \vdots & \vdots & \ddots & \vdots \\ x_n^*(1) & x_n^*(2) & \dots & x_n^*(n) \end{bmatrix} \quad (10)$$

şeklinde elde edilmektedir. X_0^* ile X_i^* arasındaki mutlak değer

$$\Delta_{0i}(j) = |x_0^*(j) - x_i^*(j)| = \begin{bmatrix} \Delta_{01}(1) & \Delta_{01}(2) & \dots & \Delta_{01}(n) \\ \Delta_{02}(1) & \Delta_{02}(2) & \dots & \Delta_{02}(n) \\ \vdots & \vdots & \ddots & \vdots \\ \Delta_{0m}(1) & \Delta_{0m}(2) & \dots & \Delta_{0m}(n) \end{bmatrix} \quad (11)$$

olarak gösterilmektedir. $[0,1]$ aralığında değer alan ζ ayırıcı katsayısı, $\Delta_{\max} = \max_i \max_j \Delta_{0i}(j)$ ve $\Delta_{\min} = \min_i \min_j \Delta_{0i}(j)$ olmak üzere, gri ilişkisel katsayı matrisi

$$\gamma_{0i}(j) = \frac{\Delta_{\min} - z \Delta_{\max}}{\Delta_{0i}(j) - z \Delta_{\max}} \quad (12)$$

formülü ile hesaplanmaktadır. Kriterlerin eşit önem düzeyinde olduğu varsayıldığında i.elemanın gri ilişki derecesi

$$\Gamma_{oi} = \frac{1}{n} \sum_{j=1}^n \gamma_{oi}(j) \quad (13)$$

ve kriterlerin farklı ağırlıklarla sahip olduğu varsayıldığında söz konusu ise i.elemanın gri ilişki derecesi

$$\Gamma_{oi} = \sum_{j=i}^n [W_i(j)X\gamma_{oi}(j)] \quad (14)$$

olarak elde edilmektedir (Özbek,2021).

3. Sürdürülebilirlik Performansının Belirlenmesi

Çalışma kapsamında, Türkiye Cumhuriyeti Ziraat Bankası A.Ş (B1), Türkiye Halk Bankası A.Ş (B2), Türkiye Vakıflar Bankası T.A.O (B3), Akbankk T.A.Ş (B4), Türkiye İş Bankası A.Ş (B5), Türkiye Ekonomi Bankası (B6), Yapı ve Kredi Bankası A.Ş (B7) ve Türkiye Garanti Bankası A.Ş (B8) olmak üzere toplam sekiz (8) banka ve toplam aktifler oranı (F1), nakdi krediler oranı(F2), özkaynak oranı(F3), mevduat oranı(F4), şube sayısı(O1), müşteri sayısı(O2), toplam ATM sayısı(O3), çalışan sayısı(O4),çalışan başına ortalama eğitim süresi(O5), sermaye yeterlilik oranı(S1) kapsam 1(K1) ve kapsam2(K2) olmak üzere toplam on iki (12) kriter ele alınmaktadır. İlgili bankalara ilişkin veriler Kamuyu Aydınlatma Platformu(KAP), Türkiye Bankalar Birliği (TBB) ve bankalara ilişkin yıl-sonu faaliyet raporlarından elde edilirken; kapsam1 ve kapsam 2 verilerine Climate-Change veri setinden ulaşılmaktadır.

Bankalara ilişkin elde edilen karar matrisi ve farklı ölçütlerin kullanılmasından kaynaklanan sorunları giderilmesi için gerçekleştirilen standartlaştırılma işlemine ilişkin sonuçlar Tablo 1.'de gösterilmektedir. Kriterlere ilişkin entropi değerleri elde edildikten sonra ej, dj, wj ve k değerleri elde edilmektedir.

Tablo 2.'de gri ilişki analizi yöntemi için elde edilen verilere göre karar matrisi oluşturulmaktadır. Kriterlerin fayda yönlü ve maliyet yönlü olmasına göre minimum ve maksimum değerleri saptanmaktadır. Maksimize ve minimize değerlere göre optimum değerlerin belirlenmesi ile referans serisi oluşturulmaktadır. Referans seri ile her sütundaki gözlemler arasındaki mutlak farkı elde edildikten sonra minimum ve maksimum değerler için Tablo.2'de belirlenen son değerler kullanılmakta ve ayırıcı katsayı değeri 0,5 olarak belirlenmektedir. İlişki derecesi elde edildikten sonra ağırlıklandırmanın eşit düzeyde yapıldığı bilgisi ile sonuçlar elde edilmektedir.

Tablo 3.'de gri ilişkisel analiz yöntemi için elde edilen verilere göre karar matrisi oluşturulmaktadır. Kriterlerin fayda yönlü ve maliyet yönlü olmasına göre minimum ve maksimum değerleri saptanmaktadır. Ayrıcı katsayı değeri 0,5 olarak belirlenmektedir. İlişki derecesi elde edildikten sonra de entropi ağırlıklandırma yöntemi ile gerçekleştirilen gri ilişkisel analiz sonuçları gösterilmektedir.

SONUÇ VE DEĞERLENDİRME

Sürdürülebilirlik yaklaşımı çevresel, sosyal ve ekonomik bir etken olduğundan uzun dönemde bankacılık sektörüne yarar sağlamaktadır. Çalışma kapsamında, bankaların sürdürülebilirliği Kapsam (1) ve Kapsam (2) verilerine göre karşılaştırarak değerlendirildiğinden, sürdürülebilirlikle ilgili veri açıklayan bankalar incelenmektedir. 2019 yılı faaliyet raporlarından alınan bilgilere göre, eşit ağırlıklı gri ilişki analizine göre sürdürülebilirlik performansı kapsamında Türkiye Vakıflar Bankası T.A.O birinci sırada yer alırken, Türkiye Cumhuriyeti Ziraat Bankası A.Ş ikinci sırada, Türkiye Ekonomi Bankası üçüncü sırada, Akbank T.A.Ş dördüncü sırada, Yapı ve Kredi Bankası A.Ş beşinci sırada, Türkiye Halk Bankası A.Ş altıncı sırada, Türkiye Garanti Bankası A.Ş yedinci sırada ve Türkiye İş Bankası A.Ş ise sekizinci sırada yer almaktadır. Entropi yöntemi ile ağırlıklandırma yapıldığında ise, Türkiye Vakıflar Bankası T.A.O birinci sırada yer alırken, Türkiye Cumhuriyeti Ziraat Bankası A.Ş ikinci sırada, Türkiye Ekonomi Bankası üçüncü sırada, Akbank T.A.Ş dördüncü sırada, Türkiye Halk Bankası A.Ş beşinci sırada, Yapı ve Kredi Bankası A.Ş altıncı sırada, Türkiye Garanti Bankası A.Ş. yedinci sırada ve Türkiye İş Bankası A.Ş. sekizinci sırada yer almaktadır. Eşit ağırlıklı ve entropi ağırlıklı gri ilişki analizi sonuçlarına göre küçük farklılıklar belirlenmektedir. Bu çerçevede, ilk dört bankaya ilişkin sıralamada herhangi bir değişiklik bulunmamakla birlikte, Yapı ve Kredi Bankası A.Ş. ağırlıklandırma ile birlikte sürdürülebilirlik performans sıralamasında bir sıra düşerken; Türkiye Halk Bankası A.Ş. bir sıra yukarı kaymaktadır. Bankacılık sektörünün sürdürülebilirlik kapsamında çalışmaları olmaktadır Türkiye Garanti Bankası A.Ş. sektör ele alındığında ilk defa temiz enerjiye yatırım yapan banka olarak değerlendirilmektedir. Ek olarak, ING Bank A.Ş. güneş enerjisi santralleriyle kendi kullandığı enerjisinin bir kısmı üretmeye başlamaktadır. Türkiye İş Bankası A.Ş ise, enerji portföyünün %69'luk kısmını yenilenebilir enerjiye ayırmaktadır. Diğer bankalar ise, sürdürülebilirlik alanında kendilerini iyileştirici faaliyetler gerçekleştirmekte ve fonlar ayırmaktadır.

Özet: Çalışma, örgüt teorileri ile eleştirel teori arasındaki ilişki ve etkinin felsefi değerlendirmesinde yönetim bilimine katkıda bulunmayı amaçlamaktadır. Burrell ve Morgan'a (1979) göre, tüm örgütsel teoriler bilim felsefesine dayanmaktadır. Örgüt ve yönetim kuramlarının günümüzde geldiği nokta, kuramları eleştirel bir bakış açısıyla ele alarak geliştirme isteğidir. Bu açıdan, örgüt kuramlarının geçirdiği örgütsel değişiminde, gerek klasik, neo klasik gerekse de Modern, Post modern yaklaşımlar bu çabalarla şekillenmiştir. Örgütsel değişim ve kültürün artan önemi ile evrensel gerçeklerin subjontifliğiyle mümkün olmadığı anlaşılmış ve teorilerin sosyal gerçekliğe bakış açısının yeniden değerlendirilmesiyle eleştirel teorinin ortaya çıkmasına neden olmuştur. Felsefe, olayların tamamına bakarken aşırı özneliliğin bilinçli bir şekilde düzeltilmesini sağlar. Eleştirel kuram ile birlikte örgütlerin rasyonel doğasının yanı sıra irrasyonel bir yapıya da sahip oldukları kabul edilmiştir. Eleştirel kuram, yönetim kuramlarının evrimi için, örgütlerdeki önemli unsurlardan biri olarak görülen beşeri unsurların dönüşüm evrelerine ışık tutan bir felsefi temele dayandırılmıştır. Bu nedenle, eleştirel teori ve örgütsel teorilerin yolları bu dönüşümün hayat bulduğu her noktada kesişir. Bu bakımdan eleştirel kuramın örgüt kuramlarının katkılarına tamamen karşı çıktığını belirtmek, sorgulanması gereken bir görüş haline gelmiştir. Bu amaçla, çalışmada eleştirel kuramın örgüt kuramının evrimindeki felsefi etkilerini göstererek genel bir çerçeve çizilmeye çalışılmıştır. Konu ile ilgili akademik literatür taranarak metodolojik yöntemlerden faydalanılmıştır.

Anahtar Sözcükler: Örgüt Kuramı, Eleştirel Kuram, Değişim ve Felsefe

Abstract: The study aims to contribute the management science in the philosophical evaluation of the relationship and effect between the organizational theories and critical theory. According to Burrell and Morgan (1979), all organizational theories are based on the philosophy of science. The point where organization and management theories have reached today is the desire to be developed by considering the theories with a critical point of view. In this respect, both classical, neo-classical and modern, postmodern approaches in organizational change of organizational theories have been shaped by these efforts. With the increasing importance of organizational change and culture, it has been understood that the realization of universal facts are not possible, and the reassessment of theories' perspective on social reality has led to the emergence of critical theory. Philosophy provides a conscious correction of excess subjectivity in looking at the whole of events. Along with the critical theory, it is accepted that organizations have an irrational structure besides their rational nature. Critical theory is based on a philosophical basis that sheds light on the transformation stages of human elements, which are seen as one of the important component in organizations, for the evolution of management theories. Therefore, the paths of critical theory and organizational theories intersect at all points where this transformation comes to life. In this respect, the view of critical theory completely opposes the contributions organizational theories must be questioned. For this purpose, a general framework has been drawn by showing the philosophical effects of critical theory on the evolution of organizational theory. The academic literature on the subject has been reviewed and methodological methods have been used.

Keywords: Organization Theory, Critical Theory, Change and Philosophy

1. GİRİŞ

Küreselleşmenin çok fazla hissedildiği günümüz dünyasında örgüt teorisi artan bir şekilde zorlu problemlerle karşı karşıya kalmaktadır. Örgütlerin sağlıklı bir şekilde varlığını sürdürmesi, amaçlarına ulaşabilmesi ve yönetim problemlerine çözüm çabalarıyla mümkün olabilir. O halde, örgütler nasıl geliyor? Örgütlerin gelişim ve değişim mekanizmaları nelerdir? Süreklilikte yönetimin rolü nedir? Bunlar literatürün farklı nitelikte cevaplar aradığı pek çok sorulardan bazılarıdır. Örgütün nasıl işlediğini dair farklı yaklaşımlarda bulunan örgütsel teoriler mevcut bilginin tarafı ve eksik olduğu gerçeğini farketmemizi sağlar. Felsefe bu noktada örgüt teorisine eleştirel yaklaşabilmeyi ve örgüt teorilerini

sınıflandırabilmeyi kolaylaştırır (Keskin, Akgün ve Koçoğlu, 2016: 71). Eleştirel teori, farklı sosyokültürel değer yargıları ve ideolojileri doğrultusunda üzerinde hakimiyet kurulan bilgiyi özgürleştirmeyi amaçlar. Örgütsel işleyiş, sistemin bir bütünlük içinde var olması araştırmacıların her zaman ilgisini çekmiş ve örgütün bütünsel şemsiyesi altında vücut bulan ilişkisel süreçler, iletişim sistemleri, sürekli değişen ve gelişen etkileşim süreçleri, araştırmacıların sistemin yapısına olan araştırma eğilimlerini arttırmıştır. Felsefi yaklaşımda, örgütleri varlık olarak değil oluşum (becoming ontology) görme eğilimi ağır basmıştır. Bu durumda örgütü meydana getiren süreçlerin varlığı dikkat çekmiştir. M.Horkheimer'e göre (1994) bir teori; insanları, buldukları kısıtlayıcı koşulları değiştirerek onları özgürleştirdiği kadar eleştirilirdi. Örgütlerin devamlılığı ise her zaman değişimle ilişkilendirilir. Bu, bazı yazarlar tarafından açıkça bir "çalışma objesi" olarak işlenmiştir: Hannan ve Freeman (1977), Pfeffer ve Salancik (1975), Tushman ve Romanelli (1985), Nelson ve Winter (1982), McKelvey (1999) için çalışmalarında örgütsel değişim ve örgüt teorisine yapılan araştırmaların ana zemini olmaya devam etmektedir. Bu bakımdan örgütsel değişim konusu; yönetim bilimlerinde değişim mekanizmaları (Tushman ve Romanelli, 1985; Pettigrew ve Whipp, 1989), örgütsel yaşam döngüsünün aşamaları (Nadler ve Tushman, 1990), örgütsel öğrenme (Argyris ve Schön, 1978) ve popülasyon ekolojisi (Hannan ve Freeman, 1977) gibi örgütsel çalışma alanlarına doğru evrilmiştir. Bu analizlerde "zaman kavramı" (Le concept du temps) açıkça merkezi bir rol oynar. Eleştirel teori aslında anın değerlendirilmesi ve yorumlamasıyla yolunu açmaya çalışır ve aynı zamanda toplumun ve örgütlerin temel yönlerinin keşfidir. Buradaki oluşumlar örgütün bütünsel yapısının altında yatan ilişkisel süreçlerin, geri bildirim döngülerinin sürekli değişen etkileşimlerin ön plana çıkmasını sağlamıştır. Bu açıdan örgütlerin etkileşim içerisinde olduğu çevre de örgütlerin davranışlarıyla oluşur (Keskin vd., 2016: 76). Oluşum ontolojisi örgütlerin ve örgütsel olguların sürekli değişim, dönüşüm ve oluşum içerisinde olduğunu düşünür. Örgütsel hayat dışarıda var olan oluşumu tamamlanmış bir gerçek değildir. Aksine, süregelen bir "oluşturma" sürecinin çıktısıdır. Peki değişim örgütteki varlığını nasıl bir süreç içinde sürdürmektedir? Eleştirel kuramın bakışı nasıl yorumlanır? Çalışmamız akademik bakış açısından sapmadan bu sorulara yanıt aramaktadır.

2. ELEŞTİREL KURAM VE FELSEFESİ

Eleştirel kuramın yola çıkış felsefesini incelemek için öncelikle yaklaşımın ilk dönemine ışık tutan birinci kuşak Frankfurt Okulu çalışmaları önem taşımaktadır. Bu dönem; Max Horkheimer (1895-1973), Theodor Adorno (1903-1969), Herbert Marcuse (1898-1979), Walter Benjamin (1892-1940), Friedrich Pollock (1894-1970), Leo Lowenthal (1900-1993) ve Eric Fromm'ün (1900-1980) araştırmalarıyla şekillenmiştir. Birinci kuşak Frankfurt Okulu olarak bilinen bu dönem, bilgiyi ideolojik tahakkümden kurtarma ve özgürleştirme amacı ile özdeşleşmiştir. Özellikle çalışan ve sessizleştirilen kesimin deneyimlerine odaklanarak toplumsal patolojilerden sorumlu ideolojileri keşfetmeyi amaçlayan bir sosyal kuramsal yaklaşım olarak ön plana çıkmıştır. İkinci kuşak Frankfurt Okulu, 1950'lerde yeniden canlanan özgürleştirmeci düşünce ile toplumların ve örgütlerin mevcut düzeninden kurtulma gereğine odaklanmıştır. Başta Jürgen Habermas (1929-) olmak üzere Alfred Schmidt (1931-2012) ve Claus Offe (1940-) gibi eleştirel kuramcıların çalışmaları ile Frankfurt Sosyal Araştırmalar Enstitüsünde devam etmiştir. İkinci kuşak Frankfurt Okulu, bilgi üretiminin ve bilginin hakim ideolojiler tarafından kontrol edilemeyeceği, toplumsal ideolojilerin kontrolü altında kalmayacağı koşulları incelemeye odaklanan ayırt edici bir yaklaşım geliştirmiştir. Okulun birinci dönemi, bilgiyi hakim ideolojilerden özgür kılmak için ekonomik, politik ve psikoanalitik çatışmalara odaklanılması gerekliliğini savunurken İkinci kuşak Frankfurt Okulu, günlük hayattaki bireyler arası etkileşimde gerçekleşen söylemsel iletişime ve dilin kullanımına odaklanmayı önermektedir. Üçüncü kuşak Frankfurt Okulu ise, 1994'te Habermas'ın Enstitü'den emekliye ayrılması ile başlayan ve eleştirel kuramın günümüze uzanan bakış açısını oluşturan yakın dönemine işaret etmektedir. Axel Honneth (1949-) öncülüğünde gelişen Üçüncü kuşak Frankfurt Okulu; Kant, Hegel ve Marx gibi kuramcıların felsefesine dayanan temellerinin yanı sıra ampirik sosyal bilim araştırmalarını ve analitik felsefeyi de kapsayıcı bir alana yayılmıştır. Üçüncü kuşak Frankfurt Okulu kuramcıları, Habermas öncülüğünde gelişen İkinci kuşak Frankfurt Okulu'nu sosyal değişim için gerekli olan bir eylem stratejisi belirlemedikleri gerekçesiyle eleştirmiş ve 'Ne yapılabilir?' sorusuna cevap aranması gerektiğini savunmuştur (Keskin vd., 2016: 420).

1920'lerde ortaya çıkan ve bugüne kadar devam eden Eleştirel Teori, bir dizi yazarı (Adorno, Benjamin, Habermas, Marcuse dahil) kültür ve iletişimi içeren kavram ve temaları kapsayan geniş bir düşünce akışıdır. Bu karmaşık bütünü açıklığa kavuşturmak için, eleştirel kuramın kavramsal kalbini daha iyi

vurgulamak Eleştirel Kuram tarihindeki farklı anları belirlemek mümkündür. Yani “anlar”/Moment, Eleştirel Kuramın dikkat ettiği ortamı belirler. Mevcut durumu teşhis etme fikri sadece konunun merkezinde değil, aynı zamanda bir felsefe ve sosyal bilimler arasında yakın işbirliğidir; ve bu tür teşhisler ışığında kültür ve iletişim alanındaki dönüşümler tasarlanır. Bu heterojenlik, belki de eleştirel projeyi kaynağında en iyi karakterize eden şeydir ve 1930'larda Horkheimer tarafından yavaş bir şekilde bir "araştırma programı" ve "temel bir teorik tutum" olarak tanımlanır. Oldukça belirsiz bölme çizgileri boyunca geniş alanlara uygulanan bu proje, çeşitli çalışma zenginlikleriyle yeniden formülasyonların ve yorumların yolunu açtı. E. Renault, Y. Sintomer ve G. Raullet, bu bakımdan paha biçilmez başlangıçlara aracılık etmişlerdir: 1930'lardan günümüze kadar eleştirel teorinin ana çekimlerini tanımlamışlar ve her aşamada felsefi konuları araştırmışlardır (Renault, 2003: 386). Zamanını teşhis etmeyi amaçlayan Eleştirel Teori'nin, kaçınılmaz olarak tarih sürecine dahil olan tasarımı, kendisini sürekli yeniden formüle etmesine, geleceğe doğru esnetilmesine yol açmaktadır. Bu anlamda bir şekilde değişimi kendine ve sosyal bilimlere sağlama fırsatı vermektedir. Geniş anlamda, eleştirel teori terimi, özellikle Anglosakson bağlamında, bir dizi yaklaşımdan oluşur. Bu yaklaşımların birkaçından bahsetmek gerekirse; kültür, müzik, edebiyat, devlet, hukuk, iletişim, medya, otoriterlik, bireysel gelişim sayılabilir. Eleştirel Teorinin çeşitli yazarları (özellikle Theodor W. Adorno, Walter Benjamin, Jürgen Habermas, Herbert Marcuse) geçen yüzyılın ortalarında önemli bir etkiye sahipti. Tüm dünyada en güncel sorunlar ve sorular açısından (özellikle Almanya, ABD, Brezilya, İtalya, Japonya'da) düzenlenen araştırmacıların, yayınların, toplantıların, seminerlerin veya konferansların sayısı göz önüne alındığında, Eleştirel Teori'nin entelektüel faaliyetlerle yaşayan ve bunlarla boğuşan bir alana sahip olduğu açıktır. Eleştirel Teori, şu anda bile birçok araştırmacı, doktora öğrencisi ve araştırma projesiyle alana olan katkısını sürdürmeye devam ederek örgüt teorileriyle bütünleşmiş bir çerçeve olarak görülmektedir. Bu anlamda entelektüel faaliyetler açısından, bu düşünce geleneği her zaman alana yakındır. Ancak bir düşünce geleneğinin güncelliği ve gelecekteki gelişimi sorunu, yalnızca ürettiği yayınları ve faaliyetleri ile ölçülmez. Aynı zamanda - ve her şeyden önce - zamana uyma, onu mantıklı bir şekilde yorumlama ve güncel gelişmelerdeki eğilimleri-değişimleri neler olduğunu algılama yeteneği ile ölçülür. Bu anlayışın şu anda hala varlığını sürdürüyor olması bile, algılanan problemler ve sorular kümesi için tutarlı bir teorik çerçeve sağlamak için gereklidir. İşte tam bu noktada, bu nedenlerden dolayı eleştirel kuramın hakkını araştırmak gerekmektedir. Eleştirel teori tarihindeki farklı “anları” veya farklı dönemleri vurgulamak, her birinin kendine özgü özellikleri ve sınırları olduğunu kabul etmek kuşkusuz yararlıdır. 1930'ların başlarında, Max Horkheimer, özellikle materyalist bir araştırma programının ana hatlarını çizmek için yola çıktığı zaman, Eleştirel Teori'nin ana özelliklerini belirlemiş ve farklı deneysel disiplinleri sosyal felsefe tarafından oluşturulan tutarlı bir çerçeve içinde ifade etmeye çağırmıştır (Horkheimer, 1978).

Horkheimer, 'eleştirel bir modern toplum teorisinin ana hatları ne olmalıdır?' sorusundan yola çıkmıştır. Max Horkheimer, *Traditional Theory and Critical Theory* adlı çalışmasında öncelikle teorinin ne olduğunu açıklamıştır. Burada, "Genel olarak teorinin nihai amacının, artık belirli bir alanla sınırlı olmayan, tüm olası nesnelere kapsayan evrensel bir bilim sistemi inşa etmek olduğunu" ifade etmiştir. Daha geleneksel teori anlayışının ise esas olarak yönetici sınıfın genel fikirleri tarafından yönlendirildiğini belirtmiştir. Bu anlamda araştırmacılar eleştirel teoriyi, geleneksel kuramcılarının dediği şekliyle, yalnızca öngörümlemeye odaklanan doğa bilimleriyle karşılaştırarak gerçeklik hakkında halihazırda kurulmuş olan sistemi güçlendirme eğilimine yönelmişlerdir. İşte bu anlamda Horkheimer her şeyden önce eleştirel teorinin tanımını sunmak için çalışmıştır. Max Horkheimer'a göre Eleştirel Teori "açıklama" (Klärung) dediği şeyi üretmesidir. Eleştirel tip teorisine özgü bir açıklamayı tetikleyen bir yansıma geleneksel teoride de mevcuttur. Yazara göre eleştiri, onun gözünde aklın özüdür, bu sadece düşünme, analiz ve yenilik yeteneği değil, aynı zamanda ahlaki ve politik sebeptir. Bu nedenle eleştiri, bilgi ve özgürlük arasındaki bir ilişkiye dayanır ve tarih ve sosyal yapıların gelişiminde rolü vardır (Horkheimer, 1974).

Eleştirel kuram Burrell ve Morgan (1979) gibi yönetim bilimciler tarafından radikal insancıl paradigma içinde değerlendirilmiştir. Radikal insancıl paradigmanın temelini, bireyin içinde yaşadığı dünyayı oluşturduğu düşüncesi oluşturmaktadır. Bunu oluşturan süreçlerin eleştiriye tabi tutulması radikal insancıl paradigmanın temel amaçlarından biridir (Yıldırım, 2007: 392). Bu açıdan bakıldığında, eleştirel kuramın temelini oluşturan bu paradigmayı kavrayabilmenin asıl yöntemi felsefi düşüncenin eleştirel bakış açısını ele almakla mümkün olabilecektir. Eleştirel kuramın temel mantığını anlamak için öncelikle kuramın temel felsefesini kavramak, felsefi düşüncenin eleştirel kurama sağladığı besleyici temeli görebilmek önem taşımaktadır. Felsefi düşünce eleştirel bir düşünce tarzı olmakla birlikte bilince

dayalıdır. Bu düşünce tarzı kendisine veri olarak ele aldığı her türlü malzemeyi aklın eleştiri süzgecinden geçirmektedir (Arslan, 2018: 28). Nitekim eleştirel kuramın tanımladığı bağlamı içerisinde sosyal gerçekliği olduğu gibi bilmenin mümkün olmadığı savının buna dayandığını söylemek yanlış olmayacaktır. Eleştirel teorinin ilk hedeflerinden biri olan 'bilimin ve bilimsel bilginin değer yargılarından bağımsız olmadığını gösterme' amacı da bu dayanağa bir kanıt niteliği taşımaktadır. Kuramsal bakış açısı sebebiyle, eleştirel kuramın bilimsel teorilerden bazı belirgin farklılıklarına değinmek yerinde görülebilecektir. Eleştirel kuramın temsilcileri olan Frankfurt Okulu üyeleri, bilimsel kuramlar ile eleştirel kuram arasında keskin bir ayrım yapmışlardır. Okul üyeleri bu ayrımı üç boyutta incelemişlerdir. İlk olarak amaçsal bir farklılıktan söz edilmektedir. Bilimsel kuramların amacı dünyanın başarılı bir biçimde manipüle edilmesi iken, yani araçsal bir kullanım söz konusuysen, eleştirel kuram özgürleşmeyi ve aydınlanmayı, davranışı gerçekleştirenlerin gizli zorlamaların farkına varmasını sağlamayı ve böylece onları bu zorlamalardan kurtarıp, doğru çıkarlarının nerede olduğunu belirlemelerini sağlayacak bir yere getirmeyi hedeflemektedir (Geuss, 2002: 84). Nitekim Habermas, strateji ve yapısal koşul bağımlılık üzerine olan örgütsel literatürün çoğunun eleştirel teorinin bu teknik menfaat yaklaşımından türediğini iddia etmiştir (Barrett, Powley ve Pearce, 2013: 195). İkinci olarak, eleştirel kuram ile bilimsel teoriler mantıksal açıdan farklıdır. Bilimsel kuramlar nesneleştiricidir. Bu, en azından tipik durumlarda kuram ile kuramın gönderme yaptığı nesnelere arasında bir ayrım yapılabileceği anlamına gelir. Bilimsel çerçeve içerisinde kuramın kendisi betimlediği nesne alanının parçası değildir. Öte yandan eleştirel kuramın dönüşlü olduğu veya kendi kendisine gönderme yaptığı iddia edilmektedir. Son olarak, bu iki yaklaşım birbirlerinden bilimsel olarak kabul edilebilir olup olmadıklarını belirlemede kullanılabilecek kanıt türü konusunda da farklıdır. Bilimsel kuramlar gözlem ve deney yoluyla ampirik kanıtlama gerektirirken, eleştirel kuram ancak daha karmaşık bir değerlendirme sürecini başarıyla tamamlarsa bilimsel açıdan kabul edilebilir hale gelir. Bu değerlendirme sürecinin temel noktası ise, kuramın dönüşlü anlamda kabul edilebilir olduğunun gösterilmesidir (Geuss, 2002: 85). Sözü edilen üç önemli farklılık açısından ortak bir değerlendirme yapmak gerektiğinde, asıl konunun eleştirel kuramın felsefi temelini dayandığını ifade etmek gerekir. Nitekim amaç, mantık ve kanıtlama şeklinin ayırt edici olarak belirtildiği özelliklerin, her iki kuramsal bakış açısının temel felsefesi için de bir çerçeve çizeceği açıktır. Bu açıdan kuramların birbirinden ayrışmasını sağlayacak asıl kriterin, 'başlangıçtaki yola çıkış felsefesi' olduğunu söylemek mümkündür.

Eleştirel kuramın felsefesiyle ilgili yukarıda değinilen temel özelliklerin ışığında yönetim ve örgüt kuramlarında bu yaklaşımların yansımalarının nasıl gerçekleştiği alanımız açısından önem taşımaktadır. Bu niyetle örgüt kuramı alanının bu evrimden nasıl etkilendiğini ortaya koymak, kuramların geçirdiği paradigmatik dönüşümlerin satır aralarını ortaya koymayı gerektirmektedir. Dolayısıyla evrim mantığıyla düşünüldüğünde hem klasik kuramların geçirdiği dönüşümün, hem de sonrasında varolan neo-klasik kuramların da yeniden değişime maruz kalışının sebebi asıl olarak, eleştirel bakış açısının temel felsefesinin örgüt ve yönetim alanına yansımalarından kaynaklı olabileceği düşünülmektedir. Nitekim eleştirel kuramın temel iddiaları olarak görülen prensipleri bu düşünceyi destekler niteliktedir. Bu prensipler Keskin ve arkadaşları (2016: 421) tarafından; 1) Bilgi objektif değildir, doğa bilimlerinde olduğu gibi evrensel kurallara tabi olamaz, 2) Bilgi değer yargılarından bağımsız değildir, toplumsal tarih ve kültürel gelişimle bağlantılıdır, 3) Mevcut toplumsal düzenin olduğu gibi kabul edilmemesi gerekir, şeklinde ifade edilmiştir. Eleştirel kuramın temelini oluşturan bu iddialar da örgüt kuramının zaman içerisindeki evriminin etkileri olarak; kültürel belirlemcilik, kontrol mekanizmaları ve subjektiflik, düşünümSELLİK ve demokratik örgüt arayışları gibi birçok kavram ve olgunun besleyicisi olmuştur. Eleştirel kuramın bu besleyici yapısı, örgüt kuramlarındaki değişimi eleştirel yaklaşım perspektifinden ele almanın önemine işaret etmektedir. Bu gerekliliğe sosyal bütünlük perspektifinden bakıldığında, sosyal dünyayı izole edilmiş bölümlere ayırmak ve onları ayrıştırmak, sosyal süreçleri her şeyi çözme noktasına kadar parçalara ayırmak gerekli hale gelmektedir. Burada, Georg Lukács'ın ardından Max Horkheimer da bilgi alanını, bilimin kullanımıyla dünyayı nesneleştirmeye ve kontrol etmeye çalışan kapitalist bir toplum çerçevesinde araçsallaştırma olarak incelemiştir. Buna göre de, sosyal dünyayı bir bütün olarak kavrayabilmenin yolu, bu şeyleştirmeden kaçan bir bilgi biçimi geliştiren, toplumsal süreçleri diyalektik olarak düşünebilen ve onları pratik gelişimlerin ötesinde yeniden oluşturan bütünsel, genel bir bakış açısına (Horkheimer, 1970) dayanmaktadır.

2.1. Klasik Örgüt Kuramlarının Evriminde Eleştirel Kuram İzleri

Örgütleri tanımlama girişimlerinde, teorisyenler, birey ile görevi arasındaki ilişkinin farklı yönlerini art arda vurgulamışlardır. Başlangıçtaki bu yaklaşım insan ile işinin fiziksel ve idari koşulları arasındaki ilişkiye dayandırılmıştır (Aktouf, 1989: 1-13). Klasik örgüt okulunun amacı ise, verimliliği artırmak için iş bölümüdür. İşyerindeki çalışanların çıkarlarını dikkate almaz. Klasik ekol, Teori X'e denk düşer, aynı zamanda HGY (hedeflere göre yönetim) olarak nitelendirdiğimiz sistemlere de karşılık gelir. Önerilen hedeflere ulaşılmadığında bir yaptırım söz konusudur. Hedefler koymak ve onları astlara dayatmaktan oluşmaktadır. Klasik yönetim düşüncesi fonksiyonel bir yaklaşıma sahiptir. Diğer bir deyişle klasik düşüncede yönetim fonksiyonlarına önem verilir. Fayol'un ortaya koyduğu ve diğer klasik düşünürler tarafından geliştirilen, yönetim fonksiyonlarıyla ilgili kavramsal çatı klasik düşünürlerin en önemli katkılarından birini teşkil etmektedir. Nitekim, F. W. Taylor, H. Fayol, L. Urwick, L. Gulick ve R. C. Davis'in tüm yönetim fonksiyonlarıyla ilgili fikir ve görüşleri bulunmaktadır. F.W. Taylor (1856-1915): Çalışmanın bilimsel organizasyonunun (1911'de başlatılan "L'organisation Scientifique du Travail" (OST)) özü 3 ilkeye dayanmaktadır:

1. İşbölümü ve Görevde Uzmanlaşma: Tasarım ve uygulayıcılar arasında bir ayırım olmalıdır. Bu, "Bir işi yapmanın en iyi yolu" olarak ifade edilmiştir. Buna göre bir işi yapmanın en iyi yolu, çalışmanın da tek yolu olarak görülmüştür.
2. Görevin Bölünmesi: Çalışmanın gerçekleştirilmesi kolay olacak şekilde çok basit öğelere ayrıştırılmasıdır. (örnek: "Les Temps Modernes" filmi).
3. Performansa Dayalı Ücret: performansla (verimlilik) bağlantılı bir prime karşılık gelir. Taylor'a göre, prim tek başına ana motivasyon kaynağıdır.

Bu organizasyon ilkeleri, üretkenliği artırmak için (başta Ford olmak üzere: Ford Model T) üretim hatlarını ortaya çıkaracak ve bu model bir 'tüketim toplumu' sembolünün başlangıcını oluşturacaktır. Taylorist yönetim anlayışı ise insan faktörünü ihmal etmiş, bu da üretkenliğin azalması, devamsızlığın artması gibi sonuçlar doğurmuştur. Çalışma süresindeki artış devamında atık, enerji ve hammadde israfında artışa neden olan bir durumu meydana getirmiştir. Diğer yandan bu süreç, hiyerarşi ile çatışmaların ortaya çıkması ve dolayısıyla sosyal iklimin bozulmasına da yol açmıştır. Başlangıcında Taylorizm, yüksek verimlilik için etkili bir yöntem olsa da sürecin ortalarına doğru etkinliğini kaybetmiştir. H. Fayol (1841-1925) Yönetim İlkeleri (Le principe administratif) adlı eserinde işletmelerin faaliyetlerini altı ana işlevde incelemiştir. Bunlar: 1-Teknik (imalat) 2.Ticari (satış) 3.Mali, 4.Muhasebe (bilanço, envanter) 5.Güvenlik ve 6.Yönetim (planlama, organize etme) şeklinde belirtilmiştir. Henri Fayol'a göre ise, işletme, ne kadar hiyerarşik bir hale gelirse, yönetim işlevi o kadar önemli hale gelmektedir. Bu açıdan Fayol, kendi teorisinin işletme de çalışanlara uygulanmasını önerir. Ona göre yönetmek, planlamak, organize etmek, komuta etmek, koordine etmek, kontrol etmek gerekir. Klasik kuramın önemli otoritelerinden olan M. Weber (1864-1920) ise Bürokrasi kuramı ile ün yapmıştır. Weber, yönetebilmek için, üç yönetim tarzına karşılık gelen bürokrasinin uygulanması gerektiğini düşünmektedir. Bu konuda ilk olarak karizmatik tarzı ele alan Weber ardından geleneksel ve rasyonel tarzı incelemiştir. Karizmatik tarz, muazzam becerilere ve kişisel niteliklere sahip bir lider olarak ifade edilirken, Geleneksel tarz işletmenin miras yoluyla geleneksel tarzda nasılsa o şekilde devam etmesi şeklinde tanımlanmıştır. Buradaki geleneksel bağ, miras yoluyla yönetim statüsüne bağlı yetkiyi de hakim kılmaktadır. Öte yandan Weber için yalnızca bir yönetim tarzı vardır, bu da üçüncü tarz olan Rasyonel tarz veya Bürokratik tarzıdır. Bu tarzda; Kuruluşun üyeleri kişisel ücret almazlar (a), yetki, kişisel olmayan prosedürler yoluyla uygulanır (b), kurallar, bu yönetim tarzının temelini oluşturur (c), bürokratik tarzda bir iş için herhangi bir aday, denemelerle test edilen teknik nitelikleri için seçilir, daha sonra aday yönetim ile bir sözleşme imzalar(d). Bürokrasiden bahsederken, Peter İlkesi ve Parkinson Yasası (Lafrance, 2012: 1) hakkında konuşmak da önemlidir. Peter ilkesi: 'Mükemmel tamirci yetenezsiz bir usta oldu (Excellent mécanicien, il est devenu contremaître incompetent)' Bu ilkeye göre: "herkes terfiler yoluyla hiyerarşiyi yetersizlik düzeyine yükseltme eğilimindedir". Peter'in ilkesi, kuralların herkes için açık olmasını, artık terfi etmediğinizde de yetersizlik düzeyinize ulaştığınızı savunmaktadır. Laurence J. Peter'in dayandığı ampirik bulgular şöyledir (1969): Herhangi bir organizasyonda, birisi işini iyi yaparsa, ona daha karmaşık bir görev verilir. Kişi verilen bu görevi doğru yaparsa, kendisine bir terfi daha verilecek ve yeteneklerinin ötesinde bir iş bulana kadar bu döngü devam edecektir. Parkinson Yasası'na

göre ise, "tüm işler mevcut zamanı işgal edecek şekilde genişleme eğilimindedir". Aşırı bürokrasinin büyük etkileri görülebilir. Parkinson bürokrasinin olumsuz yönleri olduğunu savunmuştur. Örneğin işletme içindeki; idari yavaşlık, ağırlık, azalan üretkenlik, Artan maliyetler, dinamizm kaybı bunlardandır. Nitekim bunlar da personelin motivasyonunun düşmesi anlamına gelmektedir. İşletme dışında ise; müşteri memnuniyetsizliği, azalan satışlar, değişen pazarlarda çevreye uyum sağlanmaması parkinson yasası olarak adlandırılmıştır.

Daha sonra, insan ilişkilerinin babası olarak tanımlanacak olan E. Mayo (1880-1949) 5 yıl süre ile sosyal etkenlerin keşfedilmesine yönelik bir çalışma gerçekleştirmiştir. Hawthorne atölyesinde bir telefon üretim şirketi olan Western Electric'te gerçekleştirdiği çalışmanın başlangıcında, fiziksel çalışma koşullarına odaklanarak insani boyutlara dikkat çekmiştir. Böylece çalışması ile işyerindeki yorgunluğun nedenleri, iş kazaları, artan devamsızlığın sonuçlarına dayanarak insanı ön plana çıkarmayı başarmıştır. A. Maslow'un (1908-1970) çalışmaları ise ihtiyaçlar piramidi olarak anılmıştır. Düşüncesinin temelinde, 'bir insan tarafından ifade edilen ihtiyaçların piramit biçiminde hiyerarşik hale getirilebileceği' yatmaktadır. F. Herzberg (1923) ise, iş zenginleştirme fikriyle; çift faktör teorisini Maslow'un piramidinden esinlenerek oluşturmuştur. Yazara göre, işyerindeki memnuniyetsizlik faktörleri hijyen faktörleri olarak kabul edilebilecektir. Herzberg, "Hijyen eksikliği hastalığa neden oluyorsa, varlığı sağlığı garanti etmez" ifadesini kullanmıştır. McGregor (1906-1964) ise, X ve Y teorilerini ortaya atmıştır. Klasik insan ilişkileri okulundan ayıran X ve Y terimlerinin mucidi olan kişidir. McGregor, bazı yöneticileri aşağıdaki varsayımlardan oluşan X teorisine göre faaliyet gösterdikleri için eleştirmiştir; a-Sıradan insan çalışmaktan doğuştan nefret eder, çalışmayı sevmez ve bundan kaçınmak için her şeyi yapar, b-Çalışabilmesi, sınırlandırabilmesi, kontrol edebilmesi, kendisine hedefler koyabilmesi ve yaptırımlarla tehdit edebilmesi gereklidir. McGregor kendi ifadesi ile bunu "homo-sapiens güvenlik ister ve sorumluluktan hoşlanmaz" şeklinde ifade etmiştir. Maslow'un piramidinden ilham alan McGregor, X teorisinin zıttı olarak ortaya attığı Y teorisini önermiştir. Aslında, bu durum, hedefler için çalışırken kendilerini yönetebilecek ve kendilerini kontrol edebilecek insanların olmasından ibarettir. Böylece, çalışanlar güçlenmeyi severler çünkü bunu zenginleşme ve kendini gerçekleştirme olarak görürler. Sonuçta kuram, çalışanların, amaçların belirlenmesine dahil edildiklerinde bu hedeflere ulaşmayı taahhüt edeceklerini savunmaktadır. Böylelikle McGregor tarafından ortaya atılan Y teorisi ile de motivasyon teorisi ortaya çıkmış olmuştur.

Görüldüğü gibi klasik kuramın örgüt uygulamalarına esas teşkil ettiği yadsınamamakla birlikte zamanın getirdiği birtakım değişiklikler de örgüt alanında dönüşümlere yol açmıştır. Sosyal bilimler felsefesinde 20.yüzyılda yaşanan gelişmeler, sosyal bilimlerin diğer tüm alanlarında olduğu gibi örgüt kuramı yazınındaki hakim bakış açılarının tartışılmasına ve örgüt kuramı yazınının kendisinin eleştirilmesine sebep olmuştur (Erkal ve Şentürk, 2015: 339). Nitekim örgüt kuramlarının klasikten neo-klasiğe ve modern döneme kadarki evriminin temeli de bu paradigma tartışmalarının bir sonucu olarak görülebilecektir. Bu açıdan düşünüldüğünde sosyal bilimler içerisinde önemli bir alanı temsil eden örgüt kuramı alanının gelişiminde de geçmiştaki bazı önemli bilim insanlarının ve bilimsel çabaların yeri yadsınamayacaktır. Bu bağlamda eleştirel yönetimin, klasik yönetim anlayışı içerisinde değerlendirilen bir isimden gelen temellerine değinmek yerinde görülebilecektir. Bu isim, dönemin ilerisinde olan bilimsel fikirleriyle günümüze kadar ışık tutabilen bir bilim insanı olan Max Weber'dir. Geleneksel kuram toplumu doğaymış gibi ele alan disiplinler bırakmıştır. Bu bakış açısında doğa, eşzamanlı olarak hem kendi dışındaki bir kavram hem de kavramı ve kendi nesnesini elde etmeyi amaçlayan her türlü çabayı kapsayan bir diyalektik gerçeklikten ziyade insanları dışlayan bir şey olarak anlaşılmıştır (Wilson, 2013: 419). Nitekim bu ayrışma, geleneksel kuramın temelini oluşturan 'evrenselleştirme ve genelleştirme' ye karşılık pozitivist yapılan bazı eleştirileri ön plana çıkarmıştır.

Pozitivizme yapılan bu eleştirilere göre aklın, sadece sosyal olguların açıklanmasında değil, aynı zamanda tüm toplumsallığın, kurum ve kuram düzeyinde, akla uygun hale getirilmesinde geçerli tek referans halini alması söz konusu olmuştur. Bu tarz bir inşacılık ise zamanla sıkı eleştirilere tabi tutulmuştur. Klasik kuramın önemli bilim insanlarından biri olan Max Weber, pozitivist inşacılığın sadece görüngüler üzerinden kuram yaratmasının sosyal fenomenleri açıklamada yetersiz kaldığını savunmuştur. Ona göre, sosyal olgular sadece görüngüler üzerinden açıklanamaz; çünkü görüngülerin arkasında fiziksel anlamda gözlemlenemeyecek ya da ölçümü yapılamayacak etmenler bulunmaktadır. Anlayıcı sosyoloji

kavramından hareket eden Weber'e göre kültür veya din gibi sosyal fenomenler, insan davranışları ve sosyalliğin kurulmasında etkilidir ve bunlar aklın fizik yasaları yoluyla açıklanamayacak olan şeyleri ifade etmektedir. Weber'in teorileri büyük ölçüde Alman sosyolojisinin etkisinde kalarak gelişmiştir. Sosyal fenomenlerin açıklanmasında kültürü ön plana alan Alman sosyolojik yaklaşımı, pozitivistin insan eylemlerinin beşeri yönlerini katı belirlenimci yasalara tabi tutarak kişisel özgürlüğün eylemsel doğasını göz ardı ettiğini ileri sürmüştür. Diğer bir deyişle, Alman sosyolojik yaklaşımı, insanlığın oluşumuna deterministik yasaları değil, toplumsallığın ve kültürel oluşumuna dayanak oluşturan bireysel eylemleri yerleştirmektedir (Baştürk, 2011: 21-22). Bu bakış açısına göre, klasik yönetim anlayışı içinde yaşayan bir bilim insanı olan Weber'in de savunduğu gibi, bağlam önemli bir hale gelmeye başlamıştır. Böylelikle eleştirel teorinin örgüt teorisiyle kesiştiği dönemde (1970'ler) ortaya çıkan kültürel belirlenimcilikle birlikte, sosyal sistemlerde hayatta kalmanın biyolojik sistemlerle aynı koşullara bağlı olmadığı fikri ön plana çıkmıştır. Sosyal sistemlerde olayların evrensel sosyal kurallarla açıklanmaktan çok kültürel olarak belirlendiği anlayışı yaygınlaşmaya başlamıştır (Keskin vd., 2016: 445). Bu gelişmelerle birlikte klasik anlayış içerisinde şekillenmeye başlayan eleştirel bakış açısı, bilincin ve toplumun oluşumunda ve yeniden üretiminde fikirlerin rolünü (Yıldırım, 2007: 393) ön plana çıkarmıştır.

Klasik yönetim yaklaşımına en ağır eleştiriler davranış bilimciler tarafından getirilmiştir. Kurama en yaygın eleştiri, klasik düşüncenin rasyonel insan modeline dayanması yönünden gelmiştir. Ayrıca klasik yönetimin örgütü bir makine, insanı da makinenin uzantısı olarak tanımlaması açısından da oldukça eleştirilmiştir. Örgütün sadece biçimsel kısmıyla ilgilenmesi, biçimsel olmayan örgütü dikkate almayı klasik yönetim döneminin büyük bir eksikliği olarak ifade edilmiştir. Klasik yaklaşım insan davranışının örgütün yapı ve işleyişinde etkisinin olmadığı varsayımı ile de eleştirilmiştir. İnsanı motive eden unsurlara ilişkin varsayımlar, davranış bilimciler tarafından gerçeklere uymadığı düşüncesiyle eleştiri almıştır. Herbert Simon örgütün insanlardan oluşan bir sistem olduğuna vurgu yaparak, örgütleri insan etkileşimlerinin bütünü olarak tanımlamıştır. Simon insanı tamamen rasyonel bir varlık olarak görmeyi sakıncalarını sınırlı rasyonellik kavramıyla açıklamıştır. Argyris (1962) klasik yönetim ilkelerinin örgüt üyelerinin kapasite ve yeteneklerini göstermelerine imkan tanımayacağını ve çalışanların pasif ve inisiyatiften yoksun bireyler haline geleceğini belirtmiştir. March ve Simon (1993) ise klasik yaklaşımın ilkelerinin sadece doğruyu ifade ettiğini uygulamaya yol gösterici olmadığını belirtmişlerdir (Kalemcı Tüzün, 2012: 22). Nitekim Weber'in ideal bürokrasisinde de bunun izlerine rastlamak mümkündür.

Weber'in öne sürdüğü 'rasyonel kuralların üstünlüğünün' ve 'bütün etkinliklerin bu kurallarca denetlenmesinin', bürokratların davranışları ve güvenilirlikleri açısından olumlu olduğu kabul edilirken, esneklikten yoksun olmanın getireceği sakıncaların varlığını da göz ardı etmemek gerekmektedir. Zira kurallara aşırı bağlılık, bireylerin bu kuralları içselleştirmelerine; başka bir deyişle, bu kuralları 'araç' olarak görmekten ziyade bir 'amaç' olarak benimsemelerine neden olabilecektir. Bunun tehlikeli yanı, asıl amacın ortadan kalkması, onun yerini, amaç kabul edilen kuralların almasıdır. Nitekim kamu bürokrasilerinde yaşanan gecikmelerin, kırtasiyeciliğin ve ataletin temelinde bu sorunun yattığı söylenebilmektedir (Tolay, 2012: 67).

Klasik örgüt kuramının evriminin içerisindeki belirli noktalara bakarak genel bir değerlendirme yapmak gerektiğinde, yaklaşımın kendi içerisinde birçok sancılı süreci de barındırdığı söylenebilecektir. Dönemin sanayileşmeyle birlikte geçirdiği evrimsel süreçler, araştırmacı ve uygulamadakilere, fabrikalarda çalışmaya başlayan kesimin farklı ihtiyaçları ve beklentileri olabileceğinin ipuçlarını vermeye başlamıştır. Nitekim, bu süreçler eleştirel kuramın da ele aldığı; 'örgüt üyelerinin gerçek potansiyellerini yerine getirmek için topluma ve örgüte dahil olan her kesimin istek ve ihtiyaçlarının dikkate alınması ve güç ilişkileri arasında uzlaşmaya dayalı bir iletişimi sağlayacak toplum ve örgütlerin nasıl oluşturulacağı' (Keskin vd., 2016: 440) konusunu işaret etmektedir. Bu açıdan bakıldığında, klasik yönetimin ortaya çıkardığı bazı temel prensip ve sorunsalların, eleştirel kurama nasıl temel teşkil ettiğini okumanın ve anlamlandırmanın daha mümkün hale geldiği ifade edilebilecektir.

2.2. Neo-Klasik Örgüt Kuramlarının Evriminde Eleştirel Kuram İzleri

Klasik yönetim düşüncesinin kavram ve ilkelerine dayanan neo-klasik düşüncede, kavram ve ilkeler insan ilişkileri yaklaşımının etkisiyle yumuşatılmış ve geliştirilmiştir. İnsan ilişkileri yaklaşımı, motivasyon,

liderlik, grup davranışı, kişiler arası ilişkiler ve haberleşme gibi mikro konularla gelişmeye başlamış daha sonra biçimsel ve biçimsel olmayan örgüt, sosyal ve teknik sistemler arasında etkileşim, birey ve örgüt bütünleşmesi vb. gibi makro konu ve sorunlar üzerine eğilerek, olgunlaşmış ve örgütsel davranış yaklaşımı ve sanayide hümanizm akımına dönüşmeye başlamıştır (Baransel, 1979: 214-215). Bu açıdan bakıldığında neo-klasik örgüt teorisi bir bakıma, klasik örgüt teorisi ile insan ilişkileri yaklaşımının bir parçasıdır. Bu açıdan ortaya çıkış nedeni de klasik kuramların alan için yetersiz kalmaya başlaması olarak ifade edilmektedir. Neo-klasik yaklaşımın ana fikri, bir örgüt yapısı içinde çalışan "insan" unsurunu anlama, onun yeteneklerinden maksimum düzeyde yararlanabilme, yapı ve insan davranışları arasındaki ilişkiyi inceleme, örgüt içerisindeki sosyal grupları ve özelliklerini tanıma üzerinedir. Ele aldığı konular itibarıyla insan ilişkileri kuramı (neo-klasik) iş yerindeki sosyal süreçlerin rolü üzerinde durmaktadır (Şahin, 2004: 530-531). Neo-klasik dönemin temelini oluşturan Hawthorne Araştırmaları, çalışanların klasik dönemde geliştirilen mekanik anlayışın dışında, psikolojik niteliklerinin öne çıkarıldığı ve motivasyonda farklı araçların kullanılması gerektiği anlayışını ortaya koyan çalışmalar dizisi olmuştur. Ayrıca örgütün teknik niteliğinden ötede psikolojik ve toplumsal ilişkilerin ortaya çıkardığı psiko-sosyal bir varlık olduğu düşüncesi bu çalışmaların bulguları arasında düşünülebilir. Neo-klasik dönemde geliştirilen insanların ekonomik unsurların dışındaki araçlarla motive edilebileceği fikri, yönetim anlayışlarına ve çalışma ilişkilerine de yansımıştır (Asunakutlu, 2001: 11).

Neo-klasik kuram içerisinde ele alınan önemli araştırma ve kuramlardan bazıları; Kurt Lewin ve arkadaşlarının liderlik araştırmaları, Elton Mayo ve arkadaşlarının Hawthorne araştırmaları, W.Lloyd Warner'ın Yankee City araştırması, Harwood Araştırmaları, Tavistock Enstitüsü Araştırması, Douglas MacGregor'un X ve Y kuramı, George V. Homans'ın İnsan grubu yaklaşımı, Chris Argyris'in Olgunlaşma kuramı Likert'in Sistem 4 modeli ve Maslow'un motivasyon teorisi olarak ifade edilebilecektir. Neo-klasik kuramcılar, beşeri ilişkileri dikkate alarak, örgütün biçimsel yapısının yanında bir de sosyal yapısının olduğunu inceleme ve araştırmalarda ortaya koymuşlardır. Fakat örgütü oluşturan varlıkların kendi başına birer varlık olduğu düşüncesinden kurtulamadıkları için, motivasyon konusuna gereğinden fazla ağırlık vermeleri hayal kırıklığına yol açmıştır. Öte yandan insanın geleneksel teorisinin katı kalıpları içinde, etkin ve verimli olarak çalışmasını giderek güçleştiren bu geleneksel modellerin zaman içinde çöküşü de kaçılmaz olmuştur (Öğütoğulları ve Akpınar, 2016: 38-44). Bu anlamda insanı ön plana çıkarmasıyla önemli bir yaklaşım getiren kuram çeşitli açılardan eleştirilmiştir.

İnsan ilişkileri yaklaşımı, genel olarak; ılımlı bir tutumu ve paternalist felsefeyi yansıması ve insanları manüpile etmenin farklı bir şekli olması, kararlara katılma mekanizmasının sahte bir biçimde uygulanması, aldatıcı bir demokrasi havası yaratılması, sendikalara karşı olması, örgüt içi gerçekleri açıklamakta sınırlı kalması gibi yönlerden eleştirilmiştir. Ayrıca insan ilişkileri yaklaşımının örgütü 'kapalı bir sistem' olarak tasarlamaları, ekonomik ve toplumsal koşullar ve sendikaların iç politikaları gibi dış ya da çevresel faktörleri göz önüne almamasının büyük bir noksanlık olduğu ileri sürülmekte ve insan ilişkileri yaklaşımı bu açıdan da eleştirilmektedir (Baransel, 1979: 288). Henry A. Landsberger tarafından ele alınan Hawthorne Revisited (1958) adlı çalışma fikirler savaşında rol alan yazarların görüşlerindeki temel noktaları esas alan ayrıntılı bir tablo çizmiştir. Landsberger Mayo ve izleyicilerinin ortaya koyduğu görüşlere ve İnsan İlişkileri Hareketi'ne çeşitli yazarlar tarafından getirilen eleştirileri şu dört alanda toplamıştır. Bunları; (1) Mayo'nun 'toplumun çatışma, düzensizlik, ve kuralsızlık içinde olduğu' şeklindeki varsayımı, (2) işçiye bakış açısı, (3) toplu sözleşmenin fonksiyonu ve (4) sendikaların yeri, şeklinde ifade edilmiştir (Berber, 2013: 476).

Neo-klasik örgüt teorisi ile eleştirel teorisinin yollarının kesiştiği nokta ise Landsberger'in çalışmasında yer verdiği ikinci madde ile ilgili olan örgütlerdeki psikanalizle ilgili olarak ortaya çıkmaktadır. Psikanaliz, Freud'un insan kişiliğine dair yaptığı araştırmalar sonucunda bireyin bilinçli, düzenli, rasyonel doğasının yanı sıra bilinç dışı, irrasyonel, olgunlaşmamış ve bencil olan bir tarafının da yer aldığını ifade eder. İlk olarak 1940'larda Tavistock Enstitüsü'nde gerçekleştirilen araştırmalar, çalışanların sosyal ve psikolojik unsurlardan nasıl etkilendiğini göstermeye çalışmıştır. Ardından İnsan İlişkileri Okulu olarak anılmaya başlanan Tavistock Enstitüsü araştırmaları çalışanların çatışma, dışlanma, topluluktan ayrılma gibi çeşitli psikolojik durumlarında insan ilişkilerini incelemiştir. Eleştirel örgüt teorisinin ortaya çıkmasıyla birlikte örgüt alanında etkisi olan bir dizi bireysel özellik; değerler, tercihler, inanç sistemleri hatta daha derin ve subjektif bilişsel unsurlar örgüt üyelerinin eylemlerini anlamak için araştırılmaya dahil edilmiştir (Keskin vd., 2016: 452). Eleştirel Teorisinin bu "panorasında", bütünü kendi başına temsil etme iddiasıyla bir

anın diğerine üstünlüğünü öne sürmekten kaçınmak gereklidir. Bu açıdan bakıldığında neo-klasik örgüt ile eleştirel kuram odak noktasına 'insan'ı alan bir bakış açısı geliştirmeleri dolayısıyla birbirleriyle yan yana yürümekte oldukları söylenebilecektir. İnsan ilişkileri yaklaşımı örgütteki insanla ilgili özellikle 'moral' gibi bir kavramsallaştırmayı kullanarak 'örgütlerin sosyal sistem olduğu' gerçeğini desteklemiştir. Nitekim eleştirel teorinin ortaya çıkışıyla örgüt alanına dahil ettiği unsurlar (değerler, tercihler, inanç sistemleri.vb) neo-klasik kuramın örgüt alanına kazandırdığı bu kavramlarla çok yakından ilgilidir. Dolayısıyla neo-klasik kuramda yaşanan paradigmatik dönüşümlerle eleştirel örgüt teorisinin oluşumunun izleri, örgüt kuramının alanı içerisinde birbirine benzer ayak izleri bırakmışlardır. Bunun en önemli ve destekleyici unsuru da, iki kuramsal bakış açısının da örgüt içerisindeki insana atfettikleri önemden kaynaklanmaktadır. Bu bakımdan, Neo-klasik örgüt paradigmasının gelişmeye başladığı 1950-60 yıllarındaki yaşanan ilerlemelerin, eleştirel teorinin örgüt teorisi alanında gelişimini ele alan ilk eserler arasında gösterilen Critical Management Studies (1992) gibi eserlerin ele alındığı dönemlere ışık tuttuğunu söylemek yanlış olmayacaktır. Her şeyden önce sözü edilen ilişki bu dönemde teori ile pratik arasındaki belirli bir eklemlenme anlayışına da kaynak sağlamıştır. Bu anlayışla birlikte teorinin ön görevlerinden biri de, "iyi bir yaşamı" tanımlamayı başarmak haline gelmiştir. Nitekim bu kavramsallaştırma, teori öncesi uygulamayı ona felsefi bir statü vererek nesneleştirme amacıyla değil, teori yoluyla etkin varoluşuna ve konuşlandırılmasına katkıda bulunmak için önemli görülebilecektir.

Scott (1961), örgüt bilimine değerli katkılar yapmakla birlikte neoklasik kuramın da, klasik kuram gibi, eksikliklerinden, dar görüşlü bakış açısından ve üzerinde çalıştığı insan davranışlarının pek çok yönü arasında bütünleşme sağlayamamasından dolayı eleştirilere maruz kaldığını ifade etmiştir. Bu nedenle mevcut kuramsal bilgi birikimindeki eksiklikleri ve yetersizlikleri gidermek amacıyla, modern örgüt kuramları ortaya çıkmıştır (Aktaran Tolay, 2012: 69).

2.3. Modern Örgüt Kuramlarının Evriminde Eleştirel Kuram İzleri

İş hayatına dair ilk araştırmadan bu yana, insan doğası üzerine farklı görüşlerin ortaya çıktığını görülmüştür. İnsanı, maliyet ve faydaları hesaplama konusunda keskin bir anlayışla yönlendirilen bir zeka ve sağduyu varlığı olarak görenler olmuştur. Burada insan esasen rasyonel bir varlık olarak kabul edilmiştir. İkincisi yaklaşım ise çalışanların davranışları ve motivasyonları ile ilgilenmiş, bu yüzden bu akım davranışçı bir akım olarak kabul edilmiştir. Ancak bu, düşünce okullarından biriyle özdeşleşen tüm araştırmacıların, bu öncülerin ortaya koyduğu fikirleri zorunlu olarak kabul ettikleri anlamına gelmemektedir. Bu anlamda neo-klasik yaklaşımda da, öncü kişilerin fikri baskınlığı olsa da, dönemsel olarak belirli-kesin fikirlerle özdeşleşmekten ziyade bazı şeyleri görmenin ve yorumlamanın bir yolunu açmıştır. Açılan yollardan biri de modern döneme giden yol olmuştur.

Kavramsal açıdan bakıldığında modernist yaklaşım, modern dönemde ortaya çıkan ve özellikle de 19. yüzyılda batı dünyasına egemen hale gelen dünya görüşünü belirtmektedir. Bu açıdan modernizm, modern dönemlerdeki hem bir yaşayış tarzını (modernlik) hem de kültürel bir gelişmeyi (modernite) yansıtmaktadır. Kökleri Antik Çağ felsefesine kadar uzanan modernizm, en başta eleştirel düşünceyle anılmaktadır. Modernizm, akılcı, ilerlemeci, olgucu bir bakış açısı taşımakta; bu yönüyle aydınlanma felsefesi ile ilişkilendirilmektedir. Öte yandan, modernizm, bireyin yargılama ve eleştiri yeteneklerinin geliştirilmesi bağlamında kültürel (toplumsal) bir dönüşüm projesidir (Yıldırım, 2010: 382). Modernizmin kavramsallaştırılması açısından bakıldığında modernleşme kuramının ortaya çıkışı da bu mantığa dayanmaktadır.

Bir toplumsal değişme teorisi olarak ortaya çıkan modernleşme kuramı, modernleşme sürecinin evrenselliği vurgusundan hareketle batı dışında kalan toplumların da bu sürece katılmasının mümkün olduğunu varsayarak batının izlediği tarihsel seyri, inceleme nesnesi olarak aldığı toplumlara bir model olarak sunmuştur. Batı dışı toplumların gelişmesi süreci ile ilgilenen modernleşme kuramı, batı dışı dünyanın savaş sonrasında değişim süreçlerinin incelenmesinde ve belli önerilerin ortaya konmasında etkin bir konum elde etmiştir. Modernleşme kuramının gündeme getirdiği yaklaşımlar yalnızca Amerikan sosyal bilim çevrelerinde değil, aynı zamanda batı dışı toplumlar içerisinde de karşılık bulmuştur (Altun, 2000: 123). Bu yaklaşımda, sanayileşmenin esasen özgürleştirici bir güç ve ileriye dönük bir olgu olduğu ve bu yüzden Batı toplumlarının 'gelişmekte olan' toplumlar için izlenmesi gereken bir model sunduğu düşünülmektedir (Giddens, 2010: 130). Nitekim modernleşmeyi toplumsal değişimin temelinde ele alan önemli yönetim bilimciler de alana yönlendirici bir bakış açısı sunmuşlardır. Toplumsal değişme ve

dönüşüm üzerinde önemle duran düşünürlerden biri Max Weber'dir. Onun sayesinde toplumsal değişimin sosyal-bilimsel kavranışı yeni bir boyut kazanmıştır (Solmaz, 2011: 42). Örgütlere ilişkin başlıca modern tez Weber'in Bürokrasi kuramından kaynaklanmaktadır. Klasik ve neo-klasik kuramlar örgüt yapılarını kapalı bir sistem olarak ele alırken, modern örgüt kuramları örgütleri, çevresiyle etkileşim içinde bulunan, çevreden bir takım girdileri alarak işleyen ve enerjiye dönüştüren ve bunları çıktılar biçiminde yine çevreye veren açık sistemler olarak tanımlarlar (Öğütoğulları ve Akpınar, 2016: 44). Örgütler dinamik ve açık sistemler olarak ele alındığı için değişim ve karmaşıklık bu kuramın üzerinde durduğu temel noktalar olarak görülmektedir (Şahin, 2004: 534). Örgüt teorisinin gelişiminde önemli etkilere sahip akımlardan biri olan modernist yaklaşım, modern toplumda etkisini gösteren kaos ve karmaşıklığın insanın kendi iradesi ile yönetilebileceğini savunmaktadır. Bu bağlamda modernist teori; küreseldir ve her kültüre uyarlanabilir; geçmişi reddeder, örgütün yeni yönlerini keşfeder; rasyonalizm esasına dayanır, adil ve eşitlikçidir; ortak bir uzmanlık dilinin gelişmesini amaçlamaktadır (Keskin vd., 2016: 196-197). Modernist teorisinin bu temel kabullerine karşılık, postmodernist anlayışın ortaya çıkışıyla birlikte yaklaşım bazı eleştiriler de almaya başlamıştır.

Modern düşüncenin temel dayanağını oluşturan, zihin ile maddenin bağımsız kendilikler olduğu düşüncesine dayanan dualist analiz biçimleri de, postmodernistler tarafından eleştirilmektedir. Dualist çözümleme şeklinde kavramlar biri diğerine üstün olacak şekilde ifade edilmektedir. Akıl-duygu, akıl-akıldışı, nesnel-öznel, eril-dişil ikili yapıları örnek olarak verilebilir. Burada ilk kavramlar üstün ve imtiyazlı olarak kabul edilmektedir. Öte yandan modern paradigmalara araştırmacıyı imtiyazlı bir otorite gibi görür. Burada bilgi üretimi süreci içerisinde araştırmacının gerçeği bulma yeteneğine sahip olduğu varsayılır. Ancak postmodernizm bu anlayışı kabul etmemiştir. Modernist olguda araştırma yöntemleri değişik kuram ve hipotezlerin değerlendirilmesinde yaygın bir şekilde kullanılırken, postmodernizm buna karşı çıkarak yöntemi doğrunun tek belirleyicisi olmaktan çıkarmıştır (Yıldırım, 2007: 382-383). Modernist yaklaşım kuramsal çerçevedeki bu eksik kalan taraflarının yanı sıra özellikle İkinci Dünya Savaşı'ndan sonra ortaya çıkan toplumsal sorunlara uygun çözümler getirememesi, aydınların bir kısmını yeni arayışlara sürüklemiş ve sonuçta, modernitenin felsefesine ve bilimsel bilgi tekeline karşı çoğulculuğu, yerelliği ve özgürleşmeyi ön plana çıkaran postmodern durum ortaya çıkmıştır (Aslan ve Yılmaz, 2001: 93).

Öte yandan, modernleşme teorisinin az gelişmiş diye nitelendirilen ülkelerdeki toplumsal yapıyı ve kendine özgü üretim biçimlerini görmezlikten gelerek baskıcı, kendi toplumuna yabancı ve yönetici sınıflarca benimsenen düşünce tarzlarını, ihtiyaçları, değerleri dayatmaya çalıştığı ileri sürülmüştür. Modernleşmeyle birlikte toplumsallaşmanın oluşturduğu değerlerin örgütlenme sürecinin geri dönüşü olmayan bir süreci ifade ettiği kabul edilmiş ve Weber buna "demir kafes" adını vermiştir. Rasyonel karar verme açısından türetilmiş bu tür bir toplumsallaşma bireyin rasyonel olmayan doğasını, arzularını, sevgilerini, tutkularını baskı altına almaktadır. Modern toplum bir kafes olmakla da kalmamakta, içindeki insanları kişisel kimliklerini görmezlikten gelerek o kafesin parmaklıklarınca biçimlendirmektedir. Nitekim, buradan hareketle, modernizme yöneltilen eleştirilerin modernizmin evrenselliği savunma adına her tür tikelliği bastırmasından kaynaklandığı düşüncesi savunulmuştur (Demirel, 2014: 171).

2.4. Postmodern Örgüt Kuramlarının Evriminde Eleştirel Kuram İzleri

Örgüt teorisi, aynı zamanda toplumsal yaşama ışık tutarak geniş bir bakış açısı sunduğu için önemli bir yere sahiptir. Ayrıca örgüt teorisi içinde bulunduğumuz dünyaya nasıl dahil olduğumuzu, onu nasıl gördüğümüzü ve anlamlandırdığımızı ve karşılığında nasıl eyleme geçmemiz gerektiği konusunda bizi yönlendirir. Mc Auley'e (2007) göre örgüt teorisi günlük hayatımızda olaylara ve ardında yatan "ortak kanı" (commonsense) olarak nitelediğimiz mekanizmayı daha dikkat ve özenle açıklamayı amaç edinir. Felsefi postmodernizm görüşünün dışında yeni bir sosyal toplumun ortaya çıkışına işaret eden postmodern dönem de örgüt teorisinde önemli gelişmelere sahne olmuştur. Lyotard'ın (1984) belirttiği gibi post sanayi dönemine geçişle birlikte Sanayi Devrimi'nden beri süregelen sosyal ve ekonomik yapılar yeniden şekillenmeye ve gelişen bilgi teknolojileri ile birlikte yeni bir toplumsal ağ oluşturmaya başlamıştır (Keskin vd., 2016: 49). Bu yeni süreci ifade eden terimler, değişim, esneklik, sürdürülebilirlik ve düzenliliklerdir. Bu terimlerin anlamını kazandığı çerçeve ise postmodernist çerçevedir.

Postmodern yaklaşım, gözlemlenen ile sosyal olgunun onu gözlemleyen aktör ile arasında direkt bir ilişki olmadığını aksine kullanılan dil ve dili meydana getiren kelimelerin nasıl kullanılacağına dair kurallar (diloyunları) tarafından yönlendirildiğini, dolayısıyla tek bir gerçekliğe varılamayacağını savunur (Boisot ve Mckelvey, 2010: 410-450). "Post-modern" terimi, büyük örgütsel değişikliklerle (esnek ve/veya katılımcı örgütsel biçimler) veya bir dizi yeni yaklaşım veya bakış açısıyla belirlenen belirli bir dönemi belirtmek için kullanılır. Bu ikinci anlama göre, post-modern yazıların temaları söylemin merkeziliği ve gerçekliğin oluşumunda dilin rolü, aktörlerden bağımsız olarak yeniden üretilen içkin yapıların belirlenmesi, inanç sistemlerinin ve söylemin kodunun çözülmesi ile ilgilidir. Bu yapılarla ilgili olarak, güç ve bilgi arasındaki ilişki, büyük ilerleme söylemlerinin reddi, rasyonalite veya sosyal özgürleşme olarak anlaşılır. Post-modern yazıların heterojen ve parçalı doğası, hermetikliği, ilişkili deneysel çalışmanın yokluğu, organizasyonların yönetimine katkıları hakkında sorulara yol açar. Yönetim teorisinin çoğunun altında yatan bir gelenek olan bilimsel yöntemlerle edinilen bilgilerle, 1980'lerin sonunda ortaya çıkan post-modernist teori, ortak olarak modernist geleneğin ve onun ilerleme fikrinin çekişmesini mecbur kılmıştır. Bununla birlikte, bu çekişme farklı biçimler alır. Burada eleştirel akım, bu modernist geleneğin yeniden yönlendirilmesi ve aşırılıklarının düzeltilmesini isterken, post-modernist teori, temel temalara itiraz eder ve modernizmin sonunu ilan eder. "Postmodernizm" terimi, yeni, mimari, görsel sanatlar, ekoloji, hukuk, şehir planlama ve çeviri çalışmaları gibi çeşitli alanlarda ortaya çıkmaktadır.

Postmodernizm sözcüğünün kökeni veya anlamı konusunda fikir birliği yoktur. Aslında, hiç kimse onun özel olarak neyi belirttiği konusunda hemfikir değildir ve fenomenler, nesnelere ve toplumun durumu, düşünce, kültür ve bilim gibi çeşitli şeyleri adlandırmak için kullanılır. Bu anlamda postmodernizm kelimesinin kökeni hakkında bol miktarda açıklama olduğu açıktır. Ancak bizim çalışma konumuz gereği 21. yüzyıl kullanımlarına bakarak yolumuza devam etmek yerinde görülmektedir. Postmodernizmin popülerlik kazanması ve terimin tarihsel ve sosyolojik kabulleri arasında bir gerilim yaşamaya başladığı dönem ve yer, 1960'ların mimarlık ve edebiyat eleştirisi alanı olmuştur. Kullanımı daha sonra insan bilimlerinin çoğunda ve estetik alanlarda yayılmıştır. 1960'dan sonra ise tanımlar birikmiş ve hatta birbiriyle çelişmeye başlamıştır. Burada sunulan "postmodernite" kavramsallaştırmasının unsurları, daha genel bir toplum teorisi ve onun tarihsel gelişimi içerisinde çerçevelenmiştir. Postmodernizm, modernliğin temel belirleyicileri olan "akılcılığın, rasyonel kapitalist değerlerin, bürokrasinin, uzmanlaşmanın, merkeziyetçiliğin, hiyerarşinin, kimlik belirlemelerinin ve dolayısıyla modern devlet yapısının" reddine dayanır (Doğan, 2017: 31). Disiplinlerarası nitelik kazanan ve diğer akımlar gibi dünyada olan değişimlere karşı ortaya çıkan postmodernizm, ne herhangi bir kuram ne de bir ilkeler bütünüdür. Modernizmin aksine postmodernizm, kesin tespitlere karşı çıkar, belirsizliği ve şüpheciligi ön planda tutarak kendi paradigmasını oluşturur. Bu paradigma kapsamında "bütüncül, içine kapanık, mutlak doğruların ve ideolojilerin" bulunduğu modernizmin aksine, "parçalı bir yapının hakim olduğu, açık ve kesin doğruya ulaşmanın mümkün olmadığı" postmodern anlayış biçimlenir. Diğer bir deyişle postmodernizm, modernizmle benimsenen bilgi ve varlığın sabit değerlere dayanması gerektiği ve bu sabit değerler oluşturulamazsa kaos ortamının oluşacağı düşüncesinin tersine "çoklu gerçeklik, antikurumsalcılık ve görecelilik temelleri" üzerine kurulmaktadır (Tahtaloğlu, 2018: 21). Postmodernizmin bilimsel anlayıştaki bu radikal değişimi, sosyal bilimlerle ilgili de radikal değişimlere sebep olmuştur. Örgüt konusunda yapılan tartışmalarda örgüt kültürü, ortak kültür, alt kültür, örgütsel sembolizm, örgüt imajı, örgüt iklimi, örgüt kişiliği gibi kavramlar, merkezi bir yer almaya başlamıştır. Örgüt ile ilgili söz konusu konularla, postmodernizm konusunda yapılan tartışmalar arasında, ortaya çıkış yönünden bir eşzamanlılık da söz konusu olmaktadır. Postmodern yaklaşımı benimseyenler, örgütün tekdüze ve durağan yapı ve özelliklere sahip olamayacağını kabul ederken, dil ve eylemin de hiçbir zaman son biçimini alamayacağını, sadece geleceğe doğru uzanan bir oyun içinde sürekli hareket halinde bulunacağını savunurlar (Şişman, 1996: 458). Bu açıdan postmodernizmle, örgüt ve örgüt kuramıyla ilgili eleştirel bakış açısını barındıran birçok bakış açısının da (kültürel belirlemcilik, subjektiflik, düşüncüsellik vb.) temelleri atılmaya başlanmıştır.

Postmodern teoriye esas eleştirel teori tarafından gelmiştir. Her ne kadar Frankfurt Okulu'nun ilk jenerasyonu modernitenin negatif yönlerine işaret ettiyse de, Habermas gibi Frankfurt Okulu'nun eleştirel teorisinin temsilcileri, postmodern teorisinin kilit eleştirmenleri olarak 1970'ler ve 1980'lerde ortaya çıkmışlardır. Eleştirel kuramcılar, modernite ile postmodernite arasında olduğu iddia edilen ve çoğu postmodernist tarafından kabul edilen ayrımı reddederler. Bu anlamda, eleştirel kuramcılar

eleştirileri, postmodern kuramın modernite, usa varma, aydınlanma, evrensellik ve eleştirel teorinin genelde kullandığı diğer kavramlara yaptığı saldırılarla ilintilidir. Eleştirel kuramın postmodern kuramı mercek altına alması ise, postmodern toplum teorileri, medya, taklit vb.'den çok, bilginin postmodern şekilleri ve onların sözde irrasyonel eğilimleri ile ilgilidir. Eleştirel kuramcılar, postmodernistler tarafından varolduğu iddia edilen modernite ve postmodernite farklılığını reddederler. Ancak bu eleştirel kuramcılarının moderniteyi savunduğu anlamına da gelmez. Bu anlamda, postmodern kuram ve eleştirel kuram arasında farklılıklar olduğu gibi benzerlikler de bulunmaktadır (Aydın, 2001: 203-204). Yukarıda sözü edilen farklı ilgi alanlarına karşılık iki yaklaşımın benzer ilgi alanları da söz konusudur. Postmodernistlere göre örgütler sabit unsurlardan oluşmazlar, aksine Weick'in (1969) ilişkiler ağında olduğu gibi sürekli bir dönüşüm ve 'akış' içerisindedirler. Bu nedenle tekrarlanan örgütsel faaliyetlerin aşamalandırılması, anlamları ve uygulamaları analiz edilmesi gereken unsurlardır (Keskin vd., 2016: 49). Nitekim bu nokta da tam olarak çalışmamıza aydınlık kazandırmaktadır. Yukarıda sözü geçen dönüşüm ve akış, örgüt kuramlarındaki aktif bir süreci ve değişimi ifade etmektedir.

3. ÖRGÜTLER VE ÖRGÜT TEORİLERİNİN VAROLUŞ NEDENLERİ

Örgütler sosyal hayatın devamlılığı için önemli varlıklardır. Örgütlerin hayat kalitesine ve toplumsal refaha katkıda bulduklarına değinen Tompkins (2005), modern toplumlarda karmaşık yapıya sahip olsalar bile, örgütlerin beşeri, finansal ve fiziksel kaynakları bir araya getirebilme becerisine sahip olduklarını ifade etmektedir. Örgütler, hayatın her alanı için önemlidir ve içerisinde sosyal refahı sağlayan unsurları barındırırlar. Örgüt teorisi ise, kendisine örgütün her bölümünde uygulama alanları bulabilmektedir (Hatch ve Cunliffe, 2006). Genelde birbiri ile zıt birçok argümana sahne olan örgüt teorisi, teorisyenlerin ortak bir nokta bulmak üzere farklı paradigmlar/bakış açıları benimsediği bir yarış alanıdır (Keskin vd., 2016: 69). Felsefe ise tam bu noktada bakış açılarındaki subjektifliği bilince taşıyarak örgüt ve teorilerini farklı görmeyi sağlamak ve açıklamak süreçlerinde realist bir uygulama sunar. Sosyal varlık olarak kabul edilen örgütler hem iç hem de dış etkenlerin etkisinde kalırlar. Serge Moscovici'nin "varlıklar kendilerini korumaya çalışıyorlar, değişime yol açıyorlar" ifadesi bugün içinde bulunduğumuz şartlarda örgütleri de etkileyen koşulların kısaca özeti gibidir. İkincisi "Kalıcılık/sürdürülebilirlik" kavramıdır. "Sürdürülebilirlik" ve "değişim" kavramları başlangıcından bu yana örgütlerin yönetimi anlamında oldukça fazla bir zaman geçirmişlerdir. İlk adımda, bir yönetim modeli inşa etme ve uygulama adına "değişim" örgüt teorisinin ana teması haline gelmiştir. Yönetim, bir süre için, örgütün sorunlarına kesin bir cevap verebilecek evrensel modellerin araştırılması ve kurulması yolunda Taylorist modelin ilkelerini takip etmiş ardından ise kademeli olarak örgütleri, uyarlama ve uygun koşulları aramaya yönelmiştir. Konu ile ilgili akademik çalışmalar sayesinde, bu ilke, işletmenin rekabet edebilirliğini ve sürdürülebilirliğini sağlamada "değişimi" temel bir unsur olarak kabul eder hale gelmiştir. Değişim, örgütü oluşturan unsurlar ve bunların karşılıklı ilişkileri, süreçleri, ürünleri, hizmetleri ve örgütsel hedefleri üzerinde birden çok etkiye sahiptir. Özellikle hedefler üzerindeki etki, radikal örgütsel değişimin bir işaretidir (Nurcan vd., 2002: 4). Öte yandan değişim, işletmelerde büyük bir sorun olarak karşılanmakta, kabulü ve uygulanma gücü nedeniyle örgüt içinde endişeyle karşılanmaktadır. Değişim ve sürdürülebilirlik ilişkisi üzerine düşüncenin vardığı bu ilk aşamada, istikrar ve sürdürülebilirliği savunan ideal modelin tasarımından, değişimin örgüt faydasında gerekli bir unsur haline geldiği bir yönetim tasarımına geçildiği görülmektedir. Yönetimin misyonu, "gruplar halinde çalışan bireylerin önceden belirlenmiş ortak hedeflere ulaşmak için etkili ve dinamik bir şekilde işbirliği yapmaya teşvik edildiği bir ortam yaratmak veya sürdürmek" (Koontz ve O'Donnell, 1980) olarak tanımlandığında, buradaki bazı kavramları değişimle ilgisi önem kazanmaktadır. Sürdürülebilirlik (durability/sustainability) pek çok çalışmada değişimle birlikte anılmaktadır. Pek çok tanım dizisi, çalışma alanının genişlediğini açıkça göstermektedir. Günümüze doğru uzanan araştırmalarda yazarlar artık örgütlerde değişimin gerekliliğini savunan ve bunu şart koşan teorisyenler haline gelmişlerdir. Bu anlamda değişim, belirli bir örgütsel bağlam içinde, karmaşık ve sosyal olarak yapılandırılmış bir dönüştürme süreci olarak anlaşılmalıdır. Yönetim için değişim her zaman zor, sabır ve çaba gerektiren bir iş olmasına rağmen gerekli olduğu açıktır. Diğer birçok alanda olduğu gibi yönetim araştırmasında da önemli bir tema, her olayı ve konuyu değişim ve dönüşüm açısından düşünmektir. Bu iki önemli olgu, istikrar ve kalıcılığın terkedilerek yavaş yavaş akıl yürütmenin ön plana çıktığını göstermektedir ve bu noktada eleştirel kurama ihtiyaç duyulmaktadır.

Örgüt teorisinde felsefi bir bakış ilk olarak Burrell ve Mogan'ın (1979) *Sosyolojik Paradigmalar ve Örgütsel Analiz (Sociological Paradigms and Organizational Analysis)* adlı kitabında karşımıza çıkmaktadır. Yazarlara göre tüm örgüt teorileri, altında yatan bir felsefi teoriye ve gizli bir sosyal teoriye dayanmaktadır (Keskin vd., 2016: 69). İnsan bilimlerinin konusunu, insan ve insanın bir ürünü olarak ele alınabilecek her şey oluşturmaktadır. Değişim, diğer birçok alanda olduğu gibi yönetim araştırmalarında da önemli bir tema ve işlenmesi zor bir konudur. Değişim, zamanla sosyal aktivitenin içsel bir endişesi haline geldiği için, örgütsel mekanizmaların daha iyi anlaşılması ihtiyacını doğurmaktadır. Bu anlamda değişim, örgütsel bilimlerdeki uygulayıcılar ve araştırmacılar için de merkezi bir rol oynamaktadır. Bu yol bizi sosyal inşacılık alanına götürmektedir. Rölativizmle birlikte anılan sosyal inşacılık, kendisini dayandırmakta olduğu post-yapısalcı ve post-modern kuramları kullanarak psikoloji biliminin katı pozitivist deneysel doğa bilimi olma hevesine eleştiriler getirmek ve bu bilimin "keşfettiği" gerçeklerin aslında sosyal olarak inşa edilen ve çoğunlukla yönetim odaklarının yararına olan bilgiler olduklarını göstermek üzere yola çıkmıştır (Altınal, 2010: 75). Sosyal inşacılık" terimi çok çeşitli konuları ele alan felsefe ve bilim sosyolojisindeki birçok tezle kesişmektedir. İnşacı düşüncenin öncüleri "Eleştirel Kuramcılar" olarak tanımlanmakta sakınca bulmazlar. Entelektüel kökenlerini eleştirel sosyal teorinin standart figürleri olarak ön plana çıkan Anthony Giddens, Jürgen Habermas ve Michel Foucault'ya, hatta onların da öncüleri kabul edilen Marks ve Nietzsche'ye dayandırırılar. Bu düşünürler için inşacılık, kapsamlı uluslararası eleştirel kuram ailesinin bir parçasını oluşturmaktadır. Postmodernistler, Neo-Marksistler ve Feministler de bu aileye dahil edilmektedir. Ancak eleştirel kuramcıların önde gelenleri, inşacılığın rasyonalizm ve pozitivismi maskeleydiği düşüncesiyle bu akımı pek dostça karşılamamaktadırlar. Üçüncü kuşak eleştirel kuramcılarına nazaran daha az meta-teorik konular ve disiplinler eleştiriler üzerinde duran inşacılar, sosyal eleştirel kuram kaynaklı ontolojik varsayımlar, kavramsal çerçeveler ve metodolojik yaklaşımlara daha çok ağırlık vermektedirler. Böylece inşacılar, etik değerlere vurgu yapan toplum sosyolojisine de önemli bir kavrayış sunarak, uluslararası eleştirel kurama hayati bir destek sağlamaktadırlar (Arı ve Kıran, 2011: 52). Nitekim, örgütsel fenomenlere bakışları açısından da eleştirel kuramın ve sosyal inşacı kuramın felsefelerinin kesiştiği yerler olduğu ifade edilebilecektir. Nihayetinde, değişimde aktörler yalnızca sınırlı bir güçleriyle dış kısıtlamalara yanıt verirler ve bunun etkisiyle yapı uyarlanabilir sıçramalarla ve işletmenin çevreye olan bağımlılığına göre değişebilir.

4. SONUÇ

Modern toplumların gelişiminde önemli ve motive edici güç olarak kabul edilen örgütler, dünyayı ve insan davranışlarının gerekçelerini daha iyi anlama isteğine aracılık ederler. Ayrıca örgütler, toplumun karmaşık yapısını düzene koymada baş rolü üstlenirler. Bu nedenle örgütleri, süreçlerini ve yapısını iyi anlamak gereklidir. Öte yandan örgüt teorileri örgütler ve çevre arasındaki bağın nasıl işlediğini, nasıl bir bağlantı kurulduğunu açıklamayı ve düzenlemeyi hedeflemektedir. Teorinin her zaman uygulanabilir belirli sınırları vardır. Teoriler sahip olduğumuz bilginin taraflı, subjektif, eksik olduğu gerçeğini anlamamızı sağlar. Örgüt teorilerinin daha çok yönetim biliminde kullanılması ise yeni değildir. Organizasyonel yönetim işlevleri (planlama, organize etme, komuta etme, koordine etme, kontrol) kapsam açısından düşünüldüğünde evrensel olduğu düşünülen etkili yönetim ilkelerinin formülasyonudur. Genel model olarak sunulan organizasyon düzeni, açıkça belirlenmiş bir iş bölümü ve çeşitli görevlerin koordinasyonunu sağlayan katı bir hiyerarşinin varlığı ile karakterize edilir. Bu anlamda bilimsel yönetimin babası olan Taylor, klasik okulun en iyi bilinen temsilcisi ve teorisyeni olarak ününü kuşkusuz gelecek nesillere kadar devam ettirebilecektir. Onun kanaatlerinden biri, tartışmasız bir rasyonalite ile bilimsel bir yönetim yaklaşımına ulaşmanın mümkün olduğuydu. Bu teorik çerçevede yönetim uzun zamandır örgütün sorunlarına kesin olarak yanıt verebilecek evrensel modellerin araştırılması ve uygulanması olarak görülmüştür. Bu anlayışta, örgütün verimliliği ve sürdürülebilirliği, onun değişme kapasitesi ile değil, istikrarlı ve kesin bir organizasyon biçimi oluşturma kapasitesi ile sağlanmaktadır. Bu bakış açısı geniş çapta sorgulanmıştır ve bazı kavramsal ilerlemeler artık organizasyonun verimliliğini ve sürdürülebilirliğini değişim kapasitesinin bir sonucu olarak kavramamızı önemli hale getirmektedir. Bu kavrayış içerisinde örgüt kuramında paradigmatik değişime işaret eden önemli başlıklardan birini de eleştirel kuram oluşturmuştur.

Eleştirel Kuram 1920 ve 30'larda Almanya'da gelişen ve hareket noktasını Marx'tan alarak, yabancılaşan emeğin özgürleşmesi ve bu şekilde toplumsal dönüşümü hedefleyen bir yaklaşımdır. Kuram, dönemin Almanya'sında pozitivist bakış açısına ve teknokrasi¹ zihniyetine karşı bir tepki olarak gelişmiştir. Eleştirel kuram Burrell ve Morgan (1979) gibi yönetim bilimciler tarafından radikal insancıl paradigma içinde değerlendirilmiştir. Eleştirel Kuram, sabit bir kuramsal külliyat olmaktan uzaktır ve kendisini yeniden formüle etmekten, kendi zamanını değil, diğer kuramları da onlardan ayırarak veya onlardan bolca çekerek yüzleşmekten asla vazgeçmemiştir. Bu açıdan bakıldığında geçen yüzyılın en çok sorgulama, değiştirme, yeniden formüle etme ve özeleştirme yapma yeteneğini gösteren düşünce okullarından biri olduğu bile söylenebilmektedir. Eleştirel teori kapalı bir teori değil, tarihe açık, şimdiye demir atmış ve geleceğe dönük bir teori olarak ününü sağlamıştır. Hareket halinde ve pratikle sürekli etkileşim içinde olan diyalektik bir teoridir ve bu perpektifiyle tarihle birlikte dönüştürülür. Sabit, zamansız veya tarihin dışında bir teori olabileceği fikri, Eleştirel teori anlayışının tam tersidir. Bu anlamda eleştirel teorisinin geleceği için açık olan şey her zaman değişimi destekleyici görüşe açık olacaktır.

Örgütsel değişime örgüt kuramları ve felsefi boyutu ile baktığımızda işletmelerin değişiminde insanlararası iletişimin önemli boyutu karşımıza çıkmaktadır. Değişim için, sürdürülebilirlik, rekabet ve strateji konunun önemli boyutlarını oluşturmaktadır. Ancak yüksek düzeyde sürdürülebilir rekabet avantajı, tüm kendine bağlı işletmeler içinde gerçek bir kurum kültürü oluşturmayı başaran, çalışanlarını elinde tutan ve kendilerini vazgeçilmez kılmak için stratejik konumlandırmayı başaran işletmelerde mümkün olmaktadır. Bu anlamda teorik bir araştırmayı temsil eden bu çalışma bize birkaç şey öğretmektedir. Eleştirel kuramın temsilcileri, özellikle ele aldıkları kapitalist modernizm eleştirisinden hareketle, pozitivistin özgürlük için gerekli olan eleştirel akıldan yoksun olduğunu ifade etmişlerdir. Kültürün endüstrileşmesiyle birlikte popüler kültür/kitle kültürü insan bilincinin parçalanmasını, tek tipleşmesini ve tüketim kültürünün egemen olmasını sağlamıştır. Bu parçalı bilinç de insanın özgürleşmesinin önündeki engellerden birini oluşturmuştur. Bu bakış açısıyla Frankfurt Okulu kuramcılarının göre, kitleler kapitalizm ve kapitalistlerin kontrol ettiği kültür endüstrileri tarafından kolayca 'aptallaştırılabilmektedir' (Yaylagül, 2014: 94-95). Bunun birçok sebebini de klasikten postmoderne örgüt kuramlarının evriminde görmek mümkündür. İşletmeler her geliştiğinde çevresini de şekillendirdiği kabul edilir, başka bir deyişle, onu sürekli inşa eder. Değişim, özünde bir kopma oluştursa bile, bu kopuşu meydana getiren süreçlerin kendilerinin de sürekli ve kademeli olduğunu, bunun da tekdüze anlamına gelmediğini hatırlamak önemlidir. Önemli olan bilinçle yapabilme yeterliğine sahip olmaktır. Felsefenin desteği bu yönde olmaya devam edecektir. Nitekim örgütleri anlamak için felsefi varsayımların şekillendirdiği anlamlandırma çerçevesinden yola çıkılmaktadır. Tek bir doğru cevabı bulunmayan felsefi yaklaşımlar, olaylara bütünsel bakıştaki fazla subjektifliğin bilinçle düzeltilmesini sağlamakla görevlidir. Örgüt teorileri felsefi açıdan eleştirel teoriyi yanına almasıyla bir çok soruyu aramaya devam ederek artık kalıcı bir duruş sergilemeye devam edecektir. Bu açıdan eleştirel teori, anı değerlendirme önermesi yoluyla, değişimin kapılarını örgütlere daima açık tutacaktır.

Sürdürülebilir Giyilebilir Ürünler: İnsan Yaşam Kalitesini Artırmak İçin Giyilebilir Teknoloji

Doç. Dr. Nevin AYDIN¹

¹ Artvin Çoruh Üniversitesi Hopa İktisadi ve İdari Bilimler Fakültesi İşletme Bölümü,
nevin.aydin@gmail.com, ORCID: 0000-0003-1949-2765

Özet: Son yıllarda, giyilebilir teknoloji ile insan-bilgisayar iletişimi ortaya çıktı. Giyilebilir bilgisayarlar oldukça küçük taşınabilir bilgisayarlardır. Gelecekteki giyilebilir teknolojinin biyometrik veriler toplayarak geliştirilebileceği dolayısıyla, giyilebilir bilgisayarların yalnızca kaliteyi yükseltmeyeceği hayatın tüm yönlerini etkileyeceği, giyilebilir sürdürülebilirlik yaşam kalitesini yükseltmeye ve insan merkezli odaklı olmaya yöneliktir. Giyilebilir uygulamalar, sağlık, görme engelliler için yardım, afet yardımı ve kamu güvenliği alanlarını içerir. Gelecekte, giyilebilir cihazlar bireyler ve toplumlar için değerli bir kullanım alanı oluşturacaktır. Dolayısıyla sürdürülebilir giyilebilir cihazlar, hem bireyler hem de genel olarak toplumlar için olumlu değişikliklere yol açacaktır.

Anahtar Kelimeler: Sürdürülebilir giyilebilir ürünler, Giyilebilir teknoloji, Yaşam kalitesi

Sustainable Wearables: Wearable Technology For Enhancing The Quality Of Life

Abstract: In recent years, human-computer communication has emerged with wearable technology. Wearable computers are very small portable computers. Wearable sustainability is geared towards improving the quality of life and being people-centered, so that future wearable technology can be developed by collecting biometric data, that wearable computers will not only improve quality but affect all aspects of life. Wearable apps include healthcare, assistance for visually impaired, disaster relief, and public safety. In the future, wearable devices will create a valuable use for individuals and communities. Therefore, sustainable wearable devices will lead to positive changes for both individuals and societies in general.

Key Words: Sustainable wearable products, wearable technology, quality of life

1. GİRİŞ

Giyilebilir teknoloji, kullanıcıların çevrimiçi bilgilere rahatça erişebilmeleri ve hareket halindeyken diğerleriyle (veya diğer şeylerle) iletişim kurabilmeleri için kullanıcılara mobilite ve bağlantı özelliklerini sağlar (Billinghurst ve Starner, 1999). Gerçek hayatta uygulama için nicelikli yaşam koşullarını analiz ederek yaşam kalitesini iyileştirmek için yöntemler üzerinde daha fazla çalışma yapılmıştır. Hareketleri takip edilen hedefler, gerçekleştirilen fiziksel aktiviteler ve çevresel bilgiler gibi çeşitli kişisel bilgileri içerir (Oh ve Lee, 2015). Giyilebilir cihazların teknolojik gelişimi, vücudun herhangi bir yerinde fiziksel aktiviteler ve insanın fizyolojik durumu için ölçüm ve izlemeyi mümkün kılar. İzleme görevlerini yerine getirmek için vücudun baş, kulak, göz, kol, gövde, boyun ve ayak gibi herhangi bir yerine takılabilir (Vandrico, 2016).

"Giyilebilir ürünler" olarak da bilinen giyilebilir teknoloji, aksesuar olarak takılabilen, giysiye gömülebilen, kullanıcının vücuduna implante edilebilen ve hatta cilde dövme yapılabilen bir elektronik cihaz kategorisidir. Cihazlar, mikro işlemcilerle güçlendirilmiş ve İnternet üzerinden veri gönderip alma özelliği ile geliştirilmiş, pratik kullanımları olan aygıtlardır. Bu tür cihazların hızla benimsenmesi, giyilebilir teknolojiyi Nesnelere İnterneti'nin (IoT) ön saflarına yerleştirdi (Hayes, 2020).

Giyilebilir teknoloji, yani vücudun yüzeyine giyilen elektronik cihazlar ve aksesuarlar gibi hızla gelişen bir trenddir. Giysiler ve kıyafetler, el çantaları, mücevherler ve gözlükler giyilebilir bilgi işlem için giderek daha önemli platformlar haline gelmektedir. Teknoloji daha yaygın hale gelmekte ve insan yaşamının her alanında yer almaktadır. Giyilebilir teknolojinin ortaya çıkışı, her gün hayatımızı daha da geliştirmek için yeterli fırsatlar sunarken, aynı zamanda dezavantajına da sahiptir (Vaajakari, 2018).

Giyim, kıyafet sektöründeki sürdürülebilir yenilikler sayesinde kumaş israfı, karbon emisyonu, su kullanımı ve daha birçok kaynak ihtiyacı azaltılabilir. Sürdürülebilir giyim fikri, kıyafet üretimini, dağıtımını, kullanımını ve geri dönüşümünü içine alan bir süreçtir. Ortaya çıkan karbon emisyonu gibi birçok alanda yapılan yenilemelere gidilerek üretilen sürdürülebilir kıyafetler sayesinde, uzun vadeli pozitif sonuçlar elde edilebilir. Her yıl ortalama 60 milyon ton civarında kıyafet üretiliyor. Bunun sonucunda, devasa tekstil sektöründeki en ufak bir değişiklik bile kayda değer sonuçlar ortaya çıkarabiliyor (YenilsFikirleri, 2019).

2. SÜRDÜRÜLEBİLİR GİYİM

Sürdürülebilir moda, ürününü olabildiğince güvenli ve çevre dostu hale getirmek için ürünün tüm yaşam döngüsüne bakılır. Sürdürülebilir giyim markalarının taşıdığı vasıflar(Kristen, 2019):

Atık: Sürdürülebilir giyim markaları, üretim sırasında ve giyim rotasını tamamladıktan sonra mümkün olduğunca fazla atığı azaltmaya çalışır. Bu, giysilerde geri dönüştürülmüş malzemelerin kullanılmasını ve kıyafetleri atmak yerine onarmayı içerir.

Su kullanımı: İçme, çiftçilik ve üretim için tatlı su talebi, sahip olduğumuz su miktarını aşıyor. Sürdürülebilir giyim markaları, su kullanımlarını nerede azaltabileceklerini görmek için tedarik zincirlerinden yararlanıyor.

Çalışma koşulları: Birçok hızlı moda markasının fabrikalarında korkunç derecede kötü çalışma koşulları vardır. Hatta bazıları giysilerini olabildiğince ucuza yapmak için köle emeği kullanıyor. Sürdürülebilir giyim markaları, çalışanları korumak için adil iş gücü ve etik üretim uygulamalarını takip eder.

Tehlikeli kimyasallar: Kimyasal boyaların ve son işlemlerin çoğu hızlı bir şekilde işçiler için tehlikelidir. Ayrıca su kaynağını kirlitebilir ve tüm toplumun tüketmesini güvensiz hale getirebilirler. Sürdürülebilir giyim markaları, bu kimyasallara doğal boyalar gibi alternatifler arıyor.

Tarım: Pamuk doğal bir lif olmasına rağmen, genellikle büyümek için önemli miktarda böcek ilacı gerektirir ve bu da yaban hayatına ve çiftlikte çalışan insanlara zararlıdır. Sürdürülebilir giyim markaları, çevreyi ve çiftçileri korumak için organik pamuk, keten ve diğer elyafları kullanma eğilimindedir. Ayrıca geleneksel yetiştirme yöntemlerinden daha az su kullanmanın yollarını ararlar.

Kısa yaşam döngüsü: Hızlı moda dememizin nedenlerinden biri, bugün burada olması ve yarın gitmesidir. Sürdürülebilir modadaki en büyük hedef, insanları daha az satın almaya teşvik etmek ve giysilerin daha uzun süre dayanmasını sağlamaktır. Bu nedenle, yıllarca tekrar tekrar giyebileceğiniz basit ve klasik tarzlar yaratılır.

2.1. Sürdürülebilir kumaşlar

Organik pamuk, İpek, Organik, yün, Kenevir, Alpaka, Angora, Deve, Kaşmir, Tiftik, Keten, Rami, Aluyot. En popüler olanı, organik pamuğun kullanılmasıdır. Sürdürülebilir giyilebilir ürünler, giyilebilir teknoloji ve yaşam kalitesinin iyileştirilmesi, sosyal etki ve kamu yararı üzerinde olumlu bir etkiye sahip olan sürdürülebilirlik değeri olan uygulamaların araştırılmasıdır.

3. SÜRDÜRÜLEBİLİR GİYİLEBİLİR TEKNOJİLER

Sürdürülebilir giyilebilir ürünler "yaşam kalitesinin ve sosyal etkinin iyileştirilmesi üzerinde olumlu etki yaratabilen giyilebilir bir teknoloji cihazı" dır. Sürdürülebilir giyilebilir teknoloji ve akıllı tekstiller oluşturulması maliyet, dayanıklılık ve ölçeklenebilirlik gibi konuları içerir.

Sürdürülebilir giyim, Adil Ticaret üretimi veya organik olarak yetiştirilmiş hammadde içeren kumaş gibi sosyal ve çevresel sürdürülebilirliğin bir veya daha fazla yönünü içeren giysiler (Goworek vd., 2012).

Giysilerde bir pamuklu gömleğin üretilmesi, bir kişinin 2,5 yılda içtiği kadar su gerektirir. Naylon ve polyester gibi sentetik malzemeler için ise üretilmesinde daha az su kullanır. Fakat tehlikeli sera gazları yayarlar. Kenevir, bambu ve rami gibi doğal lifler pamuk alternatifi olarak yaygın olarak kullanılmaktadır.

4. SÜRDÜRÜLEBİLİR GİYİLEBİLİRLERİN DEZAVANTAJLARI

Moda endüstrisi hızla, mevsimsel olarak değişen trendleriyle ünlüdür, kısa inovasyon döngüleri ve yazılım uyumsuzluğu, tüketici elektroniği sektöründe iyi bilinen zorluklardır. Giyilebilir teknolojiler, çevre, insan sağlığı ve toplumlar üzerindeki etkileri güç tüketimini, kıt kaynakların tüketimini ve geri dönüşümü zor elektronik atıkların büyük akışlarını üreterek etkileyebilir. Kritik hammaddelere olan talep, malzeme kıtlığını arttıracak olsa da, tedarik zincirinin diğer ucunda, geri dönüşüm sürecinde onları doğru şekilde ayırma zorluğundan dolayı, bu değerli kaynaklar kaybedilecektir. Çok sayıda küçük e-atık maddesi normal evsel atıklarla sonuçlanabilir ve daha da kritik olarak, çevrede su, toprak ve havayı kirleten ve insan sağlığına zarar veren sorunlu maddeler ortaya çıkabilir. Giyilebilir teknolojiler, her zaman çevrimiçi kültürü daha da yoğunlaştıracak ve bu da gerçek insan etkileşimleri ve genel refah üzerinde zararlı bir etkiye sahip olacaktır (Vaajakari, 2018).

Giyilebilir teknolojiler güç tüketimini artırarak, kıt kaynakların tüketimini artırarak ve geri dönüşümü zor olan büyük elektronik atık akışları oluşturarak çevre, insan sağlığı ve toplumlar üzerindeki etkileri artırabilir. Giyilebilir teknolojiler, gerçek insan etkileşimleri ve genel refah üzerinde zararlı bir etkiye sahip olabilecek, her zaman çevrimiçi olan bir kültürü daha da yoğunlaştıracaktır. Son olarak, giyilebilir teknolojilerin yükselişiyle ilgili olarak pek çok veri gizliliği ve güvenliği sorunu vardır (Vaajakari, 2020).

Giyilebilir ürünler, kullanıcılara cihazlar üzerinden bağımsız veya basit bir akıllı telefon aracılığıyla yardım sağlar. Bununla birlikte, giyilebilir cihazların son eğilimi çevre ile entegrasyondur (Augusto vd., 2013).

5. SÜRDÜRÜLEBİLİRLİK GİYİLEBİLİRLERİN AVANTAJLARI

Daha dayanıklı malzemeler üretilerek ve kullanıcıların odak noktasını daha iyi yakalamak için yeni, daha yenilikçi yollarla doğru bakım ve temizlik uygulamalarına ilişkin farkındalığı ve bilgiyi artırarak gerçekleştirilebilir (örnek; Görsel İşaretleyiciler, AR). Ancak elektronik cihazların tüketimini yavaşlatmak için çoklu platform kullanımı ve yazılım uyumluluğu her zaman sağlanmalıdır. Kullanıcının değişen istek ve gereksinimlerine nasıl ayak uyduracağına dair birçok öneri vardır. Kullanım bağlamına göre değiştirilebilen ve uyarlanabilen, çok işlevli ürünler üretmektir. Örneğin, kendi kendini temizleme ve onarım işlevlerine sahip renk, şekil ve sıcaklık değiştiren malzemeler, gelecekte değişen kullanıcı gereksinimlerini karşılamak için olası bir çözüm olarak sunulmuştur.

Genişletilmiş bir yaşam döngüsü elde etmenin bir yolu, kullanıcı ve ürün arasındaki anlam oluşumunu geliştirmektir. Bu, giyilebilir teknolojilerin temel avantajının üzerinde olduğu bir alandır. Belirli bir ürüne olan duygusal bağlılığı artırarak, daha uzun bir yaşam süresine sahip olması beklenir.

Giyilebilir teknoloji, sosyal sürdürülebilirlikle ilişkili olarak başka önemli avantajları da beraberinde getirebilir. Sağlık ve sporla ilgili giyilebilir ürünler, nüfusun yaşlanmasıyla ilgili sorunları ortadan kaldıracaktır, sağlık sorunlarını azaltabilir ve sağlık hizmeti maliyetlerini düşürebilir. Uzaktan sağlık bakımı ve erken korunmaya izin vererek yaşam kalitesini artırabilirler.

Giyilebilir teknolojiler, bilgiyi depolayarak ve bunları nesilden diğerine aktararak kültürel gelenekleri ve mirası korumaya da yardımcı olabilirler. Bu aynı zamanda bireyler ve topluluklar arasındaki bağlılığı desteklemeye de yardımcı olabilir. Giyilebilir teknolojilerin, halkı koruma faaliyetlerine yardım etmede ve sosyal krizlere yanıt vermede rol oynayabileceği düşünülmektedir.

Giyilebilir teknolojilerin sürdürülebilirlik etkisini belirleyecek olan şey, gerçek kullanıcı davranışıdır. Ürün, en yüksek sürdürülebilirlik standartlarına göre tasarlanmış olsa da, bu çabaları geçersiz kılacak olan, kullanıcıların anlık kararlarıdır (Vaajakari, 2020).

Giyilebilir teknolojinin mevcut toplu tüketim kalıpları üzerinde bir atılım yaptıklarında yıkıcı bir etkiye sahip olabileceği de varsayılmaktadır. Ürün ömrünü uzatarak yeni ürünlerin tüketimini yavaşlatmaya yardımcı olabilirler.

Genişletilmiş bir yaşam döngüsü elde etmenin bir yolu, kullanıcı ile ürün arasındaki ilişkiyi güçlendirmektir. Bu, giyilebilir teknolojilerin temel avantajının bulunduğu bir alandır. Belirli bir ürüne olan duygusal bağlılığı artırarak daha uzun bir ömre sahip olması beklenir. Ürünün kullanıcının değerleri ve yaşam tarzı, kimlik inşası, kişisel anılar ve estetik ihtiyaçları ile bağlanması gerekir. Giyilebilir teknoloji,

sosyal sürdürülebilirlik ile ilgili olarak diğer önemli avantajları da beraberinde getirebilir. Sağlık ve kondisyonla ilgili giyilebilirler nüfusun yaşlanması ile ilgili sorunları giderebilir, sağlık sorunlarını azaltabilir ve sağlık maliyetlerini düşürebilir. Uzaktan sağlık bakımı ve erken korunmaya izin vererek yaşam kalitesini arttırabilirler. Giyilebilir teknolojiler aynı zamanda bilgi ve bilgiyi depolayarak ve onları kuşaktan diğerine geçirerek kültürel gelenekleri ve mirası korumaya yardımcı olabilir. Bu aynı zamanda bireyler ve topluluklar arasındaki bağlantıyı desteklemeye de yardımcı olabilir. Giyilebilir teknolojilerin kamu koruma faaliyetlerine yardım etmede ve sosyal krizlere cevap vermede rol oynayabileceği öngörülmektedir (Vaajakari, 2018).

6. SÜRDÜRÜLEBİLİR GİYİLEBİRLERİN İNSAN YAŞAM KALİTESİNE ETKİLERİ

Giyilebilir cihazlar, birçok durumda günlük rutinler sırasında sağlık izleme sistemi olarak kullanılabilir. Gelecekteki giyilebilir teknolojinin sadece basit fiziksel aktiviteler veya biyometrik veriler toplamadaki durumundan etkileyecektir. Bazı araştırmacılar tarafından giyilebilir bilgisayarların sadece kaliteyi arttırmakla kalmayıp, yaşamın tüm yönlerini etkilemek için geliştirilmiş olmalarıdır. Giyilebilirlerin sürdürülebilirlik açısıyla yaşam kalitesini arttırmaya yönelmesi, sosyal kamu yararı ve güvenliği açısından uygulamaya alınması önemli bir gelişmedir.

Giyilebilir teknoloji sağlıklı yaşam tarzları için bir alternatiftir. Kullanıcıların sağlığını ve fiziksel aktiviteleri izlemek için kullanılabilirler. Giyilebilir cihazlar hastaların tanı ve tedavi yöntemlerini araştırarak, hastaların yaşam kalitelerini arttırmayı amaçlamaktadır. Örneğin: Giyilebilir cihazlar görme engelli insanların sokakta düşme ve çarpışmalara karşı koruyarak yollarını güvenli ve kolay bulmalarını sağlar.

Giyilebilir teknoloji, hastanelerde hasta yönetimi verimliliğini de artırabilir. Araştırmacılar, sağlık dengesizliklerinin erken tespiti için giyilebilir teknolojiyi kullanmayı amaçlamaktadırlar. Giyilebilir tekniklerde kablosuz iletişim, araştırmacıların yeni bir tür bakım noktası (POC) teşhis cihazları tasarlamasına olanak tanır (Ghafar-Zadeh, 2015). Örneğin, ticari taşınabilir sensörler ve acil tıbbi hizmetler, acil servis veya yoğun bakım ünitesi ortamlarındaki cihazlar gibi giyilebilir çözümlerle entegre giysiler, hasta yaşamını tehlikeye atan risklerin sürekli izlenmesini kolaylaştırmıştır. Sistem, hasta sağlık durumu parametrelerinin (kalp atış hızı, solunum hızı, vücut sıcaklığı, kan oksijen satürasyonu, pozisyon, aktivite ve duruş) ve çevresel değişkenlerin (dış sıcaklık, toksik gazların varlığı ve giysilerden geçen ısı akışı) tespit edilmesini sağlar. Verileri işlemek ve yararlı bilgileri sağlık hizmeti sağlayıcılarına uzaktan iletmektir (Curone vd., 2010).

Popülasyondaki fiziksel aktiviteyi arttırmak ve hareketsiz davranışı azaltmak için davranışsal müdahaleler olarak giyilebilir aktivite izleyicileri (WAT'ler) kullanılmıştır. Giyilebilir teknik programların etkili, yoğun, evde rehabilitasyon sağlama potansiyeline sahip olduğunu buldular (Nguyen vd., 2017).

Giyilebilir teknoloji, depresyon gibi psikiyatrik bozuklukların teşhisi ve izlenmesine de yardımcı olabilir. Araştırmacılar, hastaların otonom durumunu karakterize etmek için giyilebilir tekstil teknolojisine ve anlık doğrusal olmayan kalp atış hızı değişkenliği değerlendirmesine dayanan bir sistemi keşfettiler (Valenza vd., 2015).

Hastalar ve sağlık hizmeti sağlayıcıları, diyabeti etkin bir şekilde yönetmek için kan şekeri dinamiklerini etkileyen birçok faktörü (örneğin, ilaç tedavisi, aktivite, diyet, stres, uyku kalitesi, hormonlar ve çevre) izlemelidir. Son tüketici teknolojileri, diyabetik topluluğun bu kronik hastalığın gerçekten kişiselleştirilmiş, gerçek zamanlı, veriye dayalı yönetimine doğru büyük adımlar atmasına yardımcı olmuştur (Heintzman, 2016).

Artan sağlık hizmeti maliyetiyle birlikte, giyilebilir cihazlar ve sistemler, izleme ve önleme yoluyla kendi kendine bakımı kolaylaştırma potansiyeline sahip olabilir. Örneğin, ter bazlı glikoz seviyesinin invazif olmayan bir şekilde izlenmesini sağlamak için giyilebilir bir biyoelektronik teknolojisi geliştirilmiştir (Lee vd., 2017).

Parkinson hastalığını yönetmek için giyilebilir cihazlar, teşhis ve tedavi müdahalelerinin etkilerine ilişkin içgörüler sağlayan zengin veri kaynakları toplamak için büyük bir potansiyel sunar. Bradikinezi, Parkinson hastalığının birincil semptomlarından biri olduğundan, on saniyelik tam kavrama eylemi, bradikinezi

şiddetini değerlendirmek için yaygın olarak kullanılmaktadır. Parkinson bradikinezisinin şiddetini değerlendirmek için giyilebilir bir cihaz geliştirdiler (Lin vd., 2017).

Kardiyovasküler izleme yapmak ve kalp hastalarında mHealth uygulamalarına olanak sağlamak için giyilebilir cihazlar geliştirilmiştir. Düşük güç tüketen giyilebilir EKG izleme sistemleri geliştirilmiştir (Winokur vd., 2013).

Giyilebilir teknoloji, engelli insanların yaşamlarını iyileştirmek için uzun süredir kullanılmaktadır. Önümüzdeki yıllarda, bu alandaki daha fazla gelişmenin, engelliler de dahil olmak üzere tüm insanların yaşam kalitesini, sağlık hizmetlerini ve rehabilitasyonunu daha da artırması beklenmektedir. Örneğin, işitme engelli insanların müziği deneyimlemesine izin vermek için sesi titreşimlere çevirebilen giysi ve tekstillerdeki entegre haptiklerdir (Strapsco, 2021).

Kablosuz giyilebilir cihazlar, hastalarda mobilitayı desteklemiştir. Aktivite izleme, hastaların kronik durumlarını yönetmek için kullanılır (Chiauzzi vd., 2015).

7. KAMU YARARI VE SOSYAL ETKİ İÇİN GIYİLEBİLİR ÜRÜNLER

Giyilebilir cihazları benimseyerek, hem insan yaşam kalitesi iyileştirmelerine odaklanan çabalar hem de sosyal etkiye dayalı sürdürülebilirlik değerleri oluşturulabilir. UNICEF'in sahip olduğu sosyal etki faaliyetlerinde yenilikçi giyilebilir teknolojileri benimsedi ve uyguladı. Bu giyilebilir cihazların yalnızca kullanıcıların daha üretken olmasına yardımcı olmakla kalmayıp, aynı zamanda yaşam kalitesi, dolayısıyla sosyal kamu yararını geliştirme rolüne dönüşür. Bu bağlamda, UNICEF gelecekteki giyilebilir ürünler için aşağıdaki koşulları önerdi (Palmer ve Gershbein, 2016).

Maliyet Etkili: Gösterilmiş bir iş senaryosu ile düşük maliyetli alanlarda toplu halde yürütülebilir

Düşük Güç: Bir pili çalıştırır, uzun bir pil ömrüne sahiptir (muhtemelen alternatif enerji, güç tasarrufu sağlar gücün olmadığı yerde)

Sağlam ve Dayanıklı: Suya, darbeye, hava koşullarına, ısıya dayanıklıdır, kolayca depolanır.

Ölçeklenebilir: Çeşitli ortamlara ve topluluklara uygulanabilir, daha büyük ekosistemleri dikkate alabilir, kolayca üretilir / geliştirilir, kullanımı kolay ve bakımı kolaydır (yerel beceriyle sabitlenir / ele alınır) Giyilebilir cihazlar şu anda ilginç küçük taşınabilir cihazlar olarak algılsa da, yanıt verme gibi kritik alanlar için tüm dünyaya yayılma fırsatı bulacaklardır. Giyilebilir teknoloji, halka yardım etmede büyük bir rol oynayacaktır. Bireysel güvenlik ve rahatlığı sağlamak ve sosyal istikrarı sürdürmek için halkın korunması için, giyilebilir cihazların fiyatının yüksek olması, bunların yayılmasını zorlaştırmaktadır. Giyilebilir cihazların kullanımı esnasında güç ve dayanıklılığın sağlanması da son derece önemlidir. Afet yardım personeli ve kolluk görevlilerinin güvenliği açısından yoğun konsantrasyon gerektiren tehlikeli durumlarda işlevselliği önemlidir. Cihazlara gömülü piller bulunuyorsa, bunlar yardım faaliyetlerini kısıtlayacak kadar büyük veya ağırsa veya giyilebilir ekipman nedeniyle zorlu çevre koşulları, tehlikeli durum yaratabilir. Giyilebilir cihazlarda güç ve dayanıklılığın sağlanması önemli bir etmendir.

8. SONUÇ

Giyilebilir teknolojilerin sürdürülebilirlik etkisini belirleyen kullanıcı davranışdır. Ürün en yüksek sürdürülebilirlik standartlarına göre tasarlanırsa da, kullanıcılar bunları uygun kullanımlarıyla başarılı ve sürdürülebilir giyilebilir cihazlar, hem bireyler hem de genel olarak toplumlar için olumlu değişikliklere yol açacaktır.

Gelecekteki giyilebilir cihazlar daha doğru ve daha genel bilgiler toplayarak geniş bir alanda kullanılacaktır. Yapay zekanın geliştirilmesi, sensörlerin güvenilirliği, uzun pil ömrüne sahip güç kaynağı ile toplumun ve kamunun kullanımında yararlı olacaktır.

“Zaten var olan bir ürün yeni bir ürünü satın alma ihtiyacını ortadan kaldırdığında, çevreye en büyük sürdürülebilirlik faydası gerçekleşir” (Kuusk, 2016).

Bir bina yanarken her saniye önemlidir. Olay yerine koşan ilk müdahale yapan ekipler zaman tasarrufu ve sınırlama potansiyeline sahip olan giyilebilir teknoloji sayesinde hayat kurtarabilir. Polis memurları, itfaiyeciler ve sağlık görevlileri söz konusu olduğunda, giyilebilir cihazlar şu anda uzaktan kumanda sağlamak için test edilmektedir (Wearable, 20201).

Her gün değişen modaın çevresel etkisi, tekstil atıkları, kirlilik, su stresi ve karbon emisyonları gibi konularla birlikte, çevre dostu giysilere olan talebi artırmıştır. Giyilebilir cihazlar pazarında, vücuda takılan kameralar birçok alanda ivme kazanıyor. Giyilebilir cihazların işletmeler ve hükümetlerdeki etkisi giderek daha belirgin hale geliyor. Giyilebilir cihazlardan elde edilen veriler hastanın durumunu izlemek için teşhis aracı olarak kullanılabilir. Giyilebilir cihazlardan alınan veriler, diğer klinik verilerin yaptıkları işlevi görür.

Yeşil Şehirler

Doç. Dr. Nevin AYDIN¹

¹ Artvin Çoruh Üniversitesi Hopa İktisadi ve İdari Bilimler Fakültesi İşletme Bölümü,
nevin.aydin@gmail.com, ORCID: 0000-0003-1949-2765

Özet: Yeşil şehir kavramı, daha yoğun, daha yeşil ve daha yaşanabilir şehirler yaratmanın yeni bir çözüm yoludur. Yeşil bir şehir çevreyi iyileştirir, zengin biyolojik çeşitlilik yaratır. Hava kirliliğini azaltır, su depolamasını sağlar, gürültüyü azaltır ve sıcak dönemlerde havayı soğutur. Bu şehirler, yenilenebilir enerji üretimini, toplu taşıma kullananların yüzdesini, yeşil alanları ve geri dönüşüm programlarını içerir. Yeşil Büyüme, doğal kaynakları ve çevresel hizmetleri sağlarken, ekonomik büyümeyi ve kalkınmayı teşvik etmek anlamına gelir. Günümüz Dünyasının da gelişmiş ülkeler, iklim değişikliğinin etkilerine karşı Yeşil Şehirler projesini stratejik bir araç olarak değerlendirmektedirler. Yeşil şehirler, su elektrik ve atık yönetimi gibi kaynakların tüketimini azaltmayı amaçlıyor.

Anahtar Kelimeler: Yeşil şehirler, Yeşil büyüme, Yeşil ekonomi

Green Cities

Abstract: The green city concept is a new solution towards creating denser, greener, and more livable cities. A green city improves the environment and creates rich biodiversity. It reduces air pollution and noise, provides water storage, and cools the air during hot periods. These cities include renewable energy generation, the percentage of people using public transport, green spaces, and recycling programs. Green growth means promoting economic growth and development while providing natural resources and environmental services. In today's world, developed countries consider the green cities project as a strategic tool against the effects of climate change. Green cities purpose to reduce the consumption of resources such as water, electricity and waste management.

Key Words: Green cities, Green growth, Green economy

1. GİRİŞ

Dünya nüfusunun çoğunluğunu oluşturmanın yanı sıra, şehirler orantısız miktarlarda dünya ekonomisine ve karar alma gücüne odaklanır. Dahası, kentsel alanlar Dünya yüzeyinin yalnızca yaklaşık yüzde ikisini kapsasalar da, kaynaklarının yüzde 75'ini tüketirler. Yine de, sosyal ve politik hareketler ve teknolojik ve kurumsal bilgi ve yenilik merkezleri için bir merkez olarak şehirler, daha yeşil ekonomiler için güçlü bir katalizör olabilir. Dünya genelinde şehirlerin büyüyen boyutu ve önemi, onları yeşil ekonominin geliştirilmesinde tartışmasız en önemli unsurlar haline getiriyor. Şehirlerin yönetimi, rekabet eden ulusal çıkarlardan (örneğin, bölgesel kalkınma gündemleri ve sektör lobileri) ve sorumluluklardan (ulusal savunma maliyetleri gibi) biraz kurtulurken acil sorunlara daha duyarlı olabilir. Kentsel geçiş faaliyetleri, iklim değişikliği ve biyolojik çeşitlilik kaybı gibi küresel çevre sorunları ile ilgili politikaların uygulanmasında giderek daha önemli bir rol oynamaktadır. Yeşil ekonomi, gelişim düzeylerine ve mekansal organizasyonlarına bağlı olarak farklı şehirlerde farklı bir karaktere bürünecektir (Kennedy vd.,2013).

Kentsel alanların yoğunlaştırılması, planlamadaki birçok aktör tarafından sürdürülebilirliğe ulaşmanın bir yolu olarak görülürken, aynı zamanda bir planlama ideali olarak da sorgulanmıştır (Neuman, 2005).

Yeşil alanların sağladığı ekosistem hizmetleri, bu alanların fiziksel niteliklerine ve işlevlerine bağlıdır ve insanlar için fayda ve değer sağlar (Haines-Young ve Potschin, 2008).

Şehirler, küçük bir dizi gösterge aracılığıyla tam olarak tespit edilmesi çok zor olan mekansal, kültürel, çevresel ve sosyo-ekonomik özelliklerle çok karmaşık kentsel gelişim kalıpları altında gelişir. Yeşil bir şehir, tüm faaliyetlerinde enerji verimliliğini ve yenilenebilir enerjiyi teşvik eden, çevreci çözümleri kapsamlı bir şekilde destekleyen, planlama sistemlerinde karma arazi kullanımı ve sosyal karma uygulamaları ile arazi kompaktlığını uygulayan bir şehirdir. Yeşil şehirler için diğer tanımlardan farklı olarak, enerji verimliliği temel bir özellik olarak içerir. Ayrıca, GSYİH'nın Yeşil Şehir performansı üzerinde olumlu bir etkisi olduğu, nüfus büyüklüğünün olumsuz bir etkisi olduğu ve en etkili faktörlerin sanitasyon ve hava kalitesi olduğu kanıtlanmıştır (Brilhante ve Klaas, 2018).

Yeşil Şehir geleceğin modelidir. Yaşam kalitesinin sürekli geliştirebilen, tüm disiplinlerin bölgesel olarak koordine edilen faaliyetleri bir araya getiren kentsel yapılardır (ELCA, 2011). Yeşil şehir performansını ölçmek için göstergeleri sekiz alanda sınıflandırdı (Brilhante ve Klaas, 2018): sosyo-ekonomik (SE), enerji (E), yeşil alan ve arazi kullanımı (G), ulaşım (T), atık (W), su (WA), sanitasyon (S) ve hava kalitesi (A). Ayrıca şehirlerin yeşilliğini ölçmek için göstergeleri (Pace vd., 2016): enerji, ulaşım, su, atık ve hava kalitesi şeklinde sınıflandırdı. Enerji, doğrudan veya dolaylı olarak iklim değişikliği, ulaşım, ekonomik kalkınma, kamu hizmetleri, sağlık, altyapı, bilgi iletişim teknolojisi, çevre kalitesi, su, gıda ve arazi kullanımı ile bağlantılıdır (UN-Habitat, 2015). 2011'de Birleşmiş Milletler Çevre Programı (UNEP) Yeşil Ekonomi vizyonunu tanımladı; Daha iyi insan refahı ve sosyal eşitlik, çevresel riskleri önemli ölçüde azaltır (UNEP, 2011).

2. YEŞİL ALANLARIN YAŞAM KALİTESİNE VE SAĞLIĞA ETKİLERİ

Yeşil alanlar, kent sakinleri için daha eğlenceli alanlara dönüşürken, Yeşil şehir unsurları, daha az olumsuz sosyal davranış ve daha güvenlik algısı oluşturarak güvenli bir topluma katkıda bulunabilir (Kuo vd., 1998). Sokaklarda ve yollarda bitki örtüsü stresi azaltarak daha güvenli bir trafik ortamına katkıda bulunur. Yol ağaçları bir trafik tehlikesi olarak kabul edilmediğinden, yeşil yol ortamları daha güvenli olarak kabul edilir (Mok vd., 2006). Araba sürücüleri, ağaçlı sokaklarda daha düşük hızda kalırlar (Naderi vd., 2008). Binaların yakınındaki yeşil alanlar, güçlü bağlar oluşturarak sosyal etkileşimi kolaylaştırır (Kuo vd., 1998). Ağaçların bulunduğu ormana benzer alanlar, bölge sakinlerine piknik alanları oluştururken çevre sakinlerinin bir araya gelmesini sağlar (Coley vd., 1997). Yeşil alanlara ofis penceresinden bakmak iş memnuniyetini artırırken, yaşam kalitesini geliştirir (Dravigne vd., 2008). İşyerinde bir bahçeyi veya başka bir yeşil alanı görme stres düzeylerini azaltır (Stigsdotter, 2004; Lottrup vd., 2013).

Günümüzde fiziksel hareketsizlik, her yıl hastalığa sebep olmakta ve yaklaşık 1,9 milyon insanın erken ölümüne neden olan önemli bir küresel sağlık sorunudur (WHO, 2002). Büyük yeşil alanlara yakın yerlerde yaşayan insanlar, fiziksel aktivitede, diğer insanlara göre daha fazla zaman harcadıklarından, sağlığı destekleyici olumlu etkiler beklenebilir (Pretty vd., 2006). İnsanların bahçeli alanlarda yaşamı, açık hava etkinlikleri stresi ve fazla kiloyu azaltır (Nielsen ve Hansen, 2007). Daha fazla yeşil alana sahip olan kentsel alanlarda yaşam daha kalitelidir (de Vries vd., 2003). Evden bir kilometre uzaktaki yeşil alan, bir çocuğun sağlıksız bir kiloya sahip olma riskinin beş kat daha azaltır (Potwarka vd., 2008).

3. KENTSEL GELİŞİM VE YEŞİL BÜYÜME

Kentlerin fiziksel gelişimi, kent ekonomisinin en önemli bileşenleri arasındadır. Kentsel gelişme, doğal çevreyi ve kaynakları insan yapımı üstyapılara ve altyapıya dönüştürür ve bu dönüşüm, geri kalan doğal çevre üzerinde önemli bir stres yaratır. Şehirlerimizi inşa etme şeklimiz, ekonomik kaynaklarımızı nasıl harcadığımızı ve dağıttığımızı da etkiler. Kentsel biçimler ve kentsel işlevlerin mekânsal dağılımı bu açıdan kritik bir rol oynamaktadır. Kentsel işlevlerin uzak bir yerde bulunduğu büyük şehirler, hem karasal hem de su kaynakları dahil olmak üzere enerji ve doğal kaynakların tüketimini artırmaktadır. Yüksek yoğunluklu ve karma kullanımlı kentsel mahallelere sahip kompakt şehirler (örnek; Perakende, ofis ve konut faaliyetlerinin yoğunlaştırılması ve birleştirilmesi), seyahat faaliyetini azaltabilir ve bu nedenle enerji tasarrufu ve daha düşük arazi kullanımı değişikliği ile sonuçlanabilir. Genel olarak, çevredeki tarım ve orman arazilerinin korunması yoluyla (örneğin, tarımsal faaliyetler ve yerleşim alanı kullanımının birleştirilmesi yoluyla) şehirler, bu alanlar tarafından sağlanan ekosistem hizmetlerinden faydalanabilir. Bu da bir yandan sakinlerinin yaşam kalitesini artırırken diğer yandan belirli altyapı maliyetlerini potansiyel olarak azaltabilir. Yeşil ekonomiye geçişi teşvik edebilecek kentsel gelişimin kilit bir bileşeni, üstyapıdır: Daha spesifik olarak, İnşaat sektörü, küresel enerji tüketiminin yaklaşık yüzde 40'ını kullanarak karbon emisyonlarına başlıca katkıda bulunanlardan biridir; tüm temiz suyun yüzde 12'sini tüketiyor ve toplam atık hacminin yüzde 40'ını üretiyor. Yeşil Kent ekonomisinin temel hedeflerinden biri, enerji ve kaynak verimliliğini teşvik etmek ve kent sakinleri için yüksek kaliteli, sağlıklı ve uygun fiyatlı binalar sağlamaktır (Kennedy vd., 2013).

Şehirler, ulusal ekonomik büyümenin kritik itici güçleridir. Ancak hızla büyüyen şehirler genellikle hava kirliliği, sera gibi olumsuz çevresel gaz emisyonları etkilidir (Sassen, 2012). Kentsel yeşil büyüme,

ekonomik büyümeyi ve gelişmeyi teşvik eden kentsel faaliyetler olarak tanımlanır (OECD, 2013). Yeşil büyüme, iddialı hedefi GSYİH büyümesini sürdürmek olan bir ekonomik gelişme türüdür. Doğal kaynaklara zarar vermeden, Teknolojik yeniliği (özellikle Sürdürülebilir enerji sistemlerine ve döngüsel ve biyo temelli bir ekonomiye odaklanmak) artırılabilir (Daly, 1992; Acemoğlu, 2012).

Ulusal hükümetlerin şehirlerde yeşil büyümeyi sağlayabileceği yollar araştırılmalıdır. Kamu-özel ortaklıkları, kalkınma ücretleri, krediler, tahviller ve karbon finansmanı gibi mekanizmalar yoluyla yeşil altyapı yatırımları için özel finansman yatırımları yapılmalıdır (OECD, 2013).

Şehirlerde yeşil büyümeyi gerçekleştirmek için (Alter, 2014):

- Yerel ve ulusal yeşil büyüme hedeflerini uyumlu hale getirmek ve izleme araçlarını etkili kılmak
- Belediyeler arası işbirliğini artırmak
- Kentsel gelir yapılarını uyumlu hale getirmek için yeşil büyüme hedeflerini yeniden şekillendirmek
- Yeşil altyapı için özel yatırımlar yapmak

4. YEŞİL EKONOMİ

Yeşil ekonomi kavramı, başlangıçta finansal krize bir yanıt olarak uluslararası, bölgesel ve ulusal politika çevrelerinde popülerlik kazanmıştır (Bina ve Camera, 2011). UNEP, yeşil ekonomiyi, “insan refahı ve sosyal adaletin iyileşmesine neden olurken, aynı zamanda çevresel riskleri ve ekolojik kısıtları önemli ölçüde azaltan” bir ekonomi olarak tanımlar (UNEP 2010). Dünya nüfusunun yarısından fazlası artık kentsel alanlarda yaşıyor. Dünya Bankası tahmin ediyor ki Kentsel büyümenin % 90'ından fazlası gelişmekte olan dünyada olup, her yıl kentsel alanlar artmaktadır (World Bank, 2010). Yalnızca küresel ölçekte toplu ekonomik düzenlemenin çevresel bozulmanın ve iklim değişikliğinin tehlikeli sonuçlarını önleyebileceği yaygın olarak kabul edilmektedir. Şehirler genellikle kısa vadede büyüme ve refahın lokomotifidir, uzun vadede olumsuz ekonomik etkileri olabilir. Enerji talebinin ve endüstriyel üretimin merkezi olarak, kentsel alanlar antropojenik sera gazlarının % 80'inden sorumludur (Stern, 2006). Sadece son 10 yılda, küresel gıda fiyatları iki katından fazla arttı (FAO, 2013). Küresel yeşil ekonomi basitçe bir yeşil teşvik tarafından yönlendirilen GSYİH büyümesi olamaz, çünkü bir miktar yeşillik içeren GSYİH büyümesinin, kaynak kullanımında, emisyonlarda ve tüketim modellerinde gerekli ve acil değişiklikleri sağladığı kanıtlanamaz; çevresel bozulma, kaynak tükenmesi ve iklim değişikliği gereklidir. Bununla birlikte, ekonomilerin yeşillenmesi büyümeyi zorunlu olarak engellemez (Schmalensee, 2012). Uluslararası Enerji Ajansı (IEA), CO2 yörüngesine geçilmenin, 2020 ve 2035 arasında yapılan tüm yatırımların sıfır emisyonu geçilmesi gerektiğini öne sürdü (IEA, 2007). Yeşil ekonomi, çok düzeyli yönetim için önemli bir kavramdır (Pearce vd., 1989).

Yeşil ekonomi, geleneksel ekonominin basitçe yeşillendirilmiş kısımlarının ötesine geçer. Yalnızca çevresel dışsallıkların uygun fiyatlandırılması değil, aynı zamanda ekonomiyi bu yönde yönlendiren doğru kurumların oluşturulması da dahil olmak üzere ekonominin nasıl işlediğine dair daha geniş bir anlayış gerektirecektir. Şehirlerdeki düzenli toplu taşıma, sürdürülebilir uygun fiyatlı binalar / konutlar, yenilenebilir merkezi olmayan enerji kaynakları ve sürdürülebilir tüketim modellerinin faydaları şehirleri sadece kendi vatandaşları için değil, aynı zamanda daha geniş toplum için daha iyi hale getirebilir. Bir şehir ekonomisinin en önemli kısımlarından bazıları, ekosistem hizmetleri, sosyal hizmetler (örnek; Toplum temelli sosyal sermaye) ve bilgiye dayalı faaliyetler (örnek; Eğitim ve insan / entelektüel sermaye). Daha yeşil bir şehir ekonomisi elde etmenin önündeki en büyük zorluklardan biri, kentsel gelişim politikasının odağını geleneksel GSYİH ölçümlerinden (evler, fabrikalar veya yollar gibi) uzaklaştırmak ve dikkati parasal olmayan kaynaklara değer verme ve bunları yönetme yöntemlerine yönlendirmektir. Kentsel ekosistemler (örneğin, biyolojik çeşitliliğe dayalı gelenekler), su ve yiyecek temini, enerji ve iklim değişikliğini azaltma (karbon ve ısı adası yönetimi) gibi bir dizi fayda sağlar. Bu hizmetlerin niceliğinin ve kalitesinin korunması, şehirdeki yoksulluğun ortadan kaldırılması için temel olabilir. Şehirlerin ekosistemler üzerinde sınırlarının ötesinde hem bağımlılıkları hem de önemli etkileri vardır. Örneğin, birçok şehir tabanlı finans kurumu, şehir sınırlarının ötesindeki faaliyetler için sermaye sağlar (En önemlisi madencilik ve petrol üretim operasyonlarının madencilik endüstrileri). Ekonomide daha geniş yapısal değişikliklerin olması ekonomide yeşillendirmeyi hızlandırabilir. Şehirler ayrıca dünya

çapında üretilen sera gazlarının (GHG'ler) büyük bir kısmından sorumludur ve bu da küresel olarak geniş bir kentsel, kırsal ve orman ortamını etkiler. Bu nedenle, şehir sınırlarının ötesinde yeşil ekonomik bağlantıları kolaylaştıran mekanizmalar oluşturmak çok önemlidir. Kentsel yönetim mekanizmalarının oluşturulması şehir ekonomisinin yeşillendirilmesi, yoksulluğun ortadan kaldırılmasına yol açan daha yeşil bir küresel ekonomiye ulaşmak için gerekli bir ön koşuldur. Şehirlerin devasa fiziksel, finansal, beşeri, sosyal, doğal ve entelektüel sermayesini daha yeşil bir ekonomi hedefine yönlendirmek için şehirlerin içinde ve ötesinde yönetimin yönlendirilmesi gerekiyor. Yeşil ekonomi aynı zamanda, ekonomik kazanımlara odaklanmazsa sürdürülebilir ilerlemenin başarısız olacağına dair köklü bir inanç nedeniyle merkezi bir kalkınma teması olarak ortaya çıkar. Ve şehirler temel ekonomik merkezlerdir (Kennedy vd.,2013).

Birleşmiş Milletler Çevre Programı (UNEP), “yeşil ekonomi” yi “düşük karbonlu, kaynak verimli ve sosyal açıdan kapsayıcı ekonomi” olarak tanımlamaktadır. Ekonomik İşbirliği ve Kalkınma Teşkilatı şunu belirtmektedir: “Yeşil büyüme, doğal varlıkların refahımızın dayandığı kaynakları ve çevresel hizmetleri sağlamaya devam etmesini sağlarken, ekonomik büyümeyi ve kalkınmayı teşvik etmek anlamına gelir.” Yeşil Ekonomi Koalisyonu ise yeşil ekonominin “gezegenin ekolojik sınırları dahilinde herkes için daha iyi yaşam kalitesi sağlayan bir ekonomi” olduğunu düşünüyor. Yeşil Ekonomi, çevresel sürdürülebilirliği, ekonomik hedefleri ve sosyal refahı uzlaştırır. Küresel iklim acil durumu göz önüne alındığında, yeşil ekonomi, mevcut baskın ekonomik modele en iyi alternatif gibi görünmektedir. Ve özellikle gelişmekte olan ekonomilerde sürdürülebilir kalkınmanın sağlanması için vazgeçilmezdir (Albino, 2020).

Yeşil ekonomi Prensipleri (UNDESA, 2012):

- Yeşil ekonomi, sürdürülebilir kalkınmaya ulaşmak için bir araçtır
- Yeşil ekonomi, insana yakışır iş ve yeşil işler yaratmalıdır
- Yeşil ekonomi, kaynak ve enerji açısından verimlidir
- Yeşil ekonomi gezegensel sınırlara veya ekolojik sınırlara veya kıtlığa saygı duyar
- Yeşil ekonomi entegre karar vermeyi kullanır
- Yeşil ekonomi, uygun göstergeleri / ölçütleri kullanarak GSYİH'nin ötesindeki ilerlemeyi ölçer
- Yeşil ekonomi eşitlikçi ve adildir. Ülkeler arasında ve Ülkeler içinde
- Yeşil ekonomi, biyolojik çeşitliliği ve ekosistemleri korur
- Yeşil ekonomi, yoksulluğun azaltılması, refah, geçim kaynakları ve sosyal koruma ve temel hizmetlere erişim sağlar
- Yeşil ekonomi, yönetimi ve hukukun üstünlüğünü geliştirir. Kapsayıcıdır; demokratik; katılımcı; sorumlu; şeffaf; ve istikrarlıdır
- Yeşil ekonomi dışsallıkları içselleştirir

5. AKILLI, YEŞİL VE YAŞANABİLİR ŞEHİRLER

Kentleşme güçlü bir küresel eğilimdir. 2030'a kadar her on kişiden altısı kentsel alanlarda yaşayacağı tahmin ediliyor. Bu hızlı genişleme, artan CO2 emisyonları ve iklim değişikliği en acil zorluklar olan şehirleri büyük bir baskı altına sokuyor. Bugün, şehirler küresel CO2 emisyonlarının yüzde 70'ini oluşturuyor. Şehir sakinleri aşırı kalabalık, atık ve su yönetimi konularının yanı sıra aşırı kalabalık, kirletici ulaşım sistemleriyle de mücadele etmelidir. Bütün bunlar vatandaşların fiziksel sağlığı ve refahı üzerinde doğrudan olumsuz etkiler oluşturmaktadır. Şehirler, dünyanın en zengin ve en fakir vatandaşlarını barındırır. Bugün gördüğümüz çevresel zarar ve ekonomik eşitsizliklerin zorluklarını sergiliyorlar. Bununla birlikte, şehirlerin siyasi, ekonomik ve teknolojik gücü büyüdükçe, yeşil geçişte ve yeşil ekonominin itici güçlerinde öncü olarak hareket etmek için Sürdürülebilir Kalkınma Hedeflerine katkıda bulunabilirler. Sürdürülebilir şehirlere geçiş sosyal, kültürel, ekonomik ve iklimsel faktörlere bağlıdır. Gelişmekte olan ekonomilerin hızla büyüyen şehirlerinde enerji, su ve hareketlilik gibi temel ihtiyaçlar sürdürülebilir bir şekilde karşılanmalıdır. Aynı zamanda kaynaklar etkin bir şekilde yönetilmelidir. Daha gelişmiş ekonomilerde bulunan şehirlerde, şehirlerin ekonomik faaliyet, enerji tüketimi ve çevresel etki için optimize edilmesini sağlamak için akıllı yaklaşımlara ihtiyaç vardır. Bir şehrin özel kalkınma durumuna bakılmaksızın, kentsel vatandaşlar için iyi yaşam sağlamak yol gösterici bir ilke olmalıdır. Kentleşmenin zorluklarını karşılamak için, kentsel alanları geliştirirken bütüncül bir yaklaşım benimsemeli ve gerekli

yatırımları yapmalıyız. Bununla birlikte, daha yeşil bir geleceğe geçişi hızlandırmak için sağlıklı ve yaşanabilir şehirleri oluşturabiliriz (State of Green, 2011).

Dünya da az sayıda en yeşil şehir ve en yaşanabilir şehirler bulunmaktadır. Yeşil Şehirlerde hedef su, enerji, ulaşım ve toplu taşımayı içeren özellikleri bir araya getirmektir. Gerçekten enerji ve ulaşım ile ilgili bir sonuç olan, ancak aynı zamanda önemli ölçüde yeşil altyapı (örneğin, parklar ve sokak ağaçları) hava kalitesi etkilemektedir. Bir çok araştırma, şehirlerdeki biyolojik çeşitliliğin, doğanın ve ekosistemlerin, koruma ve ekosistem hizmetlerinden sürdürülebilirliğe, insan refahına, topluluk uyumuna katkıda bulunduğunu göstermektedir. Aslında, çoğu durumda hava kalitesi, yağmur suyu yönetimi, nüfus artışı, konut fiyatları ve yaşam kalitesi gibi kilit kentsel çıktılarının itici güçleridirler. Buna karşılık, “yeşil” şehirlerin bu temel bileşenleri, yaşanabilir ve dayanıklı şehirlerin belirlenmesinde de anahtar rol oynayan unsurlardır. Daha yeşil şehirler yalnızca LEED binaları, geçiş sistemleri, enerji kaynakları, yoğunluk planlaması ve bina kodlarından oluşmuyor. Yeşil şehirler aynı zamanda sağlıklı ve yaşanabilir şehirlerin temel itici güçlerinden bazıları için stratejilere değer veren ve bunları uygulayan şehirlerdir. Bu, farklılaşmamış yeşil alandan daha fazlasıdır. Parklar, sokak bitki örtüsü, doğal alanlar ve ekosistem hizmetleri için daha tutarlı ve bağlantılı planlamadır (Maddox, 2017).

6. SONUÇ

İklim değişikliği ve biyolojik çeşitlilik kaybı gibi küresel çevre sorunları ile ilgili politikaların uygulanmasında giderek daha önemli bir rol oynamaktadır. Yeşil ekonomi, Mega şehirlerin yeşil kimlik bilgilerini tanıtmaları için başka bir platform sağlıyor. Yeşil ekonomi, gelişmişlik düzeylerine ve mekansal organizasyonlarına bağlı olarak farklı şehirlerde farklı bir karaktere bürünecektir. Şehirlerin farklı zorluklarla karşı karşıya olduğunu kabul etmek önemlidir. Gelişmiş ülkelerdeki şehirler yeni işler ve endüstri yaratarak büyümeye çalışıyor. Afrika ve Asya şehirleri en yüksek büyüme oranlarından bazılarına sahiptir ve kalkınma yolları 21. Yüz yılda küresel kalkınma üzerinde çok önemli bir etkiye sahip olacaktır (Kennedy vd.,2013).

Yeşil bir şehri “tüm faaliyetlerinde enerji verimliliğini ve yenilenebilir enerjiyi teşvik eden, çevreci çözümleri kapsamlı bir şekilde destekleyen, planlama sistemlerinde karma arazi kullanımı ve sosyal karma uygulamaları ile arazi kompaktlığını uygulayan bir şehir, ve yerel gelişimini yeşil büyüme ve eşitlik ilkelerine bağlıyor.” Yeşil şehir, enerji verimliliğini temel bir özellik olarak içerir. Ayrıca, GSYİH'nın Yeşil Şehir performansı üzerinde olumlu bir etkisi olduğu, ayrıca nüfus büyüklüğünün olumsuz bir etkisi olduğu ve en etkili faktörlerin sanitasyon ve hava kalitesi olduğu kanıtlanmıştır (Brilhante ve Klaas, 2018).

Kamusal yeşil alan; Parklar ve plazalar gibi çekici kamusal alanlar, mahallelere bir kimlik ve topluluk duygusu sağlayarak bir şehre ekonomik ve kültürel zenginlik getirirken, aynı zamanda normal şehir yaşamının gürültüsünden bir çıkış noktası sunar (Kennan ve Busch, 2016).

Ekonomik büyümenin itici gücü olarak yeşil şehirler, önümüzdeki 30 yıl içinde dünya GSYİH'sının büyük bir kısmı şehirlere yatırılacaktır. Küresel yeşil geçiş için bu yatırımların sürdürülebilir çözümlerde olması çok önemlidir. Yeşil kentsel çözümlerin uygulanması, kısa geri ödeme süreleri ve yüksek yatırım getirisi (YG) olan güçlü iş durumları sunar (State of Green, 2011).

Şehirler ve kentsel alanlar, rakipsiz insan yoğunluklarını, ekonomik büyümeyi, ticari ağları ve yeniliği temsil eder ve düşük karbonlu bir dünyaya geçişe önemli bir katkı sağlama potansiyeline sahiptir. Başlangıç noktası, şehirlerin sürdürülebilir bir şekilde gelişmeye devam etmesini sağlayan çok seviyeli yönetim çözümlerini keşfetmek olabilir. Yeşil büyümeyi büyük ve küçük tüm şehirler için gerçeğe dönüştürmek için altta yatan sorunların üstesinden gelmek çok önemlidir. Kentsel altyapının direncini artırma konusunda yeşil büyümeyenin katkıları gereklidir. Ülkeler, iklim değişikliği, artan nüfus yoğunluğu ve kentsel yayılmanın çeşitli zorluklarıyla başa çıkmak için dayanıklı altyapı geliştirmeye yönelmelidir. Şehirlerin, belirli yerel koşulları dikkate alan bir yeşil büyüme modelini benimsemesi veya güçlendirmesi gerekir. Yeşil büyümeye önemli bir katkı sağlayabilecek yerel eylem fırsatları arazi kullanım düzenlemesi, vergilendirme, ulaşım, enerji verimliliği, atık, su yönetiminden kamu alımlarına kadar değişen kentsel yeşil büyüme politikalarının tasarlanmasını içerir (Skah, 2016).

Yeşil şehirler temiz havaya ve suya sahiptir. Temiz sokakları ve parklarıyla, Yeşil şehirler doğal afetler ve büyük bulaşıcı hastalık salgınlarına karşı dirençlidir (Kahn, 2006). Yeşil şehirler, çevre dostu şehirler olarak tanımlanıyor. Şehirlerin yeşillendirilmesi, aşağıdakilerden bazılarını veya tamamını kapsar: (1) hastalıklara karşı geliştirilen yeni teknolojiler; (2) kimyasal ve fiziksel tehlikelerin azaltılması; (3) herkes için yüksek kaliteli kentsel çevreler geliştirmek; (4) şehir dışındaki alanlara transferleri en aza indirmek ve çevresel maliyetleri azaltmak; ve (5) sürdürülebilir tüketime doğru ilerlemenin sağlanması (UNEP, 2011).

Yeşil kentsel alanlar biyolojik çeşitliliği ile ekonomik birimlerdir. Sağlıklı gıda üretimini ve talebi karşılamak için doğal kaynaklara ihtiyaç vardır. Yeşil Kent veya Yeşil Şehirler özel bir Sürdürülebilir kalkınma durumu olarak düşünülebilir.

Yöresel/Yerel, Bölgesel ve Geleneksel Tarım ve Gıda Ürünleri: Kavramlar ve Kapsamlar Üzerine Bir Değerlendirme

Prof. Dr. Nevin DEMİRBAŞ¹

¹ EÜ, Ziraat Fakültesi, Tarım Ekonomisi Bölümü, nevin.demirbas@ege.edu.tr, ORCID: 0000-0002-0541-1437

Özet: Yöresel/yerel, bölgesel ve geleneksel tarım ve gıda ürünleri, tarım ve gıda ürünleri üretimi içinde önemli bir yere sahiptir. Tüketicilerin farklı algılarla bu ürünlere yönelik tutum ve tercihleri de tüketim artışını motive etmektedir. Uluslararası literatür, söz konusu ürünlere tüketicinin verdiği desteğin, büyük ölçüde gıda güvenliği, kalite ve çevresel kaygılar gibi faktörlerle bağlantılı olduğunu ortaya koymaktadır. Tüketici beklentilerinin karşılanabilmesinin yanı sıra, yöresel/yerel, bölgesel ve geleneksel ürünlerin üretim ve ticaretinin artması için de bu ürünlere ilişkin Coğrafi İşaret (Ci) çalışmalarının yapılması önemli bir avantajdır. Ci uygulamalarının yanı sıra, üretimlerinin ve tüketimlerinin ekonomik ve sosyal sürdürülebilirliği amacıyla yapılan araştırmalar için de bu ürünlerin tanım ve kapsamlarının netleştirilmesi önemlidir. Bu çalışmada; yöresel/yerel, bölgesel ve geleneksel gıda ürünlerinin tanım ve kapsamı ile birbirleriyle olan ilişkileri, uluslararası literatürden yararlanılarak değerlendirilmiştir.

Anahtar kelimeler: Yöresel/Yerel Gıda, Geleneksel Tarım Ürünleri, Bölgesel Gıda, Etnik Gıda

Local, Regional and Traditional Agriculture and Food Products: An Evaluation on Concepts and Scopes

Abstract: Local, regional and traditional agricultural and food products have an important place in total agricultural and food products production. Consumers' attitudes and preferences towards these products with different perceptions also motivate the consumption increase. International literature reveals that consumer support for these products is largely related to factors such as food safety, quality and environmental concerns. It is an important advantage to carry out geographical indication studies in order to increase the production and trade of these products as well as meeting the expectations of the consumers. In addition to geographical indication applications, it is necessary to clarify the definitions and scopes of these products for researches conducted for the economic and social sustainability of their production and consumption. In this study, the definitions and scopes of local, regional and traditional agriculture and food products and their relations with each other are evaluated using international literature.

Key words: Local Food, Traditional Agricultural Products, Regional Food, Ethnic Food

1.GİRİŞ

Özellikle son yıllarda çeşitli motivasyonlarla küresel ölçekte ve bu arada Türkiye’de bölgesel, yöresel/yerel ve geleneksel ürünlere olan talep giderek artmaktadır (Katchova and Woods, 2012:4; Furman and Papavasiliou, 2018:1). Yerel üreticiler tarafından üretilen gıda ürünleri, tüketiciler tarafından “bölgesel” veya “ulusal” gıda ürünlerinden daha kaliteli, alışkanlıklarına ve gereksinimlerine daha uygun olarak algılanmaktadır (Pícha et al, 2018: 126-127; Moreno and Malone, 2020:3). Küresel trende uygun bir şekilde, bu tür ürünlerin üretim ve pazarlamasının ekonomik boyutu (Feldmann and Hamm, 2015:153) ve bu alanda kurulan işletmelerin ölçeği de giderek büyümektedir (Aggestam et al., 2017: 65). Türkiye özelinde mevcut tarımsal yapı ve kırsal alan dokusu, yöresel/yerel, bölgesel ve geleneksel tarım ve gıda ürünlerinin çeşitliliği açısından büyük bir potansiyele ve üretim gücüne (Kantaroğlu ve Demirbaş, 2018:516; Bilge ve ark., 2019:129) olanak tanımaktadır. Bu ürünlerin üretim miktarının artışı ve ticaretinin gelişimi için orijinlerini belirleyen ürün tescillerinin yapılması ve hem üretim hem de ticaret açısından mevzuata uyumunun sağlanması gereklidir. Ürünlerin gıda güvenliği ve kalitesi açısından izlenebilirliği (Kantaroğlu ve Demirbaş, 2019:500) kadar, bu gıdaların üretim ve ticaretinin sürdürülebilirliği farklı tanımlarla ele alınan söz konusu ürünlerin tanım ve kapsamlarının netleştirilmesini gerektirmektedir. Oysa, yöresel/yerel, bölgesel ve geleneksel tarım ve gıda ürünleriyle ilgili uzlaşılan bir kavram birliği olmaması (Meyerding et al.,2019:32), bu ürünlerle ilgili çalışmalar için ortak bir zemin oluşturmayı karmaşık ve bulanık bir hale getirmektedir. İşte bu amaçla bu çalışmada,

yöresel/yerel, bölgesel ve geleneksel tarım ve gıda ürünlerinin tanım ve kapsamı uluslararası ölçekte tartışılmıştır. Çalışma, Türkçe ve İngilizce yayınlardan yararlanılarak hazırlanan bir literatür araştırmasıdır.

2. YÖRESEL/YEREL, BÖLGESEL VE GELENEKSEL TARIM VE GIDA ÜRÜNLERİ: TANIMLAR VE KAPSAMLAR

2.1. Yöresel/Yerel Tarım ve Gıda Ürünlerinin Kapsamı ve Bölgesel Ürünlerle İlişkisi

Yöresel/yerel gıda, coğrafi açıdan bir bölge veya yöreye özgü olan, ün ve kalitelerini üretildikleri yörenin doğal koşulları ve bölgesel özelliklerinin oluşturduğu bilgi ve geleneklerden alan ürünler olarak tanımlanmaktadır (Schneider ve Ceritoğlu, 2010). Yerel yiyecek ve içecekler arasında taze "çiftlik kapısı" satış ürünleri, bölgesel markalı ve yerel olarak üretilen ürünler ve bir şekilde bölgeye özgü veya benzersiz olan yerel lezzetler yer almaktadır (Bilge ve ark., 2019: 128). Bu ürünler üretildikleri coğrafya parçasının hammadde, üretim girdileri ve işleme yöntemlerini kullanarak, bu alandaki ekonomik gelişme ile istihdamı teşvik etmektedir (Demirbaş ve ark., 2006:49).

Yöresel ürünlerden söz edildiğinde, yöreyi neyin belirlediğinin dikkate alınması önemlidir. Bu kapsamda ilginç ve öncelikli soru, yöre sınırlarının nasıl belirleneceğidir. Yöre terimi çok açık ve net bir kavram olarak görülebilir, ancak, yöresel ürünlerden söz edildiğinde, yöre terimi geniş bir karakteristikler yelpazesini kapsayabilir. Nitekim, bazılarında yöre çok küçük bir alan, örneğin, bir belediye ve onun çevresi olarak anlaşılmaktadır. Diğer yandan, bazıları yöreyi ülke sınırları çerçevesinde daha geniş bir perspektiften dikkate alabilmektedir. Bu bölge bir belediye, şehir ya da ekonomik bir alan olabilir. Bu tanım araziye dayalı durumu yansıtmaktadır ki buna göre, yöresel bir ürünün hem üretimi hem de tüketimi aynı alanda gerçekleşmektedir. Ancak, bu tanım "belirli alanın" ne kadar geniş olabileceğini net bir şekilde ortaya koyamamaktadır. İşte bu nedenle, yöresel gıdaların tanımı konusunda bir fikir birliği bulunmamaktadır. Kavram karmaşıktır ve amaca, coğrafyaya ve veri mevcudiyetine göre değişmektedir (Hughes et al., 2007:4; Martinez et al., 2010:3; Donkers, 2013:182; Donkers, 2015:106; Deller et al., 2017:4).

"Yöresel ve bölgesel gıda sistemleri", tarımsal üreticilerin, balıkçılar ve gıda üretimi, işleme, dağıtım ve satışıyla uğraşan paydaşların, tüketiciler ve kurumların bulunduğu yere özgü ekonomik faaliyet gruplarını ifade etmektedir. Her iki kavram da iyi tanımlanmadığından, yöresel ve bölgesel gıda sistemleri arasındaki ayrım da net değildir; bu nedenle, yöresel ve bölgesel gıdalar kavramları genellikle birbirinin yerine kullanılmaktadır (Low et al., 2015:1).

Coğrafi bir perspektiften yöresel ürün, ürünün spesifik bir yörede üretildiğini, aynı yörede aracıya ve tüketiciye ulaştırıldığını kabul etmektedir. Yani bu ürünler kısa arz zincirlerine konu olmaktadır (Donkers, 2013:182; Thilmany et al., 2020:2-3). Yöresel ürün üretimi belli bölgeleri oluşturmaya ve bu bölgelerin kimliğini belirlemeye daima sıkı bir şekilde bağlı olan tarım ve gıda gelenekleri ve kültürü kadar, belli hammaddeler, yemekler ve lezzetler gibi yöresel karakteristiklerin gerçeği ışığında desteklenmektedir. Bu nedenle, AB'de "Orijinin Korunmuş İsmi" (Protected Designation of Origin-PDO) ile işaretlenen ürünler (Official Journal(a), 1992) ve AB'ye uyum çerçevesinde Türkiye'de uygulanan "Menşe Adı" yöresel/yerel tarım ve gıda ürünlerini, AB'de "Korunmuş Coğrafi İşaret" (Protected Geographical Indication – PGI) ile anılan ürünler ve Türkiye'de uygulanan "Mahreç İşareti" ise bölgesel tarım ve gıda ürünleri için kullanılmaktadır (www.ci.gov.tr, 2021).

Guptill ve Wilkins (2002)'ye göre, iki çeşit yöresel ürün tanımlanabilmektedir. Bunlar; yöresel olarak üretilen ve sadece belirli spesifik bir alanda bulunabilenler, dolayısıyla tüketilebilenler ve sadece belli bir alanda işlenebilen ancak ulusal bir şekilde dağıtım yapılan ürünlerdir. Bu tanıma göre yöresel ürünler ve bölgesel ürünler kapsamı birbirine çok yaklaştırılmış olmaktadır.

Yöresel ürünlerle ilgili bir diğer yaklaşım mesafe ile ilgili değildir. Buna göre yöresel ürün üç özelliğe sahiptir. Bunlar;

Farklı ürün karakteristikleri;

Ürün karakteristikleri yöresel ürünlerin tadı, görünüşü ve onları yöresel olmayan ürünlerden ayıran diğer duyuşsal niteliklerini ifade etmektedir.

Ekolojik olarak taşınan özellikler;

Bu özellikler ürünün hammaddeleri ve üretim yöntemlerinin orijinini ifade etmektedir.

Sosyolojik açıdan taşınan özellikler;

Bu özellikler yöresel dağıtım ve kısa arz zincirleri ve üretim ölçeğine bağlı olmaktadır.

Yöresel ürünlerin üretimi özellikle küçük ölçekli gıda işleme firmalarına iş fırsatları sunmaktadır. Çiftçileri ise yeni gelir kaynakları için çiftlikte gıda işlemeye teşvik etmektedir. Çiftçiler işletme düzeyinde işlemenin derecesini artırmak suretiyle ürettikleri tarımsal ürünleri, gıda ürünleri formuna döndürerek, geleneksel dağıtım kanalları yerine daha endüstrileşmiş olanlara satarak ürünlerine daha iyi fiyat elde edebilmektedir. Bundan dolayı, yöresel hammadde üretimi ve gıda işleme, çiftçilere ve diğer küçük ölçekli gıda işleme firmalarına üretim ve pazarlama faaliyetlerinden daha fazla avantaj elde edilebildikleri stratejik bir değer durumunu da ifade etmektedir. Üstelik küçük ölçekli gıda işleme firmaları genellikle kırsal alanlarda lokalize olmaktadır (Donkers, 2014: 98). Belki de bu nedenle, yöresel ürün veya diğer alternatif tarım ve gıda maddelerine özel önem kazandıran unsur açık bir şekilde sosyolojik özellikler olabilmektedir. Bu yaklaşıma göre, yöresel ve bölgesel ürün ayrımı yapılamamaktadır. Oysa, bir gıda ürününün “Bölgesel” olarak adlandırılması için üretiminin belli bir bölgeyi işaret etmesi ve fakat, tüketiminin herhangi bir yerde gerçekleştirilebiliyor olması gerekmektedir.

Yöresel tarım ve gıda ürünlerinin tanım ve kapsamı ile ilgili yaklaşımların ve kriterlerin farklılığı nedeniyle üzerinde görüş birliğine varılmış tek bir tanıma ulaşılamamaktadır. Bunun yerine, yöresel ürün kavramının coğrafik, ekonomik, ekolojik ve sosyolojik gibi çoklu nitelikleri içine alabildiği ve gıda zincirlerindeki farklı aktörler tarafından farklı şekilde tanımlanabildiği görülmektedir. İngilizce literatürde yer verilen “Local” kelimesinin Türkçe karşılığının “Yerel” ya da “Yöresel” olarak kullanılabilmesi nedeniyle, bu iki kavramın birbiri yerine kullanılabilirdiği de belirtilmelidir.

2.2. Etnik Gıdalar Yöresel Gıda Kapsamında Değerlendirilebilir Mi?

Etnik gıda, etnik bir topluluğun sahip olduğu gelenek, örf ve adetlerini, buna bağlı olarak ürettikleri gıdalarda kullandıkları hammaddeleri ve bu gıdalara ekledikleri çeşni maddelerini, ilk ürettikleri şekle bağlı kalarak üretmeleridir. Etnik topluluklar tarafından üretilen bu gıdaların tümünün sadece bu topluluğu oluşturan bireyler arasında bilindiği ve üretiminin diğer nesillere iletilebilmesi için, toplulukta bulunan tecrübeli kişilerin bu gıdaların üretim yöntemlerini kendisinden sonra gelen kişilere öğretmesinin gerekli olduğu bildirilmektedir. İşte bu noktada, yöresel gıda ile etnik gıda kavramı benzerlikler göstermektedir. Çünkü etnik kökene sahip kişilerin genellikle aynı yörede yaşamaları, söz konusu bölgelerde üretilen yöresel gıdaların bir anlamda etnik kökenli olduğunu da ifade etmektedir (Kavas, 2000:70).

2.3. Geleneksel Gıda Ürünleri ile Yöresel ve Bölgesel Gıda Ürünleri Kavram ve Kapsamlarının Karşılaştırması

Geleneksel ürünlerin neden ve neye göre geleneksel sayıldığı Türkiye'nin uyum yükümlülüğünün bulunduğu AB'de, geleneksel tarım ürünleri ve gıdalar mevzuatıyla belirlenmiştir (Official Journal (b), 1992).

Buna göre; geleneksel tarım veya gıda ürünleri;

-geleneksel hammaddeler kullanılarak üretilen veya

-geleneksel bir kompozisyonla karakterize edilen veya

-bir üretim şekliyle ve/veya bir işleme yöntemiyle ve/veya geleneksel bir üretim tipini yansıtan işleme yöntemiyle karakterize edilen ürünlerden oluşmaktadır (Weichselbaum et al, 2009: 72-73). Buna göre,

mevzuat ürünün orijini yerine, geleneksel karakterini ya içerik ya da üretim yöntemi açısından vurgulamaktadır.

Diğer tarım ve gıda ürünlerinin tüketimi orijinal olarak üretildikleri coğrafi alanlarla sınırlı kalırken, geleneksel ürünlerin bazıları yaygın bir şekilde kabul görmüş ve popülariteleri ülkeden ülkeye yayılmıştır. Yöresel geleneklerin ve kültürel mirasın bir parçasını oluşturan geleneksel ürünler, küçük ve orta boy işletmelerde istihdam fırsatı yaratarak yöre ekonomisini teşvik etmektedir.

Geleneksel ürün açık ve tanımlanmış bir izlenebilirlikle, çiftlikte veya el emeğiyle üretilmiş, bazen sertifikalı bir üründür. Geleneksel ürünler kendilerine özgü niteliklere sahiptir ve pazardaki yeri diğer rekabetçi ürünler karşısındaki farklılığına bağlıdır. Geleneksel bir tarım ve gıda ürününün üretici oryantasyonlu olduğu ve üretildiği bölgenin dışına çok fazla gönderilmediği (Giraud, 2005:4) ancak, bu tür ürünlerden bazılarının yaygın bir şekilde kabul gördüğü ve popülaritelerinin uluslararası ticaretlerini motive ettiği belirtilmektedir (Weichselbaum et al, 2009: 71). Dikkat edilirse, tanımlarda coğrafi alan sınırlaması ve yöre/bölge esasına dayandırmaya sıkça rastlanmaktadır. Örneğin, yerel yönetim tarafından desteklenen yerel bir çiftçi pazarına vurgu yapılıyorsa, neyin yerel olduğunu belirlemek için ilçe uygun bir birim olabilmektedir (Hughes et al., 2007:5). İşte bu noktada yöresel ürünlerin tanımı da diğer tanım ve kapsamlara yaklaşmaktadır. Bu açıdan ele alındığında, “Bölgesel Özellikli Ürünler” in yöresel ürün kapsamına alınması önerilmektedir. Ancak, yöresel gıdaların, sadece yasa ve kurullarla düzenlenmekten uzak, karmaşık bir kavram olduğu da belirtilmektedir (Holt and Virginie, 2007). Örneğin, Türk Baklavası geleneksel gıda ürünlerinin en tipik örneklerinden biridir. Ancak, Antep Baklavası sadece geleneksel bir gıda ürünü değil, aynı zamanda AB nezdinde Coğrafi İşareti (Mahreç İşareti) tescillenmiş bölgesel bir gıda ürünüdür.

Aslında geleneksel gıdaların yöresel, bölgesel ve etnik gıdaları da kapsamına alan daha geniş bir yelpazeye sahip olduğu söylenebilir. Bununla birlikte, özel isimlerle adlandırılan bu ürünlerin her biri için literatürde üzerinde uzlaşmaya varılmış tek bir tanım da bulunmamaktadır. Nitekim, bazı özellikleri itibarıyla etnik ürünler, yöresel ve yöresel ürünlerin çoğu bölgesel özellikli ürün ve bunların tümü geleneksel ürün olabilmektedir.

3. SONUÇ VE ÖNERİLER

İnsan beslenmesinde kullanılan tarım ve gıda ürünlerinin ülkelere ve dolayısıyla bölgelere göre farklılık göstermesinde doğa koşulları, ekonomik koşullar ve toplumda yerleşik örf, adet ve gelenekler etkili olabilmektedir. Çeşitliliğin fazla oluşu ve sayılan faktörlerin etkisiyle tarım ve gıda ürünleri farklı gruplar altında sınıflandırılabilir. Literatür araştırması sonucu göstermiştir ki, tarım ve gıda ürünleri farklı isimlerle tanımlanabilmekte ve hukuki açıdan mevzuatla sınırları belirlenenler dışında kapsamlarını belirlemek karmaşaya neden olabilmektedir.

“Yöresel/yerel” ve hatta “bölgesel” olarak tanımlanan ürünlere ilişkin kesin tanımların olmaması, bu ürünlere ilişkin gıda sistemlerinin titiz nicel analizini zorlaştırmaktadır. Söz konusu ürünler coğrafi, ekolojik, sosyolojik ve ürün özelliklerine bağlı olarak farklı şekilde tanımlanabildiği gibi, yine benzer karakteristikleri nedeniyle ortak bir payda altında da toplanabilmektedir. Söz konusu ürünlerin tanımlanmasındaki belirsizliğin, araştırmacıların ve uygulayıcıların çalışmalarının ana odağına uyarlanmış birçok farklı tanım kullanmalarına yol açmaktadır. Teknik hazırlıkları yapılarak etiketlenen ürünler konusunda üretici, tüketici ve bu konuda çalışan araştırmacılar için çoğu zaman gölgede bir alan bulunmamaktadır. Bununla birlikte, bu kapsam dışında kalan tarım ve gıda ürünleri için de teknik çalışmaların yapılmalı ve CI uygulamalarının avantajlarından yararlanmalarını sağlayacak süreçler desteklenmelidir. Böylece, söz konusu ürünlerin üretim ve tüketim boyutlarında rol alan tüm paydaşların denetlenebilir, izlenebilir ve sürdürülebilir bir değer artışından yararlanabilmeleri ve ortaya çıkan değerini de adil bir şekilde paylaşılması sağlanabilecektir.

Abstract: In today's competitive environment, Corporate Social Responsibility (CSR) is very crucial for businesses both for a more ethical management and business understanding and for marketing activities. Developments in information and internet technologies have changed the way businesses communicate, provide information and connect. It's an undeniable fact that the current COVID-19 outbreak has further affected this situation. CSR and positive communication between employees are seen as an important factor for the success and sustainability of organizations. For this reason, in this study, it is aimed to examine the relationship between CSR and the Electronic Word of Mouth Communication (e-WOM) intention of employees and to determine whether the employment term has a significant effect on the e-WOM intention of the employees. The data were obtained from 246 employees of a maritime management organization in Turkey. As a result of this research, it was determined that there is a positive significant relationship between CSR activities for employees and e-WOM intention of employees. In addition, it was concluded that the duration of working on the e-WOM intention of the employees caused a significant difference.

Keywords: Maritime Business, Corporate Social Responsibility (CSR), Electronic Word of Mouth Communication (e-WOM),

1. INTRODUCTION

CSR, which is defined as a management concept, is defined as the process that includes the interactions of a company with all stakeholders, especially social and environmental concerns in commercial activities. Therefore, CSR is expressed as a concept that companies voluntarily integrate their social and environmental concerns into their business activities, together with their connections with their stakeholders (Ishak et al., 2016: 3). CSR includes economic, legal, ethical and charitable responsibilities of the corporate organizations. Economic responsibilities require satisfying consumers and stakeholders with values, and obeying laws while fulfilling legal responsibilities. Ethical responsibilities include behaviors that a business should comply with even if they are not included in the law, and charity includes material and moral contributions to society (Chang and Lee, 2020: 345). It is stated that businesses should adopt a holistic approach rather than a material approach in CSR activities and have a corporate strategic vision and management (Kim, 2013: 6). Also, it is underlined that CSR, which is a strategic management concept, can provide opportunities to businesses by using social, environmental or sustainability factors to create new products, services, processes and methods. Accordingly, it is advocated that companies should provide quality services and maximize stakeholder benefits in order to fulfill their social responsibilities (Chang and Lee, 2020: 343).

On the other hand, it is identified that WOM, which is perhaps one of the oldest informal ways of sharing ideas and experiences about products or services (Westbrook, 1987: 261), is highly effective on behaviors (Goyette et al., 2010: 6). Sharing ideas and experiences about products, services or companies via web-based platforms in the internet environment is defined as e-WOM (Hennig-Thurau et al., 2004: 38). With the technological developments, the importance of social media has increased. People communicate and interact in virtual environments. This situation increases the effectiveness of WOM and facilitates it (Vo et al., 2017: 525). As a result of developments in information and internet technologies, online social networks have substantially changed the way individuals or organizations communicate, provide information and connect with each other. Therefore, online social networks play a key role in managing the relationship between the organization and stakeholders. Realizing this, organizations have adopted virtual environments and online social networks as a tool to use them for various purposes such as strategic management and marketing, as in many areas (Cortado and

Chalmeta, 2016: 2). CSR is important to entities that create value in connection with social issues through products or services. Therefore, e-WOM, which is an effective source of information about service efficiency and innovation, attitude and behavior with new working methods, makes positive contributions to behavior. (Chang and Lee, 2020: 346). Considered as an important source of information in consumer behavior, WOM enables companies to spread their CSR activities from the most reliable sources to a wider audience as a result of technological possibilities. As a result of its dual communication capability, CSR activities on social platforms offer new communication opportunities to involve stakeholders in business organizations (Choi et al., 2019: 29).

Organizations are involved in CSR activities for various reasons. The philanthropy component, which is at the top level of Carroll's (1991) CSR Pyramid conceptual framework, expresses the contributions and activities of organizations in increasing the welfare of the society as corporate citizens (Türker and Altuntaş Vural, 2016: 149). Another reason for these activities is to promote the WOM intention (Vo et al., 2017: 52). There are studies regarding WOM of an organization's CSR activities (Skarmas and Leonidou 2013; Xie et al., 2015) and examining its effects on e-WOM. (Vo et al., 2017) in the literature. However, while CSR research includes activities related to prevention of environmental pollution, energy saving and green production / service, generally focuses on the institutional and organizational level, it seems that CSR does not attract much attention for employees (Hu et al., 2019: 129). In addition, maritime businesses consist of businesses that supply innovative products and services as well as traditional maritime activities. (Ishak et al., 2016: 3). Therefore, CSR activities of organizations have started to gain importance in the maritime sector in today's economic and social environment. For this reason, it is thought that the results of this research will contribute to both the maritime sector and the literature.

2. THE PURPOSE, MODEL AND HYPOTHESES OF THE RESEARCH

CSR and positive communication between employees are very important for the success and sustainability of organizations. It is also known in the literature that satisfaction and commitment have a positive effect on WOM intention. For this reason, in this research it was aimed to examine the relationship between CSR for employees and e-WOM intention of employees and to determine whether working time has a significant effect on employees' e-WOM intention or not. The model created in line with the purpose of the research is shown in Figure 1.

Figure 1: Research Model

In parallel with technological developments, organizations were carrying out some of their activities through digital channels. However, due to the COVID-19 epidemic experienced today, communication between most of the business activities and employees has started to take place through virtual environments. For those who work on social networking sites, it is stated that CSR communication helps employees increase their e-WOM intentions. Managers need to communicate about CSR engagement on digital platforms to positively influence employees' e-WOM behavior (Mobin et al., 2020: 941). Vo et al. (2017) found that a company improves the corporate image of CSR activities and this positively affects WOM. In this study, it is thought that CSR activities for employees may be related to positive e-WOM intention of employees. It is also expected that term of employment will cause a significant difference on the e-WOM intention of the employees. In this context, the following hypotheses have been determined.

H1: There is a significant positive correlation between CSR for employees and e-WOM intention of employees.

H2: Term of employment causes a significant difference on the e-WOM intention.

2. METHOD

In this research, a survey was conducted as a data collection tool. In order to ensure the validity and reliability of the study, firstly the literature was searched, and resources related to the subject were used in the design of the questionnaire form. As a result of the literature review, the CSR scale for employees was adapted from academic studies of Brown and Dacin, (1997), Klein and Dawar (2004) and the eWOM intention scale Zeithaml et al. (1996), Mobin et al., (2020). For organizations and businesses, the subject of CSR is getting more and more important gradually. In addition, WOM, which is the subject of a lot of research in the marketing literature and is extremely important for businesses, continues to increase its importance day by day as a result of technological developments. Although studies on both CSR and e-WOM have been carried out in the literature, it is seen that the studies on maritime management, which are vital in the economies of the countries, are extremely limited. For this reason, the sample of the study is an organization operating in the maritime sector in Turkey, and the main population is the employees of the concerned organization. Since it would be difficult and costly to reach the main population, the convenience sampling method was preferred in the study. The research data were obtained as a result of the electronic questionnaire applied to 246 employees with a 5-point Likert Scale between 28/02/2021 - 30/03/2021. The demographic characteristics of the participants are shown in Table 1.

Table 1: Demographic Information About Participants

Gender	F	%	Educational Status	F	%
Female	83	33.7	Elementary education	5	2.1
Male	163	66.3	High school	29	11.8
Term of employment (year)	F	%	College/University	175	71.1
1-5	98	39.8	Postgraduate	37	15
6-10	43	17.5	Age	F	%
11-15	50	20.3	18-26	40	16.3
16-19	44	17.9	27-35	104	42.3
20 and older	11	4.5	36-44	80	32.5
Marital Status	F	%	45 and older	22	8.9
Married	125	50.8	Total	246	100
Single	121	49.2			

As it is seen in Table 1, approximately 34% of the participants are women and 66% are men, and their marital status rates are close to each other. It is seen that 71% of the participants in the study are university graduates and the majority of the participants are between the ages of 27-44.

3. RESULTS

The research data were analyzed in IBM SPSS 24 package program and the reliability of the survey questions was tested with the Cronbach's Alpha coefficient. Cronbach's Alpha coefficients of CSR and e-WOM scales for the employees in the study were found to be 0.851 and 0.943, respectively. The fact that the alpha coefficient is in the range of 81% -100% indicates that the research is very reliable (Nakip, 2013: 205). Therefore, it is possible to say that this research is quite reliable. Principal components analysis and varimax transformation were used in factor analysis. The results are shown in Table 2.

Table 2: Results of Factor Analysis

Variable	Question	Factor Load	Eigenvalue	Total Variance%
CSR for employees	CSR1	0.768	5.695	56.945
	CSR2	0.842		
	CSR3	0.843		
	CSR4	0.640		
	CSR5	0.713		
e-WOM intention	eWOM1	0.855	1.603	72.976
	eWOM2	0.876		
	eWOM3	0.909		
	eWOM4	0.853		

	eWOM5	0.804
Kaiser Meyer Olkin (KMO)	0.884	
	Approx. Chi-Square:1855.194	
Bartlett's Test of Sphericity	df 45	
	Sig: 0.000	

Bartlett's sphericity test results in Table 2 show that there is a sufficient level of relationship between variables for factor analysis ($p < 0.05$). The KMO Sampling Adequacy Test is an index that compares the size of the partial correlation coefficients with the observed correlation coefficients and shows the suitability of the data set for factor analysis. Since the KMO value is 0.884, it is considered to be good (Kaiser, 1974:35). The total Eigen value of each variable used in the study is greater than 1 and is grouped under a single factor. Cumulative variance is over 70%. It is also seen that the factor load in each scale in the study is 0.50 and above.

3.1. Hypothesis Test Results

In the study, the relationships between CSR for employees, which is the independent variable, and the e-WOM intention of the employees with the dependent variable, and the direction of the relationships (H1) were examined by correlation analysis. In addition, the determination of whether the working time causes a significant difference on the e-WOM intention of the employees (H2) was tested with one-way ANOVA analysis. Analysis results are given in tables below.

Table 3: Results of Correlation Analysis

Mean	Standard Deviation	CSR for employees	e-WOM intention
4.33	0.704	CSR for employees	1
4.30	0.750	e-WOM intention	0.557*

* Correlation is significant at the 0.01 level

As it is seen in Table 3, a positive correlation at the level of 1% (0.557) was found between the variables as a result of the correlation analysis. Therefore, it can be said that the H1 hypothesis is accepted since there is a positive relationship between CSR for employees and e-WOM intention of employees.

Table 4: Results of Anova Test

Scale	Operation Time	N	Mean	Std. Deviation	Source	Sum of Squares	DF	Mean Square	F	p
e-WOM	1-5	98	4.4571	.85723	Between Groups	5.593	4	1.398	2.549	0.040
	6-10	43	4.2000	.56061						
	11-15	50	4.2080	.73508	Within Groups	132.210	241	.549		
	16-19	44	4.0773	.65870						
	20 and over	11	4.4182	.50955	Total	137.804	245			
	Total	246	4.2919	.74998						

Homogeneity of Variances = $p: 0.135$

In Table 4, it is seen that the p value in the variance homogeneity test is 0.135 ($p > 0.05$). The p value that indicates whether the difference between the working hours of the participants and the e-WOM intention is significant, was found to be 0.040 ($p < 0.05$). Therefore, it can be said that there is a significant difference between the employment term of the employees participating in the study and the e-WOM intention. Tukey test was conducted in order to indicate between which groups this significant difference was found and the results in Table 5 were obtained.

Table 5: Result of Tukey Test

Employment Term	Groups	Mean Difference	p	Difference Between Groups
1) 1-5	2 6-10	.25714	.321	(1-4)
	3 11-15	.24914	.301	
	4 16-19	.37987(*)	.040	
	5 20 and over	.03896	1.000	
4) 16-19	1 1-5	-.37987(*)	.040	(4-1)
	2 6-10	-.12273	.938	
	3 11-15	-.13073	.913	
	5 20 and over	-.34091	.650	

*. The mean difference is significant at the 0.05 level.

In Table 5, the results of the Tukey test, in which significant difference between term of employment of the participants and the e-WOM intention, are found. According to the p value ($p < 0.05$), which indicates whether the difference between the two working periods is significant or not, it can be said that there is a significant difference between 1-5 years and 16-19 years of employment term in the relevant organization. The average difference between 1-5 years and 16-19 years of employment term is 0.380.

4. CONCLUSION

Findings obtained in this study showed that there is a positive significant relationship between CSR activities for employees and e-WOM intention of employees. In addition, in this study, it was concluded that the term of the employment on the e-WOM intention of the employees caused a significant difference. As a result of the Tukey test conducted to determine between which groups there is a difference between the working time of the participants and the e-WOM intention is significant, it was found that there is a significant difference between 1-5 years and 16-19 years of working time. The effect of satisfaction and commitment variables on WOM intention is acknowledged in the literature (Godes and Mayzlin 2009; Akbari et al., 2016). In addition, it is also stated that there is a significant relationship between WOM behavior and interpersonal relationships between employees and customers (Gremler et al., 2001: 44). Therefore, in parallel with term of the employment, the relationship between organizational commitment and WOM intention helps to support the H2 hypothesis of this research.

In today's competitive environment CSR for employees, which is the most important resource of businesses and organizations, is of vital importance in terms of both more ethical management and trade understanding and its relationship with e-WOM, one of the basic variables of the marketing discipline. As a result of technological developments and changes in today's world, the maritime sector also benefits from digital technology devices and tries to continue certain activities through these technologies and channels. It can be said that communication and interaction between managers and employees in the business world also take place through virtual and digital environments. In this context, it is thought that the results of this research will provide information to managers in the maritime sector and contribute to future studies.

Özet: Türkiye'de coğrafi işaret tescili ile korunan yöresel ürün sayısı giderek artmaktadır. Bununla birlikte, yöresel ürünlere coğrafi işaret tescili alındıktan sonra işletmelerin pazarlama karması stratejilerini nasıl yönettiği konusunda yeterli bir bilgi söz konusu değildir. Bunun yanında, bu tescilli ürünlerin coğrafi işaret aldıktan sonra il ekonomisine sağladıkları katkı noktasında yeterince araştırma bulunmamaktadır. Bu çalışma ile bu sorulara yanıt verilmesi amaçlanmıştır. Bu amaçla Gümüşhane ilindeki coğrafi işaret tescilli ürünlerden birisi olan ve 2019 yılında tescil alan Kürtün Araköy Ekmeği örneği incelenmiştir. Bu çalışmanın birincil verileri Gümüşhane ili Kürtün ilçesi Araköy köyünde Kürtün Araköy Ekmeği üretimi yapan dokuz işletme ile gerçekleştirilen anket çalışmasından elde edilmiştir. Kürtün Araköy Ekmeği üreticilerinin ürün ile ilgili stratejileri CI almadan önceki durumdan pek farklılık göstermemektedir. Ürünün kalitesi ve CI'li olma avantajı markalaşma fırsatına dönüştürülemediği. CI etiketli Kürtün Araköy Ekmeğinin fiyatı CI'li olmayan klasik bir ekmeğe göre %14.29 daha fazladır. Ürünün kalitesi ve yüksek maliyeti göz önüne alındığında bu fiyat primi oldukça yetersizdir. Üreticilerin Kürtün Araköy Ekmeği satışında farklı dağıtım kanallarına yönelmediği, bunun yerine çoğunlukla semt pazarlarında veya kendi satış noktalarında doğrudan satış yaptığı saptanmıştır. Üreticilerin dar bir dağıtım kanalını tercih etmesi ürünleri için daha yüksek fiyat elde etme olasılığını oldukça azaltmaktadır. Üreticiler Kürtün Araköy Ekmeği satışlarında tutundurma aracı olarak sadece doğrudan pazarlamayı tercih etmektedir. Ürünü müşterilere tattırarak ekmeğin lezzet kalitesinin viral olarak yayılma beklentisi tutundurmada üreticilerin pek çaba göstermediğini ortaya koymaktadır. Kürtün Araköy Ekmeği üreticilerinin pazarlama karması unsurlarına yönelik analizler üreticilerin pazarlama noktasında desteklenmeleri gerektiği konusunda bir mesaj vermektedir.

Anahtar Kelimeler: Coğrafi İşaretli Ürün, Pazarlama Karması, Gümüşhane, Kürtün Araköy Ekmeği

Marketing Mix (4p's) Analysis of Geographically Indicated Products: The Case of Gümüşhane Kürtün Araköy Bread

Abstract: The number of local products protected by geographical indication is gradually increasing in Turkey. However, there is not enough information about how businesses manage their marketing mix strategies after the geographical indication. In addition, there is not enough study about the contribution of these registered products to the provincial economy after obtaining a geographical indication. This study has aimed to answer these questions. For this purpose, the sample of Kürtün Araköy Bread, which is one of the registered products in the province of Gümüşhane and registered in 2019, was examined. The primary data of this study were obtained from a survey conducted with nine producers who produce Kürtün Araköy Bread in the village of Araköy, in the district of Kürtün in Gümüşhane. The product-related strategies of the Kürtün Araköy Bread producers do not differ much from the situation before they received GI labelled. The quality of the product and the advantage of having a GI could not be transformed into a brand opportunity. The price of Kürtün Araköy Bread with CI is 14.29% higher than traditional bread. Considering the quality and high cost of the product, this price premium is quite insufficient. It has been determined that the producers do not use different distribution channels in the sale of Kürtün Araköy Bread, instead they mostly sell directly in the near markets or at their own sales points. The fact that producers prefer a narrow distribution channel considerably reduces the possibility of obtaining a higher price for their products. Producers prefer only direct marketing as a promotion tool in their sales of Kürtün Araköy Bread. The expectation that the flavor quality of the bread will spread virally by tasting the product to the customers reveals that the producers do not make much effort in promoting it. The analysis of the marketing mix elements of the Kürtün Araköy Bread producers gives a message that the producers should be supported at the point of marketing.

Key Words: Geographically Indicated Product, Marketing Mix, Gümüşhane, Kürtün Araköy Bread

1. GİRİŞ

Yöresel ürünlerin küçük işletmeler tarafından yoğun teknoloji kullanmadan üretilmesi; tarım alanlarının korunması bakımından gerekli olduğu kadar tüketicilerin daha sağlıklı ve doğal olan bu ürünleri tüketme istekliliğinde son derece etkili olduğu bilinmektedir (Kupke ve Page, 2015: 62). Yöresel ürünlere ilginin artması kırsal turizmin gelişmesinde itici bir güç olarak değerlendirilmektedir (Bahar vd., 2019:2). Nitekim yerel değerler turistler için gidilecek yer seçiminde etkili bir unsur olarak görülmektedir (Şen ve Ekinci, 2020: 33). Günümüzde turizm bölgelerinin kalkınmasında olduğu gibi şehirlerin kimliklerini oluşturan unsurların pazarlanmasında da tescilli yöresel ürünler etkin bir araç olarak kullanılmaktadır (Sarıipek ve Çevik, 2020: 4909).

Ürünün sahip olduğu karakteristik özelliklerin ve kalitenin üretildiği bölgeye has olması coğrafi işaretlerin (Ci) temel özelliğini oluşturmaktadır. Sınai Mülkiyet Kanununun 34. maddesi gereğince coğrafi işaret; belirgin bir niteliği, ünü veya diğer özellikleri bakımından kökenin bulunduğu yöre, alan, bölge veya ülke ile özdeşleşmiş ürünü gösteren işarettir ve bu işaretler, menşe ya da mahreç işareti olarak tescil edilmektedir. Gıda, tarım, maden, el sanatları, sanayi ürünleri coğrafi işaret tesciline konu olabilmektedir (Türk Patent ve Marka Kurumu, 2021). Coğrafi işaretlerin ürünün hukuksal olarak mülkiyet hakkının korunmasını sağlayarak hem üretici hem de tüketici açısından bazı avantajlar sağladığı bilinmektedir. Üretilen ürün üzerinde Ci bulunması kısmen de olsa, değişen küresel pazar koşullarında; ürünün rekabet gücü, bilinirliği, özgünlüğü artırılarak üreticiye gelir kazancı tüketici için de ürünün belli standartlarda üretildiği garanti edilmiş olunur. Özellikle küresel rekabette ekonominin dinamiğini oluşturan fiziksel sermaye yatırımları kadar bilgiye yapılan yatırımlarda önem arz etmektedir. Bu bağlamda gerek ulusal gerekse uluslararası ekonomilerde yöresel ürünler hakkında bilgi veren coğrafi işaretlerin önemi günden güne artmaktadır. Coğrafi işaretli yöresel ürünlerin üretiminde kullanılan girdilerin, üretimin yapıldığı yerel kaynaklardan sağlanması, ürün kalitesinde istenilen standardın yakalanabilmesi için ilgili kamu otoriteleri tarafından kontrol edilmesi şüphesiz ki üretici ve tüketici nezdinde güven esaslı bir iletişim sağlamaktadır.

Ci, tüketiciler için ürün güvenliği sağlarken, üreticiler için de bir pazarlama aracıdır. Ci aynı zamanda kırsal kalkınma kullanılan etkili bir araç olarak görülmektedir (Dogan ve Gokovali, 2012: 762). Vorotnikov ve ark. (2017:97), coğrafi işaretli ürünlerin ticari olarak yöre ekonomisine kazandırılmasını ve pazarının yaygınlaştırılmasını vurgulayarak, tescilli ürün üreten üreticilerin coğrafi işaretleri fırsat aracı olarak nitelendirmeleri gerektiğini belirtmektedir. Türkiye'nin konumu, iklimi, nüfusu, kültür zenginliği, yöresel ürün çeşitliliği gibi avantajları ve kırsal kalkınmada bu avantajların kullanılma imkânı bölgelerin güçlü yanlarını işaret etmektedir. Fakat sağlanan avantajlı koşullara rağmen Türkiye'de 477 ürüne Ci tescili alınmış ve 164 ürünün tescil işlemi devam etmektedir. Tescil ettirilen yöresel ürünlerin %26.5'ini işlenmiş ve işlenmemiş meyve ve sebzeler, %20.3'ünü yemekler ve çorbalar ve %15.2'sini ise fırıncılık ve pastacılık ürünleri oluşturmaktadır (Türk Patent ve Marka Kurumu, 2021).

Yukarıda da belirtildiği gibi, Türkiye'de coğrafi işaret tescili ile korunan yöresel ürün sayısı giderek artmaktadır. Bununla birlikte, yöresel ürünlere coğrafi işaret tescili alındıktan sonra işletmelerin pazarlama karması stratejilerini nasıl yönettiği konusunda yeterli bir bilgi söz konusu değildir. Bunun yanında, bu tescilli ürünlerin coğrafi işaret aldıktan sonra il ekonomisine sağladıkları katkı noktasında yeterince araştırma bulunmamaktadır. Bu çalışma ile bu sorulara yanıt verilmesi amaçlanmıştır. Bu amaçla Gümüşhane ilindeki coğrafi işaret tescilli ürünlerden birisi olan ve 2019 yılında tescil alan Kürtün Araköy Ekmeği örneği incelenmiştir. Kürtün Araköy ekmeği, Gümüşhane ili Kürtün ilçesi Araköy köyünde yüzlerce yıldır üretilen, geleneksel bir ekmektir. Gümüşhane Ticaret ve Sanayi Odası tarafından tescil ettirilen Kürtün Araköy ekmeğinin üretiminde un, su, ekşi maya ve kaya tuzu kullanılmaktadır. Türk Patent ve Marka Kurumu (2019), Kürtün Araköy ekmeğini 3,5- 5 kg ağırlığında, 13-18 cm yüksekliğinde ve yuvarlak şekilde olarak tanımlamaktadır. Ekmeğin en önemli özelliği; maya olarak bir önceki hamurdan ayrılarak saklanan ekşi hamurdur. Bunun haricinde hiçbir katkı maddesi kullanılmamaktadır. Ekmeğin diğer bir ayırt edici özelliği de üretim sürecinin uzun olmasıdır. Fermantasyon süresi dört saat olup, odun ateşi ile yakılan fırınlarda dört saatte pişirilmektedir. Fırından çıkan ekmekler dört saat dinlendirildikten sonra pazara sunulmaktadır. Uzun zaman alan üretim süreci nedeni ile taze raf ömrü iki ay, donmuş olarak ise altı aydır. Yöresel ürün pazarlanmasında avantaj ve üstünlük konusu olabilecek Kürtün Araköy Ekmeği bu durumda özel bir statü kazanmaktadır. Ekmeğin coğrafi işaret almış olması ile

yerel bilgi ve kültür de aynı zamanda korunmuş olmaktadır. Gümüşhane’de Kürtün Araköy Ekmeği, ürettiğini kendisi satan mikro işletmeler tarafından gerçekleştirilme olup, bu sınıflamadaki işletmeler için en önemli sorun pazarlama olarak görülmektedir (Gelibolu, 2009:155).

2. MATERYAL VE YÖNTEM

Bu çalışmanın birincil verileri Gümüşhane ili Kürtün ilçesi Araköy köyünde Kürtün Araköy Ekmeği üretimi yapan dokuz işletme ile gerçekleştirilen anket çalışmasından elde edilmiştir. Bu işletmelerden altısı sadece Araköy köyünde faaliyet gösteren üreticilerdir. Geri kalan işletmeler ise hem Araköy köyünde hem de Gümüşhane il merkezinde veya Kürtün ilçesinde satış noktası bulunan üreticilerden oluşmaktadır. Üreticilerin tamamı doğrudan tüketiciye satış seçeneğini kullanmaktadır. Anket çalışması 2021 yılı Mayıs ayında yapılmıştır. Üreticiler ile görüşmeler sosyal mesafe kuralına uyularak yüz yüze gerçekleştirilmiştir. Üretici sayısının sınırlı olmasından dolayı örneklem büyüklüğü belirlenmemiş ve tüm üreticilerle görüşülerek “tam sayım” yöntemi uygulanmıştır. Araştırmada, “yapılandırılmış anket yöntemi” kullanılmıştır. Bu çalışmanın verilerinin elde edilmesinde kullanılan anket formu beş bölümden oluşmaktadır. Birinci bölümde, Kürtün Araköy Ekmeği üretimi ile ilgili genel sorular yer alırken, diğer bölümlerde ise ürün, fiyatlandırma, dağıtım ve tutundurma olmak üzere dört pazarlaması karması unsuru ile ilgili sorulara yer verilmiştir.

Kürtün Araköy Ekmeği üreticilerinin pazarlama karması stratejileri her bir pazarlama karması unsuru kapsamında yöneltilen önermeler ile ortaya konulmuştur. Katılımcıların önermelere verdiği yanıtlarda 5’li likert ölçeği kullanılmıştır. Pazarlama karması analizi pazarlama bileşenleri olarak da ifade edilen ürün, fiyat, dağıtım ve tutundurma kapsamında gerçekleştirilmiştir. İşletmelerin ürün stratejileri hammadde temini ve maliyeti, ürün kalitesi, ambalajlama, ürün farklılaştırması ve markalaşma çerçevesinde analiz edilmiştir. İşletmelerin fiyat ile ilgili stratejileri ise Kürtün Araköy Ekmeğinde üreticilerin Cİ’li olmayan klasik tarzda üretilen bir ekmeğe göre (1 kg için) elde ettiği fiyat primi hesaplanarak değerlendirilmiştir. Fiyat primi aşağıda gösterilen formül (1) kullanılarak hesaplanmıştır (Jantıyk ve Török, 2020: 4).

$$Fiyat\ primi\ (\%) = \frac{\text{Ürün Fiyatı}_{ci'li} - \text{Ürün Fiyatı}_{ci'siz}}{\text{Ürün Fiyatı}_{ci'siz}} \times 100 \quad (1)$$

İşletmelerin dağıtım ile ilgili stratejileri, Kürtün Araköy Ekmeğinin olası dağıtım kanalları çerçevesinde incelenmiştir. Bu kapsamda; semt pazarları, üreticilerin kendi perakende satış yerleri, küçük perakendeciler (bakkal, yöresel mağaza, vb.), büyük perakendeciler (zincir marketler, vb.), distribütörler ve e-ticaret seçenekleri göz önüne alınmıştır. İşletmelerin Kürtün Araköy Ekmeği için uyguladıkları tutundurma stratejileri ise reklam, satışta özendirme, halkla ilişkiler, kişisel satış ve doğrudan pazarlama gibi çeşitli araçları kullanım durumuna göre analiz edilmiştir.

3. ARAŞTIRMA BULGULARI

3.1. Ürüne Yönelik Stratejiler

Kürtün Araköy Ekmeği üretimi yapan işletmelerin ürüne yönelik stratejileri tüm ürün kavramı kapsamında incelenmiştir. Nakip ve ark. (2012), tüm ürün kavramını bir ürünün fiziksel ve fiziksel olmayan işlevlerinin birlikte olması olarak tanımlamaktadır. Mucuk (2010) ise mamulün fiziksel varlığına üretici veya perakendeci tarafından sağlanan teslim, kredi, satış sonrası hizmet, montaj, garanti, marka adı, özellikler, kalite düzeyi, tasarım ve ambalajlama gibi çeşitli özellikler eklendiğinde tüm ürün kavramının elde edildiğini belirtmektedir. Tüm ürün kavramının içeriği göz önüne alınarak Kürtün Araköy Ekmeğine yönelik işletmelerin ürün stratejileri hammadde temini ve maliyeti, ürün kalitesi, ambalajlama, ürün farklılaştırması ve markalaşma çerçevesinde analiz edilmiştir. Bu amaçla üreticilere çeşitli önermeler yöneltilmiştir. Önermelere verilen yanıtların likert ölçek ortalamaları Tablo 1’de gösterilmiştir.

Üreticilerin, “hammadde temininde sorun yaşanmaktadır” önermesine “çok az” düzeyde katıldıkları belirlenmiştir. Ürünün üretilmesinde kullanılan tam buğday ununun arzının diğer buğday unlarına göre biraz daha az olmasından kaynaklı belirli dönemlerde az da olsa üreticilerin sorun yaşadıkları gözlemlenmiştir. Üreticiler “hammadde maliyeti diğer yöresel ekmeklere göre yüksektir” önermesine ise “kısmen (orta düzeye yakın)” katıldıklarını bildirmiştir. Ekmek yapımında birinci sınıf tam buğday unu kullanılması ve ekmeğin en az dört saat gibi uzun bir süre taş fırında pişirilmesinden dolayı odun masrafının biraz yüksek olması bunun nedeni olarak belirtilmiştir.

Üreticilerin ürün kalitesi ile ilgili önermelere verdiği yanıtlar, üretilen Kürtün Araköy Ekmeğinin kalitesine dair bir güven problemi yaşanmadığını göstermektedir. Üreticiler Cİ’li Kürtün Araköy Ekmeğinin kalite açısından hem diğer yöresel ekmeklerden hem de Cİ’li (mahreç işaretli) Gümüşhane ekmeğinden farklı olduğu konusunda neredeyse hem fikirdir. Gümüşhane ilinde Kürtün Araköy Ekmeği yanında Gümüşhane ekmeği olarak ifade edilen ikinci bir Cİ’li ekmek daha vardır. Gümüşhane ekmeği, Gümüşhane İl Özel İdaresi tarafından 2017 yılında tescil ettirilmiştir. Türk Patent ve Marka Kurumu (2017), Gümüşhane ekmeğini; ekmeklik buğday ununun, su, yaş ekmek mayası ve %15-30 ekşi hamurla karıştırılmasıyla yapılan bir ekmek olarak tanımlamaktadır. Üreticilere göre, kalite açısından Kürtün Araköy Ekmeği, Cİ almış Gümüşhane ekmeği ile yüksek derecede (4.89) rekabet edebilecek düzeydedir. Cİ’li Kürtün Araköy Ekmeği üreticileri, ürünün kalitesinin yapım sürecinde kullanılan ekşi mayadan, yüksek kaliteli tam buğday unundan, uzun bir pişirme süresinden ve pişirildikten sonra uzun bir bekleme süresinden kaynaklandığını ifade etmişlerdir. Bununla birlikte, Araköy’de yapılan ekmek üretiminde sadece kaynak suyu kullandıklarını ve bunun da ekmek kalitesini iyi yönde etkilediğini belirtmişlerdir.

Üreticilerin ürünlerini Cİ etiketi ile ambalajlı olarak piyasaya sunmadıklarına dair önermeye önemli ölçüde katıldıkları (4.33) anlaşılmaktadır. Üreticiler fırından çıkan ekmekleri en az dört saat olmak şartıyla fırının başka bir bölümünde dinlendirmektedirler. Üreticilerin ifadelerine göre ürünü uzun süre ambalajda tutmak ürünün kalitesini etkileyebilmektedir. Bu nedenle ürün sadece streç filmlere sarılarak satılmaktadır.

Cİ’li Kürtün Araköy Ekmeği üreticilerinin rakiplerine karşı üstünlük elde etmek için ürünlerinde çok az derecede farklılaştırma yaptıkları gözlemlenmiştir. Ürün pazara 3-6 kg arasında sunulmaktadır. Üretici ifadelerine göre; ilgili ağırlık haricinde ürün satışı yapmak ürünün ayırt edici özellikleri ile uyumsuzdur. Bu yüzden, ürün kalitesine duyulan güvenden dolayı, ürünü farklı gramajlarda piyasaya sürmek ya da paketlemek gibi çeşitlendirmelere ihtiyaç duymadıkları görülmektedir. Bir ürünün üretildiği yeri gösteren etiketler üretici ile tüketici arasında güveni sağlayabilmektedir. Bu bağlamda, coğrafi işaret etiketinin ürüne özel bir statü sağladığı düşünülmektedir. Her ne kadar üreticiler, yöresel ürünlerin farklılaşmasına Cİ işaretinin önemli katkı sağladığı önermesine orta derecede katıldıklarını (2.67) belirtmiş olsalar da Kürtün Araköy Ekmeği için Cİ tescili alınmasının ürünün markalaşmasına ve satış miktarını artırmasına yönelik önermelere çok az katıldıkları görülmüştür. Bu bulgulardan yola çıkarak; Cİ tescili almış Kürtün Araköy Ekmeği’nin üretici nezdinde özel bir statü kazanmadığı anlaşılmaktadır. Oysaki, bir ürünün yöresel kaynağını gösteren işaretler, ürünün marka değerini artırmada etkin olarak kullanılabilen bir araçtır. Araştırma kapsamına alınan üreticiler, ürettikleri ürünün ayırt edici özelliklerini benimsemiş olsalar dahi Cİ etiketini nasıl etkin bir şekilde pazarlamaya yönelik kullanabileceklerini bilmedikleri anlaşılmaktadır. Hâlbuki ürünün, yöresel olarak Cİ aracılığı ile farklılaştırılması, bir tekel gücü oluşturabilmekte ve bu ürünü üreten işletmeleri büyütebilmektedir (Köksal, 2014: 162).

Tablo 1: Kürtün Araköy Ekmeği Üretimi Yapan İşletmelerin Ürünle İlgili Önermelere Katılma Düzeyi

Önermeler	\bar{x}	Std. Sapma
Hammadde temininde sorun yaşanmaktadır.	2.11	.7817
Hammadde maliyeti diğer yöresel ekmeklere göre yüksektir.	2.67	.8660
Cİ’li Kürtün Araköy Ekmeği kalite açısından diğer yöresel ekmeklerden farklıdır.	4.78	.4410
Cİ’li Kürtün Araköy Ekmeği kalite açısından Cİ almış Gümüşhane ekmeğinden farklıdır.	4.78	.4410
Kalite açısından Kürtün Araköy Ekmeği, Cİ almış Gümüşhane ekmeği ile rekabet edebilir.	4.89	.3333
Kürtün Araköy Ekmeği üreticileri ürünlerini Cİ etiketi ile ambalajlı olarak	4.33	1.0000

piyasaya sürmemektedir.		
Rakilere karşı ürün farklılaştırılması yapılmaktadır.	1.56	.7265
Yöresel ürünlerin farklılaşmasına Cİ işareti önemli katkı sağlamaktadır.	2.67	.5000
Kürtün Araköy Ekmeği için Cİ tescili alınması, ürünün markalaşmasına katkıda bulunmuştur.	2.44	.8819
Marka değeri satış miktarını artırmıştır.	1.89	1.0541

\bar{x} : likert ölçek ortalaması: 1) hiç katılmıyorum; 5) kesinlikle katılıyorum

3.2. Fiyata Yönelik Stratejiler

Üreticilerin net gelirini artırmak coğrafi işaretli ürün politikasının önemli bir amacıdır. Üreticilerin net gelirini artırmak için de Cİ'li ürünler için yüksek fiyat elde etmek gerekmektedir. Bu ürünlerin kalitesinin yüksek olması ise yüksek fiyat elde etmek için önemli bir fırsat sunmaktadır. Bununla birlikte, Cİ'li ürünlerde yüksek kaliteyi sağlamak için katlanılan maliyetler oldukça yüksektir. Bu nedenle Cİ'li ürünlerde ikamesi olan benzer nitelikteki Cİ'li olmayan ürünlere göre daha yüksek fiyat elde etmesi oldukça önemli görülmektedir. Macaristan'da yapılan bir çalışmada Cİ'li gıdaların fiyatının Cİ'li olmayanlara göre ortalama %43 daha yüksek olduğu belirlenmiştir. Diğer bazı ülkelerde Cİ'li gıda ürünlerin ortalama fiyat primi sırasıyla; Yunanistan'da %55, Almanya'da %47 ve İtalya'da %19 bulunmuştur (Jantyyk ve Török, 2020: 11).

Kürtün Araköy Ekmeğinde üreticilerin Cİ'li olmayan klasik tarzda üretilen bir ekmeğe göre elde ettiği fiyat primini belirlemek için Tablo 2 hazırlanmıştır. Tablo 2'de Kürtün Araköy ekmeği yanında diğer ikame ürünlerin fiyatları sunulmuştur. İkame ürünler Cİ'li Gümüşhane ekmeği ile Cİ'li olmayan benzer ağırlıktaki klasik bir ekmeği içermektedir. Elde edilen veriler incelendiğinde; 1 kg ekmeğin fiyatı Cİ etiketli Kürtün Araköy Ekmeği için 8 TL, Cİ etiketli Gümüşhane Ekmeği için 7.50 TL ve Cİ etiketli olmayan klasik tipteki bir ekmeğin fiyatı 7 TL'dir. Bu veriler çerçevesinde, Cİ etiketli Kürtün Araköy Ekmeğinin fiyatı Cİ'li olmayan klasik bir ekmeğe göre %14.29 daha fazladır. Cİ etiketli Gümüşhane Ekmeği ise Cİ'li olmayan klasik bir ekmeğe göre %7.14 oranında fiyat olarak daha yüksektir. Gerek Kürtün Araköy gerekse de Gümüşhane ekmeği için hesaplanan fiyat primleri ürünlerin Cİ'li olmasının fiyat açısından üreticilere pek avantaj sağlamadığını göstermektedir. Nitekim, ürünlerin Cİ'li olması nedeniyle üretim maliyetleri klasik ekmeğe göre daha yüksektir. Kürtün Araköy Ekmeği üreticileri Esnaf ve Sanatkarlar Odasının maliyete göre belirlediği fiyattan ürünlerini pazara sunduklarını belirtmişlerdir. Ayrıca, üreticiler, Kürtün Araköy Ekmeği imalatının diğer ekmeğe göre az da olsa daha maliyetli olduğunu ifade etmişlerdir. Ekmeğin hazırlanış, pişme ve bekleme süresinin diğer ekmeğe göre çok daha uzun olmasının maliyetleri artıran bir faktör olduğuna dikkat çekilmiştir.

Tablo 2: Kürtün Araköy Ekmeği ile Diğer İkame Ürünlerin Satış Fiyatları (2021)

Ürünler	Ortalama Satış Fiyatı (TL/kg)	Cİ'li Olmayan Ekmeğe Göre Fiyat Primi (%)
Kürtün Araköy Ekmeği (Cİ etiketli)	8.00	14.29
Gümüşhane Ekmeği (Cİ etiketli)	7.50	7.14
Bölgede üretilen klasik tipteki bir ekmeğin (Cİ etiketli değil)	7.00	-

Kaynak: Kürtün Araköy Ekmeği ve Gümüşhane Ekmeği üreticileri ile yapılan görüşmelerden elde edilmiştir.

3.3. Dağıtım Yönelik Stratejiler

Dağıtım kanalı, üreticiler tarafından üretilen ve tüketiciler tarafından talep edilen mal ve hizmetlerin, üreticiler tarafından doğrudan veya toptancılar ve perakendeciler gibi çeşitli araçlar yoluyla tüketicilere istedikleri yer, zaman, miktar ve kalitede ulaştırılması için yapılan tüm faaliyetleri kapsayan bir yapı olarak tanımlanmaktadır (Nakip vd., 2012:178). Önceki çalışmalar Cİ'li ürünlerin farklı ülkelerde farklı dağıtım kanalları ile pazarlandığını göstermektedir. Cİ'li ürünler yüksek yoğunluklu tedarik zincirlerine sahip ülkelerde (örn. Birleşik Krallık) perakendeciler ve süpermarketler aracılığıyla pazara arz edilmektedir. Cİ'li ürünlerin ağırlıklı olduğu ülkelerde (örn. İtalya, Fransa'nın bazı kısımları) ise, bu ürünler

yerel pazarlar, doğrudan satışlar ve özel satış mağazaları (veya noktaları) ile pazarlanmaktadır (Rangnekar, 2004:7).

Tablo 3'te Kürtün Araköy Ekmeği üreticilerinin dağıtım kanalları gösterilmiştir. Üreticilerin Kürtün Araköy Ekmeği satışında en sık kullandığı dağıtım kanalının semt pazarları olduğu görülmektedir. Üreticilerin tamamının Kürtün Araköy Ekmeği satışında semt pazarlarında sürekli satış yaptıkları ortaya konulmuştur. Üreticilerin bu kanalı tercih etme nedeni semt pazarlarının tüketiciler için kolay ulaşılabilir olmasıdır. Üreticiler, Kürtün Araköy Ekmeği ile ilgili yeterli bilgiye sahip tüketicilere ulaşmada semt pazarlarının önemli bir kolaylık sağladığını vurgulamıştır. Ayrıca, üreticiler semt pazarlarında tüketiciler ile birebir iletişimin ürün tanıtımında çok etkili olduğunu ve tüketicilerin ürünü tatma imkânları ile satışta özendirme yöntemini etkili kullanabildiklerini belirtmişlerdir.

Söz konusu üreticiler içerisinde sadece üç tanesinin kendi perakende satış noktalarından doğrudan tüketicilere satış yaptıkları saptanmıştır. Tablo 3'te verilen bulgulara istinaden, üreticilerin mevcut geleneksel dağıtım kanalından ziyade pazarda büyümelerini sağlayacak diğer alternatif dağıtım kanallarını kullanmasının önemli olduğu düşünülmektedir. Nitekim, üreticilerin dağıtım kanalı olarak önemli düzeyde semt pazarlarını kullanmaları yeni pazar alanları (örn. e-ticaret) ile ilgili yeterli bilgi düzeyine sahip olmadıklarını göstermektedir.

Tablo 3: Kürtün Araköy Ekmeği Üreticilerinin Dağıtım Kanalları

Dağıtım Kanalları	\bar{x}	Std. Sapma
Semt pazarlarına satış	5,00	0,0000
Kendi perakende satış yerlerinden satış doğrudan tüketicilere satış	2,56	1,5899
Küçük perakendecilere satış (bakka, yöresel mağaza, vb.)	2,00	1,5811
İnternet üzerinden kendi web sitesi üzerinden satış	1,67	1,4142
Anlaştığı distribütörler kanalı ile satış	1,22	0,6667
Büyük e-ticaret siteleri kanalı ile satış	1,22	0,6667
Büyük perakendecilere satış (zincir marketler, vb.)	1,00	0,0000

\bar{x} : likert ölçek ortalaması: 1) hiç satış yapmıyor; 5)Sürekli veya çok sık düzeyde satış yapıyor.

3.4. Tutundurmaya Yönelik Stratejiler

Pazarlama iletişimi olarak da ifade edilen tutundurma faaliyetlerinin tamamı pazarlamanın satış artırıcı birer çabası olarak tanımlanmaktadır. Tutundurma faaliyetleri işletmenin kontrol edebildiği bir çevre olarak nitelendirilmektedir (Nakip vd., 2012:34). Başlıca tutundurma araçları kişisel satış, reklam, halkla ilişkiler satış geliştirme ve doğrudan pazarlama şeklinde belirtilmektedir (Mucuk, 2010: 184). Cı'lı ürünlere yönelik tutundurma faaliyetlerinde üreticilerin ürünleri ile yerel kalkınma, çevre, vb. unsurlar arasındaki bağlantıyı vurgulayacak mesajlar oluşturması gerektiği ileri sürülmektedir (Rangnekar, 2004:7).

Kürtün Araköy Ekmeği üreticilerinin çeşitli tutundurma araçlarını kullanım durumu incelendiğinde, sadece doğrudan pazarlamanın tercih edildiği görülmektedir. Doğrudan pazarlama, nihai tüketicilere perakendeci kullanmadan, endüstriyel alıcılara da geleneksel yol olan satışçıların satış ziyaretlerine başvurmadan yapılan satış şekli olarak tanımlanmaktadır (Mucuk, 2010: 241). Yukarıda da belirtildiği gibi, araştırma kapsamına alınan üreticilerin ürünlerini pazara sunmada en çok kullandıkları dağıtım kanalı semt pazarlarıdır. Üreticiler Kürtün Araköy Ekmeği satışlarını artırmak için tüketicilerle doğrudan iletişim kurmanın daha etkili olduğunu düşünmekte olup, bu noktada semt pazarları önemli bir fırsat olarak görülmektedir.

Üreticilerin Kürtün Araköy Ekmeği satışlarında tutundurma aracı olarak teknolojiyi pek kullanmadığı belirlenmiştir. Oysaki günümüz rekabet koşullarında ürünün hem iç hem de dış piyasada bilinirliğini ve satış miktarını artırmada kullanılabilecek en etkin yollardan biri e-ticaret olarak görülmelidir. Üreticilerin mikro işletme olmaları nedeni ile de pazarlama faaliyetleri kendi bireysel ve geleneksel çabalardan ileriye gidememiştir. Kürtün Araköy Ekmeği üreticilerinin gelişen ve değişen pazar şartları içerisinde ülke

genelinde ürünü daha iyi tanıtabilecek girişimlere pek girmedikleri anlaşılmaktadır. Hiçbir üretici tutundurma açısından çok daha büyük müşteri kitlelerine ulaşmalarını sağlamada önemli bir araç olan reklamı kullanmamaktadır. Sadece semt pazarları kanalı ile ürünü müşterilere tattırarak ekmeğin lezzet kalitesinin viral olarak yayılma beklentisi içerisine girmişlerdir. Yine hiçbir üretici tutundurma faaliyetleri kapsamında örnek ürün dağıtımını ya da promosyonlu satış kampanyası yapmamıştır. Haliyle söz konusu üreticilerin pazarlama faaliyetlerini profesyonelce ele alma imkânlarının sınırlı olduğu görülmüştür.

4. SONUÇ

Bu çalışma coğrafi işaret almış yöresel ürünlerde pazarlama karmasının yönetiminin nasıl yapıldığı konusunda bir fikir vermektedir. Yöresel ürünlere coğrafi işaret tescili olarak hem bu ürünlerin korunması hem de üretici gelirlerinin arttırılarak yöre ekonomisini güçlendirilmesi amaçlanmaktadır. Türkiye’de yöresel ürünlere coğrafi işaret tescili almak için yoğun bir çaba sarfedildiği görülmektedir. Bu çabalar takdirle karşılanmakla birlikte, ürünlere coğrafi işaret tescili aldıktan sonraki aşamalarda önemli bir boşluk görülmektedir. Coğrafi işaret tescili sonrası yöresel ürünlerin üreticileri coğrafi işaretin ürünlerine sağladığı marka değerini fırsata çevirememektedir. Karşılaşılan bu durumu Kürtün Araköy Ekmeği üreticilerinin pazarlama karması unsurlarına yönelik analizlerden anlamak mümkündür.

Kürtün Araköy Ekmeği üreticilerinin ürün ile stratejileri Cİ almadan önceki durumdan pek farklılık göstermemektedir. Ürünün kalitesi ve Cİ’li olma avantajı markalaşma fırsatına dönüştürülemediği görülmüştür. Kürtün Araköy Ekmeği Cİ etiketi ile ambalajlı olarak piyasa sunulmamakta, bunun yerine basit streç filmlere sarılarak satış yapılmaktadır. Cİ’li Kürtün Araköy Ekmeği üreticilerinin rekabet avantajı sağlamak için ürünlerinde farklılaştırma yapma noktasında yetersiz oldukları belirlenmiştir.

Cİ’li ürünlerin kalitesinin yüksek olması, yüksek fiyat elde etmek için önemli bir fırsat sunmaktadır. Bununla birlikte, Kürtün Araköy ekmeğinin Cİ’li olmasının fiyat açısından üreticilere pek avantaj sağlamamaktadır. Cİ etiketli Kürtün Araköy Ekmeğinin fiyatı Cİ’li olmayan klasik bir ekmeğe göre %14.29 daha fazladır. Ürünün kalitesi ve yüksek maliyeti göz önüne alındığında bu fiyat primi oldukça yetersizdir.

Üreticilerin Kürtün Araköy Ekmeği satışında farklı dağıtım kanallarına yönelmediği, bunun yerine çoğunlukla semt pazarlarında veya kendi satış noktalarında doğrudan satış yaptığı saptanmıştır. Üreticilerin dar bir dağıtım kanalını tercih etmesi ürünleri için daha yüksek fiyat elde etme olasılığını oldukça azaltmaktadır. Büyük bir e-ticaret sitesinde Kürtün Araköy Ekmeğinin yöreye göre yaklaşık üç kat yüksek fiyattan satılması bu durumun en iyi kanıtıdır.

Üreticilerin Kürtün Araköy Ekmeği satışlarında tutundurma aracı olarak sadece doğrudan pazarlamanın tercih edildiği görülmekte olup, bunun için de çoğunlukla semt pazarları kullanılmaktadır. Ürünü müşterilere tattırarak ekmeğin lezzet kalitesinin viral olarak yayılma beklentisi tutundurmada üreticilerin pek çaba göstermediğini ortaya koymaktadır. Yüksek kaliteli ve Cİ’li bir ürünün pazarlanmasında özellikle de dijital pazarlama araçlarından yararlanılmaması önemli bir eksiklik olarak görülmektedir.

Kürtün Araköy Ekmeği üreticilerinin pazarlama karması unsurlarına yönelik analizler üreticilerin pazarlama noktasında desteklenmeleri gerektiği konusunda bir mesaj vermektedir. Üreticilerin pazarlama bilgisinin zayıf olması ve pazarlama harcamaları için yeterli finansman imkanlarının olmaması nedeniyle böyle bir desteğe ihtiyaç vardır. Bu desteklerin Kürtün Araköy Ekmeği için Cİ alınmasına katkıda bulunan kurum ve kuruluşlar tarafından sağlanması önemlidir. Özellikle de Kürtün Araköy Ekmeğinin dijital pazarlama ile satışının yapılarak geniş kitlelere ulaştırılması açısından üreticilerin pazarlama harcamalarının kısmen de olsa finanse edilmesi hem üreticilere hem de yöre ekonomisine büyük bir katkı sağlayacaktır.

TEŞEKKÜR

Bu çalışmanın verilerinin elde edilmesinde yoğun çalışma koşulları altında zaman ayırarak sağladıkları katkıdan dolayı Gümüşhane Kürtün Araköy Ekmeği üreticilerine çok teşekkür ederiz. Ayrıca, değerli görüşleri ile bu çalışmaya katkı veren Gümüşhane İl Tarım ve Orman Müdürlüğü Gıda Şubesi Müdürlüğü’ne teşekkürlerimizi sunarız.

The Effect of Education Taken by Highly Talented Students in Science and Art Centers on Science Courses

Assoc. Prof. Dr. Nurcan Özkan¹

¹University of Trakya, Faculty of Education, Department of Mathematics and Science Education,
nurcanozkan@hotmail.com, ORCID: 0000-0001-5045-6186

Abstract: Science and Art Centers have undertaken this task in our country in order to reveal the potential of gifted individuals. Gifted children can show a higher level in their interests than children of their own age and their environment. These children show outstanding performance in creativity, art, and intellectual fields. Sometimes these abilities are seen in private academic fields. The competence of teachers, parents and professionals in discovering gifted children is important for their correct orientation in the future. During the implementation of the special skills development program, students are provided with in-depth or advanced knowledge, skills and behaviors in any discipline, taking into account the interdisciplinary and interdisciplinarity relationships. Trainings that will enable students to be aware of their individual interests and abilities, to develop their capacities and to use them at the highest level are given in this period. It has been stated that the interaction of gifted children with the environment contributes to the development of their skills. The use of laboratories in the science lesson has a distinct importance as it transforms soft information into concrete, enables learning by doing, and increases the permanence of the information. Since Physics / Chemistry / Biology activities in Science and Art centers constitute the sub-sections of the Science course, the activities to be held in the center will also affect the Science courses of gifted students. In this study, Science and Art Centers and their effect on science education were examined.

Key Words: Science and Art Center, Gifted Children, Science Teaching

1. INTRODUCTION

Efficient use of a country's resources and being strong in every field is related to the education that country provides to its individuals. How much information can be used in the 21st century has gained importance. The ability of generations to grow up with knowledge is one of the most important factors that determine the development level of a country. The development levels of the countries are directly proportional to the importance they give to education. For development, it is essential to support the education of creative individuals who will work in their own universities, factories, laboratories, research and development units, and who can produce and develop science and technology (MEB Strateji Planı, 2019-2023).

More important than the education given to individuals is to provide the education that the individual needs. Science and Art Centers (BİLSEM) undertook this task in our country in order to reveal the potential of gifted individuals.

The importance of science and technology education is obvious in today's society, where technological developments are clearly seen in every aspect of our lives. It has been observed that the importance given to science education has increased in recent years. The term gifted person is a broad term that encompasses different skills and creativity. Gifted individuals are of great importance not only for their own advancement but also for their societies. The importance to be given to the science education of gifted individuals will benefit both individuals and societies (Et, 2013).

It is known that gifted and talented children exist in every society. Therefore, making these individuals known to be active and educable individuals in every society is of great importance for that society. In addition, the role of gifted people in the creation of civilization is of great importance (Coşkun, 2007: 18). For many years, various countries have been closely interested in the education and training of gifted and talented children, and many studies have been conducted by various scientists. The reason for this interest shown to gifted and talented children is that individuals who determine the agenda of societies, direct societies, and make their names heard in the world are generally gifted and talented individuals. For this reason, from the beginning of the twentieth century, in many developed countries, gifted and talented students, in private educational institutions; It has been realized that they need

education in learning environments designed to be effective / rich in terms of teaching materials and environment (Keskin, 2006: 1).

Kulaksızoğlu (2004) stated that gifted students, who are the most productive segment in education with their fast learning and ability to use what they learn in life, play a leading role in many economic, political, military and technological fields. It has been observed that the students are interested in science and BİLSEMs. Students participate in the activities with pleasure and interest. Students think that they will use the skills, knowledge and experience they have gained in BİLSEM during their university years and this situation will be very beneficial for them.

It has been one of the responsibilities of today's education system to consciously educate gifted children, who are the most important human resource of the future, to contribute to social development (Şenol, 2011: 1). A special importance has been given to the education of these individuals, whom human beings consider as gifted and talented, in order to benefit from their talents (Sezginsoy, 2007: 14).

1.1. Definition of the Science and Art Center (BİLSEM)

Due to the advanced individual characteristics of gifted and talented students, their expectations from education are quite different from other individuals. Because, routine educational approaches that appeal to the general are inadequate to meet the needs of gifted and talented students (Levent, 2014). It cannot be ignored that gifted people who contribute to the advancement of a society in the field of science and arts are a national treasure for their country (Tozlu, 2004). The importance given to the education of the gifted is proportional to the number of future scientists, artists and leadership (Sisk, 1990). For this reason, the education of gifted and talented students in our country is carried out in Science and Art Centers (BİLSEM).

BİLSEM are centers opened by the Ministry of National Education, General Directorate of Special Education Guidance and Counseling Services. It continues in a way that does not disrupt the education of gifted or talented students attending pre-school, primary and secondary education institutions in formal education institutions. In line with this purpose, they are independent private education institutions that have been opened to ensure that they are aware of their individual talents and that they use their capacities at the highest level (MEB, 2001).

MEB (2016) BİLSEM; "Pre-school education works in a way that does not disrupt the education of specially talented students (painting, music and general mental ability) in primary school, secondary school and high school age in formal education institutions. They are independent private educational institutions that have been established to ensure that they are aware of their individual talents and use their capacities at the highest level. In these centers, students are admitted to training programs organized in the fields of adaptation, support training, realizing individual abilities, developing special skills and project production / management. It is defined as a differentiated education program beyond the education given in regular schools so that gifted students can understand their potential and contribute to themselves and society.

The education of gifted and talented students continues in BİLSEM during the time remaining from their school education. BİLSEMs are institutions that aim to realize and develop the special abilities of selected students (Gökdere, 2004). Students who are accepted to BİLSEM are supported by giving education in five different fields. These; adaptation, support training, realizing individual abilities, special skills development and project production.

1.2. The Concept of Giftedness

Gifted individuals are defined as children who perform at a higher level than their peers in intelligence, creativity, art, leadership capacity or special academic fields and need additional services or activities to develop such abilities (Coşkun, 2007: 8). Gifted and talented children differ from their peers with their high potential, endless desire to learn, producing many solutions to questions and problems, being interested in many areas, creativity, high motivation, and liking the difficulties of pursuits that require intelligence (Çağlar, 2004).

Considering the studies on gifted and talented students, there is no common definition of the concept of gifted in the literature. However, different definitions have been made for gifted children. Winner (1996) stated that gifted children have three characteristics that distinguish them from others: Firstly, they defined it as having high learning skills in a certain field (music, mathematics, athletics, etc.), secondly as their passion for learning, and thirdly as offering a different solution to events than others.

The first step in the education of gifted individuals is identification (Şahin and Kargin, 2013). The biggest task in the education of gifted children falls first to parents and then to educators as the children's first teacher. This plays an important role not only during education but also in determining them (Davis and Rimm, 2004).

Gifted children can show a higher level in their interests than children of their own age and their environment. These children show outstanding performance in the fields of creativity, art, and intellectual. Sometimes these abilities are seen in private academic fields (Çatalbaş, 1998). Normal formal education programs do not meet the needs of gifted children that are sufficient to maximize their potential. Education programs prepared for gifted children should be prepared in a way to support their cognitive development and in accordance with their developmental levels (Dönmez and Kurt, 2004).

It is known that gifted and talented children exhibit different emotional characteristics compared to their peers. These differences must be known and accepted by the environment in which they live. Both society and individuals will win when these children are contacted while respecting their differences. Great duties fall on educators, researchers, scientists and more broadly the whole society, especially families. A great job falls on families, teachers and other adults for gifted children to express themselves and to turn their talents into advantage (Oğurlu and Yaman, 2010: 220). Teachers, parents and experts are of great importance in the discovery of gifted children and in the correct guidance of these children (Sezginsoy, 2007: 35).

1.3. Student Identification Process in Science and Art Centers

The competence of teachers, parents and experts in discovering gifted children is important in terms of guiding them correctly in the future (Sezginsoy, 2007). Observation forms are sent to schools every academic year for student selection at BİLSEM. The processes are managed by the classroom teachers for the primary school and the branch teachers for the secondary school. The forms of the nominated students are sent to the commission. Provincial diagnosis examination commission creates and announces the exam date according to the grade level. Determines the students to be included in the group assessment and the evaluation criteria according to the observation forms. Group screening test is done on the specified date. It forms the visual arts talent / skill evaluation commission and the musical talent / skill evaluation commission. Visual arts talent / skill evaluation commission and musical talent / skill evaluation commission make individual evaluations of the applicants in terms of the determined criteria (Karaduman and Ceviz, 2017).

1.4. Science and Art Centers (BİLSEM) and Science Education

Due to the nature of science, information is structured by questioning the accuracy of information. The vision of the Science Curriculum; It has been defined as “raising all students as science literate individuals”. Science literate; It can be carried out with individuals who investigate and question individuals, can make effective decisions, solve problems, be self-confident, open to cooperation, communicate effectively, and learn throughout life. The learning process in the Science Curriculum updated in 2018; It covers exploration, questioning, argumentation and product design. In the learning-teaching process, the teacher; to be encouraging, directing, the student; They are expected to be individuals who can research the source of knowledge, question, explain, discuss and turn it into a product (MEB, 2018).

The use of laboratories in the science lesson has a special importance as it transforms abstract information into concrete, enables learning by doing and increases the permanence of the information. Since Physics / Chemistry / Biology activities in Science and Art centers constitute the sub-sections of the Science course, activities to be held in the center will also affect the Science courses of gifted students.

In the education of gifted individuals, the effects of Science and Technology as well as educational technologies should be utilized.

Science lesson is of great importance today, when the reflections of the effects of science and technology are seen in every field (Kahyaoğlu, 2009: 28-29). It can be said that Science and Technology courses play an important role, depending on the necessity of every citizen to be educated as Science and Technology literate in order to create a strong future for countries. In the vision of the Science course in primary education, it is stated that students must be science literate in order to create a self-confident society that attaches importance to nature and can think healthily. Science and technology literacy; It is defined as a combination of skills, attitudes, values, understanding and knowledge about science that require individuals to develop creative thinking, critical thinking, problem solving and decision-making skills, and be open to life-long learning and be sensitive to their environment (MEB, 2005: 5).

In our country, it is seen that the total number of postgraduate theses about gifted students in Ankara and Istanbul is higher than the total of other provinces in Anatolia (Özenç and Özenç, 2013). The article titled "An Overview of Postgraduate Theses Concerning the Education of Gifted Students in Turkey" published in 2017, an overview of 113 (74 master's and 39 doctoral dissertations) graduate theses conducted with gifted students between 2010 and 2016 provides. In the study, it is seen that there are few studies on BİLSEMs and in the field of science, and especially in the field of chemistry education (Kadioğlu Ateş and Mazi, 2017).

Geçkil (2012) researched what kind of activities the Science Group teachers included in their lessons in Science and Art Centers and was shown with a table. When the table is examined, it is seen that the most preferred method is student experiments and the least preferred is drama and role playing. While 28.8% of the participating teachers say "I always" use the "student experiments" method, 62.5% of them say use it "often" (Table 1). Experimental work of the students; It enables students to develop their decision-making ability, to love science and to develop their scientific literacy skills (Çepni, 2007).

Geçkil (2012) included the opinions of teachers about students' laboratory use and experimental studies in her study. The majority of teachers; They stated that motivation increases students' self-confidence and ensures permanent and effective learning.

Table 1: Frequency and Percentage Values of the Scale of Frequency of Use of Activity Types in Courses.

Number	Matter	No		Hardly ever		Sometimes		Often		Always	
		f	%	f	%	f	%	f	%	f	%

Kaymakçı (2018) examined the motivations of BİLSEM students towards learning science. While motivation and desire in his study were high in 5th grade, it decreased towards 8th grade. The students' inclination to science is at a medium level and their participation in the project did not change this situation.

It was found by Bilen (2011) that students who have assimilated and discriminated learning style have higher attitudes towards science. It has been determined that female students whose parents' education level is high school-university have higher attitudes towards science classes.

It has been suggested by Koç (2016) that BİLSEM's work is admired and appreciated, physical conditions should be improved for a better educational environment, and social activities should be increased.

According to Su, Sağlam and Mutlu (2017), the majority of students are BİLSEM; They defined it as a happy, fun, informative learning environment. The school is; They defined it as a boring training environment.

2. RESULT

The students stated that they are generally satisfied with the education in BİLSEM, they meet their expectations and do not think of a different education program. They emphasized that the most favorite aspect of the science education they received was experiment-based education. They expressed their expectations about the training in question as eliminating the lack of tools and equipment in the laboratories and creating the conditions for individual experiments.

If gifted and talented students are diagnosed at an early age and a suitable education and training environment is provided, if they can be intervened early in the negativities they experience, their talents will be able to develop in a healthy way. Therefore, it is very important to determine the attitudes of the students attending the Science and Art Center towards the Science course and to determine their expectations. At this point, it is stated that studies that are thought to achieve results that will contribute to the field are important.

Some of the studies have revealed that some teachers find themselves competent in providing science education to gifted students and some find themselves inadequate. It has been observed that teachers do not make a special practice for gifted students (Et, 2013). Studies have shown that teachers cannot find the time and material to be offered to gifted students. It has been determined that gifted students have no negative effects on the classroom. It has been determined that students who do not receive support education from BİLSEM are generally satisfied with studying in the same class as gifted students. However, it has been observed that gifted students asking too many questions and taking a lot of words may affect some of the other students negatively. It has been understood that gifted students should be educated together with other gifted students. It has emerged that gifted students need more supportive education outside of school to meet their individual educational needs.

An Overview of Environmental Education in Preschool Children

Assoc. Prof. Dr. Nurcan Özkan¹

¹University of Trakya, Faculty of Education, Department of Mathematics and Science Education,
nurcanozkan@hotmail.com, ORCID: 0000-0001-5045-6186

Abstract: Our world is deteriorating day by day due to human effects, and young generations are needed to find solutions to the problems experienced and to be experienced. It is necessary to raise individuals who are sensitive to the environment in order to ensure that future generations live in healthy and reliable conditions. Children are the future of our world. One of the most important tasks for society is to equip children with the attitudes, values, knowledge and skills necessary to ensure a healthy, fair and sustainable future for all. Studies indicate that environmental knowledge and attitude towards the environment have begun to take shape in the preschool period, and the environmental awareness gained in the preschool period has an important place in developing a positive attitude towards the environment in the future. Pre-school teachers have important duties in order to gain positive behaviors related to the environment in pre-school period. Considering that environmental awareness of children is important at early ages and that children's perceptions are limited to what they see and experience in their environment, we can express that it should be enriched both at home and at school during education. For all these, adults around the child should have knowledge about the personality and educational approaches of children in early childhood. Today, environmental education gains importance, prepares an environment for children to learn about nature at school and their immediate surroundings, and supports the development of children's ecological literacy. In this study, researches on environmental education of preschool children were examined and evaluated.

Key Words: Preschool Children, Environmental Education, the Importance of the Environment

1. INTRODUCTION

One of the most important issues today is environmental problems. Changes in living conditions, technological advances, population growth, industrialization, urbanization and so on. increases environmental problems. For this reason, providing people with environmental awareness is very important at national and international level. The increase in environmental problems and the consequences they cause reveal the importance of environmental education. In this context, examining existing educational practices and programs will enable environmental education studies to be shaped realistically and according to needs. The importance of environmental education in the preschool period is that children grow away from the natural environment in the phenomenon of urbanization, environmental problems increase day by day, and gaining skills such as observation and classification through studies on environmental issues (Buhan, 2006). Researchers state that environmental knowledge and attitude towards the environment have begun to take shape in preschool children, and environmental awareness gained in preschool period has an important place in developing a positive attitude towards the environment in the following years (Smith, 2001; Taşkın and Şahin, 2008).

Being sensitive to the environment and the need to explore nature unconditionally is a feature found in all children. Nature offers a variety of materials to children in many settings. In this respect, nature is a school that ensures the development of children. The preschool period is considered as an important step that will form the basis for the child to acquire positive attitudes towards the environment and transfer these attitudes to the next years of her life (Alisinanoğlu and Kesicioğlu, 2009). Children's attitudes and habits towards the environment are shaped in these early years (Poyraz and Dere, 2003; Aral, Kandır and Yaşar, 2001; Kınık, Okyay and Aydoğan, 2016). It is seen that these attitudes and behaviors acquired in the first years of life are permanent in later ages and affect other stages of life. In this direction, it is emphasized by many researchers (Palmer, 1995; Horwitz, 1996; Smith, 2001; Domka, 2004; Taşkın and Şahin, 2008) that attitudes and behaviors towards the environment and nature were also shaped during these critical years. The environment is thought to be a natural class that supports the cognitive, physical and social development of the child with various stimulants (Dinçer, 2005). Considering the influence of the family on the child in the preschool period and the acceptance of the family as the child's first teachers, it is important to support the child's interest in the environment at home and to give responsibilities (Flannagan and Hardee, 1994; Kınık, Okyay and Aydoğan, 2016).

Studies have shown the existence of various studies to determine the perceptions and attitudes of preschool children towards environmental and environmental problems (Cohen and Horm-Wingerd, 1993; Malkus and Musser, 1997; Musser and Malkus, 1994; Palmer, 1994). It is thought that the inclusion of environmental and environmental issues more in the preschool education program may enable teachers to give more space to the subject.

Despite the fact that environmental issue is given more place abroad, another development that makes environmental education gain importance in the pre-school education program is the changes in living conditions. For example, the majority of our country's population lives in cities and this rate has increased over the years. Children living in urban areas do not have as many opportunities to interact with nature as children living in rural areas. They spend most of their time working in schools, traveling in cars or at home with modern gaming tools such as televisions and computer games. They learn about nature-related concepts from press media such as plastic toys, cartoons, documentaries, encyclopedias and newspapers and by spending time in playgrounds in limited areas. This situation is considered as an important risk factor in the development of environmental values and attitudes in children living today. Preschool education has an important role in the development of environmental attitudes and behaviors in children. Whether this happens depends on many factors. One of them is the applied training program. This program should have a flexible content that does not target subject teaching and takes into account the developmental characteristics of students. Focusing on the principles on which the curriculum is based and making its applications accordingly are essential for the realization of educational objectives (Oluk, 2008).

An important point in the pre-school education program is the purpose, achievements, concepts, activities carried out in line with certain days and weeks. Although the selection of activities is shaped by children's interests, desires, age, needs, environmental conditions and cultural factors, teachers are not limited to any element such as unit or subject. Likewise, teachers have the opportunity to diversify the purpose, acquisition and concepts with the needs arising in the education process. Increasing the environmental awareness of teacher candidates and teachers will not only enable the effective use of environmental education elements in the program, but also support its enrichment with new goals, achievements and concepts.

Early childhood is the fastest years of development and learning. In these years, children can actively interact with the environment and gain many skills in the field of cognitive, emotional and social development. In addition, these new skills acquired form the basis of the development processes in the following years (Abbak, 2008). Therefore, parents who want to give their children a good education want to benefit from pre-school education institutions (Poyraz and Dere, 2003). By starting kindergarten, the child takes the first step into education life. However, the educational and developmental responsibilities of parents whose children start school do not end. On the contrary, they start to work with teachers in this process. Thus, parents and teachers cooperate, contributing to the educational, social, emotional and academic development of children.

Environmental education that can be given to preschool children is becoming compulsory day by day. Migration from villages and towns to cities has increased significantly in the last 60 years. Therefore, it causes the increase in construction in big cities and the gradual destruction of fertile agricultural lands, destruction of forests, decrease in agricultural production, pollution of natural resources and the environment (Ceritli, 1995; Güngördü, 2002).
