In environmental education to give behavior to children; There are many factors such as teaching environmental education well, taking the inevitable steps to protect the environment and solving environmental problems, teaching and sharing environmental education according to age, and the quality of teachers (Bayar, 2013; Bayar, 2014).

Teachers can be effective in developing children by supporting their attitudes and awareness towards the environment. Only teachers who are sensitive to the environment and have a positive attitude can be effective in providing children with positive behaviors related to the environment (Malone and Tranter, 2003; Phenice and Griffore, 2003). Environmental education should start at the home and close environment of the preschool child and then it should be developed with the education given in educational institutions (Çabuk, 2001: 40). In this context, the responsibilities of teachers become very

important. It is thought that by providing pre-school students with a good environmental awareness, damages and destruction in the environment can be prevented and prevented (Kunt and Geçgel, 2013).

It is seen that the legal measures taken by the governments and the information obtained in family and social environments are unfortunately insufficient in solving the environmental problems that arise in global dimensions today. For this reason, it is inevitable for our children, who are our future, to be educated about environment and environmental problems. The people who can give this training are primarily our teachers. The ecological knowledge, attitudes and behaviors of our teachers and their environmental awareness are of great importance for an effective environmental education. Having a good environmental education in pre-school period is a very important step in raising sensitive and conscious generations. Preschool teachers are the people who will give this education.

If deprivation against nature occurs in children, it will cause deficiencies in the experiences children can have outside, in open spaces. This situation will bring together health problems, inability to develop environmental literacy skills, and unwillingness to be in nature. Environmental psychologists describe the negative physical, social and psychological effects of children's nature deprivation as nature deficit disorder (Larson, Green and Castleberry, 2011). Nature deprivation syndrome essentially reveals the negative effects of "life away from nature". According to Louv (2005) who first used this term, lack of routine communication with nature; It may result in developmental failure in growth and academic failure. One of the unwanted side effects of the electronic age is nature deprivation syndrome. Çabuk et al. (2019) emphasizes that this is not a medical disorder, but describes an increasingly widening gap between humans and nature.

In the education systems of only a few countries in the world, it is mentioned that every child must spend one or a few hours outside / outdoors in a day. In these countries, this is recognized as the "right of children to be outside". In the United Nations Convention on the Rights of the Child, the necessity of children to play freely outdoors and to explore the local nature through play is clearly stated (Björklid, 2004). Unfortunately, in many other countries, children cannot sufficiently enjoy these rights. For example; In recent years, an increasing number of applications emphasizing the importance of learning outside the classroom have been implemented. However, in education systems in Turkey and many other countries, it is not necessary for children to be outside / outdoors for a certain period of time during the day.

As stated by Sax (2007, 29), "for the healthy development of children, they need a rich, interactive and sensual piece of nature that they can touch, smell, see and hear in the real world". However, in some cases, deprivation of nature, which appears as a necessity of living conditions, can cause sensory development disorders in children. In order to prevent such disorders from occurring, it is necessary to support children to be in nature at certain times, at least at certain times.

The most important feature that distinguishes environmental education from other education disciplines and enables it to work together with other disciplines is that the place where learning takes place is matchless and unique. In environmental education, it should be ensured that learning takes place mostly in nature. This situation is explained by the fact that, as in education in general, comprehensive and meaningful learning can only be possible in places where subject-specific situations occur. Because environmental education is the "teaching of the world" (Brody, 2005). Learning in nature; It is gained through direct experiences that include the principles of thinking, feeling and acting, where an effective development is achieved, mental and social learning takes place. In addition to learning in nature, interesting and appropriate experiences can be provided to learners in museums, science centers and botanical gardens (Dillon, 2003).

Hart (2002), in his research, involves much more than children's public playgrounds; It reveals that they want to explore and experience more diverse and natural environments, and they prefer nature as the environments chosen for their training. Hart, emphasizes that children who express their views in different ways are indicators that they prefer natural environments, have a say in environmental issues and want to participate in environmental movements. Hart, states that children's participation can be evaluated in issues such as environmental protection, as well as having a say in the natural playgrounds they want to play, and their participation in the environment. In an example given by the children to support the cleaning of the environment, he states that the active participation of children voluntarily

has been successfully provided for years in the sweeping and garbage collection studies developed with the "Green Thumb" program of the New York Parks Department to ensure the cleaning of public parks. The important thing here is that the children start and continue this cleaning work themselves. Hart, emphasizes that active participation of children in environmental issues can be easily achieved after the necessary infrastructure is established.

Nature offers many different natural materials to children. Meanwhile, it becomes a feature that supports the development of their children. Children can find the opportunity to learn many things, just by being in nature, using all their senses and examining nature (Dinçer, 1999). The main task of teachers is to provide opportunities to integrate children with nature.

"Why are children happier in nature? Because trees are their friends. How Does? Because the trees are alive, because the swing can be set up, because the ladybugs give us good luck ... There are many other reasons. For example, because there is a place to play, it is possible to breathe deeply, you can play snowballs and make a snowman, and the most important reason is because the toys in the house are lifeless but most of the things in nature are alive..." (Çabuk et al., 2019).

2. RESULT

Due to developmental, social and environmental reasons, it is important to spread environmental education practices that will be given to children at an early age. The age of starting environmental education in Korea, America and England is three (Chu et al., 2007; Maynards and Waters, 2007). In Turkey, we see that environmental education studies for preschool children have been increasing in recent years (Buhan, 2006; Gülay, 2011). On the other hand, an important part of environmental education studies are carried out for primary and secondary school students and adults (Uzun et al., 2008; Yüksel, 2009; Gülay, 2011). It has been observed that the purpose, gain, certain days and weeks related to the environment within the Education Program are not at a sufficient level (Gülay and Ekici, 2010; Gülay, 2011). Considering the general situation, it is necessary to regularly implement programs that introduce the environment to children in pre-school education institutions in Turkey, to love, protect and beautify the environment. Thanks to the environmental education programs implemented regularly and systematically, environmental education will be widespread in parallel with the schooling rates in pre-school education. In addition to these, teachers and families should seize every opportunity for children to be in touch with nature and to get to know nature. They should set a positive example for children with their own actions. They should prioritize experience and observational learning. Children who are intertwined with the environment in the first years of their lives, who know and love the environment, will form conscious generations in the future.

Children who do not interact with nature regularly and grow up living away from the natural environment are at risk in terms of developing environmental literacy skills. In this respect, children's interaction with animals, plants, and soil will enable them to both recognize the environment and gain sensitivity in terms of protecting the environment. Environmental education practices will cause children to interact regularly and frequently with the environment.

Özet: Ülkelerin bağımsız olmasının temel kriterlerinden bir tanesi de kendi ulusal savunma sanayilerinin varlığıdır. Stratejik öneme sahip olan savunma sanayisinde dışa bağımlılığı minimum seviyede olması gereklidir. Savunma sanayi ülkelerin ulusal güvenliği yanında teknoloji geliştirme ve yüksek teknolojileri ürünlerin ihracatı açısından da önemli bir sektör olarak görülmektedir. Türk savunma sanayi az zamanda oldukça büyük bir ilerlemeler kaydetmiştir. Bugün, özgün ürünleri başarıyla geliştirme aşamasında olan savunma sanayimiz bu gelişmelerin gölgesinde birçok sorunu da bünyesinde barındırmaktadır. Öncü, özgün ve yenilikçi olmak, günümüzde küresel rekabette var olabilmek için Ar-Ge'nin varlığı kilit öneme sahiptir. Tehditlerin her yönden beklendiği ve savunma ihtiyaçlarının buna paralel olarak sürekli değişkenlik gösterdiği için bulunduğumuz coğrafyada savunma sanayi Ar-Ge gerek ticari gerek ulusal menfaatler üzerindeki yüksek etkisi olması açısından çok önem arz etmektedir. Bu çalışmada özel sektörden önemli farklılıklar gösteren savunma sanayisinde Ar-Ge kavramı incelenecektir. Türk savunma sanayi cari açık sorunun sebebiyle yerli ve teknoloji geliştirme stratejisi sebebi ile ise milli olması beklenmektedir. Aynı zamanda ulusal ve uluslararası etkinliklerden faydalanıp bu kuruluşların çalışmalarını göz önünde bulundurarak, teknoloji öngörülerini takip edilmektedir. Bu çalışmada temel ve ileri teknolojilerin milli imkânlarla sağlanması amacıyla ürün odaklı Ar-Ge ve bilimsel tasarım, özgün ve milli tasarım, teknoloji ve tasarım odaklı insan kaynağının geliştirilmesi amaçlanmaktadır. Yerli savunma sanayisinde Ar-Ge ile ilgili olarak çok fazla araştırma olmadığından bu çalışma Ar-Ge adına fayda sağlaması beklenmektedir. Çalışmada verileri birebir görüşme, anket ve mülakat yöntemi ile yivli/yivsiz tabanca tüfek üreten yerli firmalardan elde edilecektir. Firmaların bu bilgileri stratejik olarak gördüklerinden dolayı firma isimleri ise çalışmada yer almayacaktır.

Anahtar Kelimeler: savunma sanayi, Ar-Ge, özgün

1.GİRİŞ

Son yıllarda Ar-Ge faaliyetlerine verilen önem artış göstermektedir. Uluslararası kuruluşlar, devletler, bölgesel otoriteler, şirketler gibi farklı kesimler Ar-Ge faaliyetlerinde kendilerini geliştirme yoluna koyulmuşlardır. Devletler politikalar üretip uygulamaya koymak ve sivil kuruluşları teşvik ederek vatandaşlarına daha iyi şartlarda bağımsız bir gelecek miras bırakmayı hedef edinmişlerdir. Firmalar ise karlarını ve rekabetçiliklerini arttırarak geleceğin ekonomisinde kendi adlarından söz etmek istemeyi amaçlamışlardır. Türkiye iktisadi büyüme motivasyonu yüksek olan bir ülkedir. Dolayısıyla Türkiye'deki Ar-Ge çalışmaları uluslararası rekabetçiliğe katkı sağlaması için performansının yüksek olması gerekmektedir. Ancak sektörden bağımsız olarak ilkelere sahip yöntem bulunmadığından uzun vadede başarılı olmak güçleşmektedir. Ar-Ge projeleri belirsizlik ve risk altında olan projelerdir. Bu yüzden ürün ve süreç gerçekleşse bile uygulama aşamasında sıkıntılar yaşanabilmektedir. Ar-Ge projelerinin dışında bir de Ar-Ge birimlerinin de etkin yönetilmesi gerekmektedir. Gerekli yönetim yapılmazsa üretim ve kaynaklardan yeterli verim sağlanmazsa sorunlar yaşanabilmektedir. Türkiye'de kısıtlı kaynak sorunu bulunmaktadır. Bu konuda akademisyenler, araştırmacılar ve tecrübelerini paylaşacak deneyim

* Bu çalışma Gümüşhane Üniversitesi, Bilimsel Araştırma Projeleri (BAP) Koordinatörlüğünce desteklenmiştir. Proje No: 20.F2910.02.01.

sahiplerine büyük bir görev düşmektedir. Kaynaklardaki artış sadece nicelik değil nitelik konusunda da olmalıdır (Özding, 2019: 9).

Ar-Ge bir ülkenin ekonomik büyümesini gerekli kılacak, alternatifi olmayan en önemli araçların başında gelmektedir. Ar-Ge'yi doğru anlayıp yönetmek ve sonuçlarını ekonomiye aktarmak ülkenin gelişimine atılan önemli bir adımdır. Türkiye'nin uluslararası arenada geri planda kaldığı göze çarpmaktadır. Teknoloji yeteneğinin bir ölçüsü olarak Ar-Ge küreselleşen dünyanın ekonomik koordinatlarını oluşturmaktadır. Bir ülkenin ekonomik problemlerinin çözümünde para ve maliye politikaları yeterli olmadığından daha sürdürülebilir araçlara ihtiyaç duyulmaktadır (Işık, 2019: 3).

Artan rekabet koşulları altında küreselleşen dünyada istikrarlı bir ekonomik büyüme sağlayabilmek ve refah artışı kazanabilme adına ülke ekonomilerinde verimlilik düzeyleri ve üretim yapıları da istikrarlı olmalıdır. Gelişmiş ülkeler ve hızla büyüyen gelişmekte olan Ar-Ge yatırımlarına özen göstermektedirler. Ar-Ge harcamaları için girdiler, üretimde verimliliği artırma ve maliyetin düşmesine olanak sağlamıştır (Dam, 2017: 1).

Tarih boyunca toplumlar her zaman varlıklarını ve vatandaşlarını koruma gereği duymuşlardır. Savunma ihtiyacı insanın yaşadığı her dönemde gerekli görülmüştür. Savunma, ülkeye yönelik yapılacak saldırının vazgeçirilebilmesi ve saldırının meydana gelmesi durumunda karşı koyabilme gücünün olmasıdır. Bir ülkenin savunmasını iyi olması savunma sanayisinin gelişmiş olması demektir. Bir ülkenin savunma sanayisi gelişmiş ülkelerde ekonomisi ve istihdamı artarken, gelişmekte olan ülkelerde savunma sanayi araçlarının dışarıdan aldıkları için ekonomik yük oluşturmaktadır. Ulusal güvenlik nedeniyle yüke katlanmak zorunda kalınmaktadır. Bu durum yaşanmaması için ülkelerin kendi milli sermayesini kullanabilmesi gerekmektedir (Bayraktar, 2020:1).

Savunma sanayi, askeri ve endüstriyel faaliyetler için gerekli ihtiyaçların giderilmesi amacıyla firmalarca ticari faaliyetlerin aynı zamanda savunma sanayisinin sitemine katkı sağlayacak Ar-Ge faaliyetleri, silah, silah alt sistemlerinin ve parçalarının üretildiği endüstrisi olduğu bilinmektedir (Zengin, 2010: 11).

Ekonomik açıdan bakıldığında savunma sanayi ekonomiyi canlandıran, hızlandıran etki yaratmakta olup diğer sanayi kolları arasında önemli bir düzeye sahiptir. Savunma sanayi; sanayileşmeyi, Ar-Ge yaparak teknolojik gelişmeyi arttırmayı, savunma araçlarının üretimini, emek-yoğun tercih edilmesini, nitelikli iş gücünün sağlanmasını ve bu nitelikli iş gücünün kaybının önlenmesini, yerli üretim yaparak savunmaya ayrılan harcamaları azaltmayı, enflasyonun düşmesine katkı sağlamayı en önemlisi de toplumsal refah artışını sağlamayı hedeflemektedir (Zengin, 2010: 13).

2. AR-GE'NİN GENEL DURUMU

2.1. Ar-Ge'nin Tanımı

Araştırma, herhangi bir konu hakkında bilgi edinmek, sorun teşkil eden durumları ortadan kaldırarak planlı ve sistemli yapılan çalışmalar bütünüdür (Ünal ve Seçilmiş, 2013: 13). Araştırma kavramı, en genel tanımıyla yeni bir teknoloji, ürün veya bilgiyi elde etmek amacıyla sorun teşkil etmeyen durumlarda da bu konuları tespit edip uygulamaya koyma anlamı taşımaktadır. Araştırma, üretim ve üretim tekniği ile alakalı olduğu söylenmektedir, fakat her türlü ekonomik faaliyete hitap eden araştırma ve geliştirme çabalarını kapsamaktadır (Sabuncuoğlu, 2001: 336).

Geliştirme kavramı ise, var olan teknoloji ya da mevcut bilgiyi yeni ürün veya üretim teknikleriyle alakalı olanlara yönelme ve mevcut olan teknoloji ile bilgiyi kullanma biçimidir. Geliştirme, teknoloji ve bilgileri daha kaliteli sonuçlara ulaşmayı ve metotları değerlendirmeyi hedeflemektedir (Sönmez, 2006: 25).

2.2. Ar-Ge'nin Önemi

Araştırma ve geliştirme, sistemli bir temel oluşturmak için toplum ve insan bilgisinden yola çıkarak, bilgi birikimini arttırarak ve bu birikime katma değer ekleyerek yeni çalışmalara imza atmaktadır (Aydın ve Soyulu, 2018: 3).

Geniş anlamda araştırma ve geliştirme, bilimsel ve teknik anlamda içeriğini geliştirmek amacıyla doğru stratejiyle yaratıcı bir çaba ve bilgi sağlayarak yeni yürütmelerin kullanımı olarak tanımlanabilir. Dar anlamda araştırma ve geliştirme, üretim aşamasının ve yeni mamullerin oluşmasına yönelik düzenli ve doğru çalışma alanıdır. Teknik anlamda araştırma ve geliştirme kavramı, yeni bir bilgiye ulaşmak veya var olan bilgileri meydana getirmek amacıyla bilginin disiplinli bir şekilde tespit edilmesi, incelenmesi, irdelenmesi ve yorumu gerekli kılan çalışmalardır. Bu çaba, sorunun karmaşık olma durumuna, mekâna, zamana ve aynı zamanda bütçeye göre farklılıklar gösterebilmektedir (Sabuncuoğlu, 2001: 336).

Bir gruba ya da kitleye değer vermek ve hizmet etmek amacıyla işletme, kamu kurumu veya sivil kuruluşların kilit noktası değişim olduğundan Ar-Ge aktif rol oynamaktadır. Dolayısıyla rekabetçilik ön plana çıkmaktadır. İşletmeler, kamu kuruluşları veya ilgili kuruluşlar varlığını sürdürebilmek için kendilerini yenilemek durumundadırlar. Rekabetçilik yenilik için olmazsa olmazdır. Aksi takdirde firmaların hayatta kalması çok zor olacaktır. En güncel örneği 20. Yüzyılda çok büyük olan firmaların 21. Yüzyılda pek azının çalışmaya devam ediyor olmasıdır. Böylece değişime ayak uyduramayan firmalar yıkıcı bir etkiyle yok olmuşlardır (Narayanan ve O'Connor, 2010: 3-4).

2.3. Ar-Ge Çalışmalarının Amacı

Rekabetçi piyasalarda varlıklarını sürdürebilmek, yeni ürün geliştirme ve ürünleri iyileştirmek amacı ile farklılaşan müşterilerin ihtiyaçlarına uygun süreci iyi takip edip istenileni yapabilmek, müşterileri tanıyıp değişiklik sergileyip ihtiyaca uygun yeni metotlarla müşterinin ilgisini çekebilmek, maliyetleri azaltmak, kaliteyi iyileştirmek, rakibin gelişmeyi başardığı bir alanda ün kazanmak, ürün portföyünü tamamlamak, yenilikçi firma imajını edinerek marka değerini arttırmak, kamu nezdinde saygınlık kazanmak, çalışanların motivasyonunu sürekli diri tutmaktır (Özdiç, 2019: 26).

2.4. Ar-Ge Harcamaları

Ar-Ge harcamaları, bilim ve teknolojiye rekabet yarışını kaçırmamak amacıyla özel ve kamu sektörünün faaliyetlerini ve harcanan çabalarını gösteren verilerdir. Ar-Ge'ye yönelik yapılan harcamalar toplamının GSYH içindeki payı uluslararası karşılaştırmalar için gereklidir. Ar-Ge harcamaları; yerli ve yabancı şirketler, devlet üniversiteleri ve özel üniversiteler, laboratuvarlar, araştırma enstitüleri gibi kurumlarda yapılan toplam Ar-Ge harcamalarında meydana gelmektedir (Işık ve Kılıç, 2011: 118)

Firmalar Ar-Ge harcamalarını yapmadan önce fayda ve maliyet karşılaştırması yapmaktadırlar. Böylece gelecekteki karlılığın artacağını düşünmektedirler. Ar-Ge harcamalarına ayrılacak paydan ziyade yapılacak araştırmanın verimliliği ve sonuçların uygulanabilir olması daha çok önem arz etmektedir. Araştırma verimli ise firmalar Ar-Ge harcamalarını arttırmak isteyeceklerdir. Çünkü yapılan her harcama yeni fikirlere ve yeni ürünlere dönüşmektedir. Burada önemli olan yeni ürünlerin korunma derecesi ve taklidinin kolay olmamasıdır. Temel araştırma, uygulamalı araştırma ve geliştirme aşamaları birbirine bağımlı bir zincirdir denilebilir. Temel araştırma aşaması bitmiş olmalıdır ki uygulamalı araştırma yapılabilir. Dolayısıyla araştırmanın gerçekleştirilmesi için bu aşamada eğitim sisteminin katkısı büyük olmalıdır çünkü yetenekli öğrencilere ihtiyaç duyulmaktadır. Araştırma sonuçlarının uygulanabilirliği, firmaların Ar-Ge sonuçlarından elde ettiği fayda miktarına bakmak gerekmektedir. Firmalar yeni geliştirme ürünlerinden kar sağlamıyorsa Ar-Ge harcaması yapmayı bırakırlar (Yıldırım ve Karaman ve Taşdemir, 2014: 524-525).

Küresel rekabette Ar-Ge yatırımlarına önem veren firmalar ve ülkeler önemli üstünlük sağlamaktadırlar. Dolayısıyla Ar-Ge harcamaları hizmete, üretime, dış ticarete, eğitime ve milli gelir gibi birçok alanın yapıtaşını oluşturmaktadır. Ar-Ge harcamalarının GSYH içerisindeki payı yüksek olan ülkenin gelişmişlik düzeyi arasında doğrusal bir ilişki bulunmaktadır (Dam, 2017: 37)

2.5. Ar-Ge Harcamalarının Amaçları

Ar-Ge harcamalarının en büyük hedefi, globalleşen dünyaya ayak uydurabilmek için faaliyette bulunan özel sektör ve kamu sektörünün bu değişimi kaçırmamak, kamu sektörü ve özel sektörün gelişmesini ve

büyümesini sağlamak ve sektörlerin devamlılığını yakalamaya çalışmaktadır. Temel amaçtan kopmamak üzere Ar-Ge harcamalarının bir diğer önem arz eden amaçları da şu şekildedir: (Zerenler vd., 2007: 657).

Ortak bir eylemi gerçekleştirmeyi hedef edinen Ar-Ge'nin asıl amacı, yeni ürünler geliştirmek ve bu üretimin maliyetlerinin minimum düzeyde olmasını sağlamak aynı zamanda kaliteyi arttırarak rekabet gücünü kaybetmeden ekonomik yarar elde etmek olacaktır. Ülke kaynaklarını verimli kullanmak, bilgi üretimini arttırmak ulusal bazda teknolojiler oluşturma ve ekonomik kalkınma ve refahı sağlamaktır. Ar-Ge faaliyetlerinde bulunan firmalar verimliliklerini, pazar paylarını arttırıp rekabet sağlamak olacaktır (Eker, 2011: 24; Tezcan, 2013: 834).

2.6. Türkiye'de Ar-Ge'nin Gelişimi

Dünyada modern anlamda sistematik Ar-Ge çalışmalarının başlangıcını 19. yüzyıl sonu olarak alınabilmektedir. Türkiye' de çok ender örnekler dışında bunun tarihi 20. Yüzyıl ortalarında ancak başlamaktadır. Fakat bilimsel çalışmaların ve teknoloji geliştirmenin tarihi daha çok eskidir. Hatta denilebilir ki 16. Yüzyıla kadar Çin ve Hindistan gibi Osmanlı Devleti de sanayi bakımından Avrupa'dan daha öndedir (Emmioğlu, 2010: 131).

Osmanlı Devleti o dönemde özellikle tekstil, sanayi ve top dökümü gibi savunma sanayi alanında çağının diğer ülkelerine göre oldukça ileri düzeydedir. Örneğin Bursa dünya ipek dokumacılığında liderliğini birkaç asır sürdürmüş, ancak onunla Hindistan rekabet halinde olmuş daha sonra Sanayi Devrimi sonrası Lyon'a kaptırılmıştır (Emmioğlu, 2010: 137).

Binlerce yıldır silah üretiminde ihtiyaç duyulduğu için teknolojik yarışın örneğini en iyi göreceğimiz yerlerden biri de metal döküm teknolojisidir. Süreçle ilgili Ar-Ge çalışmalarına ihtiyaç duyulan döküm teknolojisinde bugünkü anlamda olmasa da sürekli araştırma ve geliştirme çalışmaları devam etmiştir. Örneğin İstanbul'un fethinin bir top döküm yönteminin iyileştirilerek daha büyük toplar dökülmesi gibi bir Ar-Ge çalışması sonunda mümkün olabileceğini veya en azından çok daha kısa sürede gerçekleşeceğini tarihçiler söylemektedir (Aydüz,2006:477).

Osmanlı'da farklı coğrafyalarla temasları arttıran bir imparatorluk olarak bilime ve bilim adamlarına ilgi özellikle 15. Yüzyılın ortalarından itibaren fazlaşmış ve 16. Yüzyılda zirveye ulaşmıştır.17. yüzyıldan itibaren ise çeşitli iç ve dış koşullar sebebiyle önceki iki yüzyıla göre özellikle tabiat bilimlerine teşvik edici iklim azalmıştır (İhsanoğlu, 2010: 251).

Bu dönemde batıyla açılan farkın kapatılması için öncelikle askeri sahada başlayan bilim ve teknoloji ithal çabası 1800'lü yıllarda, özellikle de Tanzimat Fermanı'nın ilanı (1839) birlikte, devlet eliyle sivil alanda da bir sanayileşme hamlesine dönüşmüş, bu hamle Cumhuriyet Döneminde de artarak sürdürülmüştür. Özellikle Cumhuriyet'in ilk on yılında 1923 İktisat Kongresi ile birlikte radikal düzenlemelere gidilmiştir. Özel sektörün kısıtlı imkânlarından dolayı onun yerine kamunu sanayi yatırımları yapmasını amaçlayan devletçilik ilkesi ikinci dünya savaşı sonuna kadar uygulanmıştır (Dervişoğlu, 2010: 35).

2.7. Türkiye' de Ar-Ge Merkezleri

Türkiye'de Ar-Ge Merkezleri ve başvuru koşulları;

Türkiye'de Ar-Ge Merkezleri 5746 sayılı Ar-Ge Faaliyetleri Desteklenmesi Hakkında Kanun kapsamında, merkezi Türkiye'de bulunuyor ise firmanın en az 30 tam zamanlı Ar-Ge personeli çalıştırıyor olması gerekmektedir. Ar-Ge Merkezi belgesi alabilmek için, faaliyetlerini yurt içinde gösterilmeli, yeterli düzeyde Ar-Ge alt yapısı, personelin fiziki kontrol yapabilecek mekanizmasının bulunması, bütçe-çalışma kapasitesi-süresi-personel sayısı ve hangi türde projelerin yapılacağı planlandığı çizelgesinin olması, firma içerisinde ayrı bir organizasyon birimi olarak yer almalı ve aynı kampüs içerisinde bulunmalı, Ar-Ge Merkezleri teknoloji geliştirme bölgeleri dışında yer almalıdır (Dam, 2017: 40).

Tablo 1: Türkiye’de Ar-Ge Merkezleri İstatistikleri (31 Aralık 2020)

Faaliyette Olan Ar-Ge Merkezi Sayısı	1.240
Toplam Personel Sayısı (Destek personeli dahil)	66.469
Lisans	38.645
Yükseklisans	12.166
Doktora ve Üstü	1.103
Proje Sayısı (Tamamlanan + Devam Eden)	53.863
Patent Sayısı	24.454
Tescil	7.041
Başvuru	17.413
Ar-Ge Merkezi Olan Yabancı/ Yabancı Ortaklı Firma Sayısı	207

Kaynak : <https://www.sanayi.gov.tr> (Erişim Tarihi: 29. 01. 2021)

Tablo 1 ayrıntılı olarak incelendiğinde Aralık 2020 itibariyle Türkiye genelinde aktif Ar-Ge merkezi olan firma sayısı 1240 olup, bu merkezlerde toplamda 66.469 kişi istihdam edilmektedir. İstihdam edilen kişilerin yaklaşık %58’i lisans mezunu, %19’u yüksek lisans mezunu ve %2 ’lik kısmını doktora ve üstü eğitim seviyesine sahiptir.

Ar-Ge merkezleri tarafından tamamlanan veya devam etmekte olan proje sayısı 34.239’dur. Proje sonrası tescil edilmiş patent sayısı 7.041 iken, başvurusu yapılmış patent sayısı 24.454’dür. Ar-Ge merkezi olan yabancı sermayeli firma sayısı 207’dir

2.8. Dünya’ da Ar-Ge

Sanayi devriminin ilk yıllarında, yeni teknolojileri vizyon sahipleri yönetmişlerdir. Bu sebeple 19. Ve 20. Yüzyılın ilk başlarına kadar yeni türetilen teknolojiler, yapan kişinin yani mucidin adıyla anılmıştır. Bu tarihlerden sonra teknolojiler karmaşık bir hal almış bireysel olarak icat edilmeler azalma göstermiştir. Büyük şirketler bu karmaşıklığa son vermek adına, yeni teknolojileri Ar-Ge merkezinde üretmeye adım atmışlardır. Nitekim ülkelerde kamu araştırma merkezleri, özel sektöre ait araştırma birimleri ve üniversitelere mali destekte bulunmuş yeni teknolojileri daha kaliteli ve daha verimli olması için büyük adım atmışlardır (Chang, 2016:223).

Ülkelerin, globalleşen dünyaya ayak uydurabilmesi için teknolojik gelişmelerini arttırmaları şarttır. Bu da ancak araştırma ve geliştirme çalışmalarına önem vermekle ve istikrarlı olmakla sağlanabilmektedir. Son elli yıllık süreçte Ar-Ge yatırımlarına büyük önem vermişlerdir. Bu zincirin ise Ar-Ge verimliliğinin sağlanmasıyla birlikte ekonomik büyümenin de yapı taşı oluşturmaktadır. Aynı zamanda bu gelişmeler sonucunda Ar-Ge harcamaları fazla olan ülke diğer ülkelerle kıyaslandığında en gelişmiş ülke konumunda olmaları şans değildir. Dolayısıyla Ar-Ge harcamalarının GSYH içindeki oranı yüksek olan ülkeler bilim ve teknoloji de rekabeti fark yaratan ülkeler olmuşlardır. Bununla birlikte sürdürülebilir kalkınma ve daha iyi yaşam koşullarında yaşayabilmek Ar-Ge’ nin önemini bir kez daha göstermektedir. Nitekim Ar-Ge çalışmalarına ciddi kaynak ayırmak geleceğe yapılan en önemli adım olacaktır (Karagöl ve Karahan, 2014: 9).

3. SAVUNMA SANAYİ SEKTÖRÜ VE AR-GE

Ülkeler jeopolitik konum ve stratejik sebepler itibariyle kendilerini koruma durumunda hissetmektedir. Bu anlamda ülkeler güvenlik amacıyla savunmaya ihtiyaç duymaktadır. Savunma harcamalarına ve savunma sanayiye yapılan yatırımlar yıllar itibariyle büyük bir önem kazanmıştır. Ülkelerin savunma alanında başarılı olabilmesi savunma sanayi sektörünün güçlü ve bağımsız bir şekilde oluşturulmasını gerekli kılmaktadır. Savunma sanayi ülkenin ekonomik, askeri, siyasi, bilimsel araştırma, işgücü yapıları ve diğer sanayi sektörleri ile ilişkilidir (Türk, 2007: 33).

Savunma sanayi tanımı genel olarak, genel sanayi alanına bağımlı bir şekilde ülkenin savunma alanında ihtiyaç duyulan silah, mühimmat, teçhizat ve araç-gereç üretimi, gelişimi ve bakımını yaparak diğer ekonomik faaliyetlerin de içerisinde bulunan kamu ve özel sektöre ait firmalardan oluşan sanayi koludur (Alniak, 2001: 4; Şimşek, 1989: 5).

Savunma sanayi teknolojik gelişme, Ar-Ge, üretim, yetişmiş insan gücü ve ekonomik güç ile bağlantılı olarak ilerlemektedir. İleri teknoloji kullanımı ülkenin bilgi birikimi ve teknolojinin ilerlemesine katkı sağlamaktadır. Bu anlamda savunma sanayinin genel sanayi ile bütünleşik olması bu alanda ilerleyen teknolojik seviyenin diğer sektörlere de olumlu bir şekilde yansımaya olanak sağlamaktadır (Güneş, 2007: 106). Savunma sanayi alanına ayrılan bütçe ile teknoloji kullanımı, Ar-Ge faaliyetleri, üretim yöntemleri, ihtiyaç duyulan ürünler sektörün yapısını şekillendirmektedir. Özellikle yüksek teknoloji kullanımı nedeniyle devletin sağladığı destek ve teşvikler, üniversite ile şirketlerin yaptığı iş birlikleri ile yeni bilgi ve teknoloji üretimi savunma sanayi sektörünün yapısını büyük ölçüde etkilemektedir (Ziylan, 2004: 4).

Savunma sanayi sektörü özellikleri bakımından diğer sektörlere göre farklılıklar göstermektedir. Yüksek teknoloji dayalı hassas üretim yöntemleri ile yüksek kalite standartları içerir. İleri teknoloji kullanımı büyük ölçüde Ar-Ge faaliyetlerini de gerekli kılmaktadır. Bu anlamda Ar-Ge faaliyetlerine ayrılan bütçe oranı oldukça yüksektir. Dolayısıyla yüksek oranda yatırımlar yapılmaktadır. Savunma sanayi özellikleri itibarıyla nitelikli iş gücüne ihtiyaç duymaktadır. Eğitim büyük bir öneme sahiptir. Savunma sanayi genel anlamda tek alıcı olan devletin ihtiyacına yönelik üretim yapmaktadır. Sürekliliğin sağlanması için dış pazarlara açılmak zorunluluk gerektirir. Ayrıca güvenlik ve gizlilik hususları temel prensiptir. Bu anlamda devlet müdahalesi zorunludur (Şimşek, 1989: 31; Hartley, 2012: 7).

Savunma sanayi, ticari antlaşmalar ve ilişkilerin dışında tutulan bu anlamda yurt içinde gelişim göstererek, yatırım ve harcamaların belirlenmesinde stratejik sebeplerin etkili olduğu bir sektördür (Uysal ve Kök, 2013: 3).

Savunma sanayi sektörü kendi içerisinde belli sınıflara ayrılmaktadır, Osman Gür'ün yaptığı sınıflandırma da;

- Uzay ve Havacılık sanayi,
- Gemi inşa sanayi,
- Zırhlı araçlar, Tanklar ve aksamı,
- Askeri elektromekanik ve elektronik sanayi,
- Motorlu araç sanayi,
- Elektro optik ve Optik sanayi,
- Ağır ve Hafif silah sanayi,
- Patlayıcı maddeler, Mühimmat ve Kimya sanayi,
- Füze ve Roket sistemleri

Savunma sanayi de Ar-Ge'nin payı ne kadar yüksek olursa teknolojik ve bilimsel gelişme de o kadar iyiye gidecektir. Bu bağlamda yeni istihdam alanları da ortaya çıkacaktır. Bu gelişmeler ışığında ülkenin rekabet gücü artarak ekonomik olarak gelişme sağlanacaktır (Öztürk, 2001; 46).

3.1. Savunma Sanayisinde Ar-Ge Projelerinin Önemi

Dünya'nın hemen hemen her yerinde stratejik ve taktik ihtiyaçlardan dolayı her an çatışmaların çıkabilmesi mümkündür. Ülkeler küresel tehditlere karşı savunma teknolojilerinin alt yapılarını en iyi düzeyde tutmak zorundadırlar (Ziylan, 1997: 59).

Modern dünyanın savunma sistemlerine ayak uydurabilmek ve ihtiyaçlarımızı giderebilmek için Ar-Ge projelerini geliştirmek gerekmektedir. Savunma sanayi Ar-Ge projeleri ülkelerin savunma ve güvenlikten sorumlu karar mekanizmaları, kurum ve kuruluşlar, devlet kontrolünde özel sektör, silahlı kuvvetler,

konsorsiyumlar, üniversite-savunma sanayi, organize sanayi bölgeleri, laboratuvar gibi birimler savunma sanayi projelerinin oluşum aşamalarını yürütmektedirler. Ar-Ge projelerinin özgün savunma sistemleri ulusal savunma gücü ile ekonomilerine büyük katkı sağlamaktadır. Başarılı olan Ar-Ge projelerinin ihracata olumlu etki sağlarken aynı zamanda GSMH artış göstermektedir. Savunma harcamaları ülke ekonomisine Ar-Ge, eğitim, üretim olarak geri dönüş sağlar. Yazılım ve donanım ülkede geliştirilirse sistem güvenliği oluşmaktadır. Savunma sanayi Ar-Ge projeleri nitelikli iş gücünü istihdam ettiği için beyin göçünü ve işsizliği azaltacaktır. Bu bağlamda Ar-Ge projeleri savunma ve güvenlik dışında, ekonomik, teknolojik katkı aynı zamanda daha huzurlu yaşam sağlamaktadır. Dünya’da ve Türkiye’de savunma sanayi Ar-Ge projeleri her geçen gün artmasının sebebi aşikârdır (Ziylan, 1997: 59).

3.2. Savunma Sanayisinde Dünya’da Ar-Ge

Dünya kendi bilgisini üreten, üretirken de kendine ait olan bilgileri istedikleri ülkeye istedikleri zaman ve kendilerinin belirlediği bir fiyattan bilgi satan bir savunma sanayi ile muhatap olmak durumundadırlar. Ülkelerin Ar-Ge anlayışları farklıdır. Bazı ülkeler eğitim için Ar-Ge yaparken bazı ülkeler ise savunma sanayi alanında Ar-Ge yapmayı tercih etmiştir tabii bu durum ihtiyaç dâhilinde değişebilmektedir. Hükümetler Ar-Ge’ye kaynak ayırmak dışında vergi indirimini de uygulamayı politika edinmişlerdir. Örneğin; ABD Savunma Bakanlığı silah üreten Ar-Ge firmalarının masraflarının birçoğunu üstlenirken, Japonya yeni ürün üreten ve bu ürünlerin katma değerli olduğuna inandıkları firmalarından kazancından 3 yıla kadar vergi almadıkları görülmüştür. Bu bağlamda tüm dünyada rekabet uzun yıllar boyunca süregelmiştir ve bu durum böyle devam edecektir (Öner, 2006: 68).

3.3. Savunma Sanayisinde Türkiye’de Ar-Ge

Türkiye jeopolitik konumu itibarıyla dünyanın en kritik bölgelerinden birinde yer almaktadır. Jeopolitik açıdan zor olan bir bölge olduğu için Türkiye Savunma Sanayi Ar-Ge harcamalarında milli önemli bilgileri alt yapılarına uygulamayı zorlaştırmaktadır. Savunma sanayi Ar-Ge’nin önemi Türkiye’de acı tecrübeler edinerek öğrenilmiştir. Türkiye’de GSMH’den Ar-Ge’ye ayrılan ciddi bir kaynak olmalıdır ki Ar-Ge kültürü oluşturulabilsin. Ar-Ge lüks değil bir zorunluluktur savunma sanayiye diğer sanayi kollarından ayıran durum ise hayati önem taşımasıdır (Baran, 2018: 59).

Türk Savunma Sanayi açısından hedefler bulunmaktadır. Bu hedeflere ulaşabilmek için önerilerde bulunmak doğru bir seçim olacaktır. Öneriler ise şöyledir; Ar-Ge projeleri sonucunda oluşacak karın sürekli olabilmesi için ürün kalitesinde birinci olmak hedeflenmelidir. Ürün kategorisinin katma değeri net olarak ifade edilmeli ve Ar-Ge çalışmaları bu katma değeri projelere yansıtabilmelidir. Ürün tabanlı proje geliştirme modeli için teknoloji yol haritası belirlenmeli sözleşmeli projelerden yana seçim yapılmamalı. Ar-Ge projeleri birbirinden bağımsız olmamalıdır, kopukluk yaşanmamalıdır ve düşünsel sermaye birikimini de sağlamalıdır (Öner, 2006: 69).

Türk Savunma Sanayisinin Ar-Ge’ye önem vermesinin sebebi bölgesel güç gösteren BRICS ülkeleri listesinden girmekten ziyade özgün savunma alt yapılarını gerçekleştirip olası bir kriz veya tehdit durumuna karşı kendi gardını almaktadırlar. Osmanlı imparatorluğunun yükselme döneminde savunma sanayi çalışmalarına başlamışlardır ancak teknoloji ve sanayileşme konusunda batılı ülkelerin çok fazla gerisinde kalmıştır. Cumhuriyet döneminde kısıtlı kaynaklar olmasına rağmen hızlı bir yol kat edilmiş ihracata da büyük katkılar sağlanmış ancak yanlış hükümet politikaları ile ülke dışa bağımlı hale gelmiştir. Daha sonra ise 1974 Kıbrıs Barış Harekâtı sonrasında döviz darboğazları ve politik istikrarsızlıklar hedeflenen başarıyı engellemiştir. Yunanistan’daki ekonomik ve politik sorunlar, İran’ın nükleer yarışı, Suriye’deki iç savaş, Irak’ta yıllardır var olan istikrarsızlıklar, Ermeni-Azerbaycan’ın süregelen husumeti, Rusya’nın hakimiyet kurma isteği bir yandan PKK terör örgütü diğer yandan FETÖ, YPG DEAŞ-KPC gibi çok fazla dış etmen olan terör örgütleri Türkiye’nin özgün savunma sanayisi gerekli kılmıştır bu da Ar-Ge ihtiyacımızı arttırmayı gerekli kılmaktadır. Dolayısıyla Türkiye’nin Ar-Ge’ye verdiği önem savunma harcamalarının artışını gerekli kılmaktadır ve öyle de olması gerekir (Çelikkol Erbaş ve Erbaş, 2006: 687).

4. LİTERATÜR

Sümer (2005), çalışmasında savunma harcamaları ve ekonomik büyüme arasındaki ilişkiyi incelemiştir. Yapılan araştırma sonucunda savunma harcamalarının büyüme üzerindeki etkisi pozitif yönlü iken özellikle gelişmekte olan ülkelerde bu etki oldukça fazladır.

Dritsakis (2004), çalışmasında 1960-2001 yılları baz alınarak Johansen eş bütünleşme yöntemi ile Türkiye ve Yunanistan'ın askeri harcamaları karşılaştırması yapılmıştır. Sonuç olarak 10 uzun dönemde iki ülkenin harcamaları ekonomik büyüme ile ilişkili olmadığı ortaya çıkmıştır.

Karagöl (2006), çalışmasında 1960-2000 yılları arasında savunma harcamaları ile dış borç ilişkisi incelenmiştir. Bulgulara göre savunma harcamaları dış borçları arttırdığı sonucu ortaya çıkmıştır.

Şenel (2006), Dünya ve Türkiye ekonomisi açısından Araştırma ve Geliştirme (Ar-Ge) faaliyetlerinin yerini inceleyen çalışmasında, Ar-Ge'nin savunma harcamalarında ki payı analiz edilmiştir. Çalışmaya göre, Ar-Ge faaliyetleri savunma sanayi açısından önemli bir yere sahiptir. Bunun en önemli nedeni ise dışsal etkiler olarak açıklanmıştır.

Soyyigit Kaya (2013), Türkiye'nin 1970-2010 yılları itibariyle savunma harcamaları ile ekonomik etkileri Toda-Yamamoto yaklaşımı ve Granger nedensellik testi ile incelenmiştir. Granger nedensellik testine göre savunma harcamaları ve istihdam arasında nedensellik ilişkisi olduğu sonucuna ulaşılmıştır. Toda-Yamamoto yönteminin sonucunda ise istihdam, savunma harcamaları ve ekonomik büyüme arasında nedensellik olduğu sonucuna ulaşılmıştır.

Yıldız ve Akbulut Yıldız (2019), beş Orta Doğu ülkesi (İran, İsrail, Suudi Arabistan, Umman ve Türkiye) 1990-2015 yılları itibariyle ekonomik büyüme ve askeri harcama ilişkisi incelenmiştir. Bu ilişki Panel Bootstrap Nedensellik analizi ile test edilmiştir. Çalışmanın sonucunda sadece İran için çift yönlü bir nedensellik ilişkisi ortaya çıkmıştır. Genel olarak ise tek yönlü nedensellik ilişkisi olduğu tespit edilmiştir.

5. AR-GE YAPAN FİRMALARDAN ELDE EDİLEN VERİLER

Trabzon TİSAŞ ve Giresun GİRSAN firmaları ile yüz yüze görüşme sağlanmış olup Konya Grafen Biotech Nanoteknoloji Mühendislik Sanayi ve Ticaret Ltd. Şti. ile de e-mail yoluyla anket sorularımızı yönelttiğimizde bu görüşmeler neticesinde savunma sanayisinde Ar-Ge gelişimi için aşağıda ki verilere ulaşılmıştır;

Firmamızda çalışan Ar-Ge personelleri yüksek lisans mezunu, doktora mezunu ve doktora eğitimi devam eden aynı zamanda tam zamanlı çalışan ve dışarıdan destek sağlanan personellerden oluşmaktadır. Ar-Ge personellerinin kendilerini geliştirebilmeleri için internet üzerinden workshop gibi toplantılara katılım sağlanmaktadır. Eğitime önem verilmektedir. Yurt dışı eğitimlerine şuan için pandemi sebebiyle online katılım sağlanmaktadır. Eğitime katılım sağlandığında zorlanarak yapılan ürün geliştirme aşamasında daha kolay rastladıklarından bahsedilmiştir. Tedarik aşamasında sıkıntı yaşandığı belirtilmiştir. Tedarik sıkıntısından dolayı yapmak isteyip yapılamayan projeler olmuştur. Dış kurum ve kuruluşlarla iş birliği halinde çalışmalar gerçekleştirilmiştir. Çalışanlarının Ar-Ge alanlarındaki personel gelişimi için üniversitelerin deneyimlerinden aktif oranda faydalandıkları söylenmiştir. Ar-Ge süreç ve çıktılarını iyileştirmek için yapmış oldukları sentezlerin belirli standartları karşılayıp karşılanmadığı karakterizasyonlar sonucunda doğrulanmışlardır. Ar-Ge faaliyetleri kapsamında özgün üründen ziyade geliştirmeye çalıştıkları teknikler olmuştur. Bu tekniklerin hizmet olarak sunulup toplam satış içerisindeki payının ciddi oranda katkı sağlayacağını savunmuşlardır. Kurum veya kuruluşlarda bulunan ve başvuru projeler ile uyumlu ve bu öneride gerçekleştirilmesi öngörülen Ar-Ge etkinliklerinde kullanılması planlanan cihaz ve ekipman teknik özelliklerinin geliştirilmesi gereken özelliğin ele alınan ürüne fonksiyonelleştirilmesi neticesinde katkı sağlayacak altyapıya uygun hale getirilmesi amaçlanmıştır. Ellerindeki temel cihaz ve ekipmanın yaptıkları Ar-Ge projeleri için yeterli olmadığını, geliştirilmeye ihtiyaç duyulduğunu belirtmişlerdir. Bunun yanı sıra Ar-Ge boyutuyla elde edilen kazanımların endüstriyel boyuta dönüşümü için ek yatırımlara ihtiyaç duyulmaktadır.

Proje başvurularında kullanılması planlanan temel cihaz ve ekipmanı kullanacak olan personelin deneyim birikiminde yetkinlik belgesi mevcut olmayıp, gerek lisans gerekse lisansüstü düzeyde almış oldukları derslerin pratiklerini hem şirket bünyesinde hem de staj şeklinde gerçekleştirebilen personellerin mevcut oldukları söylenmiştir. Ar-Ge etkinlikleri yürütülürken karakterizasyon, sektöre göre reaktör gibi hizmetler aldıklarını belirtmişlerdir. Konferanslara katılım oranlarının pandemi sürecinden ötürü fiziksel katılım sağlanamamıştır. Nitelikli iş gücü denilince akla gelen, bilgi birikimini pratiğe dökabilen donanımlı bireyler veya çalışan olduğunu savunmuşlardır. Firmalarına iş gücü istihdam ederken uzmanlık alanı, staj tecrübesi ve yetkinlik kriterlerine önem verdiklerini açıklamışlardır. Türkiye’de yüzbinlerce işsiz varken işletmelerin bünyelerinde çalıştıracak nitelikli iş gücünün bulunmamasının sebeplerini yanlış yönlendirmeler neticesinde öğretilen bilgilerin pratiğe dönüştürülmesine yönelik imkânların sağlanmaması ve sınava dayalı bir test sürecinin uygulanmasına dayalı olduğunu belirtmişlerdir. Personellerini nitelikli, mesleki ve teknik eğitim almış olmak şartıyla firma bünyelerine dâhil etmişlerdir. Mesleki eğitim sistemine ağırlıklı önem verilmesi gereken bir konu olduğu, çünkü üniversitelerde yetişen öğrencilerin mesleki eğitim sisteminden beslenerek gelmemesi neticesinde ciddi ara eleman sıkıntısı yaşandığından mesleki eğitim sisteminden mezun olacak öğrencilerin ilgili mühendislik ve uygulamalı bölümlerde rahatlıkla uygun pozisyon bulmaları teşvik edilmesi gerektiği dolayısıyla iyi bir altyapıya sahip mühendis adayların yetişmesine imkan tanınmış olacağını savunmuşlardır. Yakın sektörlerle iş birliği yapabilecek menfaatleri de göz önünde bulundurulması gerekmektedir. Firmaların yer seçimlerinde güvenli bölge olması aynı zamanda ulaşım ve tedarik aşamalarının kolay olması oldukça önemlidir.

Ar-Ge merkezi, yeni personeliyle eski personelinin birlikte hareket etmesiyle gelişir. Pazar çok fazla gelişmediğinden Ar-Ge silah teknolojisi için mekaniği değiştirmek yerine iyileştirmeye bakılmaktadır. Yeni bir ürünün Ar-Ge merkezinde işlenmesinin kemik yapısı eski jenerasyonun, dış yapısı ise yeni jenerasyonun yaptığı söylenmektedir. Nedeni ise eski serilerin daha kaliteli olmasıdır. Malzeme ve balistiğe karar verirken üniversiteye danışıldığı, yeni ürün üretirken ise Kolluk kuvvetlerinin görüşü alınmaktadır ve saha araştırmasıyla birlikte hareket edilmektedir. Bakanlıklardan istenen prosödürlerin tam olarak ne istediklerini anlamak için yanlış yapmamak adına başka firmalar ile de görüşmeler sağlanmıştır. Fabrikalar, birkaç ilde sıkıştırıldığı için tedarik aşamasında sıkıntı yaşanmaktadır ve bu durum maliyeti de arttırmaktadır aynı zamanda ürün geliştirme aşamasında süreci uzatmaktadır. Savunma Sanayisinde Ar-Ge fason olmamak için marka yapmak zorunda. Hava şartlarına uyumun kontrolü, gövdenin kırılmaması, kapağın çatlamaması, darbeye dayanıklı olması gibi birçok etken kontrol edilmelidir. Ar-Ge merkezi olan firmanın kendi tasarımını yapması firmaya fayda sağlamaktadır. Ar-Ge’nin gelişmesi hem maliyet hem rekabet açısından uzun bir süreç oluşturur. Savunma Sanayinin diğer sanayilerden en önemli farkı hayati değer taşımasıdır.

6.SONUÇ

Ulusal güvenliğin en önemli unsurlarından biri stratejik bilgilerin dış güçlerden gizli tutulmasıdır. Dünyadaki ülkelerin açık veya gizli nedenlerle diğer ülke toprakları üzerindeki stratejik hedeflerinden dolayı oluşan tehlikeye karşı her ülke egemenliğini korumak ve vatandaşların güvenliğini sağlamak zorundadır. Tam da bu noktada güvenli bir ortamın sağlanması ekonomik kalkınma için oldukça önemlidir. Savunma sanayinin özelliği gereği, tasarım ve temel üretim teknolojilerinin gizli, güvenilir ve yurt dışına bağımlılığın az olması bizim ülke olarak ayaklarımızın üzerine sağlam bastığımızın bir göstergesi olacaktır. Özellikle dışa bağımlılığımız olan noktalarda yaşanan aksamalar bizlerin üretimde daha aktif rol alıp, diğer ülkelerden izin almadan kullanılabilecek vurucu gücü yüksek, ileri teknolojiye dayalı savunma sistem ve teçhizatına sahip olmak ülkemizin uzun vadeli ulusal stratejik çıkarlarına askeri, politik ve ekonomik yönden de olumlu katkısı olacaktır. Türkiye’nin küresel rekabet içerisinde bulunduğu coğrafi konumunun etkileri de göz önüne alındığında, ülkemizin milli olarak güçlü bir savunma sanayi tesis etmesine, mevcut ve gelecekteki küresel ortamda ayakta kalabilmek adına ihtiyacı daha da fazla olacaktır. Türkiye’nin gelişmiş ülkeler grubuna dâhil olabilmesi ve sürdürülebilir ekonomik büyüme performansını yakalayabilmesi Ar-Ge yatırımlarına önem vermekle gerçekleşecektir. Türkiye’nin teknolojiye yatırım yaparak uzun dönemli planlamalar yapması ve üniversite-sanayi iş birliğini etkin bir biçimde kullanması gerekmektedir. Kamunun yanı sıra özel sektörde uzun dönemde Ar-Ge yatırımlarına ağırlık vermesi rekabet açısından gereklidir. Türkiye’nin yüksek teknoloji ihracatını arttırmasının yolu Ar-Ge’den geçmektedir. Ekonomik büyümenin lokomotifi olan teknolojik ilerleme Ar-

Ge yatırımlarına bağlıdır. Çalışmalarımızı Trabzon TİSAŞ ve Giresun GİRSAN firmaları ile yüz yüze görüşme sağlanmış olup Konya Grafen Biotech Nanoteknoloji Mühendislik Sanayi ve Ticaret Ltd. Şti. ile de e-mail aracılığıyla firmaların Ar-Ge merkezleriyle ilgili çalışmaların yapıldığı tespitler sonucunda genel değerlendirme yapılmıştır. Şuan sadece durum tespiti yapılmış olup daha sonra ise firmalara ve ilgili kuruluşlara önerilerde bulunulacaktır. Öneri kısmında ise savunma sanayinin karar mekanizmalarının incelenmesi ve bu karar mekanizmalarının karar alma modellerinin sanayileşmeye olan etkileri incelenecektir. Böylelikle yenilik faaliyetleri nasıl gerçekleştirilmeli, süreçte mi, üründe mi, teknolojiye mi yenilik yapmamız gerekecek bunlara bakılacaktır. Türkiye için savunma sanayi cari açık sorununuz sebebiyle yerli, teknoloji açığımız sebebiyle de milli üretim bizim için oldukça önemlidir. Yani bizim özgün ürün üretmemiz gerekiyor ki farkımız olsun. Çalışmamın amacı Türkiye’de ki Ar-Ge merkezleriyle görüşülüp Ar-Ge ile ilgili yaşanan sıkıntıları tespit edip daha sonraki çalışmaları iyileştirmek adına öneride bulunulacaktır. Birinci başlıkta Ar-Ge’nin genel durumu, Türkiye’deki Ar-Ge’nin Gelişimi, Türkiye’de Ar-Ge Merkezleri, Türkiye ve Dünyadaki Ar-Ge faaliyetlerinden, ikinci başlıkta Savunma Sanayi, Savunma Sanayi Ar-Ge Projelerinden, Dünya’daki ve Türkiye’de ki Savunma Sanayi Ar-Ge’den bahsedilmiştir. Üçüncü başlık ise Ar-Ge yapan firmalardan elde edilen veriler paylaşmıştır.

Hastaların Hekim Memnuniyetinin Hastane Bağlılığına ve Hastaneyi Tavsiye Etme Niyetine Etkisinde Hastaneden Memnuniyetin Aracı Rolü

Dr. Özgün ÜNAL¹

¹ Sakarya Üniversitesi, İşletme Fakültesi, Sağlık Yönetimi Bölümü,
ozgununal@sakarya.edu.tr, ORCID: 0000-0002-1245-2456.

Özet: Günümüzde sağlık hizmetlerinden memnuniyet kavramı sağlık işletmeleri için son derece önemli hale gelmiştir. Buna karşılık hastaların hissettikleri memnuniyet hizmet sunandan memnuniyet ve genel olarak hastaneden memnuniyet şeklinde ayrılmaktadır. Bu çalışma hastaların hizmet aldıkları hekimlerden memnuniyetlerinin hastane bağlılıklarını ve hastaneyi tavsiye etme niyetlerini etkileyip etkilemediğini belirlemek; olası etkide hastaneden memnuniyetin bir aracı rolünün olup olmadığını ortaya koymak amacıyla gerçekleştirilmiştir.

Araştırmanın örneklemini Sakarya ilinde ikamet eden 350 katılımcı oluşturmaktadır. Çalışmaya katılım için katılımcıların aynı hastaneden ve aynı doktordan en az iki kere hizmet almış olması ve 18 yaşını doldurmuş olması kriterleri aranmıştır. Araştırmada veri toplama aracı olarak beş bölümden oluşan anket formu kullanılmıştır. Araştırmada kullanılan anket formu (1) Sosyo-Demografik Bilgi Formu, (2) Doktordan Memnuniyet Ölçeği (Torres vd., 2009), (3) Hastaneden memnuniyet Ölçeği (Chang vd., 2013), (4) Hasta Bağlılığı Ölçeği (Price ve Arnould 1999) ve (5) Tavsiye etme Niyeti Ölçeği (Söderlund, 2006)'nden oluşmaktadır. Verilerin analizinde SPSS Version 22 programı ile tanımlayıcı istatistiksel yöntemlerden; Smart PLS programı ile yapısal eşitlik modellemesinden yararlanılmıştır.

Araştırma sonuçlarına göre hastaların hekimlerinden memnuniyetleri hastaneden memnuniyetlerini ($\beta=0,808$, $p=0,000$), hasta bağlılığını ($\beta=0,482$, $p=0,000$) ve hastaneyi tavsiye etme niyetlerini ($\beta=0,165$, $p=0,010$) etkilemektedir. Bununla birlikte hastaların hastaneden memnuniyetleri hekim memnuniyetinin hasta bağlılığına etkisinde aracı rol oynamaktadır ($\beta=0,314$, $p=0,000$) ve bu etkiyi güçlendirmektedir. Benzer şekilde hastaların hastaneden memnuniyetleri hekim memnuniyetinin hastaneyi tavsiye niyetine etkisinde aracı rol oynamaktadır ($\beta=0,532$, $p=0,000$) ve bu etkiyi güçlendirmektedir.

Çalışma sonuçları hastaların hekim memnuniyetlerinin ve hastane memnuniyetlerinin hasta bağlılığı ve hastanın tavsiye niyetinin gelişmesinde önemli faktörler olduğunu göstermektedir. Hekimden memnuniyetin ve hastaneden memnuniyetin birlikte daha sadık hastalar oluşturmada ve hastanenin hastalar tarafından daha fazla kişiye önerilmesinde anahtar rol oynayacağı açıktır. Bu nedenle sağlık yöneticilerin hasta memnuniyetinin hem kişilerarası ilişkiler hem de genel sağlık hizmeti bağlamında değerlendirmeleri ve geliştirmeleri önerilmektedir.

Anahtar Kelimeler: Hekimden memnuniyet, hastaneden memnuniyet, hasta bağlılığı, tavsiye niyeti, WOM

1. GİRİŞ

Davranışsal niyeti, “kişinin gelecekteki davranışlarını yerine getirmeyi ya da getirmemeyi planladığı davranış derecesi olarak” tanımlamaktadır (Liu ve Jang, 2009). Davranışsal niyetler, “aynı kurumdan başka bir ürün veya aynı hizmeti satın alması, kuruluşa geri dönme niyeti veya müşterinin bir ürün veya hizmeti kullandıktan sonra başkalarına tavsiye etmesi olarak” da tanımlanmaktadır (Richins, 2011). Bu tanımlardan anlaşılacağı üzere bireylerin aynı kurumdan tekrar hizmet alması veya hizmet aldığı kurumu başka insanlara önermesi davranışsal niyetlerin boyutları olarak ele alınmaktadır. Günümüzde artan rekabet nedeniyle sağlık kuruluşları mevcut hastalarını korumanın yanı sıra yeni hastalar edinmeye de odaklanmak durumundadırlar. Bu nedenle sağlık kuruluşları için hasta bağlılığı ve hastanın tavsiye niyeti önemli faktörler olarak değerlendirilmektedir. Bu bağlamda hastaların davranışsal niyetlerinin incelenmesi ve olumlu yönde geliştirilmesi sağlık kuruluşları için önem arz etmektedir.

Hastane bağlılığı hastanın hizmet aldığı kuruma duyduğu bağlılıktır (Ünal, 2016). Bir başka tanıma göre ise hasta bağlılığı, “hastanın hastane ile ilişkilerini devam ettirip, diğer yandan hastanenin hizmetlerini potansiyel hastalara tavsiye etmesi” olarak da tanımlamaktadır (Engiz, 2017 Akt. Erdem vd., 2008). Bu tanıma göre hastanın hastane bağlılığı ile tavsiye niyeti iç içe girmiş kavramlardır ve birbirine bağlıdırlar. Tavsiye niyeti ise bireylerin almış olduğu hizmetten çevresindeki insanlara bahsederek o hizmetin benimsenmesine veya benimsenmemesine katkıda bulunulması veya alınacak olan hizmete ilişkin riskleri

azaltmak için sosyal destek arayışı olarak tanımlanmaktadır (Söderlund, 2006; Arndt, 1967). Sağlık hizmetlerinde tavsiye niyeti ise hastanın almış olduğu hizmetten veya hizmet sunucusundan memnun kalması, bağlılık ve güven duygusunun gelişmesi sonucunda, aile üyelerine ve çevresindeki bireylere sağlık kuruluşu, sağlık hizmeti veya hekimi hakkında bilgi vermesi ve yardımcı olma isteği olarak ifade edilebilir (Durmuş, 2017:55). Bu tanımlar dikkate hem hasta bağlılığının hem de tavsiye niyetinin sağlık kuruluşunun mevcut hastalarını korumaları ve yeni hastalar kazanmaları için hayati önem arz eden faktörlerdir.

Hasta memnuniyeti ise genel olarak “hastanın istek ve beklentilerinin karşılanması veya bu istek ve beklentilerin üstünde hizmet verilmesi” olarak tanımlanmaktadır (Kavuncubaşı ve Yıldırım, 2010). Hastaların daha önce hizmet aldıkları bir sağlık kuruluşundan tekrar hizmet almaları aldığı hizmetten duydukları memnuniyet düzeyine bağlıdır (Ünal, 2016). Heskett ve arkadaşları (1997) hizmet sektörü kuruluşlarında memnuniyet ile bağlılık arasında güçlü bir ilişki olduğunu ifade etmektedirler. Bu ilişki müşterinin memnuniyeti ne kadar güçlü olursa o kadar güçlü olmaktadır. Hasta bağlılığına benzer olarak bireylerin tavsiye niyetlerinin de memnuniyet düzeylerine bağlı olarak geliştiğini ifade eden çalışmalar literatürde mevcuttur (Juhana et al., 2015; Garman et. al., 2004; Homburg et. al., 2005). Literatürde yer alan bu bilgilerden yola çıkarak bu çalışmada bireylerin hizmet aldıkları hekimlerden memnuniyetlerinin hastane bağlılıklarını ve hastaneyi tavsiye etme niyetlerini etkileyip etkilemediğini belirlemek; olası etkide hastaneden memnuniyetin aracı rolünün olup olmadığını ortaya koymak amaçlanmıştır.

2. YÖNTEM

2.1. Evren ve Örneklem

Araştırmanın evrenini Sakarya ilinde ikamet eden, aynı hastaneden en az iki kere aynı doktordan hizmet almış olan 18 yaş üstü bireyler oluşturmaktadır. Çalışma hastane sınırları içerisinde yapılmadığı için araştırma süresince hastaneden hizmet alan kişi sayısı tam olarak belirlenememiştir. Buna karşılık anket formunda ilgili tarihler arasında hastaneden hizmet alıp almadıkları sorularak kriterlere uyan katılımcılar çalışmaya dâhil edilmiştir. İlgili tarihler arasında araştırmaya katılmayı kabul eden 249 kişi araştırmanın örneklemi oluşturmaktadır. Araştırma yapıldığı sırada yaşanan COVID-19 pandemisi sebebiyle yüz yüze anket uygulamasının yapılamaması ve hastane bünyesinde çalışmanın yürütülemediği olması araştırmanın kısıtlarını oluşturmaktadır.

2.2. Veri Toplama Araçları

Araştırmada veri toplama aracı olarak beş bölümden oluşan bir anket formu kullanılmıştır.

Sosyo-Demografik Bilgi Formu; katılımcıların cinsiyet, yaş, medeni durum, eğitim durumu, aylık gelir durumu gibi sorulardan oluşmaktadır.

Hekim Memnuniyeti Ölçeği; Torres, Vasquez-Parraga ve Barra (2009) tarafından Sharma ve Patterson (1999), Brockman (1998) ve Smith ve Barclay (1997)'nin çeşitli ölçeklerinden uyarlanan 5 maddelik hekimden memnuniyet ölçeği kullanılmıştır. Ölçek 5'li Likert yapıda olup; 1 Hiçbir zaman- 5 Her zaman arasında ölçeklendirilmiştir. Ölçeğin Türkçe uyarlanması Ünal ve arkadaşları (2018) tarafından yapılmıştır.

Hastane Memnuniyeti Ölçeği: Hasta memnuniyetini ölçmek amacıyla Chang ve diğerleri (2013) tarafından geliştirilen ve 4 maddeden oluşan ölçek kullanılmıştır. Ölçeğin Türkçe'ye uyarlanması Durmuş, (2017) tarafından yapılmıştır. Ölçek 5'likert şeklinde dizayn edilmiş olup 1 Kesinlikle Katılmıyorum ile 5 Kesinlikle Katılıyorum arasında puanlanmıştır.

Hastane Bağlılığı; Hastane bağlılığını ölçmek amacıyla Price ve Arnould (1999) tarafından hizmet sektörü için geliştirilen ve Wang ve arkadaşları tarafından sağlık hizmetlerine uyarlanan Hastane Bağlılığı Ölçeği kullanılmıştır. Ölçeğin Türkçe geçerlilik ve güvenilirlik çalışmaları Ünal (2016) tarafından yapılmıştır. Ölçek 5'li likert yapıda olup 1= Tamamen Katılmıyorum, 5= Tamamen Katılıyorum şeklinde kodlanmaktadır.

Tavsiye Niyeti Ölçeği: Söderlund (2006) tarafından geliştirilen ve üç maddeden oluşan ağızdan ağıza pazarlama niyeti ölçeği kullanılmıştır. Ölçeğin Türkçe geçerlilik ve güvenilirlik çalışmaları Akbolat ve arkadaşları (2020) tarafından yapılmıştır. Ölçek 5'li likert yapıda olup 1= Tamamen Katılmıyorum, 5= Tamamen Katılıyorum şeklinde kodlanmaktadır.

2.3. Veri Analizi

Elde edilen veriler SPSS ve Smart PLS 3 programları ile analiz edilmiştir. SPSS programında tanımlayıcı istatistiksel yöntemler ve güvenilirlik analizleri gerçekleştirilmiş olup, Smart PLS programında ise yapısal eşitlik modeli analizi yapılmıştır.

3. BULGULAR

Katılımcıların 92'si erkek 257'si kadındır ve 302'si bekâr 48'i evlidir. Katılımcıların çoğunluğu 30 yaş ve altındadır. Katılımcıların gelir düzeyleri incelendiğinde genel olarak 5000TL altında gelire sahip bireylerden oluştuğu görülmektedir ve katılımcıların büyük kısmının ön lisans veya daha yüksek seviyede eğitime sahip oldukları görülmektedir.

Tablo 1: Sosyo-Demografik Bulgular

		Frekans	Yüzde
Cinsiyet	Erkek	92	26,3
	Kadın	257	73,4
Medeni durum	Bekar	302	86,3
	Evli	48	13,7
Yaş	25 Yaş ve Altı	155	44,3
	26-30 Yaş Arası	116	33,1
	31-35 Yaş Arası	32	9,1
	36 Yaş ve Üzeri	47	13,4
Aylık ortalama gelir	Asgari Ücret ve Altı	135	38,6
	3000-5000	117	33,4
	5001-10000	66	18,9
	10001 ve Üzeri	32	9,1
Eğitim durumu	Ortaokul ve altı	25	7,1
	Lise	93	26,6
	Ön Lisans	104	29,7
	Lisans ve üstü	128	36,6

Çalışmada kullanılan ölçeklerin tamamının geçerlilik ve güvenilirlik çalışmaları daha önce gerçekleştirildiğinden bu çalışmada ayrıca keşfedici faktör analizi yapılmamıştır. Çalışma kapsamında ölçeklerin doğrulayıcı faktör analizleri ve güvenilirlik analizleri gerçekleştirilmiştir. Çalışmada kullanılan ölçeklerin güvenilirlik katsayıları tablo 2'de görülmektedir. Ayrıntısı tabloda görüldüğü üzere ölçeklerin güvenilirlik katsayıları 0,799 ile 0,945 arasında değişmektedir. Bu değerlere göre çalışmada kullanılan ölçeklerin güvenilirlik seviyelerinin genel olarak yüksek olduğu söylenebilir (Uzunsakal ve Yıldız, 2018).

Araştırma hipotezlerini test etmek için Smart PLS 3 programı aracılığıyla yapısal eşitlik modeli kurulmuştur. Smart PLS 3 programının yapısal eşitlik modeline ek olarak doğrulayıcı faktör analizi amacıyla da kullanılabilirdiği literatürde görülmektedir (Değerli ve Tolon, 2016; Bollen, 2002). Bu kapsamda bu çalışmada kullanılan ölçeklerin doğrulayıcı faktör analizleri Smart PLS 3 programı aracılığıyla gerçekleştirilmiştir.

Araştırmada öncelikle araştırma hipotezleri kapsamında kurulan model incelenmiştir. Araştırma modeli Şekil 1’de ve modelin yapı geçerliğine ilişkin bilgiler Tablo 2’de yer almaktadır. Ayrıntısı Şekil 1’de görüldüğü üzere kurulan modelde ölçeklerin ifadelerinin tamamının faktör yükleri 0,70’in üzerindedir. Smart PLS programında faktör yüklerinin 0,70’in üzerinde olması beklenmektedir (Wong, 2013). Bu nedenle modelde yer alan ifadelerden faktör yüklerinin beklenen seviyenin üzerinde olduğu ifade edilebilir.

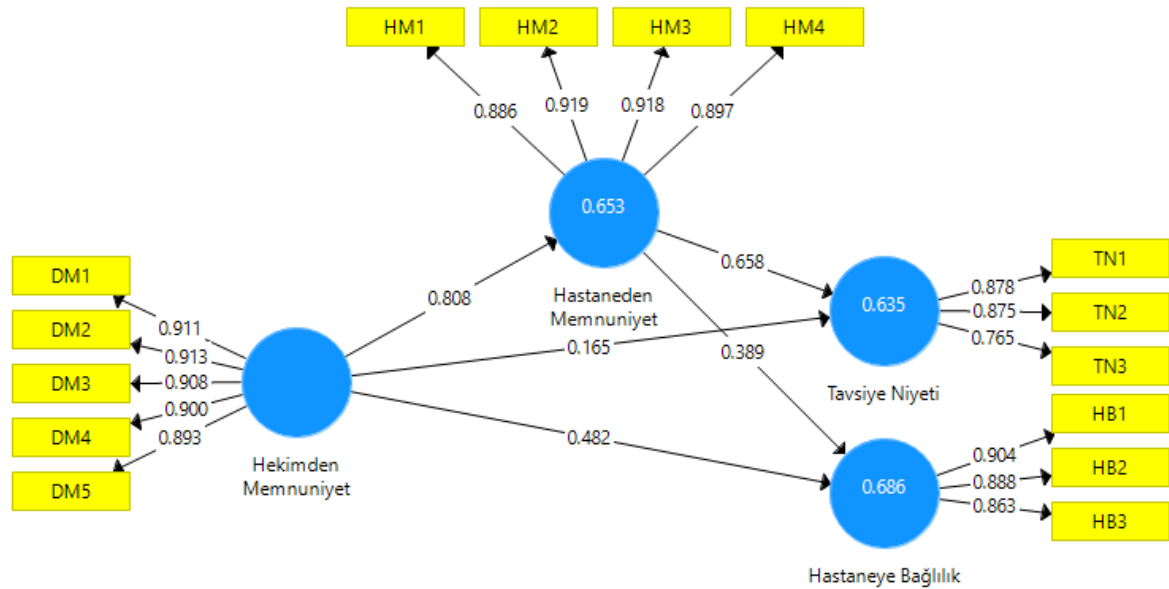

Tablo 2’de görüldüğü üzere ölçeklerin kompozit güvenilirlik ($CR \geq 70$) ve çıkarılan ortalama varyans ($AVE \geq 50$) değerleri eşik değerlerin üzerindedir. Bu sonuçlara göre ölçeklerin gerekli güvenilirlik değerlerini taşıdığı söylenebilir.

Araştırma kapsamında modelin yapı geçerliliğini test etmek amacıyla incelenen bir diğer geçerlilik ayrışma geçerliliğidir. Bu geçerliliğinin sağlanabilmesi için araştırmada kullanılan değişkenlerin hesaplanan AVE değerlerinin kareköklerinin, o değişkenin diğer değişkenlerle olan korelasyon değerlerinden büyük olması gerekmektedir (Cengiz ve Özkara, 2016). Ayrıntısı Tablo 2’de görüldüğü üzere araştırma ölçeklerini ayrışma geçerliliğini sağladığı söylenebilir.

Tablo 2: Ölçeklerin Cronbach Alpha, Ortalama Açıklanan Varyans, Birleşik Güvenilirlik Değerleri ve Ayrışma Geçerlilikleri

	1	2	3	4	α	$CR \geq 70$	$AVE \geq 50$
\sqrt{AVE}	0,905	0,885	0,905	0,841			
1. Hastaneden Memnuniyet	1				0,926	0,948	0,819
2. Hastaneye Bağlılık	0,778	1			0,861	0,915	0,783
3. Hekimden Memnuniyet	0,808	0,796	1		0,945	0,958	0,819
4. Tavsiye Niyeti	0,791	0,672	0,696	1	0,799	0,878	0,707

Şekil 1: Yapısal Eşitlik Modellemesi Çıktısı

Araştırma modelinin geçerliliğini gösteren uyum indeksleri Tablo 3’de görülmektedir. Smart PLS programında SRMR değerinin 0,10’dan düşük olması, NFI değerinin ise 0-1 aralığında olması beklenmektedir (www.smartpls.com). Tabloda yer alan sonuçlar modelin kullanılabilir olduğunu doğrulamaktadır.

Tablo 3: Araştırma Model Uyum İndeksleri

	Değerler
SRMR	0,066
NFI	0,875

Araştırma modelinin geçerliliği araştırmanın önceki bölümlerinde ortaya konulmuştur. Bu kapsamda araştırmanın hipotezleri yapısal eşitlik modeli (YEM) ile test edilmiştir. YEM sonucunda elde edilen T değerleri Şekil 2’de; T değerlerine bağlı olarak elde edilen p değerleri ve etki değerleri (β) Tablo 4’te yer almaktadır. Tabloda görüldüğü üzere hastaların hekimden memnuniyetleri hastaneden memnuniyetlerini ($\beta=0,808$, $t=34,204$, $p=0,000$), hastaneye bağlılıklarını ($\beta=0,482$, $t=6,266$, $p=0,000$) ve tavsiye niyetlerini ($\beta=0,165$, $t=2,598$, $p=0,010$) pozitif yönlü ve anlamlı etkilemektedir. Hastaların hastaneden memnuniyetleri ise hastaneye bağlılıklarını ($\beta=0,389$, $t=5,688$, $p=0,000$) ve tavsiye niyetlerini ($\beta=0,658$, $t=10,703$, $p=0,000$) pozitif yönlü ve anlamlı etkilemektedir. Bu sonuçlar hastaların hekimlerinden ve hastanelerinden duydukları memnuniyetin davranışlarını etkilediğini göstermektedir.

Tablo 4: T ve p değerleri

	β	T Değerleri	p Değerleri
Hastaneden Memnuniyet -> Hastaneye Bağlılık	0,389	5,688	0,000
Hastaneden Memnuniyet -> Tavsiye Niyeti	0,658	10,703	0,000
Hekimden Memnuniyet -> Hastaneden Memnuniyet	0,808	34,204	0,000
Hekimden Memnuniyet -> Hastaneye Bağlılık	0,482	6,266	0,000
Hekimden Memnuniyet -> Tavsiye Niyeti	0,165	2,598	0,010

Şekil 2:Yapısal Eşitlik Modeli T Değerleri

Tablo 5’de araştırma hipotezlerini test etmek amacıyla kurulan YEM’nin aracı etki sonuçları yer almaktadır. Tabloda görüldüğü üzere p değerleri istatistiksel açıdan anlamlıdır. Buna göre hastaların hekimlerinden memnuniyetlerinin hastaneyi tavsiye etme niyetlerine etkisinde hastaneden memnuniyetlerinin aracı rolü bulunmaktadır ($\beta=0,532$, $t=10,169$, $p=0,000$). Buna göre hastaların hekimlerinden memnuniyetlerinin hastaneye bağlılıklarına etkisinde hastaneden memnuniyetlerinin

aracı rolü bulunmaktadır ($\beta=0,314$, $t=5,625$, $p=0,000$). Bu sonuçlar hastaların hekimlerinden memnuniyetlerinin hasta davranışlarına olan etkisinin hastaneden memnuniyet aracılığında çok daha fazla güçlendiğini göstermektedir.

Tablo 5: Spesifik İndirekt Etkiler

	β	T Değerleri	p Değerleri
Hekimden Memnuniyet -> Hastaneden Memnuniyet -> Tavsiye Niyeti	0,532	10,169	0,000
Hekimden Memnuniyet -> Hastaneden Memnuniyet -> Hastaneye Bağlılık	0,314	5,625	0,000

2. TARTIŞMA VE SONUÇ

Bu çalışma bireylerin hizmet aldıkları hekimlerden memnuniyetlerinin hastane bağlılıklarını ve hastaneyi tavsiye etme niyetlerini etkileyip etkilemediğini belirlemek; olası etkide hastaneden memnuniyetin aracı rolünün olup olmadığını ortaya koymak amacıyla gerçekleştirilmiştir. Çalışma sonuçlarına göre bireylerin hastaneden memnuniyetleri ve hekimden memnuniyetleri hastane bağlılıklarını ve hastaneyi tavsiye etme niyetlerini etkilemektedir. Bu çalışmaya benzer olarak Durmuş (2017) hasta davranışlarının (bağlılık ve tavsiye niyeti) hasta memnuniyetinden etkilendiğini ifade etmektedir. Literatürde yer alan diğer çalışmalarda ise hasta memnuniyeti ile hasta bağlılığının güçlü bir ilişkiye sahip olduğu ifade edilmektedir (Ramli, 2019; Juhana et. al., 2015; Kessler & Mylod, 2009). Hem bu çalışmadan elde edilen sonuçlar hem de literatürde yer alan sonuçlar dikkate alındığından hizmet aldıkları sağlık kuruluşuna ilişkin tutum ve davranışlarının memnuniyetlerinden etkilendiğini göstermesi bakımından önemlidir.

Çalışmadan elde edilen bir diğer sonuca göre hastaların hekimlerinden memnuniyetlerinin hem hasta bağlılığına etkisinde hem de tavsiye niyetlerine etkisinde hastaneden memnuniyetin aracı rolü olduğu sonucudur. Hekimden memnuniyetin hasta bağlılığına ve tavsiye niyetine etkisi hastaneden memnuniyet aracılığında oldukça güçlenmektedir. Bu nedenle hastaneye ilişkin hastaların olumlu davranışlar sergilemesi için hem sağlık hizmeti sunucusundan hem de genel olarak hastaneden memnuniyetin bir arada sağlanmasının önemli olduğu ifade edilebilir.

Çalışma sonuçları dikkate alındığında sağlık yöneticilerine hasta memnuniyetine önem vermeleri ve hasta memnuniyetini geliştirecek önlemler almaları önerilebilir. Bu yolla sağlık kuruluşları hem daha sadık hastalar edinebilirler hem de yeni hastaları kuruluşa çekerek yoğun rekabet ortamında ciddi rekabet avantajı sağlayabilirler.

Green Bonds in the World and Turkey

Prof.Dr. Rasim YILMAZ¹

¹ Tekirdağ Namık Kemal University, Faculty of Economics and Administrative Sciences, Department of Economics, rasimyilmaz@nku.edu.tr ORCID: 0000-0002-1084-8705

Abstract: A recent development in capital market instruments is the green bonds. Structurally, green bonds are similar to traditional bonds, but they provide finance to the environmental and climate-friendly projects. This article investigates the issuance of green bonds in the World. Special attention is given to the growth of green bond market in Turkey. Literature review reveals that reputational benefits and market signal are the main reasons for issuing a green bond providing of the constraining nature of green bonds. Although green bond market has been growing remarkably, the lack of eligible assets is identified as the major barrier to the expansion of green bonds market.

Keywords: Low-carbon Economy, Green Bonds, Turkey

1. INTRODUCTION

Climate change is identified as one of the main treats to economic development. It is estimated that climate change could give rise to an additional 100 million people living in extreme poverty by 2030 if precautions aren't taken to reduce emissions (IFC, 2016).

A recent development in capital market instruments is the green bonds. Structurally, green bonds are similar to traditional bonds, but they provide finance to the environmental and climate-friendly projects (Flammer, 2021). Contrary to traditional bonds, issuers have to certificate their bonds whereby issuers need third-party verification which verifies compliance with the Green Bond Principles (GBPs) published by the International Capital Markets Association (ICMA) to receive the green label for their bonds. According to GBPs, the issuer needs to certify where and how the proceeds are spent, the process for project evaluation and selection, and the effectiveness of these investments in meeting their decarbonization goals. The GBPs do not require cash to be held in segregated bank accounts or that the assets financed be subject to separate security (Zhan, 2020).

Green bonds seem to have disadvantages for the issuers compared to traditional bonds. First, the proceeds from green bonds should be directed to green project. Hence, it limits investment policies of issuers. Second, the issuance of green bonds leads to the additional costs to issuers due to certification process. As argued by Flammer (2021), given the constraining nature of green bonds, a seemingly superior strategy would be to issue conventional bonds and then invest the proceeds in green projects if they are deemed to be financially more viable than other projects.

However, increasing popularity of green calls for overcoming potential advantages of green bonds to issuers. Reputational benefits, changing business model, cheaper pricing, investor pressure, market signal, public policy/regulation, financial flexibility, curbing climate change, response to shareholder expectation, and increasing the stock price are identified as potential rationales for issuing green bonds (Harrison et al., 2020).

Figure 1: The Main Reasons for Issuing a Green Bond

Source: Harrison et al., 2020.

Researches (Harrison et al., 2020; Flammer, 2021) indicate that reputational benefits and market signal are the main reasons for issuing a green bond. According to the signaling argument, green bonds may serve as a credible signal of the company's commitment toward the environment to the investors who often lack sufficient information about the company's environmental commitment (Flammer, 2021).

According to the Green Bond Treasurer Survey 2020, 98% of respondents replied that their green bond attracted new investors. A more diverse pool of investors, offering greater flexibility to reopen or issue new bonds, a stickier investor base, and greater visibility are the most frequently stated benefits of respondents (Harrison et al., 2020).

Manuscripts should be prepared using Microsoft Word format, Calibri 10-point font, single-spaced, 3 cm margin all around, and 8.5"x11" (A4) page setting. Starting from the introduction all the titles in the article should be numbered using Arabic numerals (1,2,3, etc.) and subheadings should be numbered as 1., 1.1., 1.1.2. They should be written in bold and adjacent to the left. Always use endnotes instead of footnotes. Endnotes to the text should be numbered consecutively. Footnotes should be written in Calibri 10 font size and should be placed before the references. IBANESS follows APA format as citation system.

2. GREEN BOND PRINCIPLES

The Green Bond Principles (GBP) are voluntary process guidelines that recommend transparency and disclosure and promote integrity in the development of the Green Bond market by clarifying the approach for issuance of a Green Bond. The GBP emphasize the required transparency, accuracy and integrity of information that will be disclosed and reported by issuers to stakeholders. The GBP have four core components (ICMA, 2018):

1) Use of Proceeds: All designated Green Projects should provide clear environmental benefits, which will be assessed and, where feasible, quantified by the issuer. The GBP explicitly recognize several broad categories of eligibility for Green Projects, which contribute to environmental objectives such as: climate change mitigation, climate change adaptation, natural resource conservation, biodiversity conservation, and pollution prevention and control.

2) Process for Project Evaluation and Selection: This principle covers the items that Green Bond issuers should clearly communicate to investors. These elements include the environmental sustainability

objectives of the issuer, the determination of the related Green Projects categories, and the eligibility criteria to be applied to identify and manage potentially material environmental and social risks associated with the projects.

3) Management of Proceeds: The net proceeds of the Green Bond, or an amount equal to these net proceeds, should be credited to a sub-account, moved to a sub-portfolio or otherwise tracked by the issuer in an appropriate manner.

4) Reporting: Issuers should make, and keep, readily available up to date information on the use of proceeds to be renewed annually until full allocation, and on a timely basis in case of material developments. The annual report should include a list of the projects to which Green Bond proceeds have been allocated, as well as a brief description of the projects and the amounts allocated, and their expected impact.

The eligible Green Project categories are listed below (ICMA, 2018):

- renewable energy (including production, transmission, appliances and products);
- energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- pollution prevention and control (including reduction of air emissions, greenhouse gas control, soil remediation, waste prevention, waste reduction, waste recycling and energy/ emission-efficient waste to energy);
- environmentally sustainable management of living natural resources and land use (including environmentally sustainable agriculture; environmentally sustainable animal husbandry; climate smart farm inputs such as biological crop protection or drip-irrigation; environmentally sustainable fishery and aquaculture; environmentally-sustainable forestry, including afforestation or reforestation, and preservation or restoration of natural landscapes);
- terrestrial and aquatic biodiversity conservation (including the protection of coastal, marine and watershed environments);
- clean transportation (such as electric, hybrid, public, rail, non-motorised, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);
- sustainable water and wastewater management (including sustainable infrastructure for clean and/or drinking water, wastewater treatment, sustainable urban drainage systems and river training and other forms of flooding mitigation);
- climate change adaptation (including information support systems, such as climate observation and early warning systems);
- eco-efficient and/or circular economy adapted products, production technologies and processes (such as development and introduction of environmentally sustainable products, with an eco-label or environmental certification, resource-efficient packaging and distribution).

3. GROWTH OF GREEN BOND MARKET

The first green bond was issued by the World Bank in 2008 with the demand of a group of Swedish pension funds desiring to invest in projects that help the climate (Reichelt, 2018). The total issuance of green bonds reached 25 billion USD in 2014. Since then, rising concerns about greenhouse gas emissions and climate change have triggered the issuance of green bonds. Within 5 years span from 2014 to 2019, global green bonds issuance surged 10 times. Global green bond and green loan issuance increased to 257.7 billion USD in 2019 from 25 billion USD in 2014. Expansion of green bond market is led by European countries, followed by Europe and North America.

Figure 2: The Expansion of Green Bond Market

Source: (Flammer, 2020)

In the global context, development banks (EIB, EBRD, World Bank and IFC) constitute 60% of total bond issuance in 2019. New entrants to the market are mainly national development banks (Olsen-Rong, 2015).

Figure 3: Types of Green Bonds by Region

Source: (Flammer, 2020)

4. THE FUTURE OF GREEN BOND MARKET

It is expected that the green bond market will continue to grow as long as investors receive the same yield. Moreover, governments involving in green bonds has been increasing with the leadership of European countries. The issuance of the EU green bonds will expand the Euro green bond market significantly. The European Commission announced its vision of zero net greenhouse gas emissions by 2050 and achieving a 55% reduction in emissions compared to the year 1990 by 2030. The European

Central Bank (ECB) has also been supportive of the green bond market. As of the end of 2019, the ECB possessed nearly a quarter (24%) of eligible euro-area public sector green bonds and 20% of eligible euro-area corporate green bonds (Flammer, 2020). However, the lack of eligible assets is identified as the major barrier to the expansion of green bonds market by the respondents of the Green Bond Treasurer Survey 2020 (Harrison et al., 2020).

5. GREEN BONDS MARKET IN TURKEY

The first green bond from Turkey in international debt capital markets was issued by the Industrial Development Bank of Turkey in 2016. The issue size of the bond is \$300 million while proceeds were used for private sector investments in renewable energy, energy efficiency, and other areas that reduce greenhouse gas emissions. IFC of the World Bank Group invested USD 50 million in this green bond issue in Turkey (IFC, 2016). In the following years privately owned commercial banks in Turkey such as Yapı Kredi, Akbank, Garanti BBVA also started issuing green bonds.

Turkey's first green sukuk amounted to 450 million TL was issued in 2020 by Industrial Development Bank of Turkey (TSKB) on behalf of Zorlu Enerji. Sukuk are Islamic bonds structured to generate returns in compliance with Islamic finance principles. Thus, green sukuks are in compliance with both Islamic finance principles and environmental issues (GIFIIP, 2020).

Green bonds not only help reduce carbon emissions of Turkey but also help reduce current account deficit of Turkey. The growth of Turkish economy calls for energy imports. Hence, energy and resource efficiency investments and renewable energy investments financed by green bonds leads to economic growth consuming less energy and resources and low-carbon economy.

Recently, Turkish government have taken actions to increase investments in clean energy, electric and hybrid vehicles, clean water and thus reduce carbon emissions. The first action is to prepare a legal framework. The second is to form a Bonds Guarantee Fund to encourage companies in the real sector to issue bonds at lower costs (Kaya, 2021).

6. CONCLUSION

Climate change is identified as one of the main treats to economic development. It is estimated that climate change could give rise to an additional 100 million people living in extreme poverty by 2030 if precautions aren't taken to reduce emissions. A recent development in capital market instruments called green bonds may help fight against climate change. Structurally, green bonds are similar to traditional bonds, but they provide finance to the environmental and climate-friendly projects.

Special attention is given to the growth of green bond market in Turkey. Literature review reveals that reputational benefits and market signal are the main reasons for issuing a green bond providing of the constraining nature of green bonds. Although green bond market has been growing remarkably, the lack of eligible assets is identified as the major barrier to the expansion of green bonds market.

Green bonds not only help reduce carbon emissions of Turkey but also help reduce current account deficit of Turkey. The growth of Turkish economy calls for energy imports. Hence, energy and resource efficiency investments and renewable energy investments financed by green bonds leads to economic growth consuming less energy and resources and low-carbon economy.

Sustainable Finance and Banking

Prof.Dr. Rasim YILMAZ¹

¹ Tekirdağ Namık Kemal University, Faculty of Economics and Administrative Sciences, Department of Economics, rasimyilmaz@nku.edu.tr ORCID: 0000-0002-1084-8705

Abstract: This study analyzes a recent phenomenon of sustainable finance and sustainable banking. Sustainable finance is defined as the process of taking environmental, social and governance (ESG) considerations into account when making investment decisions in the financial sector. The UN 2030 Agenda for Sustainable Development and its 17 Sustainable Development Goals (SDGs) aimed at attaining global economic growth through environmentally and socially sustainable investments and the European Union's commitment to sustainable development have given substantial momentum to sustainable finance. Sustainable development and sustainable finance goals of Europe is very supportive for the sustainable bond market. Sustainable bond market includes green, social and sustainability bonds. Recently, under the organization of international institutions such as the World Bank and the UN, banks in the world have also formed organizations such as the Sustainable Banking Network (SBN) and Net-Zero Banking Alliance to facilitate national policies, guidelines, and principles focused on sustainable banking.

Keywords: Sustainable Bonds, Sustainable Finance, Sustainable Banking, Turkey

1. INTRODUCTION

European Commission (2021) defines sustainable finance as the process of taking environmental, social and governance (ESG) considerations into account when making investment decisions in the financial sector, leading to more long-term investments in sustainable economic activities and projects.

Thus, sustainable finance supports economic growth while reducing pressures on the environment and taking into account social and governance aspects.

Environmental considerations might include climate change mitigation and adaptation, as well as the environment more broadly, for instance the preservation of biodiversity, pollution prevention and the circular economy. Social considerations could refer to issues of inequality, inclusiveness, labour relations, investment in human capital and communities, as well as human rights issues. The governance of public and private institutions – including management structures, employee relations and executive remuneration – plays a fundamental role in ensuring the inclusion of social and environmental considerations in the decision-making process.

The UN 2030 Agenda for Sustainable Development and its 17 Sustainable Development Goals (SDGs) aimed at reaching global economic growth through environmentally and socially sustainable investments and the European Union's commitment to sustainable development have given substantial momentum to sustainable finance.

2. THE EUROPEAN UNION AND SUSTAINABLE DEVELOPMENT

The European Union strongly supports the transition to a low-carbon, more resource-efficient and sustainable economy. The European Union calls for sustainable finance for sustainable development. It encourages the efforts to build a financial system that supports sustainable growth.

In 2015, the European Commission agreed on the UN 2030 Agenda for Sustainable Development and its 17 Sustainable Development Goals (SDGs) and approved the Paris climate agreement. The Paris climate agreement includes the commitment to align financial flows with a pathway towards low-carbon and climate-resilient development.

On 11 December 2019, the Commission made a clear commitment to decarbonise the economy and presented the European Green Deal as such it aims to reach zero net greenhouse gas emissions by 2050 and hence to make Europe the first climate-neutral continent.

As part of the Green Deal, the Commission presented on 14 January 2020 the European green deal investment plan, which will mobilise at least €1 trillion of sustainable investments over the next decade. It will create the right environment – or ‘enabling framework’ – to facilitate and stimulate the public and private investments needed for the transition to a climate-neutral, green, competitive and inclusive economy.

On 17 September 2020, the Commission proposed a new target of 2030 as such it is aimed to achieve a 55% reduction in emissions by 2030 as compared to 1990. The EU needs to invest approximately 350 billion Euro more every year during the 2021-30 decade than it did during the previous decade, in order to meet these 2030 climate and energy targets. It is suggested that €225 billion euros in green bonds should be issued to raise money for the 30% of the EU’s coronavirus recovery fund directed toward green initiatives. The issuance of the EU green bonds will expand the Euro green bond market significantly and allow Europe to increase its lead as the place to issue green bonds.

Sustainable finance has a key role to play in delivering on the policy objectives under the European Green Deal as well as the EU’s international commitments on climate and sustainability objectives. It does this by channelling private investment into the transition to a climate-neutral, climate-resilient, resource-efficient and fair economy, as a complement to public money. Sustainable finance will help ensure that investments support a resilient economy and a sustainable recovery from the impacts of the COVID-19 pandemic.

However, the scale of the investment challenge is beyond the capacity of the public sector alone. The financial costs of these efforts require the government to work with the private sector to meet their goals. The European Union (EU) recognises the crucial role of financial sector in capital raising and reaching those goals. Financial sector can

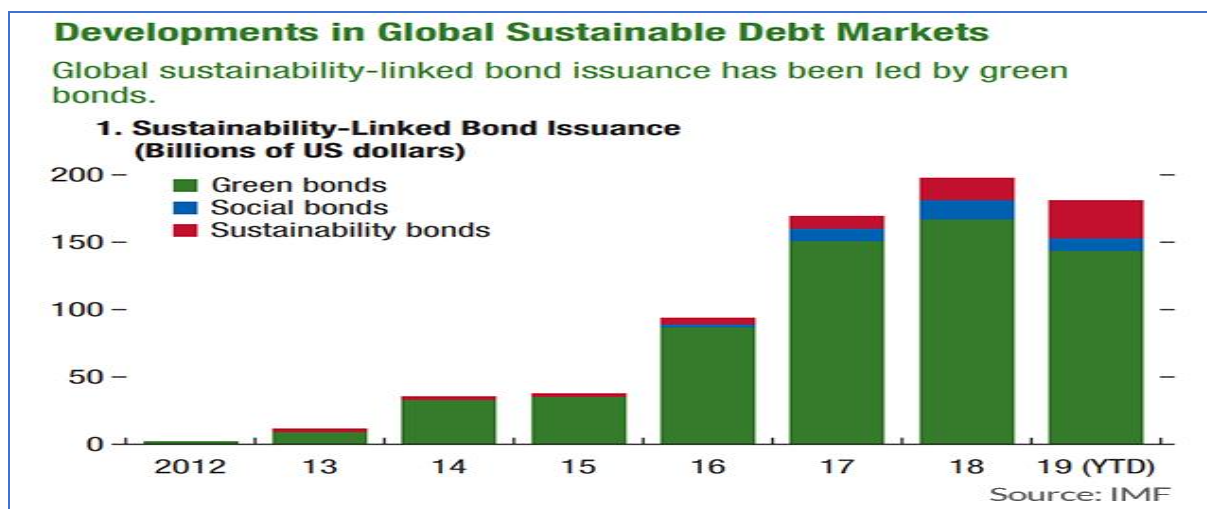

- re-orient investments towards more sustainable technologies and businesses,
- finance growth in a sustainable manner over the long-term,
- contribute to the creation of a low-carbon, climate resilient and circular economy.

3. SUSTAINABILITY-LINKED BOND MARKET

Sustainable development and sustainable finance goals of Europe is very supportive for the sustainable bond market. Sustainable bond market includes green, social and sustainability bonds. Total sustainability-linked bond issuance is estimated to be around 1.2 trillion dollar. Global sustainability-linked bond issuance has been led by green bonds, followed by sustainability bonds and social bonds. Majority of sustainability-linked bonds are green bonds as such green bonds comprise about 75% of total sustainability-linked bonds. The annual issuance of sustainability-linked bond issuance is about 200 billion dollar (Buchwald, 2019).

The first sustainability-linked bond was a green bond issued by the World Bank in 2008 with the demand of a group of Swedish pension funds desiring to invest in projects that help the climate (Reichelt, 2018). Since then, the issuance of bonds related to environment and social factors have accelerated. Annual issuance of sustainability-linked bond reached to 100 billion in 2016 and surpassed 200 billion dollar in the year 2018.

Figure 1: Sustainability-Linked Bond Issuance

Source: Buchwald (2019).

4. SUSTAINABILITY-LINKED BOND MARKET IN TURKEY

The first green bond from Turkey in international debt capital markets was issued by the Industrial Development Bank of Turkey in 2016. The issue size of the bond is \$300 million while proceeds were used for private sector investments in renewable energy, energy efficiency, and other areas that reduce greenhouse gas emissions. IFC of the World Bank Group invested USD 50 million in this green bond issue in Turkey (IFC, 2016). In the following years privately owned commercial banks in Turkey such as Yapı Kredi, Akbank, Garanti BBVA also started issuing sustainability-linked bonds. In 2019, Garanti BBVA issued its first social bond in conjunction with IFC, to support women entrepreneurs and to retain women in the job force.

Table 1: Sustainability-linked Bond Issuance by in Turkey

Year	Issuer	Amount	Maturity
2016	Türkiye Sınai Kalkınma Bankası	300 million dollar	5 years
2017	Türkiye Sınai Kalkınma Bankası	300 million dollar	10 years
2017	Garanti BBVA	150 million dollar	5 years
2019	Garanti BBVA	50 million dollar	5 years
2020	Yapı Kredi Bankası	50 million dollar	5 years
2020	Akbank	50 million dollar	4 years
2021	Türkiye Sınai Kalkınma Bankası	350 million dollar	5 years

5. SUSTAINABLE BANKING AND PRINCIPLES OF SUSTAINABLE BANKING

Although the nature of the banking sector requires fewer natural resources, carbon dioxide emissions, and waste management activities in comparison with the manufacturing companies, banks as an intermediary institutions expedite the sustainable development (Nosratabadi et al., 2020).

Leveraging of the business reputation, brand differentiation, cost reduction through the management of energy and water consumption, increasing employee satisfaction and retention, directing the industry toward best practices, responding the needs of customers with eco-preferences are determined as benefits of applying sustainability principles in the service sector including banking (Nosratabadi et al., 2020). Nájera-Sánchez (2020) argue that financial entities intensify their efforts in what had become known as sustainable banking with the goal of counteracting the negative effects of their loss of reputation after the 2008 financial crisis.

In 2012, International Finance Cooperation (IFC) has formed the Sustainable Banking Network (SBN) which is a voluntary community of financial sector regulatory agencies and banking associations from emerging markets committed to advancing sustainable finance in line with international good practice. SBN members are committed to moving their financial sectors towards sustainability, with the twin goals of improved ESG risk management (including disclosure of climate risks) and increased capital flows to activities with positive climate impact. It is a platform for knowledge sharing and capacity building that facilitates the mobilization of practical support for members to design and implement national initiatives. The SBN provides the institutions a space to exchange experiences, gain knowledge, and collectively drive the sustainable finance agenda (IFC, 2021).

Under the leadership of IFC, 25 countries have launched national policies, guidelines, principles, or roadmaps focused on sustainable banking. They include Bangladesh, Brazil, Cambodia, China, Colombia, Ecuador, Georgia, Ghana, Indonesia, Kenya, Mexico, Mongolia, Morocco, Nepal, Nigeria, Pakistan, Panama, Paraguay, Peru, Philippines, South Africa, Sri Lanka, Thailand, Turkey, and Vietnam (IFC, 2021).

IFC proposes the following six best practices for developing sustainable finance in developing and underdeveloped countries. The first four practices are designing steps while the remaining two are implementing steps (IFC, 2021).

- 1) Assess banks' sustainable finance capacity: Assess bank's existing awareness and capacity for sustainable finance to inform strategies for sustainable fiancé development.
- 2) Develop appropriate sustainable finance strategies: Tailor approaches to developing and implementing sustainable finance framework to local market conditions.
- 3) Draft frameworks jointly with stakeholders: Collaborate and engage with key stakeholders in the financial sector to raise awareness and encourage ownership.
- 4) Support finance sector to implement framework: Address capacity constraints through awareness raising and training activities, together with tool development and resources.
- 5) Promote knowledge sharing and peer learning: Support knowledge-sharing among banks through forums or working groups of sustainable finance champions.
- 6) Implement appropriate monitoring practices: Level the playing field through appropriate reporting and enforcement measures such as integrating sustainability measures in regulator ratings.

On 22 September 2019, the Principles for Responsible Banking (PRB) was signed at the United Nations General Assembly in New York. The Principles for Responsible Banking are a framework for ensuring that signatory banks' strategy and practice are compatible with the Sustainable Development Goals and the Paris Climate Agreement. As of 2021, 2029 banks representing more than a third of the global banking industry signed the agreement (UNEPFI, 2021a).

The Principles for Responsible Banking provide the framework for a sustainable banking system and help the industry to demonstrate how it makes a positive contribution to society. They embed sustainability at the strategic, portfolio and transactional levels, and across all business areas. The Principles for Responsible Banking are as follows (UNEPFI, 2021a):

- 1) Alignment: We will align our business strategy to be consistent with and contribute to individuals' needs and society's goals, as expressed in the Sustainable Development Goals, the Paris Climate Agreement and relevant national and regional frameworks.
- 2) Impact & Target Setting: We will continuously increase our positive impacts while reducing the negative impacts on, and managing the risks to, people and environment resulting from our activities, products and services. To this end, we will set and publish targets where we can have the most significant impacts.
- 3) Clients & Customers: We will work responsibly with our clients and our customers to encourage sustainable practices and enable economic activities that create shared prosperity for current and future generations.

4) Stakeholders: We will proactively and responsibly consult, engage and partner with relevant stakeholders to achieve society's goals.

5) Governance & Culture: We will implement our commitment to these Principles through effective governance and a culture of responsible banking.

6) Transparency & Accountability: We will periodically review our individual and collective implementation of these Principles and be transparent about and accountable for our positive and negative impacts and our contribution to society's goals.

On the 21st April 2021, Net-Zero Banking Alliance was formed by 43 banks from 23 countries with US\$28.5 trillion in assets, which are committed to aligning their lending and investment portfolios with net-zero emissions by 2050. The Alliance will reinforce, accelerate and support the implementation of decarbonisation strategies, providing an internationally coherent framework and guidelines in which to operate, supported by peer-learning from pioneering banks. It recognizes the vital role of banks in supporting the global transition of the real economy to net-zero emissions (UNEPFI, 2021b).

The UN-convened Net-Zero Banking Alliance outlined the Guidelines for Climate Targets Setting for Banks. The Guidelines for Climate Targets Setting for Banks outline key principles to underpin the setting of credible, robust, impactful and ambitious targets in line with achieving the objectives of the Paris Agreement. The guidelines outline the following four principles for target-setting (UNEPFI, 2021c):

1) Banks shall set and publicly disclose long-term and intermediate targets to support meeting the temperature goals of the Paris Agreement.

2) Banks shall establish an emissions baseline and annually measure and report the emissions profile of their lending portfolios and investment activities.

3) Banks shall use widely accepted science-based decarbonisation scenarios to set both long-term and intermediate targets that are aligned with the temperature goals of the Paris Agreement.

4) Banks shall regularly review targets to ensure consistency with current climate science.

6. CONCLUSION

This study analyzes a recent phenomenon of sustainable finance and sustainable banking. Sustainable finance is defined as the process of taking environmental, social and governance (ESG) considerations into account when making investment decisions in the financial sector. The UN 2030 Agenda for Sustainable Development and its 17 Sustainable Development Goals (SDGs) aimed at attaining global economic growth through environmentally and socially sustainable investments and the European Union's commitment to sustainable development have given substantial momentum to sustainable finance. Sustainable development and sustainable finance goals of Europe is very supportive for the sustainable bond market. Sustainable bond market includes green, social and sustainability bonds. Recently, under the organization of international institutions such as the World Bank and the UN, banks in the world have also formed organizations such as the Sustainable Banking Network (SBN) and Net-Zero Banking Alliance to facilitate national policies, guidelines, and principles focused on sustainable banking.

Paris Climate Agreement and Turkey

Prof.Dr. Rasim YILMAZ¹

¹ Tekirdağ Namık Kemal University, Faculty of Economics and Administrative Sciences, Department of Economics, rasimyilmaz@nku.edu.tr ORCID: 0000-0002-1084-8705

Abstract: Although industrial revolution has brought massive improvements in living standards to industrialized and industrializing countries, it leads to an accelerated growth in carbon dioxide emissions which is acknowledged as the primary driver of global climate change. Even though all parties agree on the fact that carbon dioxide emissions need to be reduced urgently in order to avoid the negative impacts of climate change, how this responsibility is shared between regions and countries are at the core of international discussions.

This article analyzes why Turkey refrain ratifying the Paris Climate Agreement although Turkey is among the first signatories of the Agreement. In the annex of the agreement, Turkey is categorized as developed country while China, Singapore, South Korea, India, Brazil, Argentina, Chile, Mexico, Saudi Arabia, Qatar and oil-rich Gulf states are categorized as developing country. As a low contributor to CO₂ emission both historically and currently, Turkey argues that it is not fair to be classified as developing country. Under this categorization, Turkey will not benefit from the financial support that would be given to countries that are categorized as developing countries, but also it will provide financial resources to assist developing countries in implementing the objectives of the climate convention. Turkey with a 21% reduction target in emissions compared to business as usual level by 2030 argues that it's a developing country and needs financial assistance to stick to the agreement.

Keywords: Paris Climate Agreement, Developed Countries, Developing Countries, Turkey

1. INTRODUCTION

Although industrial revolution has brought massive improvements in living standards to industrialized and industrializing countries, it leads to an accelerated growth in carbon dioxide emissions which is acknowledged as the primary driver of global climate change.

The Paris Agreement is a legally binding international treaty on climate change. It was adopted by 196 countries at COP 21 in Paris, on 12 December 2015 and entered into force on 4 November 2016. Its goal is to limit global warming to well below 2, preferably to 1.5 degrees Celsius, compared to pre-industrial levels. To achieve this long-term temperature goal, countries aim to reach global peaking of greenhouse gas emissions as soon as possible to achieve a climate neutral world by mid-century. The Paris Agreement is a landmark in the multilateral climate change process because, for the first time, a binding agreement brings all nations into a common cause to undertake ambitious efforts to combat climate change and adapt to its effects (UNCC, 2021).

The Paris Agreement provides a framework for financial, technical and capacity building support to those countries who need it. The Paris Agreement reaffirms that developed countries should take the lead in providing financial assistance to countries that are less endowed and more vulnerable (developing), while for the first time also encouraging voluntary contributions by other countries. Climate finance is needed for mitigation, because large-scale investments are required to significantly reduce emissions. Climate finance is equally important for adaptation, as significant financial resources are needed to adapt to the adverse effects and reduce the impacts of a changing climate (UNCC, 2021).

Even though all parties agree on the fact that carbon dioxide emissions need to be reduced urgently in order to avoid the negative impacts of climate change, how this responsibility is shared between regions and countries are at the core of international discussions (Ritchie and Roser, 2021).

2. CO₂ EMISSIONS

As of 2019, the annual CO₂ emission of the world economies is 35 billion tonnes of CO₂. The growth of global emission started to increase with the Industrial Revolution in the mid-18th century through to today. It can be observed that growth in emissions was still relatively slow until the mid-20th century.

The annual global CO₂ emission reached 5 billion tones in 1950, skyrocketed to 25 billion tones in 2000, and reached 35 billion tones in 2019.

Historically, the world's largest emitter was the UK as a first country to industrialize until 1888. After 1888, the USA became the world's largest emitter until 2000. After the year 2000, the China turned out to be the largest emitter in the world. Until the 20th century, global emissions were dominated by Europe and the United States. More than 90% of emissions were produced in Europe or the US in 1990 while they accounted for more than 85% of emissions each year in 1950. The USA is responsible for 25% of historical emissions while European countries account for 22% of historical emissions. The US and Europe now account for about one-third of emissions. Asian countries led by China and India has become significant emitters in the second half of the 20th century. Currently, Asia comprises 53% of global emissions. Many of the large annual emitters today such as India and Brazil are not large contributors in a historical context. When we look at Turkey's annual CO₂ emission, it can be seen that Turkey's historical contribution to the annual CO₂ emission is very low compared to major emitters and never accelerated as seen in the case of China and India.

Figure 1: Annual Global CO₂ Emissions

Source: <https://ourworldindata.org/co2-emissions>

Thanks to global awareness, emissions growth has slowed down over the last few years. Annual percentage change in CO₂ emissions is lower than the year before for most of the countries led by the USA and European countries. However, emissions are still rising in Asia. When we look at Turkey, it can be observed that Turkey is among the regions where emissions are falling in the range between -1% and -5%.

Figure 2: Annual Percentage Change in CO2 Emissions (2019)

Source: <https://ourworldindata.org/co2-emissions>

When we look at the share of global CO₂ emissions by country it can be seen that Turkey accounts for 1.11% of global CO₂ in 2019 while China and the USA are responsible for 27.9% and 14.5% of global CO₂ in 2019, respectively. China, the USA and the 28 countries of the EU account for more than half of global emissions. Without commitment from these largest emitters, the world will not come close to meeting its global targets.

Figure 3: Share of Global Cumulative CO2 Emissions (2019)

Source: <https://ourworldindata.org/co2-emissions>

Figure 4: Major Emitters

Source: <https://ourworldindata.org/co2-emissions>

3. THE POSITIONING OF TURKEY TO PARIS CLIMATE AGREEMENT

Based on projections, the average temperature in Turkey is estimated to be set to rise by up to 5 degrees Celsius by 2100. According to the Global Climate Risk Index 2019, disasters caused by climate change in Turkey led to an economic loss worth nearly 2 billion USD in 2017. Thus, Turkey faces huge economic losses in key sectors such as energy, transport, urbanization, agriculture, industry, trade and tourism (Demirtaş, 2019).

197 countries in the World signed the Paris Agreement. Turkey signed the agreement on April 22, 2016. Although Turkey is among the first signatories of the Agreement, Turkey refrain ratifying the Paris Climate Agreement. Currently, Turkey is one of the six countries in the world, including Eritrea, Iraq, Iran, Libya and Yemen, and the only G20 country that has not yet ratified the agreement.

The agreement categorizes countries as developed and developing, as such it obliges the developed countries to financially support the efforts of developing countries. In the annex of the agreement, Turkey is categorized as developed country while China, Singapore, South Korea, India, Brazil, Argentina, Chile, Mexico, Saudi Arabia, Qatar and oil-rich Gulf states are categorized as developing country. As a low contributor to CO₂ emission both historically and currently, Turkey argues that it is not fair to be classified as developing country. Under this categorization, Turkey will not benefit from the financial support that would be given to countries that are categorized as developing countries, but also it will provide financial resources to assist developing countries in implementing the objectives of the climate convention. Turkey with a 21% reduction target in emissions compared to business as usual level by 2030 argues that it's a developing country and needs financial assistance to stick to the agreement (Demirtaş, 2019; Kaya, 2021).

Turkey announced that Turkey will not ratify the agreement unless financial supports are given to Turkey. Recently, European Union along with the United Nations and the World Bank have proposed a special "financial package" to Turkey in return for its ratification of the 2015 Paris Agreement on climate change (Demirtaş, 2019; Kaya, 2021).

4. CONCLUSION

Although industrial revolution has brought massive improvements in living standards to industrialized and industrializing countries, it leads to an accelerated growth in carbon dioxide emissions which is acknowledged as the primary driver of global climate change. Even though all parties agree on the fact that carbon dioxide emissions need to be reduced urgently in order to avoid the negative impacts of climate change, how this responsibility is shared between regions and countries are at the core of international discussions.

Turkey signed the Paris Climate Agreement on April 22, 2016. Although Turkey is among the first signatories of the Agreement, Turkey refrain ratifying the Paris Climate Agreement. The agreement categorizes countries as developed and developing, as such it obliges the developed countries to financially support the efforts of developing countries. In the annex of the agreement, Turkey is categorized as developed country while China, Singapore, South Korea, India, Brazil, Argentina, Chile, Mexico, Saudi Arabia, Qatar and oil-rich Gulf states are categorized as developing country. As a low contributor to CO₂ emission both historically and currently, Turkey argues that it is not fair to be classified as developing country. Under this categorization, Turkey will not benefit from the financial support that would be given to countries that are categorized as developing countries, but also it will provide financial resources to assist developing countries in implementing the objectives of the climate convention. Turkey with a 21% reduction target in emissions compared to business as usual level by 2030 argues that it's a developing country and needs financial assistance to stick to the agreement.

Green Economy and Sustainable Cities

Prof.Dr. Rasim YILMAZ¹

¹ Tekirdağ Namık Kemal University, Faculty of Economics and Administrative Sciences, Department of Economics, rasimyilmaz@nku.edu.tr ORCID: 0000-0002-1084-8705

Abstract: The concepts of sustainable development, green economy, green growth and sustainable cities have become popular during the past years among governments, international institutions and public. Especially, this attention has been accelerated after the 2008 financial crisis. Initially, green economy and green growth concepts have emerged as a tool to tackle the 2008 financial crisis. These concepts subsequently led to rise the concept of sustainable development in popularity, especially with the 2012 United Nations Conference on Sustainable Development. The concept of sustainable cities has gained popularity after being counted among 17 sustainable development goals. This article investigates their interconnection and the way they create a new ecosystem.

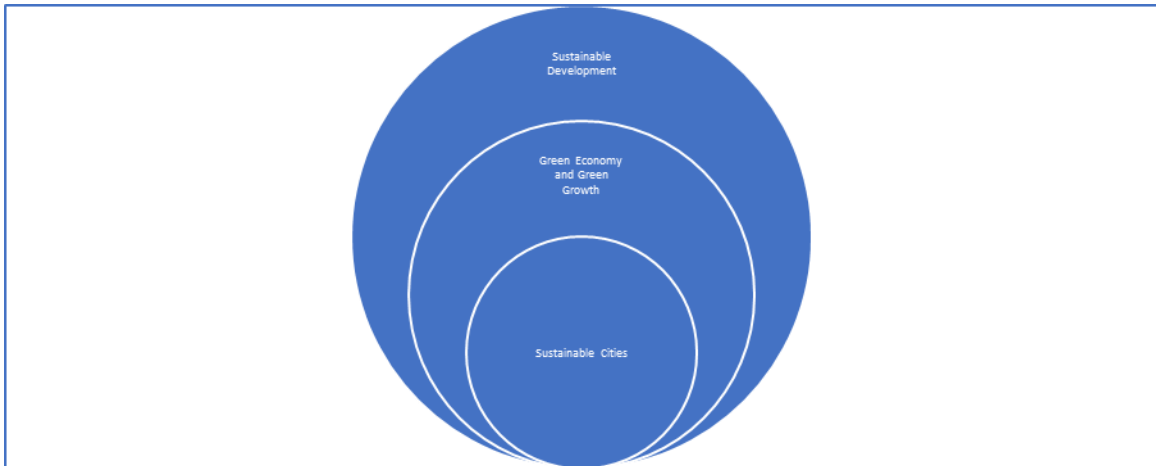

Keywords: Green Economy, Green Growth, Sustainable Development, Sustainable Cities

1. INTRODUCTION

The concepts of sustainable development, green economy, green growth and sustainable cities have become popular during the past years among governments, international institutions and public. Especially, this attention has been accelerated after the 2008 financial crisis. Initially, green economy and green growth concepts have emerged as a tool to tackle the 2008 financial crisis. These concepts subsequently led to rise the concept of sustainable development in popularity, especially with the 2012 United Nations Conference on Sustainable Development. The concept of sustainable cities has gained popularity after being counted among 17 sustainable development goals. This article investigates their interconnection and the way they create a new ecosystem.

The notions of green economy-green growth and sustainable cities are subset of sustainable development. All of them creates an ecosystem as such all parts are interconnected (see Figure 1).

Figure 1: Interconnection of Sustainable Development Related Concepts

In the following sections, concepts of green economy, green growth and sustainable cities are investigated.

2. GREEN ECONOMY

According to the UN Environment Programme, a green economy is low carbon, resource efficient and socially inclusive. Thus, it leads to human well-being and social equality, while significantly reducing

environmental risks and ecological scarcities. In a green economy, growth in employment and income are driven by public and private investment into such economic activities, infrastructure and assets that allow reduced carbon emissions and pollution, enhanced energy and resource efficiency, and prevention of the loss of biodiversity and ecosystem services. The Green Economy provides a macro-economic approach to sustainable economic growth with a central focus on investments, employment and skills (UNEP, 2021).

These green investments need to be enabled and supported through targeted public expenditure, policy reforms and changes in taxation and regulation. UN Environment promotes a development path that understands natural capital as a critical economic asset and a source of public benefits, especially for poor people whose livelihoods depend on natural resources (UNEP, 2021).

Sustainable consumption and production and resource efficiency are main ingredients of green economy. Sustainable Consumption and Production aims to improve production processes and consumption practices to reduce resource consumption, waste generation and emissions across the full life cycle of processes and products – while Resource Efficiency refers to the ways in which resources are used to deliver value to society and aims to reduce the amount of resources needed, and emissions and waste generated, per unit of product or service (UNEP, 2021).

The three main areas for the current work on Green Economy are (UNEP, 2021):

- 1) Advocacy of macro-economic approach to sustainable economic growth through regional, sub-regional and national fora
- 2) Demonstration of Green Economy approaches with a central focus on access to green finance, technology and investments
- 3) Support to countries in terms of development and mainstreaming of macro-economic policies to support the transition to a Green Economy

Multi-stakeholder partnerships for the promotion of a Green Economy are supported to accelerate and consolidate sustainable changes in both consumption and production patterns. In addition to Governments and not-for-profit organizations, UN Environment has increased its engagement with the private sector – which is a very important actor in promoting resource efficiency and green economy (UNEP, 2021).

3. PRINCIPLES OF A GREEN ECONOMY

The Green Economy Coalition is a diverse set of organisations including NGOs, research institutes, UN organisations, businesses and trade unions working to accelerate the transition to a green economy. (UNDESA, 2012). The Green Economy Coalition envisage that our economies in their current form incentivize overconsumption, degrade communal bonds, and destroy natural wealth. But this is not inevitable or unavoidable; it is simply how our economies have evolved to operate. To solve these problems, a new economic vision is required. This new vision should be a fair and green. Their vision of a green economy is one that provides prosperity for all within the ecological limits of the planet (GEC, 2020).

The Green Economy Coalition attempts to determine principles of a green economy. Initially, the Green Economy Coalition drafted nine principles of a green economy in 2012:

1. It delivers sustainable development
2. It delivers equity – The Justice Principle
3. It creates genuine prosperity and wellbeing for all – The Dignity Principle
4. It improves the natural world – The Earth Integrity, Planetary Boundaries and Precautionary Principle
5. It is inclusive and participatory in decision making – The Inclusion Principle
6. It is accountable – The Governance Principle

7. It builds economic, social and environmental resilience – The Resilience Principle

8. It delivers sustainable consumption and production – The Efficiency Principle

9. It invests for the future – The Intergenerational Principle (UNDESA, 2012).

Then, the Green Economy Coalition determined 5 key principles of a green economy in 2020 (GEC, 2020).

1. The Wellbeing Principle

A green economy enables all people to create and enjoy prosperity. The green economy is people centered. Its purpose is to create genuine, shared prosperity. It focuses on growing wealth that will support wellbeing. This wealth is not merely financial, but includes the full range of human, social, physical and natural capitals. It prioritizes investment and access to the sustainable natural systems, infrastructure, knowledge and education needed for all people to prosper. It offers opportunities for green and decent livelihoods, enterprises and jobs. It is built on collective action for public goods, yet is based on individual choices

2. The Justice Principle

The green economy promotes equity within and between generations. The green economy is inclusive and non-discriminatory. It shares decision-making, benefits and costs fairly; avoids elite capture; and especially supports women's empowerment. It promotes the equitable distribution of opportunity and outcome, reducing disparities between people, while also giving sufficient space for wildlife and wilderness. It takes a long-term perspective on the economy, creating wealth and resilience that serve the interests of future citizens, while also acting urgently to tackle today's multi-dimensional poverty and injustice. It is based on solidarity and social justice, strengthening trust and social ties, and supporting human rights, the rights of workers, indigenous peoples and minorities, and the right to sustainable development. It promotes empowerment of MSMEs, social enterprises, and sustainable livelihoods. It seeks a fast and fair transition and covers its costs – leaving no-one behind, enabling vulnerable groups to be agents of transition, and innovating in social protection and reskilling.

3. The Planetary Boundaries Principle

The green economy safeguards, restores and invests in nature. An inclusive green economy recognizes and nurtures nature's diverse values – functional values of providing goods and services that underpin the economy, nature's cultural values that underpin societies, and nature's ecological values that underpin all of life itself. It acknowledges the limited substitutability of natural capital with other capitals, employing the precautionary principle to avoid loss of critical natural capital and breaching ecological limits. It invests in protecting, growing and restoring biodiversity, soil, water, air, and natural systems. It is innovative in managing natural systems, informed by their properties such as circularity, and aligning with local community livelihoods based on biodiversity and natural systems.

4. The Efficiency and Sufficiency Principle

The green economy is geared to support sustainable consumption and production. An inclusive green economy is low-carbon, resource-conserving, diverse and circular. It embraces new models of economic development that address the challenge of creating prosperity within planetary boundaries. It recognises there must be a significant global shift to limit consumption of natural resources to physically sustainable levels if we are to remain within planetary boundaries. It recognizes a 'social floor' of basic goods and services consumption that is essential to meet people's wellbeing and dignity, as well as unacceptable 'peaks' of consumption. It aligns prices, subsidies and incentives with true costs to society, through mechanisms where the 'polluter pays' and/or where benefits accrue to those who deliver inclusive green outcomes.

5. The Good Governance Principle

The green economy is guided by integrated, accountable and resilient institutions. An inclusive green economy is evidence-based – its norms and institutions are interdisciplinary, deploying both sound science and economics along with local knowledge for adaptive strategy. It is supported by institutions

that are integrated, collaborative and coherent – horizontally across sectors and vertically across governance levels – and with adequate capacity to meet their respective roles in effective, efficient and accountable ways. It requires public participation, prior informed consent, transparency, social dialogue, democratic accountability, and freedom from vested interests in all institutions – public, private and civil society – so that enlightened leadership is complemented by societal demand. It promotes devolved decision-making for local economies and management of natural systems while maintaining strong common, centralized standards, procedures, and compliance systems. It builds a financial system with the purpose of delivering wellbeing and sustainability, set up in ways that safely serve the interests of society.

4. GREEN GROWTH

Although the roots of green growth concepts went to the Club of Rome’s report entitled “The Limits to Growth” in 1972, it became popular after the 2008 financial crisis. As a part of their responses to the crisis, 34 members of OECD Ministerial Council signed a Green Growth Declaration in 2009. It is envisaged that a return to ‘business as usual’ would be unwise and ultimately unsustainable, involving risks that could impose human costs and constraints on economic growth and development. It could result in increased water scarcity, resource bottlenecks, air and water pollution, climate change and biodiversity loss which would be irreversible. Ministerial Council agreed that green growth tools and indicators can help expand economic growth and job creation through sustainable use of natural resources, efficiencies in the use of energy, and valuation of ecosystem services. Ministers noted that innovation, supported by a strong intellectual property rights system, is a key to countries’ abilities to achieve economic growth, create green jobs, and protect the environment. This strategy provides a practical framework for governments in developed and developing countries to seize opportunities that arise when the economy and the environment work together (OECD, 2011).

Green growth means fostering economic growth and development while ensuring that natural assets continue to provide the resources and environmental services. It focuses on fostering the necessary conditions for innovation, investment and competition that can give rise to new sources of economic growth – consistent with resilient ecosystems (OECD, 2011).

Green growth has the potential to address economic and environmental challenges and open up new sources of growth through the following channels (OECD, 2011):

- **Productivity.** Incentives for greater efficiency in the use of resources and natural assets: enhancing productivity, reducing waste and energy consumption and making resources available to highest value use.
- **Innovation.** Opportunities for innovation, spurred by policies and framework conditions that allow for new ways of addressing environmental problems.
- **New markets.** Creation of new markets by stimulating demand for green technologies, goods, and services; creating potential for new job opportunities.
- **Confidence.** Boosting investor confidence through greater predictability and stability around how governments are going to deal with major environmental issues.
- **Stability.** More balanced macroeconomic conditions, reduced resource price volatility and supporting fiscal consolidation through, for instance, reviewing the composition and efficiency of public spending and increasing revenues through the pricing of pollution.

It can also reduce risks of negative shocks to growth from (OECD, 2011):

- **Resource bottlenecks** which make investment more costly, such as the need for capital intensive infrastructure when water supplies become scarce or their quality decreases (e.g. desalination equipment). In this regard, the loss of natural capital can exceed the gains generated by economic activity, undermining the ability to sustain future growth.
- **Imbalances in natural systems** also raise the risk of more profound, abrupt, highly damaging, and potentially irreversible, effects – as has happened to some fish stocks and as could happen with damage

to biodiversity under unabated climate change. Attempts to identify potential thresholds suggest that in some cases – climate change, global nitrogen cycles and biodiversity loss – these have already been exceeded.

5. SUSTAINABLE CITIES

Sustainable cities and communities are among the 17 sustainable development goals (SDG), which were adopted by United Nations Member States in 2015 as a universal call to action to end poverty, protect the planet and ensure that all people enjoy peace and prosperity by 2030.

More than half of the world population live in cities. By 2050, two-thirds of all humanity—6.5 billion people—will be urban. Sustainable development cannot be achieved without sustainable cities and communities. The rapid growth of cities—a result of rising populations and increasing migration—has led to a boom in mega-cities, especially in the developing world, and slums are becoming a more significant feature of urban life (UN, 2021).

Sustainable cities mean a city or urban area that respects principles of sustainable development (Le Thiez, 2018). Making cities sustainable involve creating career and business opportunities, safe and affordable housing, and building resilient societies and economies. It involves investment in public transport, creating green public spaces, and improving urban planning and management in participatory and inclusive ways (UN, 2021).

Based on the Pact of Amsterdam, the urban agenda for the European Union, launched in May 2016 by the Commission, the Member States and cities, aims to strengthen cooperation among stakeholders to enhance growth, quality of life and innovation in European cities and to identify societal challenges. In the energy-environment field, key themes include the energy transition and energy consumption, air quality, urban mobility, adaptation to climate change, waste recycling, and sustainable use of soil and natural resources in cities, keeping in mind the omnipresent digital transition. Other issues related to sustainable cities remain applicable, including housing, employment and skills within the local economy (Le Thiez, 2018).

6. CONCLUSION

The concepts of sustainable development, green economy, green growth and sustainable cities have become popular during the past years among governments, international institutions and public. Especially, this attention has been accelerated after the 2008 financial crisis. Initially, green economy and green growth concepts have emerged as a tool to tackle the 2008 financial crisis. These concepts subsequently led to rise the concept of sustainable development in popularity, especially with the 2012 United Nations Conference on Sustainable Development. The concept of sustainable cities has gained popularity after being counted among 17 sustainable development goals. This article investigates their interconnection and the way they create a new ecosystem.

The notions of green economy-green growth and sustainable cities are subset of sustainable development. All of them creates an ecosystem as such all parts are interconnected.

Gümrük Mevzuatında Mücbir Sebepler ve Covid-19 Pandemisinin Etkileri

Öğr.Gör.Dr. Raşit GÜLTEKİN¹

¹Trakya Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, Maliye Bölümü, rasitgultekin@trakya.edu.tr,
ORCID: 0000-0001-8390-327X

Özet: Tarih boyunca gümrükler politika, ekonomi, kamu maliyesi ve kamu güvenliği yönüyle önemli görülmüş ve hukukun geçirdiği evrime uygun şekilde çeşitli düzenlemelere konu olmuştur. Gümrük işlemlerinin gümrük mevzuatını oluşturan bu düzenlemelere göre yerine getirilmesi öngörülmüş olsa da bazı hallerde bu mümkün olmayabilmektedir. Kişilerin kusurunu ortadan kaldıran, mağdur olmasını engelleyen ve ödevlerini sonradan yerine getirmesini sağlayan bu haller arasında mücbir sebepler de bulunmaktadır. Covid-19'dan kaynaklanan pandemi de gümrük işlemleri sırasında geçerlilik bulan mücbir sebepler arasındadır. Mücbir sebepler, gümrük vergileri ve gümrük işlemleri dahil hukukun birçok alanında uygulama balsa ve koruyucu etkileri kabul edilse de ortak bir tanıma ve koşullara sahip değildir. Bu çalışmada gümrük mevzuatında düzenlenen mücbir sebepler incelenmiş ve kişilerin haklarını koruması ve ödevlerini yerine getirmesi açısından etkileri değerlendirilmiştir. Bu amaçla gümrük mevzuatının temel düzenlemeleri ile gümrük idaresinin kamuya yansıyan çeşitli uygulamaları üzerinde durulmuştur. Çalışma neticesinde gümrük mevzuatında mücbir sebeplere ilişkin düzenlemelerin çerçeve bir kanun hükmüne dayanmadığı, sistematik olmadığı, anlaşılabilirliği ve uygulanabilirliği için kapsamlı ve karmaşık bir mevzuat yığınının dikkate alınmasının gerekli olduğu sonucuna ulaşılmıştır. Pandeminin neden olabileceği mağduriyetin önlenmesi amacıyla gümrük idaresinin sık sık dağıtımli yazılarla talimatlandırılmasının nedenlerinden biri de bu durum görülmektedir. Gümrük mevzuatı ve yorumu bakımından mücbir sebeplere ilişkin tanımın, koşulların ve etkilerin Gümrük Kanununda çerçeve bir düzenlemede yer alması, iyi niyetli kişilerin haklarının korunması ve mağdur olmalarının önlenmesi ile uygulamada istikrar sağlanabilmesi açısından önemli bir eksikliği giderecektir.

Anahtar Kelimeler: Gümrük, Gümrük Mevzuatı, Gümrük İşlemleri, Mücbir Sebep, Pandemi

Abstract: Throughout history, customs have been regarded as important in terms of politics, economy, public finance and public security and have been subject to various regulations in accordance with the evolution of law. Although it is envisaged that customs procedures will be carried out in accordance with these regulations, which constitute the customs legislation, in some cases this may not be possible. There are force majeure among these situations that eliminate the flaws of people, prevent them from becoming victims and enable them to fulfill their duties later. The pandemic caused by Covid-19 is also among the force majeure reasons that are valid for customs procedures. Although force majeure are applied in many areas of law including customs duties and customs procedures and their protective effects are accepted, they do not have a common definition and conditions. In this study, the force majeure regulated in the customs legislation and its effects have been examined and it has been evaluated whether it has sufficient effect in protecting the rights of individuals and fulfilling their duties. For this purpose, the basic regulations of the customs legislation and customs practices were examined. As a result of the study, it was concluded that the regulations on force majeure in the customs legislation are not based on a framework law, are not systematic, and that a comprehensive and complex legislature must be taken into account in order to be understood and implemented. This is one of the reasons why the customs administration is instructed with frequent orders to prevent the victimization caused by the pandemic. In terms of customs legislation and interpretation, including the definition, conditions and effects of force majeure in a framework regulation in the Customs Law will eliminate an important deficiency in terms of protecting the rights of well-intentioned persons and preventing them from being victims and ensuring stability in practice.

Key Words: Customs, Customs Legislation, Customs Procedures, Force Majeure, Pandemic

1. GİRİŞ

Türk Dil Kurumu Genel Türkçe Sözlükte salgın, “*kısa zamanda çevredeki insan, hayvan veya bitkilerin büyük bir bölümüne bulaşan, müstevli (sıfat)*” ve “*bir hastalığın veya başka bir durumun yaygınlaşması ve birçok kimseye birden bulaşması, epidemî (isim)*” olarak tanımlanmıştır (Türk Dil Kurumu [TDK], 2021). Pandemi ise, “*dünyada birden fazla ülkede veya kıtada, çok geniş bir alanda yayılan ve etkisini gösteren salgın hastalıklara verilen genel isim*” anlamına gelmektedir (Türkiye Bilimler Akademisi [TÜBA], 2020: 19).

Dünya Sağlık Örgütüne göre yeni bir hastalığın dünya çapında yayılmasına pandemi adı verilmektedir ve bir hastalığın pandemi sayılması, “*yeni bir virüs veya mutasyona uğramış bir etken olması*”, “*insanlara*

kolayca geçebilmesi” ve “insandan insana kolay ve sürekli bir şekilde bulaşması” şartlarına bağlıdır. Pandeminin ilanı da şartlar gerçekleştiğinde, Dünya Sağlık Örgütü tarafından yapılmaktadır (World Health Organization [WHO], 2010; Çınar ve Özkaya, 2020: 37; TÜBA, 2020: 19). Tarihte çeşitli örnekleri olmakla birlikte, en son Çin’in Hubei eyaletinin Vuhan şehrinde 5/1/2020 tarihinde, daha önce insanlarda tespit edilmemiş yeni bir koronavirüsün tespiti, ilk olarak “2019-nCoV” ve sonra da “Covid-19” olarak adlandırılan hastalığın ortaya çıkması ve üç ay gibi kısa bir sürede tüm dünyayı etkilemesi üzerine, Türkiye’de de ilk vakanın görüldüğü tarih olan 11/3/2020’de pandemi ilan edilmiştir (WHO, 2020; Budak ve Korkmaz, 2020: 66).

Covid-19 pandemisinin (kısaca pandeminin), tüm dünyada, başta sağlık olmak üzere ekonomi, maliye, eğitim, ulaşım, turizm ve kültürel etkinlikler dahil hemen hemen her alanda etkisi olmuştur. Bu nedenle pandemiyle mücadelede edebilmek ve özellikle ekonomiye olan olumsuz etkilerini en aza indirebilmek amacıyla bütün ülkeler çeşitli içerikte para ve maliye politikası tedbirlerini hızla yürürlüğe koymuştur. Bu tedbirler; finansal piyasalara likidite sağlanması, faiz indirimi, açık piyasa işlemleri, zorunlu karşılıkların düşürülmesi, kredi temini, vergi indirimleri, vergi/borç ertelemeleri veya yapılandırılmaları, transfer ödemelerini artırma/gelir desteği sağlama, işsizliği önleme, fiyat denetimleri, borçlulara anapara veya faiz moratoryumu verilmesi ve çeşitli sektörler için teşvik paketleri olarak şekillenmiştir (Ozili ve Arun, 2020: 15; Duran ve Acar, 2020: 62; Eğilmez, 2020; Arabacı ve Yücel, 2020: 93). Türkiye’de de pandeminin ilanı ile birlikte 27/4/2020 tarihine kadar olan dönemde vergi alanında 19, sosyal güvenlik alanında 12, araştırma alanında 4, çeşitli hukuk dallarında 15 ve gümrük alanında 33 olmak üzere toplam 83 konuda düzenleme yapılmıştır (Çalikoğlu, 2020). Genel hatlarıyla oran indirimleri, vergi beyannamesi verme sürelerinin uzatılması, vergi ödeme sürelerinin uzatılması gibi vergi destekleri ve teşvik paketleri olmak üzere iki gruba ayrılan bu önlemler arasında sürelerin uzatılması ön plandadır (Ekmekçi vd., 2020: 1073). Ayrıca pandemi sürecinde vergi iadelerinin hızlandırılması, vergi ve sosyal güvenlik primlerinin ertelenmesi, borçların yapılandırılması, devlet kredisi ve kredi garantisi verilmesi, işletmelerin vergi yükünün azaltılması gibi önlemler de uygulanmıştır (OECD, 2020; Ekmekçi vd., 2020: 1073).

Pandemiyle ilgili hukuk alanında üzerinde en fazla durulan konulardan biri ise, mücbir sebep halleridir (Karakoç, 2020). Konunun gümrük ve dış ticaret alanına yansımaları ise, pandeminin mücbir sebep oluşturup oluşturmadığı ve oluşturması halinde gümrük yükümlülüklerine etkisinin ne olacağı yönündedir.

Çalışmanın konusunu gümrük mevzuatında mücbir sebep düzenlemeleri ve pandeminin etkisi oluşturmaktadır. Konunun irdelenmesi amacıyla çalışmanın birinci bölümünde vergi hukuku ve teorisi temelinde mücbir sebep kavramı, koşulları ve pandeminin mücbir sebep niteliği; ikinci bölümünde mücbir sebeplere ilişkin düzenlemeler ve son bölümünde de mücbir sebeplerin gümrük işlemlerine etkisi incelenecektir. Belirtilmelidir ki dahilde alınan vergilere ilişkin mücbir sebepler konusundaki akademik eser yoğunluğundan ne yazık ki gümrük vergileri ve gümrük işlemleri alanında da olduğunu söyleyebilmek oldukça güçtür. Bu nedenle çalışmada yapılan açıklamalarda dahilde alınan vergilere ilişkin temel düzenleme ve görüşlerden sıklıkla yararlanılmıştır.

2. MÜCBİR SEBEP KAVRAMI, KOŞULLARI VE PANDEMİNİN NİTELİĞİ

Mücbir sebep kavramı, farklı hukuk alanlarında kullanılmakla birlikte açık bir tanıma sahip değildir. Bu bölümde mücbir sebeplere ilişkin tanımlar, mücbir sebep olmanın koşulları ve pandeminin mücbir sebep olması açısından niteliği üzerinde durulacaktır.

2.1. Mücbir Sebep Kavramı

Türk Dil Kurumu Genel Türkçe Sözlükte mücbir sebep kavramı, *“herhangi bir kimse tarafından alınacak önlemlere karşı, önüne geçilmesi olanaksız, borcun yerine getirilmesine engel, borçlunun iradesi dışında beklenmedik olaylar”* şeklinde tanımlanmıştır (TDK, 2021). Arapça, *“zorla iş yaptıran, icbar eden, zorlayan”* anlamına gelen *“cebr”* kökünden türeyen kavram, Roma Hukuku dönemiyle birlikte *“mücbir haller ve olaylar”* olarak modern hukukta yerini almış ve Türkçeye *“mücbir sebep”* olarak yerleşmiştir (Ekmekçi vd., 2020: 1076). Kavram tekil veya çoğul şekliyle ve özellikle de hukuk alanında sıklıkla kullanılmaktadır.

Mücbir sebepler hukukun birçok alanını ilgilendirse de ilgili düzenlemelerde açıkça tanımlanması yerine, bir sınırlandırılmaya tabi tutulmadan örneklenmesi tercih edilen bir kavramdır. Bununla birlikte teoride, mücbir sebeple ilgili, aynı veya benzer ifadeleri içeren, birçok tanım bulunmaktadır. Bu tanımlara göre mücbir sebepler;

- “Kapsamına giren olaylar ve durumlar itibariyle, nedeni bilinse önlem alınabilmekle ve zararın önüne geçilebilmekle birlikte, çoğunlukla doğadan kaynaklanan ve insanların elindeki araçlarla karşı koyamayacağı olaylardır” (Evren, 2010: 272).
- “İllyet bağıni kesen, zarar vereni, borçluyu veya mükellefi doğan zarardan/cezadan kurtaran, bir hakkın kullanımını süresi geçtikten sonra da mümkün kılan durumlardır” (Karadağ ve Organ, 2011: 151).
- “Tarafların belirli bir süreye bağlı olarak yerine getirmesi gereken ödev, yükümlülük veya borçlarını yerine getirme sırasında iradesini geçici olarak ortadan kaldıran ve dıştan gelen fiili bir durumdur; yani gerçek dünyada meydana gelen bir olayın hukuk aleminde söz konusu olan bir ödev, yükümlülük veya borcun yerine getirilmesini ya da bir hakkın kullanılmasını geçici olarak durdurmasıdır” (Yerlikaya, 2012: 43; Erol, 2012: 200).
- “Vergi mükelleflerinin, vergi sorumlularının ve ceza muhataplarının isteseler dahi hiçbir biçimde kendi çabaları ve iradeleriyle önüne geçemeyecekleri, oluşunu ve sonuçlarını engelleyemeyecekleri doğal veya yapay durumlardır” (Erol, 2012: 201).
- “Bir hakkın kullanılmasını, bir borcun ya da ödevin yerine getirilmesini engelleyen, önceden bilinmesi ve önlenmesi mümkün olmayan her türlü olaydır” ve “kişilerin önceden tahmin etmeleri mümkün olmayan, iradelerine dayanmayan dış etkiler sonucu meydana gelen ve etkilerini bertaraf edemedikleri olaylardır” (Karakoç, 2017: 274; Karakoç, 2020).
- Özel hukukta, “bir borcun veya genel bir davranış yükümlülüğünün yerine getirilmesini engelleyen, borçlunun işletme faaliyetiyle ilgisi olmayan, öngörülemeyen ve kaçınılamaz olaydır”; idare hukukunda idarenin sorumluluğunu kaldıran hallerle ilgili olarak, “idarenin faaliyetinin dışında gelişen öngörülemeyen ve önlenemeyen olaylardır” ve aynı zamanda “idareye karşı bir taahhüdün veya yükümlülüğün yerine getirilmesini engelleyen, idarenin muhatabı kişilerin kusurundan kaynaklanmayan ve kişilerin ortadan kaldırmaya gücünün yetemeyeceği maddi veya hukuki olaylar” olup “idarenin engelleyici tutumu” bile mücbir sebep sayılmalıdır (Yıldırım, 2019: 1521-1529).
- “Kişilerin işlem ve işletmesi dışında gelişen, genel bir davranış normunun veya borcun zedelenmesine mutlak ve kaçınılmaz bir biçimde yol açan ve karşı konulmasına olanak bulunmayan olağanüstü olaylardır” (Emre ve Yılmaz, 2020).
- “Meydana gelmesi ve önlenmesi insan iradesine bağlı olmayan dış güç olarak karşı konamayacak ve önlenemeyecek haller” ve “vergi ödevlerinin yapılmasına engel olacak şekilde, mükellef iradesi dışında meydana gelen ve katlanması gereken dışsal zorunluluklardır” (Şenyüz, 2020: 302-303).

Yargı organlarının kararlarında da mücbir sebeplerin tanımlarına rastlanmaktadır. Örneğin Danıştay’a göre mücbir sebepler, “insanın iradesi ve ihtiyarı dışında meydana gelen tesadüfi...” ve “kökeni, doğal, sosyal ve hukuki olması itibariyle failin dışında kalan, fail tarafından önlenme olanağı bulunmayan, önceden takdir ve tahmin edilemeyen olaylardır.” (Ekmekçi vd., 2020: 1076). Yine Danıştay’a göre, “bir yükümlülüğün, bir borcun zamanında yerine getirilmesini veya ödenmesini engelleyen; önceden görülüp, üstesinden gelinmesi olanağı bulunmayan her türlü olay” mücbir sebeptir (Kılıç ve Şekerci, 2015: 846).

Gümrük mevzuatında mücbir sebepler tanımlanmamış; bir sınırlandırma yapılmadan örneklenmiştir. Anacak yukarıda belirtilen tanımlar göstermektedir ki gümrük vergileri ve gümrük işlemleri açısından da mücbir sebep kavramından, kişilerin iradesi dışında meydana gelen, kaçınılamaz ve karşı konulamaz niteliği olan ve kişilerin mevzuattan kaynaklanan emir ve yasaklara uygun hareket etmesini kusuru olmaksızın engellemesi nedeniyle ilgili mercilerce re’sen ya da başvuru üzerine dikkate alınması gereken hallerin anlaşılması gerekmektedir.

2.2. Mücbir Sebep Olmanın Koşulları

Mücbir sebep kavramına ilişkin tanımlar, bu sebeplerin ilgili olduğu alana göre koşullarını ortaya koymaktadır. Dolayısıyla mücbir sebepler, belirli koşullardan hareketle tanımlanmakta, özellikleri ve koşulları sıralanmaktadır.

- Mücbir sebepler, *“Vergilendirmeyi engelleyen, kişinin iradesi dışında mevcut bir kuvveti ve meydana gelen olayın da kişinin bilinç ve iradesi içinde olmamasını”* gerektirmektedir (Mutluer, 2008: 152).
- Bir durumun mücbir sebep olması, *“onun sadece doğüstü olması değil, aynı zamanda öngörülmez (sezilemez) ve önlenemez (karşı konulamaz) nitelikte olmasına bağlıdır”* ve koşulları arasında; *“dışsallık, öngörülmezlik, önlenemezlik ve özel hukuk kapsamında kusursuzluk”* vardır (Evren, 2010: 276; 281).
- *“Kişilerin vergi ödevlerini yerine getirmesini engelleyecek nitelikte ve ağırlıkta olması”* gereken mücbir sebeplerin en belirgin özellikleri, *“kişinin iradesi ve ihtiyarı dışında meydana gelen tesadüfi, kaçınılmaz ve karşı konulmaz bir olay olmasıdır”* ve bu olayların *“meydana gelmelerinden önce bilinmeleri mümkün değildir; meydana geldiklerinde giderilmeleri de ilgili kişilerin iradesine bağlı değildir”* (Karakoç, 2017: 275; Karakoç, 2020).
- Bir durumun mücbir sebep oluşturmasının temel koşulları, *“haricilik”, “kaçınılamazlık”, “öngörülemezlik”* ve *“nedensellik/illiyet bağı”* şeklindedir (Yıldırım, 2019: 1521; Ekmekçi vd., 2020: 1079-182; Balcı, 2020).
- Mücbir sebepler, *“dışarıdan gelen karşı konulmaz, öngörülemez ve öngörülse bile önlenemez niteliktedir”, “kişilerin iradesini etkiler ve vergi ödevlerini yetirmelerini engelleyecek kuvvettedir. İradi hareket etme olanağını ortadan kaldırır”* ve *“kişinin kusurundan söz edilemez”* (Şenyüz, 2020: 302-303).
- Bir olayın veya durumun mücbir sebep oluşturması; *“ tarafların kontrolleri dışında gerçekleşmiş olması, hukuki ilişkinin kurulduğu esnada böyle bir olayın öngörülemeyecek olması, öngörülse dahi sonuçlarının bu denli ağır olacağına öngörülememesi, tüm önlemler alınmasına rağmen yine de mücbir sebebin etkilerinin ortadan kaldırılamaması”* koşullarına bağlıdır (Emre ve Yılmaz, 2020).
- Danıştay’a göre mücbir sebepler, öngörülemez ve önlenemez olmanın yanında, kullanılmayan hak ya da yerine getirilmeyen yükümlülükler ile uygun bir illiyet bağına sahip olmalıdır (Kılıç ve Şekerci, 2015: 846).

Mücbir sebeplerin koşullarıyla ilgili olarak üzerinde durulması gereken bir konu da mücbir sebeplerin ispatıdır. Bu bağlamda mücbir sebebin varlığı (gerçekleşmiş olması ve herkesçe bilinmesi) belirleyici kabul edilmektedir. Bir mücbir sebebin uygulanması ve sonuç doğurması açısından toplumun tamamını ya da bir kesimini ilgilendirmesi halinde ispatı gerekmezken; bir kişi ve grubu ilgilendirmesi halinde ilgilisince ispatı şarttır. Ayrıca bir mücbir sebebin vergi ödevleri veya işlemleri üzerinde etkili olup olmadığının ve mevcut etkisin derecesinin tespiti de adaletsiz sonuçların önlenmesi açısından gereklidir (Karakoç, 2020).

Vergi hukuku alanında yapılan değerlendirmelerde, ayrıca, mücbir sebeplerin kişiye ve olaya bağlı olduğu kabul edilmekte ve Vergi Usul Kanununda sınırlama yapılmaması nedeniyle, mücbir sebeplere benzeyen ancak yeni bir tür olmamakla birlikte aynı tür içinde kalan farklı durumlar da bu kapsamda kabul edilmektedir (Şenyüz, 2020: 304). Ayrıca bir olayın önceden mutlak bir şekilde mücbir sebep oluşturması mümkün görülmemekte; her olayın kendi koşul ve özellikleri içerisinde değerlendirilmesi gerektiği de vurgulanmaktadır (Öncel, Kumrulu ve Çağan, 2008: 118; Mutluer, 2008: 152; Nas, 2011: 104). Bu bakımdan mücbir sebepler nispi olup, bir olay; olduğu yere, koşullara ve zamanın özelliklerine göre mücbir sebep olabilir ya da olmaz (Evren, 2010: 277).

2.3. Pandeminin Mücbir Sebep Niteliği

Pandemi herkesçe bilinen ve öngörülemeyen bir olaydır. Dolayısıyla pandeminin, insandan insana bulaşması, geniş bir coğrafi alana yayılması ve alınan önlemlerin ticaret hayatına çeşitli derecede

kısıtlamalar getirmesine bağlı olarak mücbir sebep oluşturması konusunda şüphe yoktur (Oğuz, 2020). Ancak vergi ödevlilerinin pandemiye bağlı mücbir sebepten yararlanmaları farklı esaslara tabi tutulmuştur.

Pandeminin mücbir sebep oluşturmasına yönelik koşullar, dahilde alınan vergiler ve vergi ödevleri açısından mevcut olduğu kabul edilmektedir. İlk olarak, dünya çapındaki etkisi, kısıtlamaların ve zorunlu koruma tedbirlerinin kişilerin vergi ödevlerini yerine getirmesini ve dava açma haklarını engelleyecek boyuta ulaşması gibi etkenler, pandemiye, “*ağır hastalık*” ya da “*gibi haller*” kapsamında ve “*geniş anlamda bir mücbir sebep*” oluşturmaktadır. İkincisi, “*tabii afetlerden kaynaklanan mücbir sebepler*”, “*şahsa özgü sonuç doğuran mücbir sebepler*” ve “*toplumu etkileyen olaylarla ilgili mücbir sebepler*” ayrımında pandemi, tabii afetlerin sınırlandırılmamış olması ve kişilerin vergi ödevlerini yerine getirmesine engelleyecek derecede olması koşullarını taşıması nedeniyle “*genel nitelikte bir afet*” oluşturmaktadır. Üçüncü olarak, kişilerin pandemi nedeniyle karantinaya alınmaları, o kişiler için “*mecburi gaybubet*” de oluşturmaktadır. Bu durum o kişilerin vergi ödevlerini yerine getirmeyi engellediğinden “*şahsa özgü sonuç doğuran mücbir sebep*” de oluşturmaktadır (Ekmekçi vd., 2020: 1089; Karakoç, 2020; Karadağ, 2020: 403-407).

Pandeminin, “*öngörülemeyen bir olay*” niteliği olmakla birlikte, mücbir sebep oluşturmanın koşullarını taşıması bakımından hangi aşamada öngörülemediği veya bu öngörülemezliğin ölçüsünün ne olduğu belirsizdir. Bu nedenler pandemi önlemleri kapsamında yayımlanan 518 Sıra No’lu Vergi Usul Kanunu Genel Tebliğinde (RG, 24/3/2020, 31078), genel mücbir sebep hali veya olağanüstü hal ilanı düzenlenmediğinden, kişilerin pandemiyle ilişkili durumlarının “*olayın özelliklerine göre*” münferit olarak değerlendirilmesi gerekli görülmektedir (Yıldırım, 2019: 1522; Doksat, 2020; Emre ve Yılmaz, 2020). Hazine ve Maliye Bakanlığı, bu Tebliğ ile pandemi önlemlerinden etkilenen bir grup mükellef için mücbir sebep ilan edilmiştir (Karadağ, 2020: 403-404). Dolayısıyla pandemiden etkilenen kişilerin bu olayı ispatı gerekmeseyse de pandemi nedeniyle vergi ödevlerini yerine getiremediklerini ispat etmeleri gerekmektedir. Örneğin pandemi nedeniyle hastanede tedavi altına alınan veya karantinaya alınan kişiler, bu nedenlerle vergi ödevlerini yerine getiremediklerini ispat etmelidirler (Ekmekçi vd., 2020: 1092).

Gümrük mevzuatı açısından da pandemi mücbir sebep oluşturmaktadır. 4458 sayılı Gümrük Kanununda (RG, 4/11/1999, 23866) bir düzenleme olmamakla birlikte Gümrük Yönetmeliğinde (RG, 7/10/2009, 27369) mücbir sebepler, “*...a) Doğal afetler (yangın, yer sarsıntısı, su basması, don, fırtına, kasırga vb.) b) Kanuni grev ve lokavtlar, c) Genel salgın hastalık, ç) Kısmi veya genel seferberlik ilanı, d) Devletçe konulan yasaklar, abluka veya savaş hali, terör, e) Ağır kaza, ağır hastalık ve tutukluluk, f) Yükümlü firmanın iflası veya şahıs firmalarında firma sahibinin ölümü, g) Yükümlü firmanın faaliyetinin kamu otoritelerince durdurulması, ğ) Yükümlünün iradesi dışında meydana gelen ve müdahalesiyle önlenemeyecek diğer durumlar...*” (m.34) şeklinde düzenlenmiştir. Gümrük Yönetmeliğinde mücbir sebep kavramı tanımlanmamış; ancak, herhangi bir sınırlandırma yapılmadan örneklenmiştir. Bunlardan, “*doğal afetler*”, “*genel salgın hastalıklar*”, “*ağır hastalıklar*” ve “*yükümlünün iradesi dışında meydana gelen ve müdahalesiyle önlenemeyecek diğer durumlar*” pandemi kapsamında değerlendirilebilecek mücbir sebeplerdir ve bunlar arasında pandemi (salgın hastalıklar) ismen de yer almaktadır (Kaya, 2020). Dolayısıyla pandemi hem içeriği olan hastalığa yakalananlar hem de pandemiye mücadele kapsamında alınan önlemlerinden olumsuz etkilenenler için mücbir sebep oluşturmaktadır. Gümrük idaresinin dağıtımlı yazılarından da pandeminin hem genel ve hem de kişilere özgü sonuçlar doğurabilen mücbir sebep olarak değerlendirildiği görülmektedir. Örneğin yetkilendirilmiş yükümlü statüsüyle ilişkili sürelerin bir talimata kadar durdurulması, özel taşıtların veya bazı antrepo işlem sürelerinin re’sen uzatılması uygulamalarında pandemi genel mücbir sebep kabul edildiği; anca, daha sonra re’sen süre uzatımı işlemlerinden vazgeçilerek bunun için başvuru ve ispat koşulu aranması hallerinde ise, pandeminin kişilere özgü sonuçlar doğurabilen mücbir sebep olarak kabul edildiği görülmektedir.

3. MÜCBİR SEBEPLERE İLİŞKİN TEMEL DÜZENLEMELER

Türkiye’de dahilde alınan vergiler ve gümrük vergileri bakımından iki ayrı mevzuat ve vergilendirme rejimi bulunmaktadır. Dahilde alınan vergilere ilişkin vergilendirme (usul) işlemleri 213 sayılı Vergi Usul Kanununda (RG,10-12/1/1961, 10703-10705); gümrük vergilerine ilişkin vergilendirme işlemleri ise, Gümrük Kanununda düzenlenmiştir. Bu bakımdan bir verginin dahilde uygulanması olsa bile gümrük

vergileri kapsamında girmesi halinde Gümrük Kanununa göre işlemler yerine getirilmektedir. Vergi Usul Kanunu düzenlemesi de bu yöndedir (m.2). Diğer taraftan kamu alacaklarının takibatı ve tahsil işlemleri 6183 sayılı Amme Alacaklarının Tahsil Usulü Hakkında Kanuna (RG, 28/7/1953, 8469) ve vergi davaları da 2577 sayılı İdari Yargılama Usulü Kanununa (RG, 20/1/1982, 17580) göre yerine getirilmektedir. Bu bölümde, gümrük mevzuatında düzenleniş şeklinin incelenebilmesi için öncelikle Vergi Usul Kanunu açısından sonrasında ise, gümrük mevzuatı açısından mücbir sebepler ve pandeminin etkisi üzerinde durulacaktır.

3.1. Dahilde Alınan Vergiler ile Vergilendirme İşlemlerinde Mücbir Sebep Düzenlemeleri

Vergi Usul Kanununda yer alan düzenlemelerde mücbir sebeplere ilişkin bir tanım yapılmamış; ancak, mücbir sebep oluşturan haller koşullarıyla birlikte örneklendirilmiş (Kılıç ve Şekerci, 2015: 844) ve “*gibi haller*” ifadesiyle de kavram daha geniş bir zemine yayılmıştır (Yerlikaya, 2012: 46; Ekmekçi vd., 2020: 1088). Bu düzenlemeler, dahilde alınan vergilere ilişkin usul işlemleri bakımından geçerli olan mücbir sebeplerin türlerini, koşullarını ve etkili olduğu alanları ortaya koymaktadır. Ancak belirtilmelidir ki anılan düzenlemelerin uygulaması açısından yorum birliği yoktur ve vergi idaresinin geniş bir takdir yetkisi bulunmaktadır.

Vergi Usul Kanununda mücbir sebepler, “1. Vergi ödevlerinden her hangi birinin yerine getirilmesine engel olacak derecede ağır kaza, ağır hastalık ve tutukluluk; 2. Vergi ödevlerinin yerine getirilmesine engel olacak yangın, yer sarsıntısı ve su basması gibi afetler; 3. Kişinin iradesi dışında vukua gelen mecburi gaybubetler; 4. Sahibinin iradesi dışındaki sebepler dolayısıyla defter ve vesikalarının elinden çıkmış bulunması; gibi hallerdir” (VUK, m.13) şeklinde örneklendirilmiştir. Yine Vergi Usul Kanununa göre, “13 üncü maddede yazılı mücbir sebeplerden her hangi birinin bulunması halinde bu sebep ortadan kalkıncaya kadar süreler işlemez. Bu takdirde tarh zamanaşımı işlemiyen süreler kadar uzar. Bu hükmün uygulanması için mücbir sebebin malûm olması veya ilgililer tarafından ispat veya tevsik edilmesi lazımdır. Maliye Bakanlığı, mücbir sebep sayılan haller nedeniyle; bölge, il, ilçe, mahal veya afete maruz kalanlar itibarıyla mücbir sebep hali ilan etmeye ve bu sürede vergi ödevlerinden yerine getirilemeyecek olanları tespit etmeye yetkilidir. Bu yetki vergi türleri ve işyerleri itibarıyla; beyannamelerin toplulaştırılması, yeni beyanname verme süreleri belirlenmesi ve beyanname verme zorunluluğunun kaldırılması şeklinde de kullanılabilir” (VUK, m.15). Bu düzenlemede mücbir sebeplerin sürelere etkisi, ispatı ile Hazine ve Maliye Bakanlığının yetkisine açıklık getirilmiştir. Hazine ve Maliye Bakanlığına verilen yetki kapsamında yayımlanan 518 Sıra No’lu Vergi Usul Kanunu Genel Tebliğinde, “ticari, zirai ve mesleki kazanç yönünden gelir vergisi mükellefiyeti bulunan veya salgından doğrudan etkilenen ya da İçişleri Bakanlığınca alınan tedbirler kapsamında geçici süreliğine faaliyetlerine ara verilmesine karar verilen işyerlerinin bulunduğu sektörlerde faaliyette bulunan mükellefler” ile “65 yaş ve üstünde olması veya kronik rahatsızlığı bulunması nedeniyle sokağa çıkma yasağı kapsamına giren mükellefler ve meslek mensupları ile beyanname/bildirimleri bu meslek mensuplarınca verilenler” itibarıyla mücbir sebep hali ve koşulları ve 524 Sıra No’lu Vergi Usul Kanunu Genel Tebliğinde (RG, 25/1/2021, 31375), “İçişleri Bakanlığınca alınan tedbirler kapsamında geçici süreliğine faaliyetlerine tamamen ara verilmesine/faaliyetlerinin tamamen durdurulmasına karar verilen işyerlerinin bulunduğu sektörlerde faaliyette bulunan mükellefler” itibarıyla mücbir sebep hali ve koşulları açıklanmıştır. Kapsamı ve yürürlük süresi sınırlı olan her iki Tebliğ de temelde sürelerle ilgilidir. Pandemiden kaynaklanan mağduriyetlere Vergi Usul Kanununda yer alan düzenlemelerin cevap vermemesi nedeniyle yürürlüğe konulan bu Tebliğlerde kapsam dışı bırakılanların, vergi idaresine başvurması ve pandemi nedeniyle oluşan mücbir sebepten etkilendiklerini kanıtlanması gerekmektedir (Ekmekçi vd., 2020: 1109).

Vergi Usul Kanunundaki diğer bir düzenlemeye göre, “Vergi, kanunlarında gösterilen süreler içinde ödenir. Ödeme süresinin son günü verginin vadesi tarihidir. Bu kanunun 15, 17 ve 342 nci maddelerinin uygulanması dolayısıyla sürenin uzaması halinde vade uzayan sürenin bittiği gündür. Maliye Bakanlığı; mücbir sebep hali ilan edilen yerlerdeki mükelleflerin, bu Kanun kapsamında olup, ödeme süresi afet tarihinden sonraya rastlayan her türlü vergi, ceza ve gecikme faizleri ile bu Kanunun 15 inci maddesinin üçüncü fıkrası uyarınca verecekleri beyannamelere istinaden tahakkuk ettirilen vergilerin ödeme sürelerini, vadelerinin bitim tarihinden itibaren azami bir yıl süreyle uzatmaya yetkilidir. Bu yetki; bölge, il, ilçe, mahal ve afetten zarar görenler ile afetten zarar görme derecesi veya vergi türleri itibarıyla

farklı süreler tespit etmek suretiyle de kullanılabilir. Bu suretle belli edilen günler verginin vadesi yerine geçer.” (VUK, m.111). Bu düzenleme, mücbir sebeplerin ödeme süresi üzerine olan etkisine açıklık getirmektedir.

Vergi Usul Kanunundaki başka bir düzenleme, *“Bu kanunda yazılı mücbir sebeplerden her hangi birinin vukua geldiği malüm ise veya tevsik ve ispat olunursa vergi cezası kesilmez”* (VUK, m.373) şeklindedir. Bu düzenleme ise, mücbir sebeplerin vergi cezalarına etkisine açıklık getirmektedir.

3.2. Gümrük Vergileri ile Gümrük İşlemlerinde Mücbir Sebep Düzenlemeleri

Gümrük işlemleri, Revize Kyoto Sözleşmesi Genel Ekte, *“gümrük mevzuatına uygun olarak gümrük idareleri ve bu idarelerle muhatap olanlar tarafından yerine getirilmek zorunda olan bütün işlemler”* olarak tanımlanmıştır (World Customs Organization [WCO], 2018: 10). Dolayısıyla gümrük işlemleri, gümrük idaresince ve ilgili kişilerin katılımıyla veya doğrudan gümrük idaresince yerine getirilen işlemler olup, gümrük idareleriyle muhatap olan kişiler açısından yerine getirmesi gereken maddi ve şekli ödevleri kapsamaktadır. Maddi ödevler, gümrük yükümlülüğü bağlamında gümrük vergilerini ödeme zorunluluğunu; şekli ödevler ise, maddi ödevler dışında kalan ve gümrük işlemlerinin tamamlanması için yerine getirilmesi zorunlu olan bütün usul işlemlerini kapsamaktadır (Gültekin, 2020: 797). Türk hukukunda gümrük işlemleri hem vergi hem de usul kanunu niteliğine sahip Gümrük Kanunu ile Gümrük Yönetmeliği ve çeşitli ikincil mevzuatla düzenlenmiştir. Vergi Usul Kanunu düzenlemeleri ise, gümrük vergileri bakımından uygulama alanı bulmamaktadır (m.2).

Gümrük Kanununda süreler düzenlenmekle birlikte (GK, m.14) mücbir sebeplere ilişkin genel bir düzenlemeye yer verilmemiş; ancak, bazı gümrük işlemleriyle ilgili olarak mücbir sebepler *“beklenmeyen haller”* kavramı ile birlikte belirtilmiştir. Mücbir sebeplere ilişkin genel düzenleme ise, hukuka aykırı bir yöntem olmakla birlikte (Ekmeççi vd., 2020: 1100), Gümrük Yönetmeliğinde yer almaktadır. Gümrük Yönetmeliğinde mücbir sebepler, *“...mücbir sebep ve beklenmeyen hallerden herhangi birinin bulunması halinde bu sebep ortadan kalkıncaya kadar ... süreler işlemez. Süresi dışında yapılan müracaatlarda, mücbir sebep ve beklenmeyen hallerin süresi içerisinde meydana geldiğini kanıtlayan belge ibrazı halinde ilgili gümrük idaresince mücbir sebep ve beklenmeyen hallere ilişkin olarak ibraz edilen belgelere göre ek süre verilir. Mücbir sebep ve beklenmeyen haller şunlardır; a) Doğal afetler (yangın, yer sarsıntısı, su basması, don, fırtına, kasırga vb.) b) Kanuni grev ve lokavtlar, c) Genel salgın hastalık, ç) Kısmi veya genel seferberlik ilanı, d) Devletçe konulan yasaklar, abluka veya savaş hali, terör, e) Ağır kaza, ağır hastalık ve tutukluluk, f) Yükümlü firmanın iflası veya şahıs firmalarında firma sahibinin ölümü, g) Yükümlü firmanın faaliyetinin kamu otoritelerince durdurulması, ğ) Yükümlünün iradesi dışında meydana gelen ve müdahalesiyle önlenemeyecek diğer durumlar.”* (GY, m.31) şeklinde düzenlenmiştir. Buna göre mücbir sebep ve beklenmeyen hallerden herhangi birinin bulunması halinde bu sebep ortadan kalkıncaya kadar Gümrük Kanununda belirtilen süreler işlememekte; süresi içerisinde gümrük idaresine başvurup ispat yükümlülüğünü karşılayan kişilere ise, ek süre verilmektedir. Ancak daha önce belirtildiği üzere, pandemi nedeniyle gümrük antrepo rejimi ve geçici ithalat rejimine ilişkin gümrük işlemlerinde re’sen ek süre uzatımına da gidilmiştir.

Gümrük Kanunu ve Gümrük Yönetmeliği dışında; Gümrük İşlemlerinin Kolaylaştırılması Yönetmeliğinde (RG, 21/5/2014, 29006), Gümrüksüz Satış Mağazaları Yönetmeliğinde (RG, 8/8/2017, 30148), Hariçte İşleme ve Geçici İhracat Tebliğinde (Seri No: 1, RG, 30/5/2009, 27243), TIR İşlemleri Tebliğinde (Seri No: 1, RG, 31/12/2010, 27802), Geçici İthal Edilen Kara Taşıtları Tebliğinde (Seri No: 1, RG, 22/4/2011, 27913), Geçici İthalat Tebliğinde (Seri No: 4, RG, 21/3/2005, 25762) ve Yetkilendirilmiş Gümrük Müşavirliği Tebliğinde (RG, 10.9.2020, 31240) de mücbir sebepler e ilişkin düzenlemeler bulunmaktadır. Bu noktada mücbir sebeplerin gümrük mevzuatı içerisinde dağınık bir görünüme sahip olduğu ve mücbir sebeplerin anlaşılması ve etkilerinin açıklanabilmesi için yoğun bir mevzuat yığınının dikkate alınması gerektiğinin belirtilmesinde fayda vardır.

4. MÜCBİR SEBEPLERİN GÜMRÜK İŞLEMLERİNE ETKİLERİ

Mücbir sebeplerin temel etkisi, hukukun doğal bir sonucu olarak, süresi içerisinde haklarını kullanamayan veya ödevlerini yerine getiremeyen vergi mükelleflerine, vergi sorumlularına ve ceza

muhataplarına bunları yerine getirmek ve mağdur olmalarını önlemek için bazı haklar sağlamaktır (Mutluer, 2008: 152; Kılıç ve Şekerci, 2015: 845). Bu açıdan mücbir sebeplerin; süreler ve vergi cezaları olmak üzere temelde iki etki alanı bulunmaktadır (Şenyüz, 2020: 304). Geniş bir bakış açısıyla mücbir sebepler, kişilerin Vergi Usul Kanununda yer alan ödevleri ile verginin/kamu borcunun ödenmesi açısından uygulama alanı bulmaktadır (Karakoç, 2020). Gümrük mevzuatı kapsamına giren düzenlemeler açısından da mücbir sebepler koruyucu etkisi olan kurumlar arasındadır.

Tablo 1’de mücbir sebeplerin etkili olduğu gümrük işlemleri ve ilgili düzenlemeler yer almaktadır.

Tablo 1: Bazı Gümrük İşlemleri ve Mücbir Sebeplerin Etkisi

Kaynak: Yazar tarafından gümrük mevzuatına ilişkin çeşitli düzenlemelerden derlenmiştir.

Tablo 1’deki açıklamalara göre gümrük mevzuatında, sıklıkla “*beklenmeyen haller*” kavramıyla birlikte ve doğal afet, kaza, hastalık, tutukluluk, savaş gibi çeşitli örnekleri tamamlamak amacıyla kullanılan mücbir sebepler, sistematikten uzak ve dağınık bir görünüme sahiptir. Bununla birlikte; gümrük işlemleri ve vergileri açısından mücbir sebeplerin de genel olarak, “*süreler*”, “*gümrük ihlalleri*” ve “*gümrük yükümlülüğü*” alanlarında etkisi vardır. Ayrıca mücbir sebepler, bazı şekli ödevler sırasında da uygulama alanı bulmaktadır.

4.1. Gümrük İşlemleri Sürelerine Etkisi

Gümrük işlemlerinin yerine getirilmesi ile bu işlemlerle bağlantılı hak ve yükümlülüklerin doğması veya sona ermesi bakımından süreler, gümrük idaresi ve bu idareyle muhatap olan kişiler için önem taşımaktadır (Ertaş, 2002: 10). Gümrük işlemleri sırasında esas itibarıyla Gümrük Kanunuyla belirlenen süreler ve kurallar geçerlidir; ancak, Türk Ceza Kanunu, Kabahatler Kanunu ve Amme Alacaklarının Tahsil Usulü Hakkında Kanunda yer alan sürelerle atıfta bulunulduğu durumlar da bulunmaktadır.

Gümrük işlemleri süreleri, ilgili oldukları düzenlemede yer alması nedeniyle, dağınık bir görünüme sahiptir. Bununla birlikte bu sürelerin, tüketici olmamak üzere, belirli başlıklar altında sınıflandırılması mümkündür. Buna göre sürelerin bir kısmı Gümrük Kanununda açıkça yer almakta; ancak, bazı sürelerin düzenlemesi ikincil düzenlemelere ya da gümrük idaresine bırakılmaktadır. Bir kısım süre için ise, uluslararası düzenlemeler esas alınmaktadır. Buna göre Gümrük Kanununda; sürelerle ilişkin genel esaslar (GK, m.14); karar verme süresi (GK, m.6/2), bağlayıcı tarife ve menşe bilgisi geçerlilik süreleri (GK, m.9/4), belge ve bilgi saklama süreleri (GK, m.13), gümrükçe onaylanmış işlem veya kullanım belirleme süresi (GK, m.46/2), yolcu beraberinde getirilip bir gümrük ambarına konulan eşyanın kalabileceği süre (GK, m.48/2), fikri mülkiyet haklarının korunmasına ilişkin süreler (GK, m.57), gümrük antrepolarında bulunan eşya için gümrük işlemlerinin tamamlanması süresi (GK, m.70/2), eşyanın antrepo rejimi altında kalış süresi (GK, m.101/1), kısmi muafiyette vergilendirme dönemi süresi (GK, m.133/1), dahilde işleme rejiminde geçici ihracat eşyasının ihraç süresi (GK, m.146), eşyanın serbest bölgelerde kalabileceği süre (GK, m.156), geri gelen eşyaya ilişkin muafiyet süresi (GK, m.168), tasfiye işlemleri süreleri (GK, m.177),

gümrük vergilerinin tahakkukunu izleme defterine kayıt süresi (GK, m.196), zamanaşımı süreleri (GK, m.197/2-5; m.231), gümrük vergilerini ödeme süresi (m.198), geri verme ve kaldırılma başvuru süreleri (GK, m.211-214, m.217), mahrece iade ve transit süreleri (GK, m.235), gümrük kabahatlerine ilişkin süreler (GK, m.238; m.241), itiraz ve uzlaşma başvuru süreleri (GK, m.242; m.244) açıkça düzenlenmiştir. Posta yoluyla gelen veya giden eşyanın bekleme süresi, Türkiye'nin taraf olduğu uluslararası posta anlaşmaları hükümlerine tabidir (GK, m.174). Dahilde işleme rejimine ilişkin süreler ile geçici ithalat rejimine ilişkin yerleşik kişi sayılma ve taşıtlarla ilgili özel durumlar Cumhurbaşkanı Kararıyla belirlenmektedir (GK, m.111/2-3; m.121/3; m.131). Yabancı limanlardan gelen veya Türkiye'den yabancı limanlara giden gemilerin geliş ve gidişlerine ilişkin bilgi verme süreleri (GK, m.34/3), özet beyan verme süreleri (GK, m.35/A), gümrük kontrolü altında işleme rejimine ilişkin süreler (GK, m.125) ve geçici ithalat rejimine ilişkin süreler (GK, m.130/3) ile muafiyetlere ilişkin süreler (GK, m.167/son) yönetmelikle veya Cumhurbaşkanı kararıyla belirlenmektedir. Gümrükçe onaylanmış bir işlem veya kullanım süresinin kısaltılması/uzatılması (GK, m.46/3), transit süreleri (GK, m.91), antrepo rejimine tabi tarım ürünlerine ilişkin özel süreler (GK, m.101/2), hariçte işleme rejimi süreleri (GK, m.139; m.146), ihracatta gümrük yükümlülüğü süresi (GK, m.190/2.b), tamamlayıcı beyan verme süresi (GK, m.199), geri verme veya kaldırmada ilave süreler (GK, m.213/4), bazı gümrük kabahatlerine ilişkin süreler (GK, m.235/1.e; m.235/2.c) ve özet beyan takibatına ilişkin süreler (GK, m.237) Gümrük Kanununda belirtilen esaslar çerçevesinde gümrük idaresince belirlenmektedir.

Gümrük işlemleri süreleri gümrük idaresine veya kişilere yönelik de olabilmektedir. Buna göre; beyan ve bildirimde bulunma süreleri (özet beyan, beyan, varış ve çıkış bildirimleri), eşyaya gümrükçe onaylanmış bir işlem veya kullanım belirlenmesi süreleri, gümrük rejimlerine ilişkin süreler, başvuru süreleri (karar isteme, bağlayıcı tarife ve menşe bilgisi, fikri mülkiyet haklarının korunması, itiraz, uzlaşma, geri verme/kaldırma, taksitlendirme vs.) ile belge saklama süreleri kişilere yönelik sürelerdir. Buna karşın karar verme süreleri, başvuruları sonuçlandırma süreleri, tasfiye işlemleri süreleri, gümrük yükümlüğüne ilişkin süreler (ek tahakkuk, tebligat ve tahsilat vs.) ile zamanaşımı süreleri ise, duruma göre kişilere ve/veya gümrük idaresine yöneliktir.

Daha önce belirtildiği üzere, sürelerle ilişkin genel esaslar Gümrük Kanununda düzenlenmiştir. Buna göre; *“Bu Kanunda ve bu Kanuna dayanılarak çıkarılan mevzuatta yer alan; izin süreleri, teminat uygulamaları, gümrük vergilerinden muafiyet ve istisna uygulamaları ile beyanın düzeltilmesine ilişkin ortaya çıkan sorunları ve tereddütleri incelemek suretiyle gidermeye Müsteşarlığın önerisi ile bağlı bulunduğu Bakan yetkilidir...”* (GK, m.10/1.a) denilerek süreler konusunda Ticaret Bakanlığının (değişmeden önce Gümrük Müsteşarlığının bağlı olduğu Bakanın) yetkili oluşu vurgulanmıştır. Ayrıca; *“... Kanunda belirtilen süreler, tarih veya vadeler, aksine özel bir hüküm bulunmadıkça uzatılamaz veya ertelenemez. Süre, tarih veya vadelerin bitim tarihinin resmi tatil gününe rastlaması halinde, bu süreler ilk işgününün resmi çalışma saatleri sonunda biter. Süre hafta veya ay olarak belli edilmiş ise; başladığı güne son hafta veya ayda tekabül eden günün mesai saati bitiminde sona erer. Sürenin bittiği ayda tekabül eden bir gün yoksa süre o ayın son gününün mesai saati bitiminde sona erer. Bu Kanuna göre gümrük idaresine yapılacak yazılı başvurular posta ile taahhütlü olarak gönderilebilir. Bu takdirde başvurunun postaya verildiği tarih gümrük idaresine verilme tarihi yerine geçer.”* (GK, m.14) denilerek sürelerin başlangıcına ve bitişine ilişkin hususlar açıklanmıştır.

Bu noktada mücbir sebeplerin gümrük işlemleri sürelerine etkisinin anlaşılabilmesi için vergi hukukunda yapılan değerlendirmelere bakılması yerinde olacaktır. Öncelikle Vergi Usul Kanunu uyarınca mücbir sebeplerin, vergi ödevlerine ilişkin süreleri *“durdurucu”* etkisi bulunmaktadır. Bu durumda mücbir sebeplerin varlığı halinde ortadan kalkıncaya kadar vergi ödevlerine ilişkin süreler işlememekte; ancak tarih zamanaşımı süresi işlemeyen süreler kadar uzamaktadır. Diğer bir ifadeyle, mücbir sebep nedeniyle işlemeyen süreler bu durum ortadan kalktıktan sonra işlemeye başlayan süreye eklenmektedir (Nas, 2011: 108; Kılıç ve Şekerci, 2015: 847). Mücbir sebeplerin süreleri durdurucu etkisini sağlanabilmesi ise, bu sebeplerin *“malum olması”* veya *“ilgililerce ispat ve tevsik edilmesi”* koşullarına bağlıdır (Yerlikaya, 2021: 46-47). Gümrük Yönetmeliğinde de mücbir sebep ve beklenmeyen hallerin birinin varlığı halinde bu sebep ortadan kalkıncaya kadar Gümrük Kanununda belirtilen sürelerin işlemeyeceği belirtilmiştir. Bu durumda süresi dolmadan gümrük idaresine başvurup ispat yükümlülüğünü karşılayan kişilere ek süre verilmekte veya aradan geçen süreye bakılmaksızın işlemler süresinde başvurmuş gibi tamamlanmaktadır. Ayrıca, pandemi nedeniyle bazı gümrük işlemleri için re'sen ek süre verilmiş veya

süre uzatımı yapılmıştır. Gümrük işlemlerinin Kolaylaştırılması Yönetmeliğinde ise, gümrük idarelerinin mücbir sebepler nedeniyle sürelere uygun hareket edememesi hallerine de yer verilmiştir.

Mücbir sebeplerin etkisinin kabul edildiği ve süre düzenlemesi içeren birçok gümrük işlemi bulunmaktadır. Özet beyan işlemleri, menşe ve dolaşım belgelerinin ibrazı, fikri mülkiyet haklarının korunması (*haklı bir mazeret hali bakımından*), beyanname iptali, nihai kullanım, transit rejimi, dahilde işleme rejimi, gümrük kontrolü altında işleme rejimi, geçici ithalat rejimi, antrepo rejimi çerçevesinde rafineri muvazene işlemleri ve gümrüksüz satış mağazaları işlemleri, geri gelen eşya, geri verme/kaldırma başvurusu, itiraz ve uzlaşma başvurusu gibi gümrük işlemlerine ilişkin süreler, bunlar arasında yer almaktadır. Ayrıca pandemiye bağlı hak kayıplarının önlenmesi amacıyla yayımlanan 7226 sayılı Bazı Kanunlarda Değişiklik Yapılmasına Dair Kanunla (RG, 25/3/2020, 31080); *“dava açma, icra takibi başlatma, başvuru, şikayet, itiraz, ihtar, bildirim, ibraz ve zamanaşımı süreleri, hak düşürücü süreler ve zorunlu idari başvuru süreleri”* de dahil olmak üzere *“bir hakkın doğumu, kullanımı veya sona ermesine ilişkin tüm süreler”* 13/3/2020 tarihinden 30/4/2020 tarihine kadar durdurulmuştur (geçici m.1). Bu süreler, 2480 sayılı Cumhurbaşkanı Kararıyla (RG, 30/4/2020, 31114) tekrar 15/6/2020 tarihine kadar uzatılmıştır. Bu düzenleme uzlaşma ve itiraz süreleri için de sonuç doğurmuştur.

4.2. Gümrük İhlallerine Etkisi

Hukuk kuralları içeriğindeki emir ve yasakların ihlali, öngörülen yaptırımın türüne göre, kabahat veya suç oluşturmaktadır. Ancak bazı hallerde hareket gerçekleşse de kabahat veya suç oluşmamakta ya da oluşmuş olsa da faile yaptırım uygulanmamaktadır. Mücbir sebepler sorumluluk hukuku açısından kabahatlerde kusurluluğu ortadan kaldıran bir etkiye sahiptir. Diğer bir ifadeyle mücbir sebepler kabahatin manevi unsurunu etkilemekte ve sağladıkları korunma sayesinde kişileri ceza almaktan kurtarmaktadırlar. Mücbir sebeplerin bu etkisi, tüm vergisel ödevleri, hatta verginin ödenmesi de kapsamaktadır. Ancak ceza kesilmesini gerektiren fiil herkesçe bilinmeyen bir mücbir sebepten kaynaklanıyorsa ispatı gerekmektedir. Ayrıca mücbir sebep ile cezayı gerektiren fiil arasında illiyet bağı yoksa korunma ve cezayı önleme etkisi oluşmamaktadır. Mücbir sebepler ortadan kalktıktan sonra yapılan işlemler ise, zamanında yapılmış kabul edilmektedir. Bu nedenle mücbir sebepler kişilerin iyi niyetini korumakta; ancak vergi ödevlerini değiştirmemektedir (Mutluer, 2008: 322; Öncel, Kumrulu ve Çağan, 2008: 120; Yerlikaya, 2012: 47-49 Erol, 2012: 217-220; Kılıç ve Şekerci, 2015: 862; Şenyüz, 2020: 305; Ekmekçi vd., 2020: 1089; Karakoç, 2020).

Gümrük mevzuatıyla belirlenen emir ve yasakların ihlali, öngörülen yaptırımların türüne göre usulsüzlük ya da vergi kaybı türünde gümrük kabahati (GK, m.239-241) veya kaçakçılık suçu (KMK, m.3) oluşturmaktadır. Bunlardan; özet beyan takibatının süresinde olumlu sonuçlanmaması (GK, m.237), dahilde işleme, gümrük kontrolü altında işleme ve geçici ithalat rejimlerine ilişkin sürelerin usulsüzlükler için öngörülen sürelerin üzerinde aşılması, taşıt haricindeki eşyanın süresinde veya tebligat tarihinden itibaren altmış gün içinde gümrükçe onaylanmış bir işlem veya kullanıma tabi tutulmaması (GK, m.238), sürelerle ilişkin düzenlemelerin ihlali nedeniyle oluşan vergi kaybı türünde gümrük kabahatidir. Özet beyanın süresinde verilmemesi (GK, m.241/3.d); karayoluyla transit eşya taşıyan taşıtların süreleri aşması (GK, m.241/3.e; m.241/4.d; m.241/5.a; m.241/6.c), antrepo rejimine tabi eşyanın antrepoya konulduğu tarihte kayıtlara geçirilmemesi (GK, m.241/3.g), dahilde işleme, gümrük kontrolü altında işleme ve geçici ithalat rejimlerine ilişkin süresinin bitimini takiben bir ila üç ay içerisinde rejimin gerektirdiği işlemlerinin bitirilmesi, yeniden ihracı veya gümrükçe onaylanmış bir işlem veya kullanıma tabi tutulması (GK, m.241/3.h; m.241/3.l; m.241/4.g; m.241/4.h; m.241/5.b), gümrük antrepolarında bulunan eşyanın devredilme sürelerinin aşılması (GY, m.333; 82 No’lu Ek, m.49); geçici olarak yurt dışına çıkarılan eşyanın süreyi aştıktan sonra getirilmesi (GK, m.241/3.l), gümrük beyannamesine eklenmesi gereken belgelerin süresi içerisinde ibraz edilmemesi (GY 82 No’lu Ek, m.5; m.9), geçici ihracat eşyasının, üç yıllık süre ile varsa ek süreler bitiminde geri getirilmemesi veya geçici ihracatın süresi aşılarak kesin ihracata dönüştürülmesi (GY 82 No’lu Ek, m.26; m.27), yetkilendirilmiş gümrük müşavirlerinin raporlarını süresinde sunmaması, gümrük kontrolü altında işleme rejiminin ibrasına yönelik tespit raporunu süresini aşarak gümrük idaresine sunmaları (GY 82 No’lu Ek, m.40; m.53) ve nihai kullanım izin belgesi süresinin bitiminden itibaren otuz günlük sürenin geçirilerek müracaat edilmesi (GY 82 Nolu Ek, m.37), sürelerle ilişkin düzenlemelerin ihlali nedeniyle oluşan usulsüzlük türünde gümrük kabahatidir. Bu gibi hallerde

mücbir sebeplerin varlığı ve ispat yükümlülüğünün yerine getirilmesi durumunda gümrük kabahatleri oluşmamakta ve idari yaptırımlar uygulanmamaktadır. Ayrıca pandemi nedeniyle süre şartlarına uyulamayan bazı durumlarda re'sen süre uzatımı yapılmış ve idari yaptırım uygulanmamıştır.

Gümrük mevzuatında süreler dışında da mücbir sebeplerin varlığı ve kabulü halinde gümrük kabahatlerinin oluşmadığı ve idari yaptırım uygulanmadığı başka durumlar da bulunmaktadır. Örneğin; rafineri işlemlerinde stok kayıtlarında muhasebeleştirilen miktarın vergileri ödenmiş olan miktardan az olması halinde on beş gün içerisinde farkın mücbir bir sebebe dayandığının kanıtlanması halinde usulsüzlük niteliğinde gümrük kabahati (GY 82 No'lu EK, m.18) oluşmaz ve idari yaptırım uygulanmaz. Transit rejimine tabi eşyanın mücbir sebeplere veya beklenmeyen haller nedeniyle çıkış veya varış gümrük idaresi dışında başka bir gümrük idaresine gitmesi (GY 82 No'lu EK, m.15) veya öngörülen güzergahının dışına çıkması (GK, m.241/6.a), gümrük denetimi bitmeden ve izin alınmadan taşıtlara yük/yolcu alınması/verilmesi, gemilerin yoluna devam etmesi (GK, m.241/4.b), gemilerin mutad rotasını değiştirmesi, durması, başka gemilerle temas etmesi ve gümrük idaresi bulunmayan yerlere yanaşması (GK, m.241/6.a) şeklinde usulsüzlük türünde gümrük kabahatleri oluşmamaktadır.

Gümrük mevzuatında yer alan mücbir sebeplerin suç oluşumunu önleme etkisi de bulunmaktadır. 5237 sayılı Türk Ceza Kanununa göre (RG, 12/10/2004, 25611) "*Kanun veya yetkili makamların emri uyarınca bir şeyin saklanması veya varlığının aynen korunmasını sağlamak için konulan mühürü kaldıran veya konuluş amacına aykırı hareket eden kişi, altı aydan üç yıla kadar hapis veya adli para cezası ile cezalandırılır*" (m.203). Ancak gümrük idarelerince uygulanan gümrük mühürlerinin mücbir sebep etkisinde açılması ve bunun da ilgili kurum veya kuruluşlardan alınacak mücbir sebep belgesi ile gümrük idaresine bildirilmesi halinde bu suç (mühür fekki/mühür kırma) oluşmamaktadır (GK, m.68/2; GY, m.195/2).

4.3. Mücbir Sebeplerin Gümrük Yükümlülüğüne Etkisi

Gümrük Kanununda, gümrük yükümlülüğünü yerine getirmekle sorumlu olan bütün kişiler, "yükümlü" ve bu yükümlülerin gümrük vergilerini ödemesi zorunluluğunu, "gümrük yükümlülüğü" kavramıyla ifade edilmiştir (GK, m.3/8.b; m.3/11). Ayrıca Kanunda gümrük yükümlülüğünü doğmasına (GK, m.182-194) ve sona ermesine ilişkin haller ayrıntılı bir şekilde düzenlenmiştir (GK, m.208-209). Ayrıca bu düzenlemelerde mücbir sebeplere bağlı olarak gümrük yükümlülüğünün doğmadığı veya sona erdiği durumlara da yer verilmiştir.

Buna göre, eşyanın sevki ve gümrüğe sunulması, serbest bölgeye konulması, geçici depolanması veya bir gümrük rejimine tabi tutulmasına ilişkin yükümlülüklerin yerine getirememesinin, "*eşyanın tahrip olması, tekrar yerine konulamaması şeklinde kaybı, eşyanın özelliklerine bağlı bir nedenden veya beklenmeyen hal veya mücbir sebepten*" ya da gümrük idarelerinin izninden kaynaklandığını kanıtlanması halinde ithalat nedeniyle gümrük yükümlülüğü doğmamaktadır (GK, m.186). Bu hallerden; eşyanın telef olmasının veya kaybının mahkeme kararıyla, suçüstü şeklindeki hırsızlıkların Cumhuriyet Savcılığınca verilen belgeyle ve hasar, telef veya kayıp herkesçe bilinen ve duyulan başka olaylar yüzünden olmuşsa o yerin en büyük mülki idare amirince verilecek belgeyle kanıtlanması gerekmektedir (GY, m.487/4). Benzer şekilde "*kaza veya mücbir sebep*" nedeniyle tümüyle eşyanın kullanılamaz hale geldiğinin veya tamamen kaybolduğunun kanıtlanması halinde, ithalat vergileri tahsil edilmeksizin geçici ithalat rejimi sona erdirilmektedir (Geçici İthalat Tebliği, m.5/son). Bu durumda Gümrük Kanununa göre ithalat nedeniyle gümrük yükümlülüğü doğmamış sayılmaktadır (GK, m.186).

Diğer bir duruma göre Türkiye Gümrük Bölgesinde transit halindeki eşyanın "*beklenmeyen hal veya mücbir sebeplerle telef veya kaybı hallerinde*" gümrük vergileri aranmamaktadır (GK, m.92/2). Ancak; eşyanın telef veya kaybının mahkeme kararıyla, suçüstü şeklindeki hırsızlığın Cumhuriyet Savcılığınca verilen belgeyle, hasar ile telef veya kayıp herkesçe bilinen ve duyulan başka olaylar yüzünden olmuşsa o yerin en büyük mülki idare amirince verilecek belgeyle ve trafik kazaları, trafik kaza raporuna göre ve en yakın gümrük idaresince yapılan tespit sonucunda gümrük idare amirinin vereceği kararlarla kanıtlanması gerekmektedir (GY, m.228/1).

Gümrük yükümlülüğünü sona erdiren haller arasında; vergilerin ödenmesi, vergilerin kaldırılmasına karar verilmesi, gümrük beyannamesinin iptal edilmesi, eşyanın bir gümrük rejimi kapsamında tesliminden

önce zaptı, müsadere edilmesi, imha veya terk edilmesi ile birlikte doğal özellikleri veya “beklenmeyen haller yahut mücbir sebep nedeniyle telef veya kaybı” da bulunmaktadır. Bu durumda da ispat yükümlülüğü kişilere aittir.

4.4. Takibat İşlemlerine ve Yargı Yoluna Başvurmaya Etkisi

Amme Alacaklarının Tahsil Usulü Hakkında Kanundaki, “Hilafına bir hüküm bulunmadıkça bu kanunda yazılı müddetlerin hesaplanmasında ve tebliğlerin yapılmasında Vergi Usul Kanunu hükümleri tatbik olunur.” (AATUHK, m.8) şeklinde yer alan düzenlemeye göre mücbir sebeplerin varlığı halinde Kanunda yer alan sürelerin işlemeceği görüşü ağırlıktadır; ancak, aksi yönde de görüşler de bulunmaktadır (Balci, 2020). Ağırlıkta olan görüşe göre Amme Alacaklarının Tahsil Usulü Hakkında Kanunda mücbir sebeplerle ilgili bir düzenleme olmasa da mücbir sebeplerin varlığı halinde süreler kural olarak işlemez. Ayrıca koşulların sağlanması halinde kişilerin afet durumu oluşturan pandemiye bağlı olarak terkin talebinde bulunması mümkündür (Karakoç, 2020). Aynı şekilde mücbir sebeplere ilişkin İdari Yargılama Usulü Kanununda bir düzenleme olmasa da mücbir sebeplerin varlığı halinde süreler işlemelidir (Öncel, Kumrulu ve Çağan, 2008: 117-118; Kırbay, 2012: 146; Yerlikaya, 2012:47-50; Erol, 2012: 214; Kılıç ve Şekerci, 2015: 857-858).

Yukarıda belirtildiği üzere 7226 sayılı Bazı Kanunlarda Değişiklik Yapılmasına Dair Kanunda “dava açma, icra takibi başlatma, başvuru, şikayet, itiraz, ihtar, bildirim, ibraz ve zamanaşımı süreleri, hak düşürücü süreler ve zorunlu idari başvuru süreleri de dahil olmak üzere bir hakkın doğumu, kullanımı veya sona ermesine ilişkin tüm süreler”; “tarafklar bakımından belirlenen süreler ve bu kapsamda hakim tarafından tayin edilen süreler ile arabuluculuk ve uzlaştırma kurumlarındaki süreler” 30/4/2020 tarihine kadar durdurulmuş, sonrasında da 2480 sayılı Cumhurbaşkanı Kararıyla da bu tarih, Kamu İhale Kanunu’nda öngörülen zorunlu idari başvuru yoluna ilişkin süreler hariç, 15/6/2020 tarihine kadar uzatılmıştır. Bu düzenleme, pandemiye bağlı mücbir sebeplerin dava açma ve kanun yollarına başvuru sürelerini etkileyip etkilemediği tartışmasına açıklık getirmiştir. Ayrıca genel mücbir sebep hali dışında, kişilerin virüs kapmaları nedeniyle dava açma sürelerini geçirmeleri halinde, kişiye özgü mücbir sebep koşullarının etkisini göstermesi öngörülmektedir (Ekmekçi vd., 2020: 1124).

Gümrük idarelerince genel bütçeye gelir olarak tahsil edilen vergiler ile idari para cezalarına ilişkin takibat işlemleri ve yargı yoluna mücbir sebeplerin etkileri bakımından yukarıdaki açıklamalar aynı şekilde geçerlidir.

4.5. Pandeminin Bazı Gümrük İşlemlerine Etkisi

Pandemi özelinde mücbir sebeplerin gümrük işlemleri üzerindeki etkisi, belirli eşyanın ithaline ve ihracına yönelik ilave düzenlemeler, varış öncesi gümrükleme imkanı ve elektronik hizmetler alanlarında da olmuştur. Bu bağlamda; geri gelen eşyanın gümrük işlemlerine öncelik tanınması, A.TR ve menşe ispat belgelerinin sonradan ve mücbir sebep kapsamında teyidinin mümkün olması şartıyla elektronik ortamda ibrazına imkan verilmesi, gümrük işlemlerinin tek pencere sistemleri, konteyner ve liman takip sistemleri, serbest bölgeler sistemi gibi elektronik ortamlarda yürütülmesi ve kağıt ortamda aranmaması, tahlil raporlarının emsal olarak kullanılabilmesi süresinin uzatılması, MEDOS (Menşe ve Dolaşım Belgeleri Otomasyon Sistemi) üzerinden düzenlenen A.TR ve tüm menşe ispat belgelerinin gümrük personeline imzalanmaması, yükümlülere uzlaşma erteleme imkanı verilmesi ile geri verme, itiraz, teciltaksitlendirme gibi başvuruların kağıt ortamda ibrazı yerine Kayıtlı Elektronik Posta (KEP) üzerinden yapılabilmesi bu alanlar arasında yer almaktadır (Çalikoğlu, 2020)

4. SONUÇ

Hukuk kuralları, diğer bir ifadeyle mevzuat düzenlemeleri içeriğinde, kişilere emir ve yasak şekilde uyulması zorunlu ödevler ile birlikte onların mağdur olmalarını önleyen, kurtarıcı ve koruyucu nitelikte bazı kurumlar da bulunmaktadır. Bunlardan biri vergi hukuku da dahil hukukun hemen hemen her alanında uygulama alanı bulan ve tek bir tanımı olmamakla birlikte örnekleri sınırlandırılmamış olan mücbir sebeplerdir. Bu çalışmada gümrük mevzuatında yer alan mücbir sebep düzenlemeleri ile etkileri

incelenmiş ve kişilerin haklarını korumada ve ödevlerini yerine getirmede yeterli bir etkiye sahip olup olmadığı değerlendirilmiştir.

Gümrük mevzuatında mücbir sebeplere ilişkin genel düzenleme Gümrük Kanununda yapılmak yerine Gümrük Yönetmeliğiyle yapılmış ve birçok ikincil düzenlemede mücbir sebeplerin geçerli kabul edildiği durumlara yer verilmiştir. Bu durum ise, hem Gümrük Kanununda hem de ikinci düzenlemelerde yer alan mücbir sebeplere ilişkin düzenlemelerin sistematiğinden uzak ve dağınık bir görünümde olmalarına neden olmuştur. Ayrıca mücbir sebeplerin etkili olduğu alanların başında gümrük işlemleri süreleri yer almaktadır ve bu sebeplerle uzayan/uzatılan süreler, kaldığı yerden işlemeye devam etmediğinden “durmaya” ve aynı süreler tekrar verilmediğinden “kesilmeye” benzememekte; tamamen dolmadan veya aşılmasına rağmen ek süre verilmesi nedeniyle *sui generis* bir özellik taşımaktadır. Mücbir sebepler nedeniyle verilen sürenin uzunluğu ise, belirsizdir. Bu bakımdan Gümrük Kanununda mücbir sebeplerle ilgili çerçeve bir düzenleme yapılması ve sistematik bir bütünlük sağlanması bu alandaki büyük bir eksikliği giderecektir.

Gümrük mevzuatında yer alan mücbir sebepler başta gümrük işlemlerinin süreleri olmak üzere gümrük ihlallerine ve gümrük yükümlülüğüne ilişkin etkileri bulunmaktadır. Ancak mücbir sebepler bu etkilerini bütün gümrük işlemleri bakımından sağlamamakta; Gümrük Kanununda ve Kanunun imkan verdiği ölçüde ikincil düzenlemelerde yer alan gümrük işlemleri bakımından ve öngörülen koşullara göre bu etki mümkün olmaktadır. Bu bakımdan çoğu durumda kişilere ispat/kanıtlama yükümlülüğü getirilmesi ve gümrük idaresinin kabul şartının getirilmiş olması da mücbir sebepler açısından sorunlu bir alan oluşturmaktadır. Gümrük idarelerine mücbir sebepleri kabul etme yetkisinin verilmesi, aynı durum için yorum ve buna bağlı uygulama farklılığı tehlikesini taşımaktadır.

Gümrük işlemleri sırasında genel ekonominin, ticaret erbabının, tüketicilerin, çevrenin, kültürel mirasın ve canlı türlerinin ve fikri mülkiyet haklarının korunmasına yönelik çaba, mücbir sebeplere yönelik başvuru haklarının kötüye kullanılmasına yönelik idari tedbirlerinin varlığını gerektirdiği de dikkate alınmalıdır. Bu nedenle gümrük idarelerine meşru hakların kullanılmasının sağlanması ile bu hakların suistimal edilmesinin önlenmesi arasında hassas dengeleri gözetmesi bakımından önemli sorumluluklar yüklemektedir.

Covid-19’a bağlı pandemi genel salgın hastalık, ağır hastalık veya yükümlünün iradesi dışında meydana gelen ve müdahalesiyle önlenemeyecek diğer durumlar kapsamında mücbir sebep oluşturmaktadır. Pandemi hem içeriği olan hastalıktan kişilerin etkilenmesi nedeniyle hem de pandemiyle mücadele kapsamında alınan önlemlerden olumsuz etkilenen kişiler için mücbir sebeptir. Ancak pandemi, bütün gümrük işlemleri bakımından genel bir mücbir sebep hali olarak değerlendirilmemiş ve buna yönelik genel bir düzenleme yapılmamış; belirli gümrük işlemleri bazında ve sınırlı bir zaman dilimi için genel geçerlilik kazanmıştır. Diğer taraftan bazı durumlarda kişiler pandemiden etkilendiklerini ortaya koyacak bir ispat yükümlülüğüne tabi tutulmamış, süre uzatımı ve idari yaptırım uygulanmaması gibi hususlar gümrük idaresince re’sen yerine getirilmiştir. Bununla birlikte pandeminin seyri içerisinde kişilerden pandemiden kendileri için mücbir sebep oluşturduğunun ispatının istendiği durumlar da olmuştur. Dolayısıyla pandemiye bağlı mücbir sebep bağlamında gümrük işlemlerinde bir süreklilik ve istikrar bulunmamakta; alınan önlemler pandeminin seyrine göre esneklik göstermektedir.

Örgütsel Farkındalık ve Örgütsel Politik Davranış Algılamalarının Davranışsal Bağlanma Göstergeleri Üzerindeki Etkileri: Konaklama İşletmeleri Örneği¹

Revşan ASLAN¹

Prof. Dr. Şevki ÖZGENER²

Özet: Konaklama işletmelerinde performansın en önemli boyutlarından biri de işe devamsızlık ve işten ayrılma niyeti gibi bağlanma göstergeleridir. Bu konuda bazı ampirik çalışmalar olmasına karşın sektörde örgütsel farkındalığı yüksek işgörenlerin işe devamsızlığı ve işten ayrılma niyetleri üzerine henüz araştırmalara rastlanmamaktadır. Dolayısıyla bu konudaki bulgu eksikliğini gidermek için örgütsel politik davranış algılamaları aracı değişken olduğunda örgütsel farkındalığı yüksek çalışanların işe devamsızlıkları ve işten ayrılma niyetlerinin nasıl ve ne yönde değiştiğini tespit etmeye odaklanmaktadır. Bu çalışmanın amacı, örgütsel farkındalık ve algılanan örgütsel politik davranış algılamalarının davranışsal bağlanma göstergeleri üzerindeki etkilerini ortaya koymak ve örgütsel farkındalık ile davranışsal bağlanma göstergeleri arasındaki ilişkide örgütsel politik davranış algılamalarının aracılık etkisini tespit etmektir. Araştırmanın örneklemini, Nevşehir ilindeki konaklama işletmeleri çalışanları oluşturmaktadır (n=377). Çalışmanın verileri, Vogus'un (2011) örgütsel farkındalık ölçeği, Kacmar ve Ferris (1991) tarafından geliştirilen örgütsel politik davranış algılamaları ölçeği, Paget, Lang ve Shultz'un (1998) işe devamsızlık ölçeğinin yanı sıra Polat ve Meydan (2010) tarafından Türkçeye uyarlanan işten ayrılma niyeti ölçeğini kapsayan bir anket formu yardımıyla toplanmıştır. Bu verilerle araştırmanın modeli ve hipotezleri, Doğrulayıcı Faktör Analizi ve Yapısal Eşitlik Modellemesi yardımıyla test edilmiştir.

Araştırmanın bulgularına göre; örgütsel farkındalığın hem işe devamsızlığı hem de işten ayrılma niyetini negatif etkilediği, ancak örgütsel politik davranış algılamalarının hem işe devamsızlığı hem de işten ayrılma niyetini pozitif etkilediği saptanmıştır. Yine örgütsel farkındalığın örgütsel politik davranış algılamalarını negatif etkilediği ortaya konmuştur. Öte yandan örgütsel politik davranış algılamalarının hem örgütsel farkındalık ile işe devamsızlık arasındaki ilişkide hem de örgütsel farkındalık ile işten ayrılma niyeti arasındaki ilişkide aracı etkiye sahip olduğu tespit edilmiştir. Son olarak bu çalışmanın bazı kısıtları olduğu belirtilmiş, çalışmada yapılan tespitlerle ilgili olarak yöneticilere ve sektöre yönelik önerilerde bulunulmuş ve gelecekte bu alanda çalışma yapacak araştırmacılara yönelik bazı önerilerde bulunulmuştur.

Anahtar Kelimeler: Örgütsel Farkındalık, Örgütsel Politik Davranış Algılamaları, Davranışsal Bağlanma Göstergeleri

The Effects of Organizational Mindfulness and Perceptions of Organizational Politics on Behavioral Indicators of Attachment: The Case of Hospitality Businesses

Revşan ASLAN¹

Prof. Dr. Şevki ÖZGENER²

Abstract: One of the most important dimensions of performance in hospitality businesses is the indicators of attachment such as absenteeism and turnover intention. Although there are some empirical studies on this subject, there are no studies yet on the absenteeism and turnover intention of the employees with high organizational mindfulness in the sector. In order to eliminate the lack of findings on this subject, the study focuses on determining how and in what direction their absenteeism and turnover intention of employees with high organizational mindfulness changes when the perceptions of organizational politics are mediator variable. The aim of this study is to reveal the effects of organizational mindfulness and perceptions of organizational politics on behavioral attachment indicators and to determine the mediating effects of perceptions of organizational politics on the relationship between organizational mindfulness and behavioral attachment indicators. The sampling of the study consists of employees in hospitality businesses operating in the province of Nevşehir (n=377). The data of the study

¹ Bu çalışma "Konaklama İşletmelerinde Örgütsel Farkındalık ve Algılanan Politika Etkililiğinin Davranışsal Bağlanma Göstergeleri Üzerindeki Etkileri" başlıklı yüksek lisans tez çalışmasından türetilmiştir.

was collected with the help of a questionnaire including the organizational mindfulness scale of Vogus (2011), the organizational policy perceptions scale developed by Kacmar and Ferris (1991), the absenteeism scale of Paget, Lang and Shultz (1998), and turnover intention scale adapted to Turkish by Polat and Meydan (2010). Based on these data, the research model and hypotheses were tested with the help of Confirmatory Factor Analysis and Structural Equation Modelling.

According to the findings of the research; It was determined that organizational mindfulness negatively affected both absenteeism and turnover intention, but perceptions of organizational politics positively affected both absenteeism and turnover intention. It was also revealed that organizational mindfulness negatively affects perceptions of organizational politics. On the other hand, it has been demonstrated that perceptions of organizational politics have a mediating effect in the relationship between organizational mindfulness and absenteeism. Similarly, it has been observed that perceptions of organizational politics have a mediating effect in the relationship between organizational mindfulness and turnover intention. Finally, it was stated that this study had some limitations, suggestions were made to the executives and the sector regarding the findings in the study and also some suggestions were made for the researchers who will work in this field in the future.

Key Words: Organizational Mindfulness, Perceptions of Organizational Politics, Behavioral Indicators of Attachment

1. GİRİŞ

Hiçbir örgüt kendisini beklenmedik olaylara karşı savunmasız kalmayı arzu etmemektedir. Özellikle yeni kurulan işletmelerin deneyimsizlik nedeniyle güvende olduklarını söylemek oldukça güçtür. Örgütler planlama, karar verme, strateji geliştirme ve eylem yeteneklerini iyileştirmek için bilgi teknolojilerinde yararlanırlar, ancak sınırlı sayıda örgüt yeni bilgi teknolojilerini özümseme çabalarında tam anlamıyla başarılı olabilmektedir. Deneyimli yöneticiler ve bilim insanları örgütsel farkındalığın veya kurumsal bağlamdaki beklentilere ve değişikliklere karşı kolektif uyanıklığın yüksek olmasının bu yenilik ve gelişmelere ayak uydurmada ve işgörenlerin davranışsal bağlanma göstergeleri üzerinde etkili olacağını ileri sürmektedirler (Mu ve Butler, 2009). Ancak çalışanların örgütsel politik davranış algılamalarının örgütsel farkındalığın davranışsal bağlanma göstergeleri üzerindeki etkisinin yönünde ve şiddetinde değişikliğe yol açabileceği düşünülmektedirler. Çok dinamik sektörlerden biri olan konaklama işletmelerinde hem işgörenlerin işletmeye bağlanması ve performansı hem de değişime ayak uydurmaları oldukça önemlidir. Bu nedenle konaklama işletmelerinin davranışsal bağlanma göstergelerini olumlu etkileyecek ve örgütsel politikleri azaltabilecek veya etkili yönetebilecek anlayışlara, yöntemlere ve araçlara ihtiyaç duymaktadır. Bu çalışma da örgütsel farkındalığın bu araçlardan biri olabileceği savı ileri sürülmekte ve bu savı test etmeye yönelik konaklama işletmeleri çalışanları üzerinde bir ampirik araştırma yürütülmektedir.

Konaklama işletmeleri çalışanları açısından işgücü devri, işten ayrılma, presenteizm, devamsızlık ve işten ayrılma niyeti gibi çok sayıda davranışsal bağlanma göstergesi bulunmaktadır. Ancak bu çalışmada sadece sektörde en yaygın olduğu düşünülen işten ayrılma niyeti ve devamsızlık göstergeleri araştırma modeline dâhil edilmiştir. Bunun gerekçesi, örgütsel davranış yazınındaki bulgu eksikliğidir.

Bu davranışsal bağlanma göstergelerinden *işten ayrılma niyeti*; herhangi bir öngörülemez sebepten dolayı bir bireyin belirli bir süre içinde işini değiştirme olasılığını yansıtır (Sousa-Poza ve Henneberger: 2004: 113; Tett ve Meyer (1993: 262). Tanımı üzerinde bir görüş birliği olmayan *işe devamsızlık* ise, işgörenin çalışma programı veya planına göre, çalışması gereken zamanlarda mazeret belirtmeksizin işine gelmemesi olarak tanımlanmaktadır (Eren, 1989: 215; Tütüncü ve Demir, 2003: 152).

Son yıllarda ortaya atılan örgütsel farkındalık, bir örgütü yeni tehditler hakkında ayırt edici ayrıntıları yakalama ve bu ayrıntılara yanıt verecek şekilde hızlı hareket etme yeteneğini yaratma derecesini ifade eder (Vogus ve Sutcliffe, 2012: 723). Bazı araştırmalarda örgütsel farkındalık süreci genelde başarısızlıkla meşgul olma, yorumları basitleştirme isteksizliği, işlemlere duyarlılık, dayanıklılığa bağlılık ve uzmanlığa saygı gösterme aşamalarından oluşur (Weick, Sutcliffe ve Obstfeld, 1999: 37-39; Weick ve Sutcliffe, 2001; Mu ve Butler, 2009: 30-33; Ray, Baker ve Plowman, 2001: 190-193). Örgütsel farkındalığın örgütsel ve işgören çıktıları ile ilişkisi üzerine sınırlı sayıda çalışmaya rastlanmaktadır (Nguyena vd., 2020; Kelemen, Born ve Ondráček, 2020: 1818-1819). Ancak örgütsel farkındalığın işgörenlerin devamsızlık ve işten ayrılma niyeti gibi davranışsal bağlanma çıktıları üzerine etkilerini ele alan çalışma henüz bulunmamaktadır.

İşgörenlerin bireysel amaçlarına katkıda bulunan, diğer kişi ve grupların zararına olan örgütsel politik davranış algılamalarının örgütsel farkındalığın davranışsal bağlanma çıktıları üzerindeki etkilerini sınırlayabileceği bu çalışmanın temel amaçlarından biridir.

Örgütsel politikler, geleneksel olarak kendi kendine hizmet eden, örgütsel hedeflerle çelişen ve bireylere, gruplara veya diğer kuruluşlara zarar vermeyi önceden planlayan davranışlar olarak tanımlanmaktadır. Başka bir ifadeyle, örgütsel politik davranışlar, genellikle örgütsel hedefleri dikkate almaksızın veya hatta bunların zararına olan, kişisel çıkarı teşvik etmeyi amaçlayan davranışlar olarak ifade edilir (Hochwarter, Witt ve Kacmar, 2000: 473). Atılganlık, yükselmek için gerekeni yapma, çıkarıcılık, yağcılık, koalisyon yapma, üste müracaat, engelleme ve yaptırımlarda bulunma bu davranışlardan bazılarıdır (Greenberg ve Baron, 2000: 410; Robbins, 2003: 371; Erkutlu, 2018: 167; Robbins ve Judge, 2020: 212).

Örgütsel politik davranışların işten ayrılma niyeti (Ram ve Prabhakar, 2010; Ekawarna, 2019) ve devamsızlık (Kacmar ve Baron, 1999) ile ilişkisi üzerine yapılan çalışmalar da yeterli görünmemektedir. Bu çalışmada hem örgütsel politik davranışların işten ayrılma niyeti hem de devamsızlık üzerine etkileri hem bu davranışların aracı değişken olarak örgütsel farkındalıkla birlikte davranışsal bağlanma göstergeleri üzerindeki etkileri irdelenmektedir.

Bununla birlikte Harris, Harris ve Harvey'in (2007) algılanan örgütsel destek ile iş çıktıları ilişkisinde ve Khuwaja, Ahmed, Abid ve Adeel (2020) liderlik ile işgören tutumları arasındaki ilişkide örgütsel politik davranışların aracı etkisini incelemiş olmaları, örgütsel farkındalık ile davranışsal bağlanma göstergeleri (işten ayrılma niyeti, iş devamsızlık) ilişkisinde örgütsel politik davranış algılamalarının aracılık edebileceği konusunda fikir vermektedir.

Bu çalışmada, örgütsel politik davranış algılamalarının, örgütsel farkındalığın davranışsal bağlanma göstergelerinden işten ayrılma niyeti ve işe devamsızlık üzerine etkisine aracılık ettiği bir araştırma modeli amaçlanmıştır. Bu çerçevede çalışmada önce örgütsel farkındalık ve örgütsel politik davranış algılamalarının davranışsal bağlanma çıktıları üzerine etkileri ve aynı zamanda örgütsel politik davranış algılamalarının, örgütsel farkındalık ile davranışsal bağlanma çıktıları ilişkisindeki aracı etkisi incelenmektedir.

Bu çalışma örgütsel farkındalık literatüründeki boşluğu doldurmayı amaçlamaktadır. Birincisi Türkçe yazında örgütsel farkındalık konusundaki teori (temel kavramlar, süreç, öncüller ve sonuçlar) ve diğer değişkenlerle ilişkisine dair bulgu yeterli görünmemektedir. Bununla birlikte konaklama işletmelerinde örgütsel farkındalığın davranışsal bağlanma göstergelerinden işten ayrılma niyeti ve işe devamsızlık üzerindeki etkilerini irdelleyen ampirik araştırmalara da rastlanmamaktadır. İkincisi şimdiye kadar örgütsel farkındalık ve örgütsel politik davranış algılamalarının davranışsal bağlanma göstergelerinden işten ayrılma niyeti ve işe devamsızlık üzerine etkilerini aynı anda ele alan bir model de test edilmemiştir. Ayrıca örgütsel politik davranış algılamalarının da davranışsal bağlanma göstergeleri üzerine etkilerini ele alan çalışmalarda sınırlı sayıda (Kacmar ve Baron, 1999; Ekawarna, 2019; Ram ve Prabhakar, 2010). Bu yönüyle çalışmamız yönetim yazınındaki boşluğu doldurmaktadır. Öte yandan örgütsel farkındalık ve örgütsel politik davranışlar konaklama işletmelerinde işe devamsızlık ve işten ayrılma niyetini etkilemekte ve dolaylı olarak bu işletmelerin kârlılığını ve performansını etkilemektedir. Dolayısıyla bu çalışma örgütsel farkındalık, örgütsel farkındalık ile örgütsel politikler arasındaki ilişkiler ve bu iki değişkenin konaklama işletmelerinde davranışsal bağlanma göstergeleri üzerindeki etkileri konusunda yönetim araştırmacıları ve konaklama işletmeleri yöneticilerine yeni bir perspektif sunması nedeniyle fayda sağlayacağı düşünülmektedir.

2. LİTERATÜR TARAMASI

2.1. Örgütsel farkındalık

Bireysel farkındalık, günümüze yönelik değerlendirci olmayan bir dikkat durumu veya insanları şimdiye konsantre olmaya iten ve bir bağlama duyarlılıklarını artıran yeni şeyleri fark etme süreci olarak tanımlanmaktadır (Kelemen, Born ve Ondráček, 2020: 1814-1815).

Örgütsel davranış yazınında bireysel farkındalık ile örgütsel farkındalığın birbiriyle ilişkili ve iç içe geçmiş olsa da, bu iki kavram arasındaki bağlantının doğası hâlâ belirsizdir. Örgütsel farkındalık, kolektif farkındalık olarak da bilinmektedir (Matook ve Kautz, 2008: 640).

Vogus ve Sutcliffe (2012: 723) göre örgütsel farkındalık; özellikle güvenilirliğe yönelik potansiyel tehditleri düzenli ve sağlam bir şekilde tartışma (başarısızlıkla meşguliyet), mevcut varsayımların yeterliliğini sık sık sorgulayarak ve güvenilir alternatifleri göz önünde bulundurarak (yorumları basitleştirme isteksizliği) bağlama dair incelikli ve güncel anlayışlar geliştirme; bu anlayışları güncel bir büyük resimle entegre etme (operasyonlara duyarlılık); önemli kararlar alırken otoriteden ziyade bir uzman gibi bu aksaklıkların veya başarısızlıkların kaçınılmaz olduğunu kabul etme ve onları kapsamlı bir şekilde analiz etme, onlarla başa çıkma ve onlardan bir şeyler öğrenmeden (dayanıklılık bağlılığı) oluşan bir süreçtir. Başka ifadeyle örgütsel farkındalık, bir örgütün ortaya çıkan tehditler hakkında ayrıntıları yakalama ve bu ayrıntılar üzerinde derhâl harekete geçme yeteneği yaratma derecesini ifade eder. Farkındalık, bir uyanıklık ve aktif farkındalık durumu yaratmayı, yeni bilgilere açık olmayı ve hareket etme yeteneğini sürdürmeyi içerir (Nwankpa ve Roumani, 2014).

Örgütsel farkındalık sadece bir durum değil, bir süreçtir (Piórkowska, 2016: 61). Bazı araştırmalarda örgütsel farkındalığın sürecinin aşamaları şu şekildedir (Weick, Sutcliffe ve Obstfeld, 1999: 37-39; Weick ve Sutcliffe, 2001; Mu ve Butler, 2009: 30-33; Ray, Baker ve Plowman, 2001: 190-193):

-Başarısızlıkla Meşgul Olma: Başarısızlıkla meşgul olma, örgütün başarısızlık olasılığına duyarlılığını, küçük başarısızlıklara dikkatini, hataları rapor etmeyi teşvik etme istekliliğini ve sorunların açıkça tartışılmasını içerir. Başarısızlıkla meşgul olma, başka türlü dikkate alınmayı hak etmeyecek, görünüşte önemsiz ve zararsız olaylar hakkındaki bilgileri birleştirme fırsatları da sağlar.

-Yorumları Basitleştirme İsteksizliği: Basitleştirme isteksizliği, yeni bilgileri filtrelemek ve organize etmek için basitleştirilmiş dünya görüşlerini veya önceden oluşturulmuş bilgi kategorilerini kullanmayı reddetmek demektir. Farklı görüşlerin araştırılmasını içerir. Basitleştirmekten kaçınan örgütler, yeni bilgi üretmek için yeni bilgi parçalarını arayacak şekilde bilgileri işlemektedir. Bu örgütlerin üyeleri, çevrelerindeki dünyanın karmaşık ve öngörülemez olduğu fikrini benimser. Bu konudaki beklentiler hafife alınmaz, daha çok sorgulanır.

-Operasyonel Duyarlılık: İşlemlere duyarlılık; durumsal farkındalığın ve canlı bir ayrıntı duygusunun sürdürülmesini kapsar. Operasyonlara duyarlılıkla karakterize edilen kuruluşlar, gerçek zamanlı bilgilere ve hataların birikmesini önleyebilecek sürekli ayarlamalar yapmalarına izin veren durumsal bir anlayışa sahiptir.

-Değişimle Başa Çıkma Yükümlülüğü: Farkındalık sahibi örgütler sıfır hatalı örgütlerin veya öngörülebilir ortamların olmadığını farkındadırlar; yani felaket (ve başarı) her an gelebilir düşüncesine sahiptirler. Farkındalığa sahip örgütlerin üyeleri, hangi planlar ve düzenlemeler yapılmış olursa olsun, örgütün başarısının ve hayatta kalmasının hâlâ beklenmedik durumlara uygun şekilde yanıt verme yeteneğine bağlı olduğunu varsayan bir bakış açısına sahiptir.

-Uzmanlığa Saygı: Örgütsel farkındalığın son boyutu olan uzmanlığa saygı; statü, görev süresi, rütbeyi dikkate almaksızın belirli bilgiye sahip bireyleri kullanma ve otoritenin uzmanlığa eşit olmadığını kabul etme eğilimidir. Bu boyut, bilgili ekip üyelerini, yeni ortaya çıkan bir sorunla başa çıkmalarına ve ortaya çıkan fırsatlara göre hareket etmelerine olanak tanıyan yetkilendirmeye hizmet eder.

Örgütsel farkındalığın davranışsal bağlanma göstergeleri üzerindeki etkileri incelendiğinde ise Nwankpa ve Roumani (2014) ABD firmaları üzerinde yaptıkları bir araştırmada örgütsel farkındalığın ERP sisteminin kullanımını pozitif yönde etkilediğini saptanmıştır. Yani ERP sisteminin kullanımını teşvik etmenin bir yolu olarak örgütsel farkındalık önerilmiştir. Yine Sullivan and Yang (2016) 350 Çin firması üzerinde yaptıkları çalışmada örgütsel farkındalığın firma inovasyonu üzerindeki farklı etkilerini incelemişlerdir. Araştırma bulgularına göre, örgütsel farkındalığın düşük yenilik derecesine sahip inovasyon ile pozitif ilişkili, ancak yüksek yenilik derecesine sahip inovasyon ile ters U ilişkisi içinde olduğu saptanmıştır. Benzer şekilde Oeij ve diğerleri (2020) taşımacılık ve lojistik sektöründen 110 Hollandalı işletme yöneticisi örneğinde örgütsel farkındalığın inovasyon üzerindeki etkilerini inceledikleri araştırmanın bulgularına göre; örgütsel farkındalığın, inovasyon algısının algılanan kullanım kolaylığı, algılanan yararlılık ve öznel norm gibi tüm yönleriyle pozitif ilişkili olduğu ve örgütsel farkındalığın, inovasyonun kullanım kolaylığı algılanması

yoluyla gerçek inovasyon kullanımı üzerinde de dolaylı etkiye sahip olduğu tespit edilmiştir. Son olarak Isirimah ve Onuoha (2020) tarafından Nijerya'daki Rivers eyaletindeki konaklama işletmeleri yöneticileri üzerinde yapılan çalışmada araştırma bulgularına göre örgütsel farkındalık ile müşteri tatmini, duygusal bağlılık ve örgütsel katılım arasında pozitif ilişki olduğu saptanmıştır. Daha duyarlı ve destekleyici bir çalışma ortamı elde etmek için örgütsel farkındalığın benimsenmesi ve uygulanması gerektiği önerilmiştir ve örgütlerin tutarlı bir şekilde eğilimlerinin, sistemlerinin ve teknolojilerinin çeşitli bağlamlarda uygulanabilirliğini değerlendirmeleri gerektiği tespiti yapılmıştır. Bu çalışma konaklama işletmelerinde örgütsel farkındalığın örgütsel çıktıları üzerindeki etkilerini inceleyen nadir çalışmalardan biridir.

Bu çalışmalar dikkate alınarak örgütsel farkındalığın örgütsel politik davranış algılamaları, davranışsal bağlanma göstergelerinden işten ayrılma niyeti ve devamsızlık ilişkilerine dair hipotezler aşağıdaki şekilde tasarlanmıştır:

Hipotez 1: Örgütsel farkındalık, işe devamsızlık üzerinde negatif etkiye sahiptir.

Hipotez 2: Örgütsel farkındalık, işten ayrılma niyeti üzerinde negatif etkiye sahiptir.

Hipotez 3: Örgütsel farkındalık, örgütsel politik davranış algılamaları üzerinde negatif etkiye sahiptir.

2.2. Örgütsel Politik Davranış Algılamaları

Örgütsel politik davranış algılamaları (Perceptions of Organizational Politics-POPs) anlaşılması zor olduğu kadar her zaman her yerde karşılaşılan davranışlar olduğu düşünülmektedir. Bu anlaşılabilirlik örgütsel politik davranışların nelerin oluşturduğuna dair anlayış eksikliğidir (Kacmar ve Ferris, 1991). Bu nedenle 1990 yılların ortalarından bu yana örgütsel davranış alanında öznel çalışma alanlarından biri olan örgütsel politik davranışlar ve bunların işgörenlerle ilişkili çıktılara etkileri üzerine çok sayıda çalışmalar yapılmaya başlanmıştır. Bu çalışmaların önemli bir kısmı görgül araştırma niteliğindedir. Elbette politik davranış algılarının olumlu yanları da bulunmaktadır. Çünkü bu davranışlar bazen motivasyon aracı olarak işlev görebilir, dolayısıyla belirli davranışların gerçekleştirme niyeti ve amaçların gerçekleşmesi de o ölçüde artmaktadır (Wan, Shen ve Yu, 2014). Ancak bu çalışmada daha çok örgütsel politik davranışların olumsuz yanları üzerinde durulmaktadır.

Örgütsel politik davranışlar, bir örgütte gayri resmi bir temelde ortaya çıkan ve çatışan eylemler olduğu olduğunda bireylerin mesleki kariyerlerini korumak veya geliştirmek için tasarlanmış kasıtlı etki eylemlerini içeren davranışları ifade eder (O'Connor ve Morrison, 2001: 301).

Örgütsel politik davranış algılamaları; çalışma ortamının diğer bireyler ve gruplar aleyhine ya da zararına, ancak çeşitli bireyler ve grupların kendi amaçlarını gerçekleştirmesine hizmet eden unsurlara ilişkin bireyin bir öznel değerlendirmesi olarak tanımlanmaktadır. Bu tanımın iki önemli özelliği vardır. *Birincisi*, politik davranış algılamaları, bir bireyin çalışma ortamında tanık olduğu ve deneyimlediği davranışa ilişkin kişisel değerlendirmesini temsil eden algısal bir değişkendir. Bu algıların nesnel gerçekliği yansıtmayabileceği kabul edilmesine karşın bir bireyin gerçeklik görüşünü temsil ettikleri için bu algılar bir bireyin bilişsel, duygusal ve davranışsal tepkilerini etkileyecektir. *İkincisi*, politik davranış algılamalarını kapsayan davranış, örgütteki diğer kişilerin zararına oluşan kendi kendine hizmet ettiği kabul edilen davranıştır (Bedi ve Schat, 2013: 247). Özellikle bireyler çevrenin davranışlar için normatif ilkeler sağladığını görmediğinde politik davranışların, ortaya çıkma olasılığı oldukça yüksektir (Hochwarter, Witt ve Kacmar, 2000: 473).

Örgütsel davranış literatüründe yapılan meta analiz çalışmalarında örgütsel politiklerin iş tatmini, örgütsel bağlılık ve iş performansı ile negatif, iş stresi ve işgücü devri ile pozitif ilişkili olduğu saptanmıştır (Miller, Rutherford ve Kolodinsky, 2008; Bedi ve Schat, 2013). Benzer şekilde Ferris ve Kacmar'a (1992: 97) göre örgütsel politiklerin yaygın olduğu işyerlerine devamsızlık oranlarında artış olduğu gözlemlenmiştir. Bazı çalışmalarda örgütsel politiklerin hem işten ayrılma niyeti (Ram ve Prabhakar, 2010; Ekawarna, 2019) hem de devamsızlık (Kacmar ve Baron, 1999) ile pozitif ilişkili olduğu saptanmıştır. Önceki çalışmalardaki tespitler dikkate alınarak örgütsel politikler ile bağlanma göstergeleri arasındaki ilişkilere dair hipotezler şu şekilde tasarlanmıştır:

Hipotez 4: Örgütsel politik davranış algılamaları, işe devamsızlık üzerinde pozitif etkiye sahiptir.

Hipotez 5: Örgütsel politik davranış algılamaları, işten ayrılma niyeti üzerinde pozitif etkiye sahiptir.

Öte yandan Harris, Harris ve Harvey (2007) algılanan örgütsel destek ile çıktılar (iş tatmini, ücret tatmini, iş gerilimi, rol çatışması ve işten ayrılma niyeti) arasındaki ilişkide; Aggarwal, Goyal ve Nobi (2018) lider-üye etkileşim ile örgütsel adalet algısı arasındaki ilişkide ve Khuwaja ve diğerleri (2020) liderlik ile işgören tutumları arasındaki ilişkide örgütsel politik davranış algılamalarının aracı etkisini incelemişlerdir. Bu çalışmalardan yola çıkarak çalışmanın aracı hipotezleri ise şu şekilde tasarlanmıştır:

Hipotez 6: Örgütsel politik davranış algılamaları, örgütsel farkındalık ile devamsızlık arasındaki ilişkide aracı etkiye sahiptir.

Hipotez 7: Örgütsel politik davranış algılamaları, örgütsel farkındalık ile işten ayrılma niyeti arasındaki ilişkide aracı etkiye sahiptir.

Şekil 1: Araştırma Modeli

3. METODOLOJİ

3.1. Örneklem

Bu çalışmada pandemi ve zaman kısıtı nedeniyle örneklem seçimine gidilmiştir. Bu çerçevede araştırmacının örneklemini, Nevşehir ili sınırları içinde faaliyet gösteren konaklama işletmeleri çalışanları oluşturmaktadır. Bu işletmelerin örneklem seçilmesinin nedenleri; Türkiye'nin en önemli turistik destinasyonlarından biri olan Kapadokya Bölgesi'nde bulunan Nevşehir ilindeki konaklama işletmeleri çalışan ilişkileri ve örgütsel politik davranışlar nedeniyle yerel ekonomiye istenen katkıyı sağlayamamaktadır. Bu nedenle bu işletmelerde işten ayrılma niyeti ve devamsızlığı azaltarak ekip performansını iyileştirmek ve hizmet kalitesini yükseltmek amacıyla örgütsel politik davranışların tespit edilmesi ve azaltılmasına yönelik önlemlerin alınması gerekmektedir. Buna ilaveten bu işletmelere yönelik ortaya çıkan tehditler hakkındaki ayrıntıları yakalamayı ve bu ayrıntılar konusunda derhâl harekete geçme yeteneğine sahip olmayı ifade eden örgütsel farkındalık da bağlamsal göstergeleri iyileştirerek bölgesel ekonomiye olan katkıyı artırabilecektir. Bu konaklama işletmelerindeki çalışan sayısı tam olarak bilinmediğinden Çingir'in (1994) örneklem büyüklüğü tablolarındaki hesaplamalar dikkate alınarak örneklem hacmi 384 olarak kabul edilmiştir. Örneklem hacmi belirlendikten sonra bu konaklama işletmeleri çalışanlarına tesadüfi olarak 450 anket bizzat araştırmacı tarafından dağıtılmış ve bazı katılımcılara İnternet ortamında anket linki gönderilerek cevaplar alınmıştır. Araştırmada 7 anket normal dağılımı ihlal ettiğinden veya aşırı uç değerleri kapsadığından analize tabi tutulmamıştır. Sonuçta analizde kullanılmak üzere 377 anket formu elde edilmiştir. Anketlerin geri dönüş oranı 0.84'tür. Bu sayı örnekleme temsil etme bakımından yeterlidir (Ulu, 2019). Bu araştırma katılan çalışanların demografik özellikleri Tablo 1'de sunulmuştur.

Tablo 1: Araştırmaya Katılan Çalışanların Demografik Özellikleri

Demografik Özellikler	Sayı	%	Demografik Özellikler	Sayı	%
Cinsiyet			Yaş Durumu		
Erkek	253	67,1	21 yaş aşağısı	15	4,0
Kadın	124	32,9	21-30 yaş arası	168	44,6
Medeni Durum			31-40 yaş arası	116	30,8
Evli	174	46,2	41-50 yaş arası	61	16,2
Bekâr	203	53,8	51 yaş ve üzeri	17	4,5
Eğitim Durumu			İş Deneyimi		
İlköğretim	69	18,3	1 yıldan az	7	1,9
Lise	117	31,0	1-5 yıl arası	149	39,5
Meslek Yüksekokulu	68	18,0	6-10 yıl arası	119	31,6
Fakülte	104	27,6	11-15 yıl arası	50	13,3
Yüksek Lisans/Doktora	19	5,0	16 yıl ve üzeri	52	13,8
Araştırmaya Katılan Çalışanların Konaklama İşletmesindeki Pozisyonu			Konaklama İşletmesinin Aile İşletmesi Olma Durumu		
Üst Yönetici	92	24,4	Evet	195	51,7
Ön Büro	129	34,2	Hayır	182	48,3
Yiyecek İçecek personeli	43	11,4	Oteldeki Çalışan Kişi Sayısı		
Kat Hizmetleri	51	13,5	10 ve daha az	220	58,4
Mutfak	17	4,5	11-25 arası	71	18,8
İnsan Kaynakları Yönetimi Personeli	4	1,1	26-50 arası	49	13,0
Satış ve Pazarlama	9	2,4	51 ve daha fazla	37	9,8
Halkla İlişkiler ve Müşteri Hizmetleri	3	,8	Otelin Yıldız Sayısı

Ürgüp	137	36,3	Belediye Belgeli	21	5,6
Avanos	12	3,2	Pansiyon	5	1,3
Ortahisar	23	6,1	Diğer	8	2,1
Çavuşin	13	3,4			

3.2. Ölçekler

Bu çalışmada örgütsel farkındalık bağımsız değişken, örgütsel politik davranış algılamaları aracı değişken ve bağlanma göstergeleri olan devamsızlık ve işten ayrılma niyeti bağımlı değişkenler olarak araştırma modeline dâhil edilmiştir. Verileri toplamak için daha önce güvenilirliği ve geçerliliği test edilmiş ölçeklerden oluşan bir anket formu kullanılmıştır. Çalışanların örgütsel farkındalık algılarını ölçek için

Vogus (2011) tarafından geliştirilen 9 ifadeli Örgütsel Farkındalık Ölçeğinden (1= Hiçbir Zaman, 5=Her Zaman) yararlanılmıştır. Yine çalışanların örgütsel politik davranış algılamalarını ölçmek için Kacmar ve Ferris (1991) tarafından geliştirilen 31 ifadeli Örgütsel Politik Algılamalar Ölçeği kullanılmıştır (1 = Çok Etkisiz, 2= Oldukça Etkisiz, 3= Orta Düzeyde Etkili, 4= Etkili, 5= Çok Etkili). Son olarak katılımcıların davranışsal bağlanma göstergelerinden işe devamsızlığı ölçmek için Paget, Lang ve Shultz (1998) tasarlanan 13 İfadeli İşgören Devamsızlık Ölçeği (1= Hiçbir Zaman, 5=Her Zaman) ve katılımcıların işten ayrılma niyeti algılamalarını belirlemek için de Polat ve Meydan (2010) tarafından Türkçeye uyarlanan ve bizzat araştırmacılar tarafından 2 ifade eklenen 5 ifadeli İşten Ayrılma Niyeti Ölçeğinden faydalanılmıştır (1= Kesinlikle Katılmıyorum, 5=Kesinlikle Katılıyorum). Tablo 3’de görüldüğü gibi tüm ölçeklerin güvenilirliği ve geçerliliği test edilmiştir.

3.3. Veri Analiz Prosedürü ve Yöntemleri

Bu çalışmanın verileri, Nevşehir ilinde faaliyet gösteren konaklama işletmeleri çalışanlarından elde edilmiştir. Bu çalışmada veri analiz prosedürü şu şekildedir:

1.Çalışmada öncelikle kayıp veri ataması yapıldıktan sonra Mahallabonis uzaklığı değerleri ve Mahallabonis ortalamaları hesaplanarak aşırı uç değerlerin olduğu 7 anket çıkarılmış ve +2,5 ile -2,5 arasındaki değerler analize tabi tutulmuştur. Bununla birlikte her bir değişkene ilişkin verilerin normal dağılıp dağılmadığını tespit etmek için Tek yönlü Kolmogorov Smirnov testinden yararlanılmıştır. Sonuçlar tüm değişkenlerin test istatistiği değerlerinin 0.05’ten büyük olduğunu, yani normal dağıldığını ortaya koymuştur.

2.Normal dağılım varsayımı altında her bir ölçeğin güvenilirlik ve geçerliliğine bakmak için tüm değişkenleri ihtiva eden bir ölçüm modelini test etmek için Doğrulayıcı Faktör Analizi uygulanmıştır. Ölçüm modeline ilişkin ilk DFA sonuçlarına göre elde edilen uyum iyiliği değerleri kabul edilebilir düzeyde olmadığından Örgütsel politikler ölçeğindeki 1., 2., 3., 4., 6., 10., 11., 12., 23., 24., 30. ve 31. ifadelerin; İşe Devamsızlık Ölçeğindeki 9., 10., 11. ve 13. ifadelerin ve İşten Ayrılma Niyeti Ölçeğinde 3.İfadenin faktör yükleri düşük olduğundan ölçüm modelinden çıkarılmıştır. Böylece uyum iyiliği değerlerinin kabul edildiği Tablo 3’deki ölçüm modeli geliştirilmiştir.

3. Geliştirilen ölçüm modeli esas alınarak ölçeklerin güvenilirlik ve geçerliliğini test etmek için önce araştırma modeldeki değişkenler arasındaki Pearson korelasyon katsayıları ve bu katsayılarının kareleri tespit edilmiştir. Sonra ölçüm modelindeki her bir değişkenin ifadelerinin karşısındaki faktör yüklerinden yararlanılarak modeldeki her bir değişkenin Ortalama Açıklanan Varyans (AVE) değerleri ve Bileşik Yapı Güvenirliği (BYG) değeri hesaplanmıştır. Bunun akabinde AVE değerlerinin karekökleri hesaplanmıştır.

4. Araştırma modeli ve hipotezlerini test etmek amacıyla Yapısal Eşitlik Modellemesi (YEM) uygulanmış ve ayrıca aracı değişken etkisini test etmek amacıyla %95 güven düzeyinde 5000 örneklem büyüklüğü esas alınarak BC Önyükleme yönteminden faydalanılmıştır.

5.Hem DFA hem de YEM için modelin uygunluğuna dair uyum iyiliği değerleri Tablo 2’de yer almaktadır.

Tablo 2: Doğrulayıcı Faktör Analizi ve KEKK-YEM için Uyum İyiliği Değerleri

Uyum Ölçümleri	İyi Uyum	Kabul edilebilir Uyum
χ^2	$0 \leq \chi^2 \leq 2df$	$2df \leq \chi^2 \leq 3df$
p değeri	$.05 < p \leq 1.00$	$.01 \leq p \leq .05$
χ^2/df	$0 \leq \chi^2/df \leq 2$	$2 < \chi^2/df \leq 3$
RMSEA	$0 \leq RMSEA \leq .05$	$.05 < RMSEA \leq .08$
p value for test of close fit (RMSEA <.05)	$.10 < p \leq 1.00$	$.05 \leq p \leq .10$
SRMR	$0 \leq SRMR \leq .05$	$.05 < SRMR \leq .10$

NFI	.95 ≤ NFI ≤ 1.00.	.90 ≤ NFI < .95.
NNFI	95 ≤ NNFI ≤ 1.00	.90 ≤ NNFI < .95
CFI	.95 ≤ CFI ≤ 1.00	.90 ≤ CFI < .95
GFI	.95 ≤ GFI ≤ 1.00	.80 ≤ GFI < .95
AGFI	.90 ≤ AGFI ≤ 1.00, close to GFI	.80 ≤ AGFI < .90, close to GFI

(Kaynak: Ulu, 2019: 88).

4. BULGULAR

4. 1. Dışsal Model

Kısmi En Küçük Kareler – YEM, dışsal model ve içsel model şeklindeki iki ayrı yapıyı kapsar (Hair vd., 2014). Bu nedenle modelindeki değişkenlere ilişkin ölçüklerin yapı geçerliği ve güvenilirliği test etmek için ilk önce dışsal model (ölçüm modeli) oluşturulmuş ve daha sonra içsel modeli (YEM Modeli) sonuçları değerlendirilmiştir.

Veri seti esas alınarak yapılan ilk analizde ortaya çıkan dışsal modelin uyum iyiliği değerleri yeterli olmadığından bazı ölçüklerde en düşük faktör yükünden başlayarak faktör yükü 0.50'den düşük olan bütün ifadeler modelden çıkarılmıştır. Dışsal modelde örgütsel politikler ölçüğündeki *pop1, pop2, pop3, pop4, pop6, pop10, pop11, pop12, pop23, pop24, pop30 ve pop31* ifadeleri; İşe Devamsızlık Ölçeğindeki *dv9, dv10, dv11 ve dv13* ifadeleri ve İşten Ayrılma Niyeti Ölçeğinde *an3* ifadesi çıkarılmıştır.

Düşük faktör yüküne sahip bu ifadeler çıkarıldıktan sonra da modelin bazı uyum iyiliği değerlerinin hâlâ kabul edilebilir olmadığı görüldüğünden uyum iyiliği değerlerini iyileştirmek için Schumacker and Lomax (2010) tarafından önerilen düzeltme indislerinden (modification indices) yararlanılmıştır. Bu çerçevede dışsal modeldeki örgütsel farkındalık ölçüğündeki of4 ifadesine ait e6 ile s5 ifadesine ait e5 hata terimleri arasında; örgütsel politikler ölçüğündeki pop7 ifadesine ait e16 ile pop8 ifadesine ait e17 hata terimleri arasında ve pop26 ifadesine ait e35 ile pop27 ifadesine ait e36 hata terimleri arasında; işe devamsızlık ölçüğündeki dv4 ifadesine ait e44 ile dv5 ifadesine ait e45 hata terimleri arasında arasında bağ (covarians) oluşturulmuştur.

Tablo 3'te dışsal modele ilişkin doğrulayıcı faktör analizinin sonuçları ayrıntılı olarak sunulmuştur. Tabloda görüldüğü üzere *Ki-Ki Kare/Serbestlik Derecesi (χ^2/df)*, *RMR*, *GFI*, *AGFI*, *IFI*, *TLI*, *CFI*, *RMSEA* gibi uyum iyiliği değerlerinin tümünün mükemmel ve kabul edilebilir düzeydedir.

Tablo 3: Dışsal Modelin Analiz Sonuçları

*1'e sabitlenmiş olduğunu ifade eder. *** p<.001

Tablo 3 görüldüğü gibi DFA sonuçlarına göre dışsal modelde kabul edilebilir uyum iyiliği değerleri karşılandıktan sonra modeldeki tüm ölçeklere ait ifadelerin faktör yüklerinin 0,50'nin üzerinde olması, hesaplanan BYG değerlerinin 0.70'in üzerinde olması, ölçeklerin OAV değerlerinin 0.50'nin üzerinde olmasından dolayı bütün ölçekler için yakınsak geçerliliğin sağlandığı rahatlıkla söylenebilir.

Yine dışsal modelde kabul edilebilir uyum iyiliği değerlerinin sağlanmasından sonra Tablo 4'te görüldüğü gibi verilen dışsal modeldeki değişkenler arasındaki korelasyon katsayılarının kareleri, her bir değişkenin OAV değerlerinin kare kökünden düşük olduğu için ölçeklerin tümünün ayırt edici geçerliliğinin de sağlandığı açıktır (Kline, 2011). Aynı zamanda her bir ölçeğin yakınsak geçerlilik ve ayırt edici geçerlilik sağlanması, ölçeklerin yapı geçerliliğinin de sağlandığı anlamına gelir.

Tablo 4: Dışsal Model Kapsamındaki Değişkenlere İlişkin Ayırt Edici Geçerlilik Sonuçları

Değişkenler	1	2	3	4
1.OF	,330			
2.POP	0,0655	,280		
3.DV	0,0864	0,2190	,280	
4.AN	0,0713	0,1989	0,2266	,384

OF: Örgütsel Farkındalık, POP: Örgütsel Politik Davranış Algılamaları, DV: Devamsızlık, AN: İşten Ayrılma Niyeti

Not: Tablo 4'te çapraz seyreden koyu katsayılar OAV değerlerinin karekökünü ifade eder.

Tablo 5'te görüldüğü gibi modeldeki değişkenler arasındaki korelasyon katsayılarının tümü 0.80'den düşük olması da ayırt edici geçerlilik koşulunun sağlandığını gösterir. Korelasyon analizi sonuçlarına göre örgütsel farkındalığın hem işe devamsızlık ($r = -.294$; $p < 0.01$) hem de işten ayrılma niyeti ($r = -.267$; $p < 0.01$) ile negatif yönlü ve anlamlı ilişki içinde iken; örgütsel politiklerin iş devamsızlık ($r = ,468$;

$p < 0.001$) ve işten ayrılma niyeti ($r = ,446$; $p < 0.001$) ile pozitif yönlü ve anlamlı ilişki içinde olduğu gözlenmiştir. Öte yandan örgütsel farkındalık ile örgütsel politikler arasında negatif ve anlamlı ilişki olduğu saptanmıştır ($r = ,256$; $p < 0.01$).

Tablo 5: Dışsal Model Kapsamındaki Değişkenlere İlişkin Korelasyonlar

Değişkenler	1	2	3	4	\bar{x}	St. Sapma

* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

4.2. İçsel Model

Dışsal model (ölçüm modeli) oluşturulduktan sonra hipotezleri test etmek amacıyla kısmi en küçük kareler yapısal eşitlik modellemesi uygulanmıştır. Tablo 6'daki YEM bulguları incelendiğinde içsel modele (KEKK-YEM Modeline) ilişkin uyum iyiliği değerlerinin tümünün yeterli olduğu gözlenmektedir.

Tablo 6: İçsel Model ve Hipotezlerin Testine Dair Sonuçlar

Hipotezler	İlişkiler	Std. Faktör Yükleri	t değeri	Sonuç
H1	OF → DV	-,195***	-3,393	Kabul
H2	OF → AN	-,168**	-2,907	Kabul
H3	OF → POP	-,258***	-4,181	Kabul
H4	POP → DV	0,429***	6,540	Kabul
H5	POP → AN	0,411***	5,793	Kabul
Uyum iyiliği Değerleri	$\chi^2/sd=1.627$; GFI=, 87; AGFI=,86; IFI=,93; TLI=,93 CFI= .93; RMR=,088; ,RMSEA= .041			

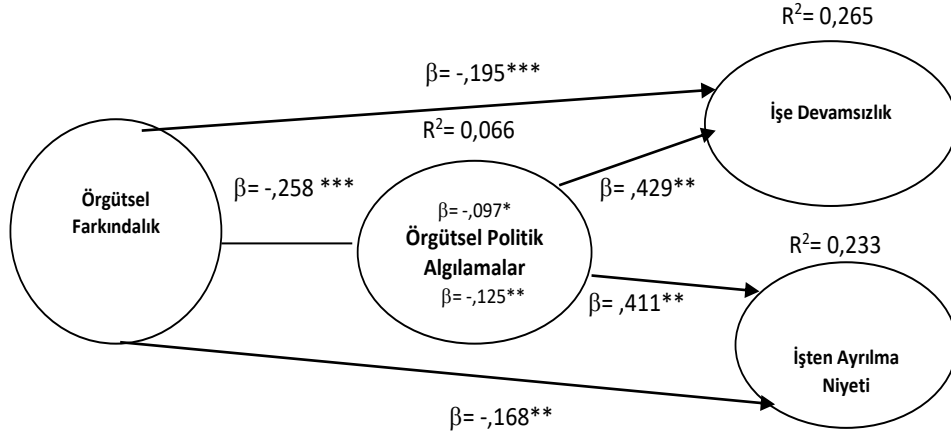

OF: Örgütsel Farkındalık, POP: Örgütsel Politik Davranış Algılamaları, DV: Devamsızlık, AN: İşten Ayrılma Niyeti

* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$

YEM sonuçlarına göre örgütsel farkındalığın davranışsal bağlanma göstergelerinden hem işe devamsızlığı ($\beta = -,195$; $p < 0.001$) hem de işten ayrılma niyetini ($\beta = -,168$; $p < 0.01$) negatif ve anlamlı şekilde etkilediği görülmektedir. Bu nedenle **H1** ve **H2** hipotezleri kabul edilmiştir. Bununla birlikte örgütsel farkındalık örgütsel politik davranış algılamalarını negatif ve anlamlı şekilde etkilemektedir ($\beta = -,258$; $p < 0.01$). Dolayısıyla **H3** hipotezi de desteklenmektedir. Buna karşın örgütsel politik davranış algılamalarının davranışsal bağlanma göstergelerinden gerek işe devamsızlığı ($\beta = ,429$; $p < 0.001$) gerekse işten ayrılma niyetini ($\beta = ,411$; $p < 0.001$) pozitif ve anlamlı şekilde etkilediği tespit edilmiştir. Bu bulgulara göre **H4** ve **H5** hipotezleri desteklenmiştir.

Modelde bağımsız değişken örgütsel farkındalığın, bağımlı değişkenler olan davranışsal bağlanma göstergelerinden işe devamsızlıktaki varyansı açıklama oranı %26.5 ($R^2 = 0,265$) ve işten ayrılma niyetindeki varyansı açıklama oranı %23.3 ($R^2 = 0,233$) ve aracı değişken örgütsel politiklerdeki varyansı açıklama oranı %6.6 ($R^2 = 0,066$) düzeyindedir. Bu bulgular dikkate alındığında araştırma modeli aşağıdaki gibi şekillenmiştir.

Şekil 2: YEM Sonuçlarına Göre Oluşan Model

Uyum iyiliği Değerleri: $\chi^2/sd=1.627$; GFI=,87; AGFI=,86; IFI=,93; TLI=,93

CFI=,93; RMR=,088; RMSEA=,041

Bu çalışmada araştırma modeline örgütsel politik davranış algılamaları aracı değişken olarak girdiğinde ise örgütsel farkındalığın hem işe devamsızlık ($\beta = -.0973$; $p < 0.05$) hem de işten ayrılma niyetini ($\beta = -.1252$; $p < 0.05$) negatif ve anlamlı şekilde etkilediği gözlenmiştir. Ancak aracı değişken olan örgütsel politik davranış algılamaları modele dâhil edildiğinde bağımsız değişkenin iki bağımlı değişken üzerindeki etkisinde de azalma ($\hat{c} < c$) olduğu için kısmi aracı etki olduğu söylenebilir. Buna ilaveten örgütsel politik davranış algılamalarının aracılık etkisini test etmek için Preacher ve Hayes (2008) tarafından önerilen %95 güven düzeyinde 5000 örneklem büyüklüğü esas alınarak BC Önyükleme yöntemi uygulanmıştır. %95 güven aralığında Bootstrap tahminlerine göre örgütsel politik davranış algılamaları modele girdiğinde örgütsel farkındalığın devamsızlığa etkisinde bir azalma vardır ($\beta = -.0973$; %95 CI [-,1538 ile -,0519]) ve ayrıca modelde alt ve üst limitler sıfırdan farklılaştığından aracı rolü oynadığı tespit edilmiştir ($p < 0.05$). Dolayısıyla bu bulgulara göre **H6** hipotezi kabul edilmiştir. Benzer şekilde %95 güven aralığında Bootstrap tahminleri incelendiğinde örgütsel politik davranış algılamaları modele girdiğinde örgütsel farkındalığın işten ayrılma niyeti üzerindeki etkisinde de bir azalma olduğu gözlenmektedir ($\beta = -.1252$; %95 CI [-,1962 ile -,0672]). Bu alt ve üst limitler sıfırı kapsamadığından aracı rolü oynadığı tespit edilmiştir ($p < 0.01$). Bu nedenle **H7** hipotezi de desteklenmiştir.

5.SONUÇ

1990'lı yıllardan beri farklı sektörlerde birçok işletme, beklenmedik olaylar ve istikrarsızlıkla karakterize edilen oldukça dinamik sosyo-ekonomik ortamlarda faaliyet göstermektedir. Bu işletmeler, kalıcı yeniden yapılanmayı teşvik eden değişim girişimleriyle dinamik ortamlara uyum sağlama eğilimindedir. Bu girişimler çoğu zaman işletmelerde düşük örgütsel etkililik, psikolojik sözleşme ihlali, işten ayrılma niyeti ve devamsızlıkla sonuçlanabilmektedir. Bu nedenle konaklama işletmelerinin belirsizlik çağında beklenmedik gelişmelere hazırlıklı olmaları ve örgütsel etkililiği artırmaları için yeni arayışlara ihtiyaç duyulmaktadır. Bu yeni arayışlardan biri olan örgütsel farkındalığın da hem örgütsel etkililiği artırmada hem de örgütsel politik davranışların olumsuz etkilerini yönetmede etkili bir yaklaşım olabileceği düşünülmektedir. Ancak bu yeni yaklaşımların etkilerini sınırlayıcı bazı faktörlerin olduğu da yadsınamaz bir gerçektir. Bu kapsamda örgütsel politik davranış algılamalarının aynı zamanda örgütsel farkındalığın olumlu etkilerini azaltıp azaltmadığı sorusu da hâlâ yanıt beklemektedir. Bu bakış açısıyla çalışmamızda örgütsel farkındalık ve örgütsel politik davranış algılamalarının davranışsal bağlanma göstergeleri (işe devamsızlık ve işten ayrılma niyeti) üzerindeki etkileri incelenmektedir. Bu nedenle Nevşehir ilindeki konaklama işletmeleri çalışanları üzerinde bir ampirik araştırma yapılmıştır.

Yapısal eşitlik modellemesi sonuçlarına göre örgütsel farkındalığın davranışsal bağlanma göstergelerinden hem işe devamsızlığı hem de işten ayrılma niyetini negatif ve anlamlı şekilde etkilediği tespit edilmiştir. Yine örgütsel farkındalığın örgütsel politik davranış algılamalarını da negatif ve anlamlı şekilde etkilediği ortaya konmuştur. Örgütsel davranış yazınında bu konuda çalışma olmadığından bu bulgular literatüre önemli bir katkı olarak düşünülebilir. Buna karşın örgütsel politik davranış algılamalarının davranışsal bağlanma göstergelerinden işe devamsızlık üzerinde pozitif ve anlamlı etkiye sahip olduğu ortaya konmuştur. Ferris ve Kacmar (1992) ve Kacmar ve Baron (1999) tarafından yapılan çalışmaların bulguları, bu bulguyu desteklemektedir. Benzer şekilde çalışmamızda örgütsel politik davranış algılamalarının davranışsal bağlanma göstergelerinden işten ayrılma niyetini de pozitif ve anlamlı etkilediği saptanmıştır. Ram ve Prabhakar (2010) ve Ekawarna'nın (2019) çalışmalarındaki bulgular bu bulguyla paralellik arz etmektedir. Son olarak örgütsel politik davranış algılamalarının, hem örgütsel farkındalık ile devamsızlık ilişkisinde hem de örgütsel farkındalık ile işten ayrılma niyeti ilişkisinde aracı etkiye sahip olduğu tespit edilmiştir. Bu bulgular da literatüre yeni bir katkı olarak değerlendirilebilir.

Bu çalışmanın bulguları dikkate alınarak turizm sektöründeki en önemli paydaşlardan biri olan konaklama işletmeleri için şu öneriler sunulabilir:

-Konaklama işletmelerinde örgütsel farkındalığın işe devamsızlık ve işten ayrılma niyetini önemli ölçüde azalttığı tespit edilmiştir. Bu nedenle yöneticiler örgütsel farkındalık süreçlerine işlerlik kazandırarak tehditlerin tartışılmasına, mevcut varsayımların sık sık sorgulanmasına, önemli kararlar alırken otoriteden ziyade uzman görüşlerinin önemsenmesine ve küçük başarısızlıklara dikkati yoğunlaştırarak hataları raporlamanın teşvik edilmesine olanak tanınmalıdır. Böylelikle bu işletmeler daha proaktif bir strateji izleme fırsat elde edeceklerinden işgörenler bu işletmelerde daha fazla kalmayı tercih edebilir ve örgüte bağlılıkları da artabilir. Yani yüksek örgütsel farkındalık, işletmelerde düşük işe devamsızlık ve düşük işten ayrılma niyetiyle sonuçlanabilir.

-Konaklama işletmelerinde örgütsel farkındalık yüksek olduğunda örgütsel politik davranışlarda önemli ölçüde azalış söz konusudur. Ancak Türkiye gibi gelişmekte olan ülkelerde örgütsel politik davranış algılamalarının hem örgütsel farkındalığın olumlu sonuçlarını bir ölçüde azalttığı gözlenmiştir. Bununla birlikte konaklama işletmelerinde işe devamsızlık ve işten ayrılma niyetinin en önemli öncüllerinden birinin örgütsel politik davranış algılamaları olduğu da çalışmada tespit edilmiştir. Bu davranışlar belirsiz çalışma ortamı, kayırmaya yönelik eylemler, düşük iş tatmini, yüksek işgücü devri, yüksek devamsızlık ve yüksek işten ayrılma niyetiyle sonuçlanmaktadır. Bu nedenle konaklama işletmelerinde örgütsel politik davranışları azaltma konusunda yapıcı örgüt kültürü oluşturulması, işgörenlerin kararlara dâhil edilmesi, ekip çalışmasına önem verilmesi, güven ve sosyal destek mekanizmaları oluşturulması, objektif kriterlere dayalı performans değerlendirme ve personel sisteminin benimsenmesi gibi önlemler alınmalıdır (Schneider, 2016: 703-705). Örgütlerde politik davranışların tümüyle ortadan kaldırılması mümkün görünmemekte, ancak bu tür davranışların makul sınırlar içinde kalması ve örgütün amaçlarına ulaşmayı maksimize edebilmesi için yöneticiler tarafından tutarlı bir şekilde ele alınması ve yönetilmesi gerekmektedir (Kreitner ve Kinicki, 2001: 540).

Bu çalışmanın bazı kısıtları da mevcuttur. Birincisi ilk çalışmalardan biri olduğundan örgütsel farkındalık konusunda sınırlı sayıda çalışma olması nedeniyle teori ve literatür oluşturmada bazı güçlüklerle karşılaşmıştır. İkincisi bu çalışma, Covid-19 pandemisi nedeniyle konaklama işletmelerinin büyük bir kısmının kapalı olduğu ve personelin önemli bir kısmının izinli olduğu bir dönemde yapıldığından anketin uygulanmasında güçlükler yaşanmıştır. Fakat yine de ulaşılan örneklem büyüklüğü, nispeten kabul edilebilir düzeydedir.

Bu çalışmada konaklama işletmelerinde örgütsel farkındalık ve örgütsel politik davranış algılamalarının davranışsal bağlanma göstergeleri üzerindeki etkileri ele alınmaktadır. Gelecekteki çalışmalarda kamu ve bilişim sektörlerinde çok boyutlu örgütsel farkındalık ölçeği kullanılarak farklı örgütsel çıktılar üzerindeki etkileri boylamsal verilerle test edilebilir. Ayrıca gelişmiş ve gelişmekte olan ülkelerdeki işletmeler açısından karşılaştırmalı olarak örgütsel farkındalığın işgören çıktıları üzerindeki etkileri ortaya konulabilir.

Özet: Geleneksel reklamcılık faaliyetleri son zamanlarda tüketicinin gözünde önem ve güvenilirliğini kaybetmiştir. Zira saldırgan ve abartılı reklamcılık faaliyetleri tüketicilerin bu durumlardan kaçınmak için çoğunlukla reklamları dinleme ya da izlemeden geçmesine neden olmuştur. Böylece işletmelerin hedef kitleye ulaşmalarında kullandıkları önemli bir tutundurma aracı olan reklamların amaçlarını gerçekleştirmeleri imkansız bir hal almıştır. Bu noktada işletmeler sosyal medyanın yükselişiyle beraber fenomenlerin hızla etki edebilme gücünü ve onların tek bir gönderiyle bile birçok insanın satın alma niyetini etkileme becerisini keşfetmiştir. Günümüzde işletmelerin pazarlama bütçelerinde sosyal etki (influencer) pazarlaması bir popülerlik dalgası giderek önem kazanmaktadır. Bu çalışmada sosyal etki pazarlaması farklı açılardan ele alınarak güncel uygulama örnekleri verilerek detaylıca incelenecektir.

Anahtar Kelimeler: Sosyal Etki Pazarlaması, Sosyal Medya Ağları, Sosyal Medya Fenomenleri.

Social Impact (Influencer) Marketing Applications

Abstract: Traditional advertising activities have recently lost importance and credibility in the eyes of the consumer. Because aggressive and exaggerated advertising activities have caused consumers to mostly listen to or watch ads to avoid these situations. In this way, advertising, which is an important promotion tool that businesses use to reach their target audience, has become impossible to achieve their goals. At this point, with the rise of social media, businesses have discovered the power of phenomena to impact quickly and their ability to influence many people's purchasing intentions even with a single post. Today, influencer marketing is becoming increasingly important in the marketing budgets of businesses as a wave of popularity. In this study, social impact marketing will be discussed from different angles and examined in detail by giving current practice examples.

Keywords: Social Impact Marketing, Social Media Networks, Social Media Phenomena.

1. GİRİŞ

İnternet teknolojilerinde yaşanan gelişimlerle birlikte reklamların hedef kitlelere ulaşmasında da bazı değişimler meydana gelmiştir. Geleneksel medyanın alışık olunan reklam biçimlerinin tersine sosyal medyada kullanılmaya başlanan yeni pazarlama iletişimi uygulamaları yeni reklam türlerinin de oluşmasına imkan vermiştir. Bu reklam türlerinden bir tanesi de sosyal etkiye sahip kişilerin yapmış olduğu reklamlardır. Sosyal medya ortamda etki sahibi kişilerin pazarlama amaçlarına hizmet edecek biçimde kullanılmasıyla sosyal etki pazarlaması kavramı oluşmuştur. Sosyal medya fenomenleri olarak bilinen etki sahibi kişiler paylaştıkları içeriklerle binlerce hatta milyonlarca kişiye anında ulaşabilmektedirler.

Sosyal etki pazarlaması, her geçen gün etkinliğini arttıran bir pazarlama dinamiği olarak, reklam verenlerin çeşitli pazarlama unsurları kapsamında ele aldıkları ve etkili bütçeler ayırdıkları bir alan olarak gelişimini sürdürmektedir. Linqua'nın (2016) yılında yürüttüğü "State of Influencer Marketing" araştırmasının verileri 2016 yılında pazarlamacıların %86'sının sosyal etki (Influencer) kullandığını, Instagram ve Facebook'un bu tip kampanyalar için en fazla tercih edilen platformlar (%87) olduğunu göstermektedir.

Bu çalışmada sosyal etki pazarlaması çeşitli yönleri ile ele alınarak kavramsal açıdan değerlendirilmeye çalışılmış ve bu konuda yapılacak başka araştırmalara da katkı sağlanması amaçlanmıştır. Bu bağlamda, sosyal etki pazarlamasının tanımı, pazarlama faaliyetlerinde sosyal etki unsurunun kullanımı ve sosyal etki pazarlamasının uygulanmasına yönelik örnekler ele alınmıştır.

2. SOSYAL ETKİ (INFLUENCER) KAVRAMI

Literatürde pek çok farklı tanımı olan influencer terimi pazarlama alanında etkileyici kişi, nüfuzlu, etkili kişi, fenomen, etki lideri gibi farklı kavramlarla eş anlamlı olarak kullanımı söz konusudur. Influencer kavramı Oxford sözlüğünde, “kişileri etkileme gücü olan, özellikle de potansiyel alıcıları bir ürün ya da hizmetle ilgili sosyal medya üzerinden yaptığı önermelerle etkileme gücü olan kişilerdir” olarak tanımlanmaktadır. (<https://www.oxfordlearnersdictionaries.com/definition/english/influencer?q=influencer>).

Sosyal medyanın gün geçtikçe yaygın kullanımıyla beraber sıklıkla karşılaşılan influencer kişiler, günümüzdeki kadar etkili olmasa bile geçmişte de alıcıları etkileyebilmek için, ağızdan ağıza pazarlama metodu ile uygulanması söz konusuydu. İlk başta yakın çevreyi kapsayan, arkadaşlardan ve ailelerden meydana gelen influencer kitlesi gazetelerin daha da etki gücüne sahip olduğu zamanlarda magazin sayfalarında, televizyonların etki gücüne sahip olduğu zamanlarda da sevilen ve değer verilen sanatçılar, yazarlar vb. kanat önderi olabilecek kişilerden meydana gelmekteydi. Sosyal medya ve mobil cihazların yaygınlaşmasıyla beraber blog yazarları (blogger) tarafından influencer vazifesinin yerine getirildiği söylenebilir (Smith, 2010).

3. INFLUENCER (SOSYAL ETKİ) PAZARLAMASI

Influencer kavramı genel olarak başkalarına etki ederek davranışlarının değişmesine katkı veren kişiler olarak tanımlanmaktadır. Bu kavram pazarlama bilimine uyarlandığında ise; kişilerin diğer kişileri ikna ederek satın alma davranışlarına değiştirebilen ve etkileyebilen kişileri içermektedir.

Influencer pazarlama, eski ve yeni pazarlama araçlarının bir karışımı olmakla birlikte, ünlü onayı ve fikrini alarak, onu günümüzün içerik odaklı bir pazarlama kampanyasına oturtmaktadır. Influencer pazarlama stratejisinin diğer stratejilerden ayrılan temel özelliği, kampanyanın sonuçlarının markalar ve etkileyiciler arasındaki işbirlikleriyle mümkün olmasıdır. Influencer’lar, ünlülerin tersine, her alanda ve herhangi biri olabilir. Dolayısıyla onları diğerlerinden etkili kılan en önemli özellik, web ve sosyal medyadaki büyük takipleridir (Khatrı, 2006).

Sosyal etki pazarlamasının özgünlüğü, bu yeni pazarlama kavramının müşterilerin ihtiyaçları yerine fenomenlerin ihtiyaçlarına seslenmesidir. İşletmeler fenomenlerle canlı ilişkiler kurmak zorundadır, örneğin işletme piyasaya süreceği bir ürüne erişimi herkesten önce fenomene vermektedir ya da fenomeni kendi düzenleyeceği bir etkinliğe davet etmektedir. Bu özgünlüğüne rağmen fenomenlerle yürütülen pazarlama faaliyetleri geleneksel pazarlama faaliyetlerine göre daha zor kontrol edilebilir. Fenomenler güvenilirliklerini yitirebilir ve bu durum da fenomenlerin destekledikleri ve tanıtımını yaptıkları ürünle ilgili olumsuz etki yaratabilir. Ayrıca fenomenler markayı ya da ürünü yanlış tanıtabilir, böyle durumlarda markanın olaya müdahale ederek durumu düzeltmesi gerekebilir (<https://www.marketing-schools.org/>, 2018).

4. INFLUENCER (SOSYAL ETKİ) PAZARLAMASI ÖRNEKLERİ

Influencer içerik üreticilerinin dijital platformlardaki bir davranışı da günümüzde trend konularının meydana gelmesine aracılık etmektedir. Elektronik ortamdaki davranışları diğer kullanıcılar için tercih nedeni durumuna dönüşebilmektedir. Gelmektedir. Bundan dolayı kullanıcıların dijital platformlardaki her hareketi diğer kullanıcılar tarafından sıkı bir şekilde takip edilmekte ve onların günlük hayatlarının bir parçası olan ürünleri, dinledikleri müzikleri ya da söyledikleri sosyal ağlarda kısa zamanda büyük kitleler tarafından tepki görerek kabul görmesiyle birer trend biçimine dönüşmektedir. İsveçli saat markası “Daniel Wellington”, bütünlük pazarlama iletişimine örnek verilebilecek bir kampanya ile dijital platformda influencerlar ile başarıya ulaşmıştır. Saat markası birden fazla influencer ile anlaşarak bu faaliyeti gerçekleştirmiştir. Influencer takipçilerine kişiselleştirilmiş indirim olanağı verilen bu kampanyada paylaşılan içeriklerde %15 oranında indirim kodu yayınlayarak kullanıcılarına iletmıştır. Start-Up projesi olan “Daniel Wellington”, bu pazarlama aktivitesiyle 150.000 dolarlık işletme değerini 5 yıldan daha az bir zaman diliminde, 200.000 dolara yükseltmiş ve influencer pazarlamasını doğru bir şekilde kullanarak hedeflerine ulaşmışlardır (Think With TR, 2019).

Türkiye’deki LÖSEV gibi nadir olan hastalıkla mücadele verenlerin ihtiyaç duydukları bakım ve teknolojiyi sağlayan bir vakıf olan The Bubble Foundation, “Seth İçin Sarı Giyin” sloganıyla ölümcül bir hastalığa yakalanmış olan 5 yaşındaki Seth’i mutlu etmek amacıyla internette büyük ilgi uyandıran bir kampanya organize etmiştir. Çok zor bir dönemden geçen Seth bu kampanyayla küçük unsurlarla mutlu olma imkanına kavuşmuştur. Zira Seth’in en çok sevdiği renk sarı olması ve bu rengi görmesiyle yüzünün gülmesi için yeterli bir durumdu. Bu nedenle Seth’in ailesi, dünyadaki tüm insanlardan sarı giyerek #WearYellowForSeth hashtag ile fotoğraf paylaşmasını istedi. Birkaç influencer da bu kampanya için gönüllü olarak fotoğraf paylaşımı gerçekleştirdi. Kampanya birkaç influencer ile birlikte o kadar hızlı yayıldı ki, Ashton Kutcher gibi ünlüler de Seth’in gülümsemesi için fotoğraflar paylaşmaya başladı. Vakfın herhangi bir gider harcamasında bulunmadığı kampanya, influencerların gücü ile birlikte bir konunun ne kadar hızla viral olabileceğini göstermiş oldu (Think With TR, 2018).

“Bizi Biz Yapan Değerlerimiz” sloganıyla yola çıkan Albaraka Türk Bankası, sosyal medya etkileşimini arttırabilmek amacıyla gerçekleştirdiği influencer marketing çalışması ile büyük yankı uyandırdı. Kampanyanın başarılı olmasını nedenlerinden birisi Albaraka’nın reklam sloganında bahsettiği değerlerin öne çıktığı, manevi duyguların derinden hissedildiği ramazan ayında gerçekleştirilmesidir. Ama bu kampanyayı başarılı yapan asıl etmen gezgin şef Ömür Akkor’un influencer olarak seçilmiş olmasıdır. Zira Ömür Akkor, Anadolu’yu karış karış gezen, kaybolmuş Osmanlı ve Selçuklu lezzetlerini araştıran gezgin bir şef olarak kendini konumlandırmıştır. Dolayısıyla bu kampanya Ömür Akkor Instagram hesabından yaptığı duyuru ile başlamış ve kullanıcılardan Albaraka Türk hesabını takip ederek bir yakını etiketlemeleri istenmiştir. Yapılan duyuruya istinaden istenilen şeyleri yerine getiren kullanıcılar içinden 15 kişi seçilerek Ömür Akkor’un yeni açtığı Bursa’daki Zennub 1844’te iftar yapmaya hak kazanacağı belirtilmiştir. Ömür Akkor, hesabından gerçekleştirdiği duyuruda: “Bizi Biz Yapan Değerlerimiz” ile “Bizi Biz Yapan Değerlerimizi Sofralarımıza Getirenler” buluşuyor ifadelerini kullanmıştır. Albaraka Türk yapılan çekiliş sonucunda 10.000’in üzerinde organik takipçi kazanmanın yanı sıra aynı zamanda başarılı bir marka – influencer ahengini de oluşturmuştur (Think With TR, 2018).

Marka – influencer ahengi açısından başarılı bir örnek de Mercedes’in kampanyalarında görülmektedir. Ama Mercedes, kampanyası bilinen bir influencer uygulamasının aksine dört ayaklı bir influencer uygulamasından oluşturulmuştur. Mercedes, pazara yeni tanıtılacak olan otomobil modeli için Instagram fenomeni bir köpek olan Loki’yle (yani sahibi ile) çalışmaya karar vermiştir. Instagram fenomeni Loki ve sahibine otomobil, karlı dağlarda sürmeleri amacıyla Mercedes tarafından verilmiştir. Sahibi otomobili sürerken karların arasında onu takip eden Loki’nin dağ macerası, 3D kameralar ve sanal gerçeklik teknolojileriyle videoya alınmıştır. Bu kampanya ile Loki aracılığıyla yalnızca Instagram üzerinden 173 milyon izlenme, 2,3 milyon etkileşim kazanılmıştır.

5.SONUÇ

Günümüzde tüketici istek ve ihtiyaçları sürekli olarak değişim göstermektedir. Tüketici, önceleri bir ürünü ihtiyacını karşılaması amacıyla alırken, artık marka ve ürün ile duygusal bağ kurmakta ve onları hayatının bir parçası haline dönüştürmektedir. Tüketici beklentilerinin fazla olması ve yoğun rekabet ortamı pazarlamacıları farklılaşabilmek amacıyla türlü stratejiler geliştirmeye zorlamaktadır. Özellikle sosyal medya araçları daha değerli hale gelmeye ve sıradan bir tüketicinin iletişim stratejisindeki temel faktörlerden biri olmaya başlamıştır. Bu nedenle pazarlamacılar, marka bilinirliğini yükseltmek ve markanın tüketiciler tarafından tercih edilmesini sağlamak amacıyla influencer pazarlamayı kullanmaktadırlar. Fenomenlerin faaliyetlerinin gittikçe artan bir şekilde popüler hale gelmesindeki faktörleri geniş bir alanda değerlendirmek mümkündür.

Gerçekleştirilen anlık ve etkileşimli iletişim ile birlikte tükettiği gibi aynı zamanda üretebilen günümüz internet kullanıcısı, kullanıcıların söz konusu kişisel tecrübe, düşünce ve tavsiyelerini aktarabilmeleri, diğer kullanıcıların güvenini kazanabilme ve rekabet koşullarında ön plana çıkabilmek için influencer marketing kullanılmasını sağlamıştır. Dolayısıyla işletmeler doğru sloganla doğru influencerı bulduğu takdirde başarı elde etme yüzdesi daha da arttığı yadsınılamaz bir gerçektir.

Abstract: Hatay province in Turkey, located Syria Border, one of the affected city both economically and socially from Syria civil war. Although there are so many effect of this civil war, in this paper, economic effects will be discussed. For the analysis among the 1176 companies registered Hatay Exporter union database 107 companies were selected and questions were directed to companies. As a result, it was concluded that Hatay was affected by civil war emerging in Syria. To eliminate the side effect of this war, it is necessart to take measure. Therefore, KOSGEB (SME Development Organization) has a key role during this process. What to do is to increase the awareness of KOSGEB support. However, it should be ensured that businesses access the supports provided by KOSGEB more easily. Businesses should be financially supported as their sales decrease (one market loss). The frame and amount of some support items should be increased. For example, if there are more distant markets, transport costs are certain to increase. Therefore, the amount and scope of this support should be increased. Another issue is what needs to be done for businesses to be more competitive in different markets.

Key words: SME, Support, International, Trade

JEL Classification: F 13, F23, F42

1. Introduction

Beginning in 2003, Syria has officially recognized the border it has actively recognized, and thus bilateral borders have been recognized and policies have been reviewed. In 2004, the Syrian government announced in bilateral talks with Turkey will not raise the issue of Hatay (Fattah, 2011). Thus, it was emphasized that the agreements need to go beyond Hatay and focus on bilateral relations. In accordance with the mutual declaration, Turkey has opened the Cilvegozu border gate in Hatay (Doğan & Uzun, 2014). Turkey's bilateral relations with the signing of four border trade center, which opens the Free Trade Zone Agreement has progressed (Altunışık & Tür, 2006).

One of the reasons for this is that conservative identity is emphasized in strengthening foreign trade and economic relations with neighbors (Çakmak & Ustaoglu, 2015). The development of economic and commercial relations with neighbouring countries, especially Arab and Muslim countries, is again the biggest factor in this regard (Korgun, 2020). Regional development that started in Anatolian cities in the 1980s strengthened conservative business groups (Gencer & Öngel, 2011). With the emergence of a conservative and economically focused generation following the same argument, economic foreign policy underlined the concept of "religious markets" (Heydemann, 2013). The civil war that broke out in Syria in 2011 affected both Syria and neighbouring countries. The civil war has brought some problems to Syria, such as political instability, economic and social problems (Mustafa, 2011). Of course, the war has affected the surrounding countries socially and economically (Ardıç, 2012). Many people who left the country after the war lived as refuge in neighbouring countries. This situation had an impact in many areas in neighbouring countries, for example the labour market, trade with other countries (Joya, 2012). From the general to the specific, the neighbouring provincial economies of Syria were affected by this war like the other countries. Hatay, which is the border province of Syria, is one of the provinces

affected by this situation. Therefore, it is important to examine the economic problems experienced in this province.

The trade between Turkey and Syria can be seen table 1 above. Turkey's exports to Syria, starting in 2008, rose to \$ 1.8 billion in 2010. The majority of this trade, Turkey's southern provinces, especially together or built in Gaziantep brought consisted of products such as electronic products and motor vehicles. This was an important step for Turkey's regional development. For the first time, the Anatolian region, which was weak compared to Marmara, on which Turkish industry traditionally relied, reached the capacity to make its own exports.

Table 10: The trade 2003-2017 Between Turkey and Syria

Years	Export	Import	Balance	Volume
2003	411	413	-3	824
2004	395	358	37	752
2005	552	272	279	824
2006	609	187	422	797
2007	798	377	421	1 175
2008	1 115	639	476	1 754
2009	1 425	328	1 097	1 753
2010	1 845	663	1 182	2 507
2011	1 610	524	1 086	2 134

2017	1 365	71	1 435	1 294

Source: Turkish Statistical Institute (Million \$)

In the figure 1 below, most exporting provinces from Turkey to Syria between 2008-2016 can be seen. Before the war, in 2011, Istanbul ranked first in exports to Syria with 616 million dollars. In 2016, Gaziantep ranked 1st with 426 million dollars. On the other hand, Hatay exports around 214 million dollars and some of it is made by Syrian businessmen who have settled in these provinces. It is important for Syrian businessmen to have information about the Syrian market. Although there is no data on this subject, these results come from the interviews with SMEs throughout the region.

In the second part of this paper KOSGEB and KOSGEB Support for Companies, in the third part Material and Methods, in the fourth part Results and in the final part Conclusion will be held.

2. KOSGEB and KOSGEB Support for Companies

KOSGEB is one of the affiliated institutions of Ministry of Industry and Technology and main purpose of this institution is to provide support for SME's. Supports that have a direct or indirect effect on exports as it follows. Support is given to fairs that companies will attend in Turkey. Thanks to this support, businesses find the opportunity to exhibit their products, especially to their customers abroad. The support for international business trips gives companies the chance to travel to the markets abroad and to learn about these markets, to meet with businesses abroad and to do business with the relevant businesses. Matching support provides support to companies that make it possible to find the centers of trade through twinning business in Turkey. Consultancy support especially helps small companies get support from professional organizations to solve the problems they face. logistics cost holds an important place in the export costs of businesses. Thanks to logistic support, there is a decrease in the costs of enterprises.

3. Material and Methods

In this paper, survey method was used. For survey, companies were selected Hatay Exporter union database. Among the 1176 companies registered Hatay Exporter union database 107 companies were included.

4. Results and Debate

In the survey conducted with SMEs, 16 questions were asked, and it was aimed to get results of the answer of these questions.

Table 11: Participant's position in companies

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Owner	57	53,3	53,3	53,3
	Manager	28	26,2	26,2	79,4
	Accountant	22	20,6	20,6	100,0
	Total	107	100,0	100,0	

Source: Own calculation

In order to see who filled out the questionnaire, this question was directed to compaines. It was observed that 53.3% of those who filled out the questionnaire were owners of enterprises, 26.2% were managers of compaines and 20.6% were accountants of compaines. As seen from the results, the surveys were filled out by people who know the business financially. Therefore, the information received will be reliable.

Figure 2: Companies Status

Source: Own calculation

Of the 107 companies that filled out the survey, 27 are sole proprietorship, 67 are limited companies, 11 are joint stock companies and 1 are ordinary partnerships. This question was asked to companies in order to get more information about the company.

Table 12: Operating Sector of Companies

	Frequency	Percent	Valid Percent	Cumulative Percent
Iron and Steel	12	11,2	11,2	11,2
Chemical Substances	12	11,2	11,2	22,4
Food	33	30,8	30,8	53,3
Furniture and forestry	18	16,8	16,8	70,1
Machine	7	6,5	6,5	76,6
Other	25	23,4	23,4	100,0
Total	107	100,0	100,0	

Source: Own calculation

This question was asked to companies to understand in which sector the companies operating. 30.8% of the enterprises that answered the questionnaire were in the Food sector. Furniture and forestry products with a ratio of 16.8%, Iron and Steel and Chemical Materials with a rate of 11.2% and Machinery with a ratio of 6.5% follow the food sector. Other sectors include agricultural products, transportation, and automotive spare parts trading. Knowing the sectors SMEs operating will enable us to obtain healthier informaiton in the next questions.

Figure 3: Number of Employees

Source: Own calculation

In order to understand the size of the enterprises included in the survey, this question was directed to the enterprises. The number of employees of 64 of the enterprises that answered the questionnaire is between 1-9, the number of employees of 38 of them is between 10-49, and the number of employees of 5 enterprises is between 50-249. The number of companies with over 250 employees is 0. The table provides information on the size of the companies that answered the questionnaire.

Figure 4: Net Sales Revenues

Source: Own calculation

As in the previous question, this question was directed to the enterprises in order to understand the size of the enterprises included in the survey. The net sales revenue of 42 of the enterprises that answered the survey is in the range of 0-999.999 TL, the number of employees of 39 of them is 1.000.000-7.999.999 TL, and the 28 enterprises are in the range of 8.000.000-39.999.999 TL. The number of companies with sales over 40,000,000 TL is 0. The table provides information on the size of the companies that responded to the survey.

Table 13: Are you registered KOSGEB database

	Frequency	Percent	Valid Percent	Cumulative Percent
Yes	86	80,4	80,4	80,4
No	21	19,6	19,6	100,0
Total	107	100,0	100,0	

Source: Own calculation

In order to understand whether the enterprises included in the survey are registered in the KOSGEB database, this question is directed to the enterprises. 86 of the enterprises participating in the survey, a large proportion of approximately 80%, are registered in the KOSGEB database. This result shows us that enterprises that actively doing export are registered in the KOSGEB database.

Figure 5: International Trade Volume

Source: Own calculation

Foreign trade volume of 60 of the enterprises that answered the questionnaire is 0-499.000 \$, 22 of them have foreign trade volume of 500.000- 999.999 \$, 20 of them is 1.000.000- 4.999.999 \$, and 5 enterprises are over 5.000.000 \$. The table provides information about the foreign trade volumes of the enterprises responding to the survey.

Figure 6: Have you benefited from KOSGEB support programs in the last 3 years

Source: Own calculation

56 of the enterprises that answered the questionnaire stated that they benefited from KOSGEB support programs in the last 3 years, while 51 stated that they did not benefit from KOSGEB support programs in the last 3 years. It was observed that 42.7% of the enterprises participating in the survey did not benefit from KOSGEB support programs in the last 3 years, therefore it was seen that the companies doing export cannot be sufficiently benefited KOSGEB support.

Figure 7: Syria originated company

Source: Own calculation

92 of the enterprises that answered the questionnaire stated that they were of Turkish origin, while 15 of them stated that they were of Syrian origin. The question is important in terms of seeing how many Syrian companies are in Hatay among exporting companies. Most of the respondents are companies of Turkish origin.

Figure 8: Have you exported to Syria in the last 10 years

Source: Own calculation

61 of the enterprises that answered the survey stated that they exported to Syria in the last 10 years, while 46 stated that they did not export to Syria in the last 10 years. The related question is important in terms of seeing how many of the exporting companies exported to Syria before.

Figure 9: After the war, our exports to Syria started to decrease or ended

Source: Own calculation

This question was directed to companies exporting to Syria in the last 10 years. The number of enterprises that answered the questionnaire stating that they exported to Syria in the last 10 years is 61. Most of these 61 businesses stated that they were adversely affected by the war.

5. Conclusion

Socially and economically, Turkey was affected by the civil war came out in Syria like other countries. The war happened in Syria affected neighbouring countries. The civil war has caused some trouble to Syria, such as social, political and economic difficulties. People were forced to left the Syria, this situation made Syrian refuge in neighbouring countries. Under these circumstances neighbouring

countries were affected in many areas, Hatay province which has the border to Syria, is one of the city affected by this war. So, it is crucial to explore the economic problems happened in this province. In the survey answered by companies, it was seen that the exports of the companies were negatively affected from this case. Losing the Syrian market Some measures should be taken due to the bad effect of exports. Therefore, KOSGEB has a great role to play. First of all, the awareness of KOSGEB should be increased. However, it should be ensured that businesses access the supports provided by KOSGEB more easily. Businesses should be financially supported as their sales decrease (one market loss). The frame and amount of some support items should be increased. For example, if there are more distant markets, transport costs are certain to increase. Therefore, the amount and scope of this support should be increased. Another issue is what needs to be done for businesses to be more competitive in different markets. In this context, it should be made more competitive by helping the modernization of the production facilities of the enterprises (purchase of new machinery, etc.).

Özet: Örgütsel Davranış literatüründe iş yerinde yaşanan sendromlara ihmal edilerek az yer verildiğinden bu çalışma ile konuya katkı yapmak istenilmektedir. Dunning-Kruger sendromu ve Imposter sendromu incelemesi için araştırmacılar tarafından ortaya konulan önermelerden yola çıkmıştır.

Herkesin zaman zaman kendinden kuşku duyması, ve özgüven yoksunluğu yaşaması normaldir. Ama bu durum kişinin kendini sahtekar gibi hissetmesine, yetersiz görmesine, şüphe ve huzursuzluğa sebep oluyorsa imposter sendromundan bahsetmek mümkündür. Imposter sendromu, kişiyi gerektiğinden fazla çalışmaya yöneltir ve bu durum kişinin gerekmediği halde daha fazla gayret göstermesine yol açıp kişiyi hem fiziksel hem ruhsal anlamda yorar ve kişi çevresi tarafından başarılı görülse dahi bunu kabul edemez ve kendi içinde güvensizlik duygusunu kamçılar. Güvensizlik kadar, aşırı güvende bir sorundur ve bilgi ve beceriksizliğinizi görememe, görmek istememe, görmeme durumu da Dunning-Kruger sendromu olarak tanımlanmıştır. David Dunning ve Justin Kruger'ın 1999 yılında niteliksiz ve farkında olmama ile ilgili yayınladıkları makalede bazı insanların aslında yetersiz oldukları işte kendilerini üstün gördüklerini tespit etmiştir. Sendrom, insanın cehaletinden doğan bilgisizliği ve bundan kaynaklanan özgüvenini ifade eder.

Örgüt kültürü, etkin bir liderlik, eğitim ve destekle sendromlardan kaynaklanan olumsuzluğun önüne geçmek mümkündür. Çalışmada ikincil kaynaklardan yararlanılmıştır. Yazı tarama tekniği kullanılarak konu ile ilgili çalışmalar incelenmiş ve bu doğrultuda tartışılmıştır.

Anahtar Kelimeler: Imposter Sendromu, Dunning-Kruger Sendromu, örgüt.

1. GİRİŞ

Sendrom, TDK sözlüğünde belirge, sıkıntı olarak tanımlanmıştır. Belirge ise “ Birlikte bulduklarında belli bir hastalığı işaret eden belirti ve bulgular bütünü” olarak yine TDK sözlüğünde tanımlanmıştır. Sendromlar kişilerin sosyal ve iş hayatlarını etkilemektedir. Bu durumda doğal olarak kişilerden oluşan örgütleri de etkilemektedir. Psikolojik olarak sağlıklı olmayan birey kendisine faydalı olamamasının yanında çalıştığı örgütün amaçlarını gerçekleştirmesine de faydası olmayacak ve hatta amacın gerçekleşmesini geciktirecek veya engelleyebilecektir.

Daha sonra açıklayacağımız Dunning-Kruger Sendromu ve Imposter sendromu da örgütlerde yaşanan sendromlardan sadece ikisidir. Dunning-Kruger Sendromu ‘cahil cesareti’ olarak adlandırılan, temelsiz özgüven olarak kısaca açıklanabilir. Bilmediklerini bilmediği için gösterilen cesaret bazen fırsat yaratsa da genellikle hayatta özellikle iş hayatında olumsuz durumlara sebep olmaktadır. Dunning-Kruger Sendromu'nun tezadı da diyebileceğimiz Imposter Sendromunda ise kişiler bildikleri halde kendilerinden şüphe duymakta, kaygı hissetmektedirler. Yetişkin, çocuk, öğrenci, akademisyen, ünlü, ünsüz herkesin yaşayabileceği imposter sendromunda kişiler başarıları hakketmediklerini ve şans eseri kazandıklarını düşünür ama bu durumu kimseye söyleyemedikleri içinde kendilerini sahtekar gibi hissetmektedirler. Bazı kişilerin sürdürdükleri yaşamlarını, kendi iç dünyalarında hissettikleri derin yetersizlik ve kusur duygularını ödünlemek için geniş çaplı bir psikolojik zırh oluşturmaya adadıklarına dikkat çeken Clarkson, sözde yetkinlik olarak adlandırmış olduğu bu sendromu nitelemek için her savaşı kazanan ve ölümsüz görünen ancak gizli, küçük ama ölümcül bir hassasiyet noktasına sahip olan Aşil' den yararlanmıştır.

2. DUNNING – KRUGER SENDROMU

Cehalet TDK sözlüğünde bilgisizlik olarak tanımlanmıştır (www.sozluk.gov.tr).

İbn Sina cehaleti, nefis hastalığı olarak görmüş ve bilginin, insan nefsinin yetkinleştiren ek bir özelliği olduğunu belirtmiştir. İbn Sina, cahilliği basit cehalet ve kazanılmış cehalet olarak türlere ayırmış ve hastalık olarak gördüğü cehâleti, ‘kazanılmış cehâlet’ olarak belirtmiştir. Cehâleti, kişinin gelecekteki hayatını belirlemede oldukça önemli bir etken olarak görmüş ve bilgiyi ise insanı yetkinliğe ve mutluluğa götüren önemli bir belirleyici; bilgisizlik ise yetkinlik ve mutluluğun önündeki en büyük engellerden biri olarak belirtmiştir (Alper, 2017: 10-11-30).

Literatürde cahil cesaret olarak da adlandırılan Dunning – Kruger Sendromu, kısaca “cehalet, gerçek bilginin aksine, bireyin kendine olan güvenini artırır” olarak açıklanmaktadır (Savaş, 2016: 2-16). Cemaloğlu’nun (2017) “Kifayetsiz Muhterisler” olarak adlandırdığı sendrom cahil cesareti olarak bilginin kararsızlığını aşmaktadır.

Dunning-Kruger sendromu, Cornell Üniversitesi’nde görevli David Dunning ve Justin Kruger adlı iki psikolog tarafından 1999 yılında yayınlanan çalışmada “algılamada yanlışlık eğilimi” olarak tanımlanmaktadır. Cehaletten doğan cesaret veya cahil cesareti olarak bildiğimiz sendrom gerçek bilgidan ziyade bilgisizliğin cesareti, kendine güveni daha çok arttırdığı olarak özetlenebilir. Cemaloğlu (2020: 124-127)); aşırı kendine güvenin kişinin yetenekleri abartmaya sebep olduğu, bu abartmanın yine aşırı güvene sebep olduğu döngüden bahseder. Aşırı güveni araştırmalarında; kişinin performansını, başarısını abartması; kişinin kendisini diğer kişilerden iyi görmesi; kişinin bildiklerinden kesin emin olması, olarak üç farklı şekilde belirtmiştir.

Bazen ve bazı insanlar kendilerini olduğundan daha iyi değerlendirmekte, bilgi, becerilerini abartma eğiliminde olabilmektedir. Kruger ve Dunning (1999: 1121-1134); *Unskilled and Unaware of It: How Difficulties in Recognizing One’s Own Incompetence Lead to Inflated Self-Assessments* isimli araştırması bunun nedenlerine cevap bulmayı hedeflemiştir. Araştırmanın odak noktası, insanların başarı ve memnuniyet elde etmek için benimsedikleri yöntemlerde yetersiz olduklarında sadece hatalı sonuçlar elde etme veya yanlış seçimler yapmakla kalmadıklarını aynı zamanda bu yetersizlikleri kendilerini gerçekleştirme olasılığında da mahrum bıraktığını iddia etmesidir. Araştırma, insanların yeteneklerini abartma eğilimini ve yaşlarına göre performansı düşük olan kişilerin bu gerçeğin farkında olmadığını, beceriksiz kişilerin diğer kişilerin davranışlarını gözlemleyerek kendileri ile ilgili iç görü kazanamadıklarını, yetkin olan kişilerin ustaca davrandıklarında aynılarının denkleri içinde geçerli olduğunu varsaydığını, eğitim alan katılımcıların daha az şişirilmiş öz değerlendirmede bulunduğunu ve eğitim almayanlardan daha iyi metabilşel beceriler sergilediklerini, düşük doğru cevap veren katılımcıların kendilerini daha yüksek olduklarını düşünmelerinin yanında aynı zamanda ortalamanın üzerinde düşündüklerini, yetersiz bireylerin yanlış kalibre edilmesine rağmen, oldukça yetkin kişilerinde de kendi değerlendirmelerinde sistematik önyargı gösterdiklerini, yeteneklerine ve test performanslarını yaşlarına göre küçümseme eğiliminde olduklarını ortaya çıkarmıştır. Çok iyi performans gösteren katılımcılar meslektaşlarının da aynı şekilde iyi performans göstermeleri gerektiğini düşünmüş ve bu durumda iyi olanların karşılaştırmalı yeteneklerini küçülmeye yönlendirmiş ama akranlarının ne kadar düşük performans gösterdiğini öğrendikten sonra, kendi değerlendirmelerini daha doğru seviyelere çıkardıkları görülmüştür. Bu durum son derece yetkin bireylerin iyi performans göstermelerine rağmen, yeterliliklerinin meslektaşları tarafından paylaşılmadığını anlamakta, fark etmede başarısız olduklarını, yeteneklerini ve test performanslarını hafife alma eğiliminde olduklarını göstermiştir. Çalışma aynı zamanda bir de paradoks ortaya çıkarmıştır; insanların yetersizliklerini fark etmelerinin bir yolunun onları yetkin kılmak olduğunu ileri sürmüştür. Ama bu sefer de kendi yetersizliklerini tanımak için üstbilşel beceri kazandıklarında artık yetersiz kalmadıklarını belirtmiştir. Kruger ve Dunning (1999: 1121-1134); çalışmada yetersiz bireylerin kötü performanslarını kendi belirleyemediğini öne sürmesine rağmen, akademik kariyerlerinde bir noktada geri dönüşlerin kaçınılmaz olduğu varsayıyordu. Neden öğrenemediler sorusunun cevabı olarak insanların günlük yaşamdaki yetenekleri hakkında diğerlerinden çok az geri bildirim almaları, ikinci olarak bazı görev ve durumların insanların kararlarının asıl niteliğini ortaya çıkaracak ve kendisini düzelten bilgilerin almalarını engellemesi ve diğer bir sebep olarak da insanların olumsuz geri bildirim

alsalar bile bu başarısızlığın tam olarak anlamlandırmaması olduğunu belirtmişleridir. Kısaca Kruger ve Dunning (1999: 1121-1134)'nin araştırması bilgisizliğin özgüveni arttırdığını ortaya koymuştur.

Sonuçları da kısaca aşağıdaki gibi özetleyebiliriz (Duygulu, 2013: 1):

- Nitelsiz insanlar bilgisizliklerinin ve yetersizliklerinin farkında değildirler.
- Nitelsiz insanlar, kendilerinde olan becerilerine ve özelliklerini abartmaya yatkındırlar.
- Nitelsiz insanlar eğitildiklerinde kendilerindeki durumunun farkına varmaya başlarlar.
- Nitelsiz insanlar, diğerlerini de doğru yargılayamaz, değerlendiremezler.

Turğut ve Tarhan (2019: 14) isimli araştırmacılar da yaptığı çalışmada Kruger ve Dunning'in araştırmasını destekler şekilde sonuçlar almış ve insanların daha önce denemedikleri şeylerde daha girişken olduklarını gösterdiklerini belirtmişlerdir.

Pavel, Roberson ve Harrison (2012: 128) isimli araştırmacılar da , havacılık öğrencileri arasında yaptıkları araştırmada Kruger ve Dunning ile benzer sonuçlar elde etmiş ve sendromun yaygın olduğunu ve eğitim müfredatının parçası olması gerektiğini belirtmişler.

ABD'de yapılan araştırma da ise aşılama ve otizmle ilgili insanların tutumlarında Dunning-Kruger etkilerini ortaya koymaya çalışmıştır. Çalışmada otizm farkındalıkları düşük olanların uzmanlardan ziyade kendi bilgilerinin daha çok olduğunu düşündükleri ve uzman olmayanlara atfettikleri rolü yükseltme eğiliminde oldukları, uzmanlardan daha çok bildiklerini düşünen ve bu konuda kendine güvenen bireylerin zorunlu aşılama politikasını daha az destekledikleri görülmüştür (Motaa, Callaghand, Timothy, 2018: 277-280).

Duygulu'nun belirttiği gibi (2013); iş kurmak isteyen yetkin biri, karşılaşabileceği zorlukları, eleman seçiminin önemini, pazar koşullarını, nakit sorunlarında karşılaşabileceği ödeme güçlüklerini, karşılaşabileceği tüm riskleri göz önünde bulundurup ayrı ayrı hesaplayacak ve belki cesareti toplayamayıp bu durumu sürekli olarak erteleyecektir. Ama öte yandan konuyu tam olarak bilmeyen biri iş kurma hayalinde detaylı hesaplara girmeden bilgisizliğin verdiği cesaretle riskleri hesaplamadan işe başlayabilecektir. Bazı insanlar ise sahip oldukları bilgi ve becerilerinin fark edilmesini beklerken kendisinden daha az yetkinliğe sahip diğer bazı kişilerin iyi yerlere gelmesinin sebebi de bilgisi az olanların sahip olduğu yine bu cesaretin verdiği ataklık ve işi isteme cesarettir. Yapılamayacağını bilmediği için denemiş ve başarmış olabilmektedirler.

Küçün, Güngör ve Eroğlu'nun yaptığı çalışmada (2020: 21-23); Girişimci adaylara eğitim verilmeden önce ve eğitimden sonra testler uygulanmıştır. Eğitim verilmeden önce Dunning-Kruger sendromu ile tutarlı sonuçlar elde edilmiş, eğitim sonrasındaki testlerde ise bu durumun değiştiği ve daha gerçekçi oldukları görülmüştür. Araştırmanın önemli bir sonucu olarak aldıkları eğitimden sonra yeterli bilgiye sahip olmadıklarının farkına varmış olmalarıdır. Bu fark gelişmenin de önüne açacaktır.

Savaş (2016: 9)'ın Dunning - Kruger sendromunu örgütler açısından değerlendirmesinde; rakiplerin karşısındaki olumsuz sonuçlarda 'aşağılık kompleksi' yani 'üstün olma ihtiyacı' hisseden örgütler, bu durumda kendilerini abartabilirler, bu durumu o kadar içselleştirirler ki başarısızlıklarını kendileri bile unuturlar, örgütler çevresindekilerin algılama yetisini fark edememekte ve olumsuz durumlarla karşılaşmaktadırlar. Bu durumu değiştirmek için eğitim olarak bilişsel farkındalığın artması gerektiği belirtilmiştir.

Örgütlerde çalışanlar açısından değerlendirmede ise sendroma sahip çalışanlar beceremeyecekleri işlere almalarına ve kendi başarısızlıklarının yanında çalıştıkları örgütün de başarısızlığına sebep olacaklarıdır. Sendroma sahip kişilere eğitimler verilerek, her bireyin eksik yanlarının ve artılarının farkında olması toplumu değiştirebilecektir (Cemaloğlu; 2020: 136).

3. IMPOSTER SENDROMU

Sendromu ilk olarak Dr. Suzanne Imes ve Dr. Pauline Clance tarafından 1978 yılında "impostor sendromu" adı ile yüksek başarılı kadınlar için kullanılmış bir kavram olmakla birlikte, işletme

literatürüne, “aşıl sendromu”, “gizli başarısızlık korkusu”, “sahtekar sendromu”, “impostor sendromu”, “topuk yarası sendromu” ya da “sözde yetkinlik/başarısızlık sendromu” olmak üzere farklı isimlendirmeler ile aktarılmıştır (Fettahlıoğlu, Çakar, 2020: 854; Yenici, 2018: 12).

Aşıl, M.Ö. 720 yılında Homeros tarafından yazılmış İlayda Destanı'nın baş karakteri ve Girdiği her savaşı kazanan ve ölümsüz olduğu düşünülen bir kahramandır. Efsaneye göre bir tanrıça ve bir ölümlünün oğluydu. Annesi Aşıl'in ölümsüz olmasının yollarını aradı ve insanlara ölümsüzlük veren dünyanın altındaki dokuz nehirden birine ayaklarını tutarak daldırmıştır. Bu, Aşıl'i annesinin tuttuğu topuğu dışında fiziksel olarak yaralanmaları bağışıklık kazandırmış, incitilemez yapmıştır. Aşıl'in hassas bölgesi, yaralanabilecek tek bir yer olarak suyla temas etmemiş topuğu kalmıştır. Truva savaşlarında bu tek zayıf noktadan zehirli okla vurulmuş ve aldığı yara Aşıl'i öldürmüştür (Clarkson, 1999). Aşıl topuğu (Achille's heel), her insanda görülen, ufak ama hassas ve hayati bir yanığı, eksikliği olduğunu belirten, insanın hassas ve yaralanabilir olabileceğiniz simgeleyen bir tabir olarak kullanılmaktadır. Aynı zamanda aşıl topuğu, tıp literatüründe de kullanılan bir terimdir. Clarkson (1999)'da, bazı kişilerin sürdürdükleri yaşamlarını, kendi iç dünyalarında hissettikleri derin yetersizlik ve kusur duygularını ödünlemek için geniş çaplı bir psikolojik zırah oluşturmaya adadıklarına dikkat çekmiş ve sendromu nitelikle için her savaşı kazanan, ölümsüz görünen, fakat kimsenin fark edemediği ölümcül bir hassasiyete sahip bir kahraman olan Aşıl imgesinden yararlanmış (Gürel & Muter, 2007: 542).

Clance ve Imes (1978), sendromu üstün başarılı bazı başarılı kadınların yaşadığı sahtekar olduklarına inandıkları içsel tecrübe olarak tanımlamışlardır. Kişiler haksız olarak başarılar elde ettiğini düşünür ve kendilerini sahtekar olarak gördükleri için yoğun olumsuz duygular yaşarlar. Aşırı çalışma da bu sendromun gözlenen bir şeklidir (akt.Cemaloğlu, 2020: 283).

Mann (2020: 5) imposter sendromunu; aldatıcı bir şekilde, aslında olduğunuzu söylediğinizi olmadığını, diğer insanların inandığı kadar iyi olmadığını düşünmek olarak açıklamıştır.

İş hayatında, kendisine büyük hedefler koyan ve her zaman daha iyisini yapmaya çalışan ve bunu yaparken başarısız olacağı korkusuna kapılan çalışanlar, hedeflerini gerçekleştirebilseler bile başarılı olma duygusunu tam anlamıyla yaşayamamaktadır. Çalışanın kendini sürekli başarılı olmaya, mükemmeli yapmaya çalışması, belli bir süre sonra kişide hayal kırıklığı, doyumsuzluk, rezil olma korkusu, diğerlerinin güvenini kaybetme korkusunu ortaya çıkarmaktadır. Bu durum, imposter sendromu diğer bir adıyla gizli başarısızlık korkusu olarak adlandırılmaktadır. Imposter Sendromu, aslında yaptığı işte gerçekten başarılı olan, fakat kendini sürekli yetersiz görmesi nedeniyle işi üzerine daha çok çaba sarf eden ve kendi içinde gizliden gizliye başarısız olacağı kaygısı taşıyan kişilerde görülmektedir. Gizli başarısızlık korkusu yaşayan kişi, hedeflerine ulaşsa bile tatmin duygusunu tam anlamıyla yaşayamamakta, içinde bulunduğu yoğun endişe sonrasında kendini bitmiş, yorgun ve tükenmiş hissetmektedir (Çıvgın & Gündoğ, 2020: 180).

Clance ve Imes (1978) imposter sendromunu elde ettikleri başarılarından duyulan suçluluk duygusu ve yetersizlik korkusu olarak açıklamış ve temel özellikleri ise, yetenek ve becerilerinizin başkaları tarafından büyütüldüğü düşüncesine sahip, bundan dolayı sahtekar gibi başkalarını kandırdığı düşüncesiyle bunun ortaya çıkma korkusu ve elde ettikleri başarılarını dışsal durumlara bağlama, sayılmıştır. Imposter olmayanlar başarıları için içsel faktörlere (çalışma, yetenek vb.), başaramadıklarını ise dışsal faktörlere bağlamaya yatkındırlar. Sınavı geçerse çalışmasına, başarısız olursa öğretmenin katılığına bağlarlar. Imposter sendromunda ise farklı olur. Başarılarını şans gibi kontrolü dışındaki etkenlere, başarısızlıklarını ise yeteneksizlikleri gibi kendisine bağlarlar. Olumsuz durumlarda kendini suçlama olarak değil aynı zamanda olumlu olaylarda dışsal nedenlere bağlama da vardır (Mann, 2020: 64-66). Diğer bir deyişle sendromun ana merkezinde kişinin kendi yeterliliğine ve başarısına yönelik olarak olumsuz tutumlar bulunmaktadır. Bu olumsuz durumlara başkaları tarafından ortaya çıkarılma beklentisi endişeyle beraber eşlik eder. Bu sendroma sahip kişiler sadece başkalarının yetersizliğini keşfetmesinden korkmaz; bu yetersizliğini gizlediği için, rol yaptığı için de kendini etik olarak yanlış bulurlar (Hawley, Paul, 2019: 203-226).

Sosyal medya da bu durumu tetikleyen unsurlardan biridir. Mann'ın (2020: 66-70) belirttiği gibi kişilerin %62'si sosyal medyada kendini, başkasının başarıları ve hayatları karşısında yetersiz hissettiğini belirtmiştir. Sosyal medyada herkes olağanüstü gözükür ve bizlerde başkalarının özel oluşlarını izler ve

kendimizi kötü hissedebiliriz. Ancak importser sendromu sadece bu yetersizlik hissi değildir, kendini sahte hissetme halidir. Bu güzel paylaşımları yapanlarda okuyanlar kadar ve bazen daha fazla hissettiği budur. Gerçek durumu ile sosyal medyada paylaştıkları uyuşmadığı için de insan kendini sahte hisseder. Sosyal medyada kıyaslamadan da kurtulmak mümkün değildir. Ayrıca sosyal medyadaki onaylanma ölçüsü olan like'lar da özsaygıyı etkilemektedir. Düşük olan sosyal medya onayı, like'larımız özsaygıda düşüşe yol açabilmektedir.

Imposter sendromundan daha fazla etkilenen yaşam biçimleri vardır. Dr. Valeri Young bunları; öğrenciler, akademisyenler ve diğer yaratıcı alanlarda çalışanlar, üstün başarılı kişiler, kariyerlerinde sıra dışı bir şekilde erken başarı kazananlar, birinci nesil (ailede ilk) üniversite öğrencileri/mezunlar, konumlarına alışılmadık yollarla gelenler, düşük temsilli gruplar, üstün başarılı aile bireyi olanlar, yalnız çalışanlar, serbest meslek sahipleri olarak belirtmiştir. İnsanların kendini bir sahtekar gibi hissetmelerinin bazı tetikleyicileri bulunmaktadır, en yaygınları ise (Mann, 2020: 12-13-14-16):

- Alınan eğitimle ilgili bir elemende
- Yeni bir eğitime başlarken
- Terfi aldığı anda

olarak sıralanmıştır.

Sahtekar olarak hissedenlerin tutumları üç çeşitte belirtebiliriz. Birincisinde belirli bir geçmiş başarısını önemsiz olduğunu, performansının zayıf olduğunu düşünür yani geçmişe yöneliktir. Diğer bir tutum geleceğe yöneliktir, başarısını şansa veya çok çalışmasına bağlayarak bir daha bu kadar başarılı olmayacağını düşünür. Üçüncü sahtekar tutumu yeteneği, beceriyi, yetkinliği hedefe alır. Başarısını kabul eder ancak bunu kendi yeteneğine, yetkinliğine değil şansa, doğru zamanda doğru yerde olmaya, başkalarından aldığı desteğe, kişisel cazibeye veya çok çalışmaya bağlar (Hawley, Paul, 2019: 203-226).

Dış görünüşü ve iç dünyasının tezatlığı altında ezilen birey, dış çevresinin yorumlarını fazlasıyla önemsemekte, sözde başarısızlığı ile çevresine rezil olacağı korkusunu yaşamakta ve kendisini yorgun, halsiz, enerjisi tükenmiş halde kötü hissetmektedir. Ancak bu durum birden bire ortaya çıkan bir durum olarak algılanmamalıdır. Imposter sendromu, yavaş yavaş gelişen, kişinin ruhsal dengesini bozan, iş, aile ve sosyal yaşamını etkileyen bir durumdur. Kişilerin başarıya ulaşmak uğruna gösterdikleri çaba, doyumun etkisini en aza indirmekte ve kişide tükenmişlik, tatminsizlik etkilerini gösterebilmektedir (Çıvgın & Gündoğ: 2020, 181).

Imposter sendromu yeterince iyi olduğumuzu hissetmemizden kaynaklanır, buna yol açan ise düşük kendine inanç ve güven eksikliğidir ve bu genellikle çocukluktan gelen bir durumdur. Onaylamayan otorite figürleri (ebeveyn gibi), aşırı kontrolcü anne-baba, dikkatten yoksun olmak, zorbalığa maruz kalmak, eğitim başarısının düşüklüğü, dinsel inançlar, kıyaslanmak, dış görünüş, kötü davranışlar düşük öz saygıya, yeterince iyi olmadığı inancına yol açar (Mann, 2020: 5861-62).

Cemaloğlu (2020) kitabında bu sendromun her iki cinste de görüldüğü, üniversite öğrencilerinde, akademisyenlerde, tıp okuyanlar ve pazarlama müdürleri gibi zümrelerde de yaygın olarak görüldüğü araştırmalardan bahsetmiştir. Tanınmış, tanınmamış her alandaki kişilerde ortaya çıkabilen sendrom günlük programları olumsuz etkiler ve zor bir durumdur.

Imposter sendromunda döngü şu şekilde çalışır (Clance: 1985):

- Başarmak istediği görev gelir, sendroma sahip kişi sahip olmadığını düşündüğü yetkinliklerden dolayı endişelenir, kaygılanır,
- Bu şüphe ve kaygıya karşılık ya çok fazla hazırlık yaparlar ya da başlamayı erteler sonra çok fazla hazırlık yaparlar,
- Görevi başarıyla tamamlayınca kendilerini iyi hissederler,
- Bu iyi hissetme geçicidir ve başarılarına karşı övgü gelse de bunun kendi yetenekleri ile ilgili olmadığını düşündükleri için övgüleri reddederler, başarılarını yeteneklerine, yetkinliklerine değil çok çalışmasına addederler; görev geldiğinde erteleyenler başarılarına şansa bağlarlar,

- Bu da yine kendinden şüpheye, sahtekar oldukları düşüncesine dönüşür ve yeni görevle döngü tekrar başlar.

Imposter sendromu konusunda uzman olarak kabul edilen Dr. Valerie Young'a göre, beş tip "imposter" vardır (akt;Fettahlıoğlu & Çakar, 2020: 855). :

Uzman, bir iş üzerinde çalışırken konu hakkında her şeyi bildiklerine emin olana kadar tatmin olmazlar. Yeni bilgi arayışları, görevleri ve projeleri bitirmelerine engel olur. Belirtilen her şartı sağlamadıklarından iş başvurusu yapmayanlar uzman kategorisine girebilirler.

Mükemmeliyetçi, genellikle yapmış oldukları çalışmalarından memnun değildir. İyi yaptıklarını kutlamaktansa, daha iyi yapabildikleri şeylere odaklanmaya yönelirler.

Doğal deha, genellikle hızlı ve kolay bir şekilde yeni bir beceriye hakim olurlar ve başaramadıklarında genellikle utanırlar ve bu durum onları zayıflatır.

Solist (cefakar), yalnız çalışmayı tercih eder ve yardım istemenin yetersizliklerini ortaya çıkarıp onu beceriksiz göstereceğine inanırlar. Değerlerini gösterebilmek için gelen yardım tekliflerini geri kabul etmezler.

Süper kahraman, kendilerini çok fazla zorladıklarından genellikle ilgilendikleri tüm alanlarda mükemmel olurlar. İşkolk insanlar, süper kahraman olarak sınıflandırılabilir.

Bu sendromu yaşayanlarda; olağan üstü çalışma, asıl görüşlerini saklama, etkileyecek üstün bir yol gösterici bulma, mükemmeliyetçilik, başarıları baltalamak, övgüyü dikkate almama, kendini baltalama, davranışları yaygın olarak görülmektedir (Mann, 2020: 25-33).

Imposter sendromunda başarı elde edilse de mutlu olunmamakta, başarı korku kaynağı olarak görülmekte başarı kendinden kuşkuya sebep olmakta ve başarıdan rahatsız olma döngüleri yaşanmakta ve kişi de sıkışmışlık hissi yaratabilmektedir (Güneysel: 2019, 27).

Fettahlıoğlu ve Çakar (2020: 856), araştırmalar ışığında imposter sendromunun, her kesimden kişilerde görülebileceği ama kadınlar ve azınlıklar açısından daha fazla etkileri olduğunu ve bu sendromunun kökenlerinin en fazla ailesel ve sosyal sözleşmelerden kaynaklanacağını ifade etmişlerdir.

Mann (2020: 19-20) kitabında imposter yaşayan ünlülerden de bahsetmiştir. Oscar ödüllü Jodie Foster şans eseri bu ödülü aldığını ve bir gün eve gelip ödülü geri alacaklarını düşündüğünü söylemiştir. Nobel ödüllü yazar John Steinbeck günlüğüne "ben yazar değilim, kendimi ve başkalarını aldatıyorum" yazmıştır. Oscar ödüllü Tom Hanks bir dergi söyleşisinde, sahtekar olduğum ne zaman anlaşılır ve herşeyi elimden alırlar, diye düşündüğü belirtmiştir.

2019 yılında Stem (Bilim, Teknoloji, Mühendislik, matematik) eğitimi alan 818 üniversite öğrencisi üzerinde yapılan araştırmaya göre özellikle birinci nesil (ailede lisans eğitimi alan ilk nesil) öğrencilerin yüksek rekabete sahip stem kurslarında daha fazla sahtekarlık yaşayabildikleri belirtilmiş, bu sahtelik hissinin performansı ortaya çıkarmayı engelleyen ama göz önüne alınmayan bir engel olabileceği belirtilmiştir (Canning vd., 2019: 647).

Daha çok kadınlarda ortaya çıktığı iddia edilen bu sendromu, Amerika'da yapılmış olan bir araştırmada Jessica Collet ve Jade Avelis isimli sosyologlar, kadın akademisyenlerin çoğunun neden geri adım atıp, olduklarından daha düşük mevkiye geçtiklerini 460 doktora öğrencisinin üzerinde incelemişler ve akademisyenlerin imposter sendromu yaşadıkları sonucuna varmışlardır (Yenici, 2018: 12-13). Sendromu kadınların erkeklerden daha fazla bu sendromu yaşadığına dair bir kanıt yoktur. Imposter sendromunun kadınlar üzerinde yapılmış bir araştırmada ortaya çıkmasından dolayı bir yanlışlığı oluşturmuştur. ABD merkezli profil çıkarma işletmesi tarafından yapılan araştırmada kadınlar ve erkekler arasındaki farklılık tespit edilmemiştir. Hatta 2016 yılında yapılan araştırmada erkeklerin İmpostser sendromundan daha fazla sıkıntı duydukları öne sürülmüştür. Toplumun ön yargısı ve toplumsal cezalandırma korkusu nedeniyle erkekler sahtelik hisleriyle ilgili konuşma olasılıkları kadınlara göre daha az olduğu belirtilmiştir (Mann, 2020: 93-94).

60dan fazla makalenin literatür taramasında ise çoğu araştırmancının kadınlar üzerinde yapıldığı belirtilse de kadın-erkek oranlarında anlamlı bir fark tespit edilmemiştir. Bu durumda da işverenlerin bu sendrom için her iki cinsiyet içinde eşit derecede dikkatli olması gerekmektedir. Ayrıca sendrom belirtilerinin yaşla birlikte, en azından yarısında, azaldığı tespit edilmiştir. Gelecekteki araştırmaların öğrencilerden daha çok çalışanlara yapılması bu sonucu etkileyebilecektir. Yine aynı çalışmada sahtekarlık yaşayan kişilerin bunu tek yaşayan olduklarına inandıkları için yalnızlaşmakta olduğu belirtilmiş bu durumun önüne geçmek içinde grup tedavisi ile deneyimlerin açıkça paylaşıldığı güvenli ortamlarda şüpheyi, sahtekarlık duygularının yok edilmesi mümkün olacağı belirtilmiştir. Sahtekarlık ve iş performansı arasındaki ilişki göz ardı edilemez, bu durumda sendromun gelişiminde tanımlanabilmesi için gerekli eğitimlerin verilmesi, kaynaklara erişim imkânının tanınması, işveren ve eğitimcilere düşmektedir. Bu sendroma odaklanan terapiler sendromun yaygınlığını azaltmaya yardımcı olur. Ayrıca bunlara ek olarak çalışanlardan sağlıklı beklentilere girerek ve hataların başarısızlık olarak tanımlanmadığı, başarıların ise açıkça kabul edildiği örgüt kültürü yaratmayı hedefleyebilirler (Denna vd, 2019: 1272).

Örgütlerde liderlerin rolü oldukça önemlidir. Örgüt ikliminin, kültürünün oluşması, adalet gibi konulara yoğunlaşarak, çalışanların imposter gibi sendromlara kapılmamalarını ve örgütün amaçları için çalışmalarına, emek vermeleri gerekmektedir (Cemaloğlu, 2020: 290). Özellikle zor zamanlarda doğru bir ekip, doğru önlemler, kronik hale gelebilecek sendromlardan örgütleri kurtarabilir (Fettahlıoğlu, Çakar: 2020, 855).

İmposter sendromunun işgörenler ve örgütler için olumlu yanlarından biri, başarılarına güven sorunu olduğundan herşeyi iki kere kontrol edip ellerinden gelenin en iyisini yaptıklarından, bir işi iyi yapma olasılıkları yüksek olmasıdır. Sendromu hafif biçimini yaşayanlar için çok çalışmanın ve ellerinden gelenin en iyisini yapmaya yönlendiren bir şey olduğu belirtilmiştir (Mann, 2020: 180).

Evden veya uzaktan çalışan örgütlerde, klasik örgütlere kıyasla lider olarak kadınların daha yüksek oranda olduğunu gösteren araştırmalar bulunmaktadır. Bunun sebebi olarak da uzaktan çalışmanın kadınların ilerlemesini daha fazla desteklemesi olduğu ama aynı zamanda kadınlar uzaktan çalışmadan erkeklerden daha fazla yararlandığı belirtilmiştir. Ama bununla birlikte uzaktan çalışanlar daha fazla imposter sendromu riskine sahip oldukları gözlemlenmiştir. Bunun nedenleri arasında ise olumlu geri bildirim ve güvence hissinin sınırlı olması gösterilmiştir (Mann, 2020: 87)

İmposter sendromu durumunda yapılabilecekler (Avşar, 2020; Tekpınar, 2010: 16-17):

Kabul Etmek: Kişi kendinde olduğunu düşündüğü “Gizli Başarısızlık Duygusu”nun sadece kendinde olmadığını, birçok başarılı insanın da bu sorunu yaşadığını bilmeli, sendromu tanıyarak ve böyle bir sorunu olduğunu kabul ederek ilk adımı atmalıdır.

Yüzleşmek: Kişi zayıf görülme korkar, saklamaya çalıştıkça içinde büyüyen bu duygu giderek baş edilemez bir hale gelir. Sendromu iyileştirmek için bir ya da birkaç kişiye durumu anlatabilmek kişi için büyük bir rahatlama sağlayacaktır. Kendinde güçsüz gördüğü yönlerini anlattığında aslında öyle olmadığını görmek ya da öyle olmuş olsa da bunun başkaları için herhangi bir zayıflık olarak görülmediğini fark edecektir.

Kendinin Farkında Olmak, Kabul Etmek: Her insan kendine has özellikleri vardır ve bu özellikler insanları tek ve biricik yapar. Önemli olan insanları olduğu gibi kabul edebilmektir. Kişi kendinde tıpkı diğer insanlarda olduğu gibi güçsüz yönler var olduğunu bilmeli, bunları rahatlıkla ifade etmekten kaçınmamalı, mükemmel olmadığını kabul etmelidir. Kişi, başkalarının ne diyeceğini düşünmek kadar içinden gelen eleştiri seslerini de kısmayı öğrenmelidir.

Geçmiş Bırakmak: Geçmişte yaşadığı tüm olumsuz duyguları bir kenara bırakmalı, bir noktada bunlar aşılmalı ve kim olduğunu, kim haline geldiğinin sorumluluğunu alması gerekir. Yaşanmışlıklarını sadece birer deneyim olarak görmelidir. Değiştiremediği özelliklerini değiştirmek için artık daha fazla çaba sarf etmeyip kendini kabul etmelidir.

Sınırları Belirlemek: Kişi yetkin olup olmadığı sınırları belirlemelidir. Bu, yetkinlikleri kazanmanın sonuçlarını ve yetkinlik kazanma sürecini öğrenmek, gözden geçirmek ve anımsamak için yaşamsal önem taşır. Var olan sorunu elinden geldiğince farkında olarak değiştirmeye çalışmalıdır. Ancak yetişkin olarak üzerinde durulması gereken diğer önemli nokta ebeveyn olarak çocuk yetiştirirken yukarıda bahsedilen

tüm basamaklara dikkat etmek olmalı, başarılarının altında kendilerini ezen çocuklar yetiştirilmemelidir. Onlara hayatın mükemmel olmadığını, kendilerinin de mükemmel olmak zorunda olmadıklarını, duygularını –miş gibi yaşamamaları gerektiği öğretilmelidir.

Başarısızlıklara Hoşgörü: Kendimizde ve başkalarında hoşgörü geliştirmeli; insanların ve kendimizin hatalarında anlayışlı bir tutum sergileyebilmelidir.

Imposter sendromu, başarısız insanların hissettiği değil, başarılı kişilerin hissettiği huzursuzluk, güvensizliktir ve bunu yenmek için yapılabilecekleri ise Mann (2020: 88-116-122-141) şöyle sıralamıştır:

- Olguları görün ve tanıyın,
- Düşünme biçimizi sorgulayın, güçlü yönlerinizi belirleyin,
- İyi davranışları tanıyın,
- Hata yapmaktan korkmayın
- İnanç taklidi yapın, öyle hissetmesiniz de kendinize güveniyormuş gibi hareket edin.
- Başarıya bakışınızı sorgulayın,
- Gerçek dostlara değer verin,
- Sosyal medyayı yönetin,
- Karşılaştırma günlüğü tutun

Duygulu (2013)'ya göre bu araştırmalardan ve ortaya çıkan sonuçlarından sonra insanların anlamasını istediği bilgisizlikten gelen cesaretin de, bilmenin verdiği titizliğinde yararı da zararı da bulunduğu. Bazı durumlarda konuyu çok iyi bilinmesine rağmen, kaygılar o kadar artar ki stres nedeniyle istenilen sonuca ulaşamayıp başarısız gelebilir. Sınavlarda yaşanan stres buna bir örnek teşkil etmektedir. Bazı öğrenciler konuyu bilmediklerinden dolayı değil, başarısız olma korkularını yenedikleri için kaygı duydukları ve stres oldukları için de başarısız olabilmektedirler. Bildiğimiz konularda yapılan gereksiz alçak gönüllülük de fark edilmemizin önünde engel olabilir. Keşfedilmeyi, takdir edilmeyi beklemek hırs, cesaret yoksunluğu olarak görülebileceğinden bunun yerine rekabetin arttığı dünyamızda, bilgi sahibi kişilerin kendilerini göstermek için daha atak davranmalarının faydalı olacağı açıktır. Gereksiz yerde ve zamanda gösterilen tevazu hak edilen yere gelmeye engel olabilmektedir.

Kişi niteliksizliğini fark etmediğinde aşırı risk ve yanlış kararlar almakta ve bunları tekrarlayabilmektedir. Niteliklerini küçümseyen kişi için ise bu durumun tersi gerçekleşmekte, karar alırken çekingen davranış gösteren kişi fırsatlar karşısında eylemsiz, pasif kalmaları söz konusu olmaktadır (Küçün, Güngör, Eroğlu, 2020: 1).

4. SONUÇ

Üstünlük önyargısı anlamına gelen Dunning-Kruger sendromuna sahip kişilere her yerde tanıklık etmiş olabiliriz. İş hayatında (kamu ve özel sektörde), özel hayatta, basında, siyasette. Bilip bilmediği önemli değil hatta bilmediğini bile bilmiyor olabilir ama hemen hemen her konuda söyleyecekleri olanlar her yerde varlar. En basitinden sorulan adresi bilmeseler bile tarif etmeye çalışabiliyorlar. Bu kişiler sosyal medyayı da kullanarak uzmanlardan bile daha özgüvenli olabiliyorlar.

Imposter sendromu yaşayanlarda bu durum tam tersidir. Bilirler ama bildiklerine, yeteneklerine güvenleri yoktur ve kendisine inanan, öven insanları aldattıkları hissi ile kendilerini sahtekar olarak düşünür ve bu sahtekarlıklarının er geç ortaya çıkacağı şüphesi ve korkusu ile yaşarlar. Bu durum pasif kalmalarına neden olabilmektedir. Yeteneklerinin ve bilgilerinin altında çalışmaya razı olurlar.

Dunning-Kruger sendromuna sahip kişiler özellikle iş hayatında fuzuli bir kendine güven sahibi olduklarından atılgan ve girişkendirler ama örgüt içinde bu durum düşük kaliteli çalışmaya, hedefe varmakta oyalanmaya ve hatta başarısızlığı sebep olabilirler. Imposter sendromuna sahip kişiler ise yapabileceklerine inancı düşük olduklarından dolayı, rezil olma ve yetersiz görüleceği korkusuyla, geri planda kalmayı, faydalı olabileceğinden daha azını yapmayı tercih ederler ki bu durumda atıl bir yetkinlikten, yetenekten, iş gücünden bahsetmemiz mümkündür. Bu durumda da örgüt kültürünün doğru, verimli bir şekilde yapılandırılması ve liderlerin rolü yol göstericidir. İşyerinde yaşanan

sendromların tanınması, bu konuda örgüt çalışanlarına eğitim ve destek verilmesi, sendromların olumsuz etkilerini azaltmak hatta yok etmek ve örgütün amaçlarına ulaşması için önem arz etmektedir.

Yolsuzluk ve Doğrudan Yabancı Yatırım İlişkisi Üzerine Ampirik Bir Değerlendirme: AB Örneği

Dr. Öğr. Üyesi Tufan Sarıtaş¹

¹ Karamanoğlu Mehmetbey Üniversitesi / İktisadi ve İdari Bilimler Fakültesi / İktisat Bölümü

tufansaritas@kmu.edu.tr, ORCID: 0000-0003-1728-2377.

Özet: Bilindiği üzere Avrupa Birliği (AB), dünya üzerinde şimdiye kadar gerçekleşmiş en başarılı ekonomik bütünleşme örneğidir. Bu başarının elde edilmesinde kurumsal faktörlerin önemli bir etkisinin bulunduğu açıktır. Yolsuzluk ise, bu kurumsal faktörlerin en önemlilerinden birisidir. Doğrudan yabancı yatırımlar ile yolsuzluk arasındaki ilişkiyi inceleyen birçok ampirik çalışmada, farklı ülke gruplarında yolsuzluk ile doğrudan yabancı yatırımlar arasında ters yönlü bir ilişkinin bulunduğu gözlemlenmiştir. Literatürde aksi yönde bulgulara ulaşan çalışmalar da bulunmaktadır. Bu çalışmada, yolsuzluk ile doğrudan yabancı yatırım arasındaki zıt yönlü ilişkiden hareketle, 27 AB ülkesinde 2002-2019 periyodu ele alınarak, yolsuzluğun kontrolünün, doğrudan yabancı yatırım girişleri üzerindeki etkisi panel veri analiz yöntemiyle araştırılmıştır. Çalışmada, doğrudan yabancı yatırım girişlerinin bağımlı seri ve yolsuzluğun kontrolü endeksinin ise bağımsız seri olduğu bir model kurulmuştur. Seriler Dünya Bankası'ndan elde edilmiştir. Daha sonra model kurularak panel veri analizi ile tahmin edilmiştir. Elde edilen ampirik bulgularda; yolsuzluğun kontrolü arttıkça, doğrudan yabancı yatırım girişlerinin de arttığı gözlemlenmiştir. Dolayısıyla yolsuzluğun düşük bir seviyede bulunmasının, AB'nin doğrudan yabancı yatırımları çekmesindeki önemli faktörlerden biri olduğu anlaşılmaktadır.

Anahtar Kelimeler: Avrupa Birliği (AB), Yolsuzluk, Doğrudan Yabancı Yatırımlar, Panel Veri Analizi.

An Empirical Assessment on Corruption and Foreign Direct Investment Relations: The EU Case

Abstract: As it is known, the European Union (EU) is the most successful example of economic integration in the world so far. It is clear that institutional factors have an important effect on achieving this success. Corruption is one of the most important of these institutional factors. In many empirical studies examining the relationship between foreign direct investment and corruption, it has been observed that there is an inverse relationship between corruption and foreign direct investment in different country groups. There are also studies in the literature reaching contrary findings. In this study, based on the opposite relationship between corruption and foreign direct investment, the period of 2002-2019 in 27 EU countries was taken into consideration, and the effect of the control of corruption on foreign direct investment inflows was investigated using panel data analysis method. In the study, a model is established in which foreign direct investment inflows are dependent series and corruption control index is independent series. The series have been obtained from the World Bank. Then, the model was set up and estimated by panel data analysis. In the empirical findings obtained; It has been observed that as the control of corruption increases, foreign direct investment inflows also increase. Therefore, it is understood that the low level of corruption is one of the important factors in attracting foreign direct investments by the EU.

Key Words: European Union (EU), Corruption, Foreign Direct Investments, Panel Data Analysis.

1. GİRİŞ

Yolsuzluk terimi, genel anlamıyla, kamu gücünün, şahsi çıkar elde edilmesi amacıyla kullanılmasından ibarettir. Bir diğer deyişle; bir kamu çalışanının, şahsi çıkar elde etmek amacıyla kamu kurumu içerisindeki konumunu kullanmasıdır. Bir ülkede yolsuzluğun bulunması, o ülkede toplumu yöneten kanunlara saygı gösterilmediğinin, yeterince uyulmadığının göstergesidir (Kaufman vd., 2003). Ancak yolsuzluğun ortaya çıkışında, kamusal görevlerin yürütülmesi için kişilere tanınan yetkilerin de etkisi vardır. Örneğin; bir malın dağıtımı veya özel sektörün denetlenmesi konusunda yapılan yetkilendirmeler, şahsi çıkar eğilimlerinin ortaya çıkmasına neden olabilmektedir (Rose-Ackerman, 1999).

Yolsuzluk tamamen etik dışı olumsuz bir durum gibi algılsa da akademik yazımda, yolsuzluğun, ekonomiye dair olumlu etkilerinden de bahsedilmektedir. Örneğin; bir ekonomide özgürlüklerin kısıtlı olması durumunda, yolsuzluk, serbest piyasaların ortaya çıkmasını sağlayabilir. Bu bağlamda ihracat veya

ithalattaki sınırlamalar, yasal olarak delinerek, daha yüksek bir dış ticaret hacmine ulaşılabilir (Lui, 1985). Ancak genel olarak, yolsuzluğun, ekonomi üzerindeki olumlu etkileri, olumsuz etkilerine kıyasla çok sınırlı bir alan teşkil eder. Yolsuzluğu, büsbütün olumsuz bir durum olarak gören bilim adamları, onu, “ticaretin çarkları arasındaki kum” olarak tanımlarlar. Bir diğer deyişle yolsuzluğu, ticareti olumsuz yönde etkileyen bir olay olarak görürler. Yine bu gruptakilere göre; karlı bir ekonomik alanda kullanılmaya ihtimali varken, yolsuzlukla mücadeleyle ayrılan ekonomik kaynakların israf edilmesi de söz konusudur (Kaufmann, 1997).

Literatürde, doğrudan yabancı yatırımlara ev sahipliği yapan ülkedeki yolsuzluk oranı ile bu ülkeye giriş yapan doğrudan yabancı yatırımlar arasında ters yönlü bir ilişkiye dair birçok çalışma bulmak mümkündür. Genellikle de yükselen piyasa ekonomilerine giriş yapan çok uluslu şirketler, yolsuzlukla karşılaşmaktadır (Cuervo-Cazurra, 2008; Smarzynska & Wei, 2002). Yolsuzluk hem yasadışı olduğu hem de maliyetleri ve belirsizliği artırdığı için çok uluslu şirketler tarafından olumsuz bir durum olarak algılanmaktadır (Shleifer & Vishny, 1993).

Yolsuzluk ile doğrudan yabancı yatırımlar arasındaki ters yönlü ilişkiye dair ampirik literatürden örnekler vermek gerekirse; Mauro (1995) 67 ülkeyi ele aldığı çalışmada, yolsuzluktaki artışın, ülkedeki toplam yatırım seviyesini düşürdüğünü gözlemlemiştir. Wei (2000a) çalışmada, 12 gelişmiş ülkeden, 45 seçilmiş ülkeye gerçekleşen doğrudan yabancı yatırım oranları ile yolsuzluk arasındaki ilişkiyi araştırmış, elde ettiği bulgularda, doğrudan yabancı yatırımlara ev sahipliği yapacak seçilmiş 45 ülkedeki yolsuzluk arttıkça, doğrudan yabancı yatırımların azaldığını saptamıştır. Wei (2000b) çalışmada devletin, doğrudan yabancı yatırımlara yönelik politikalarını da dikkate alarak yapmış olduğu gözlemde, doğrudan yabancı yatırımlar ile yolsuzluk arasında negatif yönlü bir ilişki tespit etmiştir. Al-Sadig (2009) 1984-2004 periyodu için 117 ülkeyi ele aldığı araştırmasında, yolsuzluğun, doğrudan yabancı yatırımlar üzerinde negatif yönlü bir etki bıraktığını saptamıştır. Caetano ve Caleiro (2009) 97 ülkeyi ele alarak gerçekleştirdikleri çalışmada, yolsuzluğun nispeten fazla olduğu ülkelerde yolsuzluğun, doğrudan yabancı yatırımlar üzerinde olumsuz bir etki bıraktığı sonucuna ulaşmışlardır. Samadi vd. (2011), yaptıkları çalışmada 1996-2009 periyodu için D8 ülkelerinde yolsuzluk ile doğrudan yabancı yatırımlar arasındaki ilişkiyi araştırmışlardır. Elde ettikleri gözlem sonuçlarına göre; yolsuzluk, finansal gelişme ile doğrudan yabancı yatırımlar üzerinde olumsuz bir etki bırakmaktadır. Ay vd. (2016) yaptıkları çalışmada 10 gelişmekte olan ülkeyi 1995-2013 periyodu için ele alarak, yolsuzluk ve demokrasinin, doğrudan yabancı yatırımlar üzerindeki etkisini araştırmışlardır. Elde ettikleri bulgularda; yolsuzluk ile doğrudan yabancı yatırımlar arasında negatif yönlü bir ilişki olduğunu gözlemlemiştir. Hakimi ve Hamdi (2017) yaptıkları çalışmada seçilmiş 15 ülkeyi ele alarak yolsuzluk, doğrudan yabancı yatırımlar ve büyüme arasındaki ilişkiyi araştırmışlardır. Elde ettikleri bulgularda; yolsuzluğun, doğrudan yabancı yatırımları ve büyümeyi olumsuz yönde etkilediğini tespit etmişlerdir. Brada vd. (2019) seçilmiş çeşitli ülke gruplarını ele alarak yaptıkları çalışmada yolsuzluğun, doğrudan yabancı yatırımlar üzerinde negatif yönlü bir etki bıraktığını gözlemlemiştir.

2. VERİ ve YÖNTEM

Bu çalışmada 27 Avrupa Birliği (AB) ülkesinde 2002-2019 döneminde yolsuzluğun, doğrudan yabancı yatırım girişleri üzerindeki etkisi araştırılmıştır. Ele alınan AB ülkeleri; Almanya, Avusturya, Belçika, Bulgaristan, Çek Cumhuriyeti, Danimarka, Estonya, Finlandiya, Fransa, Kıbrıs, Hırvatistan, Hollanda, İrlanda, İspanya, İsveç, İtalya, Letonya, Litvanya, Lüksemburg, Macaristan, Malta, Polonya, Portekiz, Romanya, Slovakya, Slovenya ve Yunanistan'dır. Çalışmada kullanılan değişkenler ve elde edildikleri kaynaklar aşağıdaki tabloda gösterilmektedir:

Tablo 1: Serilere İlişkin Bilgiler

Değişkenin Adı	Açılımı	Kaynak
COR	Yolsuzluğun Kontrolü Endeksi (Yüzdelerik Değer)	Dünya Bankası
FDI	Doğrudan Yabancı Yatırım Girişleri (ABD Doları)	Dünya Bankası

COR ile ifade edilen yolsuzluk değişkeni, Dünya Bankası'ndan elde edilen yolsuzluğun kontrolü endeksi ile temsil edilmektedir ve endeks 0 ile 100 arasında bir değer almaktadır. Buna göre; yolsuzluğun kontrolü endeksinin giderek daha büyük bir pozitif değer alması, bir diğer deyişle 100 puana yaklaşması, yolsuzluğun azaldığını; bunun tersine, giderek daha küçük bir değer alması, yani 0 değerine yaklaşması ise, yolsuzluğun arttığını ifade etmektedir. Doğrudan yabancı yatırım girişlerini temsil eden FDI değişkeni de benzer şekilde Dünya Bankası'ndan elde edilmiştir ve ülkeye giriş yapan dolar bazında doğrudan yabancı yatırım miktarını ifade etmektedir. Modelde kullanılan değişkenlere ait tanımlayıcı istatistikler ve korelasyon matrisi aşağıdaki tabloda gösterilmektedir.

Tablo 2: Serilere İlişkin Tanımlayıcı İstatistikler ve Korelasyon Matrisi

Seri	Ortalama	Minimum	Maksimum	Standart Hata	Gözlem
FDI	2,18e+10	-3,61e+11	7,34e+11	5,93e+10	486
COR	4,344369	3,69893	4,60517	0,202631	486
	FDI	COR			
FDI	1,0000				
COR	0,2405	1,0000			

Çalışmada 27 AB ülkesi için 2002-2019 periyodu incelendiğinden, kullanılan veri seti, bir panel veri seti özelliği taşımaktadır. Dolayısıyla ilgili veri setinin analizi için panel veri analiz yöntemi tercih edilmiştir. Panel veri analiz yöntemlerinden de Genelleştirilmiş En Küçük Kareler (GEKK) yöntemi uygulanmıştır. Bilindiği gibi bu yöntem, modelde, değişen varyans ve otokorelasyon sorunlarının bulunması durumunda bile tutarlı bir tahminde bulunabilmektedir (Yerdelen Tatoğlu, 2018, 101). Ayrıca çalışmada rassal ve sabit etkili modeller arasında seçim yapabilmek için Hausman testi (Hausman, 1978) kullanılmıştır. Bilindiği gibi Hausman testine ait olasılık değerinin %5 seviyesinde anlamlı olması durumunda "sabit etkiler modeli", %5 seviyesinde anlamsız olması durumunda ise "rassal etkiler modeli" tercih edilmektedir.

Çalışmada yolsuzluğun kontrolü endeksini temsil eden COR serisinin bağımsız ve doğrudan yabancı yatırım girişlerini temsil eden FDI serisinin bağımlı olduğu bir model kurulmuştur. Tahmin edilmek istenen modelde, yolsuzluğun kontrolü arttıkça, doğrudan yabancı yatırım girişlerinin artacağı beklenmektedir. Modele ait ekonometrik denklem şu şekildedir:

$$FDI_{it} = \beta_0 + \beta_1 COR + \varepsilon_{it} \quad (1)$$

Çalışmanın bundan sonraki kısımlarındaki ilk olarak analiz sonuçlarına yer verilecektir. Daha sonra ise sonuçla ilgili açıklamalar yapılacaktır.

3. ANALİZ SONUÇLARI

Analiz yöntemi olarak panel veri analizi tercih edilmiş ve 27 AB ülkesinde 2002-2019 dönemi için yolsuzluğun, doğrudan yabancı yatırımlar üzerindeki etkisi araştırılmıştır. Öncelikle analizde kullanılan COR serisine logaritmik dönüşüm uygulanmış; FDI serisi ise negatif değerler aldığı için logaritmik dönüşüm uygulanmamış ve ham hali kullanılarak tahmin edilecek model oluşturulmuştur. Aşağıdaki tabloda modele ilişkin tahmin sonuçlarına yer verilmektedir.

Tablo 3: Modele İlişkin Tahmin Sonuçları (Bağımlı Değişken: FDI)

COR	5,66e+10 (0,036) *
Sabit	-2,24e+11 (0,056)*

Gözlem	486
Ülke Sayısı	27
R ²	0,15
F Testi İst. (Prob.)	9,65 (0,000)*
Hausman Testi İst. (Prob.)	0,55 (0,4586)*
Model	Rassal Etkiler Modeli

*Not: Parantez içindekiler prob. değeri, diğerleri ise katsayılarıdır.

Yukarıdaki tabloda görüldüğü üzere; F testine ait olasılık değerinin, istatistiksel olarak %1 anlamlılık seviyesinde anlamlı bir değer aldığı anlaşılmaktadır. Dolayısıyla ilgili modelin kurulması noktasında herhangi bir sorunun bulunmadığı, klasik modelin yerine birim-zaman etkili modellerin kullanılabilir olduğu görülmektedir. Dolayısıyla birim-zaman etkili modellerden Genelleştirilmiş En Küçük Kareler (GEKK) yönteminin kullanılmasına ilişkin bir engel bulunmamaktadır. Bu sebeple GEKK ile tahmin yapabilmek amacıyla uygun model seçimi için Hausman testine başvurulmuş ve teste ait olasılık değerinin istatistiksel olarak %5 anlamlılık seviyesinde anlamsız olduğu gözlemlenmektedir. Yani rassal etkiler modeli kullanılarak tahminde bulunmanın, daha tutarlı bir bulguya götüreceği anlaşılmaktadır. Bu sebeple GEKK yöntemi kullanılarak, rassal etkiler modeli ile ilgili model tahminlenmiş ve bulgular yukarıdaki tabloda raporlanmıştır. Gözlem sonuçlarına göre; COR serisi ile tahmin edilen yolsuzluğun kontrolü serisinin, FDI ile temsil edilen doğrudan yabancı yatırım girişleri serisi üzerinde %5 anlamlılık seviyesinde pozitif yönlü bir etki bıraktığı görülmektedir. Yani yolsuzluğun kontrolü arttıkça, doğrudan yabancı yatırım girişlerinde bir artış yaşanmaktadır. İlgili bulgu, çalışmada beklenen ilişkiyi doğrulamaktadır.

4. SONUÇ

Bu çalışmada 27 Avrupa Birliği (AB) ülkesinde 2002-2019 döneminde yolsuzluğun, doğrudan yabancı yatırım girişleri üzerindeki etkisi panel veri analiz yöntemiyle araştırılmıştır. Ele alınan AB ülkeleri; Almanya, Avusturya, Belçika, Bulgaristan, Çek Cumhuriyeti, Danimarka, Estonya, Finlandiya, Fransa, Kıbrıs, Hırvatistan, Hollanda, İrlanda, İspanya, İsveç, İtalya, Letonya, Litvanya, Lüksemburg, Macaristan, Malta, Polonya, Portekiz, Romanya, Slovakya, Slovenya ve Yunanistan'dır.

Çalışmada yolsuzluğun kontrolü endeksini temsil eden COR serisinin bağımsız ve doğrudan yabancı yatırım girişlerini temsil eden FDI serisinin bağımlı olduğu bir model kurulmuştur. COR ile ifade edilen yolsuzluk değişkeni, Dünya Bankası'ndan elde edilen yolsuzluğun kontrolü endeksi ile temsil edilmektedir ve endeks 0 ile 100 arasında bir değer almaktadır. Buna göre; yolsuzluğun kontrolü endeksinin giderek daha büyük bir pozitif değer alması, bir diğer deyişle 100 puana yaklaşması, yolsuzluğun azaldığını; bunun tersine, giderek daha küçük bir değer alması, yani 0 değerine yaklaşması ise, yolsuzluğun arttığını ifade etmektedir. Doğrudan yabancı yatırım girişlerini temsil eden FDI değişkeni de benzer şekilde Dünya Bankası'ndan elde edilmiştir ve ülkeye giriş yapan dolar bazında doğrudan yabancı yatırım miktarını ifade etmektedir. Gözlem sonuçlarına göre; COR serisi ile tahmin edilen yolsuzluğun kontrolü serisinin, FDI ile temsil edilen doğrudan yabancı yatırım girişleri serisi üzerinde %5 anlamlılık seviyesinde pozitif yönlü bir etki bıraktığı görülmektedir. Yani yolsuzluğun kontrolü arttıkça, doğrudan yabancı yatırım girişlerinde bir artış yaşanmaktadır.

Avrupa Birliği ülkelerinin, yüksek seviyede doğrudan yabancı yatırım çekmesinde etkili olan faktörler arasında, yolsuzluk seviyesini olabildiğince düşük tutmasının da bulunduğu anlaşılmaktadır. Ekonomik

bütünleşme konusunda, modern tarih boyunca görülmemiş bir başarıya ulaşan Avrupa Birliği, kurumsal faktörler açısından sağladığı başarılarla da değerlendirilmeli, kurumsal faktörlerin, ekonomik performans üzerindeki etkisi gözden kaçırılmamalıdır. Özellikle de yolsuzluk gibi önemli bir faktörün, olabildiğince azaltılması yönünde politikalar oluşturulmalı ve bu politikaların uzun dönemli bir karakter taşıması sağlanmalıdır.

Özet : Gün geçtikçe pazar payı artan ve çok sayıda marka için hedef pazar olarak görülen Z kuşağı tüketicileri, markalar için büyük önem taşır. Z kuşağı tüketicilerinin birçok nedenden dolayı diğer tüketicilerden farklılık gösterdiği düşünülmektedir. Bu çalışmanın temel amacı, Z Kuşağı tüketicilerinin rasyonel ve hedonik marka algılarının, marka farkındalığı ve marka bağlılığı üzerindeki etkisinin incelenmesidir. Bu amaca ek olarak çalışma kapsamında ele alınan değişkenlerin katılımcıların cinsiyetine ve markaya göre farklılaşıp farklılaşmadığı da incelenmiştir. Çalışma, Z kuşağı tüketicilerinin en fazla ilgi duyduğu alanlar olan fast food, spor ayakkabı, akıllı telefon olmak üzere üç farklı sektörde gerçekleştirilmiştir. Veri toplama yöntemi olarak online anket yöntemi kullanılmıştır ve 425 katılımcıya ulaşılmıştır. Çalışmada Erciş vd (2011) tarafından Türkçeye uyarlanan ve geliştirilen, rasyonel marka algısı, hedonik marka algısı, marka farkındalığı ve marka bağlılığı ölçekleri kullanılmıştır. Elde edilen veriler varyans analizi, t testi ve regresyon analizi kullanılarak analiz edilmiştir. Yapılan analizlerde, tüketicilerin rasyonel marka algıları ve hedonik marka algıları ele alınan markalara ve cinsiyete göre farklılık gösterdiği belirlenmiştir. Çalışmada ayrıca rasyonel, hedonik marka algılamalarının marka farkındalığı ve marka bağlılığı değişkenleri üzerinde pozitif etkisi olduğu tespit edilmiştir.

Anahtar Kelimeler: Z Kuşağı, Hedonik Marka Algısı, Rasyonel Marka Algısı, Marka Farkındalığı, Marka Bağlılığı.

The Effects of Utilitarian and Hedonic Brand Perception of Generation Z Consumers on Brand Awareness and Brand Loyalty

Abstract : Generation Z consumers, whose market share is increasing day by day and seen as the target market for many brands, have great importance for brands. Consumers of generation Z are considered to differ from other consumers for many reasons. The main purpose of the research is to examine utilitarian and hedonic brand perception of generation Z consumers have an effect on brand awareness and brand loyalty. In addition, this study is to examine whether the variables differ according to gender of the participants and the brands. This study was conducted in three different sectors: fast food, sneakers and mobile phones, which are the sectors of interest to generations Z consumer. Online survey method was used as data collection method and 425 person participated in. In the study, utilitarian brand perception, hedonic brand perception, brand awareness and brand loyalty scales adapted and developed into Turkish by Erciş et al. (2011) were used. The data obtained were analyzed using regression analysis, t test and variance analysis. As a result of the analysis, it was determined that the utilitarian brand perception and hedonic brand perception differ according to gender and identified brands. In addition, it is determined that utilitarian and hedonic brand perceptions have positive effects on brand awareness and brand loyalty.

Keywords: Generation Z, Utilitarian Brand Perception, Hedonic Brand Perception, Brand Awareness, Brand Loyalty.

1.GİRİŞ

Dünya nüfusunda önemli tüketici kitlesine sahip olan Z kuşağını tanımak markalar için büyük önem taşır. Yakın gelecekte ekonomik özgürlüklerini elde edecek Z kuşağı tüketicilerinin, markalar için önemi daha da artmaktadır. Bu yüzden markaların Z kuşağını analiz etmesi ve uygun stratejileri geliştirmesi gerekir.

İşletmeler için tüketicileri markaya sadık hale getirecek stratejiler geliştirmek, yeni müşteri kazanmaya çalışmaktan daha az maliyetlidir. Markalar için tüketicilerin hedonik ve rasyonel marka algıları marka farkındalığı ve marka bağlılığı yaratmakta önemli bir araçtır. Bu doğrultuda çalışmada Z kuşağı tüketicilerin en fazla ilgi duyduğu markalarda marka algıları ve marka boyutları incelenecektir.

Literatürde Erciş vd. (2011); Yılmaz ve Yaprak (2018) yaptıkları çalışmalarda hedonik marka algılarının kalite algılarını etkilediği ve kalite algılarının da marka bağlılığını etkilediği sonucuna ulaşmışlardır. Bu çalışmada diğer çalışmalardan farklı olarak, Z Kuşağı tüketicilerinin rasyonel ve hedonik marka algılarının, marka farkındalığı ve marka bağlılığı üzerindeki etkisi incelenmektedir. Z kuşağı diğer kuşaklardan farklı olarak teknoloji ile iç içe büyümüştür. Bu yüzden yeni nesil tüketicilerin marka algıları ve marka boyutları değişkenlerinin farklılık gösterip göstermediği merak konusu olmuştur. Bu çalışmada marka algıları ve marka boyutu değişkenlerinde ne gibi farklılıklar olduğu da incelenmektedir.

Çalışmada öncelikle rasyonel ve hedonik marka algılamaları, marka farkındalığı ve marka bağlılığı teorik bilgilere yer verilmekte, daha sonra konuya ilişkin olarak yapılan anket araştırmasının analiz ve bulguları sunulmaktadır.

2. LİTERATÜR TARAMASI

2.1 Z Kuşağı

Yaklaşık olarak aynı yıllarda doğmuş, aynı çağın şartlarını, dolayısıyla birbirine benzer sıkıntıları, kaderleri paylaşmış, benzer ödevlerle yükümlü olmuş kişilerin topluluğu kuşak olarak tanımlanmaktadır (TDK, 2021). 2000 yılı ve sonrasında doğan kişiler Z kuşağı veya yeni sessiz nesil olarak tanımlanır. Gelecek yıllarda bu kuşağın adı ve yıl aralığı değişim gösterebilir (Jones, 2007). Z kuşağının yaşanan ekonomik, sosyal, kültürel ve teknolojik değişimler sonucunda diğer kuşaklardan farklılık gösterdiği düşünülmektedir. Bunun sonucunda, geleceğin tüketim ve pazarlama stratejilerini değiştirebilecek etkiye sahip oldukları öngörülmektedir (Altuntuğ, 2012). Yakın geleceğin tüketici grubu olan Z kuşağı, Tuik verilerine göre Türkiye nüfusunun yaklaşık olarak %23'ünü oluşturmaktadır. Bu sebeple markalar için önemli olan Z kuşağı tüketicileri ile ilgili yapılan çalışmalarda da artış görülmektedir.

2.2 Rasyonel ve Hedonik Marka Algısı

Tüketicilerin marka algıları rasyonel ve hedonik olmak üzere ikiye ayrılmıştır. Geleneksel araştırmaların çoğunda tüketimin faydacı boyutuna odaklanılmıştır. (Babin, 1994) Faydacı algıda alışveriş, görev odaklı ve rasyonel olarak tanımlanmaktadır. Tüketici, ihtiyacını karşıladıktan sonra görevini tamamlar ve alışveriş sonlanır. (Akturan, 2010) Geleneksel çalışmaların aksine yapılan yeni çalışmalar, tüketicilerin duygularıyla hareket ettiğini ortaya koymuştur (Babin, 1994). Hirschman ve Holbrook (1982) tarafından hedonik tüketici değeri, faydacı değere göre daha öznel olmasının yanında, bir görevi yerine getirmekten çok keyif ve eğlenme amacı taşıması şeklinde tanımlanmaktadır. Günümüz değişen koşullarında ise kişiler ürünleri ve hizmetleri; haz alma, duysal deneyim, doyumsuzluk gibi duygularını tatmin edebilmede bir araç olarak görüyorlar (Güven, 2009). Günümüzdeki tüketicilerin hedonik algıları, taklit edilemez ürünler yaratarak ve bu ürünlere özgü semboller kullanılarak ortaya çıkarılabilir (Miranda, 2008).

2.3 Marka Farkındalığı

Marka, işletmelerin ürün veya hizmetlerini tanıtmayı hedeflerken onları diğer ürün veya hizmetlerden ayırmak için tasarlanan isim, harf, logo, işaret, sembol veya bunların tamamını oluşturan her türlü kombinasyon olarak tanımlanır (Keller, 2003). Marka farkındalığı, tüketicinin reklam veya diğer iletişim kanallarıyla markaya maruz kalmasıyla diğer markalardan ayırt edilmesi şeklinde tanımlanabilir (Hoyer & Brown, 1990). Marka farkındalığı yaratmak rekabet avantajı sağladığı için işletmelerin uyguladığı önemli bir stratejidir (Homburg, Klarman, & Schmitt, 2010).

2.4 Marka Bağlılığı

Her geçen gün pazara giren yeni firmalar diğer markaların pazar payı için tehdit oluşturmaktadır. Markaların pazar payını ve karlılığını koruması için tüketiciler üzerinde marka bağlılığı yaratmak diğer firmalara karşı avantaj sağlar. (Firat & Azmak, 2007). Marka bağlılığı tüketicinin markadan beklentilerinin

karşılanmasını, sadık olduğu markayı diğer markalardan daha fazla satın almasını ve uzun yıllar boyunca aynı markayı kullanmayı sürdürmesini ifade eder. (Odabaşı & Barış, 2002). Marka bağlılığı olan tüketici, satın aldığı markaya sadıktır. Tekrar aynı ürün veya hizmete ihtiyaç duyduğu zaman aynı markayı satın almaya devam eder. (Bloemer & Kasper, 1995)

2.5 İlgili Çalışmalar

Deniz ve Erciş (2010) yapmış oldukları çalışmada, kişilik özelliklerinin rasyonel ve hedonik duyguları etkilediğini bu duyguların da marka bağlılığı değişkenini etkilediği sonucuna ulaşmışlardır. Erciş, Yapraklı, Can ve Yılmaz (2011) yapmış oldukları çalışmada, rasyonel ve hedonik marka algılamalarının marka farkındalığı ve algılanan kalite değişkenlerini etkilediği bu değişkenlerin de marka bağlılığı değişkenini etkilediği sonucuna ulaşmışlardır. Aytekin ve Ay (2015) yaptıkları çalışmada hedonik tüketim davranışının cinsiyete göre farklılık gösterdiği tespit edilmiştir. Can (2016) araştırmasında fast food sektörünü ele almıştır algılanan reklam harcamaları, marka deneyimi, marka farkındalığı, algılanan kalite değişkenlerinin hedonik duygular ve marka bağlılığı üzerindeki etkisi incelenmiş, analiz sonuçlarında hedonik duygu değişkeninin marka bağlılığı üzerinde pozitif etkisi olduğu tespit edilmiştir. Yılmaz ve Yaprak (2018) çalışmalarında giyim sektörü tüketicilerinin marka algıları, algılanan kalite ve marka bağlılığı boyutlarını incelemişlerdir. Analiz sonuçlarında, marka algılarının algılanan kaliteyi etkilediği algılanan kalite boyutunun da marka bağlılığını pozitif yönde etkilediği sonucuna ulaşmışlardır. Bu çalışmada diğer çalışmalardan farklı olarak, Z kuşağı tüketicilerin rasyonel ve hedonik marka algılarının marka farkındalığı ve marka bağlılığı değişkenleri incelenmiştir. Bu bilgiler ışığında aşağıdaki hipotezler geliştirilmiştir.

H1: Z kuşağı tüketicilerinin a) hedonik marka algı düzeyi, b) rasyonel marka algı düzeyi, c) marka farkındalığı düzeyi ve d) marka bağlılığı düzeyi marka türüne göre farklılık göstermektedir.

H2: Z kuşağı tüketicilerin, a) hedonik marka algısı, b) rasyonel marka algısı c) marka farkındalığı d) marka bağlılığı değişkenleri cinsiyetine göre farklılık göstermektedir.

H3: Z kuşağı tüketicilerin, hedonik marka algı düzeylerinin a) marka bağlılığı ve b) marka farkındalığı üzerinde pozitif etkisi vardır.

H4: Z kuşağı tüketicilerin, rasyonel marka algı düzeylerinin a) marka bağlılığı ve b) marka farkındalığı üzerinde pozitif etkisi vardır.

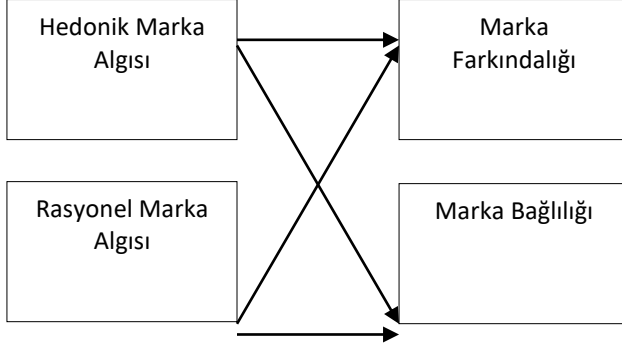

3. ARAŞTIRMANIN YÖNTEMİ

Araştırma Z kuşağı tüketiciler(2000 yılı ve sonrası doğanlar) üzerinde gerçekleştirilmiştir. Çalışma, Z kuşağı tüketicilerinin en fazla ilgi duyduğu alanlar olan fast food, spor ayakkabı, akıllı telefon olmak üzere üç farklı sektörde gerçekleştirilmiştir. Veri toplama yöntemi olarak online anket tekniği kullanılmıştır. Araştırma iki aşamalı olarak gerçekleştirilmiştir. Araştırmanın ilk aşamasında akıllı telefon, fast food, spor ayakkabı sektörlerinden Z kuşağı tüketicilerin en çok tercih ettiği markayı tespit etmek amacıyla 87 kişinin katıldığı online anket çalışması yapılmıştır. Ön aşama sonucunda; akıllı telefon kategorisinde %67,45 Apple markası, fast food kategorisinde %32,56 Burger King markası, spor ayakkabı kategorisinde %65,12 Nike markası ilk sırada yer almıştır. Ön aşama sonucunda belirlenen markalar için 3 ayrı anket formu hazırlanmıştır. Toplamda 434 kişi ile görüşülmüşken veri girişi sırasında 9 yanıt çıkartılarak analizler 425 yanıt ile gerçekleştirilmiştir. Anket formu, iki bölümden oluşmaktadır. İlk bölüm katılımcıların demografik özelliklerini belirlemeye yönelik sorulardan oluşmaktadır. İkinci bölüm ise, hedonik marka algılaması, rasyonel marka algılaması, marka farkındalığı ve marka bağlılığı değişkenlerinden oluşmaktadır. Bu sorular Erciş vd. (2011) çalışmasından alınarak, herhangi bir değişime uğratılmadan kullanılmıştır. Tüm ölçekler 5'li Likert tipi şeklinde oluşturulmuştur. Ölçeklerin geçerlilik ve güvenilirliklerini belirlemek için Açıklayıcı Faktör Analizi yapılmış ve Alfa katsayısı hesaplanmıştır. Elde edilen veriler varyans analizi, t testi ve regresyon analizi kullanılarak analiz edilmiştir. Analizler SPSS programıyla gerçekleştirilmiştir.

3.1 Araştırmanın Modeli

Araştırmanın değişkenleri kullanılarak hazırlanan ve araştırmanın hipotezlerini yansıtan model aşağıda sunulmuştur.

Şekil 1: Araştırmanın Modeli

4. Bulgular

4.1. Demografik Özellikler

Araştırmaya katılan katılımcıların % 44,3'ü erkek, % 55,7'si ise kadındır. Katılımcıların eğitim düzeyleri incelendiğinde ilköğretimde öğrenim gören katılımcılar araştırmanın %2,13'ünü lisede öğrenim gören katılımcılar %47,39'unu üniversitede öğrenim gören katılımcılar %50,47'sini oluşturmaktadır. Katılımcıların aylık ortalama aile gelirlerinin %9,98'i 2500 TL'den daha az, %15,57'si 2500-3500 TL arasında, %28,47'si 3500-5000 TL arasında ve %45,99'u 5000 TL'den daha fazla gelir düzeyine sahiptir.

4.2 Geçerlilik ve Güvenilirlik

Araştırmada kullanılan ölçeklerin geçerlilik ve güvenilirliklerinin tespiti için açıklayıcı faktör analizi yapılmış ve Cronbach's Alpha katsayısı hesaplanmıştır. Analiz sonuçları aşağıdaki tabloda sunulmuştur.

Tablo 1: Açıklayıcı Faktör Analizi ve Güvenilirlik Katsayısı

Faktörler ve Faktör Yükleri

MF2	,639			
Toplam Açıklanan Varyans: 71,338		KMO ve Bartlett testi: ,908		

Yapılan faktör analizi sonucunda, KMO değeri 0,908 çıkmıştır. Dolayısıyla bu araştırma için elde edilen verilere faktör analizi uygulanabilmektedir.

Faktör analizi sonucunda, ölçek dört farklı alt boyuta ayrılmıştır. Bu alt boyutlar orijinal ölçekle uyumludur. Sonuç doğrultusunda hedonik marka algılamasından bir, marka bağlılığından bir soru analizden çıkartılmış. Marka farkındalığına ait bir soru marka bağlılığı değişkenine dahil edilmiştir. Faktör yükü sonuçlarına göre, tüm faktör yüklerinin 0,50 değerinin üzerinde olduğu tespit edilmiştir. Toplam açıklanan varyans değeri ise % 71,338'dir. Bu bilgilerden hareketle, araştırmada kullanılan ölçeklerin asgari geçerlilik şartlarını sağladığı söylenebilir (Hair, Black, & Anderson, 2010). Bu durumda araştırmada kullanılan ölçeğin geçerlilik şartlarını uygun olduğu söylenebilir. (Hair, Black, & Anderson, 2010)

Araştırmanın güvenilirliği için Alpha katsayısı kullanılmıştır. Marka bağlılığı, rasyonel marka algısı, hedonik marka algısı ve marka farkındalığı olarak dört değişkenden oluşan ölçeğin Alpha katsayısı sırasıyla; 0,909, 0,857, 0,823, 0,680 şeklindedir. Bu bilgiler göz önüne alındığında ölçeğin güvenilir olduğu söylenebilir. (Hair, Black, & Anderson, 2010)

4.3. Hipotezlerin Testi

Araştırmanın amaçlarına ulaşmak için, farklılık analizleri ve regresyon analizleri yapılmıştır. Cinsiyete ve markalara göre farklılıkları belirlemek için t testi ve varyans analizi yapılmıştır. Rasyonel ve hedonik marka algılarının, marka farkındalığı ve marka bağlılığı üzerindeki etkisi belirlemek için de regresyon analizi yapılmıştır. Analizler aşağıdaki tablolarda sunulmuştur.

4.3.1 Farklılık Analizleri

Tablo 2: Markalara Göre Farklılık Analizi

		N	Ort.	F Değeri	P Değeri
Hedonik Algı	Burger King	112	3,2857	6,885	,001
	Nike	123	3,5854		
	Apple	190	3,0702		
	Total	425	3,2761		
Rasyonel Algı	Burger King	112	3,5476	16,505	,000
	Nike	123	4,1924		
	Apple	190	4,0368		
	Total	425	3,9529		

Marka Farkındalığı	Burger King	112	4,1585		
	Nike	123	4,2358	1,878	,154
	Apple	190	4,3154		
	Total	425	4,2510		
Marka Bağlılığı	Burger King	112	3,4393		
	Nike	123	3,6488	,973	,379
	Apple	190	3,5168		
	Total	425	3,5346		

Yapılan analizin sonucunda katılımcıların markalara göre hedonik marka algıları ve rasyonel marka algıları değişkenlerinde farklılık olduğu belirlenmiştir. Hangi markalar arasında farklılık olduğunu öğrenmek amacıyla post-hoc testi yapılmıştır. Yapılan testin sonuçları aşağıda bulunmaktadır.

Tablo 3: Markalara Göre Değişkenlerin Scheffe Post-Hoc Testi

Bağımlı Değişken	(I) Marka	Ort.	(J) Marka	Ortalama Farklılık(I-J)	P Değeri
Hedonik Marka Algısı	Burger King	3,286	Nike	-,29965	,162
			Apple	,21554	,322
	Nike	3,586	Burger King	,29965	,162
			Apple	,51519*	,001
	Apple	3,071	Burger King	-,21554	,322
			Nike	-,51519*	,001
Rasyonel Marka Algısı	Burger King	3,548	Nike	-,64479*	,000
			Apple	-,48922*	,000
	Nike	4,193	Burger King	,64479*	,000
			Apple	,15557	,329
	Apple	4,037	Burger King	,48922*	,000
			Nike	-,15557	,329

*P<0.05 ise anlamlıdır.

Yapılan Post Hoc testi incelendiğinde katılımcıların hedonik marka algılarının Nike markasında (X=3,586) Apple markasından (X=3,071) daha yüksek olduğu tespit edilmiştir. Rasyonel marka algısı değişkeni incelendiğinde Nike markası (X=4,193), Burger King markasından (X=3,548) daha yüksek çıkmıştır. Apple markasında (X=4,037) Burger King markasına (X=3,548) göre daha yüksek olduğu tespit edilmiştir. Analiz sonucunda H1a ve H1b hipotezleri kabul edilirken, H1c ve H1d hipotezleri reddedilmiştir.

Tablo 4: Cinsiyete Göre Farklılık

Değişkenler	Levene Testi		T Testi			Ortalamalar	
	F	Anlam.	T	SD	Anlam.	Kadın	Erkek
Hedonik Marka Algısı	,901	,343	,291	422	,772	3,2952	3,2606
Rasyonel Marka Algısı	1,333	,249	-2,014	422	,046	3,8729	4,0550
Marka Farkındalığı	8,887	,003	-3,097	422	,003	4,1614	4,3635
Marka Bağlılığı	,169	,682	-,413	422	,680	3,5153	3,5628

Tablo 4 incelendiğinde katılımcıların rasyonel marka algıları cinsiyetlerine göre anlamlı bir farklılık göstermektedir ($t[422]=-2,014$; $p<,05$). Erkek katılımcıların rasyonel marka algıları ($X=4,055$), kadın katılımcıların rasyonel marka algılarından ($X=3,873$) daha olumludur. Katılımcıların marka farkındalıkları da cinsiyete göre anlamlı bir farklılık göstermektedir ($t[422]=-3,097$; $p<,05$). Erkek katılımcıların marka farkındalıkları ($X=4,363$), kadın katılımcıların marka farkındalıklarından ($X=4,161$) daha olumludur. Bu sonuca göre erkeklerin rasyonel marka algıları ve marka farkındalıklarının daha yüksek olduğu söylenebilir. Dolayısıyla H2b ve H2c hipotezleri kabul edilirken H2a ve H2d hipotezleri reddedilmiştir.

4.3.2 Etki Analizleri

Tablo 5: Hedonik ve Rasyonel Marka Algılarının Marka Bağlılığı Üzerindeki Etkisi

Model	Standardize Beta	t	Anlam
Hedonik Marka Algısı	,411	10,682	,000
Rasyonel Marka Algısı	,519	10,344	,000
Model Değerleri	R ² :0,557 F:267,092 Anlamlılık:0,000		

Bağımlı Değişken: Marka Bağlılığı

Tablo 5 incelendiğinde, hedonik ve rasyonel marka algısının marka bağlılığı üzerinde etkili olduğu tespit edilmiştir. Aynı zamanda analiz sonuçları incelendiğinde R² değeri 0,557, F değeri 267,092 ve anlamlılık düzeyinin ,000 düzeyinde olduğu tespit edilmiştir. Analizlerin sonucunda H3a ve H4b hipotezleri kabul edilmiştir.

Tablo 6: Marka Farkındalığı Değişkeni Regresyon Analizi

Model	Standardize Beta	t	Anlam
Hedonik Marka Algısı	,149	5,011	,000
Rasyonel Marka Algısı	,210	5,436	,000
Model Değerleri	R ² : 0,235 F: 65,962 Anlamlılık: 0,000		

Bağımlı Değişken: Marka Farkındalığı

Tablo 6 incelendiğinde, hedonik ve rasyonel marka algısının marka farkındalığı üzerinde etkili olduğu tespit edilmiştir. Aynı zamanda analiz sonuçları incelendiğinde R² değerinin 0,235, F değerinin 65,962 ve anlamlılık düzeyinin ,000 düzeyinde olduğu tespit edilmiştir. Analizlerin sonucunda H3b ve H4b hipotezleri kabul edilmiştir.

5. SONUÇ

Yapılan faktör analizi sonucu orijinal ölçeğe uygun olarak dört boyutlu olarak oluşturulmuştur. Hedonik marka algısı, rasyonel marka algısı, marka farkındalığı ve marka bağlılığı olarak sınıflandırılmıştır. Yapılan diğer geçerlilik ve güvenilirlik hesaplamaları sonucunda ölçeklerin geçerlilikleri ve güvenilirlikleri istenilen düzeyde olduğu belirlenmiştir.

Bu çalışmanın temel amacı, Z Kuşağı tüketicilerinin rasyonel ve hedonik marka algılarının, marka farkındalığı ve marka bağlılığı üzerindeki etkisini belirlemektir. Literatürde yapılan çalışmalarda, genel kalite algılarının marka bağlılığı üzerinde pozitif ve anlamlı etkisi olduğu sonucuna ulaşılmıştır (Erciş, Yapraklı, Can, & Yılmaz, 2011); (Yılmaz & Yaprak, 2018). Bu çalışmada ise, hedonik ve rasyonel marka algılarının doğrudan marka farkındalığı ve marka bağlılığı üzerinde pozitif etkili olduğu belirlenmiştir. Yapılan ilk regresyon analizi sonucunda, katılımcıların rasyonel ve hedonik marka algılarının marka bağlılığı üzerinde pozitif etkisi olduğu belirlenmiştir. Tüketicilerin rasyonel marka algılarının (rasyonel algı std beta= 0,519 hedonik algı std beta= 0,411) marka bağlılığı üzerinde daha etkili olduğu tespit edilmiştir. Yani tüketici alışveriş yaparken markaya duyduğu hedonik ve rasyonel algısı artarsa markaya duyduğu bağlılığı da artar. Diğer regresyon analizi sonucunda ise katılımcıların rasyonel ve hedonik marka algılarının marka farkındalığı üzerinde pozitif etkisi olduğu belirlenmiştir. Tüketicilerin rasyonel marka algılarının (rasyonel algı std beta= 0,210 std beta=0,149) marka farkındalığı yaratmada daha etkili olduğu tespit edilmiştir. Tüketicilerin markalara karşı rasyonel ve hedonik algılarındaki olumlu artış markayı diğer markalardan ayırır ve tüketicide farkındalık yaratır. Bunların yanı sıra, hem marka farkındalığı hem de marka bağlılığı üzerinde Z kuşağı tüketicilerinin rasyonel marka algıları daha fazla etkilidir. Bu araştırmada ele alınan Z kuşağı tüketicilerinin hedonik ve rasyonel marka algılarının yüksek olmasına rağmen, bu bireylerin marka bağlılığı ve marka farkındalığı oluşumunda daha fazla rasyonel hareket ettikleri görülmüştür. Bu sonuç hem uygulayıcılar hem de akademisyenler için önemli bir bulgudur.

Markalara göre yapılan farklılık analizi sonuçlarına göre; rasyonel marka algısı ve hedonik marka algısı markalar açısından farklılık göstermiştir. Hedonik marka algısı değişkeninde Nike markasının ortalaması Apple markasından daha yüksektir. Z kuşağı tüketicilerinin Nike markasını daha fazla oranda hedonik amaçlı satın aldığı bu çalışma sonucunda elde edilen önemli bir bulgudur. Rasyonel marka algısı değişkeninde, Apple ve Nike markalarının Burger King markasından ortalamaları daha yüksektir. Apple ve Nike markaları, aynı zamanda, Z kuşağı tüketicileri için rasyonel güdüyle hareket edilerek satın alınan markalardır. Burger King markasına göre bu markalar daha fazla oranda rasyonel olarak algılanmaktadır. Çalışmada ele alınan değişkenlerin cinsiyete göre farklılaşma farklılaşmadığını öğrenmek için yapılan t testinde, rasyonel marka algıları ve marka farkındalığı değişkenlerinde farklılık görülmüştür. Her iki grubun ortalaması 3,5'in üstünde olmasına rağmen erkek bireylerin ortalamasının daha yüksek olduğu görülmüştür. Bu sonuca göre erkeklerin kadınlara göre rasyonel algıları ve markalara olan farkındalıkları daha fazladır. Ancak, marka bağlılığı ve hedonik marka algısı açısından kadın ve erkek Z kuşağı tüketicilerinin farklılık göstermediği sonucuna ulaşılmıştır. Genel olarak, erkeklerin alışveriş yaparken daha fazla rasyonel davrandıkları söylenebilir. Bu sonuç literatürde Fırat ve Aydın (2016) , Aytekin ve Ay (2015) tarafından yapılan çalışmalarla da desteklenmektedir.

Bu çalışma 425 kişilik bir örneklem ve Z kuşağı tarafından farkındalığı yüksek markalarla gerçekleştirilmiştir. Bundan sonraki çalışmalara öneri olarak; farkındalığı daha düşük veya pazara yeni giren markalarla karşılaştırma yaparak yeni çalışmalar yapılabilir.

Özet : Mağaza atmosferi imaj oluşturma çalışmalarında oldukça önemli bir tutundurma çabasıdır. Aynı zamanda, mağaza atmosferi firmaların marka bağlılığı sağlayabilmelerine olanak sağlar. Bu çalışmada kişisel bakım marketlerinden Gratis mağazası ele alınmıştır. Gratis mağazası son zamanlarda tüketiciler tarafından oldukça ilgi gören bir markadır. Bu çalışmanın temel amacı, Gratis mağaza atmosferinin satın alma niyeti üzerindeki etkilerinin incelenmesidir. Veri toplama yöntemi olarak online anket yöntemi kullanılmış ve 175 kişi katılmıştır. Elde edilen veriler SmartPLS yapısal eşitlik modellemesi programıyla analiz edilmiştir. Modelin test edilmesi için doğrulayıcı faktör analizi ve yol(path) analizi kullanılmıştır. Faktör analizi sonucunda mağaza atmosferinin (Mağaza İçi Yerleşim, Genel Mağaza, Mağaza Dışı, Satın Alma Noktası ve İnsan) 5 boyutlu olduğu tespit edilmiştir. Yapılan analizler sonucunda mağaza atmosferi boyutlarından insan faktörünün satın alma niyeti üzerinde etkisi olduğu tespit edilmiştir.

Anahtar Kelimeler: Mağaza atmosferi, Satın alma niyeti, Gratis.

The Effect of Store Atmosphere Dimensions on Purchase Intention: The Gratis Example

Abstract : In the studying of image constitution, the store atmosphere is the most important promotion effort. At the same time, the store atmosphere allows to the provided of companies' brand loyalty. In this studying, the Gratis store from personal care markets is examined. In the last days, Gratis store is a brand which is quite interested in by consumers. The main purpose of this research is to consider of purchasing intention effects of the Gratis store atmosphere. The online survey method was used as a data collection method and 175 people participated. The data obtained were analyzed using SmartPLS structural equation modeling programing. Confirmatory factor analysis and path analysis were used to test the model. The store atmosphere (the interior design of store, general store interior variables, external store variable, point of purchase and decoration, human) was obtained to be 5 dimensions at the end of the factor analyses. At the end of the analyses, the human factor from store atmosphere dimensions has positive effects on purchase intention.

Keywords: Store Atmosphere, Purchase Intention, Gratis.

1. GİRİŞ

Firmaların ürünlerini tüketici ile buluşturduğu noktalardan biri de mağazalardır. Mağazalar, ürünleri hedef tüketiciye doğru yerde ve doğru şekilde sunma anlamında oldukça önemlidir. Pek çok mağaza markasıyla, ürünlerinin kalitesiyle, fiyatlarıyla ve çalışanlarının karakteriyle tüketicilerin zihninde olumlu bir imaj yaratabilmek için mağaza atmosferik unsurlarını kullanmaktadırlar. Bu noktada mağaza atmosferi tüketicilere istenilen mesajı verebilmek için önemli bir tutundurma çabasıdır.

Bazı durumlarda mağaza atmosferinin satın alma davranışlarında ürünlerden daha fazla etkili olabildiği görülmektedir. Bu noktada mağazaların pazarlama karmaları kadar mekânsal estetiği de bilinçli olarak kullanmaları önem arz etmektedir. Mağaza atmosferi firma ile tüketici arasında sessiz fakat etkili bir iletişim aracıdır (Kotler, 1973-1974: 48-50). Bu sebeplerden ötürü, mağaza atmosferi kavramı mağazalar için önemli bir kavramdır ve bu konuyla ilgili yapılan çalışmalarda artış görülmektedir.

Literatürde incelenen çalışmalarda, genellikle, giyim mağazalarının (Dursun vd., 2013; Eminler vd., 2019; İbrahimova, 2020), otellerin (Levent ve Özkul, 2020), restaronların (Ariffin vd., 2012), kafelerin (Durmaz, 2017), süpermarketlerin (Pektaş, 2014; Milliman, 1982) ve mobilya mağazalarının (Yariz vd., 2018) mağaza atmosferik unsurları incelenmiştir. Bu çalışmada ise kişisel bakım sektöründe yer alan Gratis

markasının mağaza atmosferi incelenmiştir. Türkiye’de oldukça tercih edilen Gratis markası, tüketicilerine farklı ve uygun fiyatlı ürünler sunmayı amaç edinen bir kişisel bakım marketidir.

Mağaza atmosferi dışında bu çalışmada ele alınan bir diğer konu ise, satın alma niyetidir. Satın alma niyeti müşterinin gelecekte satın alma davranışına ilişkin planıyla ilgili bir kavramdır. Bu çalışma da mağaza atmosferinin satın alma niyeti üzerine etkisi incelenmiştir.

Literatürde mağaza atmosferinin satın alma davranışı üzerine etkisini inceleyen birçok önemli araştırma vardır (Kotler, 1973; Areni ve Kim, 1994; Herrington ve Capella, 1996; Turley ve Milliman, 2000).

Bu araştırmanın temel amacı, kişisel bakım sektöründe bulunan Gratis mağaza atmosferi boyutlarının satın alma niyeti üzerine etkisini incelemektir.

2. LİTERATÜR

2.1. Gratis

Türkiye’nin kişisel bakım marketi olan Gratis markası 2009 yılından bu yana 79 ilde, 600’ün üzerinde mağazaya sahiptir. Oldukça popüler olan Gratis markası tüketicilerine 30.000’i aşkın kozmetik ve kişisel bakım alanında ürünler sunar. Gratis markasının temel amacı geniş ve farklı ürün yelpazesine müşterilerinin kişisel bakım ihtiyaçlarına cevap vererek, onlara özel alışveriş deneyimi sağlayan bir perakende zinciri haline gelmektir. (www.gratis.com)

2.2. Mağaza Atmosferi

Kotler; mağaza atmosferini, “Tüketicilerde satın alma kararını olumlu yönde etkileyen belirli duygusal etkiler yaratmak için satın alma ortamları tasarlama çabası” olarak ifade etmiştir. (Kotler, 1973-1974). Mağaza atmosferi kavramı Milliman’a göre (1982: 286) alışveriş deneyimi esnasında tüketicilerin algısal ve duygusal tepkilerini uyaran ve satın alma davranışlarını etkileyen çevresel estetik ve ambiyans anlamına gelmektedir.

Mağaza atmosferi, tüketiciler tarafından mağazanın algılanan kalitesini arttırabilir ve bu durum da daha yüksek ikna seviyelerine yol açmaktadır (Sharma ve Stafford, 2000)

Mağaza atmosferi değişkenleri, müşterilerin mağazayı genel olarak algılamasına ve değerlendirmesine olanak sağlar. Başarılı uygulanan mağaza atmosferi mağazanın genel olarak tüketicinin zihninde olumlu bir imaj oluşturmaya katkı sağlarken alıcı davranışını da olumlu yönde etkilemektedir (Olahut vd., 2012)

Doğru uygulanan mağaza atmosferi unsurları müşterinin dikkatini çekebilecek, ürünleri rahatlıkla bulabilecek, planlanmamış satın alımlar yapabilecek ve tatmin edici bir alışveriş deneyimi yaşayabilecek şekilde dizayn edilmeyi içerir. Buradan hareketle, mağaza yöneticilerinin mağaza atmosferi unsurları ve bu unsurların müşterilerin satın alma kararı üzerinde yarattığı etkileri konusunda araştırmalar yapmaları önem arz etmektedir.

Atmosferik ortamı ortaya koyan Kotler (1973-1974: 54) yapmış olduğu çalışmasında mağaza atmosferi satın alma niyetini en az üç şekilde etkilediğini belirtmiştir. (1) Mağazalar, mağaza atmosferini dikkat yaratan bir ortam işlevi olarak kullanabilmektedir. Bu noktada mağazalar kendilerini diğerleri arasında öne çıkarmak için renk, ses ve hareket gibi ayırt edici uyarıcılar kullanabilir. (2) Mağazalar, mağaza atmosferini potansiyel ve gerçek müşterilere marka hakkında mesaj iletme aracı olarak kullanabilmektedir. (3) Mağaza, atmosferi duygulanım yaratan bir ortam işlevi görmektedir. Mağazalar renk, ses ve doku gibi uyarıcıları kullanarak içgüdüsel tepkileri uyandırarak satın alma niyetini olumlu yönde etkileyebilmektedir. Pavlov’un köpeğinin zil sesi ile uyarılmasıyla yiyeceğe yönelmesi gibi, mağaza atmosferinin çeşitli bileşenleri de tüketicilerde ürünler veya hizmetler için iştah yaratan hisleri tetikleyebilmektedir.

Berman ve Evans (1995) araştırmasında mağaza atmosferi unsurlarını dört ana kategoriye ayırmışlardır. Bunlar, “mağaza dışı yerleşim, mağaza içi yerleşim, genel mağaza tasarımı ve satın alma noktası ve

tasarım faktörleri”dir. Turley ve Milliman(2000), bu ayrıma beşinci bir kategori olarak insan faktörünü eklemiştir. Turley ve Milliman’ın çalışmasında yer alan mağaza atmosferik ortama ilişkin kategoriler şu şekilde ifade edilmiştir(Turley ve Milliman, 2000: 194). (1)Mağaza içi yerleşim faktörü, ürünlerin yerleşimini, rafların ve kasaların yerleşimini, sırada bekleme alanını ve trafik akışını içerir. (2)Genel mağaza yerleşim faktörü, zemin ve halıları, renk düzenini, aydınlatmayı, müzik, koku ortamını ve temizlik durumunu içerir. (3)Mağaza dışı yerleşim faktörü, mağazayı çevreleyen ortamı, girişi, binanın rengini ve büyüklüğünü, adres ve konumunu, dış tabela ve levhaları içerir. (4)Satın alma noktası ve dekorasyon faktörü, talimatları, bilgi panolarını, sanat çalışmalarını, ürün teşhirlerini ve fiyat etiketlerini içerir. (5)İnsan faktörü, çalışanların karakterlerini, üniformaları ve mağazanın kalabalık olma durumu içerir.

Mağaza içindeki trafik akışı ve ürünlerin konumu gibi unsurları içeren mağaza içi yerleşim faktörünün mağazalara iyi yönde etki ettiğini tespit eden çalışmalar vardır (Levy vd., 2013).Bu bilgiler doğrultusunda mağaza atmosferi boyutlarından mağaza içi yerleşim faktörünün satın alma niyetini olumlu yönde etkileyeceği düşünülerek aşağıdaki hipotez ortaya konulmuştur:

H1: Mağaza atmosferi boyutunun mağaza içi yerleşim faktörü satın alma niyeti üzerinde anlamlı pozitif bir etkiye sahiptir.

Mağaza atmosferi boyutlarından genel mağaza yerleşim faktörünün, satın alma davranışı ve mağazada daha fazla zaman geçirme üzerinde etkili olduğu çeşitli araştırmalar sonucunda tespit edilmiştir. Ortamların iç tasarım unsurlarında uygulanan renk şemalarının (Chebat & Morrin, 2007), mağaza ışık düzeyinin (Baker vd., 1992), mağazada çalan müziğin (Milliman, 1982; Baker vd., 1992; Yalch ve Spangenberg, 2000), mağazanın temiz olmasının (Bitner, 1990) ve kokunun (Bone ve Ellen, 1999) mağazada geçirilen süreyi arttırdığı ve satın alma davranışında iyi yönde etkileyebileceği tespit edilmiştir. Tüketicinin mağazada daha fazla zaman geçirmesi için dekor, düzen, temizlik, müzik vb. unsurların olumlu bir etkisi olduğu belirlenmiştir (Wakefield ve Baker, 1998). Bu bilgiler doğrultusunda mağaza atmosferi boyutlarından genel mağaza yerleşim faktörünün satın alma niyetini olumlu yönde etkileyeceği düşünülerek aşağıdaki hipotez ortaya konulmuştur:

H2: Mağaza atmosferi boyutunun genel mağaza yerleşim faktörü satın alma niyeti üzerinde anlamlı pozitif bir etkiye sahiptir.

Müşterilerin ürün kategorisi hakkındaki ön bilgisi mağazanın dış cephesine olan dikkati ve alışveriş kararlarını etkilediği belirlenmiştir. Orta düzeyde ürün bilgisine sahip olan müşteriler düşük ve yüksek ürün bilgisine sahip olanlara göre dış cephedeki vitrinlerden daha fazla etkilenmektedir (Pan vd., 2008). Bu bilgiler doğrultusunda mağaza atmosferi boyutlarından dış yerleşim faktörünün satın alma niyetini olumlu yönde etkileyeceği düşünülerek aşağıdaki hipotez ortaya konulmuştur:

H3: Mağaza atmosferi boyutunun mağaza dışı yerleşim faktörü satın alma niyeti üzerinde anlamlı pozitif bir etkiye sahiptir.

Mağaza içi teşhir ürünleri, satın alma noktası ve duvar süsleri gibi unsurlar mağaza yöneticilerin stratejilerinde önemli rol oynadığı söylenmiştir (Berman ve Evans, 1995; Levy vd., 2013).Bu bilgiler doğrultusunda mağaza atmosferi boyutlarından satın alma noktası ve dekorasyon faktörünün satın alma niyetini olumlu yönde etkileyeceği düşünülerek aşağıdaki hipotez ortaya konulmuştur:

H4: Mağaza atmosferi boyutunun satın alma noktası ve dekorasyon faktörü satın alma niyeti üzerinde anlamlı pozitif bir etkiye sahiptir.

Mağazadaki personel sayısı, görünümü ve davranışı tüketicinin mağaza hakkındaki algısını ve satın alma davranışını etkiler (Bitner, 1992; Turley & Milliman, 2000). Çalışanların sayısı ve samimiyeti müşterinin uyarılma seviyeleri üzerinde olumlu bir etkiye sahiptir ve bu durumda satın alma istekliliğini etkiler (Baker vd., 1992).Bu bilgiler doğrultusunda mağaza atmosferi boyutlarından insan faktörünün satın alma niyetini olumlu yönde etkileyeceği düşünülerek aşağıdaki hipotez ortaya konulmuştur:

H5: Mağaza atmosferi boyutunun insan faktörü satın alma niyeti üzerinde anlamlı pozitif bir etkiye sahiptir.

2.3. Satın Alma Niyeti

Müşterilerin mağazayı benimseyerek belirli bir ürüne yönelik davranışsal eğilim gösterme durumu satın alma niyeti olarak ifade edilir. Bir başka ifadeyle satın alma niyeti müşterilerin bir ürünü satın almaya yönelik plan ve istekleridir (İbrahimova, 2020).

Bir markaya olan algının seviye ne kadar fazla olursa müşterilerin de satın alma niyetlerinin o düzeyde artacağı tespit edilmiştir (Wu, 2015).

3. ARAŞTIRMANIN YÖNTEMİ

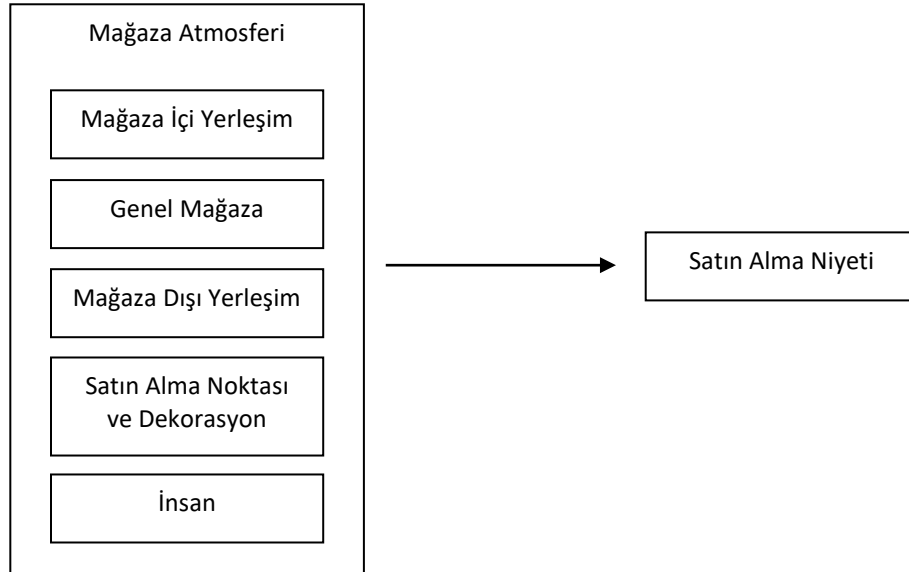

Araştırma daha öne Gratis'ten alışveriş yapan tüketiciler üzerinde gerçekleştirilmiştir. Bu çalışmada verileri toplamak için online anket yöntemi kullanılmıştır. Toplamda 216 kişi ile görüşülmüşken veri girişi sırasında 41 yanıt çıkartılarak analizler 175 yanıt ile gerçekleştirilmiştir. Anket formu demografik değişkenler, mağaza atmosferi boyutları ve satın alma niyeti sorularından oluşmaktadır. Mağaza atmosferini ölçmek için Turley ve Milliman (2000), satın alma niyetini ölçmek için Gefen ve Straub (2004) çalışmasındaki ifadeler kullanılmıştır.

Analizler için SmartPLS yapısal eşitlik modellemesi programıyla analiz edilmiştir. Araştırmanın geçerliliği ve güvenilirliğinin sağlanması için çeşitli kriterlere (birleşme geçerliliğine, iç tutarlık güvenilirliğine ve ayrışma geçerliliği) bakılmıştır. Son olarak araştırma modelini test etmek için path (yol) analizi kullanılmıştır.

3.1.Araştırmanın Modeli

Araştırmanın değişkenleri kullanılarak hazırlanan ve araştırmanın hipotezlerini yansıtan model aşağıda sunulmuştur.

Şekil 1: Araştırmanın Modeli

4. BULGULAR

4.1. Demografik Özellikler

Katılımcıların %74,42'si kadın, %25,58'i erkektir. Katılımcıların %26,74'ü 16-22 yaş arasında, %44,77'si 23-28 yaş arasında, %12,79'u 29-35 yaş arasında, %15,70'i 36-56 yaş arasındadır. Katılımcıların eğitim düzeyleri incelendiğinde %9,71'i lise, %62,29'u üniversite, %28'i ise lisansüstü seviyesindedir. Katılımcıların %32,54'ü 1500 TL ve altı, %22,49'u 1501-3000 TL arasında, %24,26'sı 3001-4500 TL arasında, %10,65'i 4501-6000 TL arasında ve %10,6'sı 6000 TL ve üstü gelir düzeyine sahiptir.

4.2. Diğer Bulgular

Katılımcıların Gratis indirimlerini takip etme durumu incelendiğinde katılımcıların %56,32'si Gratis indirimlerini takip ederken %43,68'i takip etmemektedir. Katılımcıların Gratis'ten alışveriş yapma amaçları incelendiğinde katılımcıların %41,14'ü ihtiyacı olan ürünü almak için, %20'si aklındaki ürünü almak için, %10,86'sı yeni ürünler almak için, %9,14'ü indirimleri takip etmek için, %18,86'sı ise stres atmak için Gratis'ten alışveriş yapmaktadırlar. Gratis'ten planlanan ürün dışında ürün alma sıklığı incelendiğinde katılımcıların %1,71'i hiçbir zaman, %48'i genellikle, %36,57'si nadiren, %13,71'i her zaman planlanan ürün dışında ürün almaktadır.

4.3. Geçerlilik ve Güvenilirlik

Analizler için SmartPLS yapısal eşitlik modellemesi programıyla analiz edilmiştir. Araştırmanın geçerliliği ve güvenilirliğinin sağlanması için birleşme geçerliliğine, iç tutarlık güvenilirliğine ve ayrışma geçerliliğine bakılmıştır. Faktör yükleri dikkate alınarak birleşme geçerliliğinin sağlanıp sağlanmadığı belirlenmiştir. Elde edilen ortalama varyans (AVE) değerleri birleşme ve ayrışma geçerliliğinin sağlanması için kullanılmaktadır. İç tutarlılık güvenilirliğinin sağlanıp sağlanmadığı Cronbach's Alfa ve birleşik güvenilirlik (CR) katsayılarına bakarak belirlenmiştir. Ayrışma geçerliliğinin tespiti için ise Fornell Larcker Kriteri ve Heterotrait ve Monotrait değerleri hesaplanmıştır. Son olarak araştırma modelini test etmek için path (yol) analizi kullanılmıştır.

Mağaza atmosferi faktör yüklerinin 0,70'in, AVE değerinin 0,50'nin, Cronbach's Alfa ve CR katsayılarının ise 0,70'in üzerinde olması beklenmektedir (Fornell ve Larcker, 1981; Hair, Black, Barry, & Anderson, 2010). Aşağıda yer alan Tablo 1'de araştırmadaki yapıların birleşme geçerliliği ve iç tutarlılık güvenilirliği ile ilgili sonuçlar yer almaktadır.

Tablo 1: Doğrulayıcı Faktör Analizi, Geçerlik ve Güvenilirlik Değerleri

Değişken	İfade	Faktör Yüğü	Cronbach's Alfa	CR	AVE
Genel Mağaza Yerleşimi	Genelmağaza1	0.792	0.842	0.894	0.678
	Genelmağaza3	0.837			
	Genelmağaza4	0.827			
	Genelmağaza5	0.838			
Mağaza Dışı Yerleşim	Mağazadışı5	0.879	0.899	0.925	0.712
	Mağazadışı6	0.887			
	Mağazadışı8	0.801			
	Mağazadışı9	0.780			
Mağaza Atmosferi	Mağazadışı7	0.866	0.928	0.940	0.661
	Mağazaiçi1	0.678			
	Mağazaiçi10	0.857			
	Mağazaiçi13	0.849			
	Mağazaiçi14	0.882			
	Mağazaiçi2	0.776			
	Mağazaiçi3	0.805			
Satın Alma Noktası ve Dekorasyon	Mağazaiçi4	0.807	0.923	0.951	0.867
	Mağazaiçi9	0.835			
	Satınalmanok1	0.910			
	Satınalmanok3	0.923			
İnsan	Satınalmanok4	0.960	0.846	0.907	0.766
	İnsan4	0.814			
	İnsan5	0.881			
Satın Alma Niyeti	İnsan6	0.928	0.943	0.963	0.898
	Satınalmaniyet1	0.951			
	Satınalmaniyet2	0.964			
	Satınalmaniyet3	0.927			

Mağaza atmosferi boyutlarının, Cronbach's Alfa (0,842-0,943) ve CR (0,894-0,951) katsayılarının istenilen aralıkta olması nedeniyle iç tutarlılık güvenliğinin sağlandığı görülmektedir. Aynı şekilde mağaza atmosferik boyutlarının faktör yüklerinin (0,678-0,964) ve AVE değerlerinin (0,661-0,898) istenilen aralıkta olması birleşme geçerliliğinin sağlandığını göstermektedir. Son olarak ayrışma geçerliliği için Fornell ve Larcker (1981) ve Henseler, Ringle ve Sarstedt (2015) araştırmalarında önerilen Heterotrait ve Monotrait kriterleri dikkate alınmıştır.

Araştırmada yer alan boyutların AVE değerlerinin karekökü, araştırmada yer alan boyutlar arasındaki korelasyonlardan yüksek olması gerektiği belirtilmiştir (Fornell ve Larcker, 1981).

Tablo 2'de Ayrışma geçerliliğini gösteren Fornell ve Larcker (1981) kriterlerinin bulunduğu analiz sonuçları yer almaktadır.

Tablo 2: Ayrışma Geçerliliği Sonuçları (Fornell Lacker Kriteri)

	genelmağ	insan	mağdışı	mağıçı	niyet	satınalmanok
genelmağ	0.823					
insan	0.717	0.875				
mağdışı	0.661	0.659	0.844			
mağıçı	0.788	0.665	0.523	0.813		
niyet	0.496	0.552	0.464	0.536	0.947	
satınalmanok	0.749	0.753	0.601	0.822	0.571	0.931

Tablodaki kalın yazı stilinde verilen değerler AVE değerinin karekökünü ifade etmektedir. Tablodaki değerler incelendiğinde AVE değerinin karekökünün diğer değerlerle korelasyonundan daha yüksek olduğu görülmektedir.

Heterotrait ve Monotrait kriterlerine göre, araştırmada yer alan tüm boyutlara ait değerlerin korelasyonlarının ortalamasının aynı boyuta ait değerlerin korelasyonlarının geometrik ortalamalara oranlarını göstermektedir. Aynı zamanda, Heterotrait ve Monotrait değerlerinin 0,90'nın altında olması gerektiği belirtilmiştir (Henseler vd., 2015). Tablo3'te de Heterotrait ve Monotrait kriterlerine yer verilmiştir.

Tablo 3: Ayrışma Geçerliliği Sonuçları (Heterotrait and Monotrait Kriteri)

	genelmağ	insan	mağdışı	mağıçı	niyet	satınalmanok
genelmağ						
insan	0.848					
mağdışı	0.745	0.745				
mağıçı	0.879	0.698	0.538			
niyet	0.556	0.616	0.494	0.541		
satınalmanok	0.848	0.853	0.650	0.867	0.610	

Tablodaki değerler incelendiğinde Heterotrait ve Monotrait kriterlerinin eşik değerin (0,90) altında olduğu görülmektedir.

Tablo 2 ve Tablo 3'teki sonuçlara göre ayrışma geçerliliğinin sağlandığı söylenebilir.

4.4. Hipotezlerin Test Edilmesi

Aşağıda yer alan Tablo 4'te yol (path) analizi sonuçları yer almaktadır.

Tablo 4: Yol Analizi Sonuçları (Path Katsayıları)

	Original Sample (O)	Sample Mean (M)	Standard Deviation (STDEV)	T Statistics (O/STDEV)	P Values
genelmağ ->	-0.058	-0.060	0.108	0.539	0.590

niyet					
insan -> niyet	0.220	0.217	0.110	1.995	(0.046)
mağdışı ->					
niyet	0.128	0.132	0.072	1.771	0.077
mağici -> niyet	0.192	0.190	0.109	1.764	0.078
satılmanok -					
> niyet	0.215	0.219	0.117	1.834	0.067

Bu kapsamda, öncelikle, Bootstrapping yöntemi kullanılmıştır. Mağaza atmosferi boyutlarından insan (Anlam.=0,046) boyutu satın alma niyeti üzerinde etkili olduğu görülürken, genel mağaza (Anlam.=0,590), mağaza dışı (Anlam.=0,077), mağaza içi (Anlam.=0,078) ve satın alma noktası (Anlam.=0,067) boyutlarının etkili çıkmadığı tespit edilmiştir. Buradan hareketle, H5 hipotezi kabul edilirken, H1, H2, H3 ve H4 hipotezleri reddedilmiştir (%95 güven aralığına göre).

5. SONUÇ VE ÖNERİLER

Yapılan faktör analizi sonucunda, mağaza atmosferi ölçeği beş boyutlu olarak belirlenmiştir. Mağaza atmosferi ölçeğinin boyutları mağaza içi, genel mağaza, satın alma noktası ve dekorasyon, mağaza dışı ve insan olarak sınıflandırılmıştır. Buradan hareketle, mağaza atmosferi boyutlarının satın alma niyeti üzerine etkisi belirlenmeye çalışılmıştır.

Araştırma kapsamında ortaya konulan hipotezlerin sonuçlarına bakıldığında beşinci hipotezde belirtilen mağaza atmosferi boyutlarından insan faktörünün satın alma niyeti üzerinde anlamlı ve olumlu etkinin olduğu görülmektedir. Birçok araştırma da satış personelinin sayısının ve davranışının müşterilerin mağaza hakkındaki algısını ve satın alma niyetini tespit ettiği görülmektedir. (Bitner, 1992; Turley ve Milliman, 2000; Baker vd., 1992) Araştırma kapsamında ortaya konulan ve kabul edilen beşinci hipotez genel itibari ile yapılan literatür çalışması ile örtüşmekte ve mağazaların insan faktörü unsurlarından olan çalışanların üniformalarına, çalışanların karakterlerine ve mağazanın kalabalık durumuna önem vermeleri gerektiği ortaya çıkmaktadır. Mağaza yöneticileri bu konuda çalışanlarına eğitim vererek mağaza atmosferinin insan faktörünü güçlendirebileceği düşünülmektedir.

Birinci, ikinci, üçüncü ve dördüncü hipotezlerde mağaza atmosferi boyutlarının satın alma niyeti üzerine anlamlı bir etkisi olmadığı tespit edilmiştir. Bu sonuçların örneklem sayısının düşük olması nedeninden kaynaklandığı düşünülmektedir. Gelecek çalışmalarda mağaza atmosferi boyutlarının satın alma niyeti üzerine etkisinin daha iyi anlaşılabilmesi için örneklem sayısının artırılmasında fayda görülmektedir.

Araştırma kapsamında ortaya konulan ve reddedilen üçüncü hipotezde olduğu gibi Pan vd., (2008) yapmış oldukları çalışmada mağaza atmosferi boyutlarından dış yerleşim değişkeninin satın alma niyeti üzerine etkisinin olmadığı tespit edilmiştir. Bu sonuçların düşük ürün bilgisine sahip tüketicilerin mağazanın dış cephesine dikkatli bakmamasından kaynaklandığı düşünülmektedir. Aynı şekilde yüksek ürün bilgisine sahip kişiler de markayı, mağazayı ve ürünleri tanıdığı için mağazanın dış cephesine dikkatli bakmadıkları düşünülmektedir. Buradan hareketle gelecekteki araştırmalar için mağaza atmosferinin satın alma niyetine etkisi incelenirken tüketici ilgilenim düzeylerinin dikkate alınmasının yararlı olacağı düşünülmektedir.

Gelecekteki araştırmalar için hem daha büyük bir örneklem kitlesi ile yapılması hem de ürün çeşidinin değiştirilmesi sonuçların genellenmesi için daha yararlı olacaktır. Aynı zamanda, tüketicilerin planlı satın alma davranışını ölçülmesi ve daha sonra aynı kitlenin plansız satın alma davranışının ölçülmesi karşılaştırmanın yapıp farklılıkların belirlenmesi için önem taşımaktadır.

Son olarak bu çalışma, mağazaların tüketicilerin keyifli zaman geçirdiği bir deneyim merkezine dönüşmesinin önemli olduğu belirtilmektedir. Tüketiciler ürünü satın alırken mağazada yaşadığı deneyime daha çok önem vermektedir. Bu sonuçların Gratis mağazası yöneticilerine mağaza atmosferini oluştururken ışık tutması beklenmektedir. Bu doğrultuda Gratis mağazası tüketici deneyimlerine odaklı, tüketici istek ve beklentilerini karşılamaya ve tüketicilerin duygusal algılarını dikkate alan bir bakış açısıyla mağaza atmosferi unsurlarını kullanmalıdır. Kısacası Gratis markasının, mağaza atmosferik

unsurlarını tüketiciler üzerinde duygusal bağlar kurarak algılamaları yönlendirmesi ve hedonik(hazcı) faydayı sağlaması önem arz etmektedir.

Aile İşletmelerinde Yönetimin Devri Sürecinde Kız Çocuklarının Yeri

Araş. Gör. Yasemin KARATEKİN ALKOÇ¹

¹Yüzüncü Yıl Üniversitesi, Erciş İşletme Fakültesi, İşletme Bölümü, yaseminkaratekinalkoc@yyu.edu.tr,
ORCID: 0000-0002-9160-199X

Özet: Ataerkil toplum yapısının uygulamalarının hissedildiği Türk aile işletmelerinde, yönetici kız çocuklarının payı görece azdır. Özellikle toplumsal yapının kadına biçtiği anne, eş, ev kadını, babasının küçük kızı gibi roller, geleneksel görüşlü tavırlar, toplumun iş kültüründe var olan kalıplaşmış düşünceler nedeniyle ayrımcı uygulamalar tetiklenmekte ve yönetimin kız çocuğuna devredilmesi konusunda büyük sıkıntılar doğmaktadır. Bu çalışmanın amacı, aile işletmelerinde yönetimin kız çocuklarına devredilmesinin ve devredilmemesinin nedenleri ve sonuçlarının irdelenmesidir. Bu doğrultuda, konuyla ilgili literatür incelenip, aile işletmelerinde yönetimin kız çocuklarına devri sürecinde kız çocuklarının yaşadıkları zorluklar ve yönetim devrinin veya devredilmemesinin nedenleri ortaya konmaya çalışılmıştır.

Anahtar Kelimeler: Aile İşletmeleri, Kız Çocukları, Yönetim Devri

1. GİRİŞ

İş yaşamında hızla artan kadın çalışanların sayısı, cinsiyet farklılıklarından doğan bazı cinsiyet etkilerini ve ayrımcılığını da beraberinde getirmiştir. Kadın çalışanların sayısının, iş dünyasındaki artış hızına rağmen, maalesef yöneticilik pozisyonlarında hala erkek egemenliğinin sürdüğü görülmektedir (Crampton ve Mishra, 1999). Kadınların işyerlerinde üst pozisyonlara yükselememelerinde görülmeyen engeller olarak ifade edilen “cam tavan” kavramıyla, iş hayatında kadınlara yönelik uygulanan olumsuz değerlendirmeler ve önyargılar ifade edilmektedir. Cam tavan ile ortaya konan bu cinsiyet ayrımcılığı beraberinde ücret eşitsizliğini, görev ve pozisyon ayrımcılığını, eğitim olanaklarının kısıtlanmasını ve belirli faaliyet alanlarından direkt olarak dışlanmışlığı doğurmaktadır (Gürol, 2006).

Cinsiyet farklılıklarından kaynaklanan rollerinde farklılaşması üzerine yapılan pek çok çalışma erkek rollerini; özerk, agresif, teşhirci ve dominant olduğunu, kadını rollerini ise; besleyen, yakın ilişki kuran, hayırsever gibi cinsiyet farklılıklarının paralelinde davranış farklılıklarını da doğurduğunu bulgulamışlardır (Soyşekerci, 2006).

Yukarıda açıklanan ifadeler ışığında, örgütlerde cinsiyet farklılıklarından doğan bu yönetsel farklılıklar, hiç şüphesiz bu çalışmanın asıl konusu olan aile işletmelerinde de bir takım ayrımcı yaklaşımların varlığına sebebiyet verecektir. Buradan hareketle, ülkemizdeki işletmelerin %95’ini oluşturan aile işletmelerinin, yönetim devrinde kız çocuklarına olan yaklaşımlarını mütalaa etmek yerinde olacaktır.

Toplumumuzun birçok işletmesinde var olduğu üzere, aile işletmelerinde de erkek egemen bir yapılaşmanın olması sebebiyle, kız çocuklarının kariyer ilerlemesi noktasında da bu ataerkillik bir takım bariyerler oluşturmaktadır. Her şeyden öte, ailenin iyi eğitim almış, kendini yetiştirmiş kızlarının, aile şirketinin dışında tutulmuş olması, entelektüel sermayenin büyük bir kaybı olarak nitelendirilmektedir (Gürol, 2006). Aile işletmelerinin potansiyellerini ve sürekliliklerini devam ettirmek, daha da arttırmak için kız çocuklarının işletmeye uyumlandırılmaları ve adaptasyonlarına yardımcı olunması önemli bir durum teşkil etmektedir (Şahindal ve Yaşa Özeltürkay, 2015).

Toplum genelinde var olan düşünce kalıplarına paralel olarak, kadına biçilen anne, eş, ev hanımı, babasının küçük kızı gibi roller ile kız çocuğunun aile işletmesinin dışında tutulması pekte şaşırtıcı olmamalıdır. Bu çalışma ile aile işletmelerinde kız çocuklarının yeri ve yönetimin devri sürecinde karşılaştıkları zorluklar açıklanmaya çalışılmış ve kurucu babanın yönetimi neden kız çocuğuna bıraktığı veya bırakmaya gönüllü olmadığı konusu irdelenmeye çalışılmıştır.

2. AİLE İŞLETMESİ TANIMI

Dünyadaki işletmelerin büyük çoğunluğunun aile işletmeleri olmalarından mütevellit, aile işletmelerinin yapıları, işleyişleri, ekonomilerdeki yeri gibi konular her daim araştırılacak popüler konular arasında yer

almıştır. Aile işletmesi kavramını farklı açılardan değerlendirerek farklı tarzlarda tanımlamak mümkündür. Genel bir tanımlamayla aile işletmeleri; “Ailenin geçimini sağlamak ve/veya mirasın dağılmasını önlemek amacıyla kurulan, ailenin geçimini sağlayan kişilerce yönetilen, yönetim kademelerinin önemli bir bölümü aile üyelerince doldurulan, kararların alınmasında büyük ölçüde aile üyelerinin etkili olduğu ve aileden en az iki jenerasyonun kurumda istihdam edildiği işletme yapıları” olarak ifade edilir (Pazarcık, 2004).

Başka bir tanımda Morris ve arkadaşları tarafından yapılmış ve aile işletmelerini, “ bir veya daha fazla aile üyesinin yönetimde bulunduğu ve söz sahibi olduğu, bu üyelerin de işletme politikalarını ve işleyişini belirlediği işletmeler” olarak betimlemiştir. Bu tanıma paralel bir tanımda Zimmerer ve arkadaşları tarafından yapılmış ve aile işletmelerini, “ailenin iki veya daha fazla üyesinin mali kontrolü elinde bulundurduğu, kuruculardan büyük bir kısmının sürekli olarak ailenin elinde kalma arzusunda oldukları ve temelinde ailenin ortak değerlerinin olduğu bir işletme türü” olarak ifade etmişlerdir (Gürol, 2006).

Aile işletmelerinde kurucu üye işletmeyi devretme sürecine geldiğinde, işletmenin geleceğini düşünüp bir planlama yapmak durumuyla karşı karşıya kalır. Devretme süreci, kurucunun güç ve kontrolünü bir sonraki kuşaktan seçtiği kişiye devretmesidir (Karayormuk ve Köseoğlu, 2006). Dolayısıyla bu noktada, seçilen kişinin gerek eğitim gerek deneyim ile donatılmış olması ve aile üyeleriyle güvene dayalı ilişkiler kurmuş olması, yönetim devrinin daha pürüzsüz ve etkili bir şekilde gerçekleşmesine imkan verecektir (Ada ve Kelgökmen, 2006).

3. AİLE İŞLETMELERİNDE YÖNETİMİN KIZ ÇOCUKLARINA DEVREDİLEMESİNİN NEDENLERİ

Gelecekte aile işletmesinin yönetiminde yer alacak aile üyelerinin devir sürecinden önce yetiştirilmeye başlanması olarak ifade edilen “yedekleme planlarında”, ailenin kız çocuklarının çoğunlukla yer bulmadığı, birçok araştırmayla da ortaya konulmuş bir gerçektir. Bu çalışmalardan biri Martin (2001)'e aittir. Bu çalışmada, aile işletmelerinde kurucu babanın, kızlarını ileride işletmede yönetici olmaları hususunda yönlendirmedikleri belirtilmiştir. Zira aile işletmelerinde yer alan aile üyelerinin büyük kısmının erkek çocuklardan oluşması, kız çocuklarının cinsiyet ayrımcılığına tabi tutulduklarının bir göstergesidir.

Aile işletmelerinde, aile üyelerinin çalışmasında esasen yaş ve cinsiyet belirleyici unsurlardır. Zira, erkek çocukların işletmede daha kolay kabul edildiği ve yönetime getirildiği görülmektedir. Kız çocuklarının, ailenin işletmesinde çalışsalar bile, daha çok yardım edici pozisyonlarda yer aldıkları ve erkek çocuğuna göre, işletmede söz sahibi olabilmelerinin daha zor olduğu ifade edilmektedir (Demir, 2017). Bunun nedenlerinden birini Baykal (2002), “ailedeki kadın üyelerin yoğun bir şekilde iş hayatına girmeleriyle, evliliklerinin, çocuklarının dolayısıyla geleneksel rollerinin zarar görebileceği düşüncesinin varlığı olabilir” şeklinde ifade etmiştir. Burada, içinde bulunulan toplumun kültürü, adetleri ve inançları cinsiyet ayrımcılığının ilk adımı olarak karşımıza çıkar.

Kız çocuklarının önündeki bir diğer engeli Cole (1997) kurallar olarak ifade etmiş, kuralları, çoğu kez kız çocuğunun aile işletmelerinin yönetiminde ilk olarak erkek çocuğa devredilme kuralı ile yüz yüze gelmesi olarak ifade etmiştir. Yine Cole, ailedaki kadın üyelerin daha çok ilişkileri uyumlaştırıcı, düzenleyici ve toparlayıcı rollerinin daha önemli sayıldığını ve bu yüzden kadınların aile işletmelerindeki yönetici pozisyonlarını da elde edemediklerini belirtmiştir.

Aile işletmelerinde, kız çocuklarına yapılan cinsiyet ayrımcılığının temelinde birçok öğenin etkin olması muhtemeldir. Örneğin, işletmenin büyüklüğüne göre, kız çocuklarının ailenin işletmesine dahil edilme ihtimalleri de değişiklik göstermektedir. Küçük aile işletmeleri daha geleneksel yönetim biçimlerine sahip olmalarından mütevellit, büyük işletmelere göre daha bariz ayrımcı tutumlar sergileyebilmektedirler (Gürol, 2006).

Yine aile işletmesinin faaliyet gösterdiği bölgeye göre cinsiyet ayrımcılığı şekillenebilmektedir. Zira, kırsal bölgelere göre kentlerdeki işletmelerde kız çocuklarının istihdam edilmeleri daha fazla görülmektedir (ayn. yer, 2006).

İlaveten, aile üyelerinin eğitim ve kültür düzeyleri de cinsiyet ayrımcılığına yön veren bir faktör olarak karşımıza çıkmaktadır. Eğitim ve kültür düzeyi yüksek olan aile yapılarında, ailenin daha hoşgörülü ve

yeniliklere açık olan görüşlerine paralel olarak, kız çocuklarının da yönetimde yer alma şansları daha yüksek olacaktır (ayn. yer, 2006).

Son olarak, işletmenin faaliyet gösterdiği sektör de cinsiyet ayrımcılığında etkili olabilmektedir. Endüstri ve hizmet sektörlerinde yer alan aile işletmelerinde, kız çocuklarının ayrımcılık tutumlarıyla karşılaşma ihtimalleri daha düşük olabilmektedir (ayn. yer, 2006).

Yukarıda anlatılan bahse konu tüm ifadeler genel bir çerçeveden bakıldığında, iş hayatında kadın istihdamının önemini biliniyor olmasına rağmen, hala aile işletmelerinde kadınların yani kız çocuklarının istihdam düzeyinin oldukça düşük seviyelerde kaldığı görülmektedir. Hiç şüphesiz, bu duruma sebebiyet veren pek çok faktör mevcuttur. Fakat, özet olarak aile işletmelerinin yönetiminde kız çocuklarının kısıtlı olarak yer almasının sebepleri arasında; toplumun ve buna bağlı olarak ailenin geleneksel yapısı, cinsiyet temelli işbölümünün varlığı, erkek çocuklara kıyasla kız çocuklarının eğitim seviyelerinin daha düşük olması veya aile işletmesinin faaliyet alanıyla ilgisiz olması, kız çocuklarının annelik, çocuk büyütme, ev işleri gibi rollerinin daha çok ön plana çıkarılması olarak sıralanabilir.

4. AİLE İŞLETMELERİNDE YÖNETİMİN KIZ ÇOCUKLARINA DEVREDİLMESİNİN NEDENLERİ

Önceki başlıkta açıklanmaya çalışılan kız çocuklarına karşı uygulanan olumsuz yaklaşımlara karşın, kız çocuklarının ailede maruz bırakıldıkları bu ayrımcı tutumları aşarak, aile işletmesinin yönetiminde yer bulma olasılıkları da mevcuttur.

Ailenin iyi eğitim almış kızları, mesleki deneyimleri de üstüne konulursa, işletmede faydalı bir girişimciye dönüşecek ve yönetimde erkek tavırlarından farklı olarak daha ılımlı, paylaşımcı, bütünleştirici bir hava yaratabilecektir. Keza, Türkiye'deki bilindik aile işletmelerinden, Sabancı, Aras, Doğan Holding gibi büyük işletmelerin yönetim kademelerinde bulunan ailenin kızlarının nasıl başarılar elde ettiklerini görmek mümkündür.

Aile işletmelerinde yönetim devri denildiğinde çoğunlukla erkek çocuklar akıllara gelmekte, varisler arasında kız çocuklarının varlığı çoğu zaman unutulabilmektedir. Günümüzde aile işletmelerinde kız çocuklarının artan varlığına paralel olarak kız çocukları, konuyla ilgili araştırmalarda fazlaca yer bulabilir olmuştur. Haberman ve Danes çalışmalarında, kız çocuklarının ailenin bütünlüğünü koruma, işletmenin gelecek nesillere taşınabilmesini sağlama gibi konularda daha arzulu olduklarını ve yönetim devri sırasında erkek çocuklara oranla nispeten daha sorunsuz ilerleyebildiklerini bulgulamışlardır (Haberman ve Danes, 2007).

Cinsiyetlerin liderlik tarzlarında görülen farklı karakteristik özelliklere sahip olmaları nedeniyle erkek ve kız çocuklarının işletmenin yönetim sürecinde de farklı yöntemlere sahip olabilmektedirler. Yapılan araştırmalar erkeklerin otoriteye odaklanırken, kızların dayanışmaya odaklandıklarını göstermiştir. Bu gibi özellikleri hasebiyle kız çocukları işletmede takım ruhu oluşturarak yönetime farklı bir soluk getirebileceklerdir (Demir, 2017).

Ailede erkek ve kız çocuklarının babalarıyla olan ilişkileri, cinsiyet fitratları gereği de farklılaşabilmektedir. Örneğin, yönetim kız çocuklarına devredildiğinde, işletme ortamında herhangi bir gerginlik oluşmamakta, aksine çalışma ortamı bu durumdan olumlu etkilenebilmektedir. Çünkü kız çocukları, erkek çocukları gibi babalarıyla rekabet içinde olmamaktadırlar. Bu rekabetin arkasında yatan gerçek esasında erkek çocuğun babasına benzeyebilme arzusundan kaynaklanır. Fakat kız çocuklarının babalarına daha duygusal bağlarla yaklaşmaları, baba-kızın birlikte daha kolay çalışabilmelerini, babalarının işten ayrılmasını istememeleri, her zaman bir dayanak gibi babalarının varlıklarını yanlarında istemelerinden dolayı, ortaya daha uyumlu bir işbirliği ve yüksek performans çıkabilmektedir (Demir, 2017).

Kız çocuklarının işletmeye oryantasyonlarını, onların gelecek için hazırlanmaları sağlanarak, işletme yönetiminde yer alma olasılıkları arttırılmalıdır. Bunun yanında bazen ailenin kız çocuklarının baskın karakterli oluşları da onları ön plana çıkarabilmekte ve ailenin erkek çocuklarını devre dışı bırakabilmektedirler. Bu sayede kız çocukları kendi yetkinlikleri ve becerileriyle aile işletmelerinin yönetiminde söz sahibi olabilmektedirler. Kimi zaman da ailenin erkek çocuğunun olmaması, yine kız çocuğunun yönetime getirilmesine imkan vermektedir (Gürol, 2006). Yine aile işletmesinin büyümesine

paralel olarak, iş yerlerinin sayısının artması sonucu, eğer ailedeki erkek çocuk sayısı az ise, bu durumda da kız çocuklar işletmelerin başına getirilebilmektedirler.

Kız çocuklarının yönetimi devralmasında etkili olan bir diğer unsurda, ailedeki erkek çocukların yönetimi devralma hususunda yetersiz olmaları veya bu konuda ilgilerinin az olmasıdır. Bu gibi durumlarda kız ve erkek çocuklar arasındaki rekabet ortamı zaten kendiliğinden yok olmaktadır (Gürol, 2006).

Yukarıda açıklanmaya çalışılan tüm koşullar, aile işletmelerinde kız çocuklarının yönetimi devralmaları noktasında etkili olabileceğini ve şanslarını arttırarak yönetimde yer alma ihtimallerini arttıracakı söylenebilmektedir.

5. SONUÇ

Aile işletmelerinin Dünya’da ve Türkiye’de faaliyet ve etki alanlarının gitgide büyümesi ve işletmenin sürekliliği için gelecek nesillere aktarılması çabaları nedeniyle, bu işletmelerin kurucularının erkek çocuklarından ziyade kız çocuklarına da şans tanımaları, onların varisleri olarak yetiştirilmeleri gerekliliğinin doğacağı bir gerçektir. Aile işletmelerinin gerek yönetimlerinde gerekse devrin yapılacağı çocuk seçiminde objektif ölçütlere dayanmayıp, profesyonelce seçimler yapmaması, hala geleneksel tutumlarından vazgeçmemekte ısrarcı olmaları durumunda, işletmenin işlevlerini sekteye uğratabilecek, aile içindeki bağları zayıflatacak, sermayenin bölünmesine sebep olabilecek ve dolayısıyla kurucu babanın büyük emekleriyle kurduğu işletmenin zarar görmesine neden olabileceklerdir.

Konuyla ilgili yapılan araştırmalar, aile işletmelerinde yönetim devri konusunda kız çocuklarının önündeki en büyük dezavantajın cinsiyet ayrımcılığı olduğunu göstermektedir. Dumas (1990), aile işletmelerinde başarılı bir yönetim devri için kız çocuklarının önceden eğitilip, yönlendirilerek yönetime hazırlanmaları gerektiğini vurgulayarak bunun için bazı temel etkenlerden bahsetmiştir. Bunlardan ilki, öncelikle kız çocuklarının daha en başından varis olarak nitelendirilip, dile getirilmesi gerekliliğidir. Bu noktada kız çocuğunun potansiyellerinin belirlenmesi ve o yönde hareket edilmesi önemli bir husus olarak dikkat çekmektedir. Daha sonra devir sürecinin gerektirdikleri ve tarafların birbirlerinden beklentilerini açıkça ifade etmeleri gereklidir. Bu doğrultuda hareket edilerek, kız çocuğunun eğitimi, deneyimi de bu yönde şekillendirilmelidir. Hiç şüphesiz tüm bunların gerçekleşmesinde, aile işletmesinin kurucusu olan babanın rolü en önemli ve öncelikli bir konudur.

Aile işletmelerinin yönetimlerinin devri sürecinde kız çocuklarının yeri konusu, günümüz çalışmalarında oldukça ilgi gördüğü gözlenmektedir. Bu çalışmayla, aile işletme yönetiminin devrinde kız çocuklarının karşılaştıkları cinsiyet ayrımcılığı konusuna vurgu yapılmış, bu ayrımcılığın nedenleri tartışılmış ve yönetimin kız çocuklarına devredilmeme nedenleri ile devredilmesi durumunun öncesindeki hazırlıkların neler olabileceği, konuya nasıl yaklaşılacağı hususlarında açıklamalar yapılmaya çalışılmıştır.

Konuyla ilgili yapılacak gelecek çalışmalarda, bu konu nitel veya nicel araştırma yöntemleri kullanılarak Türkiye bağlamında büyük örneklem kümeleriyle çalışılması, şüphesiz daha iyi ve görünür sonuçların elde edilmesini sağlayacaktır.

Özet: İktisadi bir aktör olarak kamu sektörü yaptığı harcamalarını karşılayabilmek için finansman sağlamak amacıyla borçlanmakta ve doğal olarak bu da ülkelerin makroekonomik verilerini etkilemektedir. Makroekonomik değişkenler ise orta ve uzun dönemde ülkenin üretim yapısını ve devamında da ekonomik büyüme potansiyelini etkileyebilmektedir. Bu bağlamda, kamu borcu ile ekonomik büyüme arasındaki ilişki hem akademisyenler hem de siyasetçiler tarafından üzerinde tartışılan önemli bir konu haline gelmiştir. Literatürde kamu borcunun ekonomik büyümeyi hangi kanallardan ve ne şekilde etkilediğine dair birçok çalışma mevcuttur. Genel olarak çalışmalar incelendiğinde kamu borcu ile ekonomik büyüme arasında ters yönlü ilişki olduğu sonucuna ulaşılmıştır. Bu çalışmada, kamu borcu ile ekonomik büyüme arasındaki uzun dönemli ilişki ABD ekonomisi üzerinden araştırılmaktadır. 1950-2020 dönemleri arasında yıllık veriler ile yapılacak analizlerde, yapısal kırılmaya izin veren eş-bütünleşme ve nedensellik testleri kullanılacaktır. Analizler sonunda elde edilen bulgular ışığında politika önermeleri yapılacaktır.

Anahtar Kelimeler: Kamu Borç Stoku, ABD, Ekonomik Büyüme.

The Relationship Between Public Debt And Economic Growth: Evidence From The USA

Abstract: If a country has a budget deficit, the public sector as an economic actor borrows due to finance its expenditures, that naturally affects the macroeconomic variables. Macroeconomic variables, on the other hand, can affect the country's production structure in the medium and long term and following its subsequent economic growth potential. In this context, the relationship between public debt and economic growth has become an important issue discussed by both academicians and politicians. In the literature, there are many studies on how and by which channels the public debt of a country affects economic growth. When the studies are examined in general, it is concluded that there is a negative relationship between them. In this study, the long-term relationship between public debt and economic growth is analysed through the US economy. Co-integration and causality tests that allow structural breakage will be used in analyses to be made with annual data between 1950-2020. Policy recommendations will be made in the light of the findings obtained at the end of the analyses.

Anahtar Kelimeler: Public Debt Stock, USA, Economic Growth.

1. GİRİŞ

Kamu harcamaları kamu gelirlerinden fazla ise hükümetler genellikle finansman sağlamak amacıyla borçlanarak bu açığı kapatma yoluna gitmektedir. Kamu borcu, merkezi hükümet (kamu iktisadi teşebbüsleri hariç), yerel yönetimler ve diğer kamu idarelerini içine alan genel devletin mevcut borç yükümlülükleri şeklinde tanımlanabilir. Bu kamu borcunun birçok makroekonomik değişkeni etkilediği aşikârdır. Bu makroekonomik büyüklükler ise orta ve uzun dönemde ülkenin üretim yapısını ve devamında da ekonomik büyüme potansiyelini etkileyebilmektedir. Bu doğrultuda, kamu borcu ile ekonomik büyüme arasındaki ilişki hem akademisyenler hem de siyasetçiler için üzerinde tartışılan ve cazibesini her daim koruyan önemli bir konu olmuştur. Literatürde kamu borcunun ekonomik büyümeyi hangi kanallardan ve nasıl etkilediği ile ilgili birçok akademik çalışma vardır. Genel olarak çalışmalar incelendiğinde kamu borcu ile ekonomik büyüme arasında ters yönlü ilişki olduğu ifade edilebilir.

Bu çalışmada, öncelikle kamu borcu ile ekonomik büyüme arasındaki ilişki hem teorik açıdan hem de ABD ekonomisi açısından değerlendirilmiştir. Daha sonra bu ilişkiye dair literatür taraması yapılmıştır. Ampirik çalışma kısmında ise 1950-2020 dönemleri arasında yıllık veriler kullanılarak kamu borcu ile

ekonomik büyüme arasındaki ilişki, yapısal kırılmaya izin veren eş-bütünleşme ve nedensellik testleri kullanılarak analiz edilmiştir. Son olarak elde edilen sonuçlar ve bu sonuçlara göre politika önermelerine yer verilmiştir.

2. KAMU BORCU İLE EKONOMİK BÜYÜME İLİŞKİSİ

Kamu borcunun ekonomik büyümeyi farklı kanallar üzerinden etkileyebildiği varsayılmaktadır. Buna karşılık genel olarak, kamu borcu ile ekonomik büyüme arasındaki nedensellik ilişkisi, Klasik ve Keynesyen düşünce okulları arasında bir tartışma konusu olmuştur. Keynesyen görüşe göre kısa dönemde toplam hasılanın belirlenmesinde toplam talep seviyesi önemli bir rol oynamaktadır. Özellikle ekonomi eksik istihdam seviyesinde ise ya da fiyat yapışkanlığı yüksek ise bu durum daha da önemli hale gelmektedir. Örneğin Keynesyen IS-LM modelinde devlet harcamalarının artması veya vergilerde indirim yapılması genişletici maliye politikası anlamına gelir ve toplam hasılanın artmasına ve kamu borç stokunun artması sebebiyle de faiz oranlarının yükselmesine sebep olmaktadır. Geleneksel yaklaşıma göre genişletici maliye politikası bir taraftan kısa dönemde toplam talebi artırarak toplam hasılayı olumlu yönde etkilerken diğer yandan uzun dönemde dışlama etkisi (crowding-out) yüzünden faizlerin artması sebebiyle yatırımların azalmasına neden olduğu için toplam hasılayı olumsuz bir şekilde etkilemektedir (Turan, 2019: 3).

Literatürde Keynesyen yaklaşıma göre artan kamu borcunun kısa dönemde toplam talep üzerindeki olumlu etkisinin yanında, neo klasiklere göre yatırımları ve verimliliği azalttığı ve belirsizlik yarattığı iddia edilmektedir. Genel olarak çalışmalar incelendiğinde kamu borcu ile ekonomik büyüme arasında ters yönlü ilişki olduğu sonucuna ulaşılmış olsa da kamu borcunun ekonomik büyüme üzerindeki etkisinin olumlu ya da olumsuz olması araştırılan dönem ve söz konusu ülkede hangi etkilerin baskın olduğu ile ilgili değişkenlik gösterebilmektedir.

2008 yılında ABD’de ortaya çıkan ve bütün dünyayı etkisi altına alan küresel ekonomik kriz sırasında birçok ülkede genişleyici maliye politikaları uygulanması sonucunda bütçe açıklarının önemli şekilde arttığı gözlemlenmiştir. Bütçe açıklarındaki artış kamu borçlarının da yükselmesine sebep olmuştur. Örneğin IMF (2018) verilerine göre 2008 yılında kamu borcunun GSYİH’ye oranı gelişmiş ülkelerde %67’den 2009’da %79’a, 2012’de %85’e, 2015’de ise %91’e yükselmiştir. ABD ekonomisine bakıldığında ise 2008 yılından sonra kamu borç stokunun GSYİH’ya oranı %100’ü aşmış ve yükselmeye devam etmiştir. Hatta 2020 yılında tüm dünyada yaşanan pandeminin etkisiyle birlikte ABD’de kamu harcamalarında yüksek bir artış yaşanmış, dolayısıyla hem kamu borcu arttığı hem de GSYİH düştüğü için Şekil 1’de görüldüğü gibi kamu borcunun GSYİH’ya oranı %143 gibi savaş yıllarından bu yana ilk defa bu kadar yüksek bir orana ulaşmıştır.

Şekil 1: ABD’de Kamu Borç Stoku / GSYİH Oranı

Kaynak: The US Bureau of Economic Analysis (BEA), The US Census Bureau.

Pek çok gelişmiş ülkeye bakıldığında, 20. yüzyılda toplam kamu harcamalarındaki artışın muazzam olduğu görülmektedir. Bu durumda genel olarak hükümetlerin büyüklüğünün artması da etkili olmuştur. Bu doğrultuda, birçok ülkenin kamu borç stokunun özellikle son yıllarda önemli ölçüde artması, ekonomik büyüme başta olmak üzere makroekonomik değişkenler üzerindeki etkisinin araştırılmasına neden olmuştur. Dolayısıyla bu çalışmada, kamu borcu ile ekonomik büyüme arasındaki uzun dönemli ilişki ABD ekonomisi üzerinden araştırılmıştır.

3. LİTERATÜR

Literatüre bakıldığında, mevcut teorik ve ampirik çalışmaların büyük bir çoğunluğu, sürdürülemez kamu borcunun bir ülkenin rekabet gücünü azalttığı ve finansal piyasasının uluslararası şoklara karşı duyarlılığını artırdığı görüşünü desteklemektedir (Saungweme ve Odhiambo, 2019: 2). Genel kabul gören görüş kamu borcu ile ekonomik büyüme arasında ters yönlü bir ilişki olduğu şeklindedir. Diğer yandan kamu borcunun GSYİH'ya olan oranı, sürdürülebilir olup olmadığı ya da ülkenin kendi yapısal durumu değerlendirildiğinde kamu borcunun ekonomik büyüme üzerindeki etkisi ülkeden ülkeye farklılık gösterebilmektedir.

Woo ve Kumar (2010) gelişmiş ve yükselen ülke ekonomileri için yüksek kamu borcunun uzun vadeli ekonomik büyüme üzerindeki etkisini yaklaşık kırk yıllık bir dönem için araştırmışlardır. Woo ve Kumar çalışmalarında ilk borç ile sonraki büyüme arasında yükselen ekonomilerde daha çok gelişmiş ülkelere daha az olmak üzere ters yönlü bir ilişki olduğu sonucuna ulaşmışlardır. Büyüme bileşenlerinin analizi, olumsuz etkinin büyük ölçüde, temelde azalan yatırım ve sermaye stokunun daha yavaş büyümesi nedeniyle işgücü verimliliği artışındaki yavaşlamayı yansıttığını göstermektedir.

Reinhart ve Rogoff 2010 yılında yaptıkları akademik çalışmada yükselen ekonomiler ve gelişmiş ülkelerde yüksek kamu borcu ile ekonomik büyüme ve enflasyon arasındaki ilişkiyi araştırmışlardır. GSYİH'ye oranı %90'ın altında olan kamu borcunun hem gelişmiş hem de yükselen piyasa ekonomilerinde ekonomik büyüme ile olan ilişkisi çok fazla bulunmazken, %90'ın üzerinde olan ülkelerde düşük büyüme oranlarıyla ilişkili olduğu sonucuna ulaşmışlardır.

Reinhart vd. (2012), 1800'lerin başından beri gelişmiş ekonomiler içinde kamu borcunun GSYİH'ye oranının en az beş yıl boyunca %90'ı aşan ülkeleri incelemişlerdir. Sonuçta kamu borcunun yüksek olduğu dönemlerde daha düşük büyüme oranlarına ulaşıldığını, ancak kamu borcuyla reel faiz oranları arasında böyle bir ilişkinin görülmediğini ifade etmişlerdir.

Baum vd. (2013) çalışmasında yaptığı analizlerde bazı Avrupa ülkelerinde kamu borcu ile ekonomik büyüme arasında doğrusal olmayan bir ilişki olduğu sonucuna ulaşmışlardır. Baum vd. (2013) kamu borcunun GSYİH'e olan oranı %67'nin altında kalan ülkelerde kısa dönemde kamu borcunun ekonomik büyüme üzerinde olumlu bir etkisi olduğunu, ama kamu borcunun GSYİH'e olan oranı %95'in üzerinde olduğu ülkelerde artan kamu borcunun ekonomik büyümeyi olumsuz yönde sonucuna varmışlardır.

Bal ve Rath (2014), Hindistan'da 1980 ve 2011 yılları arasında kamu borcunun ekonomik büyüme üzerindeki etkisini incelemişlerdir. Yazarlar, hem yurt içi hem de yurt dışı kamu borcunun ekonomik büyümeyi kısa dönemde etkilediği sonucuna ulaşmışlardır.

Doğanalp (2015), 2001-2013 döneminde üç aylık verileri kullanarak yaptığı analizlerde Türkiye'de kamu iç borcunda meydana gelen % değişime ile ekonomik büyüme arasındaki ilişkiyi incelemiştir. Analiz sonuçlarına göre iç borçlar ve ekonomik büyümenin eş bütünlük olduğu ve % 5 anlam seviyesinde iç borç ve büyüme arasında 6 gecikme dönemi referans alınarak bir nedensellik olduğunu tespit etmiştir.

Kurihara (2015), özellikle kamu borcunun çok yüksek seviyelere ulaştığı Japonya'da kamu borcu ve büyüme arasındaki ilişkiyi araştırmıştır. Sonuçlar birçok akademik çalışma ile uyumlu olarak kamu borcu ile ekonomik büyüme arasında negatif bir ilişki olduğunu göstermiştir.

Gómez-Puig ve Sosvilla-Rivero 2017 yılında kaleme aldıkları makalede, Euro bölgesinin (EA) hem merkezi hem de çevre ülkelerinin 1961-2013 dönemi için yıllık verileri kullanarak kamu borcunun ekonomik büyüme üzerindeki kısa ve uzun vadeli etkisini ampirik olarak araştırmışlardır. Gómez-Puig ve Sosvilla-Rivero Avrupa Birliği (AB) ülkelerinde kamu borcunun uzun dönemde ekonomik performansı negatif

etkilediği görüşünü destekleyen sonuçlara ulaşırken, kısa dönem için etkinin ülkeden ülkeye değişebildiği sonucuna varmışlardır.

Yusuf ve Said 2018’de yayınladıkları makalede, 1970-2015 dönemi için Tanzanya’da kamu borcunun ekonomik büyüme üzerindeki etkisini incelemiştir. Çalışma dönemi boyunca Tanzanya’da kamu borcu ile ekonomik büyüme arasında negatif bir ilişki olduğunu göstermiştir.

Ndieupa (2018) yazdığı makalede 2000 ile 2016 yılları arasında altı Orta Afrika Ekonomik ve Parasal Topluluğu ülkesinden oluşan bir örnekleme kullanarak kamu borcunun ekonomik büyüme üzerindeki ampirik etkisini araştırmıştır. Ampirik sonuçlar, kamu borcunun ekonomik büyüme üzerinde olumsuz ve istatistiksel olarak anlamlı bir etkiye sahip olduğunu göstermiştir.

Saungweme ve Odhiambo (2019) Zambiya’da 1970-2017 dönemi için kamu borç stoku ile ekonomik büyüme arasındaki ilişkiyi incelemişlerdir. Ancak yazarlar, çalışma sonucunda Zambiya’daki kamu borç servisi ile ekonomik büyüme arasında herhangi bir nedensellik ilişkisi bulamamışlardır.

Turan 2020 yılında yaptığı çalışmasında Türkiye’de 1958-2015 döneminde kamu borç ile ekonomik büyüme arasındaki ilişkiyi incelemiştir. Turan kamu toplam borcunun uzun dönemde ekonomik büyüme üzerinde anlamlı bir etkisi olmadığı, buna karşın kısa dönemde kamu toplam borcundaki artışların ekonomik büyümede azalmaya sebep olduğu sonucuna ulaşmıştır.

4.EKONOMETRİK ANALİZ VE METADOLOJİ

Çalışmanın analiz kısmında “*kamu borç stoku ile ekonomik büyüme arasında uzun dönemli ilişki vardır*” hipotezi yapısal kırılmalı ekonometrik modeller ile eş-bütünleşme ve nedensellik testleri kullanılarak ABD ekonomisi üzerinden incelenmiştir. Analiz kısmında kullanılan metodolojik sıralama şu şekildedir; öncelikle veri seti tanımlanarak hipoteze uygun model kurulmuş, daha sonra ise kullanılacak verilerin birim kök içerip içermediğini tespit etmek için yapısal kırılmaya izin veren durağanlık testleri uygulanmıştır. Durağanlık testlerinden elde edilen sonuçların ardından yapısal kırılmaya izin veren Gregory-Hansen Eşbütünleşme Testi ile Toda-Yamamoto Nedensellik analizleri kullanılarak sonuçlar yorumlanmıştır.

4.1. Veri Seti ve Model Açıklaması

Ampirik çalışmada, ABD ekonomisinin 1950-2020 dönemlerini kapsayan yıllık verileri analize dâhil edilmiştir. 1950 öncesinde 1929 Büyük Buhranı ve I. ve II. Dünya Savaşları’nda makroekonomik verilerde önemli dalgalanmalar olduğu için 1950 sonrası verilerin kullanılması tercih edilmiştir. Modellerde kullanılan kamu borç stoku ve ekonomik büyüme için kullanılan GSYİH verileri ABD İstatistik Bürosu (The US Census Bureau) ve ABD Analiz Bürosu (The US Bureau of Economic Analysis) veri tabanlarından elde edilmiştir.

Modelde bağımlı değişken olarak ekonomik büyümeyi temsilen GSYİH (GDP) değişkeni kullanılmıştır. Bağımsız değişken olarak ise ABD ekonomisi kamu borç stoku (PD) verileri kullanılmıştır. Modele dâhil edilen değişkenlerin logaritmaları alınarak ve mevsimsel etkilerden arındırılarak modele dâhil edilmiştir. Kurulan model ise şu şekildedir;

$$LGDP_T = \beta_0 + \beta_1 LPD_t + \varepsilon_t \quad (1)$$

4.2. Birim Kök Test Sonuçları

Zaman serisi analizlerinde durağanlık testleri sahte regresyon sorunundan kurtulmak için yapılması gereken önemli bir adımdır. Granger ve Newbold (1974), çalışmalarında durağan olmayan serilerle çalışılması durumunda sahte regresyon sorununun ortaya çıkabileceğini göstermiş ve durağan olmayan serilerle yapılan regresyon analizlerinin gerçek sonuçları yansıtmayacağını belirtmişlerdir. Bir zaman serisi, ortalaması ile varyansı zaman içinde değişmiyor ve iki dönem arasındaki kovaryansı bu kovaryansın hesaplandığı döneme değil de yalnızca iki dönem arasındaki uzaklığa bağlı ise durağandır (Gujarati, 1999: 713). Gerçekleştirilen uygun birim kök testleri ile uygulanan durağanlık sınamaları,

yapılan analizlerin durağan olmayan serilerle gerçekleştirilen sahte sonuçlar çıkmasını engellemektedir. Gerçekleştirilen testler sonucunda serilerin birim kök içermesi durumunda, durağan olmadığı sonucuna varılır ve durağan olmayan zaman serileri eş-bütünleşme ilişkisine sahip değillerse, değişkenler arasında anlamlı bir ekonomik ilişkinin varlığından bahsetmek yanlış sonuçlara yol açacaktır (Harris ve Sollis, 2003: 41).

Zaman serisi analizlerinde en sık ADF ve PP testleri tercih edilmektedir. Fakat ADF ve PP testleri makroekonomide uzun dönemde krizler veya ekonomik şoklar gibi kırılmaları dikkate almadan birim kök testlerini analiz etmektedir. Oysa ki piyasalar arası ortak hareketlerdeki değişiklikler veya ülkeler arası politika yapıcılarının hareketleri, portföy yöneticilerini etkilediğinden yapısal değişikliklerin çıkışının sorgulanması gerekmektedir (Arouri vd., 2007: 9-10). Zaman serisi analizlerinde bundan dolayı bir yapısal kırılma olması durumunda bunun dikkate alınmaksızın gerçekleştirilen durağanlık testlerinde serinin durağan olmama ihtimalinin yüksek olduğu söylenebilir. Oysaki kırılmanın dikkate alınarak testin gerçekleşmesi durumunda durağan olmayan serinin de durağan olabildiği görülmektedir. Zaman serisi analizlerinde bu tür sorunların çözümü için yapısal kırılmaları dikkate alan durağanlık testleri geliştirilmiştir. Çalışmada kırılmanın içsel olarak belirlendiği Zivot-Andrews kırılma testi kullanılmıştır. Zivot-Andrews (1992), yapısal kırılmanın tam olarak bilinmediği, içsel olarak belirlendiği durumu incelemektedir. Analizlerde elde edilen t istatistiği, Zivot ve Andrews tarafından oluşturulan kritik değerler ile karşılaştırılmaktadır. Eğer elde edilen t istatistiği mutlak değerce kritik değerlerden küçükse serinin birim kök içerdiğini belirten sıfır hipotezi kabul edilmektedir. Elde edilen t istatistikleri mutlak değerce kritik değerlerden büyükse sıfır hipotezi reddedilmekte ve serinin yapısal kırılmayla birlikte durağan olduğunu belirten alternatif hipotez kabul edilmektedir (Korkmaz vd., 2008: 27).

Tablo 1: LGDP Serisi Zivot-Andrews Birim Kök Test Sonuçları

Değişken	Model	Kırılma Yılı	t-İstatistiği	1%	5%	10%
LGDP	Model A	2007	-1.86	-5.34	-4.93	-4.58
	Model C	1976	-2.82	-5,57	-5,08	-4.82
ΔLGDP	Model A	1964	-3.36	-5.34	-4.93	-4.58
	Model C	1982	-4.89***	-5,57	-5,08	-4.82

Ekonomik büyüme olarak belirlenen GSYİH değişkeni için Zivot-Andrews birim kök testlerine ait sonuçlarına bakıldığında t-istatistiğine göre belirlenen yapısal kırılma dönemlerinde her üç model içinde yapısal kırılmalı birim kökün olduğu boş hipotez (H_0) reddedilememektedir yani seri durağan değildir. Durağan olmayan serilerde birim kökten kurtulmak için serinin 1. dereceden farkı alınarak birim kök testi tekrarlanmaktadır. Serinin 1. dereceden farkı alındığında Model C için 1982 yılındaki yapısal kırılma ile birlikte %10 anlamlılık düzeyinde durağanlaştığı yani I(1) olduğu görülmektedir.

Tablo 2: LPD Serisi Zivot-Andrews Birim Kök Test Sonuçları

Değişken	Model	Kırılma Yılı	t-İstatistiği	1%	5%	10%
LPD	Model A	1982	-3.67	-5.34	-4.93	-4.58
	Model C	1982	-3.13	-5,57	-5,08	-4.82
ΔLPD	Model A	1993	-4.38	-5.34	-4.93	-4.58
	Model C	1987	-4.90***	-5,57	-5,08	-4.82

Kamu borç stoku serisi için Zivot-Andrews birim kök testlerine ait sonuçlarına bakıldığında t-istatistiğine göre belirlenen yapısal kırılma dönemlerinde her üç model içinde yapısal kırılmalı birim kökün olduğu boş hipotez (H_0) reddedilememektedir yani seri durağan değildir. Durağan olmayan serilerde birim kökten kurtulmak için serinin 1. dereceden farkı alınarak birim kök testi tekrarlanmaktadır. Serinin 1. dereceden farkı alındığında Model C için 1987 yılındaki yapısal kırılma ile birlikte %10 anlamlılık düzeyinde durağanlaştığı yani I(1) olduğu görülmektedir.

4.3. Gregory-Hansen Eş-Bütünleşme Test Sonuçları

Ekonometrik çalışmalarda kullanılan standart eşbütünleşme testleri eşbütünleşik vektörün zaman içerisinde değişmediğini varsayarken, tek yapısal kırılmaya izin veren Gregory ve Hansen eşbütünleşme testi, eşbütünleşik vektörde içsel olarak belirlenen bir kırılma zamanında değişeceğini önermektedir. Gregory-Hansen alternatif hipoteze karşı, kırılmanın eş-bütünleşmede olabileceğine dayalı alternatif bir hipotez geliştirmişlerdir. Bu eş-bütünleşme analizinde üç alternatif model vardır. Bunlar; sabitte kırılma, trendli sabitte kırılma ve rejim değişimidir. Bu analizinde yapısal kırılma zamanının içsel olarak belirlendiği varsayılmaktadır (Gregory ve Hansen, 1996: 555).

$$\text{Sabitte kırılma} \quad Y_1 t = \mu_1 + \mu_2 \varphi \pi + \alpha^T y_2 t + et \quad t=1,2,3,\dots,n$$

Modelde μ_1 kırılmadan önceli sabiti, μ_2 ise kırılmadan sonra sabitte meydana gelen değişmeyi göstermektedir. t ise 0 ile 1 arasında yer alan kırılmanın zamanlamasını gösteren katsayıdır. α^T açıklayıcı değişkenlere ait katsayı vektörünü ifade etmektedir, ∂_π ise kukla değişkendir.

$$\text{Sabit ve Trendde Kırılma} \quad Y_1 t = \mu_1 + \mu_2 \varphi \pi + \beta t + \alpha^T y_2 t + et \quad t=1,2,3,\dots,n$$

Bu modelin temel farkı sabitte kırılmanın yanında trendi de ele almasıdır. Trendi temsil eden değişken β_t dir ve analizlerde trenddeki kırılma da incelenmiştir.

$$\text{Rejim Değişimi} \quad Y_1 t = \mu_1 + \mu_2 \partial \pi + \alpha_1^T y_2 t + \alpha_2^T y_2 t \varphi 1 t + et \quad t=1,2,3,\dots,n$$

Rejim değişimi modelinde ise α_1 rejim değişimi öncesi eşbütünleşme vektörünü, α_2 rejim değişimi sonrası eşbütünleşme vektöründe meydana gelen değişmeyi gösterir.

Tablo 3: Gregory ve Hansen Eşbütünleşme Testi Sonuçları

Model	Kırılma Yılı	t-İstatistiği	1%	5%	10%
C*	2005	-6.38 (0)*	- 5.13	- 4.6	- 4.34
C/T**	1964	-7.93 (0)*	-5.45	-4.99	-4.72
C/S***	1991	-7.53 (0)*	-5.47	-4.95	-4.68

Parantez içindeki değerler gecikme sayısını ifade etmektedir

* Sabitte kırılma **Trend de kırılma *** Rejim değişimi

Yapısal kırılma altında modeldeki değişkenlerin aralarında uzun dönemli bir ilişki olup olmadığının tespit edilmesi için çalışmada Gregory-Hansen Eş-bütünleşme testi uygulanmış ve yapılan analizlerde minimum test sonuçları ile bunlara denk gelen kırılma dönemleri Tablo 3'de verilmiştir. Tablo incelendiğinde tüm modeller için test istatistiğinin mutlak değer olarak kritik değerlerden büyük olduğu yani kamu borç stoku ile ekonomik büyüme arasında her üç modelde de yapısal kırılmalar ile birlikte uzun dönemli eşbütünleşme ilişkisinin olduğu görülmüştür. Yapısal kırılma tarihlerine bakıldığında ise 1964, 1991 ve 2005 yıllarında ABD ekonomisinde konjontürel krizlerin, doğal afetlerin ve küresel gelişmelerin etkilerinin olduğu görülmektedir. J. F. Kennedy'nin 1963 yılının Kasım'ında suikasta uğramasının ardından 1964 yılında Lyndon Johnson ABD başkanı seçildi. Kennedy döneminde hazırlanan, ABD'de siyahi ırka mensup kişilere okullarda, kamusal alanlarda ve işe alımlarda yapılan negatif ayrımcılığın yasaklanması konusundaki yasa olarak bilinen 1964 Medeni Haklar Yasası (The Civil Rights Act of 1964), 2 Temmuz 1964 yılında ABD başkanı L. Johnson tarafından imzalanarak yürürlüğe girmiştir. 25 Aralık 1991 tarihinde ise Sovyetler Birliği Devlet Başkanı M. Gorbaçov istifa etmiş, ardından Sovyetler Birliği'ni

oluşturan cumhuriyetler bağımsızlıklarını ilan etmiş ve Sovyetler Birliği dağılmıştır. Sovyetler Birliği'nin dağılması dünya üzerinde birçok ülke üzerinde siyasi, sosyal ve ekonomik alanlarda çok önemli etkiler yaratmıştır. 2005 yılına bakıldığında ise tarihin en yıkıcı kasırgalarından biri olan Katrina Kasırgası ABD'yi vurmuştur. Kasırğa 1.836 kişinin hayatını kaybetmesine neden olmuş, yaklaşık 80 milyar doların üzerinde zarara yol açmış ve yol alt yapılarının bozulmasının ardından 6 ay kadar Meksika Körfezi'nde petrol üretiminin durmasına sebep olmuştur.

4.4. Toda-Yamamoto Nedensellik Analizi Sonuçları

ABD ekonomisi üzerinde kamu borç stoku ile ekonomik büyüme arasındaki ilişkinin sonuçları çalışmada yeni nesil ekonometrik analizlerden sıkça kullanılan Toda-Yamamoto (1995) analiziyle test edilmiştir. Granger nedensellik analizinin eleştirilen en büyük tarafı, aralarında nedensellik ilişkisinin bakılacağı değişkenlerin eş-bütünleşik olması şartıdır ve bu durum analizi bağımlı hale getirmektedir. Oysaki Toda-Yamamoto analizinde gecikmesi arttırılmış VAR yönteminde nedensellik sınaması için seriler arasında eş-bütünleşme ilişkisi önemli olmayıp sadece modeli doğru belirlemek ve modeldeki değişkenlerin maksimum bütünleşme derecesini bilmek yeterli olmaktadır.

Toda ve Yamamoto'ya (1995) göre seriler durağan olmasalar da serilerin düzey değerlerinin yer aldığı VAR modelinin tahmin edilebileceğini ve standart Wald testinin uygulanabileceğini belirtmişlerdir. Bu yöntemde Granger nedensellik testi için, $[k+(d_{max})]$ dereceden VAR model tahmin edilmekte ve katsayılar matrisinin ilk k tanesine Wald testi uygulanmaktadır. Toda ve Yamamoto (1995), ilgili serinin durağan, trend etrafında durağan veya eşbütünleşik olup olmadığı dikkate alınmaksızın, bu testin k serbestlik derecesi ile asimptotik 2χ dağılımına sahip olduğunu göstermişlerdir. Burada; k tahmin edilen VAR modelinin uygun gecikme uzunluğunu, d_{max} ise modeldeki değişkenlerin maksimum bütünleşme derecesini ifade etmektedir. Böylece yöntemin ilk aşaması sistemde yer alan değişkenlerin bütünleşme derecesinin tespiti, ikinci aşaması ise sistemin tahminidir. Buna göre yöntemin başarısı, sistemin gecikme uzunluğunun (k) ve serilerin bütünleşme derecelerinin (d_{max}) doğru tespitine bağlıdır. Toda ve Yamamoto tarafından önerilen bu yöntemin önemli bir özelliği, birim kök ve eş-bütünleşme özelliklerinin tespitinde kullanılan potansiyel eğilimli ön testlere gereksinim olmayışıdır. Böylece, ilgili yöntemin kullanımı ile serilerin bütünleşme derecesinin yanlış tespit edilmesi ile ilgili risk minimize edilmektedir.

Çalışmada öncelikle kamu borç stoku ile ekonomik büyüme arasındaki nedensellik ilişkisinin incelenmesi için Toda-Yamamoto analizinde, bütünleşme derecesinin hesaplanması gerekmektedir. Analize dahil edilen kamu borç stoku ve ekonomik büyüme değişkenleri için yapılan ZA birim kök testlerinde tüm değişkenlerin birim köklü olduğu fakat 1. Dereceden farkı alındığında ise durağan olduğu görülmüştür. Bu nedenle $d_{max}=1$ alınır.

Toda-Yamamoto analizinde d_{max} değerinin belirlenmesinden sonra ikinci adım olarak kullanılacak gecikme sayısının belirlenmesi gerekmektedir. Bunun için en büyük gecikme uzunluğu 8 olarak seçilmiş olup Akaike (AIC), Schwarz (SC) ve Hannan Quinn (HQ) gibi kritik değerleri en küçük yapan gecikme uzunluğu belirlenmeye çalışılmıştır.

Tablo 4: VAR Modeli Bilgi Kriterlerine Göre LM-LGE Uygun Gecikme Uzunluğu

Lag	LogL	LR	FPE	AIC	SC	HQ
0	255.2915	NA	1.25e-06	-7.915.360	-7.847.895	-7.888.783
1	297.1867	79.86258	3.83e-07	-9.099.583	-8.897.188	-9.019.849
2	310.8816	25.25000*	2.83e-07	-9.402.549	-9.065224*	-9.269660*
3	315.5741	8.358605	2.77e-07*	-9.424191*	-8.951.936	-9.238.146
4	319.0543	5.981538	2.82e-07	-9.407.947	-8.800.761	-9.168.746
5	321.5273	4.095960	2.97e-07	-9.360.229	-8.618.113	-9.067.872
6	322.6277	1.753748	3.27e-07	-9.269.616	-8.392.570	-8.924.103

Tablo 4'deki sonuçlara bakıldığında, SC ve HQ bilgi kriterlerine göre gecikme sayısı 2 iken HQ bilgi kriterlerinin gecikme sayısının 2 olarak belirlendiği, AIC bilgi kriterine göre ise gecikme uzunluğunun 3 olduğu görülmektedir. Ancak modeldeki değişkenlerin birim kök testlerinde SC bilgi kriteri kullanıldığı için uygun gecikme uzunluğunun 2 olması gerektiği uygun bulunmuştur.

VAR modelinin gecikme sayısı belirlendikten sonra bu gecikme sayısına, modele giren değişkenlerin maksimum bütünleşme derecesi olan ($d_{max}=1$) 1 eklenerek $k + d_{max} = (2+1) = 3$. dereceden VAR modeli çerçevesinde nedensellik analizi yapılmıştır. Oluşturulan VAR modeli SUR (Seemingly Unrelated Regression) metoduyla tahmin edilerek Tablo 5'deki sonuçlara ulaşılmıştır.

Tablo 5: Toda ve Yamamoto Nedensellik Testi Sonuçları

Temel Hipotezler	Gecikme Uzunluğu $k=2, d_{max}=1$	F-İstatistiği	P-Değeri	Sonuç
LGDP \nrightarrow LPD	3	3.4168	0.1811	Ekonomik büyümeden kamu borç stokuna doğru herhangi bir Toda ve Yamamoto nedensellik ilişkisi bulunmamaktadır.
LPD \nrightarrow LGDP	3	15.0047	0.0006	Kamu borç stokundan ekonomik büyümeye doğru %1 anlamlılık düzeyinde tek yönlü Toda ve Yamamoto nedensellik ilişkisi vardır.

Toda-Yamamoto Nedensellik analizi sonuçlarına göre kamu borç stoku ile ekonomik büyüme arasında sadece kamu borç stokundan ekonomik büyümeye doğru tek yönlü bir nedensellik ilişkisi görülmüştür.

5. SONUÇ

2008 yılında bütün dünyayı etkileyen küresel ekonomik kriz sırasında birçok ülkede genişleyici maliye politikaları uygulanmış ve bu ülkelerin bütçe açıkları önemli ölçüde artmıştır. Bütçe açıklarındaki artış da kamu borçlarının artmasına neden olmuştur. Kamu borcunda yaşanan büyük artışlar birçok makroekonomik değişkeni etkilemektedir. Bu doğrultuda kamu borcu ile ekonomik büyüme arasındaki ilişki birçok akademisyenin dikkatini çekmiş ve bu konu ile ilgili çok sayıda araştırma yapılmasına sebep olmuştur. Teorik olarak literatürde genellikle kamu borcu ile ekonomik büyüme arasında ters yönlü bir ilişki olduğu varsayılmaktadır.

Bu çalışmada, ABD ekonomisinde kamu borcu ile ekonomik büyüme arasında uzun dönemli bir ilişki olup olmadığı araştırılmıştır. 1950-2020 dönemleri arasında yıllık veriler kullanılarak yapılan analizlerde, yapısal kırılmaya izin veren Gregory-Hansen Eş-bütünleşme testi uygulanmış ve sonucunda ABD'de kamu borç stoku ile ekonomik büyüme arasında yapısal kırılmalar ile birlikte uzun dönemli eşbütünleşme ilişkisinin olduğu görülmüştür. Yapısal kırılma tarihlerine bakıldığında ise 1964, 1991 ve 2005 yıllarında ABD ekonomisinde konjonktürel krizlerin, doğal afetlerin ve küresel gelişmelerin etkilerinin olduğu görülmüştür. ABD ekonomisinin kamu borç stoku ile ekonomik büyümesi arasındaki ilişkinin sonuçları Toda-Yamamoto Nedensellik Analizi ile test edilmiştir. Bu analize göre kamu borç stoku ile ekonomik büyüme arasında sadece kamu borç stokundan ekonomik büyümeye doğru tek yönlü bir nedensellik ilişkisi görülmüştür.

Sonuç olarak bir ülkede genişletici maliye politika aracı olarak kullanılan kamu harcamalarındaki artış ya da vergilerde yapılan indirimler büyük bütçe açıklarına sebep olabilmektedir. Bütçe açığı ile karşı karşıya kalan hükümetler ise borçlanarak finanse etme yoluna gitmektedirler ve kamu borç stokunda meydana gelen sürdürülemez artış da ekonomik büyümeyi etkilemektedir. Bu doğrultuda, ABD'de 2008 küresel ekonomik krizinden sonra kamu borç stokunda dikkat çeken artış ekonomik büyüme açısından daha dikkatli olunması gerektiğini gözler önüne sermiştir. Özellikle 2009 yılından sonra kamu borç stokunun GSYİH'ya olan oranının günümüze kadar %100'ün üzerinde seyrederek 2020 yılında %143'üleşmesi

ticaret savaşları sırasında yapılan vergi indirimleri ve pandemi ile birlikte artan kamu harcamalarının ortaya çıkardığı bütçe açıklarının önemli boyutlara ulaştığının ve borçlanma ile finanse edildiğinin kanıtıdır. Ekonomik büyüme açısından bu verilerdeki artışların dikkatle takip edilmesi gerekmektedir.

Özet: Günümüzde müşteri ihtiyaç, istek ve beklentileri sürekli olarak değişim göstermekte ve işletmeler bu gereksinimleri eskiden olduğundan daha geniş kanallarla ve teknolojilerle karşılamak durumunda kalmaktadırlar. Bu bağlamda ileri dijital teknoloji uygulamaları; sağladıkları etkileşimler, kolaylıklar, temas noktaları ve işlemler sayesinde işletmelere müşterilerine daha iyi ve daha hızlı hizmet sunma olanağı sağlayarak, gelişen müşteri ilişkileri yönetimi teknolojileri ekosisteminin bir parçası olmaya başlamışlardır. Müşteri ilişkileri yönetimi teknolojileri, müşteri tecrübelerini geliştirmek amacıyla kullanılan organizasyon uygulamalarıdır. Yeni dijital teknolojiler, mevcut müşterilerin kayıtlarının tutularak satış sürecini optimize etme, iletişim bilgilerini analiz etme ve satış fırsatlarını tek bir merkezden yürütme olanağı sağlamaktadırlar. Son yıllarda işletmelerde yeni dijital teknolojilerin kullanımının yaygınlaşmasıyla birlikte daha iyi hizmet sunmak, müşterileri elde tutmak, müşteri bağlılığını ve sadakatini sağlamak, pazarda gelişen fırsatları daha iyi bir şekilde yönetmek için kullanılan müşteri ilişkileri yönetimi de bu durumdan etkilenmiştir. Bu çalışmanın amacı; müşteri ilişkileri yönetiminde kullanılan yeni dijital teknoloji uygulamalarını açıklamaktır. Bu amaç doğrultusunda çalışmada giriş bölümü incelendikten sonra müşteri ilişkileri yönetiminde son yıllarda sıklıkla tercih edilen yapı zekâ, makine öğrenimi, blok zinciri ve bulut bilişim uygulamaları tanımlanarak müşteri ilişkileri yönetimi bağlamında örnekler verilerek değerlendirilmektedir.

Anahtar Kelimeler: Müşteri İlişkileri Yönetimi, Yapay Zekâ, Makine Öğrenimi, Blok Zinciri, Bulut Bilişim

An Assessment of New Digital Technologies Usage in Customer Relationship Management

Abstract: Nowadays, the needs, wants and expectations of customers has continually been changing and enterprises have to meet the expectations with wider channels and technologies than it used to be. In this context, advanced technology applications have become a part of Customer Relationship Management (CRM) technologies ecosystem thanks to interactions, touch points and transactions by providing better and quicker service to the customers. CRM technologies are the organizational applications that are used to enhance existing customer experiences. New digital technologies enable to conduct sales opportunities from a single center, analyze communication information, optimize sales process by keeping records of existing customers. In recent years, along with the proliferation of new technologies usage in enterprises, CRM which is used to provide better service, retain customers, provide customer satisfaction and loyalty, conduct the market opportunities is affected from this situation. The purpose of this study is to explain digital technologies that are used in CRM. In line with this purpose after introduction, artificial intelligence, machine learning, blockchain and cloud computing applications has identified by exemplifying in the context of CRM.

Key Words: CRM, Artificial Intelligence, Machine Learning, Blockchain, Cloud Computing

1. GİRİŞ

İşletmeler, müşteri memnuniyetini sağlamak ve sürekli zorlaşan rekabet şartlarında başarılı olabilmek için “müşteri ilişkileri yönetimi (MİY)” kavramına önem vermek zorundadırlar (Ersöz vd., 2008: 759). MİY, işletmelerin müşterilerini daha sistematik bir şekilde tanıyabilmeleri için kullanılan etkili bir araçtır. Müşterileri memnun ederek ve onları elde tutarak onlardan elde edilecek değeri maksimize etmek ve işletmenin en iyi müşterisini belirlemek için işletmeler MİY’den yararlanmaktadırlar. MİY, müşteri memnuniyetini geliştirme yoluyla işletmenin sürdürülebilir karlılığı başarmasını amaçlayan tekniklerin kullanılmasıdır. MİY’in geliştirilmesi için müşteriler hakkında farklı bilgiler toplanmalı ve saklanmalıdır. Bu bilgiler işletmelerin müşterilerin ihtiyaç, istek ve alışkanlıklarını anlamalarına yardımcı olmaktadır. MİY sistemi, işletmelerin üretim maliyetlerini azaltıp, karlılığı arttırma gibi geleneksel anlayıştan müşterilerin hoşlandığı ve hoşlanmadığı şeylere odaklanan bir anlayış benimsemelerine yol açmaktadır. Kısacası

müşteri ilişkilerinin temel amacı işletmelerin müşterilere odaklanmasını sağlamaktır. Bu bağlamda işletmeler çok yüksek miktarda müşteri verilerini etkili bir şekilde analiz etmek durumunda kalmaktadırlar. Ancak insan çabası ile bu kadar yüksek miktardaki veriyi yönetmek ve analiz etmek oldukça zor bir iş olmaktadır. Bu nedenle işletmeler çeşitli yeni dijital teknolojilerden yararlanmak zorunda kalmaktadırlar (Chatterjee vd., 2019: 145; Chatterjee vd., 2020: 360). Son on yılda her alanda olduğu gibi pazarlama alanında da dijitalleşme gittikçe önem kazanan konuların başında gelmektedir. Artık güç pazarlamacıların elinden çıkmış ve müşterilerin eline geçmiştir. Günümüz müşterileri bilinçli bir şekilde çevrelerindeki işletmeler ve insanlarla bağlantı içerisindedirler. Bu bağlamda MİY, değişimin yeni biçimlerinin ortaya çıktığı ve geleneksel müşteri ve işletme rollerinin hızlı bir şekilde geçerliliğini yitirdiği yeni iş ortamlarına adapte olmak zorundadır. Müşterilere hizmet “yeni pazarlama anlayışı” olarak adlandırılmakta ve esas itibarıyla müşteriler işletmeler için merkezi bir konumda bulunmaktadır. İşletmeler de müşterilere yakın olmak için yeni yollar aramaktadırlar. Dijitalleşme işletmenin pazarlama fonksiyonlarında teknolojik gelişmelerin yaşanmasına neden olmuş, yeni yaklaşımlar iletişimi kolaylaştırmış ve yönetilmesini olanaklı kılmıştır (Lipiäinen, 2015: 2-3). MİY’de geleceğin, müşterilerin sürekli değişen ihtiyaçlarını ve beklentilerini karşılamak, onları takip etmek ve geleceğin pazar eğilimlerini önceden tahmin etmeyi işletmelere olanaklı kılan MİY servis sağlayıcılarına ait olacağı düşünülmektedir. Eğer pazarlama ile ilgili veriler, görüşler ve müşteri odaklı bilgiler daha etkili bir şekilde toplanıp analiz edilebilirse işletmelerin daha etkili pazara açılma stratejileri geliştirebilmeleri mümkün olmaktadır. Böylece işletmelerin, sağlam zemine dayalı geliştirilen pazarlama stratejileri ile pazarı ele geçirebilecekleri söylenebilmektedir. Bu noktada pazarlama uzmanları için yapay zekâ, makine öğrenimi, nesnelerin interneti, bulut bilişim, blok zinciri gibi yeni dijital yenilikleri takip etmek oldukça önemlidir (Lund, 2020: 1). Bu durum, MİY yapısında önemli bir değişimin yaşandığını ve geleneksel müşteri ilişkileri yönetim yaklaşımının yerini “dijital müşteri ilişkileri yönetimi” kavramına bıraktığını göstermektedir (BThber, 2019: 1). Dijital müşteri ilişkileri yönetimi, verimliliği artırmak, müşteri taleplerine daha hızlı cevap vermek ve müşteri memnuniyetini sağlamak için müşteri ilişkileri yönetimi işlemlerinde güncel dijital teknolojilerin kullanılması olarak tanımlanabilmektedir. Bu çalışmada müşteri ilişkileri yönetiminde kullanılan yeni dijital teknoloji uygulamaları açıklanmaktadır. Bu doğrultuda öncelikle çalışmanın kavramsal çerçevesi oluşturulmakta, sonrasında son yıllarda müşteri ilişkileri yönetiminde kullanılan yapay zekâ, makine öğrenimi, blok zinciri ve bulut bilişim uygulamaları örnekler verilerek anlatılmaktadır.

2. KAVRAMSAL ÇERÇEVE

Bu bölümde çalışmada müşteri ilişkileri yönetimi bağlamında uygulamalarının açıklanması amaçlanan yeni dijital teknolojiler olarak kabul edilen yapay zekâ, makine öğrenimi, blok zinciri ve bulut bilişim teknolojileri kısaca tarif edilmektedir.

Yapay Zeka (Artificial Intelligence-AI): Yapay zeka, insanlar gibi düşünmek ve insan eylemlerini taklit etmek için programlanmış makinelerde insan zekasının simülasyonunu gerçekleştirmektir. Öğrenme ve problem çözme gibi bir insan zihniyle ilişkili özellikler sergileyen herhangi bir makineye de uygulanabilmektedir. Yapay zekanın ideal özelliği, belirli bir hedefe ulaşma şansı en yüksek olan eylemleri rasyonelleştirme ve gerçekleştirme yeteneğidir. Başka bir tanıma göre yapay zeka, insan zekası ile daha önce yapılan işleri bilgisayar ile yapma ve karar verme yeteneği ya da geçmiş deneyime ve verilere dayanan rasyonel karar alma sürecidir. Yapay zeka uygulamaları; sağlık (tedavi ve testler), otomotiv (sürücüsüz arabalar), bankacılık ve finans (dolandırıcılıkları önleme), oyun (satranç oynayan bilgisayarlar), ticaret (menkul kıymetlerin arz ve talep fiyatlandırmasının tahmin edilmesini kolaylaştırma) gibi birçok farklı sektör ve endüstride kullanılmaktadır (Frankenfield ve Scott, 2021: 1; Epicor, 2021: 1).

Makine Öğrenimi (Machine Learning): Makine öğrenimi, bir bilgisayar programının insan müdahalesi olmadan öğrenebileceği ve yeni verilere uyum sağlayabileceğidir. Makine öğrenimi, bir bilgisayarın yerleşik algoritmalarını dünya çapındaki ekonomideki değişikliklerden bağımsız olarak güncel tutan bir yapay zeka alanıdır. Kısaca, bilgisayarların programlanmadan kendi başlarına öğrenme ve geliştirme yetenekleridir. Makine öğrenimi, çeşitli nedenlerle farklı sektörlerde kullanılmaktadır. Ticaret sistemlerinin yeni yatırım fırsatlarını belirleyebilmek, pazarlama ve e-ticaret platformlarının kullanıcıların

internet arama geçmişine veya önceki işlemlerine göre kullanıcılarına doğru ve kişiselleştirilmiş öneriler sağlamak, borç veren kurumların kötü kredileri tahmin etmek ve bir kredi riski modeli oluşturabilmeleri, bilgi merkezlerinin dünyanın dört bir yanından çok sayıda haberi işleyebilmeleri ve bankaların dolandırıcılık tespit araçları oluşturabilmeleri için makine öğreniminden yararlanılabilmektedir (Frankenfield ve Khartit, 2020: 1; Epicor, 2021:1).

Blok Zinciri (Blockchain): Blok zinciri, bir veritabanı türüdür. Veritabanı, bir bilgisayar sisteminde elektronik olarak depolanan bir bilgi koleksiyonudur. Veritabanlarındaki bilgiler veya veriler, belirli bilgilerin daha kolay aranması ve filtrelenmesine izin vermek için tipik olarak tablo formatında yapılandırılmaktadır. Elektronik tablolar, sınırlı miktarda bilgiyi depolamak ve bunlara erişmek üzere bir kişi veya küçük bir grup insan için tasarlanmıştır. Buna karşılık, bir veritabanı, herhangi bir sayıda kullanıcı tarafından aynı anda hızlı ve kolay bir şekilde erişilebilen, filtrelenebilen ve değiştirilebilen önemli ölçüde daha büyük miktarda bilgiyi barındıracak şekilde tasarlanmıştır. Büyük veritabanları, verileri güçlü bilgisayarlardan oluşan sunucularda barındırarak bunu başarmaktadır. Bu sunucular bazen birçok kullanıcının aynı anda veritabanına erişmesi için gerekli hesaplama gücüne ve depolama kapasitesine sahip olmak için yüzlerce veya binlerce bilgisayar kullanılarak oluşturulabilmektedir. Bir elektronik tablo veya veritabanı herhangi bir sayıda kişi tarafından erişilebilir olsa da, genellikle bir işletmeye aittir ve nasıl çalıştığı ve içindeki veriler üzerinde tam kontrole sahip atanmış bir kişi tarafından yönetilmektedir. Blok zinciri; bankacılık ve finans (dijital para işlemleri: bitcoin), sağlık (tıbbi kayıtların saklanması), mülkiyet kayıtları, akıllı sözleşmeler, tedarik zinciri, oylama olmak üzere birçok sektörde farklı işlemler için kullanılmaktadır (Conway, 2020: 1).

Bulut Bilişim (Cloud Computing): Bulut bilişim, farklı hizmetlerin İnternet üzerinden sunulmasıdır. Bu kaynaklar, veri depolama, sunucular, veritabanları, ağ iletişimi ve yazılım gibi araçları ve uygulamaları içermektedir. Dosyaları tescilli bir sabit sürücüde veya yerel depolama cihazında tutmak yerine, bulut tabanlı depolama, onları uzak bir veritabanına kaydetmeyi mümkün kılmaktadır. Elektronik bir cihazın internet erişimi olduğu sürece, verilere ve onu çalıştırmak için yazılım programlarına erişimi mümkündür. Bulut bilişim; bilgi işlem, maliyet tasarrufu, artan üretkenlik, hız ve verimlilik, performans ve güvenlik gibi çeşitli nedenlerle insanlar ve işletmeler için popüler bir alternatif olarak görülmektedir. Bulut bilişim işletmeler, kamu kurumları ve bireyler tarafından sıklıkla kullanılmaktadır. Bulut bilişim kullanıcılarına; e-posta adresi, depolama, yedekleme ve veri alma, uygulama oluşturma ve test etme, veri analizi, ses ve video akışı, talep üzerine yazılım sağlama gibi birçok konuda hizmet sunmaktadır (Frankenfield ve Mansa, 2020: 1).

3. YÖNTEM

Bu çalışmada yeni dijital teknolojilerin MİY'e etkisinin araştırılması amaçlanmıştır. Bu amaç doğrultusunda müşteri ilişkileri yönetiminde yapay zeka, makine öğrenimi, blok zinciri ve bulut bilişim teknolojilerine yönelik uygulama örnekleri değerlendirilmiştir. Bu bağlamda çalışmada nitel araştırma yöntemi kapsamında içerik analizi kullanılmıştır. İçerik analizi, bir metne ilişkin tarafsız ve sistematik bir bilgi sunmayı amaçlayan, metinden sonuçlar çıkarmak için bir dizi usulün gerçekleştirildiği bir analiz türüdür. Araştırmada tarama modeli tercih edilmiştir. Tarama modeli, mevcut bir durumun olduğu gibi betimlenmesini öngören bir yaklaşımdır (Koçak ve Arun, 2006: 22; Özdaşlı ve Çelikkol, 2012: 145-146). MİY'de yeni dijital teknolojilere yönelik güncel uygulama örneklerine ilgili web sayfaları taranarak ulaşılmaya çalışılmıştır. Araştırma 2021 yılının Nisan ayında gerçekleştirilmiştir. Çalışmanın iki önemli kısıtı bulunmaktadır. Birincisi, araştırmada tüm uygulamalara ulaşılamamıştır. İkincisi, çalışmada sadece yapay zeka, makine öğrenimi, blok zinciri ve bulut bilişim teknolojilerine yönelik örnekler incelenmiştir. Bu nedenle araştırmada az sayıda örnek üzerinden değerlendirme yapılmaya çalışılmıştır. Bununla birlikte çalışmada belirli bir sektör üzerinden değerlendirme yapmanın yeterli olmayacağı düşünüldüğünden, MİY'de yeni teknolojilerin kullanımı tüm sektörler bazında değerlendirilmiştir.

4. MİY'DE YENİ DİJİTAL TEKNOLOJİLERİN KULLANIMI

Bu bölümde MİY bağlamında yapa zekâ, makine öğrenimi, blok zinciri ve bulut bilişim uygulamaları güncel örneklerden hareketle açıklanmaktadır.

Yapay Zekâ: Yapılan araştırmada MİY’de kullanımına en sık rastlanan yeni dijital teknoloji türünün yapay zekâ olduğu görülmüştür. Yapay zekâ; Amazon, Netflix, Google ve Facebook gibi işletmelere müşterilerini daha kapsamlı bir biçimde tanımalarına yardımcı olmaktır. Yapay zekâ; müşterilerin satın alma geçmişini, müşterilerin çeşitli ürünler üzerinde harcadığı zamanı, müşterilerin sosyal medya görünüşleri ve davranışlarını, yeni ürünleri birbirine tavsiye eden çeşitli müşteriler arasındaki benzerlikleri haritalamada kullanılmaktadır. Teknolojik gelişmelerin tesir gücü sadece daha iyi müşteri tecrübesi sağlamak, teslimatı hızlandırmak isteyen Facebook, Google, Alibaba ve Amazon gibi e-ticaret işletmeleri ile sınırlı değildir. Waymo, LG, Shell ve Amerikan Express gibi işletmeler de daha iyi hizmet sunarak doğru müşteri tecrübesi oluşturmak için ortaya çıkan yeni teknolojilere yatırım yapmaktadır. Dünyadaki her bir işletmenin yapay zekâ kullanımı gelecek on yılda gerçekleşebilecek uzak bir hayal olmasına rağmen birçok işletme yapay zekâyı müşteri ihtiyaç ve taleplerini karşılama ve daha iyi müşteri tecrübesi sağlamada kullanmaya başlamıştır. Apple’ın Siri’si, IBM Watson, çeşitli Chatbot’lar, Google Goggles, Google Photo, Google Buds bunlardan birkaçıdır. Yapay zekâ için veriler en önemli bileşenlerdir. Her saniye pazarlamacılar tarafından milyarlarca veri seti üretilmektedir. Yapay zekâ müşteriler tarafından Twitlenen her söz, yazılan gönderi, paylaşılan video ve resimler, ziyaret edilen siteler ve online satın alınan ürünlerden anlamlar çıkartmaktadır. İşletmeler tüketicilerin ilgilendiği ürünleri sunmak için bu verileri kullanmaktadır. İşletmeler daha iyi bir müşteri tecrübesi sunmak ve satış hacmini arttırmak için yapay zekâyı yatırım yapmaktadırlar (Deb vd., 2018: 758). Müşteri ilişkilerinde yapay zekâ uygulamalarından biri olan chatbotlar yazı ve ses ile kullanıcıların konuşma dilini algılayarak bilgi ve hizmetlere erişimi sağlayan bir yazılım temsilcisidir (Skjuve vd., 2021: 1). Chatbotlar kullanıcı ile belirli bir senaryo üzerinden yazışan ve cevap veren yazılımlardır. Müşterinin deneyimi ve müşterinin yaşayabileceği sorunlar üzerine yazılan algoritmalara göre iletişim kuran chatbotlar müşteri hizmetleri alanında yaygın bir şekilde kullanılmaktadır (Cerebro, 2018: 1). Başarılı chatbot uygulamalarının birçoğu yurtdışında geliştirildiği için ünlü chatbot uygulamalarıyla İngilizce konuşmak gerekmektedir. Buna rağmen Türkiye’de son zamanlarda birçok işletme chatbot uygulamasını kullanır hale gelmiştir. Bunlardan biri sipariş uygulaması olan Getir’in chatbotudur. Faaliyet sınırları içinde sipariş işlemlerinde müşterilere yardım eden chatbot aradığınız ürünleri hızlı bir şekilde sıralamakta ve müşterilere yardımcı olmaktadır (Yeren, 2020: 1). Chatbotlar daha basit isteklere ve sorulara yanıt verirken, yapay zekanın bir diğer uygulaması olan sanal asistanlar neredeyse gerçek bir asistan gibi hizmet edebilmektedir. Bu asistanlardan dünyada en bilinenleri Siri, Google Assistant, Amazon Alexa ve Microsoft Cortonadır (Cerebro,2018: 1). Vakıfbank Wibi, Vodafone TOBİ, Turkcell Yaani ise Türkiye’de kullanılan sanal asistan uygulamalarından birkaçıdır. 5000 soruya yanıt veren Vakıfbank Wibi ile müşteriler para transferi, kredi başvurusu, QR kod ile para-çekme yatırma, sanal kart limit belirleme, piyasa bilgilerini öğrenme ve kredi kart borç bilgileri sorgulama işlemleri yapabilmektedir (Durdak, 2019: 1). Yine aynı şekilde Vodafone TOBİ abonelerin fatura, tarife, cihaz fiyatları gibi konulardaki sorularını hızlı, net ve tutarlı bir şekilde insan müdahalesi olmadan yanıtlayabilmektedir (ChatbotTurkey, 2019: 1).

Makine Öğrenimi: MİY’de kullanılan bir diğer yeni dijital teknoloji türü makine öğrenimidir. Makine öğrenimi ve teknikleri veri analizi aracılığıyla müşteriler ile etkileşim kurma yollarını değiştirmiştir. MİY, müşteri ihtiyaçlarını daha doğru bir şekilde tanımlamak ve ilişki geliştirmek için mevcut ve ileriye yönelik müşteri verisini toplama, analiz etme ve yaymayı kolaylaştırıcı teknolojinin kullanımınıdır. Makine öğrenimi tekniklerini kullanan bazı MİY yazılımları incelendiğinde “Base” adlı yazılım verileri analiz ederek canlı geri dönüşler sunmakta ve satışları arttıran tavsiyeler vermekte, hedef tahmini ve takibi yaparak müşteri geliştirmeye odaklanmaktadır. “SugarCRM” müşteri bilgilerini dışsal veri noktalarını temel alarak otomatik bir şekilde güncellemekte ve müşterilerle özel etkileşimler kurmaktadır. “Zoho” adlı MİY aracı takımın amaca ulaşip ulaşamacağını tahmin etmek için satış faaliyetlerindeki anormallikleri belirlemektedir. Ayrıca bu uygulama satış görevlerinin beklentilere ulaşma olasılığı için optimal süreyi belirlemektedir (Chagas vd., 2018: 452-455). Birçok işletme makine öğrenimi algoritmalarını müşterileri tespit etmek, onları doğru bir şekilde anlamak, müşteri verilerini değerlendirerek belirli bir dönemdeki gelirlerini tahmin etmek için kullanmakta ve pazarlama çabalarına yön vermektedir. Makine öğrenimi olası müşteri kaybı ve bu kaybın sebeplerinin ortaya çıkarılmasında kullanılmaktadır. Makine öğrenimi, algoritmaları ile MİY’de bir konunun analiz edilmesi ve diğerlerinin önüne geçilmesi sağlanmaktadır. Örneğin, bir e-postada “arıza” kelimesi geçtiyse bu e-postaya yanıtlama önceliği kazandırmaktadır (Makers Türkiye, 2021: 1). Türkiye’de makine öğrenimini kullanan işletmelerden biri de Toyota Türkiye’dir. Belirsizlikleri tahmin etmek, pazarlama çalışmalarında genele hitap etmek yerine tekil

müşteri davranışlarını öngörerek proaktif aksiyonlar almak isteyen Toyota Türkiye Microsoft Azure Machine Learning kullanarak ve makine öğrenimi algoritmaları ile kendi verilerini konuşturmuş ve bazı modeller ortaya çıkarmıştır. Bu modelleri daha sonra gerçek verilere uygulayarak geleceğe dönük bazı tahminlemeler ortaya çıkartıp ve bunları operasyonel kararlarında uygulayamaya koymuştur. Sonuçlar kontrol grubuyla karşılaştırıldığında kaynakların daha etkin kullanıldığı, müşteri tarafında da bir değer oluşturulduğunu göstermiştir. Doğru kişiye ulaştıkça o kişiler için değer oluşturulurken, teklifleriyle ilgilenmeyecek kişilerin vaktini daha az alarak yoğun iletişim ortamında kıymetli bir etki oluşturmuştur (Microsoft, 2019: 1).

Bulut Bilişim: MİY, işletmelere mevcut ve gelecekteki müşterileri ile işbirliğini izleme olanağı sağlayan bir yazılım veya uygulamadır. Bu bağlamda bulut teknolojisinde herbir bilgi bulutta güvenli bir şekilde depolanmaktadır (Manchar ve Chouhan, 2017: 1). Bulut bilişim, sunucu ağlarının kullanımınıdır. Bulut ile işletmeler izni olan herhangi bir cihazdan tüm dosya ve verilerine erişebilme fırsatını yakalamaktadırlar. Bulut temelli MİY sistemleri küçük işletmelerden kurumsal işletmelere kadar tüm işletmelerin etkin müşteri yönetimi aracılığıyla amaçlarına ulaşmasına yardımcı olmak için tasarlanmıştır. Bulut sunucuları ile tüm müşteri yaşam eğrisi ve satış sürecinin tamamına odaklanmak kolaylaşmıştır (eZnetCRM, 2021: 1). İşletmelerin ölçüm ve hesaplama işlerini masaüstünden buluta taşımalarının onlar için faydalı olduğu görüldüğü için günümüzde artık birçok işletme MİY yazılımlarından kullanıcıların internet aracılığıyla da kaynaklara ulaşabilmesini istemektedir (Kumawat, 2019: 1). Bilgileri bulutta tutma işletmelerin hareket halinde iş yapmalarına olanak sağlayan mobil fonksiyonelliği olanaklı kılmış ve internet erişimi ile bulutta kayıtlı bilgilerin güncel olmasını sağlamıştır (SecondCRM, 2021: 1). İşletme çevresinde diğer işletmeler artık bilgi teknolojilerine yatırım yapmak yerine işletmenin bilgi teknolojileri ile ilgilenen bulut bilişim sağlayıcıları ile iş yapmaktadır. MİY doğrudan sunucuya bağlandığında kullanıcı için gerekli olan sadece bir internet bağlantısı olmaktadır. Böylece işletme süreçleri de daha mobil olmaya başlamaktadır. Bulut bilişimin işletmeler için bir diğer faydası ise düşük maliyetlerdir. Çünkü bulut bilişimi kullanan MİY yazılımı sunucuda ve internette mevcut bulunmakta ve kullanıcı yazılımı satın almak zorunda kalmamaktadır. İşletmeler yazılımı sadece web sunucusu üzerinden kullanmaktadır. İşletmedeki herbir bilgisayara MİY yazılımının kurulmasına gerek duyulmamaktadır. İşletme sadece fiili bir şekilde kullanacağı depolama ve bulut kapasitesi için ödeme yapmaktadır. Bulut bilişim işletmelerin veri ve bilgilerini daha etkili bir şekilde yönetmesine ve daha iyi müşteri hizmeti vermesine olanak sağlamaktadır (Nêmeček ve Vaňková , 2011: 255-257). Bulut bilişim uygulamalarından biri olan Salesforce işletmeler için MİY uygulaması ve kapsamındaki satış, destek ve raporlama yazılımları sunmaktadır (Keloğlu, 2012: 15). Dünyanın önde gelen markaları, Salesforce uygulaması ile dijital çağa ayak uydurabilmekte ve müşterilerine ve onların taleplerine odaklanabilmektedir. Amerikan Express, AT&T, Coca Cola, HP, Toyota, Verizon ve Kellogg's gibi markalar zaman tasarrufu, satışa daha çok vakit ayırabilme, müşteriye odaklanma nedeniyle bu uygulamayı kullandıklarını belirtmişlerdir (Inspark, 2016: 1).

Blok Zinciri: Yeni dijital teknolojilerden bir başkası olan blok zinciri teknolojisi, müşteri ilişkileri veri tabanını bütünleştirme ve güvence altına almada kullanılabilen teknolojik olarak üstün bir yapısal araçtır. Bir blokzinciri gerçek anlamda herbir bloğun işlem kayıtlarını içerdiği blokların zinciridir. Herbir blok komşu bloğa kriptoyla korunmuş bir şekilde bağlıdır. Bu durum, katılımcı kullanıcıların ağı kullanmalarını güven altına almakta ve izinsiz girişleri kısıtlamaktadır. Birçok MİY veri tabanları artık bulut sunuculardadır. Bulut güvenlik protokolleri gelişme göstermesine rağmen, bulut güvenliği hakkındaki endişeler tamamiyle giderilememiştir. Bulut çoğunlukla merkezileşmiş bir sistemdir. Bunun aksine blokzinciri düzenli olarak senkronize edilen ağlar arasında dağıtılmış ve merkezileşmemiş bir sistemdir. Sonuç olarak blokzinciri ile dolandırıcılık ve verilere ulaşma şansı ortadan kalkmaktadır. Blok zinciri merkezileşmemiş bir varlık olduğundan, işletme güvenli ve şeffaf bir şekilde müşterileriyle ilgilenebilmektedir. Kişisel veri güvenliği endişelerinin artması ile MİY sistemleri müşteri verilerini nasıl ele alacaklarını belirlemek zorunda kalmıştır. Bundan dolayı merkezileşmemiş ve güvenli yapısından dolayı blok zinciri önemli hale gelmiştir. Blok zinciri kişisel bilgileri saklayıp şifrelediği için kullanıcılara büyük bir kontrol gücü sağlamaktadır. Dünya genelindeki MİY kullanıcıları bir ölçüde doğru olmayan ve kopya verilerle başa çıkmak zorunda kalabilmektedir. Mevcut blok zinciri ile bir müşteri kişisel bilgileri, geçmiş işlemleri ve abonelikleri gibi doğru ve birleştirilmiş resmini temsil eden kendi kişisel anahtarlarına sahip olabilmektedir. Ayrıca müşteri tecrübelerine değer katarak karları arttıran sadakat programları da kriptoparalara benzer bir yolla blok zinciri kullanılarak yeniden hayal edilip tekrar canlandırılabilir. Çünkü blok zinciri ile müşteriler merkezileşmemiş tüm markalar ile uyumlu tek

bir cüzdan kullanabileceklerdir. Böylece müşteri tüm tecrübeleri üzerinde büyük bir kontrole sahip olmakta ve markalar müşterilere daha iyi deneyim sunmak için yarışmaktadırlar (Meyers, 2021: 1; Jones, 2021: 1). Akbank geleneksel yöntemlere göre daha hızlı ve esnek yapısı, döviz kurlarını önceden sunabilmesi, ödemelerin takip edilebilir olması ve müşteriye 7/24 hizmet sunma avantajlarından dolayı blok zinciri teknolojisini kullanmayı tercih etmiştir. Ayrıca Borsa İstanbul (BIST) veritabanlarına yeni müşteri eklemeyi, mevcut bilgileri değiştirmeyi ve doküman yönetimlerini blok zinciri üzerinden gerçekleştirmeyi hedeflemektedir (Altay Topçu ve Sumerli Sarıgül, 2020: 37; Demirel, 2017: 1).

5. SONUÇ

Günümüzde MİY yeni teknolojiler tarafından yürütülmektedir. Hem MİY sistemleri geliştiren işletmeler hem de MİY kullanan işletmeler aynı derecede teknolojiye bağlıdır. Yapay zekâ, makine öğrenimi, bulut bilişim, blok zinciri, artırılmış gerçeklik, nesnelerin interneti gibi yeni dijital teknolojilerin kullanımı tedarik zinciri ve MİY gibi alanlarda işletmelerin hayatta kalmaları için önemli hale gelmiştir. Teknolojinin rolü robot üretimi, milyarlarca kaydı yönetme ve saklama, bilginin yönetimi (toplanması, işlenmesi ve dağıtımı) müşterilere satış sonrası daha iyi destek sunma ve karar verme ile sınırlı değildir. Teknoloji ayrıca müşterilerin tanınmasını, müşterilerin ihtiyaç, istek ve beklentilerinin değerlendirilmesini ve müşterilere yapay zekâ gibi yeni dijital teknoloji uygulamaları ile satın almak isteyebilecekleri ürünler (değer) sunmayı olanaklı kılmaktadır (Güleş, 2004: 241).

Bu çalışmada yeni dijital teknoloji türleri olarak kabul edilen yapay zekâ, makine öğrenimi, blok zinciri ve bulut bilişimin MİY’de kullanımı incelenmiştir. İnceleme sonucunda iletişim, bilişim ve bankacılık olmak üzere birçok sektörde işletmelerin farklı şekillerde MİY’de yeni dijital teknolojileri kullandıkları belirlenmiştir. Bununla birlikte MİY’de kullanımına en çok rastlanılan yeni dijital teknoloji türünün yapay zekâ olduğu tespit edilmiştir. Yapay zekânın kullanımına yönelik birçok örnek bulunmaktadır. Apple’ın Siri’si, IBM Watson, Chatbot, Google Goggles, Google Photo, Google Buds, Vakıfbank Wibi, Vodafone TOBİ ve Turkcell Yaani bunlardan bazılarıdır. Yine en çok kullanılan yapay zekâ uygulamasının Chatbot olduğu görülmüştür. Diğer yandan diğer teknolojilerin kullanımına yönelik makine öğrenimi için Base, SugarCRM, Zoho ve Toyota Türkiye Microsoft Azure Machine Learning; bulut bilişim için Salesforce (Amerikan Express, AT&T, Coca Cola, HP, Toyota, Verizon ve Kellogg’s); blok zinciri için Akbank ve BIST’in uygulamaları örnek olarak verilebilmektedir. Tüm bu uygulamalarda amaç müşterileri tanımak, müşterilerle ilgili doğru bilgilere ulaşarak müşterilere doğru ürünler sunmak, müşterilerle doğru iletişim kurarak müşterilerin istek ve beklentilerine, şikâyetlerine hızlı ve etkin geri dönüşler yapmak kısaca müşteri memnuniyetini sağlamaktır. Böylece işletmeyi uzun vadede başarılı kılmaktır.

Sonuç olarak bu çalışmada son yıllarda yeni dijital teknolojilerin MİY’de yoğun bir şekilde kullanıldığı anlaşılmıştır. Bu çalışmayı değerli kılan literatürde benzer çalışmaların azlığıdır. Ayrıca tüm dijital teknolojilerin aynı anda değerlendirildiği bir çalışmanın olmamasıdır. Çalışmanın bu yönüyle literatüre katkı sağlayacağı düşünülmektedir. Diğer yandan çalışma, yapay zekâ, makine öğrenimi, bulut bilişim ve blok zinciri uygulamaları ile sınırlandırılmıştır. Ancak artırılmış gerçeklik ve nesnelerin interneti gibi teknolojilere yönelik uygulamaların da olabileceği düşünüldüğünden, bundan sonraki çalışmaların diğer dijital teknolojileri de kapsayacak şekilde yapılmasının yararlı olacağı umulmaktadır.

Makine Öğrenmesi Tahmin Algoritmaları: Borsa İstanbul 100 Endeksi

Zeynep ŞENGÜL¹

¹Trakya Üniversitesi, SOBE, YL Öğr., zzeynepsengul@gmail.com, ORCID: 0000-0002-0461-6203

Özet: Bireysel ve kurumsal yatırımcılar yatırım kararları almadan önceden yatırımları hakkında geleceğe yönelik bilgi sahibi olmak istemektedir. Hisse senetleri hakkında bilgi sahibi olmak isteyen yatırımcılar hisse senetlerine ait borsa endekslerini takip etmekle beraber teknik ve temel analizleri gerçekleştirmektedir. Bu çalışmada BIST-100 endeksine ait 2019 – 2020 yılları arasındaki günlük veriler kullanılarak AR(I)MA yöntemi ile öngörü yapıldıktan sonra tahmin çıktısının yetersiz olduğu sonucuna varılmaktadır. Bu sebeple makine öğrenmesi algoritmaları kullanılarak regresyon tahmini gerçekleştirilmektedir. Analiz sonucunda hata istatistik değerleri karşılaştırılarak makine öğrenmesi algoritmalarının AR(I)MA tahmin yönteminden daha az hata değerlerine sahip olduğu görülmektedir. Makine öğrenmesi algoritmalarından en iyi hataya sahip olan tahmincinin RBF-YSA olduğu sonucuna varılmaktadır. Geleneksel tahmin yöntemlerinin aksine öngörü tahminlerinde makine öğrenmesi algoritmalarının ekonometrik analizlerde kullanımı tartışma konusu olsa dahi yapılan çalışmalarda elde edilen bulguların olumlu sonuçlar vermesi makine öğrenmesi algoritmalarının ekonometrik analizlerde zamanla daha çok yer alabileceğini göstermektedir.

Anahtar Kelimeler: AR(I)MA Modeli, Makine Öğrenmesi, BIST-100 Endeksi

Machine Learning Prediction Algorithms: Borsa İstanbul 100 Index

Abstract: Individual and corporate investors want to know about their investment in advance without making investment decisions. Investors who want to know about stocks follow stock market indexes and conduct technical and basic analyzes. In this study, it is concluded that the output of forecast is insufficient after prediction is made using the AR(I)MA method using the daily data from 2019–2020 of the BIST-100 index. Therefore, the regression prediction is carried out using machine learning algorithms. The analysis shows that machine learning algorithms have less error values than the AR(I)MA estimation method by comparing error statistics values. It is concluded that the predictor who has the best error from machine learning algorithms is YSA-RBF. Unlike traditional predictions, the use of machine learning algorithms in prediction estimates in econometric analysis is a topic of discussion, but the positive results of the findings in the studies have shown that machine learning algorithms can be more involved in econometric analysis over time.

Key Words: AR(I)MA Model, Machine Learning, BIST-100 Index

1. GİRİŞ

Bireysel ve kurumsal yatırımcılar yatırım kararları alırken en iyi yatırım kararını almak istemektedir. Bu sebeple gelecekte elde edilmesi istenen karın doğru bir şekilde analiz edilmesi kullanılan tahmin yöntemleri için önem arz etmektedir. Elde edilen tahminlere göre kararlar şekillenmekte ve yatırım kararları arasındaki maksimum faydayı sağlamak koşulu altında seçim yapılmaktadır. Ülkelerin uyguladıkları maliye ve para politikalarının yanı sıra piyasalarda ortaya çıkan belirsizlik ve yayılma etkisi borsa endeksleri (BIST-100, vb. gibi) üzerinde artış ya da azalış etkili olmaktadır. Piyasa yapısının önemli bir göstergesi olarak kabul edilen BIST-100 endeksindeki ani artış ve azalışlar risk yapısını ortaya çıkartmaktadır. Risk yapısının belirlenmesi ve gelecekte oluşması ön görülen riskin göze alınarak işlem yapılması hem piyasa hakkında iyi bir gözlem ve bilgi yapısını gerektirirken; tahmin aşamasında kullanılan yöntemlerinde tutarlı ve etkin olmasını gerektirmektedir. İktisadi ve finansal yapı içinde ele alınan serilerin tahmin ve öngörü aşamalarında AR(I)MA ve benzeri yöntemler ele alınmakla birlikte, bulanık mantık modellerinin yanı sıra derin öğrenme ve makine öğrenmesinin gelişimi ile farklı algoritmalar da (yapay sinir ağı, destek vektör regresyonları, rassal orman) kullanılmaktadır.

BIST-100 endeksi tahmin ve öngörü aşamasında AR(I)MA modellerine kıyasla makine öğrenmesi algoritmalarının daha iyi sonuç verdiği ifade edilebilmektedir. Kutlu ve Badur (2009), İMKB endeks değerlerini yapay sinir ağı ile tahmin ederek başarı sonuç elde ettiğini ifade etmektedir. Yakut, Elmas ve Yavuz (2014), hisse senedi tahmininde ileri beslemeli yapay sinir ağı ve destek vektör makinelerini kullanarak hisse senedi tahmininde bu yöntemlerin etkin şekilde kullanılabileceğini vurgulamaktadır. Yiğiter, Sarı ve Başakın (2017), hisse senedi fiyat tahminlerinde yapay sinir ağı ve bulanık mantık

yöntemlerinin etkin sonuçlar vermediğini ve eğitim çizgisi uydurularak daha etkin sonuçlar elde edildiğini belirtmektedir. Şahin(2018), kripto para fiyat tahmininde AR(I)MA ve YSA modellerini inceleyerek YSA-MLP modelinin ARIMA modelinden daha iyi sonuç verdiğini ifade etmektedir. Karasu, Altan, Saraç ve Hacıoğlu, (2018), kripto para fiyat tahmininde destek vektör makinesi modelinin tahmin performansının doğrusal regresyon modelinden daha yüksek olduğunu vurgulamaktadır. Akşehir ve Kılıç (2019), karar ağacı, çoklu regresyon ve rassal orman yöntemleri kullanarak hisse senetlerinin başarılı tahminlerinin elde edildiğini göstermektedir. Sarıkaya (2019), hisse senetleri tahmininde yapay sinir ağı modellerinin kübik regresyon modeline göre daha iyi sonuç verdiğini ifade etmektedir. Kantar (2020), BIST-100 endeksinin aylık verilerini kullanarak AR(I)MA ile yapay sinir ağı ile öngörü tahmini gerçekleştirerek yapay sinir ağı yönteminin daha iyi sonuç verdiğini çalışmasında göstermektedir. Ustalı Koç, Tosun ve Tosun (2021), BIST-30 endeksine uygulamakta oldukları makine öğrenmesi algoritmaları ile gelecek fiyat tahmini yapılmakta olup olumlu yönde performans gösterdiğini ifade etmektedir.

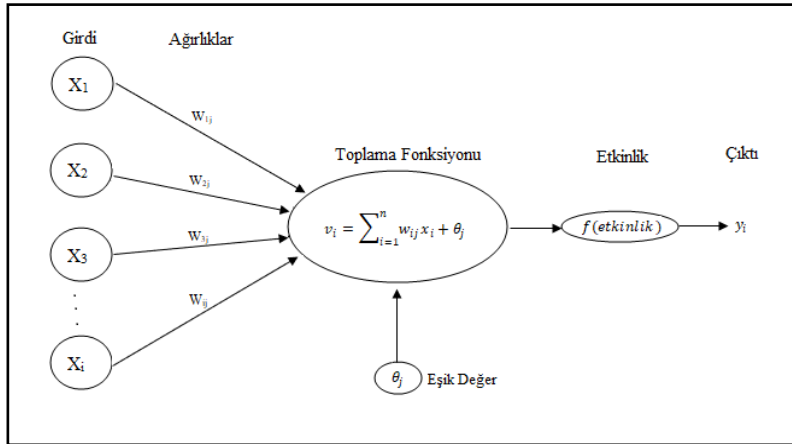

Çalışma kapsamında, 2019 – 2020 dönemleri arasında günlük verilerden faydalanılarak en uygun tahmin ve öngörü yönteminin belirlenmesi amaçlanmaktadır. İlk kısımda konuya giriş yapıldıktan sonra ikinci kısımda BIST-100 tahmin ve öngörüleme işlemlerinde ele alınan modellerin teorik yapısı hakkında bilgi verilmektedir. Üçüncü kısımda BIST-100 endeksine ilişkin en uygun model yapısına karar verildikten sonra son kısım sonuç ve önerilere ayrılmaktadır.

2. EKONOMETRİK METODLAR

2.1. Yapay Sinir Ağları

Yapay sinir ağı (YSA), insan beyninin çalışma mekanizmasından esinlenerek problemlere çözüm getirmek için oluşturulmuş esnek bir matematiksel modeldir (Wang, Chang ve Tzeng, 2011). Yapay sinir ağları, sınıflandırma, regresyon tahmini, kümeleme gibi birçok probleme ilişkin çözümleri geçmiş bilgilerden yararlanarak öğrenme yolu ile sağlamaktadır (Efendigil, Önüt ve Kahraman, 2009: 6699).Yapay sinir ağları biyolojik sinir hücreleri incelenerek, sinir hücrelerinin yapısını ve çalışmasını taklit eden bir bilgisayar programıdır. Kendi kendine öğrenme, ezberleme ve bilgiler arasında ilişkiler kurma yeteneğine sahip olmaktadır (Elmas, 2003).

Şekil 1: Yapay Sinir Ağı

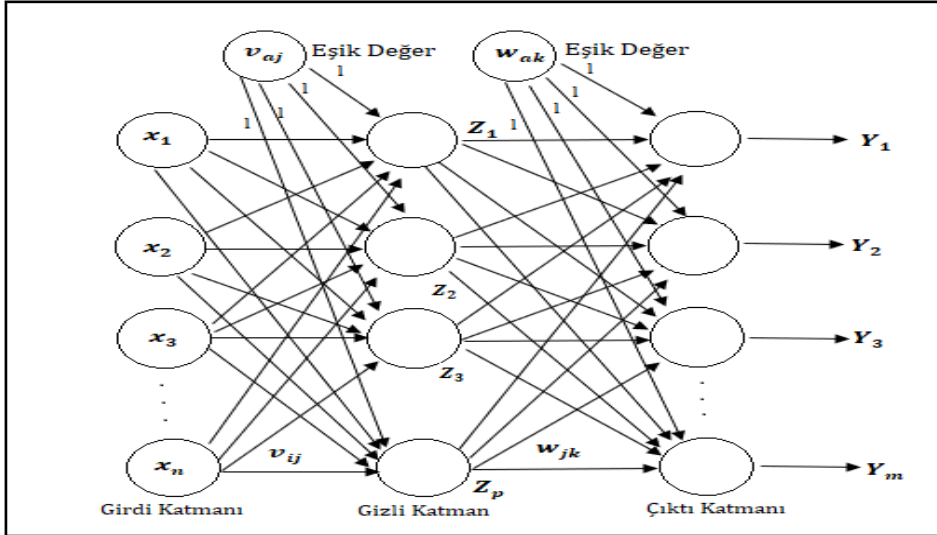

Şekil 1’de, bir yapay sinir ağı hücresine dışarıdan işlenmek üzere gelen verileri ifade eden $(x_1, x_2, x_3, \dots, x_i)$ girdi değişkenleridir. Bağlantılar üzerindeki ağırlıklar $(w_{1j}, w_{2j}, w_{3j}, \dots, w_{ij})$ sinir hücresine gelen bilginin önemini ve hücre üzerindeki etkisini göstermektedir. Tahminin açısından ağırlıkların büyüklüğü önemli olduğundan, ağırlıklar sıfır etrafında tutulmaya çalışmakta ve önemsiz olanlar dışlanarak kalan ağırlıklar ile tahmin gerçekleştirilmektedir. Ağırlıklar çarpılarak bir toplayıcıya (Σ) uygulanarak net girdi hesaplanmaktadır, elde edilen toplam, etkinlik fonksiyonundan (f) geçirilerek çıktı (y_i) elde edilmektedir. Burada; w_{ij} ağırlıkları; x_i girişleri; θ_j eşik değerini; (y_i) çıkışı; (f) ise etkinlik fonksiyonunu göstermektedir.

Ağın öğrenmesi hakkında bilgi veren çıktı sonuçları ne kadar iyi olursa sinir hücrelerinin eğitim performansı o kadar iyi çalışmaktadır. Yapay sinir ağlarında veri 2'ye ayrılarak eğitim ve test verileri oluşturularak analiz gerçekleştirilmektedir. (Öztemel, 2003).

Yapay sinir ağları birçok farklı alanda kullanılabilir, kullanımı en yaygın olan yapay sinir ağ modelleri; çok katmanlı ileri beslemeli (MLP) ve radyal tabanlı fonksiyon (RBF) modellerinin olduğu literatür taramasında görülmektedir. Uygulama kapsamında MLP ve RBF analiz edilmektedir.

Şekil 2: Çok Katmanlı İleri Beslemeli Yapay Sinir Ağı

MLP modelinin yer aldığı Şekil 2'de görüldüğü gibi ilgili problemin yapay sinir ağına alındığı yer girdi katmanını oluştururken, çıktı katmanı problemin işlendiği ağın içindeki bilgileri dışarıya ilettiği katman oluşturmaktadır. Bu iki katman arasında gizli katman yer almaktadır.

Çok katmanlı ileri beslemeli yapay sinir ağı, girdi vektörünü x , çıktı vektörünü y , ilk katmanın ağırlık matrisini A , ilk katmanın eğilim değerini a , ikinci katmanın ağırlık matrisini B , ikinci katmanın eğilim değerini b ve doğrusal olmayan elementleri f göstermek üzere,

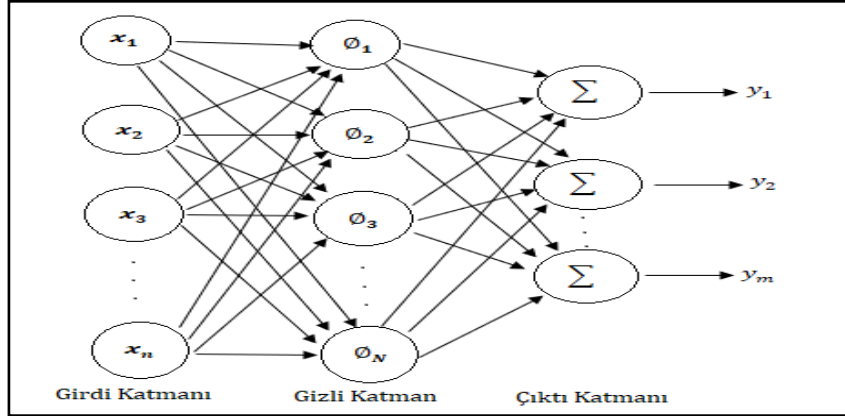

$$y = f(s) = Bl(As + a) + b \quad (1.1)$$

şeklinde gösterilebilmektedir (Öğücü, 2006: 46).

Radyal tabanlı yapay sinir ağları (RBFN) ara katmanında aktivasyon fonksiyonu olarak kullanılan ($f(x) = e^{-x^2}$) fonksiyondan adını almaktadır. Radyal tabanlı fonksiyon ağları MLP'ye benzemektedir. Yapay sinir ağı türlerinden farklı olarak tek gizli katmana sahip olmaktadır. Katman sayısı ağ yapısından kaynaklı nedenlerden dolayı değiştirilememektedir (Sivanandam, Sumathi ve Deepa, 2006).

Elde edilmek istenen RBF ağı, girdi verisine bağlı olarak gizli katmanda uygun değerlere sahip radyal tabanlı fonksiyonları seçerek, çıkış katmanında bu fonksiyonların ürettiği çıktıların uygun ağırlık değerleriyle doğrusal birleşimlerini oluşturup girdi ve çıktı arasındaki ilişkiyi belirleme süreci olarak açıklanabilmektedir (Kaynar, Taştan ve Demirkoparan, 2010: 564).

Şekil 3: RBF Yapay Sinir Ağı

Giriş katmanındaki veriler ağırlık değerleri ile çarpılmadan gizli katmana gönderilmektedir.

$x \in R^{n \times 1}$ yapay sinir ağının girdi vektörünü, $\phi_k(\cdot) \in R^+$, radyal tabanlı aktivasyon fonksiyonunu, $c_k \in R^{n \times 1}$ girdi vektör uzayının bir alt setinden seçilen radyal tabanlı merkezleri, $\|\cdot\|_2$ girdi vektörünün merkezden ne kadar uzak olduğunun bir ölçütü olan öklidyen normunu, w_{ik} çıktı katmanındaki ağırlıkları, N ise gizli katmanda bulunan hücre sayısını ve y çıktıyı göstermek üzere radyal tabanlı yapay sinir ağı modeli,

$$y_i = \sum_{k=1}^N w_{ik} \phi_k(x, c_k) \quad (1.2)$$

olarak gösterilmektedir (Okkan ve Dalkılıç, 2012, s.5959).

2.2. Destek Vektör Makinesi

Makine öğrenmesi algoritması olan ve istatistiksel temele dayalı destek vektör makineleri (DVM) sınıflandırma yöntemi olarak ortaya çıkmaktadır (Vapnik, 1995). DVM başlangıçta iki doğrusal verinin sınıflandırılması için kullanılırken problemlerin ikiden fazla sınıfa ayrılması gerektiği düşüncesiyle çoklu sınıflandırma çalışmaları gerçekleştirilmektedir (Wang ve Xue, 2013). DVM'yi tahmin etmede kullanılan kapasite (C), esneklik (ξ) ve kernel parametreleri DVM'lerin tahmininde bu çok iyi ayarlanması gerekmektedir (Popov ve Sautin, 2008).

DVM'de sınıfların ayrılmasında en büyük aralık değerine sahip olunması ve verilerin doğru bir şekilde ayrılabilmesi için kullanılan sınıflandırıcı fonksiyon, A veri kümesini göstermek üzere,

$$(x_1, y_1), (x_2, y_2), \dots, (x_i, y_i), \quad x \in R^A, \quad y \in \{+1, -1\} \quad (2.1)$$

olarak verilmektedir. x_i girdi vektörünü, y_i örnek sınıfları, w ağırlık vektörünü ve b eğilim değerini göstermek üzere,

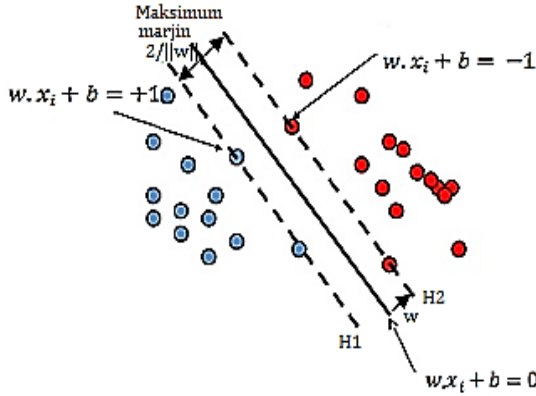

$$f(x) = w \cdot x_i + b = 0 \quad (2.2)$$

$$w \cdot x_i + b = +1 \quad (2.3)$$

$$w \cdot x_i + b = -1 \quad (2.4)$$

eşitlikleri yazılabilmektedir. Eşitlik 2.3 'de verilen, hiper düzlemin üzerinde yer alan verilerin $+1$ sınıfına dahil olduğunu eşitlik 2.4'de verilen hiperdüzlemin altında yer alan verilerin -1 sınıfına dahil olduğunu ifade etmektedir.

Şekil 4: Doğrusal Ayrılabilen DVM – Uygun Hiper Düzlem

Kesikli çizgilerin üzerindeki veriler destek vektör makinelerini ifade etmektedir. Kesikli çizgilerin üstünde kalan veriler $w \cdot x_i + b \geq +1$ fonksiyonuna, altında kalan veriler ise $w \cdot x_i + b \leq -1$ fonksiyonuna dahil olmaktadır. H1 ve H2 hiper düzlemlerinin arasında eğitim verisi bulunmamaktadır. Hiperdüzlem arasındaki mesafe uzunluğu $2/||w||$ değerine eşit olmakta ve en uygun ayırma düzlemini belirleyebilmek için mesafe uzunluğunun maksimum olması istenmektedir.

DVM’de doğrusal ayrılan modellerin yanı sıra doğrusal olmayan modellerde incelenebilmektedir. Doğrusal modelleme de belirli oranda hata ile sınıflandırma yapılabilmektedir. Bazı durumlarda veri çok daha fazla hatalar ile doğrusal olarak ayrılmadığını, uygun hiperdüzlemden olan sapmaların çok daha fazla olduğunu göstermektedir. Bu durumda doğrusal modeli kullanmak bize doğru tahmin sonucunu vermemektedir. Doğrusal olarak ayrılmada çok fazla sapma olduğunu görülmekte olan verilerde doğrusal olmayan yöntemler kullanılmaktadır. Bu yöntemlerde problemin çözümüne ilişkin girdi uzayındaki orijinal veriyi daha yüksek boyutlu uzaya taşıyarak doğrusal olarak ayırmayı hedeflemektedir.

Şekil 5: Verilerin Yüksek Boyutlu Uzaya Aktarımı

Girdi Uzayı

Örnek Uzayı

$$x \in R^N \rightarrow x \in R^N \rightarrow \phi(x) \in R^f \quad (2.5)$$

Orjinal verinin daha yüksek boyutlu bir uzaya taşınması ϕ fonksiyon ile ifade edilmektedir. Doğrusal denklemimizde düzenleme yaptığımızda, doğrusal olmayan denklem elde etmek için x yerine $\phi(x)$ yazmamız gerekmektedir.

$$w \cdot \phi(x_i) + b = 0 \quad (2.6)$$

Hiper düzlemin uygun biçimde ayırdığı veriler ise;

$$w \cdot \phi(x_i) + b \geq +1 \quad (2.7)$$

$$w \cdot \phi(x_i) + b \leq -1 \quad (2.8)$$

şeklinde denklem oluşturulmaktadır.

DVM’ de verilerin yüksek boyutlu bir uzaya aktarılmasında tüm değerlerin tek tek çarpım yapılarak değerlerin hesaplanması zorlaşmaktadır. Bu durum için çekirdek fonksiyonu kullanılmaktadır. Çekirdek fonksiyonu, orijinal verinin belirli kurala göre yüksek boyutlu uzaya taşınmasını sağlamaktadır. Yeni uzaydaki verilerin $\phi(x_i) \cdot \phi(x_j)$ iç çarpımı eğitim algoritmasını etkileyecektir.

Bu durumda çekirdek fonksiyonu;

$$K(x_i, x_j) = \phi(x_i) \cdot \phi(x_j) \quad (2.9)$$

ifade edilmektedir. Çekirdek fonksiyonlarında kullanılan “Çekirdek hilesi” yöntemi sayesinde (ϕ) ne olduğu bilgisine ihtiyaç duyulmamaktadır. Eşitlik 2.10 ‘da ϕ fonksiyonunu hesaplama gereği duymadan yüksek boyutlu bir uzaya veriler aktarılabilir. Bu durumda uygun hiperdüzlemin oluşturulması için kullanılan formül ise;

$$f(x) = \left(\sum \alpha_j y_j \phi(x_i) \phi(x_j) \right) + b = \sum \alpha_j y_j K(x_i, x_j) + b \quad (2.10)$$

şeklinde tanımlanmaktadır.

DVM genellikle sınıflandırma problemlerinde kullanılmakta olup problem çeşitliliği ile Smola ve arkadaşlarının yapmış olduğu çalışmalar DVM’ler regresyon problemlerinde de kullanılmaktadır (Smola ve Schölkopf, 2004). Regresyon tahmini ile sınıflandırma arasında pek fark bulunmasada, regresyon tahmininde amaç, uygun parametreleri belirlemek ve en iyi şekilde tahmin gerçekleştirmektir.

DVR’de de doğrusal ve doğrusal olmayan model tahminleri gerçekleştirilmektedir. Regresyon problemlerinin çözümünde sınıflandırılma için kullanılmakta olan $f(x) = w \cdot x_i + b$ fonksiyonuna hata parametresi (ε) eklenmektedir. Regresyon tahmininde girdi değerleri (x_i) çıktı değerleri ise (y_i) olduğu varsayımıyla;

$$x_i \in R^N, y_i \in R^N \quad i = 1, \dots, n \quad (2.11)$$

şeklinde tanımlanmaktadır. Hata parametresi (ε) her iki tarafa eklendikten sonra elde edilen fonksiyon;

$$y_i - wx_i - b \leq \varepsilon \quad (2.12)$$

$$-y_i - wx_i - b \leq \varepsilon \quad (2.13)$$

şekilde kullanılmaktadır.

Şekil 6: Doğrusal Destek Vektör Regresyonu

Doğrusal destek vektör regresyonunda x ve y arasında doğrusal ilişkinin var olduğu kabul edilmektedir. Regresyon yöntemi ε ’den küçük olması gerekmektedir. Küçük olduğu müddetçe hatayı önemsemeyerek tahmin gerçekleştirmektedir. En uygun regresyon denklemi $1/2||w||^2$ minimize edilerek bulunabilmektedir. Tolerans değerleri (ξ) tüm veri için bir $f(x)$ fonksiyonun bulunmadığı durumu ifade etmektedir.

Şekil 7: Doğrusal Olmayan Regresyon Fonksiyonu

Doğrusal regresyon modeli her veri tipi için uygun olmamaktadır. Bu sebeple doğrusal olmayan regresyon tahmini kullanılmaktadır. DVM’ de de bahsettiğimiz gibi doğrusal olmayan verileri yüksek

boyutlu uzaya taşınmaktadır. Doğrusal olmayan DVR’de böyle işlemektedir, veriler yüksek boyutlu özellik uzayında uygun fonksiyon bulmaya çalışmaktadır. Doğrusal olmayan regresyon tahmini gerçekleştirilebilmek için $x_i \cdot x_j$ çarpımı yerine DVM’de de kullanılmakta olan doğrusal olmayan çekirdek fonksiyonu $K(x_i, x_j) = \phi(x_i) \cdot \phi(x_j)$ yazılmaktadır. Doğrusal olmayan regresyon tahmini fonksiyonu;

$$f(x) = \sum_{i=1}^L (\alpha_i^+ - \alpha_i^-) K(x_i, x) + b \quad (2.14)$$

elde edilmektedir.

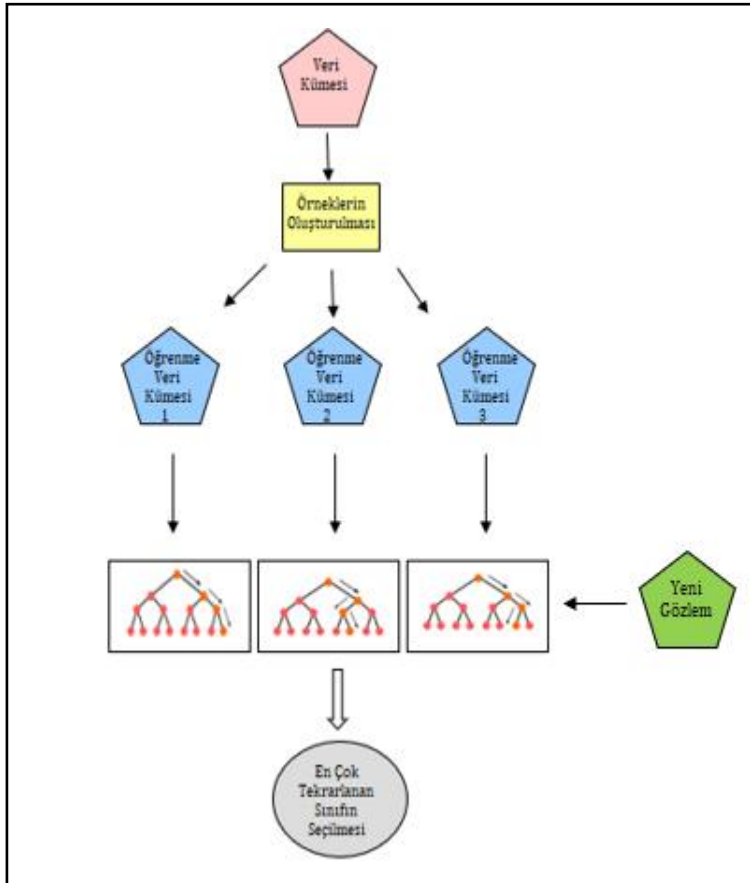

2.3. Rassal Orman

Birden fazla karar ağaçlarının bir araya gelmesiyle analizin gerçekleştirilebildiği RO algoritmasında her bir karar ağacı topluluğu ormanı oluşturmaktadır (Breiman, 2001). RO algoritması kapsamında oluşturulan her bir ağaç yapısı tahmin işlemini gerçekleştirmektedir ve doğruya en yakın tutarlı tahmin, modelin öngörüsünde kullanılmaktadır. Rassal orman algoritmasının karar ağacından en büyük farkı, karar ağacındaki aşırı öğrenme ile veriyi ezberleme olumsuz özelliğini ortadan kaldırmaktadır.

RO yönteminde kullanıcının iki parametre tanımlaması gerekmektedir. Bu iki parametre oluşturulacak ağaç sayısı (N) ve her bir düğümde kullanılacak olan değişken sayılarıdır (m). ID3 yöntemi ile RO için ağaç üretilmektedir (Breiman, 2001).

RO algoritması büyük veri tiplerinde etkin şekilde çalışabilmektedir. Üst üste tanımlanan değişkenleri silme ihtiyacı duymadan analiz edebilmektedir.

Şekil 8. Rassal Orman Algoritması Çalışma Adımları

Rassal orman algoritmasının çalışma adımları (Pal, 2005: 218; Watts, Scott, Lawrence ve Hilker, 2010: 70; Akman, Genç, ve Ankaralı, 2011);

- I. Ana kütlede N adet örneklem seçilmektedir. Örneklemin bir kısmı öğrenme verisi olarak seçilerek oluşturulacak ağaçlar için kullanılmaktadır.
- II. Öğrenme verisi içinden en doğru bilgiyi sağlayacak olan tahmin değişkeni belirlenmektedir. Tahmin değişkeni entropi ve gini indeksi ile dallanma hesaplanmaktadır.
- III. Örneklem verisinin her düğümünde dallanma iki alt dala ayrılmaktadır. Bu dallanma işlemi yaprak düğüm elde edilinceye kadar tekrar edilmektedir.
- IV. Karar ağaçlarının birbirinden ayrı olarak yapmış oldukları tahminleri bir araya getirerek yeni bir tahmin yapmaktadır. En doğru tahmini yapmış olan (en çok oyu alan) sınıf seçilmektedir.

Rassal orman regresyon yöntemi, rassal orman sınıflandırma yöntemi ile benzer şekilde işlemektedir. Elde edilen veri kümesi içinden rastgele seçilen örneklem veri kümeleri ile karar ağacı regresyon yöntemi kullanılarak ağaçlar oluşturulmaktadır. Oluşturulan karar ağaçları girdi verilerini kullanarak tahmin gerçekleştirmektedir. Tüm tahmin değerlerinin ortalamasını alarak kendi tahmin değerini oluşturmaktadır.

3. MODEL PERFORMANS DEĞERLENDİRME YÖNTEMLERİ

Uygulama kullanılmakta olan makine öğrenmesi algoritmalarının performans değerlendirmeleri için ortalama karesel hata (MSE), kök ortalama kare hatası (RMSE), kök ortalama kare yüzde ortalama kare hatası (RMSPE) ve ortalama kare yüzde hatası (MAPE) ölçütleri kullanılmaktadır.

İstatistik ölçütleri, eğitim verileri ile eğitilmiş algoritmaların test verileri için ürettikleri tahminlerin gerçek değerlere ne ölçüde yakın olduğunun bir göstergesidir. RMSE, RMSPE ve MAPE en düşük istatistiksel değerleri iyi uyum sağlayan modeli belirlemektedir.

İstatistiksel göstergelerin formülleri aşağıdaki gibidir;

$$MSE = \frac{1}{n} \sum_{t=1}^n e_t^2$$

$$RMSE = \sqrt{\frac{1}{n} \sum_{t=1}^n e_t^2}$$

$$RMSPE = \sqrt{\frac{100}{n} \sum_{t=1}^n \left(\frac{|e_t|}{|A_t|} \right)^2}$$

$$MAPE = \frac{100}{n} \sum_{t=1}^n \frac{|e_t|}{|A_t|}$$

4. UYGULAMA

Uygulamada 2019-2020 yılları arasında BIST-100 endeksine ait veriler kullanılmaktadır. Seriyeye ADF, PP ve KPSS birim kök testleri uygulanarak durağanlıklarına bakılmaktadır. BIST-100 endeksi düzeyde durağan olmadığı sonucuna varıldıktan sonra serinin getirisi alınarak durağan hale getirilmektedir. Getiri serisine ait grafik çıktısı Grafik 1'de yer almaktadır.

Grafik 1: BIST-100 Getiri Serisi

BIST-100 getiri serisine uygulanan Jarque-Bera testi sonucu serinin betimleyici istatistikleri Tablo 1’de yer almaktadır.

Tablo 1: Betimleyici İstatistikler

İstatistikler	Ortalama	Std. Dev.	Çarpıklık	Basıklık	Jarque-Bera
Değerler	0.001006	0.015031	7.244712	-0.82004	419.7201

(0,000)

Getiri serisinin ADF, PP, KPSS birim kök testleri sonuçları Tablo 2’de gösterilmektedir. Uygulanan birim kök test sonuçlarına göre serinin durağan olduğu görülmektedir.

Tablo 2: BIST-100 Getiri Setiri Birim Kök Testleri

ADF	-3,443***	-2,867**	-2.569*
PP	-3,443***	-2,867**	-2,569*
KPSS	0,739***	0,463**	0,347*

Not: ***, **, * sırasıyla %1, %5 ve %10 seviyelerinde boş hipotezin reddedildiğini göstermektedir. KPSS testi için boş hipotezin reddedilmediğini göstermektedir.

Öngörü için ARMA model tahmini gerçekleştirilerek ARMA(3,1) modelinin kullanılmasının uygun olacağına karar verilmektedir. Tablo 3’de ARMA(3,1) modeline ait tahmin sonuçları yer almaktadır.

Tablo 3: ARMA(3,1) Model Katsayıları ve t İstatistiği

Değişken	Katsayı	Standart Hata	t-İstatistiği
C	0,000	0,000	0,757
AR(1)	-0,902	0,061	-14,734
AR(2)	0,135	0,064	2,113
AR(3)	0,161	0,040	3,985
MA(1)	0,939	0,044	21,015
Sigmas(Q)	0,000	0,000	20,352

ARMA(3,1) tahmin çıktısına ait değerler Tablo 4’de gösterilmektedir.

Tablo 4: ARMA(3,1) Tahmin Edici Sonuçları

R ²	Düzeltilmiş R ²	Hata Kareleri Toplamı	Prob. (F istatistiği)	Bağımlı Değişken Ortalaması	Bağımlı Değişken Standart Sapması	Akaike Bilgi Kriteri (AIC)	Schwarz Bilgi Kriteri (SIC)
0,036	0,025	0,095	0,006	0,000	0,015	-5,572	-5,516

ARMA(3,1) model sonuçlarının yer aldığı Tablo 4 incelendiğinde R² değeri 0.036 hesaplandığı, RMSE (RootMeanSquaredError) 0.014, AIC -5.572, SIC -5.516 olarak gerçekleşmektedir. ARMA(3,1) model sonuçlarına göre ARMA tahmin sonucunun öngörü için yeterli olması tabloda ifade edilmektedir. Bu sebeple zaman serisi tahminlerinde makine öğrenmesi algoritmaları kullanılmaktadır.

Önerilen algoritmalar ile tahminler gerçekleştirilerek destek vektör makinesine ilişkin tahmin ile gerçek

değerleri Grafik 2’de sunulmaktadır. Grafiği incelediğimizde DVR-RBF tahminin neredeyse tüm verileri içine alarak tahmin gerçekleştirdiğini göstermekte iken DVR- Linear ve DVR-Polinominal modellerinin çalışmadığını göstermektedir.

Grafik 2: Destek Vektör Makinesi

Rassal orman algoritması ile regresyon tahmini gerçekleştirdiğimizde Grafik 3 elde edilmektedir. Grafik incelendiğinde rassal orman algoritmasının tahmini ile gerçek değerlerin iyi denilecek şekilde örtüşüğünü görülmektedir.

Grafik 3: Rassal Orman

Önerilen yöntemlerin uygulanması ile elde edilen sonuçlar Tablo 5’de verilmektedir. Tüm tahmin sonuçları incelendiğinde gerçek değere en yakın tahmin gerçekleştiren modelin RBF-DVR ve Rassal Orman olduğu görülmektedir. Buna rağmen hata istatistik değerlerinde en iyi tahminin RBF-YSA olduğu sunulmaktadır.

Tablo 5: Makine Öğrenmesi Algoritmalarının Tahmin ve Hata İstatistik Değerleri

YÖNTEM	TAHMİNİ DEĞER	MSE	RMSE	RMSPE	MAPE
Doğrusal-DVR	0.0028066	0.0002261	0.0150376	821575.7	34849.07
Polinom-DVR	0.0027661	0.0002258	0.0150296	807150.2	35337.30
RBF-DVR	0.0088428	0.0002993	0.0170312	6911007.3	213001.67
MLP-YSA	-0.0059679	0.0006923	0.0263124	9863892.3	374099.56
RBF-YSA	0.0022879	0.0002192	0.0014807	285854.2	12981.82
Rassal Orman	0.0065278	0.0002889	0.0169970	4929515.2	166559.26

5. SONUÇ

Zaman serisi tahminlerinde kullanılan AR(I)MA öngörü tahmin yönteminin başarısız tahmin sonucu vermesi sebebi ile önerilen makine öğrenmesi algoritmaları kullanılarak öngörü yapılabildiği görülmektedir. Gerçek tahmin sonucuna en iyi tahmin gerçekleştiren modellerin RBF-DVR ile Rassal Orman olduğu görülmektedir. Hata değerleri incelendiğinde ise en az hata istatistik değeri olan algoritma RBF-YSA olmaktadır. AR(I)MA model ile makine öğrenmesi hataları karşılaştırıldığında makine öğrenmesi algoritmalarının çok daha iyi öngörü performansı gerçekleştirdiği görülmektedir. Geleneksel yöntemlerin aksine öngörü tahmininde makine öğrenmesi algoritmalarının ekonometrik analizlerdeki kullanımı her ne kadar tartışma konusu olsa, yapılan çalışmalardan elde edilen olumlu sonuçlar makine öğrenmesi algoritmalarının ekonometrik analizlerde giderek daha çok yer almasına olanak sağlamaktadır.

Özet: Çağdaş eğitimin ve gelişen teknolojinin getirdiği yeniliklere uyum sağlayabilmek için bireylerde mevcut bilgi dağarcığı ve beceriler değişmeli, genişlemeli ve gelişmelidir. Bunu sağlayabilmenin en iyi yolu eğitim-öğretimden geçmektedir. Eğitim-öğretim sürecinde planlı ve etkili ilerlemeyi sağladığı için öğretim programları büyük öneme sahiptir. Mevcut fen bilimleri dersi öğretim programında, öğrencilerin günlük hayatlarını kolaylaştırmalarını ve topluma faydalı bireyler olmalarını sağlayacak bazı becerilerin kazandırılması hedeflenmektedir. Bunlar, “Yaşam Becerileri” başlığı altında; analitik düşünme, yaratıcı düşünme, karar verme, girişimcilik, takım çalışması ve iletişim becerileri olarak isimlendirilmiştir. Ders kitaplarının eğitim-öğretimdeki önemine bakılırsa, öğretim programının hedeflerine uygun bir şekilde hazırlandığında, öğrencilerden istenen bilgi ve becerilerin kazandırılmasına büyük ölçüde katkı sağlayabileceği için ders kitaplarının analiz ve değerlendirilmesi yapılarak ilgili birimlere doğru dönütler verilmesi, hedeflere doğru ve etkili şekilde ulaşabilmek açısından çok önemlidir. Çalışma, 2020-2021 Eğitim-Öğretim Yılında okutulması kararlaştırılan fen bilimleri ders kitabında, öğretim programı ile kazandırılması hedeflenen yaşam becerilerine ne kadar yer verildiğini belirleme amacıyla yürütülmüştür. Araştırmanın amacı ve daha önce bu konuda yeterli çalışma yapılmamış olması göz önünde bulundurulursa bu çalışma, ders kitaplarının geliştirilmesi ve yenilenmesi konusunda program geliştirme uzmanlarına, ders kitabı yazarlarına ve müfredat geliştiricilere yol gösterebilecek ve literatüre göz ardı edilemeyecek bir katkıda bulunabilecektir. Araştırma probleminin doğası gereği çalışma, nitel araştırma yaklaşımına dayandırılarak doküman incelemesi yöntemi kullanılmıştır. Verileri ise ders kitabı incelemesi sonunda elde edilen bulgular oluşturmuştur. Araştırmada 7. Sınıf Fen Bilimleri Ders Kitabı’nda 5,6 ve 7. Üniteler incelenerek hazırlanmış olan Ders Kitabı Yaşam Becerileri İnceleme Formu’na göre analiz edilmiştir.

Anahtar Kelimeler: Fen Bilimleri Öğretimi, Fen Bilimleri Dersi Öğretim Programı, Yaşam Becerileri, Fen Bilimleri Ders Kitabı

The Reflections of the Life Skills Mentioned in the Science Curriculum in the 7th Grade Textbook

Abstract: In order to adapt to the innovations brought by modern education and technology, existing knowledge and skills must change, expand and develop. The best way to achieve this is education. Programs are of great importance in the education process because they provide planned and effective progress. In the current Science Education Program, it is aimed to provide students with some skills that will enable them to facilitate their daily lives and become individuals who are beneficial to society. These are analytical thinking, creative thinking, decision-making, entrepreneurship, teamwork and communication skills gathered under the title of "Life Skills". Considering the importance of textbooks in education, when the textbooks are prepared in accordance with the objectives of the curriculum, it will be able to greatly contribute to gaining the knowledge and skills expected from students. Therefore, analyzing and evaluating the textbooks and giving correct feedback to the relevant units is very important in order to reach the targets correctly and effectively. The aim of study is to determine how much life skills that are aimed to be acquired are included in the science textbook, which is decided to be taught in the 2020-2021 Academic Year. Considering the purpose of the research and the lack of sufficient work on this subject before, this study be able to guide curriculum development experts, textbook authors and curriculum developers in the development and renewal of textbooks and it will able to undeniable contribution to the literature. Due to the nature of the research problem, the study was based on qualitative research approach and document analysis method was used. The data consisted of the findings obtained at the end of the textbook review. In the research, Units 5, 6 and 7 in the 7th Grade Science Textbook were examined and analyzed according to the "Textbook Life Skills Review Form".

Keywords: Science Teaching, Science Curriculum, Life Skills, Science Textbook

¹ Bu çalışma birinci yazarın “Fen Bilimleri Dersi Öğretim Programındaki Yaşam Becerilerinin Ders Kitapları Ve Öğretmen Uygulamalarındaki Yansımaları” isimli yüksek lisans tezinin bir bölümünden oluşturulmuştur.

1. GİRİŞ

Dünyada yeni ihtiyaçlar doğrultusunda teknolojiye ilerleme sağlanırken teknolojinin gelişmesi de beraberinde yine yeni ihtiyaçlar doğurmuştur. Eğitimde modernleşmeye gidilmiş, topluma kazandırılması hedeflenen insan profili de değişmiştir. Gelişen teknoloji ve çağdaş eğitim, 21. Yüzyılda daha üretken, yenilikçi, girişimci bireylerin yetiştirilmesini gerekli kılmıştır. Gelişen ve modernleşen dünyada, olduğu yerde sayan bir millet, kısa süre içinde gerilemekte olan ülkeler arasına girmeye mahkûm olacaktır. Bu yüzden 21. Yüzyılın beklediği becerileri kazanabilmek ve gelişen teknolojiyi yakalayabilmek bir ülkenin kalkındırılmasında büyük öneme sahiptir. Bunu sağlayabilmenin en iyi yolu ise eğitim ve öğretimden geçmektedir. Çünkü eğitim hayatı boyu devam eden; öğretim ise eğitime planlı bir şekilde büyük ölçüde katkı sağlayan bir süreçtir ve becerileri küçük yaşlardan itibaren kazandırmanın en kolay ve etkili yolu da dolayısıyla eğitim-öğretimdir.

Eğitim-öğretim sürecinde de hedeflere daha planlı ve etkili bir şekilde ulaşabilmek için öğretim programları oluşturulur. Öğretim programları öğretmenlere hedefe ulaşma yolunda rehber görevindedir. Dolayısıyla öğrencilere kazandırılmak istenen bilgi ve beceriler ile bunların nasıl kazandırılacağına dair yol gösteren kılavuz olarak tanımlanabilir. Eğitim-öğretim sürecinde programların öneminden hareketle dünyada yeni gelişmeler oldukça eğitim sistemlerinde de kaçınılmaz bir yenileşme söz konusudur. Bu yenilikler programlara da yansıtılmalı ve dolayısıyla programlarda da sıklıkla güncellemeler yapılmalıdır. Aksi takdirde yeniliklere ayak uydurmak yine zorlaşacak ve geride kalmış bir eğitim sistemi söz konusu olacaktır. Ülkemizde de eğitim sistemimizde sıklıkla çağdaşlaşma ve yenileşmeye gidilmektedir.

Dünyada ve yurdumuzda yaşanan toplumu ve toplumun kültürünü ilgilendiren gelişmeler, teknoloji ve bilimdeki ilerlemeler, öğrencilere dair beklentilerin bu yönde değişmesini ve artmasını da beraberinde getirmiştir. Öğretmenler de umutla baktığımız gelecek nesilleri bilgi ve beceri yönünden kendini daha geliştirmiş bireyler olarak yetiştirmek zorunda kalmıştır. Bu doğrultuda öğretim programlarında da düzenleme yapılmıştır (MEB, 2020).

Öğretim programlarındaki hedef davranışlar kazandırılırken hedefe göre strateji, yöntem ve teknik seçilmelidir. Daha sonra bunların uygulamaya geçirilmesi esnasında bazı materyaller kullanılmalıdır. Bunlara öğretim araçları denir ve öğretim araçları içerisinde en çok kullanılanı okul ders kitaplarıdır (Kılıç&Seven, 2008). Dolayısıyla ders kitapları analiz edilip eksiklikleri belirlenerek ilgili birimlere dönütler sağlanmalıdır. Çünkü hedeflere ulaşabilmek için ders kitaplarının içeriğinin müfredata uygun bir şekilde hazırlanması çok önemlidir.

2. TÜRKİYE'DE FEN ÖĞRETİM PROGRAMLARI

Ülkemizde fen öğretimi için pek çok öğretim programının hazırlandığı ve uygulamasının yapıldığı görülmektedir. Bu çalışmada 2019-2020 öğretim yılında yürürlükte olan Fen bilgisi dersi öğretim programında öğrencilerden beklenen becerilerden “yaşam becerileri” başlığı altında toplanan analitik düşünme, işbirliği, takım çalışması, karar verme, yaratıcı düşünme ve iletişim becerileri üzerinde durulacaktır. Burada, çalışmanın daha anlaşılır olması amacıyla ülkemizde uygulaması yapılan fen bilgisi öğretim programlarının son üç tanesinin içeriklerine kısaca değinilmiş ve sonrasında programda yer alan “yaşam becerileri” tek tek açıklanmıştır.

2005 Yılı Fen ve Teknoloji Dersi Öğretim Programı Temel Yaklaşımı

Fenin, değişmez bilgiler bütünü olmamakla birlikte yeni delillere ve bilgilere ulaştıkça olguları daha iyi açıklayabilmek için değiştirildiği düşüncesi kazandırılmaya çalışırken aynı zamanda fen okur-yazarlığı çevresinde bilimsel yöntemlerin de yerleştirilmesi hedeflenmiştir. Dolayısıyla bu programın “yapılandırmacı yaklaşımı” kabul ettiği söylenebilir (MEB, Fen Ve Teknoloji Öğretim Programı, 2005: s7).

2013 Yılı Fen Bilimleri Dersi Öğretim Programı Temel Yaklaşımı

Derslerin planlanması ve uygulanması sürecinde öğrencinin aktif, öğretmenin ise rehber olacağı öğrenme ortamları hedeflenmiştir. Öğrencinin bilgiyi daha kalıcı ve anlamlı kazanabilmesi için öğrenme ortamları

“araştırma-sorgulamaya dayalı öğrenme stratejisine” göre düzenlenir (MEB, Fen Bilimleri Öğretim Programı, 2013: s11).

2018 Yılı Fen Bilimleri Dersi Öğretim Programı Temel Yaklaşımı

Öğrenme ortamları “araştırma-sorgulamaya dayalı öğrenme stratejisine” göre düzenlenirken fenin günlük hayatta uygulama ve ekonomiye katkı sağlama özelliği önem kazanmıştır. Buna göre ünite, konu ve kazanımlar günlük hayattaki gereksinimleri karşılayacak ürünler oluşturulmasını hedefleyen bir yaklaşıma göre düzenlenmiştir (MEB, Fen Bilimleri Öğretim Programı, 2018: s11).

3. YAŞAM BECERİLERİ

Yaşam becerileri, hayat boyu birçok alanda karşımıza çıkabilecek ve deneyimleyebileceğimiz, genel ve kapsamlı becerilerdir. Yaşam becerilerinin eğitiminin verilmesi, günlük yaşamın güçlükleri ve isteklerinin hakkında gelebilmek için lazım olan becerilerin kazandırılması ve ilerletilmesi bakımından önem taşımaktadır (WHO, 1999). Çünkü yaşam becerileri günlük yaşamı kolaylaştıracak olan beceri ve yeterliliklerle ilişkilidir ve onları desteklemektedir. Bu yüzden de yaşam becerilerinin kazandırılması, öğrencilere karşılarına çıkabilecek problem veya güçlüklerde çözüme daha kolay ulaşabilmelerini sağlayacaktır. W.V. Goethe'nin “Eğitim, insanın güç sandığı ya da gerçekten kolay alt edilebilen engelleri, nasıl aşacağını öğretme sanatından başka bir şey değildir.” Sözü de yaşam becerilerinin öğrencilere kazandırılmasındaki önemini desteklemektedir.

Yaşam becerileri, hayatı kolaylaştıran ve toplumda üretken bireyler olmaya yarayan becerilerdir. Çocuklar yaşam becerilerini geliştirdikçe problemlerle başa çıkabilme olasılıkları artar ve hayatı kendi seçtikleri şekilde yaşamak için daha fazla fırsata sahip olurlar. Ayrıca yaşam becerileri eğitimi öğrencileri problemlere karşı güçlendirmeyi ve kendi kapasitelerini artırmalarını hedefler (Rooth, 2007: 6,12).

İletişim: Simge, sembol, yazı, jest ve mimikler gibi araçlarla duygu ve düşünceleri diğer kişilere ve toplumlara iletmeyi ve karşılıklı etkileşim halinde olmayı sağlayan süreçtir. (Demirel, 2006: 178). İletişim becerisi, kültürümüze ve statülerimize uygun bir şekilde kendimizi hem sözlü hem de sözsüz olarak ifade edebilme, anlatabilme becerisidir. Bu beceri, fikir ve düşüncelerimizin yanı sıra isteklerimizi, arzularımızı ve korkularımızı da ifade edebilmeyi, ihtiyaç anında yardım ve tavsiye alıp verebilmeyi gerektirir (Murthy, 2016: 58).

İşbirliği: Ortak bir amacı gerçekleştirmek için birden fazla kişinin birlikte çalışması ve çabalaması olarak tanımlanmıştır. Bu kişilerin başarıya ulaşabilmeleri için grup oluşturabilme, iyi bir iletişim kurabilme ve fikir alışverişinde bulunma, görev paylaşımı yapabilme ve sorumluluk alma gibi işbirliği becerilerine sahip olmaları gerekmektedir (Tuncel&Demirel, 2010).

Analitik düşünce: Analiz, geniş bir tanımla bir bütünü parçalara ayırıp parçalar üzerinde çalışma yapmaktır (Yılmaz, 2019). Bloom Taksonomisi'nin analiz basamağı incelendiğinde analitik düşünebilen öğrencilerden bir durum karşısında elindeki tüm verileri tek parça haline getirme; kıyaslama, düzenleme, kavram ve zihin haritası çizilme, ilişkilendirme, farklılık ve benzerlikleri bulma, gruplara ayırma gibi yeterlilikler beklenmektedir. Bunların yanı sıra gereken durumda bir yap-boz gibi ekleme, çıkarma, düzeltme yapabilmelidir (Günaydın, 2018).

Yaratıcılık: Yaratıcılık bir kişinin yaşamı boyunca öğrendiklerini, birbirleri arasında ilişki kurarak karşılaştığı bir problem durumunu çözebilmesi ve ortaya özgün bir ürün çıkarabilmesidir (Güleryüz, 2000, akt. Gömleksiz&Kan, 2009: 41). Yaratıcılık, aynı tür veya farklı tür maddelerden oluşmuş objeleri ve olguları bir problemi çözecek veya kişiyi daha iyiye taşıyacak bir durumla karşılaştığında işe yarayan bir materyal/model üzerinde kullanabilmek, eldeki verileri ve malzemeleri birbiriyle ilişkilendirerek bunları bir modele bütünleştirebilmektir (Arat, 2015: 43).

Girişimcilik: Girişimcilik becerileri; problem çözme, yaratıcılık, ikna etme, plan yapma, doğru karar verme, kendine güven duyma, özerk olma, kendine yetebilme, başarıya yönelme, çok yönlü olma, becerikli ve dinamik olma şeklinde sıralanmaktadır (Iredale&Motsa, 2002; akt. Gömleksiz&Kan, 2009: 41) Girişimcilik becerisine sahip bireyler görev ve sorumluluklardan kaçmayan özgüveni yüksek bireylerdir. Aynı zamanda iletişim ve işbirliği becerileri ile hitabet yeteneğine sahiplerdir.

Karar verme: Bir problem karşısında, probleme alternatif çözüm yolları bulup bu çözüm yollarının olası sonuçlarını tahmin etme, değerlendirme ve sonucunda en iyi çözüme ulaşma; ya da bir durum karşısındaki birkaç seçenek arasında kıyaslama ve değerlendirme yapıp en uygun seçeneği seçmektir.

Karar verme, kişide var olan bilgi ve fikirlerin doğrultusunda mevcut olayın veya problemin algılanarak çözüm yolları ve seçenekleri ile bunların olası neticelerini değerlendirmek, kontrol etmek ve en uygun çözüm yoluna giderek bunu uygulamak şeklinde tanımlanabilir (Doğan, 2010: 11).

4. FEN BİLİMLERİ DERS KİTABI YAŞAM BECERİLERİ İNCELEME FORMU

7. sınıf fen bilimleri ders kitabında 5. 6. Ve 7. Üniteler hazırlanan forma göre analiz edilmiş ve incelemeler burada sunulmuştur.

Fen Bilimleri Ders Kitabı Yaşam Becerileri İnceleme Formu			
İletişim Becerisi Ölçütleri	Evet	Kısmen	Hayır
Öğrencinin düşüncelerini açıklamasını sağlar.	X		
Detay:158. 165. 186. sayfada öğrenciden ilgili konudaki düşüncelerini arkadaşlarıyla tartışması isteniyor. 189. ve 196. sayfada öğrenciden ulaştığı sonuçları arkadaşlarıyla paylaşması isteniyor.			
Öğrencinin, fikirleri tartışırken başka fikirlere saygı duymasını sağlar.			X
Detay:			
Öğrencinin fikir alışverişinde bulunmasını sağlar.	X		
Detay: 158. Ve 186. Sayfada öğrenciden fikirlerini arkadaşlarıyla tartışması isteniyor. 189. sayfada öğrenciden araştırma sonuçlarını arkadaşlarıyla tartışması isteniyor.			
Öğrencinin, arkadaşları ile malzeme ve bilgi paylaşımı yapmasını sağlar.			X
Detay:			
Öğrencinin jest ve mimiklerini kullanmasını sağlar.			X
Detay:			
Öğrencinin düşüncelerini sembollerle aktarmasını sağlar.			X
Detay:			
Öğrencinin dinleme becerisini geliştirmesini sağlar.		X	
Detay: 158. 165. 186. Ve 189. Sayfada öğrenciyi fikirlerini arkadaşları ile tartışmaya yönlendirerek öğrencinin dinleme becerisini geliştirmeye katkı sağlıyor.			
Öğrencinin empati yeteneğini geliştirir.			X
Detay:			
Karar Verme Becerisi Ölçütleri	Evet	Kısmen	Hayır
Öğrencinin bağımlı-bağımsız değişken türlerini bir ölçüte göre belirlemesini sağlar.		X	
Detay: 196. Sayfadaki tabloda öğrenciden değişkenleri belirlemesi isteniyor.			
Öğrencinin en uygun olan cevaba ulaşmasını sağlar.	X		
Detay:177. ve 191. Sayfada öğrenciden kavramlara eş gelen açıklamaları bulması isteniyor. 178. 202. 203. 218. Ve 2019. sayfada öğrenciden boşluklar için uygun kavramları bulması isteniyor. 219. sayfada öğrenciden yargıların doğru-yanlış durumuna göre doğru cevaba ulaşması isteniyor.			
Öğrencinin bir bilginin doğruluğu veya yanlışlığı hakkında yargıya varmasını sağlar.	X		
Detay: 178. 202. Ve 218. Sayfada öğrenciden verilen cümlelerin doğruluğu veya yanlışlığını belirlemesi isteniyor. 219. sayfada öğrenciden yargıların doğru-yanlış durumuna göre doğru cevaba ulaşması isteniyor.			
Öğrencinin çoktan seçmeli sorularda şıklar arasında seçim yapmasını sağlar.	X		
Detay: 181. 182. 183. 205. 220. Ve 221. Sayfada çoktan seçmeli sorular yer almaktadır.			
Öğrencinin bir şema/tabloya bakarak bir sonuca varmasını sağlar.		X	
Detay: 204. Sayfada öğrenciden tabloya bakarak soruları cevaplaması isteniyor.			
Öğrencinin bir durumun olası sonuçlarını tahmin etmesini sağlar.	X		
Detay: 204. Sayfada öğrenciyeye bir durumun olası sonucu soruluyor. 211. sayfada öğrenciden ampullerden biri söndüğünde diğerine ne olacağını tahmin etmesi isteniyor. 212. sayfada öğrenciyeye vanalardaki su geçişine dair olası sonuç soruluyor.			
Öğrencinin karşılaştırma yaparak doğru cevaba ulaşmasını sağlar.	X		
Detay: 159. Sayfada öğrenciden bardakları kıyaslayarak soruyu cevaplaması isteniyor. 172. sayfada öğrenciden merceklere kıyaslayarak soruyu cevaplaması isteniyor.			
Öğrencinin bir durumun olumlu/olumsuz yönlerini belirlemesini sağlar.	X		

Detay: 158. Sayfada öğrenciye güneş enerjisinin yaygınlaştırılmasının yararları soruluyor. 212. Sayfada öğrenciden seri ve paralel bağlamada avantaj ve dezavantajları belirlemesi isteniyor. 217. Sayfada öğrenciden paralel bağlamanın avantaj ve dezavantajları belirlemesi isteniyor.			
Öğrencinin ihtiyaçlara göre doğru seçimler yapmasını sağlar.	X		
Detay: 150. Sayfada öğrenciden güneş altındaki ve gölgedeki banklar arasında seçim yapması isteniyor. 176. Sayfada öğrenciden görüntüleme aracı tasarlaması, dolayısıyla probleminin çözümüne yönelik doğru malzemeleri seçerek ürün oluşturması isteniyor. 216. Sayfada öğrenciden aydınlatma aracı tasarlaması, dolayısıyla probleminin çözümüne yönelik doğru malzemeleri seçerek ürün oluşturması isteniyor.			
Analitik Düşünme Becerisi Ölçütleri	Evet	Kısmen	Hayır
Öğrenciyi ilgili konu hakkında araştırma yapmaya yönlendirir.		X	
Detay: 189. Sayfada öğrenciden araştırma yapması isteniyor.			
Öğrencinin elde ettiği bilgiyi yorumlamasını sağlar.	X		
Detay: 189. Sayfada öğrenciden araştırma sonucunda elde ettiği verileri arkadaşlarıyla tartışması isteniyor. 209. sayfadaki etkinlikte öğrenciden gözlemleri sonucunda bir yargıya varması isteniyor. 216. sayfadaki etkinlikte öğrenciden gözlemleri sonucu soruları cevaplaması isteniyor.			
Öğrencinin problem durumu bileşenlerine ayırmasını sağlar.	X		
Detay: 176. Sayfada öğrenciden bilimsel yöntem ve mühendislik tasarım döngüsü basamaklarına göre probleme yönelik çözüm yolları üretip ürün tasarlaması isteniyor. 216. Sayfada öğrenciden bilimsel yöntem ve mühendislik tasarım döngüsü basamaklarına göre probleme yönelik çözüm yolları üretip ürün tasarlaması isteniyor.			
Öğrencide var olan bilgileri yeni durumlarda kullanmasını sağlar.	X		
Detay: Ders kitabının her bölümünde, özellikle de ünite sonu değerlendirmeleri olmak üzere öğrencinin var olan bilgisini kullanarak cevaba ulaşmasını sağlayan birçok soru var.			
Öğrencinin kavramlar arasında ilişkilendirme yapmasını sağlar.	X		
Detay: 154. Sayfada öğrenciden güneş ışığı ile renkler arasında ilişkilendirme yapması isteniyor. 162. sayfada öğrenciden görüntü oluşumu ile ayna uzaklığı arasında ilişkilendirme yapması isteniyor. 166. sayfada öğrenciden ışığın izlediği yol ile ortam yoğunluğu arasında ilişki kurması isteniyor. 191. Sayfada öğrenciden kavramlarla açıklamaları eşleştirmesi isteniyor. 205. sayfada öğrenciden kavramları eşleştirmesi isteniyor. 214. ve 215. sayfada öğrenciden gerilim ile akım arasında ilişkilendirme yapması isteniyor.			
Öğrencinin kıyaslama yapmasını sağlar.	X		
Detay: 151. Sayfadaki etkinlikte öğrenciden cisimlerin sıcaklıkları arasında kıyaslama yapması isteniyor. 153. Sayfadaki etkinlikte öğrenciden suların sıcaklıkları arasında kıyaslama yapması isteniyor. 186. 5. SONUÇ

7. sınıf fen bilimleri ders kitabında yapılan inceleme neticesinde, kitabın içeriğinin öğrencilerin başta girişimcilik becerisi olmak üzere yaratıcı düşünme, analitik düşünme ve karar verme becerisini geliştirmeye katkıda bulunabilecek yönde hazırlandığı görülmüştür. Ancak iletişim ve işbirliği becerilerini geliştirmeye yönelik etkinlik, okuma parçası veya soruya neredeyse hiç rastlanmamıştır.

Bireyin kendisini etkili bir şekilde anlatabilmesi ve iyi bir dinleyici olabilmesi, sosyalleşen ve küreselleşen dünyamızda iletişim kurabilmek adına büyük önem taşımaktadır. İletişim sayesinde bireyler fikir, bilgi ve düşünce paylaşımı yaparak bilgi birikimlerini artırabilir, bakış açılarını genişletebilir ve daha duyarlı, çözüm odaklı ve üretken bireyler olma konusunda kendilerini geliştirebilirler. Ayrıca fikirlerini açıkça beyan edebilen bireyler, ihtiyaçlara ve problemlere yönelik çözüm ve üretkenlik konusunda da daha hızlı ve doğru kararlar alabileceklerdir. İletişimin bu türlü katkıları sayesinde, toplumsal konulara duyarlılığı artan, empati yeteneği gelişen bireyler, toplumsal hayatta işbirliğine de gereken önemi göstereceklerdir. Öyle ki, işbirliği; bireylerin karşılıklı olarak eksiklerini tamamlaması, görev dağılımı yapabilmesi ve sorumluluk alma duygusunu geliştirebilmesi sayesinde, çalışmaların daha çabuk sonuçlanmasını veya toplumsal problemlerin daha hızlı çözülmesini sağlayacaktır. Aynı zamanda insanları bir araya getirerek dayanışma ve yardımlaşmayı sağlayabileceğinden toplumsal bütünlüğe de katkıda bulunabilecektir.

Bunlardan hareketle, bu çalışma sonucunda, 7. Sınıf fen bilimleri ders kitabındaki bu eksikliğe daha fazla önem verilerek iletişim ve işbirliği becerilerini geliştirmeye yönelik etkinliklerin, okuma parçalarının ve öğrenciye verilebilecek sorumlulukların sayısının artırılması, aynı zamanda gerçekleştirilebilecek proje ve ödev başlıklarının eklenmesi gibi içerik düzeltme çalışmalarının yapılmasının gerekli olduğu

düşünülmektedir. Bunların, 21. Yüzyılda kazanılması gerekli görülen ve müfredatın kazandırmayı hedeflediği becerilerin edinilmesine katkıda bulunabileceği kanaatine varılmıştır.

Impact of Simplified Profit Tax for SMEs on Factual Budget Revenues from this Tax

Dr. Shpresa Çela¹

Dr. Albana Gjoni²

¹Lecturer, Faculty of Economics and Agribusiness, UBT

² Lecturer, Faculty of Economics and Agribusiness, UBT

Abstract: Small and medium enterprises are the engine of the Albanian economy. They represent 99% of Albanian registered enterprises and generate more than 80% of jobs in the labor market and also contribute with 60-75% of Gross Domestic Product. This is a positive trend because if we compare it with other countries which have the same economic development they have almost the same number of these enterprises. Studying these enterprises for the great importance they have in the Albanian economy is very valuable, although there have been numerous studies about them by local researchers, we wanted to study how the simplified corporate profit tax rate affects on budget revenues, does this factor have an impact and how has it changed over the years. Turnover and number of employees has increased for SMEs, while revenues collected from this tax have decreased. Referring to the official secondary data that we have used by analyzing a considerable period of time from 2010 -2019, through an econometric model, we will study whether the Simplified Profit Tax is important and if affects budget revenues. Further we will see what measures the Albanian government has taken for the post - Covid 19 period, to come in help of small and medium enterprises. At the end we will give our recommendations based on the conclusions of the econometric model.

Key words: SME, growth, employment, turnover, panel data analysis

JEL: F21, H25.

Introduction

Small and medium enterprises play a major role in countries that are with a growing economy or are in a transition period like Albania. They are the engine of the Albanian economy because they represent 99% of registered businesses and generate more than 80% of jobs in the labor market, also contribute 60-75% of Gross Domestic Product. Small and medium enterprises play a major role in creating new jobs and reducing unemployment. Throughout the transition period, Albanian governments have made continuous efforts through various specific programs to help increase their performance, but these efforts have been insufficient. Many legislative and institutional reforms have been undertaken to support SMEs over the years. To improve the business climate and SME-s development, this are some of the reforms that have been made: Business registration facilitation, permits and licenses, regulatory impact assessment / RIA, ICT support, free trade agreement, CEFTA, provision of financial instruments, training, electronic communications growth, etc. Albania has embraced all the principles of small business, the Act (SBA). This is one of the most important agreements on the European Commission agenda for the development of SMEs, not only for the EU Member States, but also for the countries of the Western Balkans, the implementation of which has already been applied in Albania. In the period that we have studied from 2009-2019, the Albanian governments have applied two different fiscal regimes, the first regime 2009-2014 and the second regime, 2014-2019 where it is represented by different political directions. From the first political direction, in the first fiscal period, a flat tax of 10% was imposed until 2014, aiming to increase the tax base, which would be achieved if the economy had more investment and consumption capacity, and higher income, to achieve the goal of increasing tax revenue. In 2014, with the change of political direction, fiscal policy brought the ideology of fair taxation by increasing the tax burden to 15% for profit tax, dividend tax and income tax, while the simplified profit tax for small and medium enterprises changed in this period by applying an escalated tax. During the same period that we have studied, the definition of SMEs has changed too. Until 2014 they were defined according to the criteria of Albanian legislation, while after 2014 they were classified according to EU principles. Although this frequent fiscal variability affects the achievement of accurate results for each study done in this period, what we have highlighted in this article is how the Simplified Profit Tax Rate of small and medium enterprises affect the Factual Budget Revenues. How much impact does this tax have on local and municipal tax revenues? During¹ 2019, according to the Annual Report of Local Finance, published by Coplan and the Ministry of Finance, the revenues collected from the simplified profit tax on small business were 376.3 million ALL, by marking an increase of 46.8 million ALL compared with year 2018. The percentage of these revenues in the total revenues

¹ Annual Report of Local Finance, Coplan and the Ministry of Finance, 2019

from local taxes is 2.4% and they contribute 1.5% to the revenues from the sources of the municipalities. Referring² to the period taken for the study, as can be seen from the graph below, the revenues collected from the simplified Profit tax of small and medium enterprises have decreased (Source INSTAT 2019). This has been the reason that guided us to see if the tax rate of the simplified profit tax of small and medium enterprises affects this income, so whether it is important or not and through an econometric model we have proved its connection and importance.

Graph.1

According to the fiscal issues study center ALTAX, the simplified profit tax for SMEs occupies 0.02% of the Gross National Product for 2019, a number that hasn't changed for the last three years 2017,2018,2019. We can't say the same for the whole period that we have studied, so from 2009 -2012 it was 0.2% of GDP, in 2013 -2015 there was a decrease and this item occupied 0.1% and in 2016 occupied 0.04% of GDP.

Table.1

	% GDP

As we can see, the Simplified Profit Tax has been variable for the entire period under study.

² INSTAT 2019

1. Definition of small and medium enterprises

Small and medium enterprises are enterprises that have income, assets or the number of employees below a certain threshold. The most common criteria for classifying them by size used by many countries are: number of employees, turnover and / or value of assets. Until 2014, Albania applied its own criteria for the classification of SMEs, since that the Albanian economy in terms of size is very small compared to other EU countries.

According to this economic definition, are considered as small enterprises the economic enterprises which met the three following criteria:

1. They own a relatively small part of their market
2. They are managed by the owners themselves and not through a formal management structure
3. They are not part of a big business, they are independent,

On the other hand, Law³ no.8957, dated 17.10.2002, "On small and medium enterprises" used the following classification:

1. Micro enterprises, with up to 5 employees
2. Small enterprises, with 6 to 20 employees
3. Medium enterprises, with 21 to 80 employees.

The European Commission, to solve the problem of defining small and medium-sized enterprises, took the initiative to unify a single definition at EU level. After almost a decade it became necessary to revise this definition of the European Commission and so in 2005, a new definition for SMEs was adopted.⁵

An enterprise is an entity engaged in an economic activity regardless of its legal form. This definition has been given in advance by the European Court of Justice. So, it is the economic activity, the determining factor and not the legal form of business.¹⁶

The new EU definition adopted in 2005⁴ considers the three following criteria: 1) number of employees, 2) annual turnover, and 3) annual balance sheet. Based on these three criteria, enterprises are divided into 3 categories, with the following characteristics:

Table 2. European Commission Classification of SMEs

Category	No. of employees	Annual turnover	Annual balance sheet
Medium	<250	<€ 50 million (in 1996: € 40 million)	<€ 43 million (in 1996: €27 million)
Small	<50	≤€ 10 million (in 1996, € 7 million)	≤ € 10 million (in 1996: €5 million)
Micro	<10	≤ € 2 million (wasn't previously defined)	≤ € 2 million (wasn't previously defined)

Source: European Commission Recommendation of 6 May 2003 on the definition of micro, small and medium-sized enterprises.

So the EU⁵ and a large number of OECD⁶ countries, transition and developing countries have set the maximum limit of number of employees for SMEs at 200-250, with a few exceptions: such as Japan (leading up to 300 employees) and in the US (500 employees) (OECD 2004).

Currently in Albania, the simplified Profit Tax for SMEs is determined on the basis of annual turnover. Enterprises that have an annual turnover of up to 5 million ALL, the tax is zero. For enterprises with a turnover

³ Ministry of Finance, Law no.8957, dated 17.10.2002, "On small and medium enterprises"

⁴ EC, 2005, The New SME definition, User Guide and Model Declaration, pg.12

⁵ European Commission Recommendation of 6 May 2003 on the definition of micro, small and medium-sized enterprises.

⁶ OECD 2002, pg.2

of 5 to 14 million ALL per year, which are also considered small enterprises, this tax is 5% and for enterprises with a turnover over 14 million ALL per year, which are considered medium and large, the profit tax is 15%.

2. SMEs and their performance for on 2018-2019

According to the latest data from the Institute of Statistics (INSTAT 2019), by the end of 2019 the number of active SMEs was 162,342, almost the same as in 2018. Their main activity is trade and enterprises in this sector occupy 23.0% of enterprises registered during 2019, compared to 23.2% registered during 2018. While small enterprises as a result of fierce competition that the trade chains are creating more and more, as well as the weak consumption of the economy are in great difficulty. According to INSTAT⁷ 2019 the number of small enterprises with 1-4 employees, excluding agriculture sector was 116.6 thousand in 2019 marking a decrease of 2.5% due to the closure of about 4 thousand enterprises.

The trade and industry sectors had the largest contraction in business. In the trade sector this decline has been with 2300 businesses and continues to decline. The same can be said for the industry sector, where there were a decrease of 2000 thousand less active businesses, compared to 2018 as a result of closing their activity and 600 new businesses less compared to 2018. While the construction sector, telecommunications and other services have grown. To reduce the negative effects of "Covid 19", the government has implemented two financial rescue packages focusing on employees and the self-employed in small enterprises. The government has also approved packages that guarantee business support funds, through which it helped but didn't solve the whole business problem. The International Monetary Fund⁸ (IMF) has estimated that Albania's direct and indirect support packages were equal to 2.9% of GDP, from 5.8% for the Western Balkans average, due to the high public debt which reached 79.9%. Also, there has been a reduction to -23.8% of the simplified profit tax on small business during the period 2015-2019. This income created from the simplified profit tax for small businesses according to the law "On local taxes" goes to municipalities budget. The government through the tax administration collects this tax which is allocated to 98% in the municipal budget while only 2% goes to the government budget. Following the measures taken, the current government issued the decision that starting from 2021 to 2029 will remove the profit tax for entities with an annual turnover of up to 14 million ALL per year, for SMEs which were most affected by the pandemic. According to General Directorate of Taxes data, there are 91 thousand enterprises with turnover from 0 to 14 million ALL per year in the whole country, 80% of which or 72,800 businesses declare less than 5 million ALL annual turnover. Only a difference of 18,200 enterprises are in the category with annual turnover between 5-14 million ALL, who pay a simplified profit tax of 5%. So is the number of businesses that benefit from the prime minister's promise. According to the ALTAX⁹ study center, this decision does not violate the law, but, "It is not a good thing, as long as it does not reconcile with all factors." Experts estimate that the head of government is promising the abolition of a tax that actually belongs to the local government, while no alternative is given as how the municipal budget will compensate for this missing revenue.

Hypothesis: The simplified¹⁰ Profit Tax Rate on SMEs affects the level of budget revenues.

To analyze and validate the above hypothesis, we have created an econometric model, through the regression model.

In this connection, we have considered as an independent variable the profit tax rate, while as a dependent variable the factual budget revenues from this tax. Based on the data obtained from the following tables, table 5 shows the profit tax rate applied in Albania for SMEs from 2009 - 2019, and table 6 showing the revenues from the simplified profit tax of small business for this period as well, we have found the connection between these two variables which is expressed by the respective equation:

$$\text{Income} = 15.36 - 6.16 \text{ rates}$$

Model 7: KVZ, on the sample 2009-2019 (T = 11)

⁷ INSTAT, the performance of enterprises with 1-4 employees (2018-2019)

⁸ Academy of Political Studies (ASP) on reforms and important policy development in the country 2020

⁹ Eduart Gjokutaj, expert from the ALTAX research center

2021	0 - 14 million	0%

Conclusions:

1. In developing countries like Albania, SMEs have a major influence on economic growth and employment, also they generate more than 80% of jobs and also contribute with 60-75% of Gross Domestic Product.
2. According to the latest data from the Institute of Statistics (INSTAT 2019), by the end of 2019 the number of active SMEs was 162,342, almost the same as 2018. Their main activity is trade, and enterprises in this sector occupy 23.0% of enterprises registered during 2019, compared to 23.2% registered during 2018. According to INSTAT 2019 the number of small enterprises with 1-4 employees, excluding agriculture sector was 116.6 thousand in 2019 marking a decrease of 2.5% due to the closure of about 4 thousand enterprises.

3. Albania has supported all the principles of small businesses, Act (SBA). This is one of the most important agreements on the European Commission agenda for the development of SMEs, not only for the EU Member States, but also for the countries of the Western Balkans, the implementation of which has already been applied in Albania.
4. During 2019, according to the Annual Report of Local Finance, published by Coplan and the Ministry of Finance, the revenues collected from the simplified profit tax on small business were 376.3 million ALL. The percentage of these revenues in the total revenues from local taxes is 2.4% and they contribute 1.5% to the revenues from the sources of the municipalities. Referring to the period taken in the study 2009-2019, the revenues collected from the simplified Profit tax on small and medium enterprises have decreased.
5. The tax rate of the simplified profit tax for SME-s during the period we have studied, has been variable and not a long-term fiscal policy and this has led to the reduction of revenues collected from this rate
6. Through our econometric model, we confirmed the hypothesis that the tax rate of the simplified profit tax has a strong negative correlation with the factual budget revenues collected from this tax. If the tax rate increases by 1%, the factual budget revenues will decrease by 6.16%.

Özet: Sanayi devrimi sonrasında artarak devam eden enerji ihtiyacının karşılanmasında kit olmayan ve doğaya daha az zarar veren yenilenebilir enerji kaynakları yerine fosil kaynak niteliğine sahip yenilenemeyen enerji kaynaklarının kullanılmasında çevreye zararlı salınımlarda bulunmaktadır. Türkiye'nin enerji ihtiyacı göz önüne alındığında, ekonomik büyümeden daha hızlı şekilde artan enerji tüketimine karşılık sınırlı rezerv miktarının bulunması petrolle bağımlılığı ortaya çıkarmaktadır. Temel enerji kaynaklarından olan petrolün fiyatındaki değişimler makroekonomik büyüklükler ve dolayısıyla ekonomik faaliyetler üzerinde etkili olarak belirsizlik yaratmaktadır. Petrolde dışa bağımlı yapıya sahip olan ülkeler ele alındığında, fiyatlarda meydana gelen artış maliyet enflasyonda yükselme ve üretimde, yatırımlarda, istihdamda ve milli gelirden azalma meydana getirerek ekonomik daralmaya neden olabilmektedir. Çalışma kapsamında, petrol fiyat endeksi ve gayrisafi yurt içi hasıla arasındaki uzun dönem asimetrik ilişkilerin ortaya çıkartılması amaçlanmaktadır.

Anahtar Kelimeler: Saklı eşbütünleşme analizi, asimetrik etkiler, doğrusal olmama

Long-Term Hidden Cointegration Relation Between Oil Price Index and Gross Domestic Product

Abstract: Environmentally harmful emissions are made in the use of non-renewable energy resources that are fossil resources instead of renewable energy resources that are not scarce and less harmful to nature in meeting the increasing energy need after the industrial revolution. Considering Turkey's energy needs, limited amount of reserves in response to energy consumption increasing faster than economic growth reveals dependence on oil. Changes in the price of oil, one of the main energy resources, create uncertainty over macroeconomic magnitudes and thus on economic activities. Considering the countries that have a foreign-dependent structure in oil, the increase in prices can cause an increase in cost inflation and a decrease in production, investments, employment and national income, causing economic contraction. Within the scope of the study, it is aimed to reveal the long-term asymmetric relations between the oil price index and gross domestic product.

Keywords: Hidden cointegration analysis, asymmetric effects, nonlinearity

1. GİRİŞ

Sanayi devrimi ve sonrasında artarak devam eden enerji ihtiyacının karşılanmasında kullanılan enerji kaynakları dönüştürülebilirliklerine ve kullanışlarına göre ikiye ayrılmaktadır. Birincil enerji kaynaklarının belirli işlemlerden geçirilmesi sonucunda ise ikincil enerji kaynakları ortaya çıkmaktadır. Bitkisel kaynaklı yakıtların kullanımının azalması, maliyetlerinin artışı ve ısı değer düşüklüğü sonucu enerji talebinin karşılanmasında farklı enerji kaynaklarına yönelim gerçekleşmektedir (Pipe ve Jim, 2012). Ülkelerin gelişmişlik ve kalkınmışlık göstergelerinden olan enerji tüketimindeki artış ve enerji kaynak çeşitliliğindeki gelişmeler, ülkeler arası rekabet koşullarının artmasına ve enerji arz güvenliğinin iktisadi, sosyal ve siyasal açıdan ön plana çıkmasına neden olmaktadır (Akgün, 2006). Kesintisiz biçimde temiz, güvenilir ve farklı kaynaklardan uygun fiyat/miktarda enerjinin tedarik edilmesini ve yüksek verimlilik ile kullanılmasını ifade eden enerji güvenliğinin sağlanması ve fosil yakıtlardaki sınırlı ve dengesiz dağılım sonucu oluşan fiyat dalgalanmalarının önüne geçilmesi için alternatif enerji kaynaklarına yönelim gözlemlenmektedir (Sevim, 2012).

Farklı basınç ve sıcaklık koşulları altında katı/sıvı/gaz halinde bulunan petrolün kullanım alanı ve miktarı, yakıt çeşitliliği ve endüstriyel gelişmeyle birlikte artmaktadır. Temel enerji kaynağı olarak görülen petrol,

sektördeki gelişim sonucu rekabetin ve ticaretin artmasını sağlayarak ekonomik denge üzerinde dönüştürücü etkiye sahip olmaktadır. Petrol üretim eğilimlerinin öngörülebilmesi için rezerv ve üretim ilişkisinin iyi kurgulanması gerekmektedir. Petrole ilişkin rezerv miktarının ve ekonomik yapı içindeki ağırlığının yanı sıra petrol ithal eden ülkelerin yapısal özellikleri de petrol piyasa yapısı üzerinde etkili olmaktadır. Ek olarak, petrol arama ve üretiminde yatırım maliyetlerin yüksek olması, teknolojik altyapı özelliklerindeki, ülkelere ilişkin politik yapıdaki ve muhasebeleştirme ile raporlamadaki farklılaşmalar da petrol piyasası üzerinde etkili olmaktadır. Petrol piyasasında yoğun ve güçlü sermaye mekanizması bulunmaktadır (Önertürk, 1983). Petrol piyasalarında arz ve talep dengesi hassas olduğundan, talepte ortaya çıkması muhtemel ani sıçramaların engellenmesi ve fiyat kontrolünün sağlanabilmesi için petrol üretimi planlı şekilde gerçekleştirilmektedir. Petrol ihracatçısı ülkeler ellerindeki kaynakları olabildiğince verimli şekilde değerlendirmeyi, petrol ithalatçısı ülkeler ise maliyetleri en alt seviyede tutarak petrole sahip olmayı amaçlamaktadır (Ercan,1996). Petrol ithalatçısı ülkelerden petrol ihracatçısı ülkeye satın alma gücünün aktarılması petrol fiyatındaki şokların ekonomik aktiviteye etkisini göstermektedir. Petrol ihracatçısı ülkede satın alma gücünde ve toplam talepte artma yaşanırken; petrol ithalatçısı ülkede satın alma gücünde ve toplam talepte azalma yaşanmaktadır (Brown, 2002: 3).

Aktaş (2010), petrol fiyatları ile dış ticaret haddi ve işsizlik arasında negatif ilişkiyi vurgulamaktadır. Özsağır ve Şentürk (2011), ham petrol fiyatlarındaki hareketliliğin GSYİH büyümesi üzerinde etkili olduğunu vurgulamaktadır. Mucuk (2016), petrol fiyatlarındaki artışın gayrisafi yurtiçi hasılayı artırdığını ifade etmektedir. Algan vd. (2017), petrol fiyatlarındaki dalgalanmaların sanayi üretimini azalttığını belirtmektedir. Yılanıcı (2017), petrol fiyatları ile ekonomik büyüme arasında uzun dönem bir bağıntı bulunmadığını ortaya koymaktadır. Şengönül (2018), petrol şoklarının uzun dönemde ihracatı olumlu yönde etkilediğini vurgulamaktadır. Awunyo ve Vitor (2019), petrol fiyatlarının ekonomik büyüme faaliyetleri üzerine uzun dönem etkisi olduğunu belirtmektedir. Aykut (2020), petrol fiyatlarından ekonomik büyümeye doğru pozitif yönde ilişki olduğunu vurgulamaktadır. Ünal (2021), petrol fiyatları ve büyüme arasında tek yönlü nedensellik ilişkisi olduğu göstermektedir. Çalışma kapsamında, ilk bölümde konuya giriş yapıldıktan sonra ikinci bölümde değişkenler arasındaki saklı eşbütünleşmenin ortaya çıkartılması için kullanılan ekonometrik metodoloji hakkında bilgi verilmektedir. Üçüncü bölümde petrol fiyatı endeksi ve gayrisafi yurtiçi hasıla arasındaki ilişki yapısı belirlendikten, sonra son bölüm bulgu ve önerilere ayrılmaktadır.

2. Ekonometrik Metodoloji

Ekonomi kuramında değişkenler arasında denge ilişkilerinin belirlenmesinde durağanlık kavramı öne çıkmaktadır. Makroekonomik seriler genellikle durağanlık koşulunu sağlanamamakta ve durağan olmayan zaman serileri ekonometrik analizde çoğunlukla sorunlu olarak nitelendirilmektedir. Durağan olmayan seriler kullanılarak yapılan tahminlerde sahte regresyon sorunu ile karşılaşılabilir (Granger ve Newbold ,1974). Eşbütünleşme kavramı ekonomik değişkenlerin uzun dönemli dengede olması ile yakından ilişkili olmaktadır. Eşbütünleşme ile her biri ayrı ayrı durağan olmayan iki ya da daha fazla zaman serisi arasındaki ilişki açıklanabilmektedir. Değişkenler eşbütünleşik ise denge ilişkisinden olan sapma sıfırcı dereceden bütünleşik olmaktadır (Banerjee, 1993).Eşbütünleşme analizinin uygulandığı durumlar tek denklemler ve denklemler sistemi olmak üzere iki gruba ayrılmaktadır. Engle-Granger (1987), tek denkleme dayalı eşbütünleşme analizini geliştirilirken; Johansen (1988), tek denge yapısı varmış gibi kısıtlamaya gidilmesini engelleyerek çoklu eşbütünleşme vektörünün tahmin edilmesini sağlamaktadır (Sevüktekin ve Nargeleçekenler, 2010). Fark alma işlemi serilerdeki dalgalanmaları ortadan kaldırmakta ve veri kaybına uğrayan seride serinin geçmiş dönemlerde maruz kaldığı şoklar giderildiği gibi uzun dönemli ilişkiler de ortadan kalkmaktadır (Tarı, 2010).

Granger ve Yoon (2002), değişkenler arasında uzun dönem bir ilişki olmasa bile, değişkenlerin negatif ve pozitif bileşenlerine ayrıldıktan sonra bir ilişki ortaya çıkması halinde değişkenler arasında saklı bir ilişki olacağını ifade etmektedir. ε_t ve η_t hata terimi ve x_t ile y_t rassal yürüyüş sürecine sahip olmak üzere

$$x_t = x_{t-1} + \varepsilon_t = x_0 + \sum_{i=1}^t \varepsilon_i$$

$$y_t = y_{t-1} + \eta_t = y_0 + \sum_{i=1}^t \eta_i$$

(1)

şeklinde gösterilmektedir. d eşik değeri, $\varepsilon_i = \varepsilon_i^- + \varepsilon_i^+$ ve $\eta_i = \eta_i^- + \eta_i^+$ olmak üzere,

$$\varepsilon_i^- = \min(\varepsilon_i, d)$$

$$\varepsilon_i^+ = \max(\varepsilon_i, d)$$

$$\eta_i^- = \min(\eta_i, d)$$

$$\eta_i^+ = \max(\eta_i, d)$$

(2)

şeklinde gösterilmektedir. Eşitlik (1) ve Eşitlik (2) birleştirildiğinde,

$$x_t = x_{t-1} + \varepsilon_t = x_0 + \sum_{i=1}^t \varepsilon_i^- + \sum_{i=1}^t \varepsilon_i^+$$

$$y_t = y_{t-1} + \eta_t = y_0 + \sum_{i=1}^t \eta_i^- + \sum_{i=1}^t \eta_i^+$$

(3)

elde edilmektedir. x_0 ve y_0 sabit olduğu bilgisi altında, $x_t^+ = \sum_{i=1}^t \varepsilon_i^+$, $x_t^- = \sum_{i=1}^t \varepsilon_i^-$ ve $y_t^+ = \sum_{i=1}^t \eta_i^+$, $y_t^- = \sum_{i=1}^t \eta_i^-$ olmak üzere,

$$x_t = x_0 + x_t^- + x_t^+$$

$$y_t = y_0 + y_t^- + y_t^+$$

(4)

elde edilmektedir. $\Delta x_t^- = \varepsilon_t^-$, $\Delta x_t^+ = \varepsilon_t^+$ ve $\Delta y_t^- = \eta_t^-$, $\Delta y_t^+ = \eta_t^+$ olarak verilebilmektedir. Granger ve Yoon (2002) saklı eşbütünleşme yaklaşımı, Engle Granger (1987) temeline dayandığından, ayrıştırma ile elde edilen serilere Engle Granger (1987) eşbütünleşme analizi uygulanmaktadır.

Değişkenleri arasında eşbütünleşme ilişkisinin belirlenmesi durumunda saklı hata düzeltme modeline

$$\Delta Y_t^+ = \psi_0 + \psi_1 \varepsilon_{t-1} + \sum_{i=1}^k \psi_{xi} \Delta X_{t-i}^+ + \sum_{j=1}^k \psi_{yj} \Delta Y_{t-j}^+ + v_t$$

$$\Delta X_t^+ = \gamma_0 + \gamma_1 \varepsilon_{t-1} + \sum_{i=1}^k \gamma_{xi} \Delta X_{t-i}^+ + \gamma_{yj} \Delta Y_{t-j}^+ + u_t$$

(5)

geçiş yapılmaktadır.

3. Petrol Fiyat Endeksi Ve Ekonomik Büyüme Arasındaki İlişkinin Belirlenmesi

Çalışma kapsamında, Brent, West Texas Intermediate ve Dubai Fateh' e ait 3 spot fiyatı ortalamasından elde edilen ham petrol fiyat endeksi değişiminin ekonomik büyüme üzerindeki etkisini incelemek amacıyla 1989:Q4-2020:Q4 dönemlerine ait üçer aylık veriler kullanılmaktadır. Veri seti Türkiye Cumhuriyet Merkez Bankası (TCMB) elektronik veri dağıtım sisteminden (EVDS) ve Uluslararası Para Fonu (IMF) veri tabanında elde edilmektedir. Farklı temel yıllarına ait farklı dönem verileri 1989 temel yıl baz alınarak düzenlenmektedir. Tablo 1.' de birim kök test sonuçları incelendiğinde serilerin durağan dışı özellik sergilendiği ve aynı dereceden entegre oldukları tespit edilmektedir. Birim köke sahip seriler arasındaki ilişki en küçük kareler tahminleriyle incelendiğinde seride mevcut olan trend yapısı gerçekte var olmayan ilişkilerin ortaya çıkmasına neden olmaktadır. Bu nedenle değişkenler arasındaki uzun dönem denge ilişkisi Engle ve Granger yöntemi kullanılarak ele alınmaktadır. Tablo 1. incelendiğinde, ekonomik büyüme ve petrol fiyatları arasında eşbütünleşme olmadığını ifade eden yokluk hipotezi hem sabit hem de sabit ve trend terimli durumlar göz önüne alındığında reddedilmediğinden değişkenlerin bağımlı değişken olarak alındığı her iki durumda da uzun dönem denge ilişkisinin tüm önem düzeylerinde mevcut olmadığı belirlenmektedir.

Tablo 1. Değişkenlere ilişkin uzun dönem bulguları

Engle-Granger yönteminde asimetri dikkate alınmadığından şoklara karşı aynı tepkinin verildiği göz önüne alınmaktadır. Değişkenler arasında uzun dönem ilişkisinin belirlenememesine karşılık değişkenler negatif ve pozitif bileşenlere ayrılarak aralarındaki saklı ilişki ve saklı hata düzeltme modeli Tablo 2.'de incelenmektedir. Hata düzeltme katsayıları incelenerek uzun dönem ayarlama hızı ve gecikme fark değişken katsayıları incelenerek kısa dönem ayarlama hızları gösterilmektedir. Tablo 2.'de ekonomik büyüme değişkenine pozitif (EBP) ve negatif (EBN) ve petrol fiyatı değişkenine pozitif (PFP) ve negatif (PFN) olmak üzere dönüştürme işlemi uygulanmaktadır. Saklı ilişkinin sınanması için ayrıştırılan serilerde eşbütünleşme ilişkisi Granger ve Yoon (2002) yöntemi uygulanarak araştırılmaktadır. Granger ve Yoon (2002) sonuçları incelendiğinde %5 önem düzeyinde EB^+, PF^+ ve EB^+, PF^- arasında uzun dönem ilişkisinin olduğu belirlenmektedir.

Tablo 2.'de EB^+ , PF^+ modeline ilişkin uzun dönem denge denkleminin katsayıları istatistiksel olarak anlamlı bulunmaktadır. Petrol fiyatlarında meydana gelen %1 oranında pozitif şok, ekonomik büyüme üzerinde %0,24 oranında etki yaratmaktadır. Hata düzeltme katsayısının negatif ve istatistiksel olarak anlamlı olması sistemin uzun dönem dengesine ulaştığını göstermektedir. PF^+ değişkeninin bağımlı değişken olarak alındığı saklı hata düzeltme tahminindeki hata düzeltme katsayısının pozitif ve istatistiksel olarak anlamlı olması PF^+ değişkeninin kalıcı bileşen olduğunu ve EB^+ değişkeninin ise geçici değişken olduğu göstermektedir. Pozitif şoklar dikkate alındığında petrol fiyatları ile ekonomik büyüme arasında tek yönlü uzun dönem asimetrik nedensellik belirlenmektedir. Bununla birlikte, EB^+ ve PF^- uzun dönem denge denkleminin katsayıları anlamlı bulunsalar da hata düzeltme katsayısı istatistiksel olarak anlamsız bulunduğu için uzun dönem dengesine ulaşılamamaktadır.

4. SONUÇ

Petrol fiyatlarındaki artışın, Türkiye'nin ithalatçı olmasından dolayı, ekonomik büyüme üzerindeki etkilerinin olumsuz olması beklenmektedir. Petrol harcamalarının gelir içindeki payının yüksek olmasının yanı sıra petrol tüketiminin giderek artması ve diğer enerji kaynaklarına yönelim imkanının kısıtlı olmasından dolayı iki değişken arasındaki ilişkinin yapısının ortaya çıkartılması önem arz etmektedir. Petrol fiyatları ve ekonomik büyüme arasında uzun dönem ilişkisinin belirlenememesi, iki değişken arasındaki etkileşimin doğrusal olarak ele alınmasından kaynaklandığı sonucuna varılmaktadır. Bu kapsamda, özellikle fiyatların ülke dışında belirlendiği ve ithalatçı konumda bulunan makroekonomik değer ve etkilere sahip ürünlerin, ekonomik yapı içindeki etkileri incelenirken asimetri etkisinin göz önünde bulundurulması gerekliliği ortaya konmaktadır.

Özet: Faaliyet sürdürülebilirliği ve karlılık algısı işletmeler arasında rekabet ve performans kavramlarını ön plana çıkarmaktadır. Şirketlere ilişkin yatırımlar yüksek maliyetleri gelecek dönemlerdeki belirsizliklerden dolayı risk faktörü olarak değerlendirildiğinden işletmelerin finansal sağlamlığı sürdürülebilirlik için önem arz etmektedir. Finansal performansa ilişkin risklerin etkilerinin azaltılması ise finansal yapının sağlamlaştırılması ile gerçekleşmektedir. Performans ölçülmesi ile gelişim ve değişim içinde olan ihtiyaçlar belirlenerek, gelişen rekabet koşulları altında ön plana çıkılabilmektedir. Sermaye piyasalarındaki derinlik ve yatırım araçlarının çeşitliliği ele alındığında, rekabet koşulları altında, finansal paydaşlar ve yatırımcılarda etkin olarak piyasalarda rol almaktadır. Performans kriterleri ele alınarak alternatifler arasından en iyinin seçilmesi belirsizlik durumları altında doğru sonuçlar vermeyebilmektedir. Kesinlik içermeyen veya eksik bilginin olduğu durumlarda karar verme yöntemlerinden Gri ilişkisel analiz yöntemi kullanılarak derecelendirme ve sınıflandırma yapılabilmektedir. Çalışma kapsamında, sabit sermaye yatırımlarının yüksek ve riskli olduğu enerji sektöründe faaliyet gösteren işletmelerin finansal performans değerlendirilmesinde Gri ilişkisel analiz yöntemi kullanılarak çözümlenmeler elde edilerek hem uygun politika önerileri yapılmakta hem de model karşılaştırmaları gerçekleştirilmektedir.

Anahtar Kelimeler: Gri İlişkisel Analiz, Finansal Performans, Enerji Sektörü

Abstract: The perception of operational sustainability and profitability highlights the concepts of competition and performance among businesses. Financial stability of the enterprises is important for sustainability, as the high costs of investments in companies are considered as a risk factor due to uncertainties in the future. Reducing the effects of risks on financial performance is achieved by strengthening the financial structure. Developing and changing needs can be identified with performance measurement, and it can come to the fore under developing competitive conditions. Given the depth of capital markets and the diversity of investment instruments, financial stakeholders and investors actively play a role in the markets under competitive conditions. Selecting the best among alternatives by considering performance criteria may not give correct results under uncertainties. In cases where there is incomplete or incomplete information, grading and classification can be made by using Gray relational analysis method, one of the decision-making methods. Within the scope of the study, in evaluating the financial performance of enterprises operating in the energy sector, where fixed capital investments are high and risky, appropriate policy recommendations are made and model comparisons are made using the Gray relational analysis method.

Key Words: Gray Relational Analysis, Financial Performance, Energy Sector

1. GİRİŞ

Toplumların sürdürülebilir gelişimi için güvenli ve erişilebilir enerji kaynaklarına ihtiyacı bulunmaktadır. Nüfus artışı, sanayileşme, kentleşme ve teknolojik gelişmelerin artarak kullanım yoğunluğunun genişlemesi enerji tüketiminde artış yaratmaktadır. Enerji sektörünün alt sektörleri ele alındığında, enerji talebinin büyük çoğunluğu dengesiz dağılım gösteren fosil yakıtlara bağlı olmakta ve enerji arzında farklılaşmalara neden olmaktadır. Dışa bağımlılık yapısı göz önüne alındığında, enerji arzının sağlanması için şeffaf-rekabetçi-mali açıdan enerji sektörünün gelişiminin desteklenmesi gerekmektedir. Enerji sektörüne yapılan yatırımlar karlı olsa bile, yatırım maliyetinin yüksek olması sektör için temel risk faktörü oluşturmaktadır. Risk faktörünün ortadan kaldırılması ve yatırımların karlı hale dönüşmesi için sektördeki firmaların hem üretim faaliyetlerini geliştirmeleri hem de finansal alt yapılarını güçlendirmeleri gerekmektedir. Türkiye’de enerji politikaları talebin karşılanması ve arz güvenliği temeline dayanmaktadır. 2002 yılı itibarıyla enerji alanındaki özelleştirme faaliyetleri sonucu kurumsal yapının değişmesiyle Türkiye’de faaliyet gösteren enerji üretim ve dağıtım sektöründeki firmaların finansal performanslarının değerlendirilmesi önem arz etmektedir.

Peker ve Baki (2011), sigorta sektöründe faaliyette bulunan üç firmanın performanslarını karşılaştırılması olarak ortaya koymaktadır. Elitaş ve diğ. (2012), İstanbul Menkul Kıymetler Borsası (İMKB)'nda işlem gören 7 sigorta şirketinin finansal performansları karşılaştırarak finansal başarının en önemli unsurunun likidite oranları olduğunu saptamaktadır. Tayyar ve diğ. (2014), Borsa İstanbul'a kayıtlı bilişim ve teknoloji sektöründe faaliyet gösteren işletmelerin finansal performanslarını değerlendirmektedir. Meydan ve diğ. (2016), BIST'te işlem gören gıda firmalarının finansal performanslarını klasik finansal oran analizi ile karşılaştırmalı olarak incelemektedir. Başdeğirmen ve Tunca (2017), etkinlik ve verimlilik kapsamında sektördeki firmaların finansal performansını etkileyen faktörlerin başında öz sermaye ve toplam aktifler geldiğini belirtmektedir. Ayçin (2018), Borsa İstanbul'da menkul kıymet yatırım ortaklıkları endeksinde yer alan işletmelerin finansal performanslarını değerlendirmektedir. Güleç ve Özkan (2018), 2005-2016 yılları arasında Borsa İstanbul'da faaliyet gösteren 16 çimento şirketinin finansal performanslarını inceleyerek hisse senedi getirileriyle gri ilişkisel analiz değerleri arasındaki ilişkinin son derece zayıf olduğunu ve sıralamaların birbirinden farklılaştığını belirtmektedir. Başdeğirmen ve Işıldak (2018), gri ilişkisel analiz yönteminden yararlanarak ulaştırma sektöründe faaliyet gösteren işletmelerin finansal performanslarını incelemektedir. Şengül ve Ece (2018), 2005-2017 yılları arasında BIST 100 şirketlerinin finansal performanslarını inceleyerek gri ilişkisel analiz değerleri ile hisse senedi getirileri arasındaki ilişki ortaya koymaktadır. Günay ve diğ. (2018), Türkiye'nin önde gelen şirketlerinin finansal performansları net satış gelirleri açısından değerlendirilmektedir. Tezergil (2018), Türk finans sektöründe faaliyet gösteren portföy yönetim şirketlerinin finansal performanslarının karşılaştırmaktadır. Ersoy (2020), finansal performans değerlendirmesinin yoğun rekabet ortamında varlığını devam ettirmek isteyen işletmeler için hassas ve dikkate alınması gereken önemli bir süreç olduğunu belirtmektedir.

Finansal piyasaların genişlemesi ve gelişmesi olarak tanımlanan finansal gelişme sonucunda artan entegrasyon finansal krizlerin sıklıklarının kolaylaştırabildiğinden ülkelerin makroekonomik performanslarını etkileyerek sektörel firmaların finansal performanslarını ve finansal durumlarını etkilemektedir. Firmalara ilişkin değer yaratma süreci finansal performans ölçümüyle sağlanmaktadır. Çalışma kapsamında, Borsa İstanbul (BIST) elektrik, gaz ve buhar sektörlerinde faaliyet gösteren firmaların finansal performansının çok kriterli karar verme yöntemleri (ÇKKV) arasında yer alan entropi ile ağırlıklandırma yapılan gri ilişkisel yöntemi ele alınarak değerlendirilmektedir. Firmaların finansal performanslarının değerlendirilmesi firmaların gelecek dönemlerde göz önüne alınması gereken adımların belirlenmesini sağlayabilmektedir. Çalışmanın ilk bölümünde konuya giriş yapılarak ikinci bölümünde ekonometrik metodoloji ile ilgili teorik bilgi sağlanmaktadır. Üçüncü bölümde finansal performans açısından sektörel firmalar karşılaştırılarak son bölümde elde edilen bulgular değerlendirilmektedir.

2. EKONOMETRİK METODOLOJİ

Çok kriterli karar verme yöntemlerinde kriter ağırlıkları, bilgi ve deneyimlerle belirlen öznel ağırlık ve ölçüm verilerine dayanan objektif ağırlık olarak iki şekilde belirlenmektedir. Sistemdeki düzensizliğin ve belirsizliğin ölçüsü olarak tanımlanan entropi yöntemi, istatistiksel özelliklere ve ölçüm yöntemlerine dayanmaktadır. Entropi yönteminin ilk aşamasında j.değerlendirme kriterine ($j = 1, 2, \dots, n$) göre i. alternatifin ($i = 1, 2, \dots, m$) aldığı değer x_{ij} olmak üzere, karar matrisi

$$D = \begin{bmatrix} x_{11} & x_{12} & \dots & x_{1n} \\ x_{i1} & x_{i2} & \dots & x_{in} \\ x_{m1} & x_{m2} & \dots & x_{mn} \end{bmatrix}$$

(1)

elde edilmektedir. Farklı birim cinslerine sahip kriterlerin [0,1] aralığına indirgenmesi için

$$p_{ij} = \frac{x_{ij}}{\sum_{i=1}^m x_{ij}}$$

(2)

şeklinde normalizasyon gerçekleştirilmektedir.

Değerlendirme kriterine ilişkin entropi (belirsizlik ölçüsü) değerleri, $k = (\ln(m))^{-1}$ ve $0 \leq e_j \leq 1$ olmak üzere,

$$e_{ij} = -k \cdot \sum_{j=1}^n p_{ij} \cdot \ln(p_{ij}) \quad i = 1, 2, \dots, m \text{ ve } j = 1, 2, \dots, n$$

(3)

şeklinde hesaplanmaktadır. Kriterlere ilişkin entropi değerleri kullanılarak kriterlere ilişkin ağırlık değerleri

$$x_j = \frac{1 - e_j}{\sum_{j=1}^n (1 - e_j)}$$

(4)

elde edilmektedir.

Gri sistem teorisi küçük örneklem ve zayıf bilginin yer aldığı problemler için önerilmektedir (Julong,1982). Gri ilişkisel analiz stokastik/bulanık yöntemlerle belirlenemeyen bilinmeyen (belirsiz) sistemlerin davranışlarının sınırlı veri kaynağı ile belirlenmesini sağlamaktadır (Feng-Wang, 2000). Kesin olarak ifade edilemeyen ve değişkenlerdeki/sistem yapısındaki/sistem sınırlarındaki/sistem davranışındaki bilgi eksikliğine sahip durumlarda gri bilgiler olarak ele alınmaktadır (Chih-Hung ve Ching-Liang, 2003). Ek olarak, gri sistemler çoklu veri girdilerin ve ayrık verilerin analizinde kullanılabilir (Lin ve Liu, 2004). İdeal bir çözümde mesafenin kullanılmasına dayanan gri ilişkisel analiz sınıflandırma ve derecelendirme tekniği olarak ele alınmaktadır. Verilerin az olması sistemin faktörleri arasındaki temel ilişkilerin belirlenmesine engel olmadığından diğer yöntemlerdeki gibi sınırlayıcı olmamaktadır (Feng ve Wang, 2000). Dizi olarak tanımlanan her bir faktör ile kıyas yapılan referans serisi arasındaki ilişki derecesini belirlenebilmektedir. Faktörler arasında etki derecesi gri ilişkisel derece (0 ile 1 arasında) olarak ifade edilmektedir (Üstünişik, 2007). Karmaşık faktörler arasında niceliksel ve niteliksel ilişkilerin belirlenebilmesinde etkili olan yöntem, diziler arasındaki ilişkiyi mantıksal ve sayısal olarak ölçümleyebilmektedir. Elemanlar arasındaki değişim sürekli ve birlikte meydana geliyorsa elemanlar arasında yüksek ilişki ve değişim sürekli ve birlikte meydana gelmiyorsa düşük ilişki ortaya çıkmaktadır (Altan ve Candoğan, 2014). Gri ilişkiler analizi karar verme sürecinde tek başına ya da diğer yöntemlerle etkileşimli olarak bütünleşik olarak uygulanabilmektedir (Wu,2002).

Karar problemiyle ilgili karşılaştırmaya tabii tutulacak faktör serisi;

$$x_i = (x_i(j), \dots, x_i(n)), \quad i = 1, 2, \dots, m \quad \text{ve} \quad j = 1, 2, \dots, n$$

(1)

ve faktörleri kıyaslamak için belirlenen referans serisi, j . kriterin normalize değerler içindeki en uygun değer $x_0(j)$ olmak üzere,

$$X_0 = (x_0(j)), \quad \text{ve} \quad j = 1, 2, \dots, n$$

(2)

belirlenmektedir. x_i faktörü seçenekleri ve seçeneklerin her bir kritere göre aldığı performans değerleri olmak üzere, karar matrisi

$$X = \begin{bmatrix} x_1(1) & \dots & x_1(n) \\ \vdots & \ddots & \vdots \\ x_m(1) & \dots & x_m(n) \end{bmatrix}$$

(3)

şeklinde gösterilmektedir. Karar matrisinde yer alan her bir kriterin en iyi değeri alınarak elde edilen referans serisi karar matrisine ilk satır olarak eklenerek karşılaştırma matrisine dönüştürülmektedir. Gri ilişki katsayılarının hesaplanmasında göstergeler arasında birbirinden farklı kriterlerin kullanılmasından dolayı göstergelerin karşılaştırılabilmesi için veriler fayda, maliyet veya en uygun (optimum) duruma göre standartlaştırılmaktadır (Yıldırım, 2014). j . kriterin hedef değeri $x_{0b}(j)$ belirlenen optimum değer ve $\max_j x_i(j) \geq x_{0b}(j) \geq \min_j x_i(j)$ olmak üzere, fayda yönlü kriter durumunda; seri değerlerinden maksimum değer seçilmesi amaca uygun olduğundan normalizasyon,

$$x_i^* = \frac{x_i(j) - \max_j x_i(j)}{\max_j x_i(j) - \min_j x_i(j)}$$

(4)

maliyet yönlü kriter durumunda; seri değerlerinden minimum değer seçilmesi amaca uygun olduğundan normalizasyon,

$$x_i^* = \frac{\max_j x_i(j) - x_i(j)}{\max_j x_i(j) - \min_j x_i(j)}$$

(5)

ve optimum durumda seri değerinin ortalamasının seçilmesi amaca uygun olduğundan normalizasyon,

$$x_i^* = \frac{|x_i(j) - x_{0b}(j)|}{\max_j x_i(j) - x_{0b}(j)}$$

(6)

şeklinde gerçekleştirilmektedir (Yıldırım, 2014:234). Karar matrisi normalize edilmiş matrisi

$$x_i^* = \begin{bmatrix} x_1^*(1) & \dots & x_1^*(n) \\ \vdots & \ddots & \vdots \\ x_m^*(1) & \dots & x_m^*(n) \end{bmatrix}$$

(7)

dönüştürülmektedir. x_0^* ile x_i^* arasındaki mutlak değer farkı

$$\Delta_{0i}(j) = |x_0^*(j) - x_i^*(j)|, \quad i = 1, 2, \dots, m \quad \text{ve} \quad j = 1, 2, \dots, n$$

(8)

olarak elde edilmekte ve

$$\Delta_{0i}(j) = \begin{bmatrix} \Delta_{01}(1) & \dots & \Delta_{01}(n) \\ \vdots & \ddots & \vdots \\ \Delta_{0m}(1) & \dots & \Delta_{0m}(n) \end{bmatrix}$$

(9)

şeklinde mutlak değer matrisi oluşturulmaktadır. Gri ilişkisel katsayı matrisi, ζ parametresi ayırıcı katsayı ve $[0,1]$ aralığında bir değer olmak üzere,

$$\gamma_{0i}(j) = \frac{\Delta_{\min} + \zeta \Delta_{\max}}{\Delta_{0i}(j) + \zeta \Delta_{\max}}$$

$$\Delta_{\max} = \max_i \max_j \Delta_{0i}(j) \text{ ve } \Delta_{\min} = \min_i \min_j \Delta_{0i}(j)$$

(10)

elde edilmektedir. ζ parametresi Δ_{0i} ile Δ_{\max} arasındaki farkı düzenlemekte ve Δ_{\max} veri dizisindeki en uç değer olma ihtimalini ortadan kaldırmaktadır. Genellikle 0,5 değeri alan ζ ayırıcı katsayısı genel sıralamayı etkilemediği söylenebilmektedir (Hsu ve Wen, 2000). Karşılaştırmalı seriler (x_i^*) ile referans seri (x_0^*) arasındaki geometrik benzerliğin ölçüsü olan gri ilişki analizi karşılaştırılmalarda kullanılabilir. İlişki derecesinin büyüklüğü referans seri arasında kuvvetli bir ilişki olduğunu göstermektedir. Eğer karşılaştırılan iki seri birbirinin aynı ise, gri ilişki derecesi 1 olarak bulunur. Gri ilişkisel derecesi serilerin referans seriye benzerliğini göstermekte ve seriler birbirinin aynı ise gri ilişki derecesi bir(1) olmaktadır (Üstünişik, 2007). Gri ilişki derecesi Γ_{0i} ve j. kriterin önem derecesi w_j olmak üzere, kriterlerin önem derecelerinin eşit olduğu durumda gri ilişki derecesi

$$\Gamma_{0i} = \frac{1}{n} \sum_{j=1}^n \gamma_{0i}(j), \quad i = 1, \dots, m$$

(11)

ve önem derecelerinin farklı olduğu durumlarda gri ilişki derecesi

$$\Gamma_{0i} = \frac{1}{n} \sum_{j=1}^n [w_j(j) \gamma_{0i}(j)], \quad i = 1, \dots, m$$

(12)

olarak elde edilmektedir. Gri ilişki derecesi hesaplandıktan sonra büyükten küçüğe doğru sıralama yapılmakta ve ilk sıradaki seçenek en uygun alternatif olarak belirlenmektedir.

3. ENERJİ SEKTÖRÜNE İLİŞKİN FİNANSAL PERFORMANSIN DEĞERLENDİRİLMESİ

Çalışma kapsamında, Akenerji Elektrik Üretim A.Ş. (AKENR), Aksu Enerji Üretim A.Ş. (AKSEN), Aksu Enerji ve Ticaret A.Ş. (AKSUE), Ayen Enerji A.Ş. (AYEN), Bomonti Elektrik Mühendislik Müşavirlik İnşaat Turizm ve Ticaret A.Ş. (BMELK), Enerjisa Enerji A.Ş. (ENJSA), Odaş Elektrik Üretim Sanayi Ticaret A.Ş. (ODAS), Zorlu Enerji Elektrik Üretim A.Ş. (ZOREN) olmak üzere 8 işletme finansal performans değerlendirilmesi açısından incelenmektedir. 2018 yılına ait finansal oranlarının (likidite, finansal yapı, finansman ve karlılık) elde edilmesinde Kamuoyu Aydınlatma Platformu (KAP) veri dağıtım sisteminden faydalanılmaktadır. Likidite çerçevesinde incelenen cari oran (CO) ve asit-test oranı (ATO) maksimum yönlü olmaktadır; finansal yapı altında ele alınan kaldıraç oranı (KO) ve borçlanma katsayısı (BK) minimum yönlü oranlar olmaktadır. Ek olarak, finansman olarak ele alınan aktif devir hızı (ADH) ve öz sermaye devir hızı (ÖDH) maksimum yönlü oranlar iken; karlılık altında ele alınan aktif karlılığı (AK) ve öz sermaye karlılığı (ÖK) maksimum yönlü oranlar olarak ele alınmaktadır.

Finansal performans değerlendirmesi için seçilen oranlar entropi ile ağırlıklandırıldıktan sonra gri ilişkisel analiz yöntemi uygulanarak firmalar performans değerlendirmeleri açısından sıralanmaktadır. Ele alınan değerler pozitif olduğu için herhangi bir işlem yapılmadan karar matrisi oluşturulmaktadır. Tablo 1.'de karar matrisine ilişkin normalizasyon süreci gerçekleştirildikten sonra, normalize edilmiş entropi matrisindeki değerler kullanılarak nihai entropi ağırlıkları elde edilmektedir.

Tablo 2.'de karar problemine ait alternatiflerin değerlendirilmesi için kullanılan kriterlerin maksimum ve minimum değerleri belirlenmektedir. Normalizasyon işleminin gerçekleştirilmesinde kriterlerin fayda ve maliyet durumları belirlenerek referans sistemi serileri elde edilmektedir. Minimum ve maksimum değerler belirlendikten sonra, karar matrisinin referans serilerine göre mutlak değerleri elde edilmektedir. Minimum sıfır, maksimum bir ve ayırıcı katsayı değeri 0,5 olarak belirlenmektedir. Gri ilişkisel derece ile ele alınan serisinin referans serisine benzerliği Tablo 2'de ortaya konmaktadır. Ek olarak, entropi yöntemiyle belirlenen kriter ağırlıkları gösterilmektedir.

4. SONUÇ

Sanayi faaliyetleri başta olmak üzere İktisadi gelişmelerin temel yapı taşı olarak anılan enerji sektöründeki gelişmeler göz önüne alındığında, sektöre yatırım yapmak hem kazanç sağlamakta hem de yatırım maliyetlerin yüksekliği ve kaybın telafisinin zor olması dolayısıyla diğer sektörler için daha riskli olmaktadır. Enerji sektöründeki yatırımların finansal sağlamlılık olgusuna dayanması gerekmektedir. Bu nedenle, enerji sektöründeki firmaların finansal performans değerlendirmelerinin hem yatırım yapılacağı dönemde hem de yatırım ilerleyen dönemlerinde incelenmesi önem arz etmektedir. Çalışma kapsamında, enerji sektöründe faaliyet gösteren şirketlerin faaliyetleri eşit ağırlıklandırma ve entropi ağırlıklandırma ile ortaya çıkartılmaktadır. Entropi yöntemi sonuçlarına göre en önemli finansman oranı öz sermaye devir hızı olarak belirlenmektedir. Öz sermaye devir hızının yüksek olması maksimizasyon yönlü olduğu için firmanın performansın olumlu yönde etkilediği söylenebilmektedir. Her iki ağırlıklandırma döneminde ilk sırada 2018 yılında işlem görmeye başlayan ENJSA firması yer almaktadır. Hem üretim hem dağıtım faaliyetinde bulunan firmalar finansal performansını artırmak isteyen firmalar maksimizasyon yönlü kriterlerini arttırmak ve minimizasyon yönlü kriterlerini azaltmak için farklı yollara başvurabilmektedir. Eşit ağırlıklı gri ilişki analizine göre sürdürülebilirlik performansı kapsamında ENJSA birinci sırada yer alırken, AKSEN ikinci sırada, AKSUE üçüncü sırada, AYEN dördüncü sırada, ZOREN beşinci sırada, ODAS altıncı sırada, BMELK yedinci sırada ve AKENR sekizinci sırada yer almaktadır. Entropi yöntemi ile ağırlıklandırma yapıldığında ise, ENJSA birinci sırada yer alırken, AKSEN ikinci sırada, ZOREN üçüncü sırada, AYEN dördüncü sırada, ODAS beşinci sırada, AKSUE altıncı sırada, AKENR yedinci sırada ve BMELK sekizinci sırada yer almaktadır. Bu çerçevede, ilk iki firma ve son iki firmaya ilişkin performans sıralamalarında herhangi bir değişiklik bulunmamakla birlikte; diğer durumlarda eşit ağırlıklandırma ve entropi ağırlıklandırma arasında büyük farklılıklar olduğu gözlemlendiğinden, performans sıralamalarında eşit ağırlıklandırmanın tercih edilmemesi önerilmektedir.

Özet: Türkiye ile İran arasında geçmişten günümüze hem siyasi hem de iktisadi olarak çok farklı ve düzensiz bir ilişki seyretmiştir. Türkiye ile İran arasındaki ticari ekonomik ilişkileri ele aldığım bu yazıda Türkiye'nin İran ile ticari ilişkileri inşili çıkışlı bir seyir izlemektedir. Bunun başlıca nedenlerinden biri her iki ülkenin de değişen siyasi yapısı ve iyi ilişkiler sırasında ülkelerde olan darbeler başlıca sebebidir. Kendi düzenine oturtulamamış olan iktisadi yapı her değişkenden çok fazla etkilenen hassas bir hal almış olmasından sadece iki ülke arasında olan ilişkileri kötü veya iyi olmasının dışında diğer güçlü iktisadi yapıya sahip ülkelerin uygulamış oldukları yaptırım ve ambargolar ile daha da yıpranmıştır. İki ülke arasındaki ticari ilişkilerin artmasındaki bir diğer etken Türkiye'nin 2000'li yıllardan itibaren yürüttüğü ve ülkenin dış politikasında benimsediği komşularla sıfır sorun politikasıdır, Türkiye ile İran arasındaki ilişkileri etkileyen ve yakınlaştıran bir politika olarak söyleye biliriz. Türkiye'nin İran ile 1996 yılında yaklaşık 1 milyar dolar civarında olan dış ticaret hacmi, 2012 yılında 21,89 milyar dolara seviyelerine kadar çıkmış, 2018 yılına geldiğimizde ise ticaret hacmi azalarak 9,3 milyar dolar seviyesine gelmiştir. En nihayetinde sonuç olarak iki ülke arasındaki ilişkiler gidişatına göre ülkelerin ekonomileri aynı doğrultuda şekil almaktadır. Son dönemlere baktığımızda bu durumu olabildiğince talere etmeye çalışan Türkiye ve İran ticaret hacimlerini arttırmış ve belirli bir düzlemde tutmayı sağlamışlardır. Kısaca Türkiye ile İran ticari ilişkileri ne sadece iktisadi yapıyla alakalı nede ülkelerin yaşamış oldukları siyasi olaylardır, ticari ilişkiler biraz önce saymış olduğumuz faktörlerin birleşimi sonucunda oluşmakta ve gelişmektedir.

Anahtar Kelimeler: Ticari ilişkiler, Ticaret hacmi, İktisadi yansıma, Ekonomik İş birliği, Ekonomik Kriz

1. Giriş

Türkiye İran arasındaki geçmişteki ilişkilere baktığımızda Osmanlı devletinin son zamanlarından itibaren iki devlet arasında çoğunlukla olumsuz yönde bir ilişki görülmektedir. Bunun nedeni ise Tanzimat döneminde devlet adamları İran'ı potansiyel bir tehlike oluşturabileceğini düşünmesi, iki ülkenin farklı mezheplerde olması ve çatışmanın dinsel bir boyuttan da devam etmesinden, bölgede hâkimiyet ve güç çatışmasının kaynaklanmaktadır. Bu doğrultuda İran'ın Doğu Anadolu bölgesindeki Ermeni örgütlerini desteklemesi sonucunda Osmanlı devletini zor bir duruma düşmüştür. Bu örgütlerin en önemli destekleyicisi ise İran'da yaşayan Ermenilerdir. İşte bu durum iki ülkenin arasında bir sorun oluşturmuş ve hatta ilerleyen zamanlarda bu durum İran tarafından Osmanlı devletine karşı bir tehdit aracı olarak kullanılmıştır. Bu ve bunun gibi karşılıklı olarak yıpratılan ilişkiler her iki ülkeyi de ekonomik, siyasi, buldukları coğrafyada hâkimiyetlerinin azalması ve bunun gibi birçok olumsuz yönden etkilenmiştir. 1930 yılına geldiğimizde ise İran ile iyi ilişkiler kurulmaya başlanmış ve bu iyi ilişkiler Rıza Şah'ın 1934 yılında Türkiye ziyaret etmesi ile daha da artmış olsa da iyi giden bu ilişki Dünya savaşı ile azalmış ve birazda yıpranmıştır (ÇETİNSAYA, 2016).

Tablo 1: 1969 – 1984 Yılları Arasında Türkiye-İran Ticaret İstatistikleri (Dolar)

YILLAR	İHRACAT	İTHALAT	HACİM	DENGE
1969	4.795.410	1.168.827	5.964.237	3.626.583
1970	5.245.295	34.643	5.279.938	5.210.652
1971	4.131.406	4.610.169	8.741.575	-478.763

1974 yılından sonra ise iki ülke arasındaki ilişkiler İran hükümeti lehine bir yol almış ve her ne kadar İran hükümeti Türkiye'yi destekler nitelikte olsa da Türkiye'nin Amerika'nın ambargosuyla karşı karşıya kalması ve bunun sonucunda her yönden zayıflamaya başlamış olmasıyla birlikte İran'ın bu süreçte Türkiye'nin aksine, güçlenmesi İran'ın Türkiye karşısında bir avantaj sağlamıştır ve İran bu avantajı korumaya çalışmıştır. 1979 yılına geldiğimizde ise İran'da İran İslam Devrimi meydana gelmiştir. İran'da yeni kurulan hükümet ile Türkiye hükümeti arasındaki ilişkiler eski dönemdeki ilerlemeye göre daha da gelişmiştir. İki ülke arasındaki ilişkilerin bu denli hızlı gelişmesinin sebeplerinden birisi ise Türkiye'nin ekonomisinin kötü bir seyir izlemesi ve bunla birlikte Türkiye'de 1980 yılında bir darbe olmasıyla birlikte Türkiye ekonomik olarak kendini düzeltebilmenin yollarından biri olarak İran ile yapılacak olan ticaret ile ekonomisini canlandırmaya çalışması hem İran hem de Türkiye için karşılıklı iyi bir gelişme olmuştur. Türkiye İran'ın petrol, doğalgaz gibi kaynaklarından daha da faydalanmak ve siyasi ilişkileri arttırmak ve bu iyileşmeyi artık sistematik bir hale getirmek için 1985 yılında Türkiye, İran ve Pakistan arasında Ekonomik İşbirliği Teşkilatı kurulmuştur. Bu hem siyasi hem de ekonomik bakımdan önemli bir adım olmuştur (ÇETİNSAYA, 2016).

Tablo 1'de de görüldüğü gibi ithalat ihracat dengesi 1970 yılından itibaren Türkiye hep açık vermiştir. Bunun yanında Türkiye ile İran arasındaki ticaret hacmi de giderek artmıştır. Özellikle 1980 yılında imzalanan "Uluslararası Karayolu Taşımacılığı Anlaşması" ile birlikte ticaret hacmi 1979 yılında 187 milyon dolar iken 1980 yılında büyük bir sıçrama yaparak 887 milyon dolar seviyesine çıkmıştır. Bu dönemde siyasi ilişkilerinde iyi gitmesinin sonucunda iki ülke arasındaki ticaret her geçen yıl artmaya devam etmiş ve 1984 yılında 2,3 milyar doların üzerinde seyir etmiştir.

Tablo 2: 1985 – 2000 Yılları Arasında Türkiye-İran Ticaret İstatistikleri (1000 \$)

YILLAR	İHRACAT	İTHALAT	HACİM	DENGE
1985	1.078.851	1.264.654	2.343.5050	-185.803

1998	194.696	433.026	627.722	-238.330
1999	157.814	635.928	793.742	-478.114
2000	235.784	815.730	1.051.514	-579.946

Kaynak: TÜİK Verilerinden Derlenmiştir.

1985 – 2000 yılları arasında en yüksek ticaret hacmini 1985 yılında 2 milyar doların üzerinde iken hemen bir yıl sonra 1986 yılında en düşük ticaret hacmi olan 785 milyon dolar seviyesine düşmüş. 1987 ve 1988 yılında yeniden 1 milyar doların üzerine çıkması, 1989 ve 1990 yılların da ise ticaret hacminin yeniden 1 milyar doların altına düşmüştür. Bir yıl arayla bu denli bir yükseliş ve azalış seyir eden ticari ilişkilerin bu dönemde tam olarak oturmadığını ve 1985 yılında ekonomik işbirliği yapılmış olsa da bu teşkilatlanmanın tam olarak düzene girmediği anlaşılmaktadır. Bu tabloda dikkat çeken diğer bir husus ise iki ülke arasındaki ticaret hacminin sadece en düşük olduğu zamanlarda Türkiye'nin ithalat – ihracat dengesi pozitif olmuştur. Özellikle 1991 yılında İran ile yapılan ticarete bu yıllar içerisinde en yüksek ihracat fazlası bir değere yükselmiştir. Türkiye ile İran arasındaki ticarete bu denli bir ihracat ithalat farkının olmasının en önemli faktörü olarak Türkiye'nin İran'dan ithal ettiği doğalgaz petrol gibi enerji ithalatından kaynaklanmaktadır. Bir diğer faktör ise 1980'li yıllarda temelleri atılan "ticaret devleti" politikasıdır diyebiliriz. O zamanlarda Turgut Özal tarafından uygulanmaya başlanan ve ithalat ikame stratejisini biryana bırakıp ülkenin artık ihracat odaklı büyümesi teşvik edilmiştir. Ticaret devleti tanımını kısaca ülke hükümetinin uyguladığı dış politikalar ile ticareti birlikte yürüten ve ekonomik faaliyetler doğrultusunda dış politikaya şekil veren devlet olarak açıklayabiliriz (Sarıaslan, 66).

2. Literatür

Özal'ın oluşturmuş olduğu bu ekonomik sistem Türkiye'nin 1990 yıllarındaki koalisyon döneminde sürdürülememiş ve bu doğrultuda Türkiye ile İran arasında siyasi anlaşmazlıklar yeniden başlamış ve 1990'lı yıllardaki koalisyon hükümetlerinin döneminde karşılıklı siyasi suçlamalardan dolayı ekonomik ilişkilerin 1980'lerinde gerisine gitmesine sebep olmuştur. 1996 yılına geldiğimizde ise dönemin başbakanı olan Necmettin Erbakan'ın Türkiye ile İran arasında ilişkileri iyileştirmek için bununla birlikte Türkiye'nin doğal gaza olan ihtiyacını alternatif ülke olarak İran ile doğalgaz antlaşmasını ve Türkiye ile İran'ın öncülüğünde kurulan D-8 İslam Örgütü'nü kurmuştur. Fakat maalesef yine ekonomiye siyasi çıkarların bir müdahalesi olmuş ve Türkiye'nin iç siyasi yapısı bu durumu, bu antlaşmaları Erbakan hükümetinin Türkiye'yi İran'ın rejim sistemine benzetmeye çalıştığını öne sürülmüş ve bu duruma karşı çıkmış. Bu gibi nedenler ile Türkiye ile İran arasında ekonomik ve siyasi yapının Özal hükümeti zamanındaki gibi bir iyileşmenin aksine, olumsuz seyir etmiştir (İnat, 2015: 9-10). 1990'lı yıllarda yaşanan olumsuz durumlar ekonomiyi de doğrudan veya dolaylı bir şekilde etkisini göstermiş ve 1990 – 2000 yılları arasında ekonomik ilişkiler tablo 2'de de anlaşıldığı gibi iki ilke arasındaki ekonomik ilişkiler çok dalgalı bir seyir izlemiş ve çoğunlukla azalan bir seğir izlemiştir. 1996 ve 2000 yılında 1 milyar seviyesinin üzerine çıkan ve bu iki yıl dışındaki bütün yıllarda 1 milyar doların altında seyreden ticaret hacmi iki ülke arasında yaşanan siyasi vb. olumsuzlukların ticaret üzerindeki etkisini açık bir şekilde göstermektedir. 1996 yılındaki yaşanan ekonomik hacmin artışının bir sebebi olarak 1996 yılında dönemin Başbakanı Necmettin Erbakan Tahran'da 23 milyar dolarlık bir doğalgaz anlaşması imzalaması ve bununla doğru orantıda ülkelerin o zamanda ilişkilerin iyileşme potansiyeli oluşturmasından kaynaklanmaktadır.

Tablo 3: 2000 – 2018 Yılları Arasında Türkiye-İran Ticaret İstatistikleri (1000\$)

YILLAR	İHRACAT	İTHALAT	HACİM	DENGE

2000'li yıllara gelindiğimizde “ticaret devleti” politikası yeniden uygulanmaya başlamış ve Türkiye ile İran arasındaki ticari ilişkiler yeniden canlanmaya başlamıştır (Sarıaşlan, 67). 2000'li yıllarda AK Parti iktidarının uyguladığı ekonomik sistem Özal hükümetinin İran ile yaptığı ekonomik kalkınma yaklaşımını daha da geliştirilmiş bir şekilde siyasi çatışmaları bir kenara bırakılarak ekonomik ilişkilerin gelişmesi için çalışılmıştır. Bu doğrultuda iki ülke arasındaki ilişkiler iyi bir hal almış ve ticaret hacmi sekiz yıl gibi kısa bir sürede 2008 yılında 10 milyar doların üzerine çıkmıştır. İlerleyen zamanda Türkiye ile İran arasında orta doğuda yaşanan olayların iki ülke arasındaki siyasi yapı olumsuz etkisi olmuş olsa da gerek Türkiye gerekse İran bu olumsuz siyasi yapının ekonomik ilişkileri olumsuz etkilemeden devam ettirmişlerdir (İnat, 2015: 10). Siyasi gerginliğin olmasına rağmen ekonomik ilişkilerin seyrinin kötü bir hal almadan iki ülke arasında kurulmuş olan ekonomik düzlemin devamı sağlanmıştır.

Türkiye ile İran arasındaki ilişkilerde iş birliğiyle birlikte 2003 yılında Amerika'nın Irak işgaliyle birlikte Türkiye'yle İran ülke Amerika'nın Irak'a karşı müdahalesine karşı çıkmış ve Irak'ın toprak bütünlüğünün sağlanması yolunda ortak görüş birliği içerisinde olmaları ve Türkiye'nin Ortadoğu bölgesinde aktif bir dış politika izlemesi, iki ülke ilişkilerinin artmasında ve bölgedeki çıkarları uyumlu hale gelmesinde önemli katkı sağlamıştır. Bu doğrultuda iki ülkenin birbirleriyle izlediği siyasi ve ekonomik ilişkiler ilerleyerek ticaretin artmasına sağlamakla birlikte hem ekonomik hem de stratejik birliktelik olmuş bu birliktelik ile komşu iki ülkenin birlikte hareket etme ve aynı doğrultuda hareketleri coğrafyada bulunan kendi üstünlüklerini belirlemede önemli bir öğreti olmuştur (SAYIN, 245). İşte bu ve bunun gibi örnekler komşu ülkelerin birbirlerini rakip görüp çatışması değil asıl birlikte hareket edip birlikte daha da ilerlemesinde örnek ve ilerleyici bir yol göstermektedir.

2000 yılında Türkiye ile İran arasındaki ticaret hacmi 1 milyar dolar olan ticaret hacmi 2008 yılına geldiğimizde 10 milyar doları aşmıştır. Bunun sebeplerinden birisi Türkiye'nin o dönemlerde uyguladığı ılımlı politikalarıdır. Tablo 2'de 2009 yılında gözükten azalmanın sebebi ise o dönemde dünya çapında olan ekonomik krizden kaynaklanmaktadır. Ama dünya çapında olan ekonomik krize rağmen Türkiye ile İran arasındaki ticari ilişki çok çabuk toparlanıp 2012 yılında zirve nokta olan 21 milyar doların üzerine çıkmıştır. İki ülke arası ticaret dengesine baktığımızda Türkiye'nin İran ile yapmış olduğu bu ticaret akışında hep açık verdiği görülmektedir. Bu doğrultuda aslında Türkiye ile İran arasındaki ekonomik ilişkilerde İran'ın Türkiye'deki pazarına, Türkiye'nin İran'daki pazarına olan ihtiyacından daha fazladır çünkü bu ikili ilişkide bu zamana kadar tabloda da görüldüğü gibi İran hep kârlı çıkan taraf olmuştur. Yukarıda da değinildiği gibi önceki dönemlerde iki ülke arasındaki rekabetin etkisiyle aralarındaki ticari ilişkilerin olumsuz etkisi 2000 yılından sonra ciddi bir artış ivmesi ile 2012 yılında ticaret hacmi 21 milyar dolar seviyesini üstüne kadar çıkmıştır. 2012 yılından sonraki dönemlerde düşüş olmuş olsa da bu düşüş sadece iki ülkenin arasındaki oluşan olumsuz ilişkiler değil dünya ekonomisindeki küçülmenin etkisi vs. diğer etkilere kaynaklanmaktadır.

Amerika'nın 2010-2016 yıllarında İran'a karşı uyguladığı ambargo ve yaptırımın en önemli nedeni İran'ı uluslararası finansal sistemden çıkarmak istemektir. Amerika'nın Türkiye'ye bu konuda yapmış olduğu baskı bankacılık sektöründe olmuştur. İran'dan petrol ve doğalgaz almayı devam ettiren Türkiye ise bu konuda İran ile uluslararası finans sistemiyle çalışmaması sonucunda yeni bir yol bulmuş ve bu ticari ilişkiyi altın üzerinden finanse etmeye başlamışlardır. Yeni yaptırım yasasıyla birlikte İran'la enerji ticaretine devam eden ama finansal olarak bir işlem yapamayan Türkiye'nin finansal işlemler için kullandığı Halk Bankasını da bu yaptırımların delinmemesi için finansal olarak işlem yapılmaması için yaptırımlara ek madde olarak içerisine eklemiş ve yeni engeller koyulmuştur. (ÖZDAĞ, 239-243).

İran'a karşı, giderek şiddeti artan uluslararası yaptırımlar özellikle 1990'lı yıllardan beri İran'ın sürdürmeye çalıştığı neoliberal ekonomik kalkınma hedefini ve küresel kapitalizme yeniden katılabilme ve adapte olabilme çabalarını olumsuz etkilemiştir. Bankacılık ve enerji sektöründe uygulanan yaptırımların etkisiyle İran ekonomik olarak zayıflarken, maden sanayisine getirilen yaptırımlarla birlikte bu alanda çalışan ve 22 milyona yaklaşık İranlı işçilerin yüzde 10'unu istihdam eden bir diğer önemli sektörde büyük zarar görmüştür. Böylelikle Amerika'nın petrol ve doğalgaz sanayisi gibi İran için büyük bir öne sahip olan bu sektörleri hedef alan yatırım ve ambargolarının kapsamını genişletmiştir ve Amerika'nın yapmış oldu bu aksiyon ile İran ekonomisinin ana ögesi olan ve belkemiğini oluşturan kamu teşebbüslerindeki çalışan mavi yakalı diye anılan çalışanların istihdamını hedef almaktadır (ŞEN, 93).

Türkiye ile İran arasında siyasi ve güvenlik alanında yaşanan sorunların doğrudan veya dolaylı olarak ekonomik alanda belirmesi ve bununla birlikte her iki ülkede olumsuz etkilenmiştir. Türkiye ile İran arasındaki ticaret hacminin 2013 yılındaki düşüş sonrasında 2014 yılını da yaklaşık aynı şekilde bir azalışla ticaret hacmi 13,7 milyar dolar seviyesine kadar düşmüştür. 2014 yılına geldiğimizde daha da gelişerek artması gereken ticaret hacmi düşüş yaşamış ve sonunda 2011 yılındaki 16 milyar dolarlık ticaret hacminin gerisinde kalmıştır. 2014 yılında Türkiye ve İran aralarındaki bu ilişkiyi güven ve işbirliği temeli üzerinde ilerletmiş olsalardı çok rahat bir şekilde "TIR Krizi" ve "doğalgaz fiyatı" sorununu çözebilecekken maalesef bu süreci çözmekte her iki ülkede zorlanmıştır (YEĞİN, 141-142).

İran'a uygulanan uluslararası ambargolar ve yaptırımlar İran da 1980'li yıllardan itibaren Amerika, Birleşmiş Milletler Güvenlik Konseyinin ve Avrupa Birliği'nin benzer yaptırımları sonucunda, İran'a giden ticari malların gönderilmesi ve nükleer faaliyetle ilgili her türlü malların ticareti ve yatırımı yasaklanmış, ayrıca İranlı bazı tüzel ve özel kişilerin yurtdışı varlıkları dondurulmuştur. Bu kararlar doğrultusunda Avrupa Birliği'ndeki ülkelerin İran ile yatırım ve mali ilişki yapmaları tamamen yasaklanmıştır. Bu olumsuz durum doğrultusunda İran'a yabancı para girişinin azalmasına neden olmuştur. İran'ın nükleer programına ilişkin olarak İran ile yaptırım uygulayan ülkelerin öncüsü olan altı devlet ile İran arasında 2013 tarihinde imzalanan geçici Anlaşma ve onu takiben 2015 yılında Ortak Kapsamlı Eylem Planı imzalanmış ve yaptırımlar istisnalar haricinde 2016 yılı itibarıyla kaldırılmıştır (Konya Ticaret Odası, 5).

Türkiye ile İran arasında 2015 yılının ocak ayında Tercihli Ticaret Anlaşması olmuştur. Bu anlaşmayla Türkiye 125 sanayi ürünüde imtiyaz almıştır ve 140 tarım ürünüde ise İran'a tercihli tarife başlamıştır. Bu anlaşma kapsamında İran Devleti tarafından indirim yapılan ürünlere ise şöyledir; temizlik malzemeleri, sağlık malzemeleri, tekstil ürünleri, kimya sektörü, plastik ve mamulleri, ağaç ve orman

ürünleri, cam sektörü, mobilya gibi çeşitli ürünler bulunmaktadır. Anlaşmanın içerisindeki ürünlere baktığımızda bu ürünler Türkiye'nin ihracatının önemli bir kısmını oluşturduğu anlaşılmaktadır (Usta, 2019: 66).

Türkiye ile İran arasındaki ilişkilerin en son ki kısa zamana baktığımızda İran'ın komşu ülkelerindeki savaşlara ve nükleer faaliyetleri sebebiyle İran'ın uygulana yaptırımların etkisiyle iki ülke arasındaki ticaret hacminin düşmüş olsa bile bu düşüş 2018 yılında 10 milyar dolar civarında olmuştur. İki ülke arasındaki ekonomik ilişkilerin çok fazla düşüş yaşamaması iyi bir şey olsa da, Türkiye ile İran arasındaki ticaret hacmi ülkelerin genel ekonomik faaliyetlerine baktığımızda yapılabilecek potansiyel ticari faaliyetin altında kalmıştır. Bu doğrultuda baktığımızda iki ülke arasındaki ticari ilişkiler karşılıklı ekonomik bağımlılık oluşturduğu söylenemez (Pulat, 2018: 96). Aslında her ne kadar anlaşmazlıklar olsa da bu anlaşmazlıkların ekonomik yansımaları her iki ülkede de uzun veya kısa bir tahribat oluşturmaktadır. İşte bu tahribatı engellemek ve boşa harcanan ekonomik ilişkilerin artık yeni bir düzlemde olmasını sağlamak için iktisadi ilişkileri siyaseten ve geçici çıkarlar doğrultusunda alınabilecek kararlar doğrultusundan olabildiğince ayrı bir şekilde tutarak iktisadi ilişkileri kendi düzleminde ilerletmeye devam etmek her ülkenin elindedir. Şimdi veya daha sonra oluşacak siyasi gerginliğin ticari ilişkilere olumsuz bir hal almasını nasıl engelleyeceğimiz konusunda geçmişten edindiğimiz bilgiler sonucunda uzlaşmacı bir dil ile birlikte olumlu bir bakış açısıyla siyasi bir üslup yürütmeye ekonomik ilişkilerin seyrini düzgün bir şekilde tutabiliriz.

3. SONUÇ

Sonuç olarak Türkiye ile İran arasındaki siyasi ilişkilerin gidişatına göre iki ülkenin birbirine komşu olması ve diğer ülkelerin kendi siyasi çıkarları bağlamında istediği zaman ambargo uygulaması hem Türkiye'nin iktisadi yapısını hem de İran'ın iktisadi yapısını olumsuz yönde etkilerken bu iki komşu ülke bölgesel veya başka siyasi nedenler ile birlikte kendilerini daha zor bir ekonomik duruma sokmamak ve birbirlerinin den destek alıp karşılıklı olarak sürdürebilecekleri ticaret potansiyelini boşa atmamaları iki ülkeyi de her açıdan daha iyi bir konuma getirmiştir. Siyasi ilişkiler hangi doğrultuda hareket ederse iktisadi ilişkilerde aynı doğrultuda şekil almaktadır. İşte bu nedenle sadece komşu olmanın ve karşılıklı birbirine ihtiyaç duymanın gerekçeyle bile yapılabilecek olan bu uyum belli başlı geçici ideolojik reflekslerle çöpe atılmayıp. Birlikte daha güçlenerek ve birbirimizi geliştirerek ilerleyebileceğimiz bir ortamda her iki ülke içinde iyi olacaktır.

Abstract: This article examines the impact of the exchange rate, foreign direct investment, exports, and imports on the economic growth of China, China is mostly accused of devaluation of the Renminbi's exchange rate for increasing exports and economic growth. Thus the relationship among RMB's exchange rate, Foreign direct investment, exports, imports as independent variables, and gross domestic product per capita income as a dependent variable is analyzed by using time series data for the period of 1982 to 2018, with the execution of ARDL (Autoregressive-Distributed Lag) and VECM (Vector Error Correction) models to find out the relationships between these variables.

In conclusion, it was found that there is a significant and negative relationship between gross domestic product per capita income and exchange rate for instance with a 1% increase in exchange rate GDP per capita is decreased by 1.2% in long run. However, foreign direct investment and export have a significant and positive relationship with GDP per capita income, with a 1% increase in FDI and exports the GDP per capita is augmented by 1.4% and 0.26%. On the other hand, the relationship between GDP per capita and imports is insignificant.

Keywords: Exchange rate, Economic Growth, ARDL & VECM Models, FDI, Export.

1. INTRODUCTION

The exchange rate is defined as it is the price of one currency in terms of obtaining another country or economic zone currency in a specific period. Exchange rate regimes are adopted by a country's monetary authority generally and monetary authority (The Central Bank) has the power to adopted the exchange rate regime that is according to the economic strategy, monetary policy, economic situation, and benefits of that country.

According to Policonomics (2017), each exchange rate regime has its pros and cons, it is not easy work to find out the most suitable exchange rate system for a country because the economy is highly affected by the exchange rate system instance import, export, GDP, etc. can be affected very much by the decision.

There are many exchanges rate regimes, and most known exchange rate regimes are floating and fixed exchange rate regimes, although many other exchange rate regimes exist that are elaborated as under;

1. Monetary Union: A country has low independence over it, like Eurozone.
2. No Separate Legal Tender: It is a situation where the currency of another country is used in another country and they have very low independence over the exchange rate of that currency.
3. Currency Board: It is a clear contract on a stable exchange rate between two or more countries.
4. Target Zone Agreement: This is a situation where the exchange rate can increase or decrease but within certain limitations.
5. Crawling Peg: It is an exchange system that limits the fluctuation of the currency mainly defined characteristics such as the fixed exchange rate of the currency are often reviewed and adjusted because of market elements such as inflation and a group of other rates.
6. Managed floating: This is an exchange rate that is elastic but with government intervention in the Market.
7. Free/floating Exchange Rate: The exchange rate is determined by the market (Policonomics, 2017).

Based on another article by Ahmad (2013) the exchange rate is a vital economic factor, and economists are interested in the effect of the exchange rate on economic growth. The exchange rate means with

how many units of the domestic currency we can buy how many units of external currency. If we omit inflation from the exchange rate it is called the exchange rate if we don't omit inflation from the exchange rate, then it is called a nominal exchange rate. If the exchange rate is controlled by the government, it is called the Controlled exchange rate, and if it is not controlled it is called a floating exchange rate and in the middle, it is called a managed floating exchange rate which is the semi-controlled exchange rate.

According to The New York Times “The Trump administration labeled China a currency manipulator on Monday after China allowed the value of its currency to fall” it is mostly observed that the US has accused the government of China for devaluation of its currency Swanson (2019). According to the economists, the dumping policy is followed for decreasing exporting products price in the US and Europe markets that will lead to a high economic growth rate in China.

It is beneficial for import oriented countries to keep their currencies exchange rate high because they importing products will be at reasonable price or cheap although for export-oriented countries that are exporting more and exporting technological and capital assets they need to keep their low exchange rate is better for enhancing their exports in the international market plus and keeping their products demand high, compare to other countries products.

In this article, we aim to find whether the fall or rise of RMB's exchange rate impacts economic growth or the relationship between the exchange rate and the economic growth of China for the period of 1982 to 2018 will be investigated.

2. LITERATURE REVIEW

Officially the People's Republic of China is the largest country, economy, exchange reserve, and exporter in the world with a \$14.34 trillion gross domestic product (GDP) and 1.4 billion populations, an unemployment rate of 3.62%, inflation rate of 2.9%, an exchange rate of RMB (Renminbi) 6.91/\$, a current account balance of 141.3 billion USD, the trade balance of 165 billion USD, export 2.5 trillion U.S. dollars, import 2.08 trillion U.S. dollars at the end of 2019. The economy of China has experienced amazing economic growth in the last few decades that has captured the title of the second-largest economy in the world. In 1978 when China launched the economic reform program the country ranked 9th in nominal GDP and 35 years later it jumped to the 2nd biggest economy in the world (Export Enterprises SA, 2021).

Based on a research paper by (Thorbecke, 2009), China's exports increase by about 22% in the year 2005 to 2008 and its current account surplus surpassed 9% of GDP in 2006 and 11% of GDP in 2007. Its economic growth is 10% more than every year between 2004 and 2007. Quite a few economists think that China's balance of payment (BOP) is in disequilibrium and China must let the RMB exchange rate appreciate. On the other hand, the Chinese government has rejected suggestions for the quicker rise of RMB's exchange rate, due to unfavorable effects of RMB appreciation on the reduction of labor-intensive exports of China and will lead to the ruining of those industries across China.

Based on a study that analyzed the growth shocks and China RER (price exchange rate) in long run, it shows that with the decline of the labor force of China in the long run the real exchange rate will have increase, and in the short-run financial capital, inflows are effective in RMB's exchange rate (Tyers, 2007). In another paper the possibility of RMB's reform and RMB becoming the regional trading currency in the region plus stable exchange rate important for China. Secondly, the reasons affecting RMB's exchange rate in long run have been analyzed (Hokroh, 2013).

A research paper regarding effects of the appreciation of RMB's exchange rate on social and economic factors in 29 provinces of China from 1987-2008 by using GMM method forecasting has conducted and resulted from research shows that an increase in the exchange rate of RMB has a negative result over GDP growth and employment in those provinces (HUA, 2011).

According to Su (2017) research paper that analyzed the RMB and real Gross domestic productions relationship of China three-time phases such as 1952-1979, 1979-1993, and 1993-2014 by using the Vector error correction model, the result shows that in the first period it has no significant effect on GDP

and after RMB's exchange rate reform shows that there is a positive and significant correlation in this time from 1979 to 1993 between RMB's exchange rate depreciation and GDP growth and lastly in 1993-2014 there is a negative relationship between RMB's exchange rate appreciation and GDP growth for example with an increase in RMB's exchange rate the GDP is negatively affected.

In an empirical study regarding the panel study of countries from 1978-2007 regarding the RER and economic growth, In this study quantile regressions method have been used and resulted that in long run it is very efficient, effective and lead to economic growth and development if countries have a stable and competitive real exchange rate (Missio, 2015).

The Chinese government is worried that the RMB exchange rate increase will decrease labor-intensive exports. It is investigated by Thorbecke (2009) that an increase in the exchange rate of RMB will lead to a decrease in China's exports of labor-intensive products such as furniture, clothing, footwear, etc.

As per research regarding the impact of nominal exchange rate on economic development of Kuwait by Paul (2019), by using time-series data from 1975 to 2015 and Least Square method and BG test. The result approves that the exchange rate plays a vital role in the economic development of Kuwait. The study expresses that an increase in the nominal exchange rate leads to a significant and positive impact on economic growth. Consequently, it is suggested that Kuwait should devalue its currency to increase its exports. It is also suggesting that Kuwait should increase nonpetroleum export due to the non-renewability characteristic of petroleum, plus it will absorb an enormous amount of foreign direct investment in the country, therefore, an increase in nonpetroleum products will highly affect the economic growth and development in Kuwait.

On the other hand, a study by Ahmad, (2013), regarding the impact of inflation, nominal exchange rate, foreign direct investment (FDI), and capital stock on the economic development of Pakistan with time-series data from 1975 to 2011 by using the OLD method. The resulted of the investigation shows that the exchange rate and inflation have a negative impact on economic growth, for instance, a percent increase in the exchange rate will reduce the GDP by 0.55 and a percentage increase in inflation will decrease GDP by 0.29 percent. Furthermore, a percentage increase in FDI will increase the GDP by 0.37 percent although capital stock does not significantly affect GDP.

Hence, the article by Ahmad (2013) regarding the Pakistan exchange rate suggests that due to a higher increase in the exchange rate of Pakistan for instance Pakistani currency has lost its value from 1980, 1 dollar equal to 10 Rupees to 90 Rupees in 2011. Thus, Pakistan mostly exports raw materials and agricultural products but importing costly products for example machinery petrol, and technology products and that's why Pakistan's balance of trade remained negative for a long time. Therefore, it's suggested for policymakers to adopted an exchange rate system that could result in the economic development of Pakistan. For instance, the devaluation of Pakistani Rupees can lead to an increase in export and effecting the imports negatively thus people will buy domestic products and this mechanism will lead to economic growth and development.

Graphical Representation of China's Economy from 1982 to 2018.

Graph 1: Gross domestic product of China

Graph 2: Import and export of China

Graph 3: Official exchange rate of China

Note: The above graphs are the authors' work; data is taken from World Bank Data Bank Development indicators.

Many have commended the appreciation of RMB by 20% against the dollar, although RMB has depreciated by 35% against Euro during September 2008. This decision of appreciation against dollar and depreciation against Euro has been very beneficial for China due to the fact that the crowding of exports like furniture and footwear of China in European markets which made European officials upset regarding this decision of China and will respond regarding the absence of floating exchange rate system in China thus this policy will negatively effect on free trade in the world (Thorbecke, 2009).

According to Thorbecke (2009) due to the surplus of both current and capital account of China, it's appropriate to appreciate RMB's exchange rate but the Chinese government has rejected the appreciation of RMB faster because that will negatively affect labor-intensive exports of China and Chinese government fears that they will lose the competitiveness with other exporting nations in the international market due to appreciation of RMB.

According to recent studies, researchers suggest that the RMB undervaluation should take place up to 10-30% because the revaluation during 2005 is assumed insufficient to affect China's BOP disequilibrium. Inside China, there is the existence of massive concerns regarding the adverse effect of exchange rate revaluation on employment mostly in the labor-intensive exporting sector. In this paper, the researcher has aimed and analyzed the structural effect of exchange rate evaluation on the current account surplus by 4% using a 17 sector quantifiable Chinese economies equilibrium model.

A study by Willenbockel (2006) finds out that there are several requests for the RMB's revaluation both by the international Tang I community and internal observers, according to internal observers that they are expressing regarding a substantial ambiguous situation and suggest that rearrangement of the exchange rate belongs to the Chinese government and their interest.

According to a study by Tang (2008) which have studied the impact of exchange rate and Economic growth in China using the CVAR model, resulted in contrast to many other pieces of research that China has not benefited from the exchange rate of RMB, and there no direct relationship between exchange rate and economic growth of China in the long-time. Remarkably, it expresses the massive economic

growth of China is due to export and inflow of foreign capital based on analyses of this study and also proposes that the long-run exchange rate is mutually recognized by the foreign reserves, FDI, and foreign trade. Additionally, the 2005 RMB appreciation did not adversely impact the China economy, though as an alternative it has led to the stable economic growth of China. China might maintain a managed floating exchange rate policy creating partial changes to the RMB's daily floating limits in reply to the requests from international communities.

3. RESEARCH METHODOLOGY AND DATA

The analyzed data regarding this research paper is secondary data time series data it's taken from the World Bank data bank, variables such as GDP Per capita income as a dependent variable and foreign direct investment (FDI), export, import are considered as independent variables and the period of research study is from 1982-2018. According to the Augmented Dickey Fuller Test of Unit root test of variables, and stationary level the ARDL model (Autoregressive-Distributed Lag model) is applied and the statistical model for our research is below (Ahmad, 2013).

$$\ln(EG_t) = \beta_0 + \beta_1 \ln(FDI_t) + \beta_2 \ln(ER_t) + \beta_3 \ln(NX_t) + \epsilon_t$$

Where

EG= Economic Growth= GDP Per Capita income

FDI= Foreign Direct Investment

ER= Exchange Rate

NX= (Export-Import)

ϵ_t = Stochastic Error Term

Where, $\beta_0, \beta_1, \beta_2, \beta_3, \beta_4$ are the respective parameters.

To find out the Unit Root of Variables we use the Augmented Dickey-Fuller test of the variables so that it can be estimated what technique is appropriate for our model. The results of the unit-roots test are given in table 1 below;

Table 1: Augmented Dickey Fuller Unit Root Test

Variables	t-Statistics	Prob.*	Stationarity level
GDP_PCI	-4.497948	0.0053	I(1)**
FDI	-4.853278	0.0021	I(1)**
ER	-5.804517	0.0002	I(1)**
EXPORT	-4.597337	0.0041	I(1)**
IMPORT	-4.782535	0.0026	I(1)**

As per the above test, ***, ** and * indicate the 1%, 5%, and 10% level of significance and observing the result of the test the null hypothesis is rejected, as it can be explained that all variables are integrated of order 1 [I (1)], thus the ARDL model (Autoregressive-Distributed Lag model) can be executed for finding a relationship among mentioned variables. The test required before executing the ARDL model is as below.

Lag length criteria for our variables are below Using VAR model to find optimal lag length Criteria for our variables.

Table 2: VAR Lag Length Test

Lag	LogL	LR	FPE	AIC	SC	HQ
0	-347.8592	NA	1334.235	21.38541	21.61215	21.46170
1	-216.3129	215.2575	2.136382	14.92806	16.28852*	15.38581
2	-177.1808	52.17617*	1.014688*	14.07156	16.56574	14.91078*
3	-153.4389	24.46135	1.496273	14.14781	17.77571	15.36849
4	-120.9125	23.65558	1.932918	13.69167*	18.45328	15.29380

Based on VAR Lag order selection criteria 2 lag is considered as an optimal lag, and as a result of Unit Root Test and Peseran and Shin (2003) research on the ARDL model, it is optimum to execute the ARDL model.

Bounds test is done to see if there is a long-run relationship between our variables or not.

Table 3: ARDL Bound Test

Test Statistic	Value	k
F-statistic	10.97706	4
Critical Value Bounds		
Significance	I0 Bound	I1 Bound
10%	2.45	3.52
5%	2.86	4.01
2.5%	3.25	4.49
1%	3.74	5.06

As per the above analysis of the ARDL Bound Test, the value of F-statistic is higher than the Lower and upper bound (I0 and I1) thus we can reject the Null hypothesis and which means there is, the existence of a long-run relationship between variables.

Table 4: ARDL Cointegrating and Long-Run Model

Variable	Coefficient	Std. Error	t-Statistic	Prob.
D(GDP_PCGR(-1))	0.559083	0.106571	5.246132	0.0000
D(FDI)	0.186406	0.287297	0.648827	0.5232
D(EXCHANGE)	-2.741984	0.602536	-4.550739	0.0002
D(IM)	-0.531142	0.174404	-3.045473	0.0059
D(IM(-1))	0.865170	0.182468	4.741495	0.0001
D(X)	0.137866	0.164938	0.835866	0.4122
D(X(-1))	-0.481943	0.121461	-3.967878	0.0007
CointEq(-1)	-0.715586	0.104756	-6.830972	0.0000
Cointeq = GDP_PCGR - (1.6775*FDI -1.3257*EXCHANGE -0.3102*IM +0.1678*X + 15.1648)				
Long Run Coefficients				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
FDI	1.677455	0.371919	4.510274	0.0002
EXCHANGE	-1.325702	0.336414	-3.940688	0.0007
IM	-0.310239	0.315344	-0.983810	0.3359
X	0.167763	0.237553	0.706213	0.4875
C	15.164766	1.959513	7.739048	0.0000

According to the above ARDL Cointegration model, equation, and probability value, the result is robust and Cointegration Equation (-1) = -0.715586 and 5% probability value we can express that the test is significant, besides the equilibrium time is 1.4 years. After finding the ARDL result we are bound to test the below tests to see the normality and serial correlation, and VECM for finding the correlation between variables.

Graph 5: Histogram Normality Test

Note: Graphs 5 is authors' work.

According to the above test and Jarque-Bera Probability value which is more than 5%, the Null hypothesis is rejected and it is concluded that the executed ARDL model is robust, for furthermore robustness of ARDL model result, Heteroskedasticity test is performed as below.

Table 5: Heteroskedasticity Test: Breusch-Pagan-Godfrey

F-statistic	1.001800	Prob. F(12,22)	0.4786
Obs*R-squared	12.36732	Prob. Chi-Square(12)	0.4166
Scaled explained SS	3.271777	Prob. Chi-Square(12)	0.9933

Based on the above analyses Null Hypothesis is rejected as per P-value which is more than 5% in Prob. F (12,22) 47% thus there is not Heteroskedasticity in our model and analyses.

Furthermore, for finding out whether variables have serial correlation or not, the Breusch-Godfrey Serial Correlation LM Test is executed.

Table 6: Breusch-Godfrey Serial Correlation LM Test:

F-statistic	0.282697	Prob. F(2,20)	0.7567
Obs*R-squared	0.962237	Prob. Chi-Square(2)	0.6181

As per the above test result, the Null Hypothesis is rejected because the value of P is more than 5% in Prob. F (2,20) 75%, thus there is no serial correlation in the model. According to the above tests, it is concluded that the model and analyses are significant, meaningful, have no Serial Correlation, Heteroskedasticity and it is normal.

Therefore, Cointegration for a long-run relationship test is executed, thus Vector Error Correction Model (VECM) test is performed.

Table 7: Vector Error Correction Model (VECM)

	Coefficient	Std. Error	t-Statistic	Prob.
C(1)	-0.408084	0.123928	-3.292915	0.0013
C(2)	0.409623	0.148003	2.767670	0.0064
C(4)	0.702022	0.202663	3.463993	0.0007
C(9)	0.078516	0.033582	2.338060	0.0208
C(12)	0.336292	0.114759	2.930419	0.0040
C(13)	-0.087211	0.043266	-2.015704	0.0457

$$\text{Equ1: } D(\text{LGDP}) = C(1) * (\text{LGDP_PC} - 1.206 * \text{RER} - 0.53247 * \text{IMP} + 1.491 * \text{FDI} + 0.2676 * X + 16.3498) + C(2) * D(\text{LGDP_PCGR}(-1)) + C(4) * \text{IMP}(-1)$$

R-squared	0.638355	Mean dependent var	0.066471
Adjusted R-squared	0.560860	S.D. dependent var	2.487331
S.E. of regression	1.648296	Sum squared resid	76.07259
Durbin-Watson stat	2.024939		

Equ2: $D(RER)=C(9)*D(LGDP_PC(-1))+C(10)*D(RER(-1))+C(11)*D(IM(-1))+C(12)*D(FDI(-1))+C(13)*D(X(-1))$

Note: Table 1-7 are the authors' work.

Based on the above Vector Error Correction Model analyses and Probability value of less than 5%, the result for long term relationship is significant and it is expressed as below:

1. Based on Equation number 2 there is a long-run and meaningful relationship between GDP, Exchange Rate, Foreign Direct Investment, and Export but import has no meaningful relationship.
2. The exchange rate and GDP per capita income have a long-run and negative relationship, for instance, a percentage increase in RMB's exchange rate will lead to a 1.2 percent negative effect on the GDP Per capita income of Chinese people.
3. Foreign Direct Investment and GDP Per capita income have a positive and significant relationship for example for a percentage increase in FDI will lead to a 1.4 percent increase in GDP per capita income.
4. Export and GDP Per capita income has a positive and significant relationship, for instance, a percentage increase in Export will lead to a 0.26 percent increase in GDP per capita income.

After VECM analyses, the long-run impulse response of the variables on each other is tested, which means in 10 years how each variable affects another variable.

Graph 6: GDP per Capita Income to Exchange Rate

Graph 7: FDI to Exchange Rate

Graph 8: Export to Exchange Rate

Graph 9: Imports to Exchange Rate

Note: The above graphs are the authors' work.

As per the above Impulse response analyses of variables for 10 years, it can be explained as below:

1. Response of GDP per capita income to exchange rate; As per Graph 7, it is clear that the response of GDP per capita income to exchange rate in 2 starting years negative up to 1.1% and later on it has an upward trend but as a whole, the increase in RER will impact negatively on the GDP per capita income.

2. The response of FDI to exchange rate: Response of FDI to exchange rate in according to graph 8 is a downtrend in the first two years but later on, it has an uptrend and positive.
3. The response of Export to Exchange Rate: Exports have a downtrend up to 4th year and later on, it is an upward trend but it is still it has a negative effect on the long run on the exports of China.
4. The response of Imports to Exchange rate: As per graph 10 on the response of Imports to exchange rate, there is a positive impact of imports with the increase in the exchange rate for instance an upward trend from -1.2 to -0.9 which means import will increase by an increase in the exchange rate.

4. CONCLUSION

As it was several times requested and demanded that the Chinese government should appreciate its currency but the government of China has resisted doing so the reasons behind its resistance are the multiple negative effect RMB's exchange rate revaluations on macro-economic factors. The data analyses of our study which is driven from the World bank data bank from 1982-2018 for 37 years and based on executed ARDL and VECM models, we have reached a vital result regarding this research concerning the impact of RMB's exchange rate on GDP Per capita income and other macroeconomic factors like FDI, Export, and Import that there is a long-run and meaningful relationship between GDP per capita, exchange rate, foreign direct investment, and export but import has no meaningful relationship.

Exchange rate and GDP per capita income have long-run and negative relationships, for instance, a percentage increase in RMB's exchange rate will lead to a 1.2 percent negative effect on the GDP per capita income of Chinese people.

Foreign direct investments, exports, and GDP per capita income have a positive and significant relationship, for example, a percentage increase in FDI will lead to a 1.4 percent increase in GDP per capita income, besides a percentage increase in export will lead to a 0.26 percent increase in GDP per capita income.

The impulse response of GDP per capita income to exchange rate in long term (10 years) shows that in first two years it is negatively affected up to 1.1% and later on it has an upward trend but as whole the trend is negative. The impulse response of FDI to the exchange rate for the first two years has a deep downtrend but after that, it has an upward trend. Moreover, the response of export to exchange rate is downtrend until 4th year and after that, it is uptrend but still in the negative region.

The result of this investigation shows that there is a significant and negative relationship between exchange rate and GDP per capita for 1982-2018 years based on ARDL and VECM model.

cannalbantoglu@ayvansaray.edu.tr, ORCID: 0000-0002-0903-4085

Özet: Covid – 19 dünya çapında ülkelerin karantina ve kapama sürecine girdiği bir dönem olarak hayatın her alanını etkilemektedir ve “Büyük Buhran” dan sonra ekonomiyi etkileyen en büyük krizlerden biri haline gelmiştir. Salgın olarak nitelendirilen bu dönem sadece insanların sağlığını değil, ülke ekonomilerini ve dolayısıyla işletmelerin çalışma biçimlerini değiştirmiştir. Bu süreçte insanlar çok daha yoğun bir şekilde internet trafiği oluşturmuş ve bu durum işletmelerin dijitalleşme süreçlerinde daha hızlı olmaları gerektiğini göstermiştir.

Dijital dönüşüm kavramı internetin yaygın kullanımı ve dijitalleşme kavramının artmasıyla birlikte günümüzde artık tüm sektörleri kapsamaktadır. Dijital dönüşüm işletmelerin iş yapış biçimlerini değiştirmektedir. İş yapış biçimlerinin değişmesi aynı zamanda işletmelerin gelirlerini ve ekonomik yapılarını da etkilemektedir. Dünya çapında dijital ekonomi artan bir ivme ile hareket etmektedir. Ayrıca dijital dönüşüm yatırımları için harcamalar da giderek artmaktadır. Dijital dönüşüm doğru bir şekilde işletmeye entegre edildiğinde yapılan harcamaların aslında gereklilik olduğu sonucu da ortaya çıkmaktadır.

Çalışma içerisinde dijital dönüşüm konusundaki istatistik veriler üzerinden değerlendirmeler yapılmaktadır. Dijital dönüşüm harcamaları, işletmelere ve endüstriye olan etkileri çalışma içerisinde yer almaktadır. İşletmelerin Covid 19 sürecinde önceliklerinin neler olduğu ve bu öncelikler hakkında olan değerlendirmelere yer verilmektedir. Dijital dönüşüm tüm işletmeler ve işletmelerin departmanlarında kendisini göstermektedir. Günümüzde Covid 19 dijital dönüşüm sürecini hızlandırma anlamında büyük bir etki oluşturmuştur. Diğer bir açıdan yöneticilerin de talep ve öncelikleri de değişmiştir. Bu çalışmada tüm bu değerlendirmeler dijital dönüşümün geleceği konusunda çeşitli fikir ve öneriler getirmektedir.

Anahtar Kelimeler: Covid 19, Dijital Dönüşüm, Dijitalleşme

Abstract: Covid - 19 has become one of the major crises affecting the economy after the "Great Depression", as a period in which life has entered into a world-wide quarantine and shutdown transformation. This period, which is described as an epidemic, has changed not only the health of people, but also the styles of the country's economies and residences. In this process, people have created much more intense internet traffic, and this is how businesses transformed faster in the digitalization processes.

Digital transformation now covers all sectors with the widespread use of the internet and the increase in the concept of digitalization. Digital transformation is changing the way businesses do business. Changing the forms of business also does not affect the income and economic structures of the enterprises. The digital economy around the world is moving with increasing momentum. Also, expenditures for digital transformation investments are also increasing. It turns out that words that are turned into a digital transformation right tab actually need it.

Evaluations are made on the working volume of digital transformation statistical data. Digital transformation spending, the cause of the business and its impact on the industry are the most workplace. What are the Covid priorities of businesses and the progress on these priorities are given. Digital transformation shows sustainability in all businesses and departments of businesses. Today, Covid 19 has made a huge impact speeding up the digital transformation time. The demands and priorities of another manager have also changed. These free reviews bring various ideas and suggestions about the future of digital transformation.

Key Words: Covid 19, Digital Transformation, Digitalization

1. GİRİŞ

Her kriz ortamı bazı zararlar oluştursa da yanında bazı fırsatları da sunmaktadır. Günümüzde son yüzyılın en büyük salgını ile karşı karşıyayız. Salgın dönemi çok fazla vakanın ve salgına bağlı ölümlerin olduğu bir dönem olarak hala deva etmektedir. Yalnız, bu süreç sadece insanlar için değil, işletmeler içinde zorlu olmaktadır. Fakat dijitalleşme anlayışı ve beraberinde gelen dijital dönüşüm bu kriz ortamının fırsatı olarak ortaya çıkmaktadır. Salgından öncede büyüyen ve giderek daha fazla talep edilen dijitalleşme anlayışı, bu dönemde zirve denebilecek bir noktaya ulaşmıştır. Bunun en basit nedenlerinden bir tanesi de şirketlerin iş yapma biçimleri değişmiştir. Uzaktan çalışma metodu, online siparişlerin artışı, temasın azalması vb. nedenler ile hem işletmeler hem de bireyler daha fazla dijitalin

içinde yer almaktadır. İşletmeler için bir fırsat ve öncelikleri değiştiren bir olgudur aslında pandemi süreci. Dijitalleşme ve dijital dönüşüm artık daha yoğun olarak hissedilecektir.

2. DİJİTALLEŞME

Dijitalleşme, ilk bakışta, İnternet üzerinden büyük miktarda verinin kullanıma sunulduğu ve bulutta analiz edilebildiği Büyük Veri trendi gibi verilere odaklanıyor gibi görünmektedir. Toplanan verilerin çoğu, genellikle ham ve yapılandırılmamış bir biçimde, gerçek dünyanın birikimlerini tanımlamaktadır. Bununla birlikte, bu veri setlerinden bilgi elde etmek istiyorsak, genel soruları yanıtlamak için ilgili özellikleri ve pek çok ilgisiz ayrıntıdan özet toplamak gerekmektedir. Bu toplu soyutlamalar, aynı zamanda, yapay nesnelere, mekanizmaların ve durumların paylaşılan ve dolayısıyla genelleştirilebilir fenomenlerini tanımlayabilen ve aynı zamanda bilim adamlarının ve genel olarak insanların dünyanın belirli yönlerini anlamasına izin veren bireysel benzersiz özelliklerini tanımlayabilen modellerdir. Bu, genel olarak dünya için olduğu kadar bireysel alanlar için de geçerlidir. Örneğin, iş alanlarında dijitalleşme genellikle neyin nereden alınıp satılacağını, nasıl reklam verileceğini, nasıl verimli bir şekilde üretilip nakledileceğini ve müşteriyle nasıl iletişim kurulacağını bildirir. Üretim modunda dijitalleşme, aynı zamanda ürünleri dijital biçimde tasarlamak, ürünü üretmeden önce bileşenleri sanal olarak oluşturmak, uygulamak ve satılan veya kiralanılan bir ürün, kullanıcılar ve üretici firma arasındaki ilişkiyi sürdürmek anlamına gelir (Gray & Rumpe, 2015).

Dijitalleşme, Dördüncü Sanayi Devrimi ve Nesnelere İnterneti tarafından tetiklenen, iş süreçlerine ve faaliyetlerine yaklaşım ve düşünme şeklini değiştiren temel bir güçtür. Giderek artan bu dijital çağda, kuruluşlar (yani şirketler, devlet kurumları ve diğerleri) ile müşteriler arasındaki ilişkiler yeniden şekillenmekte ve yeni iş modelleri ortaya çıkarılmaktadır. Günümüzde, endüstrilerdeki şirketler yeni iş fırsatlarını takip etmek ve hızla değişen küresel iş ortamına ayak uydurmak için çevikliğe, hıza, esnekliğe ve hızla geri dönüş yeteneğine ihtiyaç duymaktadırlar. Dijitalleşme, ileri teknolojinin tüm süreçlerin, ürünlerin ve hizmetlerin merkezine yerleştirilmesinin önemini vurgulamaktadır. Ancak, iş ve toplum için dijitalleşmenin vaat edilen değerinin çoğu henüz tam olarak gerçekleşmiş değildir. Modern toplumda ve endüstriyel ortamlarda, örgütsel işletim sistemleri giderek daha karmaşık ve otomatik hale gelmektedir. Bu sistemler; insanları, makineleri, iş istasyonlarını, cihazları, robotları ve uygun izleme, sensörler ve kontrol sistemlerine sahip diğer varlıkları içerir. Bu sistemlerle ilgili sürekli yaşanan zorluk, dijitalleşme, işletim süreçlerinde sık değişiklikler, rastgele kesintiler ve önemli ölçüde dalgalanan piyasa taleplerini içeren yeni teknolojilerin eklenmesidir. Sürekli olarak yeni iş modelleri ve yenilikçi teknolojiler icat edilmektedir ve bu icatlar, etkin yenilik ve organizasyonun alakalı, bağlantılı ve gelecek eğrisinin önünde kalması için keskin bir odaklanma gerektirmektedir. Dijitalleşme sadece kağıtsız olmak demek değildir; bu, iş ve toplum için değer yaratma, sürdürülebilirlik ve yeni fırsat yaratma için dijital verileri yönetmek, düzenlemek, kontrol etmek ve bunlardan değer üretmek için çözümleri entegre edebilmek anlamına gelmektedir (Parida, 2018: 23).

Dijital bir devrim karşısında, ulusal ve bölgesel hükümetler dijitalleşmeyi giderek stratejik bir öncelik olarak tanımlamakta ve bilim, endüstri ve toplumun dijital dönüşümünü teşvik etmek için büyük ölçekli girişimler oluşturmaktadır. Dijitalleşme endüstri ile araştırma iş birliklerine girmek için daha fazla fırsat yaratır. Dijital teknolojilerin her yerde mevcut olmasıyla, şirketler geleneksel çalışma yöntemlerine hapsolmuş hissetmekte ve araştırma ve öğretimde inovasyon projeleri için üniversitelere daha sık yaklaşmaktadırlar. Öğrencilerden - dijital yerliler olarak - ve araştırmacılardan, endüstrilerindeki dijital fırsatlara dışarıdan bir bakış sağlamalarını ve dijital iş modellerini, ürünlerini ve hizmetlerini yenilemelerine ve geliştirmelerine yardımcı olmalarını beklemektedirler (Legner vd, 2017: 2).

2.1. Dijitalleşmenin Örgütsel Etkileri

Dijitalleşme, kuruluşların performanslarını iyileştirmek için kullanabilecekleri dijital varlıkların kullanımını ve bu teknolojilerin örgüte olan etkilerini ölçebilmek anlamına gelir. Dijitalleşmenin örgütsel etkilerindeki temel yönler şunlardır: Örgütsel çeviklik, Örgütsel Öğrenme, Dijital Yenilikler ve İş Ekosistemleri (Kuusisto, 2017: 342).

Örgütsel Çeviklik

Örgütsel çeviklik, günümüzün hızlı tempolu dünyasında bir amaçtan çok bir gereklilik olarak görülmektedir. Economist Intelligence Unit tarafından yapılan bir araştırmada, yöneticilerin büyük çoğunluğu (%88) çevikliği küresel başarı açısından kilit bir unsur olarak tanımlamaktadır. Çevikliğin iki ana faydası vardır: birincisi, iş tehditlerine zamanında yanıt verebilmektir. İkincisi ise, fırsatları kendilerini sunarken belirleme ve bunlardan yararlanma yeteneğidir. Örgütsel çeviklik, şirket performansında uzun vadeyi destekleyen farklı ve taklit edilemez bir avantaj olarak görülebilir (Alavi vd., 2014).

Örgütsel Öğrenme

Örgütsel öğrenme, inovasyonu ve süreç etkinliğini sağladığı için şirketler açısından önemlidir. Örgütsel öğrenme, organizasyonun performansını ve sonuçlarını iyileştirmesini sağlayan ayırt edici yetkinliklerin üretilmesine ve geliştirilmesine yönelik, bireyleri ve grupları aracılığıyla organizasyonun kalbinde üretilen dinamik bilgi yaratma süreci olarak tanımlanmaktadır (Real vd., 2006: 506).

Dijital Yenilikler

Büyük dijital yenilikler, eskisinden çok daha kısa aralıklarla ortaya çıkmaktadır. 1980'lerde, her on yılda bir büyük bir yeni teknoloji ortaya çıkarken; milenyum itibarıyla herhangi bir zamanda birçok farklı atılım olmaktadır. Fichman vd. (2014: 330) dijital inovasyonu şu şekilde tanımlamaktadır: Dijital inovasyon oldukça geniş bir şekilde yeni olarak algılanan, benimseyenler tarafında bazı önemli değişiklikler gerektiren ve içinde somutlaşan veya etkinleştirilen bir ürün, süreç veya iş modeli olmaktadır.

İş Ekosistemleri

İş ekosistemi, aynı pazara veya ürüne odaklanan ve genellikle birbirleriyle etkileşime giren iş grubu için kullanılan bir terimdir. Terimin kökenleri biyolojiden gelmektedir. The New Oxford English Dictionary (1993) biyolojik bir ekosistemi "bir habitat işgal eden ve içinde yaşadıkları çevre ile etkileşime giren bir canlı türler topluluğu" olarak tanımlar (Kuusisto, 2017: 352).

3. DİJİTAL DÖNÜŞÜM

Dijital dönüşüm kavramı, kişisel ve kurumsal bilgi teknolojileri ortamlarının birleşmesi ile oluşur ve sosyal, mobil, analitik, bulut teknolojileri ve Nesnelerin İnterneti gibi yeni dijital teknolojilerin dönüşüm etkisini kapsar. Daha geniş anlamda dijital dönüşüm, dijital teknolojiler ile iş süreçlerinin dijital bir ekonomiye entegrasyonu olarak sunulmaktadır. Karşılaştırmalı diğer bir görüş, girişimlerin yürütülmesini veya erişimini radyal olarak artırmak için yeniliğin kullanılmasıdır (Ziyadin vd., 2020: 409). Farklı bir tanıma göre dijital dönüşüm; yıkıcı veya kademeli bir değişim sürecidir. Dijital teknolojilerin benimsenmesi ve kullanılmasıyla başlar, ardından bir kuruluşun örtük bir bütünsel dönüşümüne veya kasıtlı olarak değer yaratma amacına evrilir (Henriette vd., 2016: 3).

Dijital dönüşüm, üretkenliği, değer yaratmayı ve sosyal refahı artırmak için güncel teknolojileri benimsemekle ilgilidir. Birçok ulusal hükümet, çok taraflı kuruluş ve endüstri birliği, uzun vadeli politikalarını temel almak için stratejik öngörü çalışmaları üretmiştir. Dijital dönüşüm ile ilgili kamu politikalarının uygulanmasını önererek, bu tür gruplar Tablo 1'de listelenen hedeflere ulaşmayı beklemektedir (Ebert & Duarte, 2018: 16).

Tablo 1: Dijital Dönüşüm Hedefleri

	Endüstride ve toplumda daha yenilikçi ve iş birliğine dayalı bir kültürün gelişimini teşvik edin
Sosyal	Dijital çalışma ve toplumda mükemmelliğe ulaşabilmeleri için kişilere yeni beceriler ve geleceğe yönelim sağlamak için eğitim sistemini değiştirin.
	Dijital iletişim altyapıları oluşturun ve sürdürün ve yönetimini,

	erişilebilirliğini, hizmet kalitesini ve uygun fiyatını sağlayın
	Dijital veri korumasını, şeffaflığı, özerkliği ve güveni güçlendirin
	Nüfusa sunulan dijital hizmetlerin erişilebilirliğini ve kalitesini iyileştirin
	Yeni ve yenilikçi iş modellerini uygulayın
Ekonomik	Ekonomide gelir üretimini, üretkenliği ve katma değeri artırmak
	Düzenleyici çerçeveyi ve teknik standartları iyileştirin

Kaynak: Ebert ve Duarte (2018: 16).

2020 boyunca, farklı sektördeki kuruluşlar küresel bir salgın karşısında eşi görülmemiş zorluklarla karşılaşmıştır ve karşılaşmaya da devam etmektedir. Birçoğu, iş modellerini hızla uyarlarlarken, aynı zamanda birdenbire uzak, dağınık bir işgücünü yönetmek zorunda kalmıştır. Salgın sonrası dünya "yeni normale" dönüşürken, liderler ihtiyaçlarını yeniden değerlendirmek zorunda kalmaktadırlar. Böylece, dijital dönüşüm artık sadece "hoş" bir şey değil; daha ziyade, yeni iş gücü modeli için evrimleşmenin temel bir bileşeni haline gelmiştir (Batti, 2021).

Dijital dönüşüm, şirketlerin iş modelinde önemli değişiklikleri yönlendirmek için dijital teknolojilerin kullanılmasını ifade etmektedir. COVID-19 süreci, işletmelerin ve perakende, restoranlar ve eğitim gibi tüm endüstrilerin dijital dönüşümünü hızlandırmıştır. Örneğin, e-öğrenme pandemiden önce var olmuş olsa da COVID-19 salgını, kısıtlama sırasında ve aynı zamanda yeni normalde faaliyetlerine devam etmenin tek olası yolu olarak geleneksel eğitim organizasyonlarının dijital dönüşümünü hızlandırmış ve genişletmiştir. Kısıtlama sırasında okulların ve üniversitelerin işlerini dijital olarak nasıl dönüştürdüklerine dair sonuçlar oldukça iyi görünmektedir. Aksine, halihazırda çevrimiçi satış yapan bazı tanınmış geleneksel mağazalar, yüksek talebi karşılamak için gereken dahili süreç dönüşümünün olmaması nedeniyle kısıtlama sırasında zamanında sipariş teslimatına katılamamıştır (Acosta, 2020: 261).

4. COVID 19 VE DİJİTAL DÖNÜŞÜM

COVID-19 salgınının neden olduğu mevcut durumda, şirketler sosyal mesafeyi ele almak ve yeni normale uyum sağlamak için dijital teknolojileri düşünmektedirler. Yapay zeka, robotik ve diğer dijital teknolojilerin manuel olarak tekrarlanan görevleri otomasyonla değiştirme potansiyelini kimse inkar edemeyecektir. Tüm bunlara rağmen, kuruluşların teknolojiyle benzersiz insan yetkinliklerinden yararlanmanın yine de kopyalanmasının zor olduğunun farkında olması gerekir. Yaratıcılık, empati, muhakeme, sezgi, kişilerarası duyarlılık, problem çözme, makinelerin şu anda sahip olmadığı bazı özel kişilerarası insan yetkinlikleridir (Acosta, 2020: 262).

Dijital dönüşüm konusunda yapılan istatistikî çalışmalara bakıldığında karşımıza birçok çalışma çıkmaktadır. Aşağıda yer alan grafiklerde dijital dönüşüm konusunda Statista tarafından yapılan istatistiksel ve anket çalışmalarının sonuçları yer almaktadır.

Dijital dönüşüm teknolojileri ve buna uygun olarak yapılan hizmet harcamaları giderek artmaktadır. Özellikle COVID 19 ile birlikte bu süreç çok daha hızlı gerçekleşmektedir. 2020 ile 2023 yılları arasında dijital dönüşüme yapılan doğrudan yatırımların toplam 6,8 trilyon ABD dolarına ulaşacağı tahmin edilmektedir. Başlangıçta, yalnızca 2023 için dünya çapında dijital dönüşümü mümkün kılan teknolojilere ve hizmetlere yapılan harcamaların 2,3 trilyon ABD doları olması beklenmektedir (IDC, 2020).

Şekil 1: Dijital Dönüşüm Teknolojileri ve Hizmetleri Harcamaları

Kaynak: IDC: Statista (2020)

COVID-19'un yapay zeka gibi inovasyon hızlandırıcılara olan talep üzerindeki etkisi Şekil 2'de gösterilmektedir. Ankete göre, katılımcıların% 46,4'ü kuruluşlarının gelişmiş analitik talebinin önemli ölçüde veya orta düzeyde arttığını ifade etmektedir.

Şekil 2: Teknoloji ve İnovasyon Hızlandırıcılarına Yönelik Artan Talep

Kaynak: IDC (2020)

Operasyon verimliliğini artırmak, mevcut iş süreçlerini dönüştürmek ve müşteri deneyimini iyileştirmek, 2020'de koronavirüs (COVID-19) salgını ortasında en önemli iş girişimleridir ve CIO (Chief Information Officer) katılımcılarının yüzde 62, 56 ve 55'ine göre bu üç işletme girişimi için artan öncelik bulunmaktadır (IDG, 2020).

Şekil 3: Pandemi Dönemi Girişimlere Öncelik Verme

Kaynak: IDG Research Services (2020)

Ankete katılan uluslararası dijital karar vericilerin çoğu, COVID-19 salgınının dijital dönüşümün hızını artıracığı görüşündedir. Ankete katılanların çoğu, salgının bir sonucu olarak uzaktan çalışmanın ve işbirliği araçlarının kullanımının daha yaygın olacağı ifadelerine de katılmaktadır (DMEXCO, 2020).

Şekil 3: Pandeminin Dijital Endüstri Üzerine etkisi

Kaynak: DMEXCO (2020)

Bir CIO anketine göre, işletmelerinin COVID-19 salgını sırasında korunmalarına yardımcı olmak için en önemli üç öncelik sorulduğunda, yanıt veren CIO'ların yüzde 37'si dijital dönüşüm etkinliklerini ve uzaktan çalışma deneyimlerini listelerinin en üstüne koymaktadır. Salgın sosyal mesafenin yaygın bir şekilde uygulanmasına yol açtıkça, uzaktan çalışma birçok işletmenin yeni gerçeği haline gelmiştir (IDG, 2020).

Şekil 4: Pandemi Dönemi CEO Öncelikleri

Kaynak: IDG Research Services (2020)

5. SONUÇ

Dijitalleşme gösteriyor ki, "dijital" kavramı artık işletmeler için ihtiyaç değil bir zorunluluk haline almaktadır. Yerelde ya da küreselde işletmeler dijitalleşme süreçlerinin tümüyle içinde yer almalıdır. İşletmelerin iç yapılarının dijitalle uyumlu hale getirilmesi bu süreçten fayda sağlamayı hızlandırıcı bir çalışma olacaktır.

Dijital dönüşüm konusunda bazı şirketler ciddi yatırımlara başlamışken, bazı şirketler yatırım konusunda hala istenilen seviyeye ulaşamamıştır. Fakat verilere baktığımızda gelecekte büyük bir yatırım alanı olacağı görülmektedir. 2020 yılında dijital dönüşüm alanına 1.3 Trilyon Dolar yatırım yapılmış ve 2023 yılında bu yatırımın 2.3 Trilyon Dolar'a çıkması beklenmektedir. Bu durum gösteriyor ki bu alanda yapılan/yapılacak yatırımlar bazı ülkelerin GSYİH'ından bile büyük rakamlara ulaşmaktadır.

Dijital dönüşüm içerisinde inovatif teknolojileri barındırmaktadır. Dijital dönüşüme yatırım yapmak isteyen ya da bu dönüşümü işletmelerinde kullanmak isteyenlerin de bu teknolojilere olan talepleri de giderek artmaktadır. Özellikle pandemi sürecindeki dijitalleşme talebi ile birlikte ileri analitik teknolojilere olan talep büyük bir hızla artmıştır. Bunun yanında yapay zeka kavramı da giderek benimsenmektedir. Bu ve benzeri teknolojilere olan ihtiyacın artış göstermesinde pandemi sürecinin etkisinin büyük olduğu da net bir şekilde görülmektedir.

Pandemi süreci ile birlikte işletme içi faaliyetler ve girişimlerinde öncelikleri değişmiştir. Bir işletme için temel amaç kar olmakla birlikte, pandemi sürecinde bu durum yanına başka amaçlar ve öncelikler de getirmiştir. Dönem dönem hem Türkiye'de hem de dünyada yaşanan "kısmi/tam kapanma" süreçleri işletmelerin operasyonel anlamda zorlanmasına neden olmuştur. Bundan dolayı da bu süreçte işletmeler için önemli olan önceliklerden biri de operasyonel faaliyetlerdeki verimliliği artırmak olmuştur. Bunun yanında mevcut iş süreçlerini değiştirmek ve müşteri deneyimi konusunda yapılacak çalışmalar işletmelerin dijital dönüşümden daha fazla faydalanmasını sağlayacaktır.

En çok merak edilenlerden bir tanesi de "yeni normal"de işlerin nasıl yürütüleceği konusu olmaktadır. Bu konuda da aslında çalışanlar artık işlerin bir kısmını evden yapabileceğini ve işletmeler de bazı işler için çalışanların ofiste olmasına ihtiyacı olmadığını anlamıştır. Salgın süreci dijitalleşmedeki bu süreci daha da hızlandıracaktır. Çalışanlar "evden çalışma yönteminde" artık daha fazla online oturum programlarını kullanmaktadır. Diğer yandan bazı işler için ofis ihtiyacı da tamamen ortadan kalkacaktır.

İşletmelerin aslında büyük bir zorluk yaşayarak başladığı bu süreçte liderliğin ne kadar önemli olduğu bir kez daha ortaya çıkmıştır. Sadece hükümetler düzeyinde değil, aynı zamanda işletmeler açısından da liderden beklenenler daha fazla olmaya başlamıştır. Liderler dijital dönüşüm sürecine liderlik edecek ve bu süreci başarılı şekilde atlatan liderler, çok daha güçlü bir şekilde yoluna devam edecektir.

Pandemi süreci her ne kadar kriz olarak tanımlansa da her krizin getirdiği fırsatlar olmuştur. Pandemi süreci de beraberinde aslında gelişen dijital dönüşümü hızlandırma fırsatı sunmuştur. Çevik ve sektöre hızlı adapte olabilen şirketler bu süreci iyi bir şekilde ve hatta rakiplerini ekarte edecek şekilde atlatacaktır. Diğer yandan dijital dönüşüm alanında talep ve ihtiyaçların önümüzdeki on yılda şu ana kıyasla kat ve kat artacağı da görülmektedir.

Özet: Bu çalışmada, Türkiye'nin organik tarımsal üretiminde gerçekleşen değişimleri değerlendirmek amaçlanmıştır. Bu kapsamda bitkisel üretim için 2002-2019 yıllarına ait veriler, hayvansal üretim için ise 2008-2019 yıllarına ait veriler kullanılmıştır. Buna ek olarak, 2019 yılında Türkiye'nin coğrafi bölgelerinde gerçekleştirilen organik bitkisel üretim ile ilgili göstergeler ortaya konmuştur. Sonuçlar; Türkiye'de organik bitkisel üretim alanları açısından birinci sıradaki coğrafi bölgenin Doğu Anadolu Bölgesi (%47,30) olduğunu, bunu sırasıyla Ege Bölgesi (%24,53) ve Karadeniz Bölgesi'nin (%12,21) takip ettiğini göstermiştir. Organik bitkisel üretim gerçekleştiren çiftçilerin %32,96'sı Ege Bölgesi'nde bulunurken, bunu sırasıyla %31,27'lik oranla Karadeniz Bölgesi ve %24,93'lük oran ile Doğu Anadolu Bölgesi takip etmektedir. 2019 yılı verilerine göre Türkiye'de toplam organik bitkisel üretim 1374535,69 ton olarak gerçekleşirken, organik ürünler ihracatı 203 milyon dolar düzeyindedir. Aynı dönemde organik bitkisel üretimin iller bazında dağılımı incelendiğinde; üretim miktarı, alan ve çiftçi sayısı göstergeleri açısından birinci sıradaki ilin Aydın olduğu, bunu organik alan açısından Kars'ın, çiftçi sayısı açısından ise Rize'nin takip ettiği görülmektedir. Yıllara göre organik üretim istatistikleri incelendiğinde; bitkisel üretim ile ilgili göstergelerin dalgalı bir seyir izlemekle beraber genel olarak artış eğiliminde olduğu, hayvansal üretimde ise yumurta ve arı ürünleri üretiminde önemli artışlar sağlanmasına karşın et ve süt üretiminin özellikle son yıllarda azalış eğilimi gösterdiği belirlenmiştir.

Anahtar Kelimeler: Organik Tarım, Bitkisel Üretim, Hayvansal Üretim

Abstract: This study aimed to evaluate the changes that occur in organic agricultural production in Turkey. Within this scope, the data for crop production between the years of 2002-2019 and for animal production between the years of 2008-2019 were used. In addition, the indicators related to the organic crop production that is conducted in Turkey's geographical areas in 2019 are presented. The results showed that in terms of organic crop production areas in Turkey the Eastern Anatolia Region is on the first rank (% 47,30) that are followed by the Aegean Region (24.53%) and the Black Sea Region (12.21%). 32.96% of the farmers making organic crop production are located in the Aegean Region, followed by the Black Sea Region with 31.27% and Eastern Anatolia Region with a rate of 24.93%. According to the data in 2019 while the total organic crop production in Turkey is 1374535.69 tons, the organic products export is around \$ 203 million. When the distribution of organic crop production on the province basis is examined in the same period, Aydın is on the first rank in terms of production amount, area and the number of farmers, followed by Kars in the way of organic land and Rize in the number of farmers. When organic production statistics by years are examined; it has been determined that even though the indicators related to crop production have a fluctuating course, they tend to increase in general, but in animal production meat and milk production has shown a downward tendency especially in recent years, in spite of the increase in the production of eggs and bee products.

Key Words: Organic Agriculture, Crop Production, Animal Production

1. GİRİŞ

Artan dünya nüfusu ile birlikte tarım ve gıda ürünlerine olan talep artmış, bu durum konvansiyonel tarımın yaygınlaşmasını hızlandırmıştır (Eryılmaz ve Kılıç, 2018: 624). Konvansiyonel tarım terimi, çoğu hükümet ve tarımsal işletme grubu tarafından teşvik edilen ve dünya genelindeki üreticiler tarafından uygulanan baskın çiftçilik yaklaşımlarını ifade etmektedir (Kristiansen ve Merfield, 2006: 3). Konvansiyonel tarım; önemli verim ve üretim artışları sağlamış, ancak birtakım çevresel sorunları da beraberinde getirmiştir (Rehber, 1991:155-156). Bu üretim şeklinde çevresel etkilerin göz ardı edilmesi nedeniyle, sürdürülebilirlik ile ilgili kaygılar yaşanmaya başlamış ve bunun sonucunda günümüzde organik tarım olarak adlandırılan üretim sisteminin uygulamaları yaygınlaşmıştır.

Yerel kaynakların etkin bir şekilde kullanımını maksimize ederek toprak verimliliğini arttıran bir tarım sistemi olarak ifade edilen organik tarım (Gomiero ve ark., 2011: 96), doğal dengeyi maksimum düzeyde korumaya ve aynı zamanda insan ve hayvan sağlığına zararlı kalıntıları yasaklayarak yüksek kaliteli gıda

üretimi gerçekleştirmeye çalışmaktadır (Mondelaers ve Ark., 2009: 1098). Organik tarım; sentetik pestisitlerin, inorganik gübrelerin ve genetiği değiştirilmiş organizmaların kullanımından kaçınıldığı, canlıların sağlığını ve üretkenliğini optimize etmeyi ve kirliliği (hava, su ve toprak) azaltmayı amaçlayan bir üretim sistemidir (Nandwani ve Nwosisi, 2016: 2). Organik tarım terimi, ürünün üretilmesinden nihai tüketiciye ulaştırılmasına kadar gerçekleştirilen işlemlerin çevreye saygılı yöntemler kullanılarak yapıldığı bir süreci ifade etmektedir (Scialabba ve Hattam, 2002: 3). Esasında organik tarım kavramının kökenleri, binlerce yıl boyunca sayısız kırsal toplumda gelişen geleneksel çiftçilik uygulamalarında yatmaktadır (Behera ve Ark. 2012: 290). Günümüzde organik tarım uygulamaları; geleneksel üretim uygulamaları ile modern teknolojileri, çevresel sürdürülebilirliği gözeterek bir araya getirmektedir.

Organik tarım faaliyetleri, önemli bir ekonomik değer meydana getirmektedir. Sertifikalı organik ürünler, üreticiler için daha yüksek gelir seçenekleri sunarak çevrenin bilinçli bir şekilde kullanılması için piyasaya dayalı bir teşvik sağlamaktadır (Scialabba ve Müller-Lindenlauf, 2010: 165).

Türkiye organik tarıma ihracatçı firmaların talepleri doğrultusunda ihracat yapmak niyetiyle 1986 yılında başlamıştır (Rehber ve Turhan, 2002: 382). Organik tarım faaliyetleri başlangıçta; kuru üzüm, kuru incir, kuru kayısı, fındık, nohut, fasulye, mercimek, zeytin ve zeytinyağı gibi geleneksel ihracat ürünlerinin üretimi için gerçekleştirilirken (Turhan ve Ark., 2008: 318), 2019 yılında organik bitkisel üretim kapsamında (geçiş süreci dahil) 213 ürünün üretimi yapılmıştır (TOB, 2021). Başladığı dönemden günümüze kadar önemli aşamalar kateden Türkiye’de organik tarım, 2019 yılı organik bitkisel üretim verilerine göre 53782 çiftçi tarafından 386074 ha alanda gerçekleştirilmiştir (TOB, 2021). Dış ticaret istatistikleri incelendiğinde; Türkiye’nin 2019 yılında 203 milyon dolarlık ihracat gerçekleştirdiği ve Türkiye’de organik ürün ihracat faaliyetlerinde bulunan 209 gerçek veya tüzel kişi bulunduğu görülmektedir (TOB, 2021, FiBL, 2021a). İhracat değerinin 2009 yılında 27 milyon dolar, 1999 yılında ise 24 milyon dolar (TOB, 2021) düzeyinde olduğu göz önünde bulundurulduğunda; bu alanda önemli artışlar gerçekleştiği ifade edilebilir. Türkiye’nin dünya organik ürün tüketiminin önemli bir bölümünü gerçekleştiren Avrupa’ya yakınlığı ve organik tarımsal üretim noktasında sahip olduğu potansiyel göz önünde bulundurulduğunda, uygun politikalar ile organik ürünlerin üretimi ve ihracatı konusunda çok daha iyi noktalara gelinebileceği düşünülmektedir.

Bu çalışmada, Türkiye’de organik tarımsal üretim; bu konudaki çeşitli göstergeler ortaya konularak analiz edilmiştir. Analiz sonuçlarının, politika yapımcılar ve organik tarım ile ilgili kurum ve kuruluşların politika geliştirmeleri konusunda yardımcı olabileceği düşünülmektedir.

2. Materyal ve Yöntem

Çalışmanın ana materyalini Tarım ve Orman Bakanlığı (TOB) organik tarım istatistiklerinden (Geçiş süreci hariç) elde edilen veriler oluşturmaktadır. Konu ile ilgili ulusal ve uluslararası düzeyde yayınlanan raporlar ve yayınlardan da çalışma kapsamında yararlanılmıştır.

Organik bitkisel üretimde gerçekleşen değişimi analiz etmek amacıyla 2002-2019 yıllarına ait organik bitkisel üretim verileri için tablolar oluşturulmuş, organik bitkisel üretimin güncel durumunu ortaya koymak adına; coğrafi bölgeler ve seçili iller için üretim göstergelerine yer verilmiştir. Coğrafi bölgeler için organik üretim göstergeleri; iller için paylaşılan organik bitkisel üretim istatistiklerinden yararlanılarak orijinal hesaplamalar ile oluşturulmuştur. İlçeler için organik bitkisel üretim istatistikleri bulunmaması nedeniyle bazı ilçeleri farklı coğrafi bölgelerde olan illerin, il merkezlerinin bulunduğu coğrafi bölge dikkate alınarak hesaplama yapılmıştır. Hayvansal üretimde gerçekleşen değişimleri değerlendirmek için 2008-2019 yıllarında üretilen; et, süt, yumurta ve arı ürünleri için tablolar hazırlanmıştır.

3. Bulgular

Türkiye’de 2002-2019 yıllarında organik bitkisel üretim ile ilgili göstergelere Tablo 1’de yer verilmiştir. Tablo 1. incelendiğinde; organik tarım faaliyetlerinde bulunan üretici sayısının dalgalı bir seyir izlediği görülmekle beraber genel olarak artış eğilimi gösterdiği ve üretici sayısının 2019 yılında 2002 yılına göre %332.74’lük bir artışla 53782’ye ulaştığı görülmektedir. Aynı dönemde benzer eğilimler gösteren üretim

alanı ve üretim miktarı, 2019 yılında 2002 yılına göre sırasıyla %329.79 ve %343.22 oranında artışla 386074 ha'a ve 1374536 tona ulaştığı görülmektedir. Türkiye'de organik tarım alanlarının toplam tarım alanları içerisindeki payı istatistikleri incelendiğinde ise 2006 yılında %0,4 olan oranın 2017 yılına gelindiğinde %1,4'e ulaştığı görülmektedir (Lernoud, J., Willer, H., 2019; Willer, H. ve ark., 2008)¹.

Tablo 1. Türkiye'de Organik Bitkisel Üretim (2002-2019)

Yıllar	Çiftçi Sayısı	Alan (Ha)*	Üretim Miktarı (Ton)
2002	12428	89826,69	310124,58
2003	13044	103190	291876
2004	9314	162193	278726
2005	9427	175074	289082
2006	8654	162131	309522

* TOB (2021) istatistiklerinde; 2002-2009 yıllarında "üretim alanı", 2010-2019 yıllarında "toplam alan" adıyla paylaşılan verilerin her yıl için genel toplamı alınmıştır.

Tablo 1'de de görüldüğü üzere üretici sayısında yıllık en yüksek artış oranı %109,99 ile 2009 yılında gerçekleşmiştir. Üretim alanlarında en yüksek artış %231,25 ile 2009 yılında ve üretim miktarında en yüksek artış %93,08 ile 2011 yılında gerçekleşmiştir.

Tablo 2'de 2019 yılında organik bitkisel üretim miktarı en yüksek 10 il ve bu iller ile ilgili göstergelere yer verilmiştir. Tablo 2. incelendiğinde, üretim miktarı açısından birinci sıradaki ilin; toplam üretimin %13,81'ini gerçekleştiren Aydın olduğu, bunu sırasıyla Manisa ve Kars illerinin takip ettiği görülmektedir. Üretim miktarı en yüksek 10 il dışında kalan diğer şehirlerin ise üretimin %32,08'ini gerçekleştirdiği görülmektedir.

Tablo 2. Türkiye'de Organik Bitkisel Üretimi En Yüksek İller (2019)

İl	Çiftçi Sayısı		Toplam Alan		Üretim Miktarı	
	Kişi	%	Ha	%	Ton	%
Aydın	11107	20,65	56190,70	14,55	189800,97	13,81

¹ Organik tarım alanı verileri; geçiş süreci dahil, sertifikalı üretim alanı verileridir. Kullanılan organik tarım alanı verileri; FiBL istatistikleri ile oluşturulmuş ve güncel FiBL (2021b) verileri ile eşleşmektedir. Lernoud ve Willer (2019) çalışmasındaki veri (520886 ha) ile güncel FiBL (2021b) verisi (520885 ha) ile 1 ha sapma göstermektedir.

Manisa	2441	4,54	13784,72	3,57	167417,00	12,18
Kars	3177	5,91	46380,04	12,01	97229,43	7,07
Erzurum	1561	2,90	21304,77	5,52	88492,23	6,44
Van	2493	4,64	31040,72	8,04	82725,43	6,02
Ağrı	1366	2,54	32961,02	8,54	80075,59	5,83

Genel Toplam	53782	100,00	386074,04	100,00	1374535,69	100,00

Kaynak: TOB (2021).

Üretim miktarı açısından birinci sırada olan Aydın'ın, üretim alanı (%14,55) ve üretici sayısı açısından da birinci sırada yer aldığı görülmektedir. Aydın ilini; üretim alanı açısından %12,01 ile Kars ve %8,54 ile Ağrı illeri takip etmektedir. Çiftçi sayısı açısından ikinci sıradaki il ise %19,49 ile Rize'dir. Coğrafi bölgelere göre organik bitkisel üretim istatistikleri Tablo 3'de verilmiştir.

Tablo 3. Türkiye'nin Coğrafi Bölgelerine Göre Organik Bitkisel Üretimi (2019)

Coğrafi Bölgeler	Çiftçi Sayısı		Toplam Alan		Üretim Miktarı	
	Kişi	%	Ha	%	Ton	%
Doğu Anadolu Bölgesi	13408	24,93	182594,22	47,30	517348,74	37,64
Ege Bölgesi	17724	32,96	94722,28	24,53	476398,43	34,66
İç Anadolu Bölgesi	1812	3,37	18548,74	4,80	137653,11	10,01
Karadeniz Bölgesi	16818	31,27	47138,55	12,21	92575,34	6,74
Güneydoğu Anadolu Bölgesi	2422	4,50	21356,60	5,53	87615,46	6,37
Akdeniz Bölgesi	610	1,13	15251,87	3,95	40767,44	2,97
Marmara Bölgesi	988	1,84	6461,76	1,67	22177,17	1,61
Toplam	53782	100,00	386074,04	100,00	1374535,69	100,00

Kaynak: TOB (2021), Orijinal Hesaplamalar.

Tablo 3. incelendiğinde, Türkiye'de organik üretim miktarı en yüksek olan bölgenin %37,64'lük oran ile Doğu Anadolu Bölgesi olduğu görülmektedir. Bunu sırasıyla Ege Bölgesi (%34,66) ve İç Anadolu Bölgesi (%10,01) takip ederken, üretim miktarı en düşük bölge Marmara Bölgesi (%1,61) olarak belirlenmiştir. Üretici sayısı istatistikleri incelendiğinde; üretim miktarı açısından ikinci sırada yer alan Ege Bölgesi'nin bu alanda birinci sırada olduğu, bunu sırasıyla %31,27'lik oran ile Karadeniz Bölgesi ve %24,93'lük oran ile Doğu Anadolu Bölgesi'nin takip ettiği belirlenmiştir.

Üretim alanı incelendiğinde ise bu alanda birinci sıradaki coğrafi bölgenin Doğu Anadolu Bölgesi olduğu, bunu sırasıyla Ege Bölgesi ve Karadeniz Bölgesi'nin takip ettiği belirlenmiştir. Tablo 3'de verilen üretim alanı istatistikleri, TOB istatistiklerinde bulunan üretim alanı, nadas alanı ve doğadan toplama üretim alanı verilerinin toplamıdır. 2019 yılı verilerine göre bu göstergelerin toplam üretim alanı içerisindeki payı Şekil 1'de verilmiştir.

Şekil 1. Organik Üretim Alanlarının Dağılımı (2019)

Kaynak: TOB (2021).

Şekil 1 incelendiğinde Türkiye’de toplam organik bitkisel alanların %90’ının sertifikalı üretim alanı, %9’unun doğadan toplama üretim alanı ve %1’inin ise nadas alanı kategorisinde bulunduğu görülmektedir. Bu alanların önemli bir bölümünde üretilen ürünlerin; hububat, zeytin ve sert kabuklu ürünler olduğu ifade edilebilir.

Türkiye’de organik et, süt ve yumurta üretimi, 2008-2019 yılları aralığında değerlendirilmiş ve elde edilen göstergeler Tablo 4’de verilmiştir. Veriler incelendiğinde, Türkiye’de ilgili yıllardaki ortalama organik et üretiminin 2060,29 ton, süt üretiminin 17548,16 ton ve yumurta üretiminin 77634454 adet olduğu görülmektedir. Verilere göre Tablo 4’de bulunan organik hayvansal ürünlerin üretimi ile uğraşan çiftçi sayısı (arıcılık ile uğraşanlar hariç) 2008 yılına göre 2019 yılında %448,38 oranında artmıştır. Organik hayvansal üretim ile uğraşan çiftçi sayısında en yüksek rakama ise 2013 yılında ulaşılmıştır.

Tablo 4. 2008-2019 Yıllarında Türkiye’de Organik Hayvansal Üretim (Et, Süt ve Yumurta)

Yıllar	Çiftçi Sayısı	Et Üretimi (ton)	Süt Üretimi (ton)	Yumurta (adet)
2008	31	554,42	8711,00	4424000
2009	38	376,58	12994,00	11767400
2010	105	6803,01	11604,75	17889808
2011	137	1358,78	14793,55	26236920
2012	151	480,69	17627,06	36105556
2013	1632	4970,07	54780,93	48040778
2014	216	2107,09	15509,72	64898912
2015	179	2605,00	19739,00	58938769
2016	173	1609,00	21431,00	147600367
2017	119	1352,00	15109,00	161254080
2018	148	1687,73	12883,51	174675362
2019	170	819,12	5394,46	179781501
Ortalama	258,25	2060,29	17548,16	77634454

Kaynak: TOB (2021).

Organik et üretimi incelendiğinde, üretim miktarının genel olarak dalgalı bir seyir izlediği ve üretim miktarında en yüksek rakama 6803,01 ton ile 2010 yılında ulaşıldığı, bunu 4970,07 ton ile 2013 yılının takip ettiği görülmektedir. Organik et üretimi ile benzer şekilde dalgalı bir seyir gösteren organik süt

üretimi istatistiklerine bakıldığında, üretimin en yüksek olduğu yıl 54780,93 ton ile 2013 yılı olarak belirlenirken, bunu 21431 ton ile 2016 yılı takip etmektedir. 2019 yılında ise organik süt üretimi 2008 yılına göre %38,07, 2018 yılına göre ise %58,12 oranında azalarak 5394,46 ton olarak gerçekleşmiştir. Tablo 4’de verilen diğer hayvansal ürün üretim göstergelerinden farklı olarak neredeyse her yıl artış gösteren yumurta üretimi incelendiğinde, üretimin 2019 yılında; bir önceki yıla göre %2,92, 2008 yılına göre ise %396,37 oranında artarak 179781501 adete ulaştığı görülmektedir.

Organik arı ürünlerinin üretimi ile ilgili 2008-2019 yılı verilerine Tablo 5’de yer verilmiştir. İlgili yıllarda organik arı ürünleri üretimi ile uğraşan üretici sayısı genel olarak artış eğilimi gösterirken üretici sayısının en yüksek olduğu yıl 355 ile 2012 yılı olarak gerçekleşirken bunu 334 ile 2018 yılı takip etmiştir.

Tablo 5. 2008-2019 Yıllarında Organik Arı Ürünleri Üretimi ile İlgili Göstergeler

Yıllar	Çiftçi Sayısı	Kovan Sayısı	Üretim (Ton)
2008	93	11207	181,21
2009	147	14917	206,54
2010	191	14699	208,15
2011	205	19105	221,31
2012	355	47065	516,84
2013	279	32342	344,04
2014	321	36.391	280,00
2015	322	38.296	674,54
2016	276	40.371	349,00
2017	318	48.153	393,20
2018	334	51742	494,93
2019	249	50100	576,76
Ortalama	257,50	33699	370,54

Kaynak: TOB (2021).

Organik arı ürünleri üretiminde kullanılan kovan sayısı istatistikleri incelendiğinde, sayının yıllar içerisinde genel olarak artış eğiliminde olduğu görülmektedir. Bu gösterge için bir önceki yıla göre en yüksek oranda artış %146,34 ile 2012 yılında gerçekleşirken, 2019 yılında kovan sayısı 2008 yılına göre %347,04 artış ile 50100’e ulaşmıştır.

Veriler incelendiğinde ilgili yıllarda genel olarak dalgalı bir eğilim gösteren organik arı ürünleri üretimi; 2015 yılında 674,54 ton ile en yüksek seviyeye ulaşırken, bunu sırasıyla 576,76 tonluk üretim ile 2019 yılı ve 516,84 tonluk üretim ile 2012 yılı takip etmiştir.

4. Sonuç

Bu çalışma, Türkiye’de organik tarımsal üretimi, yıllar içerisinde gerçekleşen değişimleri ortaya koyarak analiz etmeyi amaçlamaktadır. Hem bitkisel üretim hem de hayvansal üretim ile ilgili göstergeler incelendiğinde, üretimin genel olarak incelenen başlangıç yılına (Bitkisel üretim için 2002, hayvansal üretim için 2008) kıyasla 2019 yılında önemli ölçüde arttığı görülmektedir. Ancak organik et ve süt üretiminde en yüksek üretim miktarına sırasıyla 2010 ve 2013 yıllarında ulaşılmıştır ve 2019 yılında gerçekleştirilen et ve süt üretimi; belirtilen yıllardakine göre sırasıyla %87,96 ve %90,15 oranında azalmıştır. Bu durum, Türkiye’nin organik et ve süt üretimi konusunda önemli bir potansiyele sahip olduğunun ve bu potansiyeli daha iyi bir şekilde değerlendirmesi halinde ilgili ürünlerin üretiminde önemli konumlara ulaşabileceğinin bir göstergesi olarak yorumlanabilir.

Organik tarım ürünleri üretiminde yıllar içerisinde gerçekleşen azalmaların önüne geçmek için bu alanda üretici örgütlenmesinin sağlanması ve pazarlama kanallarının geliştirilmesinin önem taşıdığı düşünülmektedir.

Abstract: In every company, in one context or another, we come across the term inventory. The size of inventories determines the concept of operation of enterprises. That is, inventories are one of the most important items in accounting. Determining the size of inventories is a real challenge for any manager. This confirms how important they are.

That is, inventory management is necessary to be able to realistically know at any time how much they are.

In fact, to enable work that will take place in an easy and simple way. Through this data, managers will always be able to achieve a positive result with the lowest costs.

That is, accounting control that needs to take place continuously in order to meet the requirements and claims. But also to keep costs low.

Namely, the results that are presented for a certain period depend on many factors. This includes inventories (raw materials that are prepared to enter the work process and then receive a new output in the form of products or services). But in another case, the inventory implies stored material that is provided for a future period of operationalization.

In fact, inventories are assets from which a certain benefit is expected in a certain period and they act in the operating process only once.

Therefore, they have current assets treatment and their shelf life is one year. But you can also find inventories that are used repeatedly and the shelf life will certainly be longer than one year.

Keywords: current assets, stored material, raw materials, accounting control, inventories.

INTRODUCTION

Inventories are stored for multiple purposes. They can be like work items and small inventory that are consumed in the production process.

They can also appear as unfinished production, ie as finished products of own production for further sale or as purchased goods that are intended for future sale.

Therefore, the question arises: what should be the optimal size of inventories to achieve the required economy and the required rationality in operation?

The answer would be: in order to achieve optimal inventory, it is necessary to determine the diagnostic substrates that set the normal to the smallest and largest amount of inventory.

Of course, this will be achieved by harmonizing the quantity of inventory with the needs of production, the needs of the provision of services, the composition of the means of inventory and the state of the inventories on the market.

Therefore, in order to achieve the economic efficiency of the operation, it is necessary to manage them correctly and accurately.

From this point of view, accounting should constantly monitor the situation and provide information to the managers in charge of conducting the inventory policy in the company.

Here it is necessary to emphasize the importance of continuous inventory monitoring, not only for maintaining the optimal level of inventory, but also for maintaining the optimal level of costs. Because, in the total operating costs of the enterprise, the cost of inventory makes up a fairly large percentage. This means that inventory costs include all procurement costs (invoice price, import and other duties, transport costs, storage costs, etc.)

In fact, valuing inventory in accounting is really very important.

1. ACCOUNTING CONTROL OF INVENTORIES

Accounting control of inventories, as well as their management is one of the most important tasks of any company. Certain shortcomings may arise that burden business entities in finding the optimal level of inventory.

Namely, it is necessary for the company to hire an experienced manager who will always face the problems and certain difficulties that will appear during the operation. Because there is unpredictability in claims, unreliable suppliers, a wide range of items, different lengths of delivery, a certain interest in a product, etc. For all these reasons, it is very important to keep track of the inventories of raw materials.

Inventory planning

Since business entities, in large part, cannot function without inventory, it is necessary to constantly determine their sizes.

They contribute to the successful solution of many problems that arise when procurement is shifted, possible delays in sales, etc.

It is well known that in many businesses the principle - just in time- is used

However, this means working without inventory or stocks that are provided just before the start of a job task. This means that not every company needs the same level of inventory. This means that inventories need to be kept at an acceptable level, where the amount of inventory will determine the opportunity cost, which can be a risk if they do not have inventory.

Namely, determining the size of inventories is influenced by the type of work, observance of the principle of continuity, the duration of the procurement phase, how much the costs for storing inventories are, as well as the risk of inventory storage or vice versa, the risk of non-storage.

Accommodation and storage of inventory

Inventories are accommodated and stored in depots, warehouses, large refrigerators, etc. This means that the storage can be in its own space, area, building. But it can also be rented space for a certain period and agreed rent.

Namely, it depends on the type of accommodation, as well as the conditions and the manner of storage.

Then, it depends on what materials, finished products, small inventory, goods that require special storage conditions to prevent spoilage. Differentiation of all inventory, from an accounting point of view is necessary because all items are kept separately on a separate account.

Nomenclature and inventory encryption

Each inventory has its own specifics. Therefore, in addition to the type of inventory, it is necessary that they have the correct name and list the other technical properties of the product.

Namely, the inventory needs to be numbered and have a nomenclature with which it will be marked.

Therefore, in the continuous functioning, ie movement of the large number of stored products, items and other materials, there is a need for accurate marking. All this is in the interest of the company because confusion is very unlikely.

In this way, through encryption, it is very easy to recognize which inventory is in question, and at the same time the way of accounting is facilitated, ie. posting. In analytical accounting, encryption and ciphering are of great importance.

That is, the inventory and their grouping and sorting in any form of storage is done very easily.

This means that encryption takes place using the letters of the alphabet, numbers, and can be mixed in the form of alphanumeric codes. It is choice of the company itself or the type of inventory imposes the concept of marking, ie encryption.

For illustration only, the European Union uses its own product encryption system called European Article Numbering (EAN). This code is also imprinted on a sticker in the form of a bar code, which reads as Optical Character Recognition - OCR.

Recording (bookkeeping) of inventories

As we pointed out earlier in the paper, the inventory needs to be constantly monitored.

That is, the information and data about them should be constantly accurately processed and presented in reports. The operational activities would move in the right direction when, at any moment, we know the inventory situation. This means that the accountant, ie the accounting function, needs to make a chronological record of the events in the trade books, and hence to have a constant insight in the warehouses and other depots.

Namely, the managers will make the right decisions, if they receive the financial statements in a timely manner and with accurate and objective data.

Therefore, the records are kept in the general ledger, analytical accounting and auxiliary accounting records.

In fact, the accounting task mainly consists of records of procurement data. All procurement is performed by the procurement department, ie the procurement function which is responsible for each product to take special care.

This refers to the monitoring of prices, as well as the markets, the timeliness of delivery and the correctness of the order.

Namely, the connection between the procurement and accounting function is correlated and they are cautious in choosing the suppliers. The chief accountant continuously controls the whole procedure.

In the general ledger, different accounts are kept for each type of inventory, as well as for each individual item.

This confirms the importance of control and the need for analytical accounting.

In this way, the records enable the improvement of the operation of the enterprise.

Meanwhile, the auxiliary accounting records control and monitor the minimum, optimal and maximum inventory. And, of course, we will emphasize that, after a certain period of time, it is necessary to perform inventory, inspection and harmonization of all types of inventory.

Documentation for the procured raw materials (inventories)

The documentation is also very important, because it confirms the principle of materiality.

When keeping inventory, bookkeepers need to have complete documentation of their procurement and sales.

Namely, the various documents (invoices, delivery notes, requests, etc.) confirm the correctness of the accounting records and the final results obtained in a certain period.

In addition to the confirmation of the accuracy and correctness of the financial and material indicators, the documentation should be submitted in a timely manner.

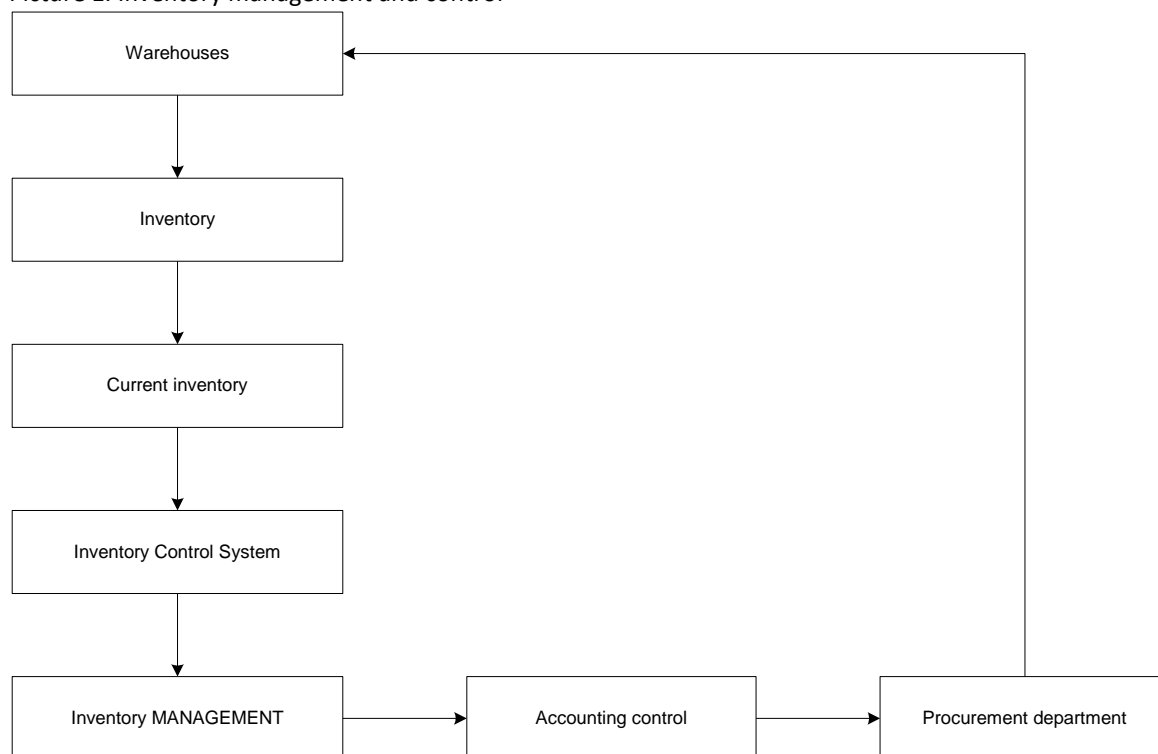

In fact, the accounting department, in the accounting information system is required to collect and classify all documents.

Hence, it will be possible at any time to inspect the condition of inventories and to enable proper direction of operational activities.

However, we will emphasize that all this depends on the dynamics of procurement and turnover with them. The classification of documents begins with whether the inventories are from own production, whether they are commercial goods or whether they are inventories that are items of work.

Namely, the forms themselves are different so that the accountants can more easily classify and record them.

Picture 1. Inventory management and control

2. FRAMEWORK FOR INVENTORY RECOGNITION AND MEASUREMENT

(IAS 2 – Inventories)¹

The purpose of this Standard is to prescribe the inventory accounting procedure according to the cost system. The basic issue in inventory accounting is the amount of expense that should be recognized as an asset that should be kept in the records until the appropriate revenue is recognized.

This value is recognized as an asset in the enterprise until the related revenue is recognized (ie when inventories are sold), at which point inventories are recognized as an expense (ie cost of sales).

IAS 2 provides guidance on determining the cost and subsequent recognition as an expense, including any deductions from net realizable value.

¹ IAS (1999)

Revised IAS 2 contains guidance on cost formulas used to evaluate inventories.

Under IAS 2 Inventories, they are defined as assets:

- which are kept for sale in the regular course of operations;
- in the production process intended for such sale; and
- in the form of raw materials or auxiliary materials that are consumed in the production process or in the provision of services.

Net realizable value is the estimated selling price in the ordinary course of business, less the estimated cost of completion and the estimated cost of selling.

The net realizable value refers to the net amount that the business entity expects to realize from the sale of inventories in the regular course of operations. Fair value is the amount for which an asset can be exchanged or a liability settled, in a transaction under commercial terms, between parties sufficiently informed and willing to accept the transaction arbitrarily.

Namely, the fair value reflects the amount by which the same stocks could be exchanged in the market, between known and prepared buyers and sellers.

Inventory measurement

Inventories, like most assets, are accounted for at cost.

Namely, inventory according to IAS 2 are measured

- 1) according to costs, or
- 2) according to the net realizable value, which can be realized on the market if it is lower than the measurement according to the costs.

When inventories are measured at cost, the cost of inventories includes the cost of purchasing inventory, conversion costs, and all other costs.

When inventories are measured at cost, the cost of inventories includes inventory costs, conversion costs and other costs. Inventory costs include the cost of inventory, customs duties, non-refundable taxes, transport costs and transport insurance costs, then handling costs and all other costs directly attributable to the purchase of inventory.

Namely, conversion costs are direct labor costs, but also each separate part fixed overheads and each separate part of the variable overhead costs. When fixed costs are allocated to conversion costs, production capacity is used. This means that the fixed part of the costs, which refers to the unused part of the capacity, cannot be realization costs, instead of being settled as an expense in the period in which they arose. Other costs incurred in bringing inventory to a specific location in a specific location time includes the cost of designing products that are designed for specific customers.

Namely, the inventories, as stated above, need to be measured according to the amount of costs or net realizable value. That is, depending on which of them is lower.

Inventory measurement is extremely important in accounting.

Because in the financial statements according to IAS 2 they should disclose:

- a) Inventory accounting policies adopted, including the cost method used,
- b) The total accounting amount of inventories and the accounting amount in the appropriate classifications for the enterprise,
- c) The accounting amount of the inventories expressed at the net realizable value,
- d) The amount of any reimbursement of write-offs recognized as income in the period in accordance with IAS 2, paragraph 31;

- e) Circumstances or events that led to the replenishment of write-offs in accordance with IAS 2, item 31, and
- f) The accounting amount of the inventories pledged to secure the liabilities.

CONCLUSION

Inventories are crucial assets for the operation of the enterprise. They are inevitable. But also inventory management is a key foundation on which the company operates. For that reason, it is necessary to observe the principles in determining and procuring inventories.

That is, first of all, care should be taken to respect the principle of continuity, ie. determining the size of inventory.

Then, the principle of dynamics and consumption of inventories, ie determining the time and quantity used for production and trade with them.

It is also very important to observe the principle of control, or to coincide the accounting control with the warehouse control. Inventory control ensures maintained quality and optimal inventory level. And, the principle of accounting control, monitoring of each process of entry and exit of inventories. Inventories generate costs for which a special plan should be made in their procurement.

Therefore, it is first necessary to adopt which methods will be used in determining the costs.

Inventory costs are determined using the method first in - the first out or known as the FIFO method.

This method requires that items in inventory with the earliest purchase date be the first to be sold or issued. And everything else in that order.

However, the weighted average cost method can also be used.

According to this method, the cost of each item in inventory is determined based on the weighted average cost. The average can be calculated periodically or depending on the circumstances. The FIFO method or, last in - first out can also be applied. This method requires reverse selling from the FIFO method.

This means that the purchased items with the latest date are sold or issued first and again the other stocks in order.

Abstract: In the years of the economic /financial / sovereign debt and coronavirus pandemic crisis in Greece, many viable businesses that are facing financial difficulties are led to liquidation rather than timely restructuring, with very few entrepreneurs having a second chance. This corporate failure faced by Greek companies in recent years may have been caused by either endogenous and exogenous factors or a combination of these two. In this paper we investigate the factors (economic, social, political) that will help to facilitate entrepreneurs' access to a second and third opportunity taking also into account socially vulnerable groups such as people with disabilities and women entrepreneurs. Moreover, we try to find the characteristics that would encourage honest bankrupt entrepreneurs for a second business venture and the sectors where a second chance may have increased chances of sustainability in Greece. The aim of our research is to lead Greece to higher rates of self-employment, reduction in unemployment and exit from the crises.

Keywords: bankruptcy, second chance, Greece

1. INTRODUCTION

In the years of the financial crisis in Greece, many viable businesses that are facing financial difficulties are led to liquidation rather than timely restructuring, with very few entrepreneurs having a second chance. In this paper we investigate the factors (economic, social, political) that will help to facilitate entrepreneurs' access to a second and third opportunity. Moreover, we try to find the characteristics that would encourage entrepreneurs and mainly honest bankrupt entrepreneurs for a second business venture and the sectors where a second chance may have increased chances of sustainability in Greece. The corporate failure faced by Greek companies in recent years may have been caused by either endogenous and exogenous factors or a combination of the two. However, it is difficult to separate the impact of external factors, such as the economic downturn, from the impact of the company's particular characteristics, which are the result of its management in the event of bankruptcy. The cost of a possible corporate failure is high for the company but also for society.

Indicatively, we mention the following consequences: increasing unemployment with the wider social consequences that this entails, reduction of living standards, high inflation, insufficient utilization of resources and especially human resources, with consequences for the national economy, instability of the banking system due to the inability to repay the loan funds, financial losses for shareholders due to

* This research is co-financed by Greece and the European Union (European Social Fund- ESF) through the Operational Programme «Human Resources Development, Education and Lifelong Learning 2014-2020» in the context of the project “Seeking Incentives for a Successful Second and Third business Opportunity after bankruptcy in Times of Recession” (MIS 5047261).

the deterioration of the value of the company's share, financial market instability resulting in higher borrowing costs for businesses.

During the last years, the unfavorable economic environment seems to have affected the perceptions of individuals in general, let alone the socially vulnerable, about whether they have sufficient knowledge and skills to cope with the increasing difficulties of the current environment in doing business. In addition, over time in Greece the index, which concerns the fear of failure, as a deterrent to doing business, moved to higher levels than most countries that participated in the World Entrepreneurship Observatory (GEM) survey. Of particular interest is the trend of the index before and after the crisis. Specifically, after 2009 the index seems to show an upward trend mainly as a result of the economic crisis, while it remains above the long-term average over time.

2. LITERATURE REVIEW FOR A SUCCESSFUL ENTREPRENEURS SECOND CHANCE

Hegarty et al (2020), while acknowledging that the amendments to the Bankruptcy Laws are in the right direction, barriers to accessing finance remain. Additionally, propose that training programs can help eliminate the stigma of corporate failure. Musulin, M., & Gregov, Z. (2019), conducted a survey of companies in Croatia and emphasizes the need of expert assistance (business, legal, psychological) during and after the bankruptcy for honest entrepreneurs. Nielsen, K., & Sarasvathy, S. D. (2016), investigate business restarts in Denmark from 1980 to 2007, and stresses the need of appropriate education in order to learn from failure experience and increase the chance of a successful business restart.

Tajti, T. (2018), argue that lawmakers in order to develop a law framework for a successful entrepreneurs second chance policy, need to have fully understand the impact of bankruptcy stigma. Wagner, J. (2002), in his research in Germany, also emphasizes the problem of 'stigmatization of failure' as a barrier to a second business opportunity. Simmons et al (2014) recognize the complexity of the second business chance problem and note the need to develop a framework to encourage these entrepreneurs.

Moreover, foreign direct investment (FDI) can help entrepreneurs for a second chance. Especially, for Greece Vlachos *et al* (2019) investigate the barriers to inward (FDI) in Greece. According to their survey, they found that the main barriers to Greece's inward FDI are bureaucracy and excessive taxation. Other barriers less important are the high VAT, corruption, macroeconomic instability, lack of transparency, the unstable legal framework and the lack of enforcement of the laws. Some of these barriers are also mentioned by Bitzenis *et al* (2014). By giving a second chance to entrepreneurs who have gone bankrupt with simultaneous support in business education, psychological support and financing, growth can be achieved. Related to this is a more recent article by Tsitouras *et al* (2020). In their survey conclude that foreign direct investments and the quality of human capital are important drivers of economic growth for Greece.

3. RESEARCH METHODOLOGY

Our study aims to find the characteristics that would encourage entrepreneurs and mainly honest bankrupt entrepreneurs for a second business chance. For this reason we use questionnaire analysis. This type of analysis has many positives as Queirós *et al* (2017) describe in their work. We first conducted a literature review and according to this review, the questions of our questionnaire were created.

So, we run a questionnaire for every business and every entrepreneur operating in Greece regardless of the country of origin of the owners in order:

- to seek the opinion of entrepreneurs on the need for a second chance for entrepreneurs who fail
- to see if entrepreneurs believe that in Greece there are favorable proposals regarding the political, economic and social conditions that affect business activity in our country

- to investigate if entrepreneurs believe that a business failure stigmatizes the "failed" businessman and if the Greek state makes efforts and actions to prevent this stigma

The questionnaire was sent by e-mail, using the contact details of companies from ICAP databases to which we had access. We have to mention that due to the coronavirus pandemic there were problems and delays in the collection of answers, as due to lockdown it was difficult to collect questionnaires with closed companies and difficult to impossible to reach entrepreneurs for lifelong communication. For this reason the response rate in this initial pilot survey was 5% (number of respondents: 110).

3. EMPIRICAL RESULTS

The most of our respondents operate their companies for more than 10 years. Moreover, for 34% of the respondents the years of operation are more than 31.

Figure 1: Years of operation of the company

There is also a wide range of sectors in our survey. Food, beverages and tobacco (19%), wholesale companies (15%), constructions (10%), machinery and equipment (9%), other manufacturing industries (9%), chemicals and pharmaceuticals (5%), etc.

Figure 2: Field of activity

In figure 3 we can see that many companies today employ more than 10 employees. However, 38% of the companies when they closed also employ more than 10 employees which implies the impact of bankruptcy on rising unemployment in Greece.

Figure 3: Number of employees

Regarding the possibilities of financing in Greece, there is a severe lack of sources of financing for new and growing businesses. Respondents emphasize the lack of a stock market for financing new companies and the insufficient bank lending.

Table 1: Financing in Greece

	Not at all	A little	Moderate	Very	Very much
B1. Financing: In Greece... [there is sufficient equity for new and growing businesses]	19%	45%	30%	5%	1%
B1. Financing: In Greece... [there is sufficient foreign capital for new and growing businesses]	31%	45%	18%	6%	0%
B1. Financing: In Greece... [there is sufficient bank lending]	44%	38%	11%	7%	0%
B1. Funding: In Greece... [there are sufficient government grants for new and growing businesses]	18%	39%	32%	9%	2%
B1. Funding: In Greece... [there are sufficient other financial tools for start-ups]	29%	42%	25%	5%	0%
B1. Funding: In Greece... [venture capitalists are an important source of private support for new and growing businesses]	27%	45%	18%	7%	3%
B1. Financing: In Greece... [there is a stock market that financially supports new and growing companies]	67%	28%	3%	1%	1%

Entrepreneurs are also frustrated with government policy not only at national government level but also at local government level. Bureaucracy, level of taxation, corruption and legislative instability are reported as deterrents to new business ventures by the majority of entrepreneurs.

Table 2: Government policy in Greece

	Not at all	A little	Moderate	Very	Very much
B 2. Government policy: In Greece ... [government policies are constantly favoring new businesses]	33%	37%	24%	5%	2%
B 2. Government policy: In Greece ... [supporting young and growing businesses is a high priority at national government level]	27%	32%	31%	7%	3%
B 2. Government policy: In Greece ... [supporting young and growing businesses is a high priority at the local government level]	30%	38%	22%	7%	3%
B 2. Government policy: In Greece ... [bureaucracy is a deterrent to new and growing businesses]	4%	6%	11%	21%	58%
B 2. Government policy: In Greece ... [the level of taxation is a deterrent to new and growing businesses]	0%	9%	11%	30%	50%
B 2. Government policy: In Greece ... [corruption is a deterrent to new and growing businesses]	5%	9%	21%	24%	42%
B 2. Government policy: In Greece ... [legislative instability and the constant change in tax laws is a deterrent to new and growing businesses]	2%	3%	15%	24%	57%

Concerning technology parks and incubators we observe that according the answers of the respondents in our survey, are not considered to operate as efficiently as they should. The same view applies for government programs supporting young and growing businesses. There is also frustration with the behavior of civil servants in supporting young and growing businesses.

Table 3: Government programs in Greece

	Not at all	A little	Moderate	Very	Very much
B3. Government programs: In Greece... [technology parks and incubators provide effective support to new and growing businesses]	18%	41%	29%	10%	2%
B3. Government programs: In Greece... [government programs to support young and growing businesses are effective]	19%	34%	34%	11%	3%
B3. Government programs: In Greece... [there is a sufficient number of government programs to support young and growing businesses]	18%	47%	28%	5%	2%
B3. Government programs: In Greece... [anyone who needs help with a government program for new and growing businesses can find what they need]	27%	31%	26%	14%	2%
B3. Government programs: In Greece... [civil servants are competent and effective in supporting new and growing businesses]	45%	31%	17%	4%	4%

Regarding the degree to which a businessman who has failed is stigmatized, our results are according to the relevant literature. Society, public services and especially banks seem unwilling to give a new chance to a failed entrepreneur.

Table 4: Businessman stigmatization

	Not at all	A little	Moderate	Very	Very much
B4. A businessman who has gone bankrupt to what extent do you consider yourself stigmatized: [in society?]	2%	13%	30%	38%	17%
B4. A businessman who has gone bankrupt to what extent do you consider yourself stigmatized: [in public services?]	5%	8%	19%	29%	39%
B4. A businessman who has gone bankrupt, to what extent do you consider yourself stigmatized: [in the banks?]	1%	0%	7%	19%	73%
B5. To what extent do you consider that ... [banks finance a new business if they know that a shareholder has gone bankrupt in the past?]	54%	29%	14%	2%	2%
B6. To what extent do you consider that ... [lack of discharge and / or long-term and burdensome debt repayments make it difficult to finance a second business opportunity?]	2%	6%	12%	34%	46%

It is impressive the fact that there is not enough information about the second business opportunity programs managed by O.A.E.D. Only 34% of the respondents answer that they knew these programs.

Figure 4: O.A.E.D. programs

Table 5: Oportunity programs

	Not at all	A little	Moderate	Very much	
B8. If so, [how effective do you think they are? [Not at all (1), Little (2), Moderate (3), Very (4), Too Much (5)]]	24%	38%	29%	7%	2%
B9. To what extent do you think the following actions can contribute to a successful second or even third business opportunity? [second business opportunity programs from O.A.E.D.]	12%	44%	31%	14%	0%
B9. To what extent do you think the following actions can contribute to a successful second or even third business opportunity? [Adoption in the legislation of fast procedures of liquidation and discharge of long-term and burdensome debt repayments for honest entrepreneurs]	4%	12%	19%	65%	0%
B9. To what extent do you think the following actions can contribute to a successful second or even third business opportunity? [increased networking between entrepreneurs / entrepreneurs]	5%	29%	42%	24%	0%
B9. To what extent do you think the following actions can contribute to a successful second or even third business opportunity? [development of a system for recognizing honest versus dishonest entrepreneurs]	5%	14%	21%	60%	0%
B9. To what extent do you think the following actions can contribute to a successful second or even third business opportunity? [second-hand entrepreneurs' access to funds, cash flows and credit, with few restrictions and no long debt repayment periods recorded in the bankruptcy process]	5%	15%	30%	51%	0%

However, they do not believe or they are not sure that these programs can contribute to a successful second or even third business opportunity. On the other hand, they believe that the development of a system for recognizing honest versus dishonest entrepreneurs (60%) and second-hand entrepreneurs' access to funds, cash flows and credit, with few restrictions and no long debt repayment periods recorded in the bankruptcy process (51%), can really can contribute to a successful second or even third business opportunity.

4. CONCLUSIONS AND POLICY RECOMMENDATIONS

It is confirmed in our research that the entrepreneur who failed once is stigmatized in the banks and in society, creating obstacles for a second successful business opportunity. Some policy recommendations could be the following:

- adoption in the legislation of fast procedures of liquidation
- discharge of long-term and burdensome debt repayments for honest entrepreneurs,
- development of a system for recognizing honest versus dishonest entrepreneurs,
- attracting foreign investment funds,
- development of special financing banking products,
- increasing the possibilities of state financing,
- creating / strengthening the capital market especially for startups and / or second chance entrepreneurs,
- reducing bureaucracy and corruption,
- better staff behavior in government services to better serve entrepreneurs,
- increase state programs to support new businesses,
- strengthening technology parks opening them up to honest entrepreneurs who had failed in the past

It is imperative that entrepreneurs, who fail, get back on their feet faster and make a new effort with the wisdom of experience. If the characteristics of a framework for a second chance are identified in these entrepreneurs, they will largely achieve better results due to past experience. According to

European Commission statistics, only 5 out of 100 bankrupts are fraudulent. The rest are honest. So with the 2nd Opportunity, tens of thousands, maybe even hundreds of thousands of Greeks, immediately rejoin the production process. This means: new job positions, revenue for the State, psychological uplift for a huge number of Greeks who have fallen, immediate cessation by a significant number of companies of delinquent conduct to which they are necessarily led, having gone bankrupt in practice but are not officially bankrupt due to the lack of a Second Chance framework.

Abstract:

The Aim of this study is to present the intermediate results of a survey of the tourist activities of Bulgarian citizens in the period April 2020 – March 2021 in the conditions of the COVID-19 pandemic.

Material and methods. The main method of gathering information is the questionnaire. 257 Bulgarian citizens aged 60 and over took part in the survey. The survey was conducted by students at VUARR as part of their training in the bachelor's program "Economics of Tourism". For this purpose, the Internet application Google Forms was used. The questionnaire was improved after testing it in a previous research on the same topic conducted in 2018. As a result of the research, the profile of the Bulgarian senior tourist is outlined. A comparison of the results obtained in 2018 and 2021 is made and on this basis the relevant conclusions are drawn and the relevant summaries are made.

Conclusion. Despite the reduced activity due to the pandemic situation, the profile of the Bulgarian senior tourist has not undergone significant changes.

Keywords: senior tourism, questionnaire, profile of the Bulgarian senior tourist.

1. Introduction

The basic aim of this study is to present the intermediate results of a survey of tourist activities of Bulgarian citizens from April 2020 to March 2021 in the conditions of the COVID - 19 pandemic. The study is part of the project "Silver Tourism in Bulgaria", included in the Research Plan of UARD.

The main method of gathering information is the questionnaire. 257 Bulgarian citizens aged 60 and over took part in the survey. The survey is conducted by students at UARD as part of their training in the bachelor's program "Economics of Tourism". For this purpose, the Internet application Google Forms was used. The questionnaire was improved after testing in previous surveys on the same topic, conducted in 2018 - one of the strongest for Bulgarian domestic and international tourism. Their results are presented in publications of students surveyed (Aleksandrova, Neykova, 2018) and the Head of examines (Levkov, 2019). A literary review on the topic has been made in them, so we will not present it here.

A total of 18 questions were included in the survey (App. 1). They are grouped in two blocks. The questions from the first block (№ 1 - № 7) reveal some socio-demographic characteristics of the surveyed persons - age, sex, place of residence, marital status, education, employment status, income. These characteristics influence the formation of the tourist needs of the people and determine the possibilities for their satisfaction.

The answers to the questions from the second block (№ 9 - № 20) characterize the tourist activities of the surveyed persons, carried out during the last 12 months (at the time of the survey).

As more surveys are to be conducted in the autumn of 2021, we assume that the results obtained this spring are not final.

2. Results and Discussion.

2.1. Socio-demographic profile of the surveyed persons.

According to the National Statistical Institute at the end of 2020 the population of Bulgaria is 6916548 people. Of these, 1.972 million people or 28.5% of the total population of the country are aged 60 and over. The structure of this two million contingent by age groups is as follows: 60-64 years - 23.7%; 65 - 69 years - 22.9%; 70-74 - 21.7%; 75 and more years - 31.7%.

The analysis of the data in table. 1 gives grounds for the following findings related to the answers to the first block of questions:

- Question 1. Over 40% of the surveyed 257 persons are aged 60 to 64. It is no coincidence that they are the focus of our study. The process of transition from active work to a calmer rhythm of life in them is only now beginning. Some people in this group receive income from more than one source (eg pension and salary) and have the opportunity to allocate funds to meet their tourism needs.
- Question 2. A slight predominance of the surveyed women (52.5%) over the men (47.5%) was found.
- Question 3. Almost half of the respondents live in district centers, and about ¼ - in small towns and villages. This relatively accurately reflects the settlement structure of the Bulgarian population. City residents have a decisive role in the formation of the contingent of adult tourists.
- Question 4. The marital status of the respondents is determined by the predominance of family members (59%) and widows (25%). The share (about 8% each) of the other two categories is low - divorced and unmarried.
- Question 5. Over 85% of the respondents have secondary or higher education. The established educational level is a favorable condition for the formation of various tourist needs.
- Question 6. Only half of the surveyed persons are “classic” pensioners (fig. 1). About ¼ are working pensioners and people who have not yet retired and are also working. People from the last two groups objectively have more financial resources and less free time, while the ratio in the first group is the opposite.

Figure 1. Labor status of the respondents

- Question 7. The distribution of the surveyed persons by income is diverse and shows the strong social stratification in the Bulgarian society and in particular among the elderly. Despite the increase in income in the last two years, more than half of the respondents still have a monthly

income of less than BGN 700 and have difficulty in allocating funds to meet their tourist needs. About 20% of the respondents indicated incomes over BGN 1,000. They form a small group of relatively solvent potential tourists.

The presented in table. 1 socio-demographic profile of the surveyed persons in 2020 is similar to that of 2018. Due to the small number of respondents in 2020, we will not make a comparison between the data from the two surveys.

Table 1: Socio-demographic characteristics of the surveyed persons

Question №		2020	2018
1.	Age distribution (%)		
	60 – 64	43.6	35.6
	65 – 69	23.0	34.2
	70 – 74	22.2	20.0
	75+	11.3	10.2
2.	Gender distribution (%)		
	Male	47.5	43.5
	Female	52.5	56.5
3.	Distribution by Place of Residence		
	City (District center)	45.1	45.0
	Town	28.0	34.4
	Village	26.8	20.6
4.	Marital status		
	Married	58.8	64.8
	Divorced	7.8	10.8
	Widows	24.9	23.8
	Unmarried and others	8.5	0.6
5.	Education		
	Higher	29.2	38.8
	Secondary	56.4	52.7
	Primary or lower	14.4	8.5
6.	Labor status		
	Works, does not receive a pension	25.7	18.8
	Does not work and does not receive a pension	1.2	1.0
	Receives a pension and works	23.7	29.2
	Receives a pension and does not work	49.4	51.0
7.	Income (net monthly income in BGN from all sources: salary, pension, rents, annuities, etc.)		
	to 299	14.8	18.9
	300-499	25.3	29.4
	500 - 699	17.1	17.9
	700 – 999	23.0	19.0
	1000 – 1999	14.0	*10.0
	2000 and more	5.8	**5.0

* 1000 - 1499

** 1500 and more

2.2. Tourist activity of the surveyed persons.

The information in table. 2 characterizes the tourist activities of senior tourists in Bulgaria in the one-year period since the beginning of the Covid-19 pandemic. It should be noted that, unlike the previous study, the current one allowed questions 11 and 12 to be given not only 1 but two answers.

- The answers to questions № 8 and № 9 show that during the pandemic the elderly Bulgarian tourists limited their travels almost entirely within the country. More than 1/3 of them have not made a single tourist trip. The decrease compared to 2018 is not large, as even then the activity of senior Bulgarian tourists is not very high. Domestic tourism remains basic, but reduces the number of tourist trips undertaken, and is usually limited to 1-2 per year. The reduction is even stronger for international travel. Only 24% of the respondents have taken such measures, compared to 35% in 2018.

Figure 2. Number of domestic and international trips

- Question 10. Preferences for different organizational forms of tourist travel are strongly influenced by the pandemic situation. Interest in unorganized tourism has increased - individual, family and group (a total of 58%).
- Question 11. The most preferred means of transport for tourist trips remain those with a smaller capacity - a car and a bus. Travel by train is typical for domestic tourism, and those by plane - for international.
- Question 12. Hotels remain the most used accommodation places for elderly tourists (51% of respondents). Followed by guest houses with 34% and holiday sanitation with 28%. Most of the sites of health tourism are referred to the latter. Almost ¼ of the respondents visited friends and relatives, and 13% had their own home as a destination, different from the main one, located in another village. The high share of guest houses, own homes and those of friends and relatives proves that during the pandemic, preferences for accommodation with limited capacity are growing, which are supposed to guarantee more limited contacts and higher security.
- Question 13. The preferences of older tourists, established in the previous study, are confirmed. Over 40% is the share of accommodation without category. These include not only their own homes and those of friends and relatives, but also those to which respondents do not indicate the category. From the categorized accommodation places, the most frequent are the 3-star hotels - at ¼ of the respondents.
- Question 14 allows for up to 3 answers. Despite the established great species diversity, maritime, cultural and health tourism are emerging as the main ones for the elderly tourists in Bulgaria. The same species were most often mentioned two years earlier, which shows the relative stability of the preferences of the contingent of adult tourists in Bulgaria.
- Question 15. The costs incurred for tourist trips and stays are one of the main indicators characterizing the tourist activities. About ¼ of the respondents did not incur any travel expenses in the first year of the pandemic, as they did not undertake tourist trips. Two years

earlier, their share was significantly lower - only 14%. In both surveys, the highest share of respondents (about 1/3) made expenses between BGN 100 and 499. These are usually costs that provide one or a maximum of two short trips in the country. Expenses over BGN 1,000 are most often realized when traveling abroad. The share of respondents who reported such costs during the pandemic decreased from 20% to 13%.

Figure 3. Travel expenses

- Question 16. The answers received confirm that, as two years earlier, relatives and friends remain the main source of tourist information for elderly Bulgarian tourists. About 70% of them are informed in this way and much less often use other sources, such as materials of travel agencies, print and electronic media and the Internet.
- Question 17. Over 40% of the respondents state that they have not used discounts or special conditions in their tourist trips. Another 30% rarely receive discounts (for no more than 1/3 of their trips). Only 20% use such discounts often, and only 8% - always.
- Question 18 allows up to 3 answers. About 1/3 of the respondents did not answer, probably because they had not had tourist trips in the last 12 months. Discounts are most often provided by accommodation and travel agencies - in over 40% of cases. In third place with 38% are NSSI / NHIF.

Table 2. Tourist activity of the surveyed persons

Question №		2020	2018

** up to 3 answers

2.3. Profile of the Bulgarian senior tourist.

The Bulgarian senior tourist undertakes tourist trips relatively infrequently and for a short time - 1 or 2 times a year, usually in the country and much less often abroad. He prefers unorganized individual or family domestic tourism, followed by organized group international tourism. The most commonly used vehicles are of small capacity - car and bus, less often - train for domestic travel and aircraft for international. Preferred accommodation is three-star hotels, but also guest houses and holiday resorts; in the conditions of a pandemic, the share of visits to friends and relatives has sharply increased. Bulgarian senior tourists have a steady interest in seaside, cultural, health and rural tourism. Their tourist trips and stays are economical and rarely exceed BGN 1,000 per year. Relatives and friends remain the main source of tourist information for elderly tourists in our country. A small part of them use discounts or special conditions, most often offered by tourist companies and NSSI / NHIF.

3. Conclusion

As a result of the research, the profile of the Bulgarian senior tourist is outlined. A comparison of the results obtained in 2018-2019 and 2020-2021 is made. The main conclusion is that the profile of the Bulgarian senior tourist is relatively stable and has not undergone significant changes in recent years. The pandemic situation has negatively affected tourist activity, but it has not caused serious changes in preferences for organizational forms and types of tourism, the means of transport and accommodation used, as well as the preferred sources of tourist information. Older people in Bulgaria represent a significant contingent of real and potential tourists, but the country still lacks a targeted policy to stimulate their tourism activities.

Appendix 1. Questionnaire „Senior Tourism in Bulgaria“

1.	Age (years of age): 60-64; 65-69; 70-74; 75+
2.	Sex: male; female
3.	Residence - big city (district center); small town; village
4.	Marital status - unmarried; married; divorced; widower / widow; something else
5.	Degree of education - primary or lower; secondary; higher
6.	Work status - working, not receiving a pension; does not work or receives a pension; receives a pension and works; gets a pension and does not work
7.	Net monthly income in BGN from all sources (wages, pensions, rents, etc.) - up to 299; 300-499; 500-699; 700-999; 1000-1999; 2000 and above
8.	How many tourist trips in Bulgaria with a minimum of 1 night you have taken in the last 12 months - 0; 1; 2; 3 and above
9.	How many trips abroad with a minimum of 1 night you have taken in the last 12 months - 0; 1; 2; 3 and above
10.	What is the usual form of your tourist trips - organized group tourism (through a intermediary - tour operator or tour agent); organized individual or family tourism (through a intermediary); unorganized group tourism (without intermediaries); unorganized individual or family tourism (without intermediaries)
11.	A commonly used means of transport (up to 2 answers) - airplane; bus; train; car (own or rented); ship; something else
12.	Type of commonly used accommodation (up to 2 answers) - hotel; guesthouse; hostel; hut; holiday House; own dwelling other than the main one (in another settlement); other (eg visiting friends or relatives) - specify
13.	Category of commonly used accommodation - no category; 1 or 2 stars; 3 stars; 4 or 5 stars
14.	Typically practiced type of tourism (up to 3 answers) - seaside holiday; winter; cultural; rural; ecological;

health; religious; others - specify

15. What amount (in BGN) you spent in the last 12 months for tourist trips, incl. transport, accommodation, food and additional tourist services (attractions, entertainment, shopping, etc.) - 0; 1-99; 100-499; 500 - 999; 1000 - 1999; 2000 and beyond

16. Which major sources of information you use when planning travel trips (up to 2 answers) - travel agency materials; ads from television and print media; information from the Internet; information from relatives and friends; others - specify

17. How often on your travels you use discounts or special conditions and programs designed for elderly people - never; rarely (less than 1/3 of the cases); often (around and over half of the cases); always

18. If you have used such preferential terms, who has provided them (up to 3 answers) - travel agencies; places of accommodation; eating establishments; museums; The National Social Security Institute / The National Health Insurance Fund; trade unions; the employer; others (e.g. the church; political parties; NGOs and others) - specify

Bağımsız Denetçilerin Kilit Denetim Konularının Denetim Raporunda Bildirilmesine Yönelik Algılamaları ve Demografik Özellikleriyle İlişkisi Üzerine Pilot Bir Araştırma¹

sadiyeoktay5@yahoo.com.tr

Özet: 2000’li yılların başlarında yaşanan muhasebe ve denetim skandalları, denetim raporlarına olan güveni ciddi anlamda sarsmıştır. Bu da bilgi kullanıcılarının işletmeler hakkında daha açık, ayrıntılı ve güvenilir bilgi ihtiyacını gündeme getirmiştir. Bu ihtiyacı gidermek üzere denetim raporlarının şekli, kapsamı, anlaşılabilirliği ve taşıdığı değer yoğun bir şekilde tartışılmıştır. Bu tartışmalar neticesinde gerek uluslararası gerekse ulusal düzeydeki düzenleyici otoriteler yeni denetim standartları yayınlamışlardır. Uluslararası Muhasebeciler Federasyonu (IFAC), “ISA 701: Communicating Key Audit Matters in The Auditor’s Reports” ve ülkemizde de Kamu Gözetimi Muhasebe ve Denetim Standartları Kurumu “BDS 701: Kilit Denetim Konularının Bağımsız Denetçi Raporunda Bildirilmesi” başlıklı yeni standartları yürürlüğe koymuşlardır. Standartlar denetim raporunda kilit denetim konularının bildirilmesine ilişkin denetçinin sorumluluğunu düzenlemektedir. Bu çalışmada, Türkiye’de faaliyet gösteren bağımsız denetçilerin kilit denetim konularının denetim raporunda bildirilmesine yönelik algılamaları ile demografik özellikleri arasındaki ilişkinin incelenmesi amaçlanmıştır. Kilit denetim konularının denetim raporunda bildirilmesine yönelik bağımsız denetçi algıları ile denetçinin demografik özellikleri arasındaki ilişkiyi gösteren çalışmalar bakımından literatürde önemli bir boşluk olduğu görülmüştür. Böylelikle, hem literatüre hem de uygulamaya yönelik bulguların sunması nedeniyle çalışmanın önemli olduğu düşünülmektedir. Araştırma kapsamında 106 sayıda bağımsız denetçiye yönelik anket çalışması gerçekleştirilmiştir. Çalışmada, konuya yönelik geliştirilen “kilit denetim konuları ölçeği”nden yararlanılmıştır. Veriler SPSS programında analiz edilmiştir. Araştırma sonucunda bağımsız denetçilerin demografik özelliklerinin (cinsiyet, yaş, öğrenim durumu, mesleki unvan, mezun oldukları bölüm ve faaliyette bulunulan il) kilit denetim konularına yönelik algılamalarında herhangi bir farklılık oluşturmadığı belirlenmiştir.

Anahtar Kelime: Kilit Denetim Konuları, Bağımsız Denetçi, Denetim Raporu

Abstract: The accounting and auditing scandals experienced in the early 2000s seriously shaken the confidence in audit reports. This situation has brought the users' need for more transparent, detailed, and reliable information about businesses. The form, content, comprehensibility, and value of the audit reports have been discussed intensively to fulfill this need. As a result, regulatory authorities at both international and national levels have issued new auditing standards. The International Federation of Accountants (IFAC) has issued new standards titled “ISA 701: Communicating Key Audit Matters in The Auditor’s Reports” and, also in our country, Public Oversight, Accounting, and Auditing Standards Authority of Turkey “TSA 701: Communicating Key Audit Matters in the Independent Auditor’s Report”. The standards in question regulate the auditor’s responsibility for communicating key audit matters in the audit report. This study examines the perceptions of independent auditors operating in Turkey for sharing key audit matters in the audit report and the relationship between their demographic characteristics. It has been observed that there is an essential gap in the literature in terms of studies showing independent auditors’ perceptions regarding the communication of key audit matters in the audit report and the relationship between auditors’ demographic characteristics. Therefore, the research is considered important, mainly because it presents both literature and practice findings. Within the scope of the study, a survey has been conducted with the participation of 106 independent auditors. In the study, the scale of key audit matters developed for this purpose has been used. The data have been analyzed in the SPSS program. As a result of the study, it has been determined that the demographic characteristics (gender, age, educational status, professional title, department from which they graduated, and province where they conduct activity) of the independent auditors do not make any difference in their perceptions about key audit matters.

Keywords: Key Audit Matters, Independent Auditor, Audit Report

¹ Bu çalışma ikinci yazarın danışmanlığında yürütülmekte olan doktora tezinden türetilmiştir.

1. GİRİŞ

Denetim ile ilgili ilk gelişmeler M.Ö 2000’li yıllarda Roma, Mısır ve Yunan uygarlıklarına dayanmaktadır. Sanayi devrimi sonrasında işletmeler çok uluslu yapıda faaliyet göstermeye başlamış ve işletmeler için denetim kavramı ayrı önem kazanmıştır. Denetim ile ilgili en önemli çalışmalar 13.yy’da Avrupa kıtasında gerçekleşmiştir. Denetim kavramı ilk defa 1844 yılında İngiltere’de ortaya çıkmıştır (Philomena, 2007, 3).

2. Dünya Savaşından sonra büyük burhan etkileri azalmış, işletmeler ekonomik sıkıntıları geride bırakarak, yatırım sürecine girmiştir. İşletmelerin yatırım hızlarındaki gelişmeler denetim kavramını 1920 yıllarda İngiltere’den, Amerika kıtasına kaymasına neden olmuştur (Philomena, 2007, 3). 1920’li yıllarda denetim kavramının Amerika kıtasına kayması, birçok yeni kuruluşun Amerika Kıtasında oluşmasına neden olmuştur. Bunların en önemlisi, Uluslararası Muhasebeciler Federasyonu (International Federation of Accountants – IFAC)) ve bu kuruma bağlı Uluslararası Muhasebe Standartları Kuruludur (IASB - International Accounting Standards Board). Uluslararası Denetim Standartları kurulunun en temel amacı, uluslararası denetim standartlarının hazırlanması, yayılması ve geliştirilmesinin sağlanmasıdır (Durmuş, 2017,20).

Küreselleşmenin etkisiyle işletmeler kendi ülkelerin dışında faaliyet göstermeye başlamış ve Dünya’nın her yerinde geçerli olacak, tek tip kurallardan oluşan muhasebe standartlarına ihtiyaç duyulmaya başlanmıştır. Dünya’da geçerli tek tip muhasebe standartlarına uygun hazırlanan finansal tablolar uluslararası denetim standartlarının oluşmasını sağlamıştır. Uluslararası Denetim Standartlarının temeli Uluslararası Muhasebeciler Federasyonu tarafından oluşturulmuştur. Uluslararası Denetim ve Güvence Standartları Kurulu (International Auditing and Assurance Standard Board- IAASB) tüm dünyada geçerli olan Uluslararası Denetim Standartları (UDS) oluşturmuştur. Ülkemizde bu konuyla ilgili yetkili resmi kurum, Kamu Gözetim Kurumu (KGK) olup, uluslararası denetim standartlarını Türkiye şartlarına uyarlayarak Türkiye Denetim Standartlarını (TDS) oluşturmuştur (Can, 2017,30).

Uluslararası Denetim ve Güvence Standartları Kurulu, yeni denetim raporu tasarısı altında 2010 yılında ilk defa “*kilit denetim konuları*” başlığını oluşturarak, denetim kalitesini artırmak için gerekli olan bilgi ihtiyacını karşılamayı hedeflemiştir. Şubat 2013 yılında gerçekleşen toplantı sonucunda Uluslararası Denetim Standartları: 701, ilk olarak ayrı bir standart olarak tanımlanmıştır. Haziran 2013 yılında taslak olarak onaylanmış, diğer standartlar ve bölümlere uyumluluk araştırmaları tamamlandıktan sonra Ocak 2015’te yayınlanmıştır (Sarisoş, 2018, 68). Ülkemizde “BDS 701: Kilit Denetim Konularının Bağımsız Denetçi Raporunda Bildirilmesi Standardı”, 09.03.2017 tarihinde, 30002 sayılı Resmi Gazetede yayınlanarak yürürlüğe girmiştir. BDS 701, Türk Ticaret Kanununun, 6102 Sayılı Kanunu uyarınca bağımsız denetime tabi şirketler için 01.01.2018 tarihinden sonraki dönemler için yürürlüğe girmiştir. Kilit denetim konularının denetim sektörüne getirmiş olduğu yenilik ve önemden dolayı bu çalışmada, Türkiye’de faaliyet gösteren bağımsız denetçilerin, kilit denetim konularının denetim raporlarında bildirilmesi ile ilgili yapılan değişikliklerle ilgili görüşlere katılma düzeylerinin, denetçilerinin demografik özellikleri bakımından, farklılık olup olmadığının tespit edilmesi amaçlanmıştır.

2. KİLİT DENETİM KONULARI

Kilit denetim konuları, bağımsız denetçilerin bağımsız denetim sürecinde işletmeler için önemli olan konuları belirleyerek üst yönetime bildirilen konulardır. Denetçiler üst yönetime bildirmiş olduğu kilit denetim konularını belirlerken aşağıda yer alan hususları göz önünde bulundurmaktadır.

- Önemli yanlışlık risklerinin yüksek olduğu denetim bölümleri,
- Karmaşık ve anlaşılmayan muhasebe tahminleri,
- Önemli işlem ve denetim olaylarının etkisi,
- Denetim öncesi denetçilerin planlamış olduğu yaklaşımlarda meydana gelen önemli değişiklikler (KGK, BDS 701, 2013, 9).

Bağımsız denetçiler, bağımsız denetim sürecinde kilit denetim konularını belirlerken aşağıda yer alan özelliklere dikkat etmesi gerekmektedir.

- a. Belirlenen konular işletmeye özgü olmalıdır,
- b. Bağımsız denetim raporlarında kilit denetim konularının bildirilmesinde genel ve standartlaşmış kalıplar kullanılmamalıdır,
- c. Kilit denetim konularında, uygulan denetim prosedürlerini detaylı bir şekilde aktarmak yerine, kilit denetim konularının işletmeye etkileri belirtilmelidir,
- d. Kilit denetim konularında raporda bildirilmesi, raporun görüşünü etkilememelidir,
- e. Kilit denetim konularında raporda bildirilmesi, işletmelerin ilgili sorunları çözemediği imha edilmemeli ve konuların çözüm yollarını ilişkin bir bildirimde bulunulmamalıdır,
- f. Kilit denetim konularının bildirilmesinde uzun listelerden kaçınılmalıdır (Şirin, 2016, 7-10).

Kilit denetim konularının bağımsız denetim raporlarında ayrıca belirtilmesinin temel amacı, bağımsız denetimin kalitesini artırmak ve finansal tablo okuyucularının finansal tabloları anlama kapasitesinin artırılmasını sağlamaktır (Can, 2017, 82).

2.1. Kilit Denetim Konularının Denetim Raporunda Bildirilmesi

Bağımsız denetçiler, denetim esnasında tespit ettikleri yanlışlıkları önemlilik seviyesine göre mesleki muhakeme, muhasebe standartları ve etik standartlar çerçevesinde değerlendirerek, işletmeye özgü kilit denetim konularını belirleyerek, denetim raporlarında bildirmektedir. Bağımsız denetçilerin, bilgi, eğitim düzeyi, mesleki tecrübesi ne kadar yüksekse, kilit denetim konularının tespiti ve bildirimi o kadar faydalı ve başarılı olacaktır. Bağımsız denetçiler, denetim sürecinde tespit etmiş olduğu, önem arz eden konuları belirleyerek denetim raporunda ayrı bir başlık altında belirtmektedir. Kilit denetim konularının ayrı bir başlık altında bildirilmesi, işletmeye özgü kilit denetim konularının finansal tablo okuyucularına anlaşılabilir bir şekilde ulaşmasını ve kilit denetim konularının öne çıkartılmasını sağlamaktadır (KGK, BDS 701, 2017, A31).

Bağımsız denetçiler, denetim raporunda bildirecek olduğu kilit denetim konularını mesleki tecrübe ve deneyimine bağlı olarak aşağıdaki sıralamayı göz önünde bulundurarak belirlemektedir.

- a. Bağımsız denetçi denetim esnasında önemli konuları belirleyerek önemlilik sıralaması yapmaktadır,
- b. Bağımsız denetçi belirlemiş olduğu kritik konuları üzerinden konularının önemlilik seviyesine göre üst yönetime bildirim yapmaktadır,
- c. Bağımsız denetçi denetim sürecinde önem seviyesi en yüksek konuları belirleyerek, denetim raporları için kilit denetim konuları tespit etmektedir (KGK, BDS 701, 2013, 29).

Kilit denetim konularının raporlarda bildirilirken, teknik terimlerden uzak durularak, işletmeye özgü, finansal tablo okuyucularının anlayabileceği, faydalı bilgi sağlanması gerekmektedir. Kilit denetim konularının raporda belirtilmesi, üst yönetim ve denetçiler arasında ilişkinin kuvvetlenmesine yardımcı olmaktadır. Bağımsız denetçiler, kilit denetim konularının sebeplerini ve açıklamalarını belirtirken, uygun ve anlaşılabilir dil kullanılmalı, kilit denetim konularını çalışma kâğıtlarıyla ilişkilendirmelidir (KGK, BDS 701, 2017, A36).

2.2. Kilit Denetim Konularının Denetim Raporunda Bildirilmesinin Sağladığı Faydalar

Kilit denetim konularının, denetim raporunda bildirilmesi, denetim sürecinin şeffaflığını artırarak, raporun iletişim değerinin artırılmasını sağlamaktadır. Kilit denetim konularının denetim raporunda bildirilmesi işletmeye özgü daha ayrıntılı bilgi taleplerini karşılanmasını sağlamaktadır. Kilit denetim raporunun denetim raporunda bildirilmesi, denetimin kalitesi ve güvenilirliğinin artırılmasını sağlamaktadır (Karacan, Uygun, 2016, 634).

Uluslararası Denetim Standartlarının, denetim raporlarının formatlarında yapmış olduğu değişiklikler sonucunda bağımsız denetim raporlarında kilit denetim konularının bildirilmesi ve ayrı raporlanması sağlanmıştır. Kilit denetim konularının raporda bildirilmesi;

- a. Denetim Raporunun denetim sürecinin şeffaflığını artırarak ve bağımsız denetim iletişimsel değerini geliştirmiştir,
- b. Bağımsız denetçi, üst yönetim ve finansal tablo okuyucuları arasında iletişim güçlendirmiş ve geliştirmiştir,
- c. Bağımsız denetçilerin mesleki şüpheciliğini daha fazla kullanmasını sağlamıştır,
- d. İşletmeye özgü önemli konuların raporda ayrı bir başlık altında toplanmasını sağlayarak, finansal tablo okuyucularının finansal tabloları daha iyi anlamasını sağlamıştır,
- e. Denetim kalitesini, şeffaflığını artırarak, finansal tablolara olan güven seviyesini arttırmıştır (Karacan, Uygun, 2016, 634).

2.3. Kilit Denetim Konularının Denetim Raporunda Bildirilmesinin Bağımsız Denetçilere Getirdiği Sorumluluklar

BDS 701 Kilit Denetim Konularının Bağımsız Denetim Raporunda Bildirilmesi standardının, bağımsız denetçilere bir takım sorumluluklar getirmiştir. Standardın bağımsız denetçilere getirmiş olduğu sorumluluklar aşağıdaki gibidir:

- a. Denetim esnasında, en önemli konuları belirleyerek, kilit denetim konusu olarak belirlenmesi,
- b. Kilit denetim konularının tespit edilerek, üst yönetimden sorumlu olanlarla iletişime geçilmesi,
- c. Kilit denetim konularını belirlenirken, BDS 701 standardın yer alan kilit denetim konuları ölçütlerinin kullanılması,
- d. Kilit denetim konularının belirlendikten sonra, nedenlerinin açıklanması,
- e. Kilit denetim konularının raporda bildirirken genel ve teknik bilgilerden kaçınılması,
- f. İşletmelerin mahrem bilgilerini, kilit denetim konuları içerisinde yer vermemesi,
- g. Kilit denetim konularını çalışma kâğıtları ile desteklenmesidir (Akkuş, 2017, 6).

3. LİTERATÜR İNCELEMESİ

Kilit denetim konularıyla ilgili ulusal ve uluslararası alanda birçok araştırma yapılmıştır. Ulusal alanda yapılan akademik çalışmalarda özellikle, BİST (Borsa İstanbul) 100’de yer alan firmaların bağımsız denetim raporlarını incelenmiş, şirketlerin faaliyet gösterdikleri sektörler göre en önemli kilit denetim konuları tespit edilmiştir. Akdoğan ve Bülbül (2019), BİST 100’de işlem gören bağımsız denetim raporları üzerinde bir araştırma yapmış, araştırma sonucunda en çok hasılat, maddi duran varlıklar, karşılık ve yükümlülükler konularının raporda bildirildiğini belirtmişlerdir. Aktaş ve Acar (2020), BİST 100’de işlem gören bağımsız denetim raporları üzerinde bir araştırma yapmış, bağımsız denetim raporlarında en sık kullanılan kilit denetim konuları tespit edilmiştir. Ayrıca kilit denetim konularıyla önemlilik seviyeleri arasında ilişki T-Testi uygulanarak test edilmiş, önemlilik eşik değerleri, hesaplama yöntemine göre birbirinden farklılaşırken, 2017 ve 2018 yıllarında önemlilik seviyelerinde önemli bir farklılık görülmemiştir. Aydın ve Karapınar (2020), BİST’te işlem gören firmaların bağımsız denetim raporlarını inceleyerek, dört büyükler ve diğer bağımsız denetim firmalarının hazırlamış olduğu raporda belirttiği kilit denetim konu sayısı arasında anlamlı bir farklılık olup olmadığını araştırmıştır. Araştırma sonucunda, dört büyükler ve diğer bağımsız denetim firmalarının hazırlamış olduğu kilit denetim konu sayılarında anlamlı fark olduğu sonucuna ulaşmıştır. Çağırın ve Varıcı (2018), 2017 yılında BİST 100’ de imalat sektöründe faaliyet gösteren şirketlerin bağımsız denetim raporlarını incelemiş, yapılan çalışma sonucunda imalat sektöründe en riskli kilit denetim konuları maddi duran varlıklar ve stoklar olduğunu tespit etmişlerdir. Kavut ve Güngör (2018), BİST 100’de yer alan işletmelerin bağımsız denetim raporlarında kilit denetim konularının dağılımlarını incelemişlerdir. Çalışma sonucunda farklı denetçilerin aynı sektörler için benzer konuları önemli bulduklarını belirlemişler, raporların amacına ulaşabilmesi için konuların anlaşılır bir dille yazılması, uzun anlatımlar ve gerekli olmayan açıklamalardan ve özellikle konuya ilişkin ayrı bir görüş verildiği izleniminden kaçınılması gerektiğini vurgulamışlardır. Yalçın (2020),

BİST 100’de faaliyet gösteren firmaların kilit denetim konuları incelemiştir, imalat alanında faaliyet gösteren 2017 – 2019 yılları arasında firmaların bağımsız denetim raporları üzerinden yer alan kilit denetim konuları sayısı, denetim firmasının ölçeğine, işletmenin sürekliliği hakkında belirsizliğine ve cari yılda meydana gelen denetçi değişimlerine göre farklılık gösterdiğini tespit etmiştir. Ciğer ve diğerleri (2018), BİST’de kayıtlı 400 şirket üzerine bir araştırma yaparak, kilit denetim konularını 32 başlıkta toplamışlardır. Çalışma sonucunda Türkiye’de tespit edilen kilit denetim konu başlıklarının yurt dışı ülkelerinde tespit edilen kilit denetim konularıyla benzerlik gösterdiğini tespit etmişlerdir.

Ulusal literatürde BİST 100’de yer alan şirketlerin denetim raporlarının incelenmesiyle ilgili çalışmaların haricinde literatür de serbest muhasebeci mali müşavirler üzerine anket çalışmaları ve ARI Okunabilirlik Endeksi (Automated Readability Index) üzerine yapılan çalışmalar da mevcuttur.

Güleç (2020), kilit denetim konularıyla ilgili, serbest muhasebeci mali müşavirler, yeminli mali müşavirler ve akademisyenler üzerinde bir anket çalışması yapmıştır. Çalışma sonucunda, kilit denetim konularının, denetimin kalitesini artıracaklarını, denetim raporlarının daha şeffaf ve güvenilir olacağını, denetçilerin iş yükünün artmasına rağmen, denetim raporlama zamanını etkilemeyeceğini tespit etmiştir.

Akçay ve diğerleri (2020), Arı Okunabilirlik Endeksine göre, kilit denetim konularında cinsiyet ve sektör kavramlarının denetim konularının okunabilirliği üzerine bir etkisi olup olmadığını araştırmıştır. Araştırma sonucunda, kadın bağımsız denetçiler tarafından oluşturulan kilit denetim konularının okunabilirliğinin ve bankacılık sektörü için hazırlanan kilit denetim konularının okunabilirlik endeksinin, diğer sektörler için daha yüksek olduğu (okunabilirliğinin daha zor olduğunu) tespit edilmiştir.

Uluslararası literatürde kilit denetim konularıyla ilgili de birçok çalışma yapılmıştır. Uluslararası alanda yapılan çalışmalar özellikle, kilit denetim konularının denetim raporlarında bildirilmesinin yatırımcılara olan etkileri, denetçilere getirmiş olduğu sorumluluklar ve bağımsız denetim firmalarının büyüklüklerinin kilit denetim konuları üzerinde bir etkisinin olup olmadığını tespitine ilişkindir. Uluslararası literatürde yer alan kilit denetim konularıyla ilgili çalışmaların bazıları aşağıdaki gibidir.

Brasel ve diğerleri (2016), 528 denetçinin katılımıyla anket uygulaması yapmışlar, denetçilere iki farklı durumda aynı sorular iletilmiştir. Birinci durumda şirketle ilgili olumsuz bilgiler denetçilerle paylaşılmış, ikinci durumda şirketle ilgili bilgi paylaşımı yapılmadan anket sorularının cevaplanması istenmiştir. Yapılan çalışma sonucunda dışardan gelen bilgilerinin denetçilerinin görüşlerini etkilemediği, çalışmalarında önemlilik seviyesini baz alarak kilit denetim konularını belirledikleri tespit edilmiştir.

Doğan ve Arefaine (2017), PwC, EY, Deloitte, Grant Thornton firmalarında görev alan denetçiler üzere bir araştırma yapmıştır. Kilit denetim konularının denetim raporlarına eklenmesiyle birlikte, denetçilerin daha fazla muhasebe bilgisine sahip olması gerektiği, raporların standart rapor formatından uzaklaşarak işletmeye özgü denetim raporuna dönüştükleri tespit edilmiştir.

Li (2017), kilit denetim konularının faydaları üzerine yoğunlaşmış, Çin’de yer alan denetim raporları üzerinden bir araştırma yaparak, denetim raporlarında en riskli kilit denetim konuları belirlemiştir. Çalışma sonucunda, kilit denetim konuları Dünya’da yer alan ülkelerde belirlenen kilit denetim konularıyla benzerlik gösterdiği tespit edilmiştir.

Sakel ve Theis (2019), müşteri baskısı ve denetim raporunda kilit denetim konularının bildirilmesinin denetçi performansını etkileyip etkilemeyeceğiyle ilgili bir araştırma yapmışlardır. Araştırma 73 bağımsız denetçi üzerine Almanya’da gerçekleştirilmiştir. Yapılan çalışma sonucunda denetçinin müşteri baskısından etkilenemediği, kilit denetim konularını raporda bildirmesinin denetçi performansını olumlu etkilediği sonucuna ulaşılmıştır.

Tusek ve Jeotiva (2018), Hırvatistan’da yapmış oldukları bir çalışmada, dört büyük denetim firmaları ve yerel denetim firmalarının hazırlamış olduğu denetim raporlarını kilit denetim konuları üzerinden bir araştırma yaparak incelemiştir. Denetim raporlarında en yüksek riskli kilit denetim konusun gelir analizi olduğu, diğer riskli konuların değer düşüklüğü, değerlendirme ve karşılıkların diğer riskli konular olduğunu bulmuşlardır.

Vilk ve Walter (2017), Norveç’te 31.12.2016 tarihi itibarıyla sona eren, beş büyük denetim firmasının hazırlamış olduğu 137 denetim raporunu, kilit denetim konularını açısından incelemiştir. Denetim firmalarının riskli gördüğü en önemli 5 konuyu, denetim firmalarının raporda sunumu, sorunu nasıl ele

aldıkları, kilit denetim konularının tespiti açısından her hangi bir fark olup olmadığını incelemiştir. Yapılan çalışmalar sonucunda kilit denetim konularının tespit edilip, rapora konu edilmesinin denetim firmaları açısından değişiklik gösterdiği sonucuna ulaşılmıştır.

4. ARAŞTIRMA METODOLOJİSİ

Araştırma, Türkiye’de faaliyet gösteren bağımsız denetçilerin, kilit denetim konularının bağımsız denetim raporlarında bildirilmesi ile ilgili yapılan değişikliklerle ilgili görüşlere katılma düzeylerinin, denetçilerinin demografik özellikleri bakımından, farklılık olup olmadığının tespit edilmesi amacıyla hazırlanmıştır. Bu doğrultuda, bağımsız denetçilerin kilit denetim konularına yönelik yaklaşımları ve genel düşünceleri bağımsız denetçilere uygulanan bir anketle araştırılmıştır. Araştırma verilerinin analiz edilmesinde, veri gruplarının karşılıklı olarak incelemesinde T-testi analizi, veri grupları değişkenleri arasında oluşan ilişkileri tespit etmek amacıyla ANOVA testi kullanılmıştır.

Araştırmanın evreni, bağımsız denetçi unvanıyla Kamu Gözetim Kurumu’na kayıtlı meslek mensuplarından oluşmaktadır. Örneklem olarak ise, Türkiye’de faal olarak faaliyet gösteren bağımsız denetçiler seçilmiştir. Ocak 2021 tarihi itibarıyla, Türkiye’de Kamu Gözetim Kurumuna bağlı 16.812 bağımsız denetçi bulunmakta olup, bu bağımsız denetçilerin 4.916 kişi faal olarak bağımsız denetim yapmaktadır. Araştırma için, 150 bağımsız denetçiye anket gönderilmiş, pilot araştırmanın değerlendirilmesi için 106 tanesi kullanılmıştır.

Araştırmanın yöntemi, faal olarak faaliyet gösteren bağımsız denetçilerin, kilit denetim konularının bağımsız denetim raporlandırma bildirilmesiyle ilgili denetçi görüşlerini tespit edilmesi için 5’li Likert Anket Yöntemi kullanılmıştır. Bağımsız denetçiler üzerinde uygulanan anket iki bölümden oluşmaktadır. Anket Formunun birinci bölümü için, bağımsız denetçilerin demografik özellikleriyle ilgili sorular belirlenmiştir. Anket Formunun ikinci bölümü için, bağımsız denetçilerin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılma derecelerinin belirlenmesi amaçlanmıştır.

4.1. Güvenilirlik Analizi

Araştırmada kullanılan ölçeğin güvenilirlik analizi için “Cronbach Alpha Değeri” hesaplanmıştır. Bu değer. 878 olarak hesaplanmış olup, ölçeğin yüksek derecede güvenilir olduğunu göstermektedir. Ankete katılan bağımsız denetçilerin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılma düzeylerini ve kategorik özelliklerine göre dağılımını gösteren özet tablolar aşağıdaki gibidir.

Tablo 1: Ankete Katılan Bağımsız Denetçilerin Kategorik Özelliklerine Göre Dağılımı

		n	%
Cinsiyet	Erkek	80	75%
	Kadın	26	25%
Yaş	20-30	21	20%
	31-40	36	34%
	41-50	33	31%
	51 +	16	15%
Öğrenim Durumu	Yüksek Lisans	84	79%
	Lisans	19	18%
	Doktora	3	3%
Mezun Olunan Bölüm	İşletme	70	67%
	Maliye	19	18%
	İktisat	1	1%
	Ekonometri	11	10%
	Diğer	4	4%
Mesleki Unvan	Denetçi Yardımcısı	18	20%
	Denetçi	55	62%
	Kıdemli Denetçi	8	9%

	Baş Denetçi	3	3%
	Sorumlu Ortak Baş Denetçi	5	6%
Mesleki Deneyim (Yıl)	1-5	30	29%
	6 - 10	38	36%
	11- 15	10	10%
	16-20	11	10%
	20+	16	15%
Denetimde Bulunan İş Sayısı	1-5	45	52%
	6-10	16	19%
	11- 15	3	3%
	16-20	4	5%
	20+	18	21%
Faaliyet Gösterilen İl	İstanbul	30	29%
	Ankara	0	0%
	İzmir	0	0%
	Bursa	1	1%
	Antalya	50	49%
	Diğer	22	21%

Tablo 2: Bağımsız Denetçilerin Kilit Denetim Konularının Bağımsız Denetim Raporunda Belirtilmesiyle İlgili Görüşlere Katılım Düzeylerinin Frekans Ortalama ve Standart Sapma Değerleri Sonuçları

İfade No	İfade	Ort.	ss
Soru 2	Denetim kalitesini artırır.	4,24	,72
Soru 17	Finansal tablo okuyucularının, şirket hakkında olumsuz düşünmesine neden olur.	2,17	1,13

N=106

Ankete katılan bağımsız denetçilerin vermiş olduğu yanıtlara istinaden, frekans ortalama ve standart sapma değer sonuçları incelendiğinde “Denetim kalitesini artırır” görüşlerine bağımsız deneticilerin en yüksek katılım gösterdikleri tespit edilmiştir. Ayrıca, bağımsız denetçilerin “Finansal tablo okuyucularının, şirket hakkında olumsuz düşünmesine neden olur” görüşlerine en düşük katılım düzeyi gerçekleştirdikleri tespit edilmiştir.

4.2. Araştırmanın Hipotezleri

Araştırma hipotezleri ise aşağıdaki şekilde oluşturulmuştur:

H1: Bağımsız denetçilerin demografik özelliklerine göre, kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark vardır.

H1a: Bağımsız denetçilerin cinsiyetlerine göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark mevcuttur.

H1b: Bağımsız denetçilerin yaş gruplarına göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark mevcuttur.

H1c: Bağımsız denetçilerin öğrenim durumlarına göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark mevcuttur.

H1d: Bağımsız denetçilerin mezun olduğu bölümlere göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark mevcuttur.

H1e: Bağımsız denetçilerin mesleki unvanlarına göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark mevcuttur.

H1f: Bağımsız denetçilerin mesleki deneyimlerine göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark mevcuttur.

H1g: Bağımsız denetçilerin fiilen bağımsız denetimde buldukları iş sayısına göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılım düzeylerinde fark mevcuttur.

H1h: Bağımsız denetçilerin faaliyet gösterdikleri illere göre kilit denetim konuların bağımsız denetim raporunda bildirilmesiyle ilgili belirtilen görüşlere katılma seviyeleri arasında fark mevcuttur.

4.3. Hipotezlerin Test Edilmesi

Ankete katılan bağımsız denetçilerin kilit denetim konuları ile ilgili görüşlere katılım düzeylerinin bağımsız denetçilerinin cinsiyetleri, yaşları, öğrenim durumları, mezun oldukları bölümlere, mesleki unvanlarına, meslek deneyimlerine ve mesleki faaliyetlerini gösterdikleri illere göre bir fark olup olmadığının tespiti için t-testi, tek yönlü varyans analizi gerçekleştirilmiştir. Ankete katılan bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin cinsiyetlerine göre bir farklılaşma olup olmadığının incelemek için t-testi gerçekleştirilmiştir. Analiz sonucunda **H1a hipotezi reddedilmiştir**, bağımsız denetçilerin kadın ya da erkek olmasına göre kilit denetim konularının algılamaları farklılık göstermemektedir.

Tablo 3: T-testi

	Cinsiyet	N	Ort.	ss	p
Kilit denetim konuları	Erkek	80	3,58	,52	.809
	Kadın	26	3,54	,81	

Bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin **yaşlarına** göre bir farklılaşma olup olmadığının test etmek için Tek Yönlü Varyans Analizi uygulanmıştır.

Tablo 4: Yaşlara Göre Tek Yönlü Varyans Analizi

ANOVA					
	Kareler toplamı	df	Ort. Kare	F	p
Gruplar arası	,099	3	,033	,088	,966
Gruplar içi	38,121	102	,374		
Total	38,220	105			

Tek Yönlü Varyans Analizi sonucunda p: .966 > 0,05 değerinden büyük olduğundan **H1b hipotezi reddedilmiştir**. Bağımsız denetçilerinin, bağımsız denetim raporlarında kilit denetim konularının bildirilmesiyle ilgili görüşlere katılma düzeylerinin, %5 hata düzeyinde bağımsız denetçilerinin yaşlarına göre anlamlı bir fark olmadığı söylenebilir. 20-30 yaş için ort:3,59 (ss:.68), 31-40 yaş için ort:3.56 (ss:.60), 41-50 yaş için 3,59 (ss:.53) ve 51 yaş üzeri için ort.3,57 (ss:.60) olarak hesaplanmıştır. Dolayısıyla denetçiler için kilit denetim konuları algılama düzeyi birbirine çok yakın olarak hesaplanmıştır.

Ankete katılan bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin **öğrenim durumlarına** göre bir farklılaşma olup olmadığının test etmek için Tek Yönlü Varyans Analizi uygulanmıştır.

Tablo 5: Öğrenim Durumlarına Göre Tek Yönlü Varyans Analizi

ANOVA					
	Kareler toplamı	df	Ort. Kare	F	p
Gruplar arası	,275	2	,137	,373	,690
Gruplar içi	37,945	103	,368		
Total	38,220	105			

Tek Yönlü Varyans Analizi sonucunda $p: .690 > 0,05$ değerinden büyük olduğundan **H1c hipotezi reddedilmiştir**. Bağımsız denetçilerinin, bağımsız denetim raporlarında kilit denetim konularının bildirilmesiyle ilgili görüşlere katılma düzeylerinin, %5 hata düzeyinde bağımsız denetçilerinin öğrenim durumlarına göre anlamlı bir fark olmadığı söylenebilir. Lisans mezunları için ort:3,57 (ss:.56), yüksek lisans mezunları için ort:3.53 (ss:.80), doktora mezunları için ort: 3,86 (ss:.21) olarak hesaplanmıştır.

Ankete katılan bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin mezun oldukları bölümlere göre bir farklılaşma olup olmadığının test etmek için Tek Yönlü Varyans Analizi uygulanmıştır.

Tablo 6: Mezun Oldukları Bölüme Göre Tek Yönlü Varyans Analizi

ANOVA					
	Kareler toplamı	df	Ort. kare	F	P**
Gruplar arası	2,941	4	,735	2,090	,088
Gruplar içi	35,183	100	,352		
Total	38,123	105			

**P: 0,10

Tek Yönlü Varyans Analizi yapılan analiz sonucunda $p: .088 < 0,10$ değerinden küçük olduğundan **H1d hipotezi kabul edilmiştir**. Bağımsız denetçilerinin, bağımsız denetim raporlarında kilit denetim konularının bildirilmesiyle ilgili görüşlere katılma düzeylerinin, %10 hata düzeyinde bağımsız denetçilerinin mezun oldukları bölümlere göre anlamlı bir fark olduğu söylenebilir. İşletme bölümü mezunları için ort:3,56 (ss:.66), iktisat bölümü mezunları için ort:3.31 (ss:.37), Ekonometri bölümü mezunları için ort: 3,70 (ss:.00), maliye bölümü mezunları için, ort: 3,83 (ss:.22) ve diğer bölümlerden mezun olan kişilerin ort: 4,05 (ss:.65) olarak hesaplanmıştır.

Ankete katılan bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin **mesleki unvanlarına** göre bir farklılaşma olup olmadığının test etmek için Tek Yönlü Varyans Analizi uygulanmıştır.

Tablo 7: Mesleki Unvanlarına Göre Tek Yönlü Varyans Analizi

ANOVA					
	Kareler toplamı	df	Ort. kare	F	P
Gruplar arası	3,051	4	,763	2,004	,101
Gruplar içi	31,975	84	,381		
Total	35,026	88			

Tek Yönlü Varyans Analizi sonucunda $p: .101 > 0,05$ değerinden büyük olduğundan **H1e hipotezi reddedilmiştir**. Bağımsız denetçilerinin, bağımsız denetim raporlarında kilit denetim konularının bildirilmesiyle ilgili görüşlere katılma düzeylerinin, %5 hata düzeyinde bağımsız denetçilerinin mesleki unvanlarına göre anlamlı bir fark olmadığı söylenebilir. Denetçi yardımcıları için ort:3,86 (ss:.70), denetçiler için ort:3.41 (ss:.56), kıdemli denetçiler için ort: 3,68 (ss:.59), baş denetçiler için, ort: 3,72 (ss:.70) ve sorumlu ortak baş denetçiler için ort: 3,45 (ss:.93) olarak hesaplanmıştır.

Ankete katılan bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin **mesleki deneyimlerine** göre bir farklılaşma olup olmadığının test etmek için Tek Yönlü Varyans Analizi uygulanmıştır.

Tablo 8: Mesleki Deneyimlerine Göre Tek Yönlü Varyans Analizi

ANOVA					
	Kareler toplamı	df	Ort. kare	F	p
Gruplar arası	,414	4	,104	,274	,894

Gruplar içi	37,803	100	,378		
Total	38,218	104			

Tek Yönlü Varyans Analizi sonucunda $p: .894 > 0,05$ değerinden büyük olduğundan **H1f hipotezi reddedilmiştir**. Bağımsız denetçilerinin, bağımsız denetim raporlarında kilit denetim konularının bildirilmesiyle ilgili görüşlere katılma düzeylerinin, %5 hata düzeyinde bağımsız denetçilerinin mesleki deneyimlerine göre anlamlı bir fark olmadığı söylenebilir. 1-5 yıl meslek deneyimlere sahip olanlar için ort:3,58 (ss:.56), 6-10 yıl meslek deneyimlere sahip olanlar için ort:3,56 (ss:.64), 11-15 yıl meslek deneyimlere sahip olanlar için ort:3,55 (ss:.59), 16-20 yıl meslek deneyimlere sahip olanlar için ort:3,71 (ss:.70) ve 20 yıl üzeri meslek deneyimlerine sahip olanlar için ort: 3.46 (ss:.70) olarak hesaplanmıştır.

Ankete katılan bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin fiilen bağımsız denetimde buldukları **iş sayısına** göre bir farklılaşma olup olmadığının test etmek için Tek Yönlü Varyans Analizi uygulanmıştır.

Varyansların homojenliklerin tespit edilmesi için, Levene Testi uygulanmaktadır. Uygulanan Levene Test sonuçlarına göre, significance level (önem düzeyi) (p) = $0,01 > \alpha = 0,05$ değerinden küçük olduğu için %5 hata seviyesinde varyansların homojen olmadığı söylenir. Homojen dağılmayan varyanslar için post hoc testlerinden Tamhane's T2 testi uygulayarak analizler yapılır.

Tamhane's T2 testi analizi sonuçlarına göre Mean Difference bölümünde yıldızlı her hangi bir veri bulunmadığı için **H1g hipotezi RED edilmiştir**. Bağımsız denetçilerinin, bağımsız denetim raporlarında kilit denetim konularının bildirilmesiyle ilgili görüşlere katılma düzeylerinin, %5 hata düzeyinde bağımsız denetçilerinin fiilen bağımsız denetimde buldukları iş sayısına göre anlamlı bir fark olmadığı söylenebilir.

Ankete katılan bağımsız denetçilerinin kilit denetim konularının bağımsız denetim raporunda bildirilmesiyle ilgili görüşlere katılım düzeylerinin bağımsız denetçilerin **faaliyette buldukları illere göre** bir farklılaşma olup olmadığının test etmek için Tek Yönlü Varyans Analizi uygulanmıştır.

Tablo 9: Faaliyette Buldukları İllere Göre Varyans Analizi

ANOVA					
	Kareler toplamı	Df	Ort. kare	F	p
Gruplar arası	1,163	3	,388	1,179	,322
Gruplar içi	32,533	99	,329		
Total	33,696	102			

Tek Yönlü Varyans Analizi sonucunda $p: .322 > 0,05$ değerinden büyük olduğundan **H1h hipotezi reddedilmiştir**. Bağımsız denetçilerinin, bağımsız denetim raporlarında kilit denetim konularının bildirilmesiyle ilgili görüşlere katılma düzeylerinin, %5 hata düzeyinde bağımsız denetçilerinin faaliyette buldukları illere göre anlamlı bir fark olmadığı söylenebilir. İstanbul ilinde faaliyet gösteren denetçiler için ort: 3,47 (ss:.70), Bursa ilinde faaliyet gösteren denetçiler için ort: 3,06 (ss:.0), Antalya ilinde faaliyet gösteren denetçiler için ort: 3,60 (ss:.53) ve diğer illerinde faaliyet gösteren denetçiler için ort: 3,73 (ss:.44) olarak hesaplanmıştır.

4. SONUÇ

Denetim sürecinin geçmişi M.Ö 2000'li yıllara kadar uzanmaktadır. Sanayi devrimiyle birlikte, ticaret Dünya geneline yaygınlaşmıştır. Ticaretin hacminin her geçen gün biraz daha artması, uluslararası ticaretin başlamasına neden olmuştur. İşletmeler uluslararası alanda faaliyet gösterdikçe, faaliyet gösterilen ülkelerin yasa ve kurallarına uygun olarak işlem yapılma gereksinimi doğmuştur. Ülkeler arasında meydana gelen yasa ve kural farklılıkları tek tip bir muhasebe ve raporlama standartları

gereksinimi doğmuştur. Uluslararası alanda meydana gelen bu değişiklikler denetim sürecine ayrı bir önem sağlamıştır. Çok uluslu coğrafyada faaliyet gösteren işletmelerin denetime olan gereksinimler artmıştır. Uluslararası Denetim ve Güvence Standartları Kurulu bu konu hakkında birçok çalışma yapmıştır. Uluslararası Denetim ve Güvence Standartları Kurulu'nun yapmış olduğu yayınların içerisinde en önemlilerinden bir tanesi, Yeni Bağımsız Denetim Raporu Projesi'dir. İlgili projeye ilk defa uluslararası denetim ve raporlama alanında "kilit denetim konuları" ayrı bir başlık altında değerlendirilerek raporda belirtilme zorunluluğu getirilmiştir. Ülkemizde ilgili politika 2018 yılında halka açık şirketlerin denetim raporlarında yer almıştır ve bu kapsamda denetim raporunun görüş kısmında bir takım yeniliklere gidilmiştir.

Bu çalışma IAASB'nin getirmiş olduğunu "Yeni Bağımsız Denetim Raporu Projesinde" yer alan Kilit Denetim Konularının daha detaylı anlamak, Kilit denetim konuları kavramının bağımsız denetim raporlarında getirdiği yenilikler tespit ederek, bu görüşlerin bağımsız denetçiler üzerinde etkileri daha detaylı tespit etmek amacıyla yapılmıştır.

Kilit denetim konularının bağımsız denetim raporunda bildirilmesinin bağımsız denetim raporunda meydana gelen bir takım değişiklikleri bağımsız denetçilerinin görüşlerinin tespit edilmesi amacıyla bir anket çalışması hazırlanmıştır.

Anket çalışması; Kilit Denetim Konularının bağımsız denetim raporunda bildirilmesinin, bağımsız denetçiler üzerinde etkilerini tespit etmek ve denetçilerinin demografik özellikleri bakımından, kilit denetim konularının denetim raporlarında belirtilmesiyle ilgili görüşlere katılma düzeyleri arasında oluşan farklılıkların tespit edilmesi amacıyla hazırlanmıştır. Anket bağımsız denetçilerin demografik özelliklerini içeren ve kilit denetim konuları ilgili görüşlere kapsayacak şekilde iki bölümden oluşmaktadır. Anket Türkiye'de Kamu Gözetim Kurumu'na bağlı olarak faaliyet gösteren, 106 bağımsız denetçi üzerine uygulanmıştır.

Anket, bağımsız denetçilerin demografik özelliklerine göre kilit denetim konularının bağımsız denetim raporunda belirtilmesiyle ilgili görüşlere katılım düzeylerinde farklılıkların tespiti için hazırlanmıştır. Bağımsız denetçilerin, cinsiyet, yaş, öğrenim durumu, mezun oldukları bölüm mesleki unvan, deneyim ve faaliyet gösterdikleri illere göre görüşlere katılım düzeyleri incelenmiştir.

Bağımsız denetçilerin anketlere vermiş olduğu cevaplar üzerinden oluşturan hipotezlere göre, cinsiyet, yaş öğrenim durumu, mesleki unvan, faaliyet gösterdikleri illere göre ankette yer alan sorulara katılım düzeylerinde anlamlı bir fark olmadığı, mezun oldukları bölümlere göre ise anlamlı bir farklılık olduğu tespit edilmiştir.

Literatürde, bağımsız denetçilerin demografik özelliklerinin kilit denetim konularıyla ilgili görüşlere katılım düzeyleriyle etkileriyle ilgili hazırlanan her hangi bir çalışma yer almamaktadır. Güleç (2020), kilit denetim konularıyla ilgili, serbest muhasebeci mali müşavirler, yeminli mali müşavirler, akademisyenler üzerine bir anket çalışması uygulamış, çalışma sonucunda, kilit denetim konularının, denetim kalitesini artıracığının, denetim raporlarının daha şeffaf ve güvenilir olacağını, denetçinin iş yükünü artıracığını fakat denetim raporlama zamanı etkilemeyeceğini tespit etmiştir.

Sonuç, olarak, kilit denetim konularının bağımsız denetim raporlarında bildirilmesi, bağımsız denetçilerin bağımsız denetim sürecinde mesleki şüphecilikle ve daha disiplinli çalışarak, denetim kalitesini ve şeffaflığını artırmaktadır. Denetim raporlarının standartlaşmış kalıplardan uzaklaştırarak, işletmeye özgü denetim raporları hazırlanmasını sağlamaktadır. Bağımsız denetçiler ve üst yönetim arasında iletişim düzeyi artırarak, bağımsız denetim sürecinde tespit etmiş olduğu kritik konularını öğrenme ve değerlendirme imkânı sağlamaktadır.

Kişi Başına Düşen Sağlık Harcamalarının Kamu ve Özel Sağlık Harcamaları Yönünden Değerlendirilmesi: OECD Bölgesi İçin Panel Veri Analizi

Doç. Dr. Utku Altunöz¹

¹Sinop Üniversitesi, Boyabat İİBF, İktisat Bölümü, Bölüm, utkual@hotmail.com , ORCID: 0000-0002-0232-3108

Özet: Bu çalışmanın amacı sağlık harcamalarını belirleyen unsurları ve sağlık harcamalarının ülkeler arasında neden farklılık gösterdiğini OECD ülkeleri özelinde 1993-2019 periyodunda ampirik olarak ortaya koymaktır. Üç farklı modelin kullanıldığı çalışmada kamu harcamalarının bağımlı değişken olduğu analiz sağlık harcamalarında kamunun yüksek payda olduğunu göstermektedir. Bu durum akıllara kamu kesimi harcamalarının özel kesim harcamalarını dışlaması olarak bilinen crowding out (dışlama etkisi)'ni getirmektedir. Üç model toplu olarak değerlendirildiğinde doktor sayısındaki artış sağlık harcamalarını azaltırken kişi başında ilaç harcamaları, doğurganlık oranı, şehirleşme oranı 65 ve üzeri yaşın nüfustaki payının artışı ve kişi başı GSYİH sağlık harcamalarını arttırmaktadır.

Anahtar Kelimeler: Sağlık Harcaması, Panel Regresyon, OECD

Evaluation of the Health Expenses Per Person for Public And Private Health Expenses: Panel Data Analysis For OECD Region

Abstract: The aim of this study is to examine the factors that determine health spending and why health spending differs between countries in OECD countries. The analysis used covers the period 1993-2019. In the study, in which three different models are used, the analysis that public expenditures are dependent variable shows that the public has a high share in health expenditures. This suggests the crowding out known as the exclusion of public sector expenditures from private sector expenditures. When the three models are evaluated collectively, the increase in the number of doctors reduces health expenditures, while drug expenditure per capita, fertility rate, urbanization rate increase the population share of 65 and over age population and GDP per capita increase health expenditures.

Key Words: Health Expenditure, Panel Regression, OECD

1. GİRİŞ

İnsanoğlunun en değerli hazinesi olan sağlığın korunması ve devamlılığının sağlanması maksadıyla sağlıkla ilişkili mal ve hizmet üreten tüm kurum ve kuruluşların meydana getirdiği yapıya sağlık sektörü denilmektedir. Sağlık sektörüncce gerçekleştirilen tüm faaliyetler de sağlık hizmeti olarak adlandırılmaktadır (Ersöz, 2008:96). Bu bağlamda toplumu oluşturan bireylerin sağlıklı yaşaması, sağlığını kaybedenlerin tekrar sağlığına kavuşması veya kayıpların en aza indirgenmesi yoluyla, insanın yaşam kalitesine temel olan sağlık donanımının mümkün olan en üst seviyede tutulması için sunulan hizmetler sağlık hizmetleri olarak adlandırılmaktadır. Sağlık hizmetleri, sağlık harcamaları ile desteklenmektedir. (Ateş, 2011:10). Kamusal özellikte olan sağlık harcamaları hem sağlık hizmeti alan kişilere hem de bu kişilerin çevresinden başlayarak topluma pozitif dışsallık¹sağlamaktadır. Pozitif dışsallık kamunun sağlık sektörüne müdahalesinin ve/ veya faaliyette bulunmasının temel gerekçelerindedir (Stiglitz, 1988:44). Sağlık hizmetlerinin büyük bölümünü oluşturan koruyucu hizmetler tam kamusal mal olarak kabul edilmektedir. Bununla birlikte koruyucu hizmetler dışında kalan hizmetler ise yarı kamusal mal olarak kabul edilmektedir (Altunöz,2020: 86). Bu nedenle koruyucu hizmetler haricindeki hizmetlerin piyasada alınıp satılması gerçekleştirilebilmektedir. Aynı zamanda düşük gelirli kesimin hem adil gelir dağılımına ulaşabilmesi hem de sağlık hizmetlerinden faydalanabilmesi için kamu müdahalesi önem taşımaktadır.

¹ Kendi faydasını arttırmak amacıyla ekonomik birimlerin aldığı kararların birbirinden bağımsız bir başka ekonomik birimin kararını dolaylı veya dolaysız etkilemesiyle meydana gelen kavramdır. Başka ekonomik birimin kararı olumlu etkilenirse pozitif, olumsuz etkilenirse negatif dışsallıktan söz edilir.

Son yıllarda OECD ülkelerinin sağlık harcamalarında meydana gelen belirgin artış, sağlık politikalarının verimliliğinin ve etkinliğinin sorgulanmasını da beraberinde getirmiştir. Her ne kadar sağlık harcamalarındaki artış doğrultusunda etkin ilaçların geliştirilmesi ve kaliteli sağlık hizmeti sunulması, yaşam süresini ve yaşam kalitesini arttırsa da sağlık harcamalarındaki artış kamu bütçesi üzerinde baskı oluşturabilmektedir. Ayrıca birçok Avrupa ülkesinde kamu sağlık harcamalarındaki artış hızı ekonomik büyümeden daha hızlı gerçekleşmektedir.

Sağlık harcamaları genellikle kısa dönemde gider olarak düşünülse de uzun dönemde yatırım harcaması olarak kabul edilmektedir. Beşerî sermayenin sağlık ve eğitim olmak üzere iki temel üzerine inşa edildiği düşünüldüğünde bu iki alana yapılan yatırımların bireylerin beşerî sermaye seviyelerini doğrudan etkileyebileceği söylenebilir. Bloom, Canning (2000) ise sağlığın beşerî sermayenin temel dinamiklerinden biri olduğunu savunmaktadırlar. Beşerî sermaye fiziki sermayeden farklılık göstermektedir. Beşerî sermaye üretim sürecinin içinde olan diğer faktörlerin verimli ve etkin biçimde kullanılmasını, yeni teknolojilerin geliştirilmesini ve bu teknolojilerin rasyonel şekilde kullanılmasını sağlamaktadır. Ayrıca beşerî sermayenin önemli bileşenlerinden biri olan sağlık göstergeleri ile ülkelerin gelişmişlik düzeyi arasında pozitif bir ilişkinin var olduğu kabul edilmektedir.

Sağlık göstergeleri her bir ülke için sağlık harcamaları, doğum beklentisi, ortalama yaşam süresi, çocuk ölüm oranları gibi farklı değişkenler şeklinde inceleme alanı bulabilmektedir. Bu çalışmanın amacı sağlık harcamalarını belirleyen unsurları ve sağlık harcamalarının üzerindeki etkisini OECD ülkeleri özelinde ampirik olarak ortaya koymaktır. Çalışmanın ampirik kısmında elde edilen en son verilerin kullanılacak olması ile çalışmanın özgünlüğünün artacağı düşünülmektedir. Ayrıca literatürde sağlık harcamaları ile ilgili çalışmaların geneli makroekonomik değişkenlerle ilişkilerinin incelenmesi şeklinde kümlenmektedir. Bu bağlamda bu çalışmanın analiz kısmında bağımlı değişken olarak hem kişi başına düşen sağlık harcamaları hem de kişi başına düşen özel sağlık harcamalarını ve kişi başına düşen kamu harcamaları özelinde 3 farklı model oluşturularak çalışmanın özgünlüğünün artırılması amaçlanmaktadır.

2. SAĞLIK SEKTÖRÜNDE KAMU VE ÖZEL KESİMİN ROLÜ VE SALIK SİSTEMİ MODELLERİ

Ülkelerin sağlık harcamalarının finansmanında özel ve kamu ayırımı ülkenin gelişmişlik düzeyi, özel ve kamu sektörünün verimlilik payı, ülkenin sosyo-ekonomik yapısı gibi pek çok faktörden etkilenmektedir. Genelde devletin sağlık hizmeti ve sağlık harcamalarında baskın olması gerektiğini savunan görüşün yanında geleneksel rolünde değişikliğe gidilmesini ve devletin sağlık hizmeti finansmanı ve sunumundan ziyade denetim ve düzenleme görevini üstlenmesini gerektiğini savunan görüş birçok ülkede taraftar bulmaktadır. Bu iki görüşün yanında üçüncü bir görüşe göre özel ve kamu sektörü oluşturulacak ortaklıkla her bir sektör kendi başına sağlayacağından daha fazla kaynak ve etkinlik oluşturabilir. Fakat oluşturulacak ortaklık rekabet değil, bir iş birliği şeklinde olmalıdır (Çetin ve Ecevit,2010: 180).

OECD ülkelerinde kamu ve özel sektörün sağlık hizmetleri sunumundaki ağırlıkları farklı olup standart bir model uygulanması bulunmamaktadır. Sağlık konusunun tamamen kamu veya tamamen özel sektöre bırakılmamasının başlıca nedenleri ise şu şekilde sıralanabilir (Giray ve Taşdelen, 2018: 276).

- Türkiye’de olduğu gibi diğer OECD ülkelerinde de kamu sağlık sektöründeki yoğun bürokrasi, acil durumlarda hayati sorunları beraberinde getirmektedir. Bu nedenle kamu sağlık sektörüne alternatif olarak özel sağlık sektörüne gereksinim duyulmuştur.
- Devlet kuruluşlarının temel misyonlarından biri kamu yararını gözetmektir. Bununla birlikte devlet kuruluşlarının büyük bölümü genellikle toplumun güçlü kesimlerinin kontrolindedir. Bu durum belirli kesimin devletin sağlık hizmetlerinden yeterli şekilde yararlanabilmesini engellemektedir. Sonuç olarak oluşan talep özel sağlık sektörünün varlığını gerekli kılmaktadır.
- Sağlık hizmetini talep eden hasta ile arz eden hekim arasında mevcut olan bilgi asimetrisi kamu müdahalesini zorunlu kılmaktadır.
- Sağlık “Yarı kamusal mal” özelliği taşımaktadır. Sağlık hizmetinin olması gereken nicelik ve nitelikte arz edilememesi ve topluma sağladığı dışsal faydaları sebebiyle tümüyle özel sektöre bırakılmasına sıcak bakılmamaktadır.

- Salgın dönemlerinde bulaşıcı hastalıkların varlığı yalnızca hastalığın temas ettiği bireyleri değil tüm toplumu ilgilendiren bir durum haline gelecektir. Dolayısıyla bu tür sorunlarla karşılaşan bireylerin sorunun çözümü için hizmet araması ya da hizmetin satın alınmasını beklemek başkalarının sağlığını etkileyeceğinden kamunun müdahalesini gerektirmektedir.

Tüm bu nedenlerden dolayı ülkeler sağlık harcamalarının kontrolü, hastaların tedavilerini gerçekleştirilmesi ve vatandaşlarının sağlıklı bireyler olabilmesi gibi mali amaçlarla çeşitli sağlık finansman modelleri geliştirmişlerdir. Bu modellerin temel dinamiklerini ise sağlık hizmetlerinin kaynakları, sözkonusu kaynakların organizasyonu ve yönetimi, Finansmanı ve sunumu oluşturmaktadır (Culyer ve Newhouse, 2000:13-19). Tablo 1’de temel sağlık finansman modelleri izlenebilmektedir.

Tablo 1: Sağlık Finansman Modelleri

Finansman Modeli	Beveridge Modeli	Bismarck Modeli	Özel Sağlık Sigortası (ABD Modeli)
Karar mekanizması	Devlet karar verir ve yönetir	Sigorta fonu ile hekim birlikleri karar verir ve yönetir.	Özel Girişim
Kaynaklar	Vergiler	Sigorta Primleri	Özel Finansman
Sağlık Hizmeti Sunucuları	Kamu	Kamu/özel	Özel

Kaynak: Tatar (2011:108)

Bu modellerden ilki kamu bütçesine dayalı olan **Beveridge Modeli**’dir. Bu modelde sağlık harcamaları yerel ya da genel kamu bütçelerinden karşılanmaktadır. Beveridge modelinde devlet, bütçe vasıtasıyla sağlık hizmetlerinin finansmanını kontrol etmekte, vatandaşların tümü belirlenen katkı paylarını ödemeleri dışında sağlık hizmetlerine ücretsiz olarak erişmektedirler. Ayrıca bu sistemde verdikleri sağlık hizmeti karşılığında hekimlere maaş ya da kişi başına ödeme yöntemi söz konusudur (Uğurlu,2018: 52). OECD’nin 20 kurucu üyesinden Lüksemburg, Hollanda, Avusturya, Belçika Almanya, Fransa ve İsviçre Sağlık sisteminde Beveridge modelini kullanmaktadır. Böylelikle sağlık hizmetleri, devlet eliyle vergiye dayalı olarak finanse edilerek halka sunulmaktadır. Diğer bir model ise zorunlu kamu sigortası sistemi olarak da bilinen **Bismarck Modeli**’dir. Doğu ve Batı Almanya’nın birleşmesi ile Almanya için refah devletin tanımı içinde tasarlanan Bismarck Modeli’nin temelini sigorta sistemi oluşturmaktadır. Söz konusu sigortanın finansmanı işçi ve işveren bodro kesintilerinden karşılanmaktadır (Daştan ve Çetinkaya, 2015: 107). Sistem kâr amacı gütmemekte ve vatandaşın tümünü kapsamayı amaçlanmaktadır (Barnighausen ve Sauerborn, 2002:1560). Sağlık harcamalarının finansmanına dolaylı vergilerden ve hazine katkısı sağlanabilmektedir. Ayrıca Bismarck modelinde sağlık harcamalarının finansmanı primlerden elde edilen kamu dışı yöntemlerle de toplanabilmektedir (Sigorta kurumları). Hastalık fonlarının hastane, aile hekimi ve diğer sağlık hizmeti sunucusu kurumlarla sözleşme yapmaları veya hizmet karşılığı ödemede bulunmaları söz konusudur. Almanya, Hollanda, Fransa, Belçika, İsviçre, Japonya ve bazı Latin Amerika ülkelerinde uygulanan bu modelde doktorlar ve hastanelerin genel eğilimi özel olma şeklindedir ve hastalık risklerine karşı tedavi edici ve ayakta bakım hizmetlerini kapsayan sigortalama yapılmaktadır. **Özel Sağlık Sigortası Modelinde (ABD Modeli)** ise özel sigorta şirketleri sağlık hizmetleri ile özel sağlık sigortası finansmanında geri ödeme kurumu niteliğindedir. Özel sağlık sigortalıları, İngiltere gibi kapsayıcı sağlık sistemine sahip ülkelerde vergi geliriyle finanse edilirken ABD gibi ülkelerde sağlık hizmetlerinin temel finansman kaynağıdır. Bu sistemi sosyal sağlık sigortası yönteminden ayıran özellik prim ödeme noktasındadır. Özel sağlık sigortasında kişiler sağlık durumlarına göre değişen oranlarda prim ödemek şartıyla sağlık hizmeti alırken sosyal sigortada sistemden herkes geliriyle orantılı şekilde ödeme yaparak yararlanabilmektedirler (Koçkaya, 2016: 85). Tablo 1’deki üç temel sigorta modelinin dışında bu modellerin birleştirilmesi ile oluşturulan sistemlere de rastlanmaktadır. **Cepten ödeme Modeli** bireylerin sağlık hizmetleri kullanımı için doğrudan cepten ödeyerek yaptıkları tüm harcamalardır. Cepten ödeme sisteminde tahmin edilemez ve öngörülemez ölçüde yüksek maliyetlerle karşılaşılacak oldukça olasıdır. Ayrıca modelin olumsuz yanı insanı boyutunun olmamasıdır (İstanbuluoğlu,2010: 90). Varlıklı kişiler rahatlıkla sağlık hizmeti alabilmektedirler. Modelin olumlu yönü ise yıllarca ön ödeme yapmalarına gerek olmaması ve ne kadar hizmet alırlarsa, o kadar ödeme yapmalarıdır. Ne var ki, bu tarzda sunulan bir hizmetten, sadece ekonomik gücü olan yararlanabilir. Üstelik varlıklı kişiler için de riskler söz konusudur. Fransa, Almanya, Belçika, Hollanda, Bazı Güney Amerika ülkeleri, İsviçre ve Japonya modeli tercih eden ülkelerdir. **Ulusal Sağlık Sigortası**

Modeli (karma model) Beveridge ve Bismarck modellerinin bazı özelliklerinin birleştirilmesi ile meydana getirilmiş olan sağlık modelidir. Modelin en belirgin özelliği özel sağlık hizmeti sunucuları kullanılırken sistem vatandaşlarca prim ve vergi ödemesi ile finanse edilmekte ve devlet tarafından işletilmektedir (Woolhandler, Campbell vd., 2003:773). Kâr amacı yada pazarlama gereksinimi olmaması nedeniyle kolay organize edilip yönetilen bir modeldir (Daştan ve Çetinkaya, 2015: 107). Tayvan ve Güney Kore tarafından tercih edilmektedir.

3. TÜRKİYE VE SEÇİLMİŞ OECD ÜLKELERİNDE SAĞLIK SEKTÖRÜNÜN MALİ BOYUTU

Son yıllarda OECD ülkelerinin karşılaştığı en önemli problemlerinden biri sağlık harcamalarında kayda değer artıştır. Özellikle Covid salgınında daha da artan şekilde sağlık sektörü dışındaki yatırımlara yönlendirilecek kaynakların öncelikli yatırım alanlarından sağlık sektörüne aktarıldığı görülmektedir. Sağlık harcamalarındaki artışın temel sebeplerini şu şekilde sıralayabiliriz (Kamacı ve Yazıcı,2017:57).

- Yaşam süresinin uzamasına bağlı olarak kronik hastalıklarda meydana gelen artış
- Sağlık için kullanılan teknolojinin yüksek maliyetli olması
- Salık konusunda insanların daha bilinçli hale gelmesi
- İnsanların gelirleri doğrultusunda sağlık harcamalarının artması
- Ahlaki risk ve ters seçim problemlerinin meydana getirdiği maliyetler

Grafik 1: 2017 Yılı için Seçilmiş OECD Ülkelerinde Cari Sağlık Harcaması / GSYİH Oranı (%)

Kaynak: OECD (2019)

OECD seçilmiş ülkelerin sağlık harcamalarının GSYH'lerindeki payları Grafik 1'de sunulmuştur (OECD tarafından açıklanan en son veriler 2017 yılına kadardır). Seçilmiş ülkelerin ortalaması 2017 yılı için %8,9 olurken Türkiye'de %4,2 ile en düşük oran gerçekleşmiştir. Türkiye'deki oranın OECD ortalamasının yarısı kadar olması diğer dikkat çekici noktadır. Tablo 2'de Türkiye'nin Sağlık Harcamalarının GSYİH içindeki Payı ve OECD karşılaştırması izlenebilmektedir.

Tablo 2. Toplam Sağlık Harcamalarının GSYH İçindeki Payı ve OECD Karşılaştırması (Milyon TL, %), (2002-2018)

Yıllar	Türkiye Toplam Sağlık Harcamaları (Milyon TL)	GSYİH (Milyon TL)	Türkiye'nin Toplam Sağlık Harcamalarının Payı (%) (a/b)	OECD'nin Sağlık Harcamalarının Payı
	(a)	(b)		(%)
2002	18.774	359.359	5,2	8,3
2003	24.279	468.015	5,2	8,5
2005	35.359	673.703	5,2	8,7

2010	61.678	1.160.014	5,3	9,4
2011	68.607	1.394.477	4,9	9,3
2012	74.189	1.569.672	4,7	9,2
2013	84.390	1.809.713	4,7	9
2014	94.750	2.044.466	4,6	8,8
2015	104.568	2.338.647	4,5	8,8
2016	119.756	2.608.526	4,6	8,9
2017	140.647	3.110.650	4,5	8,8
2018	165.568	3.724.388	4,4	8,8
2019	166.789	4.280.381	3,8	8,9

Kaynak: TÜİK ve OECD Sağlık İstatistikleri (2019)

Toplam sağlık harcaması, ülkede yapılan tüm kamu ve özel sağlık harcamalarının toplamını ifade etmektedir. Tablo 2'ye göre her ne kadar 2002 yılından 2019 yılına kadar Türkiye'de toplam sağlık harcamalarında devamlı artış gerçekleşmiş olsa da GSYİH'deki payı devamlı olarak düşmüştür. (2019'da %3,8). OECD ülkelerinin 2019 yılında sağlık harcamaları payı %8,9 iken Türkiye'nin sağlık harcamaları payı %3,8 olarak kaydedilmiş olup bu oran oldukça düşüktür. Tablo 1'de Türkiye'de 2002 yılında 18.774 Milyon TL olan toplam sağlık harcaması 17 yılda yaklaşık 9 kat artmış ve 166.789 Milyon TL'ye ulaşmıştır. Fakat bur artış GSYİH içindeki orana yansımamıştır. Ülkelerin gelir seviyeleriyle sağlık harcamaları arasında kayda değer bir ilişki bulunmaktadır ve yüksek gelir düzeyindeki ülkeler sağlık hizmetlerine daha fazla harcama yapma eğilimindedirler (Khanolkar vd., 2016: 35). Tablo 3'te seçilmiş ülkeler için sağlık harcamalarının GSYİH'ye oranı izlenebilmektedir.

Tablo 3: Seçilmiş OECD Ülkeler için Sağlık Harcamalarının GSYH'ye Oranı

ÜLKELER	2012	2013	2014	2015	2016	2017	2018	2019
<i>Avusturya</i>	6,29	6,27	6,32	6,33	6,31	6,33	6,35	6,34
<i>Belçika</i>	8,19	8,23	8,25	8,26	8,29	8,30	8,32	8,32
<i>Meksika</i>	3,16	3,26	3,25	3,25	3,26	3,28	3,27	3,28
<i>Macaristan</i>	4,91	4,91	4,88	4,90	4,90	4,91	4,93	4,94
<i>Polonya</i>	4,58	4,53	4,51	4,48	4,49	4,50	4,50	4,51
<i>Türkiye</i>	4,15	4,23	4,29	4,30	4,32	4,30	4,32	3,8
<i>İspanya</i>	6,73	6,50	6,40	6,41	6,44	6,41	6,43	6,42
<i>Almanya</i>	8,36	8,57	8,70	8,72	8,73	8,73	8,73	8,73
<i>Fransa</i>	8,83	8,91	9,02	9,03	9,03	9,05	9,03	9,04
<i>İngiltere</i>	7,80	7,78	7,58	7,62	7,66	7,65	7,68	7,69
<i>İsrail</i>	4,87	4,86	4,75	4,77	4,76	4,78	4,78	4,79
<i>Hollanda</i>	9,53	9,62	9,48	9,50	9,53	9,54	9,51	9,53
<i>Yunanistan</i>	6,27	6,07	4,99	5,12	5,19	5,22	5,20	5,22
<i>İzlanda</i>	6,99	7,07	7,18	7,21	7,22	7,20	7,18	7,18

Kaynak: OECD'den yazar tarafından derlenmiştir.

Tablo 3'ye göre Türkiye, İsrail, Meksika ve Polonya gibi gelişmekte olan ülkelerle benzer oranda sağlık harcaması yapmıştır. Hane halkı bütçelerinden sağlık için ayrılan harcamalar genel olarak sigorta ve özel hastane kapsamında karşılanmayan ilaç ve bakım hizmetleri için yapılan harcamalara karşılık gelmektedir (OECD, 2018:44). Bununla birlikte Avrupa Birliği'nin lokomotif ülkelerinde (Almanya, Fransa) ve AB'den ayrılan İngiltere'de bu oran Türkiye'nin yaklaşık iki katıdır. Hane halkı fertlerinin sağlık amaçlı hizmetler ve ürünler için hizmet sunucularından doğrudan satın alışlarında, kişiler ve kurumlar tarafından kısmen veya tamamen geri ödemeleri yapılamayan harcamaları hane halkı cepten sağlık harcamaları olarak adlandırılmaktadır.

Grafik 2: Cari ve hane halkı cepten sağlık harcamaları,2010-2018

Kaynak: TÜİK

Grafik 2'ye göre Türkiye'de hane halkı cepten sağlık harcamaları 2017 yılında 24 milyar 4 milyon TL iken, 2018 yılında %19,4 artarak 28 milyar 655 milyon TL'ye ulaşmıştır. Ayrıca hane halkı cepten sağlık harcamalarının cari sağlık harcamaları içindeki payı, 2017 yılında %17,4 iken, 2018 yılında %17,5'e yükselmiştir. Hane halkı cepten sağlık harcamalarının dağılımı grafik 3'te izlenebilmektedir.

Grafik 3: Hane Halkı Cepten Sağlık Harcamalarının Dağılımı

Kaynak: TÜİK,2019

Cepten sağlık harcamalarının %40,5'i hastanelerde gerçekleşirken bunu %32,0 ile perakende satış ve diğer tıbbi malzeme sunanlar ve %20 ile ayakta bakım sunanlar takip etmiştir. Sağlık harcamalarının önemli bir kısmını da ilaç harcamaları oluşturmaktadır. Tanım olarak eczanelerden yaptığımız ilaç harcamaları, tedavi gören hastalar için kullanılmakta olan ilaçlar, sağlık bakanlığınca temin edilen aşı harcamaları ve yurt dışından getirilen ilaçların toplamı olan ilaç harcamalarının detayları Tablo 4'te izlenebilmektedir.

Tablo 4: Toplam İlaç Harcamaları (2002-2018)

	2002	2003	2005	2010	2015	2016	2017	2018	2002-2018 Artış (%)
TL	7.290	9.003	11.918	20.612	29.260	33.622	38.797	47.504	552
2018 Fiyatlarıyla	33.161	32.690	36.838	41.954	40.774	43.472	45.133	47.504	43
USD	4.841	6.030	8.889	13.738	10.757	11.128	10.636	9.870	104
Satın alma Gücü Paritesi USD	12.329	12.208	14.280	22.416	24.331	25.875	28.166	31.669	157
Sağlık Harcamalarındaki Payı (%)	38,8	37,1	33,7	33,4	28	28,1	27,6	27,8	-

GSYİH İçindek Payı (%)	2,1	2,0	1,8	1,9	1,3	1,3	1,2	1,3	-
------------------------	-----	-----	-----	-----	-----	-----	-----	-----	---

Kaynak: Bağcı ve Atasever (2019)

Tablo 4'e göre 2002 yılından 2018 yılına kadar 16 yıllık süre içinde toplam ilaç harcamaları reel olarak %43, nominal olarak %552 artmıştır. Her ne kadar artış olsa da GSYİH'deki pay %2,1'den %1,3'e inmiştir. Seçilmiş OECD ülkelerinde ilaç harcamaları Grafik 4'te izlenebilmektedir.

Grafik 4: Seçilmiş OECD Ülkelerinde Kişi Başı İlaç Harcamaları (SGP USD)

Not: *Ülkeler 2017, Danimarka ve Japonya 2015, Meksika 2014, Fransa 2013 diğer ülkeler 2016 yılı verisidir. SGP, Satın alma gücü paritesi.

Kaynak: Küçük (2020: Çevrim içi)

Grafik 4'teki SGP'ye göre hesaplanan kişi başı ilaç harcamalarında Belçika, Kanada ve İsviçre ilk üç sırayı paylaşırken OECD ortalaması 447S GP USD'dir. OECD ortalaması 2016 yılı için 447 SGP USD olup Türkiye'nin bir yıl önceki gerçeklemesi bu tutarın altındadır.

4.LİTERATÜR

Çalışkan (2009) OECD ülkeleri için sağlık harcamalarını belirleyen faktörleri analiz ettiği çalışmada analizde dahil ettiği yaş, şehirleşme, kişi başında GSYİH değişkenlerinin sağlık harcamalarını belirlemede önemli bir rol oynadığı sonucuna ulaşmıştır. Berendes vd. (2011) özel kesim ve kamu kesimi sağlık harcamalarında hizmet alanların eğilimlerini inceledikleri çalışmalarında özel kesimin kamuya göre ilaca erişim konusunda daha etkin olduğunu, ayrıca yanıt verebilirlik gibi konularda daha iyi bir performans sergilediğini ve bundan dolayı sağlık harcamalarının özele daha fazla yönlendiğini belirlemişlerdir. Çelik (2011) Türkiye'deki sağlık harcamalarını farklı ülke grupları ile karşılıklı analiz ettiği çalışmada kişi başı sağlık harcamalarının ülkeden ülkeye ciddi farklılık gösterdiği sonucuna ulaşmıştır. Yine aynı çalışma sonucuna göre ülkelerin sağlık harcamaları ile sağlık statüleri arasında doğrudan bir ilişki bulunamamıştır. Lago-Penas, Cantarero ve Fernandez (2013), OECD ülkeleri arasından seçtiği 31 ülkeyi 1970 ve 2009 periyodunda sağlık harcamaları- GSYİH ilişkisi bağlamında analiz etmişlerdir. Analiz sonucunda uzun dönemde sağlık harcamalarının GSYİH üzerindeki etkisinin daha duyarlı ve olumlu olduğunu, kısa dönemde ise, bu etkinin daha az olduğunu belirtmişlerdir. Hernández, Moral-Benito (2014) 20 OECD ülkesini analizlerine dahil ederek sağlık harcamalarında ve sağlık sisteminin etkinliğinde hangi faktörlerin etkin olduğunu belirledikleri çalışmalarında engelliliğe uyarlanmış yaşam yılı, yaşam beklentisi ve mortalitenin etkin faktörler olduğu sonucuna ulaşmışlardır. Akar (2014) sağlık harcamalarının nispi fiyatı ile ekonomik büyüme ilişkisini analiz ettiği çalışmada kısa dönemde anlamlı bir ilişkiye ulaşamazken uzun dönemde anlamlı bir ilişkinin varlığına ulaşmıştır. Çelik, Khan ve Hikmet (2016) seçilmiş 55 ülke ile 1995-2013 yılında sağlık harcamalarında hangi değişkenlerin önemli rol oynadıklarını belirledikleri çalışmalarında doğumda beklenen yaşam yılı ve cepten ödeme düzeyinin önemli rol oynadığı sonucuna ulaşmışlardır. Çınarlıoğlu (2017) tüketicilerin sağlık kuruluşu ve sağlık

harcaması seçimini etkileyen faktörleri araştırdığı çalışmasında hizmete erişim ve hizmet sunumunda profesyonellik derecesi ile sosyo-demografik faktörlerin önemli rol oynadığı sonucuna ulaşmıştır. Boz ve Önder (2017) OECD ülkelerinin sağlık sistemini analiz ettikleri çalışmalarında 34 ülkeyi analize dahil ederek veri zarflama sistemini kullanmışlardır. 2000-2013 periyodunu inceledikleri çalışmalarında sistemin etkin hale gelebilmesi için her bir ülkenin kendi modelini geliştirmesi ve deneyimlerini birbirleriyle paylaşması gerektiği sonucuna ulaşmışlardır. Giray ve Taşdelen (2018) çalışmalarında sağlık harcamalarının kamu ve özel olarak sektörel dağılımı ile sağlık harcamalarının GSYİH payları arasında olası bir ilişkinin varlığını OECD ve Türkiye özelinde analiz etmişlerdir. Çalışmada sağlığın beşerî sermayenin olmazsa olmaz kaynaklarından biri olduğu ve sağlık alanına yapılan harcamaların beşerî sermayenin güçlenmesine katkı sağladığı sonucuna ulaşmıştır. Altunöz (2020) ekonomik büyüme ile sağlık harcamaları ilişkisinin OECD ülkeleri için 2000-2016 periyodu için analiz ettiği çalışmasında iki değişken arasında güçlü bir ilişkinin varlığına ulaşmıştır.

5.PANEL REGRESYON ANALİZİ

Ekonometrik analizlerde eğer aynı kesit birimi zaman içinde takip ediliyorsa söz konusu karma veriler panel veri olarak isimlendirilmektedir. (Gujarati, 1999:849). Panel veriler 3 amaca hizmet etmektedir. İlki birimler arası değişkenliği tanımlamaktadır. Böylelikle değişkenlerin seyri ve büyüklüğünü bilmemiz mümkün olmaktadır. İkinci amaç değişkenleri diğer bazı değişkenler bakımından açıklamaktır. Üçüncü amaç ise her bir birimin ilgili değişken bakımından kestirimini yapmaktır (Hsiao, 2003:89). Panel veriler fonksiyonel olarak eşitlik (1)'deki gibi ifade edilmektedir.

$$Y_{it} = \beta_0 + \beta_{it}X_{it} + \dots + \beta_{kit}X_{kit} + e_{it} \quad i = 1,2, \dots N \quad t = 1,2, \dots T \quad (1)$$

Eşitlik (1) de t zamanı, i kesitleri ifade etmektedir. Panel veri tercihinin diğer veri türlerine göre sağladığı avantajlar şu şekilde sıralanabilir (Baltagi, 2005: 4-6):

- Heterojenliğe karşı veri seti kontrolüne olanak vermektedir.
- Yetersiz kesit gözleminin var olduğu durumda analize izin vermekte, bunun yanında zaman ve kesit serisi analizlerine göre daha fazla değişkenlik arz etmektedir. Böylelikle bağlantı problemi ihtimali azalmaktadır.
- Panel veri kullanımı ekonomik tahmin edicilerin verimliliğini arttırmaktadır.

Panel veri analizlerimde rassal etkiler ya da sabit etkiler modeli kullanılmaktadır. Sabit etki modelinde panele dahil olan yatay kesitler arasındaki fark her bir yatay kesit için ayrı ayrı sabitler eklenmek suretiyle elde edilmektedir. Yatay kesitlerin gözlenebilmesi rassal etkiler tahmin yönteminde mümkün olamamaktadır. Yatay kesitlerin rassal dağıtılmış olması nedeniyle rassal etkiler hata terimlerinden elde edilebilmektedir. Sabit ve rassal etkiler tahmincilerinden hangisinin tercih edileceğinin belirlenmesi için Hausman (1978) testi kullanılabilmektedir (Baltagi, 2005). Panel analizlerde kullanılan modeller sabit ve rassal etki ayırımının yanında dengeli ve dengeli olmayan şeklinde iki türe daha ayrılmaktadır. Dengeli olmayan panelde noksan veri durumu mevcut olmaktadır ve yatay kesitlerdeki gözlem sayıları eşit değildir. Dengeli panelde ise noksan veri durumundan bahsedilememektedir.

5.1. Model ve Veri Seti

Ülkeler arasında sağlık harcamaları, kültürel, sosyo-ekonomik, politik, pek çok sebeple farklılık göstermektedir. Bununla birlikte konuyla ilgili ulusal ve uluslararası literatürde yapılan ampirik analizlerde genel kabul görmüş ve üzerinde fikir birliğine varılan değişkenler mevcuttur. Çalışmanın değişken seçiminde Di Matteo (2005), Getzen(2006), (Sanz ve Velázquez (2007) ve Çalışkan (2009) çalışmaları referans alınmıştır. Çalışmada kullanılacak panel veri analizi 1993-2019 dönemi olmak üzere 26 yıllık süreyi kapsayacaktır. OECD'ye ait tüm ülkelerin güncel verilerine ulaşılamaması nedeniyle OECD kurucu ülkeleri olan Türkiye, Almanya, ABD, Yunanistan, Avusturya, Kanada, Fransa, Hollanda, Belçika, Lüksemburg, İtalya, İngiltere, İzlanda, Danimarka, İrlanda, Portekiz,İsviçre, İsveç, İspanya, Norveç, analize dahil edilmiştir. Söz konusu 20 ülke çalışmada yatay kesit birimleri olarak belirlenmiştir. Değişkenler

analize yıllık olarak dahil edilmiştir. Model E-views 8 paket programıyla tahmin edilecektir. Modelde kullanılacak değişkenler Tablo 5'te izlenebilmektedir.

Tablo 5: Değişkenler, Tanımı ve Kaynakları

Değişkenler	Tanımı	Kaynak
hsağ	Kişi başına düşen sağlık harcaması	OECD, https://ec.europa.eu/
hsağkamu	Kişi başına düşen kamu sağlık harcaması	OECD, https://ec.europa.eu/
hsağözel	Kişi başına düşen kamu özel harcaması	OECD, https://ec.europa.eu/
dr	800 kişiye düşen doktor sayısı	OECD, https://ec.europa.eu/
ilaç	Kişi başına ilaç harcaması	OECD, https://ec.europa.eu/
kamu	Toplam sağlık harcamalarında kamu payı	OECD, https://ec.europa.eu/
doğum	Doğurganlık oranı	OECD, https://ec.europa.eu/
şehir	Şehirleşme oranı	OECD, https://ec.europa.eu/
GSYİH	Kişi başı GSYİH	OECD, https://ec.europa.eu/
yaş	65 ve üzeri nüfusun toplam nüfustaki payı	OECD, https://ec.europa.eu/

Not: Kişi başına düşen sağlık harcaması ve Kişi başı GSYİH, satın alma gücü paritesine göre USD'dir

Tablo 5 deki değişkenlerden ilk üç değişken (hsağ, hsağkamu ve hsağözel) bağımlı değişken olarak analizlere dâhil edilecek olup dr (800 kişiye düşen doktor sayısı) değişkeninin sağlık harcamalarını azaltması beklenmektedir. Kamu (Toplam sağlık harcamalarında kamu payı) değişkeninin ise kamunun ülkedeki payına göre sağlık bağımlı değişkeni azaltması yada arttırması beklenen bir durumdur. Diğer değişkenlerin tümünün sağlık harcamalarını arttırması beklenmektedir.

5.2. Yatay Kesit Bağımlılık Testleri

Panel analizlerde birim kök testine geçilmeden önce paneli meydana getiren birimlerin birbirini etkileme durumunu belirleyen yatay kesit bağımlılık testleri yapılmalıdır. Yatay kesit bağımlılık testi sonucunda paneli meydana getiren her bir birimden herhangi birinde meydana gelecek şoktan analize konu olan tüm ülkelerin aynı şekilde etkilenme derecesine sahip olması ve herhangi bir ülkede meydana gelebilecek makroekonomik şokun panelde yer alan diğer ülkeleri etkilemediği anlaşılabilir (Menyah vd. 2014:389).

Yatay kesit bağımlılığının varlığını araştırmak amacıyla geliştirilen testlerin ilki Breusch ve Pagan (1980) tarafından geliştirilen ve eşitlik (2) de görülen Lagrange Multiplier (LM) testidir.

$$LM = T \sum_{i=1}^{N-1} \sum_{j=i+1}^N P_{ij}^2 \quad (2)$$

(2) numaralı eşitlikte P, örnek tahmin olarak kalıntıların ikili korelasyonunu ifade etmektedir. Lagrange Multiplier (LM) testinde iki farklı hipotez kurulmakta olup yokluk hipotezi ve alternatif hipotez $H_0 = \text{yatay kesitler arasında ilişki yok}$ ve alternatif hipotez $H_1: \text{Yatay kesitler arasında ilişki var}$ şeklinde kurulmaktadır. Yokluk hipotezinde $T \rightarrow \infty$ olduğunda N sabite $\frac{N(N-1)}{2}$ derecesinde kıkare asimptotik dağılıma sahip olduğu ve testin zaman boyutu T'nin yatay kesit boyutu N'den büyükse tercih edileceğini varsaymaktadır. Söz konusu test Peseran (2004) tarafından geliştirilerek literatürde CD_{LM} olarak isimlendirilmiş olup eşitlik (3) deki gibi ifade edilmektedir.

$$CD_{LM} = \sqrt{\frac{1}{N(N-1)} \sum_{i=1}^{N-1} \sum_{j=i+1}^N (TP_{ij}^2 - 1)} \quad (3)$$

3 numaralı denklemde $T \rightarrow \infty$ ve $N \rightarrow \infty$ durumunda yatay kesit bağımlılığının olmadığı iddia edilir. Bununla birlikte $N > T$ olduğu durumlarda CD_{LM} testi seviyede bozulmalar göstermektedir bundan dolayı yine Peseran (2004), $> T$ olduğu durumlarda geçerli olan CD testini geliştirmiş olup eşitlik (4) de izlenebilmektedir.

$$CD = \sqrt{\frac{2T}{N(N-1)}} \sum_{i=1}^{N-1} \sum_{j=i+1}^N P_{ij} \quad (4)$$

Diğer bir yatay kesit bağımlılık testi Pesaran vd. (2008) tarafından geliştirilmiş olan LM_{adj} testidir ve eşitlik (5) de izlenebilmektedir.

$$LM_{adj} = \sqrt{\left(\frac{2}{N(N-1)}\right)} \sum_{i=1}^{N-1} \sum_{j=i+1}^N P_{ij} \frac{(T-k)p_{ij}^2}{\sqrt{v_{Tij}^2}} \quad (5)$$

Eşitlik (5) de regresör numaraları k ile ifade edilirken $v_{Tij}^2, (T - k)p_{ij}^2$ nin ortalamasıdır.

Bu testleri için:

Yokluk hipotezi H_0 : Yatay kesitin olmadığı ve alternatif hipotez H_1 : Yatay kesit bağımlılığının varlığı şeklinde oluşturulmaktadır. Yokluk hipotezinin reddi ve yatay kesit bağımlılığının olmadığı durumlarda analize birinci nesil panel birim kök testleri ile devam edilirken yatay kesitin olması durumunda ikinci nesil panel birim kök testleriyle devam edilir (Baltagi, 2010: 284).

Tablo 6: Yatay Kesit Testleri

Test	İstatistik	Olasılık
LM (Breusch ve Pagan, 1980)	18,19	0,00
CD_{LM} (Pesaran, 2004)	1,61	0,00
CD (Pesaran, 2004)	-0.72	0,05
LM_{adj} (Pesaran vd. 2008)	1,88	0,02

Tablo 6 sonuçlarında göre örnekleme konu olan ülkeler için eğim katsayılarının homojenlik durumunu test etmek için yapılan Tablo 6'daki yatay kesit testlerinin sonuçlarına göre örnekleme konu olan 20 ülkede yatay kesit bağımlılığının olmadığını ifade eden yokluk hipotezi %99 anlam düzeyinde kabul edilmektedir. Elde edilen sonuca göre analize konu olan ülkelere herhangi birinde ortaya çıkacak etkinin diğer ülkeleri etkilemeyeceği söylenebilir. Bu sonuçların ardından analize birinci nesil panel birim kök testlerinin uygulanması gerekmektedir. Bu bağlamda çalışmada Levin, Lin ve Chu (2002), Levin, Lin, Chu ve Im, Pesaran, Shin (2003), panel birim kök testleri tercih edilecektir.

5.3. Panel Birim Kök Testi

Ekonometrik analizlerde değişkenlerin durağan olmaları diğer bir ifadeyle birim kök taşıması gerekmektedir. Eğer birim kök taşırsa sahte regresyon sorunu nedeniyle ulaşılan sonuçlar doğru olmayacaktır. Bu çalışmada yatay kesitin varlığına ulaşılamaması nedeniyle birinci nesil panel birim kök testleri olan Im, Pesaran, Shin (2003) ve Levin, Lin, Chu (2002) 'den yararlanılmıştır.

Levin, Lin ve Chu (2002) birim kök sınavında, birim kök varsayımlarının denge düzeyinden yüksek oranda sürekli bir sapma göstermekte olan alternatif varsayımın karşısında kısıtlı bir etkiye sahip olduğunu değerlendirmişlerdir. Bu bağlamda Levin, Lin ve Chu (2002) birim kök sınavı, söz konusu etkinin daha fazla hissedildiği küçük örneklemliy uygulamalarda daha fazla hissedilmesinden dolayı önerilmektedir (Baltagi, 2005).

Levin, Lin ve Chu (2002) birim kök testinde paneldeki bütün birimlerin ilk dereceden kısmi otokorelasyon içerdiği varsayılır ve eşitlik (6) daki aşağıdaki temel ADF spesifikasyonunu kullanmaktadır.

$$\Delta y_{it} = \alpha y_{it-1} + \sum_{j=1}^{p_i} \beta_{ij} \Delta y_{it-j} + x'_{it} \delta + \varepsilon_{it} \quad (6)$$

Eşitlik (2) de $\alpha = p - 1$ ortak kabul edilmekte fakat fark terimlerinde gecikme uzunlukları göz önünde bulundurulmaktadır. Ayrıca α tahmini deterministik ve otokorelasyondan arındırılmış ve

standartlaştırılan $\Delta_{y_{it}}$ ve y_{it} vekil değişkeniyle yapılmaktadır. Bu bağlamda oluşturulan hipotezler $H_0: \alpha = 0$ ve $H_1: \alpha < 0$ şeklindedir.

Çalışmada kullanılacak diğer bir birim kök testi Im-Pesaran-Shin (2003) tarafından geliştirilen test istatistiğinin bootstrap versiyonu olup eşitlik (7) deki gibi hesaplanır.

$$t = \frac{1}{N} \sum_{i=1}^N t_i T \quad (7)$$

Eşitlik (7)'de $t_i T$ ADF-t istatistiğini ifade etmektedir. LM istatistiği, Solo (1984)'nun önerdiği bireysel Lagrange test istatistiklerinin ortalamasıdır ve eşitlik (8)'de izlenebilmektedir.

$$LM = \frac{1}{n} \sum_{i=1}^N LM_i \quad (8)$$

Birim kök testlerine ait sonuçlar tablo 7 ve tablo 8'de sunulmuştur.

Tablo 8’de sunulan ve gecikme uzunluklarının Schwartz Bilgi Kriteri tarafından belirlendiği Levin, Lin, Chu birim kök testi sonuçlarına göre boş hipotez ret edilmiştir. Diğer bir ifadeyle analize konu olan her bir seri sabit ver trendli, sabit ve trendsiz ve sabit modellerin herbirinde seride durağan sonuç vermiştir. Farklı iki birim kök testlerinden de aynı sonuçların elde edilmesi değişkenlerin seride durağan oldukları anlamına gelmektedir. Çalışmada daha fazla gözlem ile içerdiği avantajlar ve yatay kesit ile zaman serisi verilerine göre gözlenemeyen, ölçülemeyen faktörlerin etkilerinin de içermesi nedeniyle dengeli olmayan panel veri analizi yöntemi tercih edilmektedir. Hausman (1978) testinden elde edilen sonuçlara göre sabit etkiler modeli rassal etkiler modeline göre daha uygulanabilir sonuç vermiştir.

4.4. Otokorelasyon Sınaması ve Panel Regresyon

Regresyon analizlerinin ana hipotezlerinden biri farklı gözlemler için aynı hatalar arasında ilişkinin (korelasyon) olmamasıdır. Bu bağlamda ekonometrik analizlerin önemli sorunlarından biri otokorelasyondur. Eğer hata terimleri birbirleri ile ilişkili ise oto korelasyonun varlığından söz edilir. Çalışmada oto korelasyon sorunu olup olmadığı, boş hipotezde oto korelasyonun olmadığını iddia Wooldridge (2002) testi ile test edilmiştir.

Tablo 9: Wooldridge Otokorelasyon Testi Sonuçları

Wooldridge Testi	<i>F Değeri</i>	<i>Olasılık</i>
	38.661	0.005

Tablo 9 elde edilen Wooldridge oto korelasyon test sonucuna göre boş hipotez reddedilmiştir. Bunun anlamı denklemlere ait hata terimleri arasında oto korelasyon problemi gözlemlendiği şeklindedir.

Analizde karşılaşılan otokorelasyon sorunu kurulan her bir model için üç modelde de AR (1) dönüşümü yapılarak modeller bu ekonometrik probleminden arındırılmıştır. Modelde değişen varyans probleminin var olup olmadığı ise Greene'nin testi ile sınanmıştır.

Tablo 10: Greene Heteroskedasticity Testi Sonuçları

Greene Değişken Varyanslık Testi	<i>Chi – square (Ki – Kare)</i>	1008.11
	<i>Prob > chi – square =</i>	0.0000

Greene Heteroskedasticity test sonuçları Tablo 10'da sunulmuş olup boş hipotez eş olasılık değeri% 5'den düşük olmasından dolayı reddedilmiştir. Bu durum değişken varyanslılık probleminin varlığı anlamına gelmektedir. Tespit edilen oto korelasyon problemi White'ın yatay kesit kovaryans katsayısı yöntemiyle giderilmiştir. Bunun yanında çalışmanın güvenilirliğinin ve gücünün artırılması amacıyla otokorelasyon sorununun çözümünde AR (1) süreci işletilmiştir.

Çalışmada kullanılacak modeller eşitlik (9) (10) ve (11) de izlenebilmektedir. Modelin daha güçlü sonuçlar üretmesi amacıyla değişkenlerin logaritmaları alınarak analize dahil edilmiştir. (ln) logaritmalarının alındığını ifade etmektedir.

Model 1

$$\ln \text{hsağ} = \alpha + \beta_{1j} \ln \text{GSYİH} + \beta_{2j} \ln \text{kamu} + \beta_{3j} \ln \text{nilaç} + \beta_{4j} \ln \text{indr} + \beta_{5j} \ln \text{nyaş} + \beta_{6j} \ln \text{doğum} + \beta_{7j} \ln \text{şehir} + \varepsilon_{ij}$$

(9)

Model 2

$$\ln \text{hsağ kamu} = \varphi + \beta_{1j} \ln \text{GSYİH} + \beta_{2j} \ln \text{kamu} + \beta_{3j} \ln \text{nilaç} + \beta_{4j} \ln \text{indr} + \beta_{5j} \ln \text{nyaş} + \beta_{6j} \ln \text{doğum} + \beta_{7j} \ln \text{şehir} + \varepsilon_{ij}$$

(10)

Model 3

$$\ln \text{hsağ özel} = \vartheta + \beta_{1j} \ln \text{GSYİH} + \beta_{2j} \ln \text{kamu} + \beta_{3j} \ln \text{nilaç} + \beta_{4j} \ln \text{indr} + \beta_{5j} \ln \text{nyaş} + \beta_{6j} \ln \text{doğum} + \beta_{7j} \ln \text{şehir} + \varepsilon_{ij}$$

(11)

Eşitlik (9) , (10) ve (11) den elde edilen sonuçlar tablo (11) , (12) ve (13) de izlenebilmektedir.

Tablo 11: Model 1 için Tahmin Sonuçları (Bağımlı Değişken:lnhsağ)

<i>R²</i>		0.74	

Tablo 11 sonuçlarına göre analizde kullanılan kamu ve dr değişkenleri dışında tüm değişkenler toplam sağlık harcamalarını arttırmaktadır. Sonuçlar detaylı incelendiğinde ilaç, doğum, şehir, GSYİH ve yaş değişkenlerindeki %1 birimlik artış toplam sağlık harcamalarını sırasıyla 0.12, 0.38, 0.16, 0.11, 0.33 ve 0.44 birim arttırırken kamu değişkeni 0.22 birim azaltmaktadır. Dr değişkeninin toplam sağlık harcamalarını azaltması, doktor sayısının artmasıyla daha sık muayene ve hastalığa yakalanmadan önlemlerin alınması olarak yorumlanabilir. Toplam sağlık harcamalarındaki en fazla artış şehir, yaş ve ilaç değişkenlerinde izlenmekte olup tüm bu sonuçlar teorik beklentiler doğrultusundadır. Şehirleşme oranı, 65 yaşındaki nüfus ve kişi başına ilaç harcamasının artmasının toplam ilaç harcamalarını önemli şekilde arttırması beklenen bir durumdur. Ayrıca kişi başına GSYİH'deki artışın gerek özel gerekse kamu harcamalarının artışına neden olması teorik beklentilerle birebir örtüşmektedir. Teşhis testleri sonuçlarına göre R^2 değeri 0.78 olup bağımsız değişkenlerin bağımlı değişkendeki değişimi %74 oranında açıkladığını ifade etmektedir. Modelin bir bütün olarak anlamlı olup olmadığını gösteren F istatistiği, modelin anlamlı olduğunu ifade etmektedir.

Tablo 12: Model 2 için Tahmin Sonuçları Bağımlı Değişken:lnhsağkamu

Değişkenler	Katsayı	t istatistiği	Std.Hata.

R^2		0.76	

Tablo 12'deki model 2 sonuçları incelendiğinde model 1 sonuçlarına benzer şekilde kamu kesim sağlık harcamalarını en fazla arttıran değişkenler 1.22, 0.52 ve 0.48 ile şehir, ilaç ve yaştır. Tablo 11 ile karşılaştırıldığında kamu sağlık harcamaları değişkeninin pozitif değer aldığı izlenmektedir. Elde edilen sonuç toplam sağlık harcamalarında kamunun yüksek payda olduğunu göstermektedir. Bu durum akıllara kamu kesimi harcamalarının özel kesim harcamalarını dışlaması olarak bilinen crowding out (dışlama etkisi)'ni getirmektedir. Bu bağlamda sağlık harcamalarında kamu payının artması kamu sağlık harcamalarında 0.45 birimlik artışa neden olmaktadır. Bunun dışındaki ilaç, doğum, şehir ve yaş değişkenlerindeki %1 birimlik artış kamu sağlık harcamalarını sırasıyla 0,52, 0.05, 1.22 ve 0.48 arttırmaktadır.

Tablo 13'teki model 3 sonuçlarına göre özel kesim sağlık harcamalarını en fazla arttıran değişkenler şehir, yaş ve ilaç değişkenleridir. Kamu değişkeninin (sağlık harcamalarında kamunun payı) negatif sonuç vermesi dışlama etkisini çok daha açık hale getirmiştir. Model (1) sonuçlarında negatif, model (2) sonuçlarında pozitif olan bu değişkenin model (3) de negatife dönmesi kamu harcamalarının özel kesim harcamalarını dışlattığını göstermektedir. Şehirleşme, yaş ve doğumla birlikte özel sağlık harcamalarının artması beklenen bir durumdur. Ayrıca Kamu kesimindeki gibi özel sağlık kesiminde de doktor sayısındaki artış hastalıkların önceden tespitiyle toplam sağlık harcamalarında azalışa neden olmaktadır.

6. SONUÇ

Dünyanın birçok ülkesi, kaynakların etkin kullanımının yanında sağlık hizmetleri konusunda devletin rolünün ne olması gerektiğini ve devletin sağlık hizmetleri etkinliğini sorgulamaya başlamışlardır. Bu doğrultuda devletin sağlık hizmetlerindeki konumu, sağlık hizmetlerinin finansmanı ve sunumu konusunu ele alan bilimsel çalışmaların sayısında da önemli bir artış meydana gelmiştir.

Bu çalışmada OECD ülkelerinde uygulanan farklı sağlık modelleri ve söz konusu modeller doğrultusunda ülkelerin yaptıkları sağlık harcamaları hem teorik hem de ampirik olarak ele alınmıştır. Çalışmanın analiz kısmında birçok faktörden etkilenen sağlık harcamaları demografik, çevresel, ekonomik ve sağlık sistemi seviyesini yansıtan değişkenler kullanılarak incelenmiştir. Genel geçer literatürden farklı olarak sağlık harcamaları kamu ve özel kesim olarak ayrı ayrı da analiz edilerek sağlık harcamalarında iki sektörün durumu anlaşılmasına çalışılmıştır. Elde edilen sonuçlara göre her iki kesimin toplamından oluşan toplam sağlık harcamaları analizinde ilaç, doğum, şehir, GSYİH ve yaş değişkenlerindeki artış toplam sağlık harcamalarını arttırırken kamu değişkeni azaltmaktadır. Bener şekilde doktor sayısındaki artış da toplam sağlık harcamalarını azaltmaktadır. Bu durum doktor sayısının artmasıyla daha sık muayene ve hastalığa yakalanmadan önlemlerin alınması olarak yorumlanabilir. Bu sonuçlar bağlamında özel ya da kamu kesiminin ağırlığının hem sağlık hizmeti sunumunda hem de finansmanında önemli olduğunu belirtmek yerinde olacaktır.

Kamu harcamalarının bağımlı değişken olduğu analiz sağlık harcamalarında kamunun yüksek payda olduğunu göstermektedir. Bu durum akıllara kamu kesimi harcamalarının özel kesim harcamalarını dışlaması olarak bilinen crowding out (dışlama etkisi)'ni getirmektedir. Çünkü özel kesim harcamalarının bağımlı değişken olduğu modelde kamu değişkeninin (sağlık harcamalarında kamunun payı) negatif sonuç vermesi dışlama etkisini çok daha açık hale getirmiştir. Model (1) sonuçlarında negatif, model (2) sonuçlarında pozitif olan bu değişkenin model (3) de negatife dönmesi kamu harcamalarının özel kesim harcamalarını dışlattığını göstermektedir. Üç model toplu olarak değerlendirildiğinde doktor sayısındaki artış sağlık harcamalarını azaltırken kişi başında ilaç harcamaları, doğurganlık oranı, şehirleşme oranı 65 ve üzeri yaşın nüfustaki payının artışı ve kişi başı GSYİH sağlık harcamalarını arttırmaktadır. Sonuçlar bir bütün olarak ele alındığında çalışmada kullanılan değişkenler sağlık harcamalarındaki değişiklikleri güçlü şekilde açıklamaktadır. Bu sonuçlar Di Matteo (2005), Getzen(2006), (Sanz ve Velázquez (2007) ve Çalışkan (2009)'ın çalışmalarına paralel olarak OECD ülkelerinde sağlık harcamalarının lüks harcama değil ihtiyaç olduğunu göstermektedir.

Development and Features of the Residential Real Estate Market in Bulgaria

Assen PALOV ¹

¹ University of Agribusiness and Rural Development, bori_eood@abv.bg

Abstract: The present study investigates the development of the residential real estate market in Bulgaria and identifies the main factors that affect the demand, supply and prices of real estate in Bulgaria. The subject of research are the factors that influence the development of the residential real estate market. The main goal is to analyze the state of this market by deriving the factors that affect the demand, supply and prices of residential properties in Bulgaria. In this regard, the specific features of the real estate market in Bulgaria are considered in the context of its development and the main trends are traced in terms of investment opportunities in residential real estate.

Keywords: real estate, real estate market, demand, supply, prices, housing loans, interest rates.

1. INTRODUCTION

Real estate has always been subject of great investor interest - from the average person who wants to buy a home, to real estate investment funds (REITs), which own and manage portfolios of real estate. Knowing and understanding the real estate market is one of the fundamental requirements for the success of investments in real estate. Till the 90s, we could not talk about a functioning real estate market in Bulgaria. Restitution in parallel with the privatization of the majority of state and municipal property led to predominantly increase in private ownership of property. This proved to be a serious prerequisite for the development of the real estate market. The 2005 - 2008 was a fruitful period for the sales of real estate. High demand has led to a drastic rise in property prices. The financial crisis and its manifestation in Bulgaria radically changed the situation in the sector. Its impact was most strongly felt in the market through tight lending measures and rising interest rates, which made it very difficult to finance and invest in real estate. The lack of credit resources led to a decrease in demand and a halt in the construction of many investment projects, which in turn led to bankruptcies of developers and investors. At the end of 2008, there was a decrease in construction activity compared to the beginning of the year, which gradually had a negative impact on the construction sector and the real estate market. This trend continued over the next five years. The real estate market began to revive only in 2014. At the moment, it is once again in a stage of maturity and supply and demand are expected to begin to equalize. Forecasts are contradictory, but according to sector experts, the real estate market is much more balanced and mature at the present time than in 2008 and it is not expected to go through similar upheavals as in 2008 and 2009.

Summarizing the development of the Bulgarian real estate market, we can conclude that since 1990, it has made significant progress. In addition, the sector survived the 2008 crisis and managed to recover. It is currently one of the busiest markets in Europe. Of course, due to the cyclical nature of real estate investments and many other factors, trade failures cannot be completely avoided, but a better knowledge of the specifics of this market is a factor for reliable forecasting of its future development.

2. Nature and specific features of the real estate market

The real estate market is a specific area of investment entrepreneurial activity carried out with the aim of making a profit from the construction, management and operation of real estate.¹ Real estate can be considered both in terms of investment perspective and as a source of benefits for their owners as a result of their use, which can be long-term advantage.

¹ Iliev, Genov, Kalinkov, Monev, & Kalchev, 2007, Real Estate in Bulgaria in the Conditions of European Integration, Varna. Science and Economics Publishing House, ISBN: 978-954-21-0317-2, p. 89

Monev (2007)² provides a comprehensive definition of the real estate market as “a set of existing and potential buyers (individuals and organizations) of products - real estate (in its pure form or related services) - entering a complex system of economic, human and legal relationships with sellers and other market participants in order to realize transactions that include the basic (property) and / or specific (construction, superstructure and extension) rights over them and which meet their needs. This definition distinguishes the real estate market as a separate market, although it is directly related to the financial market and the economy generally.³ The literature is widespread belief that that the real estate market is both a commodity market and a capital market (investment market). Therefore, "immovable property is both a commodity and capital in kind, and the real estate market is both a commodity market and a capital market".⁴ This is the position of the majority of authors who write in this field.

Numerous definitions of the real estate market are known in the specialized literature, which reflect its various characteristics. According to Maximov⁵, the real estate market is "an interconnected system of market mechanisms ensuring the creation, sale, operation and financing of real estate." In this definition, the market is presented as a system that includes all activities for the creation and operation, including real estate financing. In this sense, the market can be represented as a set of relationships between buyers and sellers, landlords and tenants and other market participants in real estate transactions. These relations have a legal and economic nature and are related to the redistribution of real estate between the individual participants. According to another definition of the nature and scope of the real estate market, it is "a set of real estate objects, as well as civil law transactions and operations with this property, carried out by professional participants in the real estate market or through their mediation."⁶

As part of the market economy of the individual country, the real estate market is in interaction with other markets (consumer goods market, securities market, credit market, insurance, etc.). Due to the specific features and high prices of housing compared to the average income of households, the real estate market is closely linked to the credit market. The purchase of real estate in most cases is related to negotiating a mortgage bank loan. When lending to a bank for the purchase of real estate, it must be insured. This determines the relationship of the real estate market with insurance. Changes in interest rates and conditions on loans and deposits are a determining factor for the demand and supply of real estate. The strongest connection of the real estate market with the financial market is through the opportunities for investing in real estate through the stock exchanges. There are other opportunities for individual investors, such as by acquiring shares in real estate companies, exchange-traded funds (ETF)⁷ or real estate investment trusts (REITs)⁸, which are widely used in global practice.

Eventually, we can summarize that in the real estate market there is a transfer of ownership or use between the individual participants as the sellers (landlords) contact the buyers (tenants) in order to carry out the transaction. In this way an equilibrium price of real estate is achieved. As in any other market, so in the real estate market, the main elements are the demand, supply and prices of real estate. From the point of view of the specific features of the real estates, the legal and contractual relations related to the appraisal of the real estates and formation of the market price, the transfer of ownership or the settlement of other relations between the subjects such as right of use, rent, lease

⁸ Real Estate Investment Trust (REIT) is a company that owns, manages or finances real estate that generates income, in Bulgaria these are the Joint Stock Companies with Special Investment Purpose (JCSIP)

may be indicated. and others.; property management (purchasing or selling decisions, renting), the management of the properties themselves and the related costs for insurance, taxes, etc.; the infrastructure and the activities necessary for the functioning of the market (material, consulting, brokerage, insurance, marketing activities - advertising, sales promotion, surveys, etc.).

The characteristics of real estate also determine the specifics of the real estate market. The immobility and uniqueness of each real estate correspond to the geographical location of the market and predetermine the essential importance of this factor. The location of the real estate and the characteristics of the territory on which it is located are crucial for its value and its investment attractiveness. Other features that distinguish the real estate market from other commodity markets are: impossibility to sell without necessarily making a preliminary inspection of the site. The market is characterized by a limited number of sellers and buyers and a high degree of regulation (administrative, legal and economic), especially when it comes to state and municipal property. Demand and supply of real estate have low elasticity, ie with increasing supply and demand, prices rise at a slower pace. Both supply and demand are determined not only by the consumer qualities of the sites, but also largely determined by other factors such as: the state of infrastructure in the area of the site and the surrounding environment at the level of settlement, municipality, district, region. Real estate transactions are carried out in longer terms and are characterized by legal complexity. Real estate has low liquidity, but on the other hand their value usually increases over time. In purchase and sale, real estate exists on the market as a commodity and as a service - for rent, lease, right of use, etc. This makes it possible to form two separate markets for real estate transactions - for sales and rent.

There are many participants in the real estate market, which depending on their status can be summarized in four groups of entities: legal entities, individuals, the state and municipalities. When property seekers do so for investment purposes, they can be classified into:

- individual investors (individuals);
- institutional investors (state, municipalities and other institutions);
- professional investors (SPAC)⁹, whose object of activity is fundraising through issuance of securities and purchase of real estate and real rights over real estate, construction and improvements, in order to provide them for management, renting, leasing or renting and selling them, or buying and selling receivables.

There are many classifications in the real estate market in the literature. Since the perspective from which the study is conducted is the real estate investor, it is appropriate to use the following division of the real estate market: agricultural land market, housing market, business real estate market, which are office buildings and commercial premises and industrial properties, a mixed property market, such as residential properties that can be used for offices or shops, and a specific property market (e.g., schools, galleries, libraries, etc.). this classification is most often used in foreign literature when making various analyzes of the real estate market. The focus of this article is on the residential real estate market.

3. Development and trends in the residential real estate market in Bulgaria

The following main stages can be distinguished in the development of the real estate market in Bulgaria: until 1990; to the beginning of the 21st century and a modern market from the beginning of the 21st century. During socialism, real estate prices, housing finance and construction were controlled by the state. The right to property was limited by the Law on Citizens' Property, and prices were fixed. Until the early 90's, the residential real estate market was characterized by a deficit, which caused the increased demand for real estate after that. In the 1990s, restitution began in parallel with the privatization of state and municipal property. The predominant growth of private property proved to be a serious prerequisite for the further development of the real estate market. Housing prices of 2 euros per m²

⁹ JCSIP (Joint Stock Companies with Special Investment Purpose) is a joint stock company which, under the terms and conditions of the Special Investment Purpose Companies Act (promulgated, SG No. 46/2003), invests the funds raised through the issuance of securities. securities, real estate or receivables (securitization of real estate and receivables). Joint Stock Companies with Special Investment Purposes (JCSIP) are known in world practice as Real Estate Investment Trusts - REITs.

increased dramatically due to hyperinflation during the 1996-1997 crisis. During this period, unemployment levels were high, incomes were low, the political and economic environment was precarious, funding was limited, and this adversely affected the development of the housing market. The real estate market went up at the beginning of the new century. After 2000, real estate sales are growing rapidly, there is a foreign demand for real estate in Bulgaria. Between 2004 and 2008, the market grew at a double-digit annual rate, leading to a boom in the housing market. Real estate prices have been characterized by a sustained and unprecedented sharp rise, accompanied by a large increase in construction and credit and the creation of a property bubble. The manifestation of the global financial crisis was felt by tightening lending, rising interest rates and limiting the financing of construction and entrepreneurship. This led to bankruptcies of developers and investors and a subsequent huge drop in property prices. The first signs of a revival in the real estate market appeared in 2013 - 2014. Almost zero interest rates on bank deposits encouraged people to invest in real estate. That is why the housing market began to grow in 2014, recovering from the deep collapse in 2008. After five years of sharp rise in house prices, the real estate market in Bulgaria in the first quarter of 2020 again declined. The Bulgarian economy is expected to shrink by about 7% this year, according to the European Commission, due to the coronavirus pandemic. According to the property register, the number of homes sold in the second quarter of 2020 was 27.8% less compared to the same period in 2019. In the third quarter of the year the market grew compared to the previous year 2019 (Fig. 1).

FIG. 1 Real estate sales in Bulgaria for 1-3 quarters of 2020 compared to 2019

Source: Property Register, <https://www.registryagency.bg/bg/registri/imoten-registar/statistika/>

The main factors influencing the demand for real estate and used in the market analysis according to European criteria are: nominal house price index, gross household income, gross amount of housing loans to disposable income of households, population over 18 years, distribution of the population by status of possession.

The housing price index shows the change in the prices of residential properties purchased by households (apartments, single-family houses, etc.), both newly built and existing, regardless of their end use and their previous owners for a certain period.¹⁰ Nominal housing prices in Bulgaria marked a sharp change after 2008, as shown in Fig. 2. In 2009 there was a significant decline in house prices - 20.42% compared to 2008. This is mainly due to the reasons mentioned above - limited lending by banks, high supply and shrinking demand, due to lack of resources and a sense of insecurity. All these factors put strong pressure on property prices and lower them. After this drastic decline, prices began to rise until 2016. In the fourth quarter of 2016, the increase in prices was 8.1% compared to the same

¹⁰ Eurostat. (2017). Housing price statistics - house price index. http://ec.europa.eu/eurostat/statistics-explained/index.php/Housing_price_statistics_-_house_price_index

period of the previous year, after which the growth rate of prices began to decline and reached a nominal value of 2.9% in the second quarter of 2020 compared to 2019. The average change in the nominal property prices for the period 2008 - 2020 amounts to 0.8%.

FIG. 2 Housing price index in Bulgaria for the period 2008-2020

Source: <https://www.nsi.bg>

Gross household income is defined according to the NSI methodology as “the sum of all regular incomes of the household and its members received from: labor, property, pensions, unemployment benefits, social benefits for children, other benefits and allowances and regular transfers from other households.”¹¹ The trend is a steady increase in income, and in 2014 there was a slowdown in growth due to rising inflation in the country. At the end of the period there is again a positive upward trend.

FIG. 3 Change in the gross total income of households for the period 2010-2019

Source: <https://www.nsi.bg>

¹¹ <https://www.nsi.bg>

FIG. 4 presents the change in the gross amounts of housing loans for a ten-year period from the beginning of the financial crisis to 2018 for the period 2008 - 2014 the trend is negative. After 2014, the indicator marked an increase due to the improvement of the economic situation related to the reduction of interest rates on loans and stabilization of incomes in the country.

FIG. 4 Gross amount of housing loans for the period 2008-2018

Source: https://hypos.org/app/uploads/sites/3/2019/09/HYPOSTAT-2019_web.pdf

During the period under review, according to the European Mortgage Federation (2019)¹², the population over 18 years of age recorded a steady decline due to declining birth rates and migration processes among the younger generation and people of working age, caused by many factors including life, lack of adequately paid jobs and lack of opportunities for realization in the country, etc.

The indicator "distribution of the population by status of possession" shows an increase in the share of persons living in their own homes, which was interrupted in 2013. In 2013 there was a decrease compared to 2012, which remained in the following years until 2018.¹³

The main indicators that can be used to analyze the supply on the housing market are: the total number of dwellings in the country, the actual investments in residential buildings, the number of projects completed during the year, building permits and interest rates on loans. For the period under review, statistics show an increase in the number of building permits. Interest rates on loans are characterized by a steady downward trend after 2010. With regard to the housing stock, there has been an increase since 2011, as a result of the easing of limited lending.

In recent years, near-zero interest rates on bank deposits have encouraged people to invest in real estate. That is why the housing market began to recover in 2014 after a significant decline in 2008-2010 and showed a steady upward trend until the first quarter of 2020, when the economy was closed due to the COVID-19 pandemic.

In the first half of 2020, housing permits decreased by almost 25% on an annual basis. Housing prices are expected to remain relatively stable over the medium term, amid declining demand. The average interest rate on BGN mortgage loans fell to 2.89% in July 2020 from 3.07% in the previous year, according to the Bulgarian National Bank. Data from the third quarter show a trend of recovery of the levels of most indicators, but the uncertainty and the deteriorating economic situation guarantee a decline in sales, which is likely to be typical for next year.

¹³ Ibid., Table 11.

4. CONCLUSION

Summarizing the development of the Bulgarian real estate market after the 1990s, we can conclude that it has made significant progress. In addition, the sector has managed to recover from the global financial crisis of 2008 and is currently one of the busiest markets in Europe. This fact is mainly based on declining and partly zero interest rates on deposits, falling interest rates on loans, rising rental prices in large cities and the frequent turmoil in the financial markets, which make investments in financial assets increasingly uncertain. Analyzing the main factors of supply and demand in the real estate market we can conclude that economic and political crises are key to its development and dynamics. In this regard, the use of modern methods for risk assessment and forecasting in real estate investments are a key factor for their success.

Abstract: The world Covid 19 pandemic, has produced deep changes in the ways of leaving and realizing normal daily activities of the citizens. One of the daily activities realized by the citizens is the payment as a way of finalizing the transaction with a certain monetary instrument. Payment is one of the activities that banks must adapt to the new situation and have to offer various payment instruments that will provide a safe and continuous way of carrying out financial activities. But, on the other hand, the question is how much the clients are prepared to accept those banks payment instruments and to change their habits and preferences for cash payment. The main aim of this paper is to perform an analysis of the clients' payment adaptation during Covid19 pandemic and their acceptance of the non-cash payment instruments offered by the commercial banks in the North Macedonia. For this purpose, a survey research has been performed in way to analyze the above mention situation before the pandemic start and during the pandemic.

Key words: payment instruments, banks, pandemic

1. Introduction

Digital revolution imposed by the internet, has caused significant changes in all spheres of social life and economic activity, and naturally, it has not passed away the banking sector as well.

In its essence, the banking sector is conservative and tends towards traditional and established methods. Traditionally, financial products and services have been distributed through bank branches due to their proximity to customers, the large number of services they perform, the added value that the client receives at the branch, and the important role bank branches play in decisions made by customers (Le'bana-Cabanillas et al., 2013). But, during the time, the number of bank transactions increased to unexpected ratios, so that the use of traditional methods for transactions processing was not possible any more.

The new technological achievements that have been successfully implemented in the banks working, have caused significant changes in the bank's way off communication with its clients, i.e. in the way the banking institutions has distributed their services to the clients. Namely, there is a gradual transformation from traditional to modern electronic way of distribution.

E-banking is a modern service that is a precondition for the banks survival on the market. The banks significantly invest in this service, which is a strategic tool for lowering the costs in the banking sector, in order to gain the clients' trust, competitive advantage and effective extension of their business out of the geographical barriers. (Brief Survey on Use of E-Bankig in Albania, Ermela Kripa, PhD-European University of Tirana, Marinela Seitaj, MSc, Coordinator UET Language Centre/TELTs test, European University of Tirana, Academic Journal of Interdisciplinary Studies, MCSER Publishing, Rome-Italy, July 2015). In fact, the credibility of the entire banking system will be under the question should the fast changes in the clients' preferences are not identified and met, and if the clients are not informed in due time and solutions are not offered to them in real time.

The first step towards the electronic banking are the automated teller machines (ATM) that enable lower working expenses, time saving for the bank employees and use of the bank services by the clients any time of the day. Then POS terminals as a system that enables connecting of the buyers, the bank and the retail, the payment cards as an instrument for realizing cashless payments, the electronic money, the electronic checks, and the mobile banking that is the latest trend of the electronic banking etc.

The new modern trends in the banks working are being gradually implemented in the banking sector of our country, too. But, the characteristic of our situation is a still relatively low preparedness for higher development of the digital banking, and use of some, now already traditional instruments such as the payment cards (Kadievskaja-Vojnovic 2016).

There are many factors that define the preparedness for digitalization in the banking sector: (Kadievskaja-Vojnovic 2016).

- The banks capacity for innovations
- The phase of technological development in which the country is
- The level of competition in the sector
- The consumer culture
- The population demographic structure
- The concentration degree in the banking sector and
- The existing regulative, which can promote or limit the development of new technological solutions.

But, besides the encouraging factors, there are limiting factors as well: (Kadievskaja-Vojnovic 2016).

- The negative effects that the financial crisis had on the banks' capacity for innovations and
- The local population mentality that has not show the sufficient level of trust to online activities and cashless way of payment yet.

2. Analysis of the payment system in the Republic of North Macedonia

The proliferation of payment cards – that is, debit, credit, and prepaid cards – has dramatically changed the way we shop and merchants sell goods and services. Today, payment cards are indispensable in most advanced economies. (Bolt &Chakravorti, 2008).

The payment card as a specific instrument for cashless payments, issued by the banks, trade or other specialized businesses, is mainly used for: (Uros T., 2010) paying for products and/or services; cash withdrawal and electronic payment.

The increased usage of cards has increased the value of payment networks, such as Visa Inc., MasterCard Worldwide etc.

As for the situation in the Republic of North Macedonia, from the report on the data for payments statistics published by the NBRM, in December 2019, totally 1 864 227 cards with a function for cash withdrawing/depositing, are in circulation. 1 825 824 or 98% of the total cards number, are owned by individuals, and 99% of them or 1 809 513 cards have payments function. Therefore, in average, 1,8 payment cards are issued to a million people in the state. In 2019, there were 13 733 merchants, i.e. 19 779 selling points (data for 2018) that accepted payment cards. In December 2019 , according to the same official source, there are 1 072 ATMs in the country and 31721 points of sale (POS terminals). (http://www.nbrm.mk/platezhna_statistika.nspk). Analyzing the trend for payment cards in the period from January 2016 to December 2019, some short-term fluctuations can be seen, but for the whole period, it has been noted that there is an increase in the number of active payment cards of almost 8%. This statistics undoubtedly lead to a conclusion that there is a solid infrastructure for cashless payment, but also for cash withdrawal without physical presence on the counters in the bank branches.

The research aim

The aim of this research is to analyze how the banks and their clients are prepared to adapt themselves for using banking services in the situation of pandemic. Therefore, the focus of this research is on analyzing the effects of using the payment cards, and the preparedness and the degree of acceptance and usage of such payment instruments by the people.

Target group

The target group in this research are the citizens of Republic of North Macedonia over 18 years old, who have opened a transaction account in some commercial bank in the country. The target group is segmented into several categories in order to see their habits and perceptions on the research subject from a point of view of different age structure, social structure, gender structure, job status, educational degree, resident regions etc. The answers given by the respondents from different regions were given according to the residence county in the statistical region. The sublimation according to 8 statistical regions (HTEC third level), accepted by the Central Bureau of Statistics, was made for the analyses consistency and eventual comparison of the results on a regional level.

Techniques for data collecting and instruments for researching

The research was realized by an anonymous survey questionnaire of 25 structured questions of closed type, which generally reflect the respondents' perception on the habits, safety and acceptance of the payment cards and electronic systems offered by the banks before the pandemic start and after it was designated. Data collecting was only electronic, in the period of time from 29.04 2020 to 21.05 2020, under the conditions of a state of emergency in the country, and respecting the recommendation for social distance between the interviewers and the respondents. Having in mind the specific period for researching, the link to the poll was sent to more than 6000 people, and totally 920 respondents gave their answers.

Research main hypothesis

The usage of payment cards and the habits, i.e. preferences for their usage by the citizens before the pandemic and after its start, are different.

Separate hypotheses

For easier and more detailed testing of the main hypothesis, eight auxiliary hypotheses in a close correlation with the research main hypothesis, have been established.

1. There is not statistical dependence between the respondents' status and preferences for the way of withdrawing financial resources (counter or ATM).
2. There is not statistical dependence in the frequency of visiting bank branches before and during the pandemic.
3. There is not statistical dependence between the preferences for payment in the retail, i.e. the usage of the payment card before the pandemic start and the respondents' age.
4. There is not statistical dependence between the change of the preferences for payment in the retail, i.e. the usage of the payment card before the pandemic start and the respondents' age.
5. There is not statistical dependence between the preferences for using the payment card and the respondents' monthly incomes.
6. There is not statistical dependence between the change of the preferences for using the payment card from the pandemic start and the respondents' monthly incomes.
7. There is not statistical dependence between the preferences for payment in the retail, i.e. the usage of the payment card before the pandemic and after its start.
8. There is not statistical dependence between the usage of the payment card in the retail before the pandemic start and after its start.

The structure of the respondents by gender, age and status, is given in the Table 1.

Table 1			
Row Labels	female	male	
18-25 years	62	31	93
Employed in public sector	2		2
Employed in private sector	12	12	24
Unemployed	6	3	9

Grand Total	413	229	257	21	920

The research results

The research results will be presented in two parts. In the first part, some quantitative analyses obtained from the answers in the questionnaire will be presented, while in the second one, the results of the statistical testing of the hypotheses set in the research, will be shown.

Descriptive statistics of the survey results

Of the total number of respondents, 875 or more than 95% have answered that they possess payment card. From them, 841 respondents or 96,1% have answered that they prefer to withdraw money from ATM than from the bank counter. From the respondents who possess a payment card, more than 55% , in the last 6 months before the start of the pandemic, have never visited the branch of their bank, while about 30% have visited the branch once a month in average in the last 6 months. But, since the start of the pandemic, almost 70% of the respondents (607 respondents) have never visited their bank branch, and 188 respondents or 21,5% have visited the bank branch at least once. These results show that the respondents have started using the payment card for cashless payment or for withdrawing money from the ATM, in a larger number (Table 3).

Table 3

Row Labels	Physically visited a branch before the pandemic start		Physically visited a branch from the pandemic start	
Twice a month	65	7.4%	33	3.8%
Three times a month	18	2.1%	14	1.6%
Once a month	261	29.8%	188	21.5%
I haven't visited a branch because I'm using a payment card to pay or withdraw a money from an ATM	482	55.1%	607	69.4%
More than three times a month	48	5.5%	31	3.5%
Did not respond	1	0.1%	2	0.2%
Grand Total	875		875	

Regarding preferences for using the payment card before the pandemic start, most of the respondents who use payment card have answered that they prefer to pay by a payment card (64%), while 313 respondents or 36% that prefer to pay in cash although they possess a payment card.

Table 4

Row Labels	Payment preferences before the pandemic	
I prefer to pay in cash even though I have a payment card	313	35.98%
I prefer to pay with payment card	557	64.02%
Grand Total	870	

These preferences, from the start of the pandemic, have undergone some changes in favor of the payment card. So, about 8% is a higher number of respondents who prefer to use payment card since the pandemic start, compared to the number two months ago, i.e. before its start.

Table 5

Row Labels	Preferences for payment before the pandemic	
Yes, I started to pay in cash more than before	19	2.17%
Yes, I started to pay with payment card more than before	179	20.48%

No, I still prefer to in cash	233	26.66%
No, I prefer to pay with payment card	443	50.69%
Grand Total	874	

The respondents have been asked to give their opinion concerning the advantages and stimulations the banks have made in the period since the start of the pandemic for avoiding physical presence in their branches.

Table 6

	Yes	no	didn't respond
The bank encouraged me to use a payment card to with draw cash	425	460	35
The bank promoted the use of electronic services instead of a physical presence at a branch counter	571	314	35
The bank encouraged me to use a payment card in retail	518	363	39
The bank offered me additional benefits (lower transaction costs, higher amount of overdraft, etc.) to use its e-services instead the physical realization of activities	380	502	38

3. Statistical hypotheses testing

In order to examine the dependences between separate measuring indicators, statistical tests have been made by means of χ^2 test independence test.

Statistical hypothesis 1

H₀: There is not a statistical dependence between the status of the respondents and preferences for the way of withdrawing money (counter or ATM).

H₁: There is a statistical dependence between the status of the respondents and preferences for the way of withdrawing money (counter or ATM).

Respondents status	Counter	Payment card	Total	Results of χ^2 test
Employed in public sector	11	403	414	$\chi^2 = 64.349 > 9.488$ $df = 4$ $p < 0.00$ $\alpha = 0.05$
Employed in private sector	12	318	330	
Unemployed	10	51	61	
Retired	13	36	49	
Student	6	56	62	
Total	52	864	916	

From χ^2 independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis for independence between the respondents status and the preferences for way of withdrawing money (counter or ATM), should be rejected. In other words, the respondents' status and the preferences for way of withdrawing money (counter or ATM) are in a statistical dependence.

Statistical hypothesis 2

H₀: There is not a statistical dependence in the frequency of visiting the bank branches before and during the pandemic.

H₁: There is a statistical dependence in the frequency of visiting the bank branches before and during the pandemic.

	I haven't visited a branch	once a month	Twice a month	Three times a month	More than three times a month	Total	Results of χ^2 test $\chi^2 = 1059.24 > 26.296$ $df = 16$ $p < 0.00$ $\alpha = 0.05$ $C = 0.7336$
I haven't visited a branch	469	15	3	1	2	490	
Once a month	125	143	9	3		280	
Twice a month	18	29	18	1	1	67	
Three times a month		9	1	9	1	20	
More than three times a month	7	9	6	2	28	52	
Total	619	205	37	16	32	909	

From χ^2 independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis for independence between the respondents status and the preferences for way of withdrawing money (counter or ATM), should be discarded. This means that there is statistically significant dependence in the frequency of visiting the bank branches before and after the pandemic. From the estimated contingency coefficient ($C = 0.7336$), it can be concluded that there is a high dependence between the variables.

Statistical hypothesis 3

H₀: There is not a statistical dependence between the preferences for using the payment card and the respondents' age.

H₁: There is a statistical dependence between the preferences for using the payment card and the respondents' age.

From χ^2 independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis should be discarded. In other words, there is statistically significant dependence between the respondents' age and the preferences for using the payment card when paying in retail. But having in mind the low value of the contingency coefficient ($C=0.166$), it can be concluded that there is a little relationship between the variables.

	I prefer to pay in cash	I prefer to pay with payment card	Total	Results of χ^2 test $\chi^2 = 24.579 > 9.488$ $df = 4$ $p < 0.00$ $\alpha = 0.05$ $C = 0.166$
18-25 years	48	36	84	
26-35 years	94	139	233	
36-45 years	100	220	320	
46-55 years	45	107	152	
More than 55 years	26	55	81	
Total	313	557	870	

Statistical hypothesis 4

H₀: There is not a statistical dependence between the preferences change for payment in retail, i.e. using the payment card since the pandemic start and the respondents' age.

H₁: There is a statistical dependence between the preferences change for payment in retail, i.e. using the payment card since the pandemic start and the respondents' age.

	Yes, I pay more in cash	Yes, I pay more with payment card	No, I still pay in cash	No, I still pat with payment card	Total	χ^2 test results $\chi^2 = 19.650 < 21.026$ $df = 12$ $p < 0.074$ $\alpha = 0.05$
18-25 years	3	11	37	33	84	
26-35 years	3	51	64	115	233	
36-45 years	7	69	77	169	322	
46-55 years	4	30	33	85	152	
More than 55 years	2	18	22	41	83	
Total	19	179	233	443	874	

From χ^2 test independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis should not be discarded.

Statistical hypothesis 5

H₀: There is not a statistical dependence between the preferences for way of payment in retail and the respondents' monthly incomes.

H₁: There is a statistical dependence between the preferences for way of payment in retail and the respondents' monthly incomes.

	I prefer to pay in cash	I prefer to pay with payment card	Total	Results of χ^2 test $\chi^2 = 58.476 > 5.991$ $df = 2$ $p < 0.00$ $\alpha = 0.05$
Between 20 000 den. and 30 000 den.	133	273	406	
More than 30 000 den.	52	176	228	
Less than 20 000 den	137	111	248	
Total	322	560	882	

From χ^2 independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis should be discarded. In other words, there is statistically significant dependence between the respondents' monthly incomes and the preferences for using the payment card when paying in retail.

Statistical hypothesis 6

H₀: There is not a statistical dependence between the preferences change for using the payment card from the pandemic start and the respondents' monthly incomes.

H₁: There is a statistical dependence between the preferences change for using the payment card from the pandemic start and the respondents' monthly incomes.

	Yes, I prefer to pay more in cash	Yes, I pay more with payment card	No, I still pay in cash	No, I still pay with payment card	total	Results of χ^2 test
Between 20 000 den. and 30 000 den.	6	88	94	214	402	$\chi^2 = 49.511 > 12.592$ $df = 6$ $p < 0.00$ $\alpha = 0.05$
More than 30 000 den.	4	39	38	143	224	
Less than 20 000 den	9	51	91	80	231	
Total	19	178	223	437	857	

From χ^2 independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis should be discarded. In other words, there is statistically significant dependence between the monthly incomes of the respondents who possess payment cards and the preferences change for using the payment card when paying in retail after the pandemic start.

Statistical hypothesis 7

H_0 : There is not a statistical dependence between the preferences for payment in retail, i.e. using the payment card before the pandemic start and its start.

H_1 : There is a statistical dependence between the preferences for payment in retail, i.e. using the payment card before the pandemic start and its start.

	I prefer to pay with cash	I prefer to pay with payment card	Total	Results from χ^2 test
Yes, I pay more in cash	9	8	17	$\chi^2 = 593.175 > 7.815$ $df = 3$ $p < 0.00$ $\alpha = 0.05$ $C = 0.637$
Yes, I pay more in cash	78	100	178	
Yes, I pay more in cash	220	11	231	
Yes, I pay more in cash	5	438	443	
Total	312	557	869	

From χ^2 independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis should be discarded. In other words, there is statistically significant dependence between the preferences for using the payment card for paying in retail before the pandemic start and its start.

Statistical hypothesis 8

H_0 : There is not a statistical dependence between the use of the payment card in retail, before the pandemic start and its start.

H_1 : There is a statistical dependence between the use of the payment card in retail, before the pandemic start and its start.

Have you used payment card in the market? (before/from the pandemic start)	Yes	no	Total	Results of χ^2 test
Yes	767	9	776	$\chi^2 = 511.614 > 3.841$ $df = 1$ $p < 0.00$
No	22	58	80	
Total	789	67	856	

			$\alpha = 0.05$
--	--	--	-----------------

From χ^2 independence test it can be concluded that on the significance level $\alpha=5\%$, the null hypothesis should be discarded. This leads to a conclusion that there is statistically significant dependence between the use of the payment card for paying in retail, before the pandemic start and its start.

The research limitations

Although the research has been conducted by taking account of the scientific approach in the sample defining, nevertheless it has some limitations.

- One of those limitations is the territorial deployment of the respondents. Namely, although the sample contains territorial scope of the respondents from all eight statistical regions, there is a disparity concerning the representativeness of each separate region. In fact, most of the respondents (324) or about 35% are from the region of Pelagonia, while the participation of the interviewed persons from the region of Polog, and the Eastern and Northern regions, is between 4,8% and 6,3% of the total respondents number.
- As the research has been realized only online, there has not been any physical communication, especially with the representatives from the banking institutions who would give appropriate overviews concerning the subject of this research.
- Having in mind that the research has been realized by sharing a link to the questionnaire, generally speaking, it is a voluntary sample.

4. Conclusion

The results show that generally the people have changed their preferences for the ways of payment and usage of the payment cards during the pandemic. That is probably due to the fact that most of the banks encourage their clients to use different services of the bank without physical presence as a part of the recommendations for physical distancing. However, the results indicate that there is still a large space for acting in this respect.

- On the basis of the analysis of the secondary data from NBRM, it can be concluded that there is a solid infrastructure for cashless payment and cash withdrawing without physical presence over the counters in the banks branches.
- Although from the analyses of banks' web sites in the country it can be seen that almost all banks encourage their clients to realize their financial obligations without physical presence in the branch and that they offer some benefits such as lower commissions etc., there is still a large number of the respondents that have a negative answer concerning these questions. Maybe, that is due to inappropriate channel for information delivering by some of the banks.
- This survey has confirmed the main hypothesis that the people's habits, i.e. preferences for using payment cards before the pandemic start and after its start, are different. The main hypothesis has been also confirmed by the testing of separate statistical hypothesis, and the following statistical conclusions have been made:
 - There is a statistical dependence between the status of the respondents (employed in a public sector, private sector, unemployed, students, pensioners) and the preferences for way of withdrawing money (counter or ATM).
 - There is a statistical dependence in the frequency of visiting the banks branches before and during the pandemic.
 - There is a statistical dependence between the preference for using the payment card and the respondents' monthly incomes.

- There is a statistical dependence between the change in the preferences for using the payment card from the pandemic start and the respondents' monthly incomes.
- There is a statistical dependence between the preferences for paying in retail, i.e. using the payment card, before the pandemic start and after the start of the pandemic.
- There is a statistical dependence between the usage of the payment card when paying in retail before the pandemic start and after the pandemic start.

Recommendations

Taking into account the fact that there is a statistical dependence between the status of the respondents and the preferences for the way of money withdrawing (counter or ATM), and the preferences for using the payment card and the monthly incomes of the respondents, the banking institutions should identify the reasons for such preferences of different categories of people and should offer segmented educative campaigns for different clients categories.

The banks should find out an appropriate communication channel with their clients in order to inform the clients on the offered benefits and recommendations.

Türkiye Cumhuriyet Merkez Bankası'nın Pandemi Sürecinde Kullandığı Para Politikası Araçları

Öğr. Gör. Havva ARABACI¹

¹Trakya Üniversitesi Edirne Sosyal Bilimler Meslek Yüksekokulu Muhasebe Vergi Bölümü

arabacih@hotmail.com Orcid: 0000-0003-0212-6590

Özet: Merkez Bankası Kanunu'na göre Bankanın temel görevlerinden biri finansal sistemde istikrarı sağlayıcı ve para ve döviz piyasaları ile ilgili düzenleyici tedbirleri almaktır. Ayrıca, mali piyasaları izlemek, finansal sistemler ile ilgili hususlarda hükümete görüş vermek, Bankaca uygun görülecek banka dışı mali kurumların ve bankaların yükümlülüklerini esas alarak zorunlu karşılıklar ve umumi disponibiliteler ile ilgili usul ve esasları belirlemek ve bankalardaki mevduatın vade ve türleri ile özel finans kurumlarındaki katılma hesaplarının vadelerini belirlemek, ödeme ve mutabakat sistemlerini kurmak, işletmek ve denetlemek de Bankanın finansal istikrar ile ilgili diğer temel görevleri arasındadır. Türkiye Cumhuriyet Merkez Bankası 2001 yılında yeniden düzenlenen Merkez Bankası Kanunu ile fiyat istikrarı temel amacına ilave olarak finansal sistemde istikrarı sağlayıcı tedbirleri almakla görevlendirilmiş bulunmaktadır.

Dünyada ilk olarak Çin'in Wuhan kentinde 2019 yılı Aralık ayında ortaya çıkarak tüm dünyaya yayılan Covid-19 salgını, Türkiye'de de sağlık, sosyal ve ekonomik alanda etkilerini göstermiştir. Ekonomiye olan olumsuz etkilerini azaltabilmek için bir takım önlemler alınmıştır. Ekonomik alanda alınan karar ve önlemlerin başlıca aktörü olan Türkiye Cumhuriyet Merkez Bankası bu alanda para politikası araçlarını etkili bir şekilde kullanmaya çalışmıştır. Bu çalışma ile Türkiye Cumhuriyet Merkez Bankası'nın pandemi sürecinde kullandığı para politikası araçları açıklanmıştır.

Anahtar Kelimeler: Türkiye Cumhuriyet Merkez Bankası, Para Politikası Araçları, COVID-19 Pandemisinin Etkileri.

Monetary Policy Tools Used by Central Bank of Turkey During Covid 19 Pandemic

Abstract: According to the Central Bank Law, one of the main duties of the Bank is to take stabilizing measures for financial system and regulatory measures regarding financial and exchange markets. In addition, monitoring the financial markets, giving an opinion to the government on matters regarding financial systems, determining the procedures and principles regarding required reserves and general liquidity based on the liabilities of non-bank financial institutions and banks deemed appropriate by the Bank and determining the terms and types of deposits in banks and the maturity of participation accounts in private financial institutions, establishing, operating and supervising payment and settlement systems are among the other basic duties of the Bank related to financial stability. With the revised Central Bank Law In 2001, Central Bank of Turkey, in addition to the primary objective of price stability, are mandated to take measures for stabilizing the financial system.

Covid 19 epidemic which started in city of Wuhan, China at December of 2019 affected Turkey on social, economic and healthcare fields. A number of measures have been taken in order to reduce its negative effects on the economy.

Central Bank of Republic of Turkey which is the main actor of decisions and measures taken in the economic field has tried to use monetary policy tools effectively in this field. With this study, monetary policy instruments used by the Central Bank of Turkey in epidemic are explained.

Keywords: Central Bank of Turkey, Monetary Policy Instruments, Effects of Covid 19 epidemic.

1. GİRİŞ

Covid-19 salgını dünya çapında ekonomik faaliyetleri ciddi şekilde etkilemektedir. Pandemi nedeniyle büyüme oranında düşüş, işsizlik oranında artış, enflasyon oranında artış, ödemeler dengesinde bozulma, bütçe dengesinde bozulma ve dış finansmanda zorluklar yaşanmaktadır. Pandeminin ekonomi üzerindeki olumsuz etkilerini giderebilmek için her ülke kendine has ekonomik tedbir yolları aramaya başlamıştır.

Türkiye'de ilk vaka 11 Mart 2020 tarihinde sağlık bakanı tarafından açıklanmıştır. Hala etkisini sürdüren COVID-19 Pandemisine bağlı olarak ortaya çıkan ekonomik zorluklar Türkiye'yi de etkisi altına almıştır.

Salgının hızını azaltabilmek için ise bazı tedbirler alınmış ve alınan tedbirler Türkiye’de ekonomik ve sosyal yaşamı durdurma noktasına getirmiştir. Pandeminin ekonomi üzerindeki olumsuz etkilerini giderebilmek için para politikası ve maliye politikası araçları kullanılmıştır. Türkiye’de bu etkileri azaltmak amacıyla 18.03.2020 tarihinde “Ekonomik İstikrar Kalkanı” destek paketi yayınlanmıştır.

Para politikası, merkez bankalarının genel ekonomi politikası hedefleri ile uyumlu olarak (fiyat istikrarı, finansal sistemin işleyişinde istikrar ve sürdürülebilir ekonomik büyüme) para arzı ve faiz gibi değişkenleri yönlendirme çabaları olarak tanımlanabilir (Uzunoglu ve Sönmezler, 2013).

Ekonomi politikasının genel amaçlara ulaşabilmesi için para politikasının bu amaçlara doğru yönlendirilmesi gerekir (Erçel, 1996:2).

Merkez Bankası’nın uyguladığı para politikasının temel araçları;

- i. Açık piyasa işlemleri,
- ii. Doğrudan alım-satım,
- iii. Reeskont politikası,
- iv. Döviz alım-satımı,
- v. Karşılık oranlarıdır.

TCMB’nin Politika Araçları ve Amaçları

Kaynak: Kara, 2012. TCMB’nin Politika Araçları ve Amaçları

Merkez Bankası açık piyasa işlemleri ile parasal tabanı değiştirebilir. Merkez Bankası’nın tahvil veya döviz satın alması halinde, parasal taban genişlemiş, ekonomideki para arzı artırılmış demektir. Merkez Bankası’nın tahvil veya döviz satması halinde parasal taban daraltılmış, para arzı azaltılmış olur (Öçal, Çolak, Togay ve Eser, 1997).

Merkez Bankası, reeskont kredilerine uygulanacak reeskont oranlarını belirleyerek bankaların kredi hacimlerini etkileyebilirler. Merkez Bankası, bankalar sistemi aracılığı ile dolaşımdaki para hacmini artırmak istediğinde, reeskont oranını düşürerek, reeskont kredi hacmini artırabilir. Reeskont oranının düşürülmesi, bankaların daha fazla kredi talep etmesini teşvik eder. Dolaşımda ki para hacmini daraltmak istediğinde ise, reeskont oranını yükselterek, reeskont kredi hacmini azaltabilir. Reeskont oranının yükseltilmesi ise bankaların kredi talebini azaltabilmektedir.

Bankalar, topladıkları mevduatın bir kısmını, zorunlu karşılıklar oranına göre, karşılık olarak ayırarak Merkez Bankası’na yatırır. “Merkez Bankası, karşılık oranlarını değiştirerek, bankaların ellerindeki aşırı rezervleri (parasal tabanı) ve böylece banka sisteminin kaydı para genişlemesini etkileyebilirler “ (Parasız, 1997, s. 306).

2. Türkiye Cumhuriyet Merkez Bankası’nın Pandemi Sürecinde Kullandığı Para Politikası Araçları

Covid-19 pandemisinin ekonomi üzerindeki olumsuz etkilerini giderebilmek için para politikası ve maliye politikası araçları kullanılmıştır. Türkiye’de bu etkileri azaltmak amacıyla 18.03.2020 tarihinde “Ekonomik İstikrar Kalkanı” destek paketi yayınlanmıştır.

Transfer ödemelerinde artışlar Covid-19 pandemisine karşı para politikaları kapsamında; faiz indirimlerine gidilmiş, kredi kolaylıkları sağlanmış, para basma yoluna gidilmiş, bazı sektörlere doğrudan destekte bulunulmuştur. İlk parasal tedbir, merkez bankalarının para piyasasında genişletici etki yaratabilmek için faiz indirimlerine gitmesi ile başlatılmıştır. Ayrıca kriz sürecinde firmaların ve hane halkının kırılabilirliğini minimuma indirmek amacıyla vergi erteleme, yapılandırma kararları, genişletici harcama politikaları, doğrudan gelir transferlerini içeren genişletici maliye politikaları da uygulamaya konulmuştur (Kaya, 2020: 233).

Tüm dünyaya yayılan COVID-19'un Türkiye'deki ekonomik etkileri; TCMB, 30 Nisan 2020 tarihli 2020-II Enflasyon Raporu Bilgilendirme Toplantısı'nda makroekonomik gelişmeler aşağıdaki gibi açıklanmıştır (<https://www.tcmb.gov.tr>).

Enflasyon Raporu Bilgilendirme Toplantısı'nda Para Politikası ile ilgili gelişmeler;

- Enflasyon görünümüne bağlı olarak bir hafta vadeli repo ihale faizi yüzde 8,75'e indirilmiştir.
- Sistemin fonlama ihtiyacındaki artışa bağlı olarak, açık piyasa işlemleri (API) aracılığıyla sağlanan net fonlama miktarında artış gözlenmiştir.

TCMB, 30 Nisan 2020 tarihli Para Politikası Kurulu 2020-II Enflasyon Raporu Bilgilendirme Toplantısı'nda faiz indirimlerine ek olarak kapsamlı bir önlem paketi uygulamaya koymuştur (<https://www.tcmb.gov.tr>).

1. Türk lirası ve yabancı para likidite yönetiminde esneklik ve öngörülebilirlik artırılmıştır.
2. Reel sektöre kredi akışının kesintisiz devamını teminen bankalara hedefli ilave likidite imkânları tanınmıştır.
3. İhracatçı firmaların nakit akışının desteklenmesine yönelik reeskont kredi düzenlemeleri yapılmıştır.
4. Devlet İç Borçlanma Senetleri (DİBS) Piyasası likiditesinin desteklenmesine yönelik adımlar atılmıştır.

Covid-19 pandemisinin reel sektöre ve hane halkına yönelik olumsuz yansımalarını sınırlamayı teminen alınan iktisadi faaliyeti ve makrofinansal istikrarı destekleyici tedbirlerin bir kısmı iktisadi faaliyetin 2020 yılının son çeyreğinde güçlü seyrini koruması sonucunda kademeli olarak gevşetilmiştir. Diğer taraftan salgının seyrine dair küresel çapta süregelen belirsizliklerin de etkisiyle devam eden riskleri yönetmek için sıkı para politikası duruşuyla birlikte bazı tedbirlerin uygulanmasına devam edilmiş veya ilave tedbirler alınmasına ihtiyaç duyulmuştur (<https://www.tcmb.gov.tr>).

Finansal istikrarı desteklemek ve piyasaların etkin işleyişine katkıda bulunmak amacıyla uygulamaya konulan tedbir ve düzenleme adımları ana başlıklar altında Tablo I.' de özetlenmiştir.

Tablo I. Finansal İstikrarı Desteklemek Ve Piyasaların Etkin İşleyişine Katkıda Bulunmak Amacıyla Uygulamaya Konulan Tedbir Ve Düzenlemeler

1. TCMB Tarafından Faiz Oranlarına ve Likidite Yönetimine İlişkin Atılan Adımlar	
Yürürlük Tarihi	Tedbir / Düzenleme
25 Aralık 2020	Politika faizi oranı olan 1 hafta vadeli repo ihale faiz oranı ile döviz karşılığı TL swap işlemleri ve TL karşılığı altın swap işlemlerinde uygulanan TL faiz oranı yüzde 15'ten yüzde 17'ye yükseltilmiştir.
4 Ocak 2021	TCMB Tarafı Swap işlemleri ve BIST VİOP Nezdinde Türk Lirası Uzlaşmalı Vadeli Döviz işlemleri TCMB Web Sitesinde işlem valör tarihleri bazında günlük olarak yayınlanmaya başlanmıştır
4 Mart 2021	Bankaların repo işlemleri karşılığı TCMB'ye getirebilecekleri kıymetler arasına Hazine ve Maliye Bakanlığınca kurumsal yatırımcılara ihracı yapılan döviz, döviz endeksli ve altın cinsi devlet iç borçlanma senetleri dâhil edilmiştir.
19 Mart 2021	Politika faizi oranı olan 1 hafta vadeli repo ihale faiz oranı ile döviz karşılığı TL swap işlemleri ve TL karşılığı altın swap işlemlerinde uygulanan TL faiz oranı yüzde 17'den yüzde 19'a yükseltilmiştir.

2. Zorunlu Karşılıklar (ZK)1

Yürürlük Tarihi	Tedbir / Düzenleme
27 Kasım 2020	TL cinsinden ZK'lara ödenen faiz/nema oranı tüm bankalar için yüzde 12'ye yükseltilmiş, ABD doları cinsinden mevduat/katılım fonu yükümlülükleri için tesis edilen ZK'lara yüzde 1,25 olarak uygulanan komisyon oranı yüzde 0'a düşürülmüştür.
25 Aralık 2020	Parasal aktarım mekanizmasının etkinliğini artırmak amacıyla sade bir zorunlu karşılık sistemine geçilmesine karar verilmiştir. ZK oranları ve ZK faiz/nema oranlarında kredi büyümesine göre farklılaşma uygulaması kaldırılmış ve TL ve YP ZK oranları tüm bankalar için aynı seviyede olacak şekilde yeniden belirlenmiştir.
5 Mart 2021	TL ZK oranlarının tüm vade dilimlerinde ve yükümlülük türlerinde 200 baz puan artırılmasına ve TL ZK'lara ödenen faiz/nema oranının 150 baz puan artışla yüzde 13,5'e yükseltilmesine karar verilmiştir. Ayrıca TL ZK'ların döviz cinsinden tesis edilebilmesi imkânı azami oranı yüzde 30'dan yüzde 20'ye, standart altın cinsinden tesis edilebilmesi imkânı azami oranı yüzde 20'den yüzde 15'e düşürülmüştür

3. İhracat ve Döviz Kazandırıcı Hizmetler Reeskont Krediler

Yürürlük Tarihi	Tedbir / Düzenleme
4 Ocak 2021	20 Mart 2020 tarihinde küresel ekonomik belirsizlikler ile uluslararası ticarete yaşanan güçlüklerin reel sektör firmaları üzerindeki olası etkilerinin hafifletilmesi amacıyla 720 güne yükseltilen, 7 Ağustos 2020 tarihinde ise 360 güne indirilen ihracat ve döviz kazandırıcı hizmetler reeskont kredilerinin azami vadesi 240 gün olarak güncellenmiştir. Yeni pazarlara yapılan ihracat, yüksek teknolojlü ürün ihracatı ve döviz kazandırıcı hizmetlerin finansmanı amacıyla kullanılan krediler için ise azami vade 360 gün olarak belirlenmiştir

4. Mevduat / Katılım Fonları, Kredi Kartları ve Ödeme Sistemleri

Yürürlük Tarihi	Tedbir / Düzenleme
18 Aralık 2020	BDDK tarafından yapılan değişiklikle kredi kartlarında taksitlendirme süreleri: - Basılı ve külçe halinde olmayan kuyumla ilgili harcamalarda 8 aydan 6 aya, - Fiyatı 3.500 TL'ye kadar olan televizyon alımları hariç elektronik eşya alımlarında 6 aydan 4 aya, - Mobilya ve elektrikli eşya alımlarında 18 aydan 12 aya indirilmiştir.
23 Aralık 2020	3321 Sayılı Cumhurbaşkanlığı Kararıyla, 30 Eylül 2020 – 31 Aralık 2020 tarihleri arasında açılan veya vadesi bu tarihler arasında yenilenen mevduat/katılım fonlarında uygulanan stopaj oranlarını, - Vadesiz ve ihbarlı hesaplar ile 6 aya kadar (6 ay dâhil) vadeli hesaplarda yüzde 15'ten yüzde 5'e, - 1 yıla kadar (1 yıl dâhil) vadeli hesaplarda yüzde 12'den yüzde 3'e, - 1 yıldan uzun vadeli hesaplarda yüzde 10'dan yüzde 0'a indirilmesinde uygulamanın süresi 31 Mart 2021 tarihine uzatılmıştır
31 Aralık 2020	TCMB, bankalarca ticari müşterilerden ve finansal tüketicilerden tahsil edilen ücretlere ilişkin tebliğlerde, FAST işlemleri karşılığında alınabilecek ücretin EFT işlemleri ücret sınırlamalarına tabi olmasına ve EFT sisteminin resmi çalışma saatleri dışında gerçekleştirilen FAST işlemleri için söz konusu azami ücretlerin yüzde 50 artırımlı olarak uygulanmasına yönelik değişiklik yapmıştır
10 Şubat 2021	BDDK, bankaların, bankalar adına kıymetli maden değerlendirme ve toplama hizmeti veren anlaşmalı kuyumcular ve kıymetli maden eksperleri tarafından banka müşterilerinin altın cinsinden mevduat/özel cari/katılım hesaplarına alacak kaydetmek üzere topladıkları fiziki altınların asgari milyem değerlerini belirlemiştir
1 Nisan 2021	3755 sayılı Cumhurbaşkanlığı Kararıyla, mevduat/katılım fonlarında uygulanan stopaj oranlarının indirim süresi 31 Mayıs 2021 tarihine kadar uzatılmıştır

30 Nisan 2021 TCMB tarafından yayımlanan Ödemelerde Kripto Varlıkların Kullanılmamasına Dair Yönetmelik'te,
- Kripto varlıkların ödemelerde doğrudan veya dolaylı şekilde kullanılamayacağı, buna yönelik hizmet sunulamayacağı,
- Ödeme hizmeti sağlayıcılarının, ödeme hizmetlerinin sunulmasında ve elektronik para ihracında kripto varlıkların doğrudan veya dolaylı olarak kullanılacağı bir şekilde iş modelleri geliştiremeyeceği, bu tür iş modellerine ilişkin herhangi bir hizmet sunamayacağı,
- Ödeme ve elektronik para kuruluşlarının, kripto varlıklara ilişkin alım satım, saklama, transfer veya ihrac hizmeti sunan platformlara veya bu platformlardan yapılacak fon aktarımlarına aracılık edemeyeceği belirtilmiştir.

1 Mayıs 2021 3941 Sayılı Cumhurbaşkanlığı Kararıyla, kripto varlık hizmet sağlayıcıları ve tasarruf finansman şirketleri suç gelirlerinin aklanması ve terörün finansmanının önlenmesine dair Yönetmelik kapsamına dâhil edilmiştir.

5. Kredi Kullanımına ve Borç Ödemelerine Dönük Düzenlemeler

Yürürlük Tarihi Tedbir / Düzenleme

8 Aralık 2020 KGF, Avrupa Yatırım Fonu aracılığıyla yürütülen COSME-İşletmelerin ve KOBİ'lerin Rekabet Edebilirliği Programı kapsamında KOBİ'lere 1 yılı ödemesiz olmak üzere asgari 36 azami 60 aya kadar vadeli 7,5 milyar TL tutarında kredi destek paketi hazırlamıştır. KOBİ'ler bu kapsamda 1 milyon 125 bin TL'ye kadar kredi kullanabilecektir.

21 Aralık 2020 Dünya Bankası tarafından Türkiye'de KOSGEB aracılığıyla 300 milyon ABD doları finansman sağlayacağı duyurulmuştur. Koronavirüs salgınının mikro ve küçük ölçekli işletmeler (MKİ'ler) üzerindeki yıpratıcı etkileri dikkate alınarak tasarlanan bu proje ile öncelikli sektörlerdeki MKİ'lere hızlı ve kolay erişimli işletme sermayesi desteği verilerek, MKİ'lerin faaliyetlerini ve istihdam seviyelerini sürdürmelerinin sağlanması amaçlanmaktadır. Destek programı: -İmalat sektöründeki MKİ'lere "faizsiz geri ödemeli destek" ve -2017 ve sonrasında kurulan ve imalat, bilgisayar programlama ve bilimsel Ar-Ge sektörlerinde faaliyet gösteren genç inovatif MKİ'lere "faizsiz geri ödemeli destek" veren iki bileşenden oluşmaktadır.

24 Aralık 2020 Ticaret Bakanlığınca, koronavirüs salgını nedeniyle ticari faaliyetleri olumsuz etkilenen esnaf ve sanatkârlara ve gerçek kişi tacirlere yönelik hibe desteği programı açıklanmıştır. Buna göre,
-Hibe, gelir kaybı desteği ve kira desteği olarak verilecek,
-Gelir kaybı desteği 3 ay süreyle aylık 1000 TL,
-İş yeri kira olanlara kira desteği 3 ay süreyle, büyükşehirlerde 750 TL, diğer illerde 500 TL, kira bedelinin kira destek tutarının altında olması durumunda iş yeri kira bedeli olarak belirlenmiştir.

26 Aralık 2020 Ticaret Bakanlığı, perakende işletmelerce tüketicilere yönelik gerçekleştirilen taksitli satışlara yönelik uygulamaları yeniden düzenlemiştir. Buna göre:
-Video, kamera ve ses sistemi gibi elektronik eşya satışları ile fiyatı 3.500 TL'nin üstünde olan televizyon satışlarında taksit süresi 6 aydan 4 aya çekilmiştir.
-Buzdolabı, çamaşır makinesi, bulaşık makinesi ve elektrikli ev aletleri gibi elektrikli eşya satışları ve mobilya satışlarında daha önce 18 olan taksit sayısı sınırı 12'ye indirilmiştir.
-Perakende işletmelerce basılı ve külçe halinde olmayan kuyum satışlarında taksitlendirme süresi sınırı 8 adan 6 aya çekilmiştir.

29 Aralık 2020 3340 Sayılı Cumhurbaşkanı Kararı ile Halkbank'ın,
- Önceki yıllarda alınan kararlar kapsamında Esnaf ve Sanatkâr Kredi ve Kefalet Kooperatifleri (ESKKK) kefaletiyle veya doğrudan kullandığı bakiyesi 2021'e devreden krediler ile 1 Ocak -31 Aralık 2021 arasında kullanılacak kredilere yüzde 50 oranında,
- Söz konusu kredilerden Karar ile belirlenen bazı özel koşulları taşıyan kredilere ise yüzde 100 oranında faiz indirimi uygulanmasına, bu Karar kapsamında açılan kredilerden doğacak gelir kayıplarının Hazine ve Maliye Bakanlığı'nca karşılanmasına

	karar verilmiştir.
13 Şubat 2021	Çevre ve Şehircilik Bakanlığı'nca kentsel dönüşüme yönelik banka kredisi faiz destekleri yeniden düzenlenerek, hak sahiplerince bankalardan kullanılacak kredilere sağlanacak faiz desteklerinde, kredi anapara tutarı için belirlenen üst limitlerin artırıldığı duyurulmuştur. Hak sahipliği bazında destek sağlanacak kredi anapara tutarı için üst limit, "güçlendirme" kredilerinde 50 bin TL'den 80 bin TL'ye, "konut yapım", "konut edindirme", "iş yeri yapım" ve "iş yeri edindirme" kredilerinde ise 125 bin TL'den 200 bin TL'ye yükseltilmiştir. Bir hak sahibi adına faiz desteği sağlanacak toplam kredi tutarı da 625 bin TL'den 1 milyon TL'ye çıkarılmıştır.
1 Mart 2021	TCMB tarafından Bankalarca Ticari Müşterilerden Alınabilecek Ücretlere İlişkin Usul ve Esaslar Hakkında Tebliğ'de yapılan değişiklikle, bankaların ticari müşterilere kullanılan nakdi krediler için kredi miktarının yüzde 1'ine kadar alabilecekleri kredi kullandırım ücreti yüzde 1,1'e yükseltilmiştir. 1 Mart 2021 tarihinden itibaren kullanılan kredilerde ticari müşterinin kredinin tamamı için erken ödeme talebinde bulunması halinde bankalar bu talebi kabul etmek durumunda olup, bu müşterilerden TL krediler için gerekli faiz ve diğer maliyet unsurlarına ilişkin indirimler yapılarak hesaplanan ve müşteri tarafından bankaya erken ödenen tutarın, kalan vadesi 24 ayı aşmayan kredilerde yüzde 2'sine, kalan vadesi 24 ayı aşan kredilerde ise yüzde 2'nin üzerine kalan vadenin 24 ayı aşan kısmındaki her bir yıl için yüzde 1 eklenerek hesaplanan tutara kadar erken ödeme ücreti alınabilecektir. Söz konusu hesaplamada kalan vadenin 24 ayı aşan kısmındaki süreler yıla tamamlanacak olup, döviz cinsi veya dövize endekli kredilerde ise TL krediler için uygulanacak azami ücretin bir puan artırımlı hali uygulanabilecektir.
12 Mart 2021	Hazine ve Maliye Bakanlığı tarafından açıklanan Ekonomi Reformları Eylem Planı kapsamında; -KGF teminatı ile 5. ve 6. bölgelerde imalata dayalı, ithal ikamesi ve ihracatı önceleyen yatırımlara uzun vadeli kredi desteği sağlanması, -İlave İstihdama Finansman Desteği kapsamında mikro ve küçük işletmelerde ilave istihdam başına 100 bin TL (en fazla 500 bin TL) KGF kefaletli kredi imkânı verilmesi, bu kapsamda 2 yıl vade (6 aya kadar ödemesiz dönem) kullandırım sağlanması, -İstihdama katılan her 1 kişi için 12 ay boyunca ödenen sosyal sigorta ve işsizlik sigortası primlerinin kredi faiz bakiyesinden düşülmesi, -KOBİ'lerin Devlet Destekli Alacak Sigortası Sistemi ile güvence altına alınan alacaklarının bankalar nezdinde teminat olarak kabul edilmesi, imkânları getirilmiştir.
16 Mart 2021	Ticaret Bakanlığı, perakende işletmelerce gerçekleştirilecek taksitli mal ve hizmet satışlarında taksitlendirme süresini 12 ay olarak sınırlayan genel hükme tabi olan konut ve taşıt satışların taksitlendirme süreleri yeniden düzenlenmiştir. Buna göre, konut satışları için taksit sınırlaması kaldırılmış, taşıt satışlarının ise taşıtın değerine göre 24 ile 60 ay arasında taksitli satışa konu olabileceği hükme bağlanmıştır
16 Nisan 2021	BDDK, Ekonomi Reformları Eylem Planı doğrultusunda "Bireysel Bankacılık Analiz ve Derecelendirme Modeli (BAM)" geliştirilmiştir. BAM ile halihazırda yapılmakta olan mevzuata uygunluk denetimine ilaveten proaktif bir bakış açısıyla banka işleyişinin, iş modelinin, strateji ve politikalarının finansal tüketicilerin hak ve menfaatleri kapsamında değerlendirilmesi ve bu doğrultuda kural ve standartlar oluşturularak en iyi uygulamaların yaygınlaştırılması amaçlanmaktadır.
23 Nisan 2021	Resmi Gazete'de yayımlanan 31463 sayılı Cumhurbaşkanı kararı ile yeni koronavirüs nedeniyle dışsal etkenlerden kaynaklanan dönemsel durumlar kapsamında zorlayıcı sebep gerekçesiyle kısa çalışma uygulanan işyerleri için kısa çalışma ödeneğinin süresi 30 Haziran 2021 tarihine kadar uzatılmıştır.
30 Nisan 2021	Ticaret Bakanlığı, salgın tedbirleri kapsamında esnaf ve sanatkar için 2021 yılının ilk üç ayı olarak belirlenen 1.000 TL hibe desteği ile büyükşehirlerde 750 TL, diğer illerde ise 500 TL olarak sağlanan kira desteğinin uygulama süresinin bir ay uzatıldığını açıklamıştır.

1 Mayıs 2021	KOSGEB vasıtasıyla imalat sektörlerinde çalışan mikro ve küçük ölçekli işletmeler ile teknoloji tabanlı start-up'lar için toplamda 5 milyar TL bütçeli yeni bir destek programı başlatılmıştır. Buna göre mikro işletmeler 30 bin TL'ye kadar, küçük işletmeler ise 75 bin TL'ye kadar olmak üzere, 3 yıl geri ödemesiz ve tamamı faizsiz şekilde destekten faydalanabilecektir. Ayrıca TESKOMB ve Halkbank aracılığıyla esnafa kullanılan kredilerin taksit ödemeleri, 1 Temmuz 2021 tarihine kadar ertelenmiştir
21 Mayıs 2021	Resmi Gazetede yayınlanan 3998 sayılı Cumhurbaşkanı kararı ile salgın nedeniyle zarar gören esnafa iki grup halinde toplam 4 milyar 622 milyon TL hibe desteği verileceği açıklanmıştır. Bu bağlamda, - İlk grupta yer alan; kahve, kafe, çay bahçesi, okul personel servisi, düğün salonu, öğrenci yurdu, kantin, kırtasiye, hamam gibi 235 bin esnafa 5 bin TL, - İkinci grupta yer alan 1 milyon 150 bin esnafa ise 3 bin lira hibe desteği sağlanacaktır.
25 Mayıs 2021	31491 sayılı Resmi Gazetede yayınlanan değişiklikle 2021 yılı Mart dönemine ilişkin bildirilen hizmet beyannamelerindeki sigortalı sayısı 50'nin altında olan özel sektör işverenlerinin 1 Temmuz 2021 ila 30 Haziran 2022 tarihleri arasında ilave istihdam sağlamaları durumunda, bu sigortalılar için prime esas kazanç alt sınır üzerinden hesaplanan ve tamamı yasal süresi içinde ödenen sigorta primi ve işsizlik sigortası sigortalı ve işveren hissesi primlerinden sağlanan prim teşvik, destek ya da indirimleri düşüldükten sonra kalan tutar, ilgili işverenlerce 30 Haziran 2022 tarihine kadar kullanılan kredilerde 12 aylık süreye ilişkin primlerin ödenmesini müteakip kredi faiz veya kar payı bakiyesinden düşülecektir. Bu madde kapsamında kredi garanti kurumlarınca kredi faiz veya kar payı bakiyesinden düşülen tutar Fondaya karşılanacaktır.
26 Mayıs 2021	Hazine ve Maliye Bakanlığı, KOBİ'lere finansman desteği için 10 bankanın katılımıyla, TOBB ve KGF işbirliğinde 2021 Nefes Kredisi paketi başlatılacağını açıklamıştır. Bu kapsamda, - Faiz oranı yıllık yüzde 17,5 olarak belirlenmiştir. 6 ay ödemesiz dönem imkânı ile beraber kredi geri ödemeleri 12 eşit taksitte yapılacaktır. - Paket kapsamında 2020 yılı cirosu 1 milyon TL'yi aşmayan KOBİ'ler azami 50 bin TL, cirosu 1-10 milyon TL arasında olan KOBİ'ler ise azami 200 bin TL kredi kullanabilecektir. - Bu paket ile yıllık cirosu 10 Milyon TL altında olan ve 2020 yılı cirosunda 2019 yılına göre yüzde 25 kayıp yaşayan; Ticaret, Deniz Ticaret, Sanayi, Ticaret ve Sanayi veya Ticaret Borsası'na kayıtlı üyelere işletme sermayesi finansman imkânı sağlanacaktır. - 1 Haziran 2021'den itibaren uygulanmaya başlayacak olan pakette Hazine destekli KGF kefaleti sağlanacaktır.

Sonuç

Covid-19 salgını dünya çapında ekonomik faaliyetleri ciddi şekilde etkilemektedir. Pandemi nedeniyle büyüme oranında düşüş, işsizlik oranında artış, enflasyon oranında artış, ödemeler dengesinde bozulma, bütçe dengesinde bozulma ve dış finansmanda zorluklar yaşanmaktadır. Pandeminin ekonomi üzerindeki olumsuz etkilerini giderebilmek için her ülke kendine has ekonomik tedbir yolları aramaya başlamıştır.

Hala etkisini sürdüren COVID-19 Pandemisine bağlı olarak ortaya çıkan ekonomik zorluklar Türkiye'yi de etkisi altına almıştır. Salgının hızını azaltabilmek için ise bazı tedbirler alınmış ve alınan tedbirler Türkiye'de ekonomik ve sosyal yaşamı durdurma noktasına getirmiştir. Pandeminin ekonomi üzerindeki olumsuz etkilerini giderebilmek için para politikası ve maliye politikası araçları kullanılmıştır. Türkiye'de bu etkileri azaltmak amacıyla 18.03.2020 tarihinde "Ekonomik İstikrar Kalkanı" destek paketi yayınlanmıştır.

Covid-19 pandemisine karşı para politikaları kapsamında; faiz indirimlerine gidilmiş, kredi kolaylıkları sağlanmış, para basma yoluna gidilmiş, bazı sektörler doğrudan destekte bulunulmuştur. İlk parasal tedbir, merkez bankalarının para piyasasında genişletici etki yaratabilmek için faiz indirimlerine gitmesi

ile başlatılmıştır. Ayrıca kriz sürecinde firmaların ve hane halkının kırılganlığını minimuma indirmek amacıyla vergi erteleme, yapılandırma kararları, genişletici harcama politikaları, doğrudan gelir transferlerini içeren genişletici maliye politikaları da uygulamaya konulmuştur.

Covid-19 pandemisinin reel sektöre ve hane halkına yönelik olumsuz yansımalarını sınırlamayı teminen alınan iktisadi faaliyeti ve makrofinansal istikrarı destekleyici tedbirlerin bir kısmı iktisadi faaliyetin 2020 yılının son çeyreğinde güçlü seyrini koruması sonucunda kademeli olarak gevşetilmiştir. Diğer taraftan salgının seyrine dair küresel çapta süregelen belirsizliklerin de etkisiyle devam eden riskleri yönetmek için sıkı para politikası duruşuyla birlikte bazı tedbirlerin uygulanmasına devam edilmiş veya ilave tedbirler alınmıştır.

Özet: Dünyada ilk olarak Çin'in Wuhan kentinde 2019 yılı Aralık ayında ortaya çıkarak tüm dünyaya yayılan Covid-19 salgını, 11 Mart 2020 tarihinde Dünya Sağlık Örgütü tarafından pandemi (salgın) olarak ilan edilmiştir. Pandeminin ilan edilmesinden sonra tüm ülkeler salgının önlenmesi için sert tedbirler almışlardır. Pandemiden korunma ve tedavi sürecinde uygulanan bu sert tedbirler, ülkelerin ekonomileri üzerinde negatif yönde etkiler yaratarak, ekonomik faaliyetlerin durma noktasına gelmesine neden olmuş ve bir çeşit küresel krize yol açmıştır. Ekonomik sorunların başında büyüme oranında düşüş, işsizlik ve enflasyon oranında artış, ödemeler dengesinde ve bütçe dengesinde bozulma ve dış finansmanda zorluklar gelmektedir. Pandeminin ekonomi üzerindeki olumsuz etkilerini giderebilmek için her ülke kendine has ekonomik tedbir yolları aramaya başlamıştır. Bu kapsamda ülkeler kriz karşısında genişletici ekonomi politikalarını hızla devreye sokmuşlar ve iç piyasalarını korumak için acil para ve maliye politikası önlem paketleri hazırlamışlardır. Pandemiye bağlı olarak ortaya çıkan ekonomik zorluklar Türkiye'yi de etkisi altına almıştır. Türkiye'de ilk vaka 11 Mart 2020 tarihinde Sağlık Bakanı tarafından açıklanmıştır. Salgının hızını azaltabilmek için alınan tedbirler, Türkiye'de ekonomik ve sosyal yaşamı durdurma noktasına getirmiştir. 2020 Mart ayı ortalarından itibaren iç talep kanalıyla ekonomik faaliyetler, dış ticaret ve turizm sınırlandırmaya başlamış, özellikle taşımacılık sektöründe hava taşımacılığı bu süreçten yoğun olarak etkilenmiştir. Bu çalışma ile Türkiye'de Covid-19 salgınının işsizlik üzerine etkisi incelenmiş ve ayrıca istihdama yönelik düzenlemeler ve alınan önlemler açıklanmaya çalışılmıştır.

Anahtar Kelimeler: Covid-19, İşsizlik, İstihdam.

Effect of COVID-19 Pandemic on Unemployment

Abstract: The Covid-19 pandemic, which first appeared in Wuhan, China in December 2019 and spread all over the world, was declared as a pandemic (epidemic) by the World Health Organization on March 11, 2020. After the pandemic was declared, all countries took drastic measures to prevent the epidemic. These drastic measures applied in the process of protection and treatment from pandemics had negative effects on the economies of the countries. It caused economic activities to come to a standstill and led to a kind of global crisis. The main economic problems are the decrease in growth rate, increase in unemployment and inflation rate, deterioration in the balance of payments and budget balance and difficulties in external financing. In order to eliminate the negative effects of the pandemic on the economy, each country has started to seek specific economic measures. In this context, countries have rapidly implemented expansionary economic policies in the face of the crisis and prepared emergency monetary and fiscal policy measures to protect their domestic markets. Economic difficulties arising due to the pandemic Turkey has also influenced. The first case in Turkey is explained by the Minister of Health on March 11, 2020. In order to reduce the speed of the epidemic, some measures were taken and the measures taken has brought the economic and social life has come to a standstill in Turkey. As of mid-March 2020, economic activities, foreign trade and tourism have begun to be limited through domestic demand, and especially in the transport sector, air transport has been heavily affected by this process. This study examined the effects of Covid-19 pandemic on unemployment in Turkey and in addition the regulations regarding employment and the measures take were tried to be explained.

Keywords: Covid-19, Unemployment, Employment.

1. GİRİŞ

Dünyada ilk olarak Çin'in Wuhan kentinde 2019 yılı Aralık ayında ortaya çıkarak tüm dünyaya yayılan Covid-19 Pandemisi, 11 Mart 2020 tarihinde Dünya Sağlık Örgütü (DSÖ) tarafından pandemi (salgın) olarak ilan edilmiştir. Pandeminin ilan edilmesinden sonra tüm ülkeler salgının önlenmesi için sert tedbirler almışlardır. Alınan tedbirler ise ekonomik faaliyetlerin durma noktasına gelmesine neden olmuştur. Salgın insan sağlığı ile birlikte ülke ekonomilerini de etkilemiştir. Dünyayı etkisi altına alan salgından dolayı tüm ülkeler ekonomik kriz ile karşı karşıya kalmıştır.

Covid-19 Pandemisi birçok ülkede uygulanan sokağa çıkma yasağı, sosyal karantina uygulaması, iş yerlerinin, spor tesislerinin ve eğitim kurumlarının kapatılması, uluslararası giriş ve çıkışların sınırlandırılması gibi sıkı tedbirler, hem ekonomik hem de sosyal yönden negatif etkilerin doğmasına neden olmuştur. “Dünyada yaşanan bu pandemi tarım, ticaret, sanayi, ulaşım, finans ve bankacılık, sağlık, havayolları ve enerji piyasaları gibi birbirine bağlı pek çok sektörü olumsuz olarak etkileyen bir durgunluğa yol açmıştır” (Duran ve Acar, 2020: 57). Pandemiden korunma ve tedavi sürecinde uygulanan tedbirler sonuçta küresel ekonomik bir krize yol açmıştır. Ülkelerin karşı karşıya kaldığı arz/talep şoklarının etkisi ile üretim, istihdam, toplam talep, enflasyon ve finansal istikrar gibi temel iktisadi konularda kriz sinyalleri izlenmeye başlanmıştır (Bölükbaş, 2020: 51). Kriz büyüme oranında düşüş, işsizlik oranında artış, enflasyon oranında artış, dış finansmanda zorluklar, ödemeler dengesinde ve bütçe dengesinde bozulmalar şeklinde kendini göstermeye başlamıştır.

Ekonomi üzerindeki olumsuz etkilerin giderilebilmesi için her ülke kendine has ekonomik tedbir yolları aramaya başlamıştır.

Tedbirler kapsamında üretici ve tüketiciyi destekleme yoluna başvurulmuş, bu kapsamda ülkeler kriz karşısında genişletici ekonomi politikalarını hızla devreye sokmuşlardır. Bu amaç doğrultusunda dünya genelinde ülkeler iç piyasalarını korumak için acil para ve maliye politikası önlem paketleri hazırlamışlardır.

Covid-19 Pandemisine karşı para politikaları kapsamında; para basma, faiz indirimleri, kredi kolaylıkları, bazı sektörlerle yönelik doğrudan destek uygulamaları yapılmıştır. İlk parasal tedbir, merkez bankalarının para piyasasında genişletici etki yaratabilmek için faiz indirimlerine gitmesi ile başlatılmıştır. Ayrıca kriz sürecinde firmaların ve hane halkının kırılma noktasını minimuma indirmek amacıyla vergi erteleme, yapılandırma kararları, genişletici harcama politikaları, doğrudan gelir transferlerini içeren genişletici maliye politikaları da uygulamaya konulmuştur (Kaya, 2020: 233).

Pandemiye bağlı olarak ortaya çıkan ekonomik zorluklar Türkiye’yi de etkisi altına almıştır. Salgının hızını azaltabilmek için küresel çapta olduğu gibi Türkiye’de de uygulanan sokağa çıkma yasağı, iş saatlerinin kısaltılması, esnek çalışma sisteminin uygulanması, iş yerlerinin kapatılması gibi alınan pek çok tedbir, ülkede ekonomik ve sosyal yaşamı durma noktasına getirmiştir. Özellikle 2020’nin Mart ayı ortalarından itibaren, iç talep kanallarıyla ekonomik faaliyetler, dış ticaret ve turizm sınırlandırılmaya başlanmış olup, bu durum taşımacılık sektörünü özellikle de hava taşımacılığını derinden etkilemiştir.

2. COVID-19 PANDEMİSİNİN İŞSİZLİK ÜZERİNE ETKİSİ

Covid-19, tüm ekonomik sektörlerde farklı etkiler doğurmuştur. Krizden olumsuz olarak etkilenen sektörler olduğu gibi, bu süreçte üretim hacmini artırarak kârlı çıkan sektörler de olmuştur. Alkol, dezenfektan ve temizlik malzemelerine artan ihtiyaç neticesinde, bu maddeleri üreten şirketlerin üretim hacmi ve karlılığı artmıştır (Balci ve Çetin, 2020: 43). Faaliyetlerini tamamen durdurmamayan işletmeler ise birtakım kurallara uymak şartıyla faaliyetlerine devam etmiştir. Bunlara örnek olarak maske kullanımı, kapalı ortamlarda mesafe kuralı, kapalı ortamlarda aynı anda bulunabilecek insan sayısı, hijyen kural ve tedbirleri söylenebilir.

İşgücü piyasaları açısından bakacak olursak, ekonomideki daralma genel olarak üretim hacminin düşmesi ve buna bağlı olarak işsizlik oranlarında artışa sebep olmuştur.

Ayrıca Pandemi nedeniyle çalışma hayatına yapılan düzenlemeler, esnek çalışma ve kısmi çalışma gibi farklı istihdam türlerini ön plana çıkarmıştır. Eski günlere nazaran daha az iş yapabilen işletmeler ise işçilerinden bir kısmına süreli veya süresiz ücretsiz izin vermişlerdir. Kriz, iş gücü arzını olumsuz yönde etkilediği gibi işgücü talebinde de düşüşe neden olmuştur (Bulut ve Pınar, 2020: 219).

İşsizlik tahmin hesaplamalarına göre 2020 yılı sonunda işsizliğin gelişmiş ülkelerde %8,3’e, dünya genelinde ise %9,7’ye yükselmesi öngörülmektedir. 2021 yılında işgücü piyasalarına yönelik uygulamaya konulan politikalar neticesinde gelişmiş ülkelerde işsizlik oranının %7,2 gerilemesi öngörülmektedir. Ancak 2021 yılında dünya genelinde işsizlik oranlarının %9,8 ile neredeyse değişim göstermemesi beklenmektedir (Kaya, 2020: 230).

Türkiye’de de Pandeminin işsizlik üzerindeki etkisini azaltmak, iş ve çalışma dünyasını desteklemek amacıyla çok sayıda adımlar atılmıştır. Bu adımlar arasında kısa süreli çalışma planları, ücret sübvansiyonları ve firmalara yönelik destekler bulunmaktadır. Türkiye’de bu etkileri azaltmak amacıyla 18.03.2020 tarihinde “Ekonomik İstikrar Kalkanı Paketi Destek Programı” yayınlanmıştır.

Kısa Çalışma Ödeneği; İşyerindeki çalışma sürelerinin geçici olarak azaltılması veya durdurulması hallerinde, üç ayı aşmamak üzere sigortalılara çalışmadıkları dönem için gelir desteği sağlayan bir uygulamadır. Kısa Çalışma Ödeneği, çalışılmayan süreler için işçinin kendisine ödenir (İŞKUR).

3. PANDEMİDE İSTİHDAMA YÖNELİK DÜZENLEMELER VE ALINAN ÖNLEMLER

2020 yılı Mart ayı içerisinde alınan kararlarla birlikte esnek çalışma ve uzaktan çalışma modelleri desteklenerek yaygınlaşması sağlanmıştır. Kısa çalışma ödeneğinden faydalanmak için gerekli olan 600 gün prim şartı 450 güne indirilerek son 120 günde prim ödemiş olma şartı da 60 güne çekilmiştir. Başvuru için gerekli belge sayısı azaltılarak daha fazla kişinin kısa çalışma ödeneğinden yararlanması sağlanmıştır. Çalışılmayan sürelerin daha sonraki dönemlerde çalışılabilmesi anlamına gelen telafi çalışma süresi daha önceleri 2 ay iken bu düzenlemeyle birlikte 4 aya çıkarılmıştır. 2020 yılının tamamı için asgari ücret desteği verilmesi yönünde karar alınmış ve bu süreçte 32 bin sağlık personelinin istihdam edilmesi kararlaştırılmıştır (Cumhurbaşkanlığı Strateji ve Bütçe Başkanlığı, 2020).

Mart 2020’de atılan adımlar Nisan 2020’de de devam etmiştir. Turizm sektöründe çalışmakta iken iş akitleri askıya alınmış olan çalışanların bir kısmı kısa çalışma ödeneği kapsamına alınmış olup, Nisan ayı içerisinde sigorta girişi yapılanlar bu hizmetten yararlanma hakkına sahip olmuştur. Çalışanlar işveren tarafından ücretsiz izne ayrılan ile 15 Mart 2020 tarihinden sonra iş akitleri feshedilen buna rağmen işsizlik sigortasından yararlanmak için gerekli şartları taşımayan çalışanlara 3 ay boyunca günlük 39,24 TL ödeme yapılması kararı alınmıştır. Kısa çalışma ödeneğinin bağlanmasından önce tamamlanması gereken uygunluk tespiti beklenmeksizin çalışanın beyanına göre kısa çalışma ödeneği bağlanması yönünde karar alınmıştır. Bu sayede çalışanların kısa süre içinde haklarına erişmeleri önünde bir engel daha kaldırılmıştır. Toplu iş sözleşmesi uyarınca yürütülen yetki ve uygulamalar üç ay süreyle uzatılmış, 4857 sayılı İş Kanunu’na eklenen Geçici İstihdam Güvencesi başlıklı geçici madde işle işten çıkarma uygulamaları 3 ay süreyle yasaklanmıştır. İşten çıkarma yasağı ilk etapta üç ayla sınırlandırılmasına rağmen, dönemler halinde uzatılarak uygulanmasına devam edilmiştir. 23 Temmuz 2020 tarihli son değişiklik ile birlikte bu süreyi uzatma yetkisi cumhurbaşkanlığına aktarılmış ve uzatılabilecek son tarih olarak 30 Haziran 2021 tarihi belirlenmiştir (Cumhurbaşkanlığı Strateji ve Bütçe Başkanlığı, 2020).

23 Temmuz 2020’de kabul edilen kanun teklifi ile birlikte, Cumhurbaşkanlığı tarafından Kısa Çalışma Ödeneğinden faydalanma süresinin 31 Aralık 2020 tarihine kadar uzatılmıştır. Kısa Çalışma Ödeneği alanlar ile nakdi ücret desteğinden faydalananlar arasında çalıştıkları işyeri tekrar normal çalışma düzenine geçenlerin sigortalı ve işveren paylarının tamamının 31 Aralık 2020 tarihine kadar 3 ay süreyle İşsizlik Sigorta Fonu’ndan karşılanmasına karar verilmiştir (Cumhurbaşkanlığı Strateji ve Bütçe Başkanlığı, 2020).

3 Eylül 2020’de İşten çıkarma yasağı Cumhurbaşkanı Kararı ile 17 Eylül’den itibaren 2 ay süreyle uzatılmıştır.

27 Ekim 2020’de Kısa Çalışma Ödeneği süresi 2 ay uzatılmıştır. Kısa çalışma, sözleşme fesih yasağı ve Pandemi ücretsiz iznini, iki ay uzatan Cumhurbaşkanı kararı, Resmi Gazetede yayımlanmıştır (Resmi Gazete, 27 Ekim 2020, Karar Sayısı: 3134). Bu durumda; Kısa Çalışma Ödeneği 31.12.2020 tarihine kadar uzatılmıştır.

27 Ekim 2020’de İşten çıkarma yasağı ve Pandemi Ücretsiz İzin Ödeneği 17.01.2021 tarihine kadar uzatılmıştır (Resmi Gazete, 27 Ekim 2020, Karar Sayısı: 3135).

1 Aralık 2020’de Yeni Koronavirüs (Covid-19) Nedeniyle Dışsal Etkilerden Kaynaklanan Dönemsel Durumlar Kapsamındaki Zorlayıcı Sebep Gerekçesiyle Yapılan Kısa Çalışma Ödeneği Başvuru Süresi 31 Aralık 2020 tarihine kadar uzatılmıştır (31321 sayılı Resmi Gazete, 1 Aralık 2020, Karar Sayısı: 3238).

2 Aralık 2020 tarih ve 31322 sayılı Resmi Gazetede yayımlanan Cumhurbaşkanı kararlarıyla istihdam teşviklerinde ve normalleşme desteğinde süre uzatımına gidilmiştir.

İlave İstihdam Teşviği ile bir önceki yılın ortalama sigortalı sayısına ilave istihdam edilenler için sağlanan prim desteği uygulaması sürecektir.

Normal çalışma düzenine geçen iş yerlerimiz için Normalleşme Desteği adı altında destekler de devam etmektedir (Sosyal Güvenlik Kurumu). Bu sayede istihdamı korumak hedeflenmiştir.

Karara göre;

- İlave İstihdam Teşviki süresi 31 Aralık 2022'ye kadar uzatılmıştır.
- Normalleşme Desteği 30 Haziran 2021'e kadar uzatılmış, 3 ay olan yararlanma süresi 6 aya çıkarılmıştır.
- Kadın, genç ve mesleki yeterlilik belgesi olanların istihdamına uygulanan teşvik süresi ise 31 Aralık 2022'ye kadar uzatılmıştır.

19 Şubat 2021'de Yeni Koronavirüs (Covid-19) Nedeniyle Dışsal Etkilerden Kaynaklanan Dönemsel Durumlar Kapsamındaki Zorlayıcı Sebep Gereğiyle Kısa Çalışma Uygulanan İşyerleri İçin Kısa Çalışma Ödeneğinin süresi 31.03.2021 tarihine kadar uzatılmıştır (31400 sayılı Resmi Gazete, 19 Şubat 2021, Karar Sayısı: 3556; İzmir Ticaret Odası).

09 Mart 2021'de Resmi Gazetede yayımlanan Cumhurbaşkanı Kararı'na göre; normalleşme sürecinde istihdamı koruma tedbirleri çerçevesinde 17 Mart 2021 tarihinden itibaren Nakdi Ücret Desteği ve İşten Çıkarma yasağı 2 ay daha uzatılmıştır (31418 sayılı Resmi Gazete, 09.03.2021).

15 Mart 2021'de Kısa Çalışma Ödeneğinin 2021 Mart ayı sonunda bitirilmesine karar verilmiştir. İşverenin ücretsiz izne çıkarılmasına karar verebileceği açıklanmıştır. Ancak 23.04.2021 tarih 31463 sayılı Resmi Gazete'de yayımlanan Cumhurbaşkanı Kararı ile Kısa Çalışma Ödeneğinin süresinin, 31.03.2021 tarihinden sonra başlamak üzere, 30 Haziran 2021'e kadar uzatılmasına karar verilmiştir. Karar 31463 sayılı Resmi Gazetede yayımlanmıştır (31463 sayılı Resmi Gazete, 23 Nisan 2021, Karar Sayısı: 3910). Ayrıca 30.04.2021 tarih 31470 sayılı Resmi Gazete'de yayımlanan 29.04.2021 tarih 3930 sayılı Cumhurbaşkanlığı Kararı ile 4857 Sayılı Kanun'un Geçici 10'uncu maddesi ile getirilen İşten Çıkarma Yasağının, işverene tanınan Ücretsiz İzne Çıkarma Hakkı süresinin ve ücretsiz izne çıkarılan sigortalıya ödenmekte olan Nakdi Ücret Desteğinin ödenme süresinin de 30.06.2021 tarihine kadar uzatılmasına karar verilmiştir (31470 Sayılı Resmi Gazete, 30 Nisan 2021, Karar Sayısı: 3930).

Alınan tüm ekonomik tedbirlere rağmen, Covid-19 Pandemisinin varlığını sürdürdüğü bu ortamda ekonominin toparlanması için belirli bir zamana ihtiyaç vardır. Gelişmekte olan ülkelerin ekonomileri daha çok hizmet sektörüne dayandığından; dışa bağlı olmaları, turizm gelirlerine ihtiyaç duymaları sebebiyle ekonominin bu ülkelerde düzelmesi uzun zaman alacaktır. Ancak gelişmiş ülkelerin ekonomileri sanayi sektörüne dayandığından bu krizden erken çıkacakları, ekonomilerinin daha hızlı düzeleceği tahmin edilmektedir (Kaya, 2020: 232).

4. PANDEMİ DÖNEMİNDE TÜRKİYE'DE İŞSİZLİK VERİLERİ

Türkiye'de işsizlik verileri değerlendirildiğinde işsizlik oranlarının 2014'den günümüze yaklaşık %9 ile %14 arasında değişim gösterdiği; istihdam oranlarının ise yaklaşık olarak %45 ile %47 arasında değişim gösterdiği görülmektedir.

2014 ile 2020 yılları arasını kapsayan İşsizlik ve İstihdam Oranları aşağıda Grafik 1'de gösterilmiştir.

Tablo 1: Temel İşgücü Göstergeleri: 2019-2020 ve 2021 1. Çeyrek (Bin kişi) (15+yaş)

Yıllar - Years	15 ve daha yukarı yaştaki nüfus Population 15 years and over	İşgücü Labour force	İstihdam edilenler Employed		İşsiz Unemployed	İşgücüne dahil olmayan nüfus Not in labour force	İşgücüne katılma oranı Labour force participation rate (%)	İstihdam oranı Employment rate (%)	İşsizlik oranı Unemployment rate (%)
			Edilenler	Unemployed					
Toplam - Total									
2019 I. Çeyrek - Quarter I	61.098	32.036	27.335	4.701	29.062	52,4	44,7	14,7	
II. Çeyrek - Quarter II	61.343	32.401	28.221	4.180	28.942	52,8	46,0	12,9	
III. Çeyrek - Quarter III	61.591	33.152	28.482	4.671	28.439	53,8	46,2	14,1	
IV. Çeyrek - Quarter IV	61.839	32.432	28.131	4.301	29.407	52,4	45,5	13,3	
2020 I. Çeyrek - Quarter I	62.117	30.887	26.699	4.188	31.230	49,7	43,0	13,6	
II. Çeyrek - Quarter II	62.422	29.659	25.853	3.806	32.763	47,5	41,4	12,8	
III. Çeyrek - Quarter III	62.730	31.558	27.364	4.194	31.172	50,3	43,6	13,3	
IV. Çeyrek - Quarter IV	63.038	30.794	26.823	3.970	32.244	48,8	42,6	12,9	
2021 I. Çeyrek - Quarter I	63.320	31.668	27.391	4.277	31.652	50,0	43,3	13,5	

Kaynak: TÜİK. Haber Bülteni. 18 Mayıs 2021. İşgücü İstatistikleri, I. Çeyrek: Ocak - Mart

Tablo 1 incelendiğinde işsizlik oranı 2021 yılı I. çeyreğinde bir önceki yılın aynı çeyreğine göre 0,1 puan azalarak %13,5 olduğu görülmektedir. İşsiz sayısı bir önceki yılın aynı çeyreğine göre 89 bin kişi artarak 4 milyon 277 bin kişi olarak gerçekleşmiştir.

İstihdam oranı ise 2021 yılı I. çeyreğinde bir önceki yılın aynı çeyreğine göre 0,3 puan artarak %43,3 olmuştur. İstihdam edilenlerin sayısı 692 bin kişi artarak 27 milyon 391 bin kişi olarak gerçekleşmiştir.

İşgücüne katılma oranı 2021 yılı I. çeyreğinde bir önceki yılın aynı çeyreğine göre 0,3 puan artarak %50,0 olmuş; işgücüne katılan sayısı ise 781 bin kişi artarak 31 milyon 668 bin kişi olarak gerçekleşmiştir.

Tablo 2: İstihdamın İşteki Duruma Göre Dağılımı, 15+yaş, I. Çeyrek: Ocak - Mart 2021

	I. Çeyrek 2021 (Bin kişi)			I. Çeyrek 2021(%)		
	Toplam	Erkek	Kadın	Toplam	Erkek	Kadın
Toplam	27 391	18 968	8 422	100,0	100,0	100,0
Ücretli veya yevmiyeli	19 140	13 299	5 841	69,9	70,1	69,3
İşveren	1 265	1 106	160	4,6	5,8	1,9
Kendi hesabına	4 569	3 741	828	16,7	19,7	9,8
Ücretsiz aile işçisi	2 416	823	1 594	8,8	4,3	18,9

Kaynak: TÜİK. Haber Bülteni. 18 Mayıs 2021. İşgücü İstatistikleri, I. Çeyrek: Ocak - Mart 2021

Tablo 2 incelendiğinde istihdamın %69,9'unu ücretli, maaşlı veya yevmiyeli çalışanların oluşturduğu görülmektedir. Geriye kalan istihdamın %4,6'sını işverenler, %16,7'sini kendi hesabına çalışanlar, %8,8'ini ücretsiz aile işçileri oluşturmaktadır.

Ayrıca 28 Mayıs 2021 tarihli ve 37545 sayılı TÜİK Haber Bültenine göre 2021 I. Çeyreğinde genç işsizlik oranı %25,3 olarak gerçekleşmiştir. Ne eğitimde ne istihdamda olan 15 - 24 yaş grubundaki genç nüfusun sayısı ise 2 milyon 922 bin kişi olmuş ve 2021 yılı I. Çeyreğinde bu oran %24,7 olarak gerçekleşmiştir. Uzun süreli işsizlerin sayısı 2021 yılı I. Çeyreğinde 1 milyon 252 bin kişi olmuş ve işsiz sayısının %29,3'ünü oluşturmuştur.

5. SONUÇ

Covid-19 Pandemisi, dünyayı etkisi altına alarak küresel anlamda çok boyutlu etkiler yaratmıştır. Korunma ve tedavi sürecinde uygulanan tedbirler, ülkelerin özellikle ekonomileri üzerinde negatif yönde

etkiler yaratarak bir çeşit küresel ekonomik krize yol açmıştır. Küresel salgın döneminde üretim, istihdam, toplam talep, enflasyon ve finansal istikrar gibi temel iktisadi konularda kriz sinyalleri görülmeye başlanmıştır. Sinyaller büyüme oranında düşüş, işsizlik ve enflasyon oranında artış, ödemeler dengesinde ve bütçe dengesinde bozulma, dış finansmanda zorluklar şeklinde karşımıza çıkmaktadır.

Ekonomideki daralma genel olarak üretim hacminin düşmesine ve buna bağlı olarak işsizlik oranlarında artışa sebep olmuştur. Pandeminin işsizlik üzerindeki etkisini azaltmak amacıyla, kısa süreli çalışma planları, ücret sübvansiyonları ve firmalara yönelik destekler uygulanmaya başlamıştır. Ancak hükümetler tarafından geliştirilen tüm bu politikalara rağmen sokağa çıkma yasağı, iş saatlerinin kısaltılması, esnek çalışma sistemi, iş yerlerinin kapatılması şeklinde alınan tedbir önlemleri ekonomideki daralmayı tetiklemektedir.

Türkiye’de de Pandeminin etkileri azaltmak amacıyla 18.03.2020 tarihinde “Ekonomik İstikrar Kalkanı” destek paketi yayınlanmıştır. 2020 yılı Mart ayı içerisinde alınan kararlarla birlikte esnek çalışma ve uzaktan çalışma modelleri desteklenerek yaygınlaşması sağlanmıştır. Mart ayında atılan adımlar Nisan ayında da devam etmiştir. 23 Temmuz 2020’de kabul edilen kanun teklifi ile birlikte, Cumhurbaşkanlığı tarafından kısa çalışma ödeneğinden faydalanma süresinin 31 Aralık 2020 tarihine kadar uzatılmıştır. 19 Şubat 2021’de Yeni Covid-19 nedeniyle dışsal etkilerden kaynaklanan dönemsel durumlar kapsamındaki zorlayıcı sebep gerekçesiyle kısa çalışma uygulanan işyerleri için kısa çalışma ödeneğinin süresi 31.03.2021 tarihine kadar uzatılmıştır. 15 Mart 2021’de kısa çalışma ödeneğinin 2021 Mart ayı sonunda bitirilmesine karar verilmiştir. İşverenin ücretsiz izne çıkarılmasına karar verebileceği açıklanmıştır. Ancak alınan Cumhurbaşkanlığı Kararı ile Kısa Çalışma Ödeneğinin süresinin, 31.03.2021 tarihinden sonra başlamak üzere, 30 Haziran 2021’e kadar uzatılmasına karar verilmiştir. Ayrıca 30.04.2021 tarih 31470 sayılı Resmi Gazete’de yayımlanan Cumhurbaşkanlığı Kararı ile İşten Çıkarma Yasağının, işverene tanınan Ücretsiz İzne Çıkarma Hakkı süresinin ve ücretsiz izne çıkarılan sigortalıya ödenmekte olan Nakdi Ücret Desteğinin ödenme süresinin de 30.06.2021 tarihine kadar uzatılmasına karar verilmiştir.

Bu önlemler işsizliği sınırlamaya yardımcı olsa da Pandeminin işgücü piyasası üzerinde ciddi bir etki yaratması beklenmektedir.

Tüketici Sinizmi Konusunda Ulusal Pazarlama Alanyazınında Yayınlanmış Çalışmaların Bibliyometrik Analizi

Dr. Öğr. Üyesi Senem ERGAN¹

¹Çanakkale Onsekiz Mart Üniversitesi / Gökçeada Uygulamalı Bilimler Yüksekokulu Turizm İşletmeciliği Bölümü, senemergan@comu.edu.tr, ORCID: 0000-0002-2155-2643

Özet: Tüketici davranışları ile ilgili çalışmalar incelediğinde belirli kavramların (tüketici sadakati, tüketici bağlılığı, güven, ağızdan ağıza pazarlama, satın alma niyeti, yeniden satın alma niyeti, yeniden ziyaret etme niyeti vb.) yoğun bir şekilde incelendiği, buna karşılık olumsuz tüketici davranışlarına gereken önemin gösterilmediği görülmektedir. Olumsuz tüketici davranışlarından birisi de “tüketici sinizmi” dir. Sinizm kavramı, işletme alanyazınında çoğunlukla çalışanlar açısından örgütsel olarak incelenen bir kavramdır. Oysa pazarlama açısından da önemli bir kavram olmasına rağmen ulusal alanyazınında çok fazla çalışılmamıştır. Bu araştırmanın amacı; tüketici sinizmi kavramı hakkında pazarlama alanyazınında yapılan çalışmaların bibliyometrik analizinin yapılarak varolan çalışmaların derlemesini yapmak, eksik görülen ve ihtiyaç duyulan alanlar belirlenerek pazarlama alanyazınına katkı sağlamaktır. Bu amaçla 2016 ile 2020 yılları arasında ulusal veri tabanlarında yer alan “tüketici sinizmi” ve “consumer cynicism” anahtar kelimelerinin yer aldığı akademik çalışmalar belirlenmiştir. Söz konusu çalışmalar bibliyometrik analiz ile incelenmiştir. Araştırmanın sonucunda tüketici sinizmi kavramının ulusal pazarlama alanyazını için oldukça yeni ve çok çalışılmayan bir kavram olduğu görülmüştür.

Anahtar Kelimeler: Tüketici sinizmi, pazarlama, tüketici davranışları, bibliyometrik analiz.

Bibliometric Analysis of Studies on Consumer Cynicism Published in National Marketing Literature

Abstract: When studies on consumer behavior are examined, it is observed that specific concepts (consumer loyalty, consumer engagement, trust, word of mouth, purchase intention, repurchase intention, revisit intention, etc.) are investigated intensively while adequate attention has not been given to the subjects about negative consumer behavior. One of the negative consumer behaviors is “consumer cynicism”. The concept of cynicism is a concept that is mostly studied organizationally in terms of employees in the business literature. Although it is an important concept in terms of marketing, it has not been studied much in the national literature. The purpose of this research is to make a compilation of existing studies by making a bibliometric analysis of the studies conducted in the marketing literature about the concept of consumer cynicism, to contribute to the marketing literature by determining the areas that are considered as incomplete and needed. For this purpose, academic studies including the keywords "tüketici sinizmi" and "consumer cynicism" in the national databases between 2016 and 2020 were determined. These studies were examined by bibliometric analysis. As a result of the research, it was seen that the concept of consumer cynicism is quite new for the national marketing literature and not studied much.

Keywords: Consumer cynicism, marketing, consumer behavior, bibliometric analysis.

1. Giriş

Sinizm kavramı milattan önceki çağlarda ortaya çıkan ve günümüzde de halen kullanılmakta olan bir kavramdır. M.Ö. 4. yy.da Eski Yunan’da ortaya çıkan sinizmin kaynağı Sinoplu Diyojen’e dayanmaktadır. Diyojen günün aydınlığında elinde yanan bir fenerle dolaştığında çevresindeki insanların “neden” sorusuna “dürüst bir insan arıyorum” şeklinde bir cevap vermiştir. Bu söz, sinizmin temelini açıklamaktadır (Bayram ve Ergen, 2018:96). Görüldüğü üzere sinizm kavramı felsefe kökenli bir kavramdır. Zamanla diğer sosyal bilimler içerisinde de tartışılmaya başlanmıştır. Psikoloji, toplum ve siyaset bilimleri bu alanların başında gelmektedir (Akçay, 2021:1). İşletme biliminde ise yönetim ve organizasyon alanında yapılan çalışmalarda örgütsel sinizm kavramı sıklıkla araştırmalara konu olmaktadır.

Sinizm kavramı ile ilgili tanımlar da zaman içerisinde farklılık göstermiştir. Bazı bilim insanları sinizmin doğuştan gelen, olumsuz bir özellik olduğunu ileri sürmekte iken bazıları da sinizmin yaşanılan deneyimlerin sonucu ortaya çıkan bir davranış biçimi olduğunu savunmuşlardır. Sinizm kavramı üzerindeki bu farklı yorumlar evrensel bir tanımın oluşmasını engellemiştir. Bu karmaşa 1980’li yılların

sonunda ortadan kaldırılmış ve sinizm kavramı ile ilgili ortak bir tanım geliştirilmiştir. Bu yeni tanıma göre sinizm, “bir veya daha fazla nesneye karşı geliştirilen, hayal kırıklığı, güvensizlik ve şüpheyle ilişkilendirilen ve çevresel faktörlere maruz kalarak zaman içerisinde değişim gösterebilen öğrenilmiş bir tutum” dur.

Günlük yaşamlarında sinik davranışlar sergileyen bireyler, alışveriş yaptıkları mağazaya, satın aldıkları bir ürüne ya da markaya veya bir üreticiye karşı da sinik tutumlar sergileyebilmektedirler. Bu açıdan incelendiğinde pazarlama bilimi içerisinde de sinizm kavramından bahsetmek mümkün olmaktadır. Zamanla tüketicilerin de sinik davranışlar sergilediğini fark eden pazarlama akademisyenleri tüketici davranışları içine “tüketici sinizmi” kavramını da eklemiştir (Odou and Pechpeyrou, 2011:1799; Chowdhury and Fernando, 2014:677, Tokgöz, 2020:40).

Bu çalışmada öncelikle tüketici sinizmi kavramı açıklanacaktır. Daha sonra ulusal alanyazında tüketici sinizmi konusunda yayınlanmış olan çalışmaların bibliyometrik analizine yer verilecektir.

2. Tüketici Sinizmi

Tüketici sinizmi, bireysel bir tüketicinin, firmalar arasında yaygın fırsatçılığın var olduğu ve bu fırsatçılığın zararlı bir tüketici pazarı yarattığı inancıyla pazara karşı geliştirilmiş istikrarlı ve öğrenilmiş bir tutumdur. Tüketici sinizmi, pazarlama uyarılarına karşı savunmacı zihinsel araçlar olarak düşünülebilir. Yapılan araştırmalar, bazı durumlarda sinik tüketicilerin, güvenilmeyen firmaların uyguladıklarına benzer manipülatif taktikleri kullanabileceğini göstermektedir. Örneğin, bir araba alım satımı sırasında pazarlık yapan bir tüketici, arabanın kusurlarını işletme çalışanından gizleyebilmekte ya da satın alma konusunda fikrini değiştiren bir tüketici iade yapmak için ürünün kusurlu olduğu şeklinde yalan söyleyebilmektedir (Helm vd., 2015:516). Sinik davranışlar gösteren tüketiciler işletmelere karşı şüpheyle yaklaşmaktadırlar. Çünkü tüketicinin sinizminin temelinde tüketici, işletmeyi kendi çıkarlarını düşünen fırsatçı bir yapı olarak görmektedir (Tokgöz, 2020:40).

Tüketici sinizmi, tüketicilerin kişilik özellikleri ya da işletmelerle yaşadıkları deneyimler / etkileşimler sonucu ortaya çıkmaktadır. Stres, öfke, kırgınlık, kızgınlık, güvensizlik gibi durumlar bireylerde olumsuz duygulanmaya yol açmaktadır. Kişilerdeki bu olumsuz duygulanma sözleşme ihlalinin algılanmasına, bu algı da tüketici sinizminin oluşmasına neden olmaktadır. Bir diğer neden de tüketicilerin işletmelerle yaşadıkları olumsuz deneyimlerdir. Örneğin, işletmenin haksız kazanç sağladığına ilişkin tüketicilerde gelişen algı, işletmenin tüketicilere karşı samimiyetsiz ve aldatıcı tavırlar sergilemesi, tüketicinin alışveriş sırasında ya da sonrasında yaşadığı olumsuz bir olay ve bunun işletme tarafından çözüme kavuşturulmaması, satın alınan ürünün beklenen performansı gösterememesi gibi durumlar tüketicilerde işletmeye karşı sinik tutumların gelişmesine neden olmaktadır. Yapılan çalışmalar da tüketicilerin olumsuz deneyimlerinin tüketici sinizmini tetiklediğini ortaya koymaktadır. Örneğin, yapılan bir çalışmada tüketicilerin beklentilerinin karşılanmamasının işletmeye karşı öfke ve hayal kırıklığının oluşmasında önemli bir etken olduğunu ve bu durumun da tüketici sinizmine yol açtığını görülmüştür. Böylece tüketici, işletmeye karşı genelleyici bir bakış açısıyla güvensizlik geliştirmekte ve işletmeye karşı olumsuz bir tutum geliştirmektedir (Çam, 2019:155-160).

Tüketici sinizmi dört farklı türde görülebilmektedir; savunmacı sinizm, saldırgan sinizm, tahrip edici sinizm ve etik sinizm (Odou & Pechpeyrou, 2011:1801; Çam, 2019:148; Utkutuğ, 2021:218).

Şekil 1. Tüketici Sinizmi Türleri

Kaynak: Odou & Pechpeyrou (2011)'den aktaran Çam (2019:148).

Savunmacı sinizm, kendilerini piyasadaki manipülasyon girişimlerinden korumak için oluşturulmuş bir tüketici başa çıkma stratejisidir. Esas olarak, tüketiciler kendi çıkarlarını kovalayan işletmelerden kendilerini korumaya odaklanmaktadır. Her zaman yoğun bir şekilde şüphe, güvensizlik ve yanlış yönlendirilme korkusu hissetmektedirler. *Saldırgan sinizm*, "herkesin kendi çıkarının peşinden koştuğu" şeklindeki ayırt edici bir fikre dayanmaktadır. Saldırgan sinikler genellikle fiyat farklılaştırma stratejilerine duyarlıdır. *Tahrip edici (yıkıcı) sinizmde*, "bireyler, tüketicilerin zihnini ve görünüşünü sömüren tüketim ideolojisini, toplumun farkındalığını artırmak için kendine özgü yaratıcı stratejilerle kınamalıdır" düşüncesi temeline dayanmaktadır. Stratejiler bağlamında genellikle kurumların imajları ile kimlikleri arasındaki önemli farklılıkları ortaya koymayı amaçlayan proaktif bir yaklaşım benimsemektedirler. Tahrip edici (yıkıcı) siniklerin, şirketlerin itibarını olumsuz ve zayıf olarak algılama eğiliminde olduklarını iddia etmek de mümkündür. Etik sinikler, genel olarak tüketimi hedeflemektedirler ve toplumsal refahın gerçekleştirilmesiyle motive olmaktadır. Bu türden tüketim karşıtı tavırlar için verdikleri en yaygın itici güçler çevresel kaygılar ve maddi eşitsizliklerdir (Utkutuğ, 2021:218).

Tüketiciler siniz davranışlar sonucunda duygusal ve davranışsal olmak üzere iki şekilde tepki gösterebilmektedir. Duygusal (bilişsel) tepkiler, işletmeye karşı yabancılaşma davranışının gelişmesi, markaya karşı güvensizlik ve kuşkunun oluşması şeklinde görülebilmektedir. Davranışsal tepkiler ise duygusal tepkilere göre daha serttir. İşletme ile ilgili olumsuz yorumlarla negatif ağızdan ağıza pazarlama yapılması, tüketici saldırganlığının oluşması, tüketicinin işletmeyle, markayla ya da ürünle dalga geçmesi, rakip işletme ya da markaya karşı sadakat geliştirmek gibi tutumlar davranışsal tepkilere örnek olarak verilebilir (Çam, 2019:164-168).

3. YÖNTEM ve BULGULAR

Tüketici sinizmi ile ilgili olarak yerli literatürde yapılan çalışmaların bibliyometrik analizinin yapıldığı bu çalışmada, 2016 ile 2021 yılları arasında YÖK Ulusal Tez Merkezi, ULAKBİM ve Google Akademik veri tabanlarında yer alan "tüketici sinizmi" ve "consumer cynicism" anahtar kelimelerinin yer aldığı akademik çalışmaların taraması yapılmıştır. Çalışma ile ilgili veri toplarken, alanyazında yer alan çalışmaların tüketici sinizmi ile ilgili olup olmadığını belirleyebilmek amacıyla çalışmaların özet, araştırma, yöntem ve sonuç bölümleri detaylı bir şekilde incelenmiştir. Tüketici sinizmi ile ilgili ulusal yazında yapılan çalışmalar incelendiğinde en eski çalışmanın 2016 yılında yayınlandığı görülmüştür. Bu nedenle incelenen çalışmalar 2016-2021 yılları arasındadır. Araştırma sırasında ulusal alanyazında "tüketici sinizmi" ya da "consumer cynicism" anahtar kelimelerinin yer aldığı 13 adet akademik çalışma incelenmiştir. Bunlardan iki tanesi doktora tezi, bir tanesi yüksek lisans tezi ve on tanesi de makaledir.

Bu çalışmada bibliyometrik analiz yapılmıştır. Bibliyometri terimi, belgelerin yayınlanmasında ve kullanılmasında ortaya çıkan modellerin matematiksel ve istatistiksel analizini ifade etmektedir (Ramos-Rodriguez & Ruiz-Navarro, 2004:981). İlk kez 1969 yılında Pritchard tarafından kullanılan bibliyometrik analiz ile araştırma yapılan alanda yayınlanan bilimsel çalışmalar incelenmekte, verilerin niceliksel analizi

yapılmakta ve alandaki gelişim belirli parametreler kapsamında incelenmektedir. Bibliyometrik analiz ile incelenen alana akademik açıdan gelişmesi için katkı sağlanması amaçlanmaktadır (Aydın ve Aksöz, 2019:617). Bibliyometrik analizlerde araştırılan alanyazınla ilgili bibliyometrik bir çalışma yapılabilmesi için önceden belirlenmiş parametrelerin kullanılması gerekmektedir (Işık vd., 2019:123). Bu çalışmada kullanılan parametreler;

- Çalışmanın yazarının / yazarlarının isimleri
- Çalışmanın ismi
- Çalışmanın yayınlandığı yıl
- Çalışmanın türü (tez, makale vb.)
- Çalışmanın alanı (örneklem grubu)
- Çalışmada kullanılan değişken / boyutlar
- Çalışmanın yöntemi (analizler)
- Çalışmanın sonucu olarak seçilmiştir.

Araştırma soruları ise aşağıdaki gibi belirlenmiştir:

RQ1: Çalışmaların araştırma yılına göre dağılımları nedir?

RQ2: Çalışmaların araştırma alanına göre dağılımları nedir?

RQ3: Çalışmaların kullanılan yöntemlere göre dağılımları nedir?

RQ4: Çalışmaların değişkenlere göre dağılımı nedir?

Tablo 1’de ulusal alanyazında “tüketici sinizmi” konusunda yazılmış çalışmalar gösterilmektedir. Tabloda yer alan 13 adet çalışma, bu çalışma kapsamında belirlenen parametreler çerçevesinde analiz edilmektedir.

Tablo 1. Çalışmaların Listesi

Yazar	Çalışmanın İsmi	Yayın Yılı	Yayın Türü	Çalışma Alanı	Değişkenler / Boyutlar	Çalışmanın Yöntemi	Sonuç
Akçay, G.	Tüketici Sinizminin Öncülleri ve Sonuçları: Hizmet Sektörü Üzerinde Bir Araştırma	2021	Doktora Tezi	Bursa'da ikâmet eden, 15 yaş ve üzerinde olan ve hizmet satın alan / kullanan tüketiciler	Tüketici Sinizminin Öncülleri (Toplumsal / Kurumsal Sinizm, Etik Dışı Pazarlama Uygulamaları, Olumsuz Duygulanım), Tüketici Sinizmi, Tüketici Sinizminin Sonuçları (Tüketici Boykotları, Olumsuz Ağızdan Ağıza İletişim, İşletmeyi / Markayı Terk Etme, Pazardan Geri Çekilme)	Yapısal Eşitlik Modellemesi	Toplumsal / kurumsal sinizmin ve etik dışı pazarlama uygulamalarının hizmet sektörüne yönelik tüketici sinizmi üzerinde anlamlı ve pozitif etkisi olduğu, buna karşılık olumsuz duyulanımın anlamlı etki göstermediği bulunmuştur. Hizmet sektörüne yönelik tüketici sinizminin tüketici boykotları, olumsuz ağızdan ağıza iletişim ve işletmeyi / markayı terk etme davranışları üzerinde anlamlı ve pozitif bir etkisinin olduğu ancak pazardan geri çekilme davranışları üzerinde anlamlı bir etkisinin olmadığı görülmüştür.
Utkutuğ, Ç. P.	Sosyal ve Çevresel Sorumluluğun Algılanan Kalite Üzerinde Aracılık Rolü: Genç Tüketicilerin Materyalistik Değerleri ve Sinik Tutumları / The Mediating Role of Social and Environmental Responsibility in The Relationship between Material Values, Consumer	2021	Makale	805 genç tüketici	Tüketici Sinizmi, Materyal Değerler, Ürün Kalitesi, Kurumsal Sosyal Sorumluluk	Yapısal Eşitlik Modellemesi	Sosyal ve çevresel sorumluluğunun aracılık rolü ile materyal değerlerin algılanan ürün kalitesi ile ilgili pozitif değerlendirmeleri desteklediğini, sinizmin ise böyle bir aracılık rolü olmaksızın olumsuz değerlendirmelere neden olduğu görülmüştür.

	Cynicism and Product/Service Quality						
Tokgöz, E.	Tüketicinin Kin Tutma Eğiliminin Pazardan Geri Çekilme Niyeti Üzerinde Etkisi: Tüketici Sinizminin Aracı ve Düzenleyici Rolü	2020	Makale	Çanakkale Onsekiz Mart Üniversitesi'ne bağlı bir meslek yüksekokulunda okuyan 502 öğrenci	Tüketicinin Kin Tutma Eğilimi, Pazardan Geri Çekilme Niyeti, Tüketici Sinizmi	Faktör Analizi, Korelasyon Analizi, Regresyon Analizi	Tüketicinin kin tutma eğiliminin pazardan geri çekilme niyeti üzerindeki etkisinde tüketici sinizminin düzenleyici ve kısmi aracı rolü olduğu belirlenmiştir.
Bozoklu, Ç.P. ve Ermeç, A.	Tüketici Sinizmi Ölçeği'nin Türkçe'ye Uyarlanması: Güvenilirlik ve Geçerlilik Araştırması	2020	Makale	Bahçeşehir Üniversitesi ve Hacettepe Üniversitesi'nde okuyan 18-25 yaş arasında lisansüstü ve lisans 806 öğrenci	Genel Anlamda Fırsatçılık, Doğrudan Tüketicilere Yönelik Fırsatçılık, Aldatma	Keşifsel Faktör Analizi, Yapısal Eşitlik Modellemesi	Genç tüketicilerin ticari kimliklere ve bu kimliklerin faaliyetlerine yönelik artan güvensizliklerinin olduğu belirlenmiştir.
Özkaya, B. ve Ülker, Y.	Markaların Sosyal Medyada Oluşan Sinik Tutuma Yönelik Yaklaşımları	2020	Makale	İstanbul'da gıda sektöründe faaliyet gösteren iki markanın sosyal medya uzmanları	Sinik Tutum, Marka ve Tüketici Arasındaki İlişkinin Yürütülmesi, Sosyal Medyada Markanın Sinik Tutuma Yönelik Yaklaşımları	Derinlemesine Görüşme	Markaların sosyal medyada oluşan tüketici sinizmine daha fazla önem vermeleri gerektiği sonucu ortaya çıkmıştır.
Çam, M.S.	Öyküleyici Reklamlar ve Tüketici Sinizmi İlişkisi Üzerine Deneysel Bir Çalışma	2019	Doktora Tezi	Aksaray Üniversitesi'nde okuyan 70 öğrenci	Öyküleyici Reklam, Duygusal Tepki, Reklam Güvenirliği, Karakter Özdeşliği, Tüketici Sinizmi, Taşınma, Olumsuz Duygulanma, Toplumsal Sinizm, Pazar Deneyimleri	Deneysel Yöntem, Korelasyon Analizi, T Testi, ANCOVA, ANOVA	Öyküleyici reklamların diğer reklam türlerine göre tüketici sinizmi tutumlarını dönüştürebildikleri görülmüştür. Reklamda öyküleyici yaklaşımın taşınma, duygusal tepkiler, empati ve reklam güvenirliği açısından yüksek skorlara sahip olduğu belirlenmiştir.
Andaç, R.E.	Sinizm ve Tüketici Sinizmi: İstanbul İlinde Bir Uygulama	2019	Yüksek Lisans Tezi	İstanbul'un Bakırköy, Kadıköy, Küçükçekmece ve Beyoğlu ilçelerinde	Tüketici Sinizmi, Yaş, Cinsiyet, Medeni Durum, Eğitim, Gelir	Faktör Analizi, T Testi, ANOVA, Compare	Tüketici sinizminin cinsiyet, medeni durum ve eğitim seviyesine göre farklılık gösterdiği, gelir seviyesi ve

				yaşayan 424 tüketici		Means Testi	yaş ile olumlu bir ilişkisinin olduğu ve erkeklerin kadınlara göre daha çok tüketici sinizmi eğiliminde oldukları belirlenmiştir.
Ceylan, H.H. ve Köse, B.	Amaca Dönük Pazarlamada Tüketici Algısının Satın Alma Niyeti Üzerine Etkisi	2019	Makale	Uşak Üniversitesi'nde okuyan 341 öğrenci	Algılanan Tüketici Etkinliği, Tüketici Şüpheliği, Tüketici Sinizmi, Davranışsal Niyet	Yapısal Eşitlik Modellemesi	Tüketici şüpheliğin ve tüketici sinizminin amaca dönük ürün satın alma niyeti üzerine doğrudan etkisinin olmadığı buna karşın algılanan tüketici etkinliği aracılığıyla dolaylı bir etkiye sahip olduğu belirlenmiştir.

Tüketici Sinizmi, Kaynağın Uzmanlığı, Tavsiyenin Aldatılmayı Azaltması, Tavsiyeye Güven, Tavsiyenin Etkisi, Tavsiyenin Şüpheye Düşürücülüğü, Memnuniyetsizlik ve Onaylamama	T Testi, Varyans Analizi, Korelasyon Analizi, Regresyon Analizi	Erkeklerin daha sinik tutuma sahip olduğu kadınların ağızdan ağıza pazarlamadan daha çok etkilenecek sinik tutumlar gösterdikleri görülmüştür. "Kaynağın uzmanlığı" ve "tavsiyenin aldatılmayı azaltması" faktörlerinde katılımcıların yaşları arttıkça daha çok sinik davranışlar sergiledikleri, "tavsiyeye güven" faktöründe yaş azaldıkça daha çok sinik tutumlar gösterdikleri, eğitim arttıkça tüketicilerin sinik tutum dereceleri ile ağızdan ağıza pazarlama eylemleri ve sinik davranış seviyelerinin arttığı belirlenmiştir.
Kerse, Y. ve Meriç, K.	Beş Faktör Kişilik Özelliklerinin Tüketici	2018	Makale	246 tüketici ile görüşülmüştür.	Dışadönüklük Kişilik Özelliği, Uyumluluk Kişilik Özelliği, Sorumluluk Kişilik	Regresyon Analizi	Uyumluluk kişilik özelliğinin tüketici sinizmi üzerinde pozitif yönde ve anlamlı bir

	Sinizmine Etkisi: Ampirik Bir Araştırma				Özelliği, Duygusal Denge Kişilik Özelliği, Gelişime Açıklık Kişilik Özelliği, Tüketici Sinizmi		etkisinin olduğu görülmüştür.
Akgüç Çetinkaya, Ö. ve Ceng, E.	Türkiye'deki Black Friday Etkinliğinin Tüketici Sinizmi Bağlamında Bir Değerlendirmesi	2018	Makale	Black Friday ile ilgili olarak #karacuma etiketi ile paylaşılan 1841 tweet incelenmiştir.	Tüketici Sinizmi, Değer Uyumsuzluğu, Şüphencilik- Güvensizlik, Yıkıcılık- Saldırganlık	Duygu Analizi	Tüketicilerin kendi değerleriyle uyumsuz olduğunu düşündükleri ve güvenmedikleri, şüphe duydıkları için görüşlerini sosyal medyada negatif bir dille belirttikleri görülmüştür.
Atılğan, K.Ö., İnce, T. ve Yılmaz, S.	Tüketicilerin Satın Alma Niyetleri ve Boykota Yönelik Tutumlarının Tüketici Sinizmi, Fiyat Şeffaflığı ve Fiyat Adaleti Bağlamında İncelenmesi	2017	Makale	Mersin'de lise, önlisans, lisans ve lisansüstü okuyan 376 öğrenci ile görüşülmüştür.	Fiyat Şeffaflığı, Tüketici Sinizmi, Prosedürel Fiyat Adaleti, Satın Alma Niyeti, Boykot Yapma Tutumu	Faktör Analizi, Korelasyon Analizi	Fiyat şeffaflığı, prosedürel fiyat adaleti ve satın alma niyeti arasında pozitif ve anamlı ilişki bulunurken, tüketici sinizmi ile boykot yapmaya yönelik tutum arasında pozitif yönlü anlamlı bir ilişki olduğu belirlenmiştir. Tüketici sinizmi ve boykot yapmaya yönelik tutum ile fiyat şeffaflığı, prosedürel fiyat adaleti ve satın alma niyeti değişkenleri arasında negatif yönlü ilişki olduğu görülmüştür.
Güven, E.	Tüketimde Sinik Tutum: Tüketici Sinizminin Sebep ve Sonuçları	2016	Makale	Tüketici sinizmi hakkında yazılan makaleler	Sinizm, Tüketici Sinizmi	İçerik Analizi	Tecrübeler, güven kaybı ve tatminsizlikler sinizmi meydana getirmektedir. Tüketicilerin yaşadıkları bu durumun da tüketici sinizmini oluşturduğu belirtilmiştir.

RQ1: Çalışmaların araştırma yılına göre dağılımları nedir?

Tablo 2. Yayın Yılına Göre Dağılım

Yayın Yılı	Frekans	Yüzde (%)
2021	2	15,4
2020	3	23,1
2019	4	30,8
2018	2	15,4
2017	1	7,7
2016	1	7,7
Toplam	13	100,0

Tablo 2’de görüldüğü üzere tüketici sinizmi ile ilgili en fazla yayın yapılan yıl %30,8’lik bir oranla 2019’dur. Her ne kadar 2017’den sonra bu konuda yapılan çalışmalarda bir artış görülse de 2019’dan sonra tüketici sinizmi konusuyla ilgili yapılan çalışma sayısında bir azalış olduğu görülmektedir.

RQ2: Çalışmaların araştırma alanına göre dağılımları nedir?

Tablo 3. Yayın Türüne Göre Dağılım

Yayın Türü	Frekans	Yüzde (%)
Makale	10	76,9
Yüksek lisans tezi	1	7,7
Doktora tezi	2	15,4
Toplam	13	100,0

Tablo 3’te tüketici sinizmi ile ilgili yapılan çalışmaların türüne yer verilmektedir. %76,9’luk bir oranla en fazla tercih edilen yayın türü makaledir. Bunu %15,4 ile doktora tezi ve %7,7’lik bir oranla ise yüksek lisans tezi takip etmektedir.

RQ3: Çalışmaların kullanılan yöntemlere göre dağılımları nedir?

Tablo 4. Yöntem Türüne Göre Dağılım

Yöntem Türü	Frekans	Yüzde (%)
Nitel	9	69,2
Nitel	3	23,1
Karma	1	7,7
Toplam	13	100,0

Tablo 4’e göre tüketici sinizmi ile ilgili çalışmalarda en fazla kullanılan yöntem nitel yöntemlerdir. Nitel yöntemler içerisinde de en fazla da yapısal eşitlik modellemesi tercih edilmiştir. Nitel yöntemlerin kullanıldığı 3 adet çalışma vardır. Bir çalışmada ise hem nitel hem de nitel yöntem kullanılmıştır.

RQ4: Çalışmaların değişkenlere göre dağılımı nedir?

Tablo 5. Araştırma Alanına Göre Dağılım

Araştırma Alanı	Frekans	Yüzde (%)
Nihai tüketiciler	5	38,5

Öğrenciler	5	38,5
İşletme çalışanları	1	7,7
Yorum	1	7,7
Makale incelemesi	1	7,7
Toplam	13	100,0

Tablo 5, tüketici sinizmi ile ilgili yapılan çalışmaların araştırma alanlarına yer vermektedir. Araştırma alanı ile örneklem grubu ifade edilmektedir. Çalışmalarda örneklem olarak en fazla nihai tüketicilerin (%38,5) ve öğrencilerin (%38,5) seçildiği görülmektedir. İşletme çalışanları (işletmenin sosyal medya uzmanları) ile görüşülerek bir çalışma yapılmıştır. Bir çalışmada da konuyla ilgili yorumlar (tweetler) incelenmiştir. Bir çalışmada da konuyla ilgili yazılan makaleler incelenmiştir.

Değişkenlerin kullanılma sıklıklarına bakıldığında ise en fazla kullanılan değişkenin tüketici sinizmi olduğu (11 çalışmada kullanılmıştır) görülmektedir. Olumsuz duygulanım, tüketici boykotları ve pazardan geri çekilme değişkenleri ise ikişer çalışmada kullanılmışlardır. Diğer değişkenler ise tablo 1’de gösterilmekte olup sadece tek bir çalışmada kullanılmışlardır.

4. SONUÇ

Bu çalışmada ulusal veri tabanlarında yer alan “tüketici sinizmi” konusunda yapılan akademik çalışmalar incelenmiştir. Çalışmanın sonucunda pazarlama alanında “tüketici sinizmi” konusunda önemli bir eksiklik olduğu görülmüştür. YÖK Tez Merkezi veri tabanı incelendiğinde “örgütsel sinizm” konusunda 365 adet lisansüstü tez varken “tüketici sinizmi” konusunda 3 adet tez bulunduğu belirlenmiştir. Buna ek olarak uluslararası alanyazında uzun senelerdir çalışılan ve onlarca makale olan “tüketici sinizmi” konusunda ulusal alanyazında sadece 10 adet makale bulunmaktadır.

Tüketiciler için satın alma seçenekleri her geçen gün artmaktadır. Bu durum işletmelerin tüketicilerini mutlu, sadık birer tüketici haline getirmelerini zorunlu kılmaktadır. Bu nedenle işletmeler, tüketicilerinin olumsuz algıladığı durumları ortadan kaldırmalı ve sinizm gibi işletmeye karşı olumsuz bir davranış geliştiren tüketiciyi geri kazanmaya çalışmalıdır. Bu nedenle işletmelere yol gösterecek akademik çalışmalara ihtiyaç duyulmaktadır. Pazarlama alanında çalışan akademisyenlerin hem akademik açıdan hem de kamu ve özel sektörde faaliyet gösteren işletmeler ve pazarlama profesyonellerine yol göstermesi açısından “sinizm” gibi olumsuz tüketici davranışları hakkında daha fazla çalışmalar yapmaları ve öneriler geliştirmeleri gerekmektedir. Bu amaçla, gelecekte yapılacak çalışmalarda farklı grupların örneklem olarak seçilmesi -örneğin, örnekleme endüstriyel tüketicilerin oluşturması- alana katkı sağlayacaktır ve «tüketici sinizmi» konusuna farklı bir bakış açısı getirecektir. Çünkü halihazırdaki çalışmalar incelendiğinde örneklem olarak nihai tüketicilerin ve öğrencilerin yoğunluklu olarak seçildiği görülmektedir.

Bu çalışmanın kısıtı kaynaklara erişimdir. Konuyla ilgili yazılmış kitaplar ve kitap bölümlerine ulaşılamamıştır. Çalışma alanı, veri tabanlarında yer alan çalışmalar ile sınırlıdır. Bu çalışmanın hazırlandığı dönemde yayınlandığı için çalışmaya dahil edilemeyen yayınların olma olasılığı çalışmanın kısıtlarındandır. Erişim izni olmayan yayınların da veri tabanlarında yer almaması bu çalışmanın bir diğer kısıtıdır.

Study of The Dependence Between The Expenditure Financial Flows in The Hospital Care in Bulgaria

Tsvetana Kerencheva¹

University of Agribusiness and Rural Development, kerencheva@abv.bg

Abstract: The aim of the study is to present a comparative analysis of current health care costs for the period of 2011-2018 in Bulgaria. Mathematical, tabular and graphical methods were used. The share of current expenditures in% of the country's GDP based on year 2011 has been determined. In 2013, the increase in current health expenditures decreased as GDP and the expenditure on outpatient care and retail trade in pharmacies and sanitary stores decreased. In 2012 and 2014, current health care expenditures increased more significantly as a share of GDP, with more health expenditures incurred in the country in absolute terms.

The management of medical institutions is a challenge in Bulgaria. Improving health systems is an important public goal. The criteria for efficiency and effectiveness, as well as quality patient care, should be set as fundamental for the health system.

Keywords: healthcare, quality, hospital care costs, health care costs, management of medical institutions

1. INTRODUCTION

Currently in Bulgaria a system of mixed financing of hospital care is used, including budget and fund financing. Every year there are significant deficits formed at the hospital level, as the reasons are complex and are contained mainly in the existing system of financing of hospitals, which determines a large part of the incentives for cost management.

Each hospital is a commercial company and is subject to the provisions of the Commercial Law, including the provisions on insolvency under this law. Based on the expediency at the moment, the hospitals in the country, despite the realized losses and accumulated liabilities are not in danger of bankruptcy. However, the problems with underfunding are deepening, and in the best case at the end of the reporting year are covered by the Ministry of Health /MH/. This method does not solve the problems and is not effective. In reality, the medical establishments do not function as commercial companies, as at the beginning of the year they do not have an annual plan for subsidies, as well as a draft budget approved by the Ministry of Health.

The conditions under the National Framework Agreement are not agreed with the medical establishments, but by law they are obliged to fulfill them. When negotiating lower values than the actual ones to pay for medical activities, hidden deficits are set for hospitals [1]. Thus, they are pressured to work below the cost of the services they provide and the normal functioning of hospital care is hampered. The constant increase in the cost of medicines is also the reason for the serious losses of the medical establishments and the deficits of the National Health Insurance Fund over the years.

The need to apply effective cost analyses in the healthcare system and its subsystems began to be realized in Bulgaria in the second half of the twentieth century.

2. Analysis of the health care expenditure (2011-2018)

In the system of public health care in Bulgaria in 1993 a unified methodology for separate reporting of costs in health care facilities by types of costs and types of facilities was developed and implemented [2]. It is difficult to analyse the costs of hospitals after the transfer of their funding to the health insurance fund, as the information is summarized on an annual basis, but not at the level of disease or patient. Following the introduction in 2011 of Specialized Hospital Software, monthly data for patient-level cost reporting are provided to the National Centre for Public Health and Analysis. It summarizes and analyses the information in order to achieve comparability in terms of economic efficiency of different types of medical institutions.

Information is also submitted to the National Statistical Institute, which uses the System of Health Accounts (SAS). It is developed as a statistical system with repetitive, current calculations and production of statistical information, using a harmonized methodology and standard classifications. SAS is an internationally accepted statistical system for describing, classifying and analysing health expenditures and sources of funding. The application of this statistical system aims to estimate all health care costs - both public and household costs, non-profit organizations - foundations, associations, private health insurance funds, occupational health care enterprises.

The total health care costs under the SAS measure the end use of these goods and services plus the capital costs in the institutions, providers of health services - those in which health care is the predominant function.

Relative share of current health expenditure (R&D) in gross domestic product (GDP) = (R&D) x 100

Table №1 contains information on the current health expenditures for the period Year 2011 - 2018, broken down by types of activities and presented in Chart №1. The data in it show that the share of current health expenditures in our country increases from 10% to GDP at the beginning of the period, it reaches 11.12% of GDP in 2014, then decreases to 10.57 % of GDP in 2018.

Table №1 Current health expenditure by type

(Million BGN)

Year	2011	2012	2013	2014	2015	2016	2017	2018
Current costs of hospital care – total /CCHC/	2 106.400	2 181.510	2 243.158	2 484,231	2 440.842	2 624.354	2 745.457	3 110.563
Current costs of outpatient care /CCOC/	778.750	1 010.290	977.830	1 016.878	1 080.054	1 105.940	1 222.056	1 228.072
Running costs through the retail system in pharmacies, sanitary and optical stores, etc. suppliers of medical products /RCPSOS/	2 366.790	2 482.190	2 135.141	2 359.985	2 494.059	2 740.352	2 952.754	2 958.532
Current expenses by function of medical and rehabilitation procedures /CEMRP/	2 819.950	3 146.340	3 146.990	3 472.037	3 466.396	3 675.730	3 924.135	4 306.138
Total current health expenditure /TCHE/	8 071.89	8 820.33	8 503.119	9 333.131	9 481.351	10 146.376	10 844.402	11 603.305
GDP - production method - national level	80 714	82 239	81 955	83 885	89 362	95 131	102 345	109 743

Relative share of current health expenditures in relation to GDP in%	<u>10.00</u>	<u>10.725</u>	<u>10.375</u>	<u>11.126</u>	<u>10.61</u>	<u>10.666</u>	<u>10.596</u>	<u>10.573</u>
--	--------------	---------------	---------------	---------------	--------------	---------------	---------------	---------------

[3] Source National Insurance Institute - <https://www.nsi.bg>

Chart №1 Current health expenditure by type for the period 2013-2018

Source: data from NSI

Line 5 shows the sum of the types of current health expenditures for the respective years. It can be seen that they increase every year, except for 2013, which is due to the large decline in current expenditures for outpatient care in the same year, despite the low value of the average annual inflation index in the country for January - December 2013 compared to January - December 2012 in the amount of 0.9%.

Row 6 reflects the data on the gross domestic product at the national level - there is a decrease in absolute value only in 2013.

Row 7 calculates the share of current health expenditures in total relative to GDP at the national level. There is a smooth movement on the line of Chart №2, except for the two clearly defined peaks due to higher values of current expenditures in 2012 and 2014.

Chart №2 R&D as a % of GDP for the period 2011-2018

Source: data from NSI

During the study period, public spending on health care in the country also showed an upward trend from BGN 4, 844.18 million in 2011 to BGN 7,585.187 million in 2018 - presented in Table №2.

Despite their significant increase in absolute value, as a relative share in GDP they have a slight decline in 2015 and 2016, compared to the previous ones. Compared to the relative share of total current health expenditures, which decreased in the last two years of the analyzed period, the share of public expenditures relative to GDP has been growing since 2017 due to increased budget funding in the health care system.

Table №2 Public expenditures for healthcare

Year	GDP - production method - in BGN million	Public expenditures for healthcare in BGN million	Relative share of GDP in %
2011	80 714	4844.180	6,01
2012	82 239	5010.790	6,09
2013	81 955	5313.873	6,48
2014	83 885	5997.481	7,15
2015	89 362	5911.144	6,61
2016	95 131	6269.342	6,59
2017	102 345	6759.765	6,60
2018	109 743	7585.187	6,91

Table №3 shows the changes in the values of private expenditures for healthcare in Bulgaria for the period of 2011 - 2018.

There is a decrease in absolute values in year 2013, then there is an increase and again followed by a decrease in 2018. The changes in the relative shares of the private expenditures for healthcare in our country have decreased in 2013, 2017 and 2018. This enables the access of the majority of the population to health services and improves the efficiency of the health system in the country.

Table №3 Private expenditures for healthcare

Year	GDP - production method - in BGN million	Private expenditures for healthcare in BGN million	Relative share of GDP in %
2011	80 714	3227,730	4,00
2012	82 239	3809,520	4,63
2013	81 955	3189,246	3,89
2014	83 885	3335,650	3,98
2015	89 362	3570,207	4,00
2016	95 131	3877,034	4,08
2017	102 345	4084,657	3,99
2018	109 743	4018,118	3,66

[3] Source: NSI - <https://www.nsi.bg>

Table №4 Relative share of public and private health expenditures

Year	Relative share of public expenditures in relation to the total amount of health expenditures in %	Relative share of private expenditures in relation to the total amount of health expenditures in %
2011	60,01	39,99
2012	56,81	43,19
2013	62,49	37,51
2014	64,26	35,74
2015	62,34	37,66
2016	61,79	38,21
2017	62,33	37,67
2018	65,37	34,63

Source: author calculations

Table №4 presents the changes in the relative shares of public and private health care expenditures in Bulgaria, compared to their total value for the study period.

The data in it show that the share of private expenditures varies, but after 2016 it continues to decline. At the same time, the share of public health expenditures, despite its fluctuations, shows an upward trend from 2017 onwards. Therefore, it can be concluded that the maintenance of the health sector is largely borne by the state - over 60%, which shows that it is trying to fulfill its commitment to health care, allocating more and more public funds and considers the sector for socially significant.

3. CONCLUSION

The management of hospitals is a challenge in Bulgaria. The abilities of the directors of the hospitals are not always up to standard, the choice of governing bodies of municipal and state hospitals is non-transparent and without clear rules. The current topic today - the transformation of medical institutions into state-owned companies instead of commercial ones - is not an optimal solution because it will lead

to even greater inefficiency of management, as they are subject to mandatory regulations only by the state. To be managed by the state, including the distribution of funds from health contributions - this would take development back in time as a kind of nationalization. Hospitals that are not commercial companies, but spending units with a budget to the relevant ministry receive state subsidies that are not in the public domain, and their accountability as well. Reforms in the sector over the last three decades have been unsatisfactory, but efforts are being made to improve access to health care for the population. Problems exist with the quality of health services; the obsolete moral and physical material base; the collection of health insurance contributions; poor quality control of medical services; chronic shortage of funds for financing hospital care; lack of sufficient medical staff and so on. The measures taken by the state to control the expenditure of funds under the concluded framework agreement and the imposition of financial discipline, setting limits on the activities of health care institutions, introduction of a national health card, etc. are insufficient, but in the right direction. Annually increasing costs for hospital health care are not relevant to the improvement of the health status of the population; over-hospitalizations; non-compliance with the severity of the disease and accompanying those with the value determined by the clinical pathway; discrepancy of the payment with the quality / results / of the treatment.

It is right to move to funding based on diagnostic-related groups, the introduction of an electronic health record. If the system of control over medical activities is performed by an independent control body and not by civil servants, the criterion for assessing the quality of health services provided will be emphasized.

Retrospective Analysis of Expenditure in Bulgarian Healthcare System

Veli Baldza ¹

University of Agribusiness and Rural Development, veli_bal@abv.bg

Abstract: The article analyses tendencies in health care expenditure in Bulgaria during the period 2008-2018. Cost analysis is an important issue in the health management process. It is important to analyze relevant data on healthcare expenditure to ensure financial sustainability of the health system. Economic evaluation can provide useful and relevance information how to use available resources for maximizing health benefits. The management of medical institutions is a challenge in Bulgaria. Improving health systems is an important public goal. The criteria for efficiency and effectiveness, as well as quality patient care, should be set as fundamental for the health system. This study focuses on several key indicators that can give an idea of the state of the health care system in Bulgaria. Some of the main problems and the reasons for them are highlighted, as well as the country's place among countries in the European Union (EU).

Keywords: health care, economic evaluation, health care expenditure, effectiveness.

1. INTRODUCTION

The health system is an important part of the national economic system and provides professional health care services to the population aimed at preserving and strengthening its health status. In this way, the health system has a significant impact on human capital and human development. Therefore, health care system is extremely important for the economic development. From this point of view, the financing of the health care is crucial for the economic prosperity and well-being of society and should be a priority of any government policy. Optimal funding maximizes the benefits for both the individual and society.

As the financial evaluation gives an idea of the overall strength of the health system the issue of the financing of health care is essential to the health economy. Cost analysis is very important in the health management process. Expenditure on health, as defined in the System of Health Accounts (OECD, Eurostat and WHO, 2017), measures the final consumption of health goods and services. This refers to current spending on medical services and goods, on preventive and curative health, and overall financial management of health care irrespective of the type of financing arrangement. It is important to analyze relevant data on healthcare expenditure to ensure financial sustainability of the health system.

2. Material and method

Present study aims to analyses several indicators: Total health care expenditures as a percentage of GDP, health care expenditure per capita, public and private health care expenditure as a percentage of total health care expenditure and their structure. In this regard bibliographic analysis of Bulgarian and foreign academic literature sources, statistical data, reports and other EU and Bulgarian documents dealing with the issue of spending funds in the health sector is done. Results and conclusion are drawn.

3. Overview of the health care system in Bulgaria

The Bulgarian health system is controlled by the Ministry of Health, responsible for national health policy and the overall organization and functioning of the health system, while the National Health Insurance Fund (NHIF) controls and manages the health insurance system. NHIF carries out its administrative duties through 28 territorial divisions, known as regional Health Insurance Funds.

The key players in the insurance system are the insured individuals, the health care providers and the third-party payers, comprising the National Health Insurance Fund, the single payer in the social health

insurance (SHI) system, and voluntary health insurance companies (VHICs).¹ Health reform in Bulgaria started with establishment of National health insurance fund (NHIF) in 1998. The NHIF is an autonomous public institution independent from the government. One of the key goals of reform was the transition from government budget financing of health care to financing based on the health insurance principle. Management of health care providers was decentralized and contractual relations between the NHIF and health care providers were introduced together with new payment mechanisms. Social health insurance contributions are calculated at 8% of monthly income, paid by the insured individuals, their employers, or the state. The insurance system (SHI and VHI) covers diagnostic, treatment, rehabilitation services and medications for the insured persons.

4. Health care expenditure analysis (2008-2018)

Health care expenditure is critical to a well-functioning health system. However more expenditure, though, do not automatically translate into better health care functioning – the effectiveness of spending is also important. Analysis of structure, and dynamics of health care expenditures is a key direction of health economy. Health spending per capita and as a share of GDP summaries overall resource availability. Fig. 1 presents the total health expenditure (THE) as a share of GDP in Bulgaria and EU (average) over the period 2008-2018. Total health expenditure comprises the sum of public and private expenditure. According to World bank the share of THE in Bulgaria is consistently lower than EU average with a difference of 2 - 3 percent of GDP. In the beginning of the period THE amounts to 6,29% and increases to 7,35% in 2018. The highest value is registered in 2014 - 8,51% of GDP. Steady growth of spending in absolute value for the period is observed. Total health expenditure in Bulgaria is relatively high in comparison with other CEE countries (fig. 2). The country has highest cost compared to the Romania, Latvia, Poland, Lithuania, Slovakia, Croatia. However, Slovakia (17th place), Serbia (18th place) Croatia (24th place), Lithuania (28th place), Latvia (30th place) offer better health services than Bulgaria (31st place) according to the European Health Consumer Index (2018).

Fig. 1. Total health care expenditure as a share of GDP in Bulgaria and European Union (2008 – 2018)

Source: World bank, data available at <https://data.worldbank.org/>

Bulgarian healthcare spending per capita for 2018 was \$690 - 11.51% increase from 2017 (fig. 2). Despite doubling since 2005, per capita health spending was the fourth lowest in the EU.

¹ Dimova A, Rohova M, Moutafova E, Atanasova E, Koeva S, Panteli D, van Ginneken E. Bulgaria health system review. Health Syst Transit. 2012;14(3):1-186.PMID: 22894828

Fig. 2. Current health expenditure per capita in USD (2008-2018)

Source: World bank, data available at <https://data.worldbank.org/>

THE as a percentage of GDP is highest in Switzerland (fig. 3). According to EHCI the top position in “EHCI 2018 total scores” was taken by Switzerland, seen from the consumer’s point of view (893 points out of 1000). The second position was taken by Netherland (883 points). Total health cost amounts 9,97% of GDP in Netherland while in Bulgaria this indicator amounts 7,35%. The difference is 2,62% but Bulgaria occupy 31st position in ranking system according to the European Health Consumer Index (2018). This is evidence of the volatile relationship between healthcare costs and quality of health services in the country. Unfortunately, increase in current health costs does not lead to greater patient satisfaction of the quality of Bulgarian health care.

Fig. 3. Total health care expenditure as a share of GDP in selected countries in 2018

Source: World bank, data available at <https://data.worldbank.org/>

In recent years, public spending on health care in our country also note an upward trend. Public spending is significantly higher in the EU, while in Bulgaria private spending is far higher and its role has been growing slowly but steadily in recent years (fig. 4).

According to reports of Ministry of Finance in Bulgaria the largest contribution to the financing of health expenditures has the budget of NHIF (75-78% of total public health financing). The second source is

state budget (. Next in importance are the funds provided by municipalities and last - the funds from EU operational programs and others international program (external resources about 0,5-3,5%).

Fig. 4. Public health expenditure as a share of total health expenditure (2008-2018)

Source: World bank, data available at <https://data.worldbank.org/>

Most of the EU countries spend significant public funds as a share of GDP for health care. The average share of public expenditures for the EU is 74,1%. For Bulgaria this indicator is slightly above 55%. At the same time, in Bulgaria the share of private expenditures in total healthcare expenditures is consistently higher than EU average. As of 2018, in Bulgaria the share of private expenditures is 42,4%, while in the EU this share is 25,6% (fig. 5). During the study period, the share of public spending in the EU was significantly higher than private spending and remained above 75%. It is noteworthy that this share has remained stable for the last 18 years, i.e., the increase in total healthcare costs in the EU keeps this proportion unchanged.

Another essential element of financing of health care is private health insurance. Private insurers provide a range of services, which include extending and supplementing publicly financed healthcare systems, allowing policyholders to benefit from faster access to treatment and a wider choice of healthcare providers. In national markets across Europe, the role of private insurers differs significantly due to differences in the way national healthcare systems are organised and financed.²

According to the methodological requirements of the System of Health Accounts SHA the expenditure of the private sector include: Individual consumption expenditures of households on regulated payments for medical, dental and dental technical services, supplies, and other therapeutic goods. Also included are the payments in the system of retail trade in pharmacies, optical and sanitary shops; Claims paid by the voluntary health insurance companies; Expenditures of non-profit institutions serving households - as these expenses cannot be allocated in detail by functions and by providers, they are allocated to non-classified activities; Expenditure of enterprises and organizations for activities related to labour health care for employees. According to the methodological requirements of the SHA, ver. 2011 expenditures for Voluntary health care insurance and enterprises' and organisations' expenditures for labour medical activities are separated from private sector in a separate Voluntary Health Care Payment Schemes.³

Fig. 5 Private health expenditure as a percentage of total health expenditure (2008-2018)

Source: World bank, data available at <https://data.worldbank.org/>

Out-of-pocket expenditure (OOP) are spending on health directly out of pocket by households to medical practitioners and pharmaceutical suppliers, for medical goods and services used to recover or improve the health status of individuals or groups of the population. Out-of-pocket expenditure are a component of private health expenditure. Since 2008 the share of OOP in private health expenditure has fallen slightly, although they form significant share of all private expenditure. This leads to the conclusion that the role of private insurance, and payments from private corporations is increasing but the potential for increasing the role of private health insurance in Bulgaria remains significant. Fig. 6 presents spending on health directly out of pocket by households for the period from 2008 to 2018. There is a trend of their continuous increase, as the rate of their growth is ahead the growth rates of both public and total health expenditures. In this period average value of out-of-pocket expenditure per capita in Bulgaria is 532 USD. This amount is more than twice bigger than EU average. As a percentage of total health financing represented 42,4% in 2018 decreasing slightly, although remained highest in the EU. The drivers of OOP expenditure are payments for services not covered by the benefit package (pharmaceuticals and outpatient care). Pharmaceuticals and medical devices, and inpatient care in Bulgaria accounted over 70% of current health expenditure. Bulgaria’s spending on pharmaceuticals was the highest in the EU (over 40 % of total health expenditure).

Fig. 6 Out-of-pocket expenditure per capita (2008-2018)

Source: World bank, data available at <https://data.worldbank.org/>

5. CONCLUSION

Current health expenditure in Bulgaria has increased for the study period. Although the trend has not been consistent, health spending grew on average by more than 5.3 % per annum between 2009 and 2017, more than three times the EU average of 1.5 %. The annual growth in public spending on health care has outpaced GDP growth in the period. The NHIF budget is the main source for health financing providing three quarters of Bulgaria's current health expenditure. Although health spending in Bulgaria is still relatively low compared to other EU Member States, it has increased steadily over the last years. However, the increase in health care costs is mainly due to out-of-pocket expenditure. Bulgaria reports the highest share in the EU. Pharmaceuticals and medical devices, and inpatient care account for the predominant proportion of private expenditure on health. Informal payments to doctors are estimated to make up a considerable share of out-of-pocket payments. The biggest challenge for accessibility of health care is the significant proportion of the population not covered by health insurance.

The presented data illustrate the need for urgent reform of the healthcare system in Bulgaria, as the problems are not so serious in terms of lack of financing, but rather in terms of optimizing the available resources. The effectiveness of health services in Bulgaria is poor and improvements in the quality of care have been slow. In addition, Bulgaria's very high hospitalisation rates are partly due to the underdevelopment of preventive health services and the primary care sector. Increasing public health expenditure cannot achieve the desired medical results and patient satisfaction with the quality of provided medical services.

It can be concluded that the model of financing the health system in Bulgaria needs a change in term to achieve a reduction in the financial burden of the population, strengthening control over health care costs and increasing efficiency and quality of provided medical services. It means to set following objectives: To improve the efficiency of the use of funds in the health system; To optimize the structure and distribution of hospital resources and to overcome the territorial imbalances in the system; To reduce and eliminate the share of unregulated costs in the system; To improve the control in the system; To measure the quality of treatment and monitor the effects of the applied therapies on patients; To create potential for implementation of new policies and programs and for investments and renewal of the material base and technologies for treatment.

Abstract: This study attempts to draw inductive causal inference patterns for the relationships between current account, economic growth proxied by industrial production, real effective exchange rate, inflation, and interest payments on external debt in Turkey. All variables used in this study are extracted from EVDS (Electronic Data Delivery System) of The Central Bank of the Republic of Turkey. In order to determine both the direct and indirect contemporaneous causal relationships between the variables, we estimate Directed Acyclic Graphs (DAGs) for the period 2006M01 – 2021M03. The resulting DAGs template suggests that the current account and inflation are the main driving factors of the real effective exchange rate, affecting interest payments on external debt directly. The results also suggest that both inflation and foreign debt interest payments have directed effects on economic growth while the current account affects economic growth indirectly through its effect on the exchange rate and interest payments on external debt.

Keywords: Current account, exchange rate, economic growth

1. Introduction

Studies on the relationship between current account, exchange rate, and economic growth have always been an attractive topic for researchers as the effect of globalization on open economies had been one of the major topics in the economics literature. After the 1980s, when globalization winds to blow around the world, many countries have faced current account deficits due to their uncompetitive domestic markets, which cannot sell their goods and services in international markets. Nevertheless, countries like Turkey have been running current account deficits for many years, making the currencies' value decrease. Therefore, understanding the possible relations and transmission channels between current account, exchange rate, and economic growth, particularly for developing countries, may help policy-makers to pursue the right economic policies, either maximizing economic growth or minimizing the harmful effects of persistent current account deficits. For example, large deficits could cause depreciation in exchange rates and cost-push inflation. Hence, for countries in floating exchange rate regimes, market forces should adjust to the correct level in the long term.

The Turkish economy has been suffering from current account deficit for years, primary problems arising from the saving gap and foreign dependency on energy and intermediate goods. Therefore, it is prominent to make the current account deficit sustainable to reach a balanced economic growth path. There is a growing agreement that sustained real exchange rate misalignment will generally lead to severe macroeconomic disequilibria, that the correction of external balances (i.e., Current account deficits) will usually require a real exchange devaluation (or depreciation) (Edwards, 1988). Dornbush (1982) and Williamson (2009) argue that more 'successful' developing countries owe much of their success to having been able to maintain the real exchange rate at its 'appropriate' level.' Hence, it is not an overstatement to say that real exchange rate behavior occupies a central role in policy evaluation and design.

2. Literature Review

This section will summarize brief literature by categorizing relations between variables used in our study. Lebe et al. (2009) analyze the effects of Turkey and Romania's economic growth and exchange rate changeability on the current deficit by employing the structural VAR method between 1997-Q2 and 2007-Q3. The findings obtained from the empirical analysis show that economic growth is the primary

driver of the current account deficit. They argue that the current account deficit increases with increased total demand in the economy as the economy grows.

There are debates on the effects of exchange rates on economic growth, mainly arguing that its impact differs according to the types of countries. For example, Prasad et al. (2006) concluded that there is empirical evidence that overvaluation of real exchange rate harms growth in developing economies, although they find no evidence that the same is true in developed countries. Also, Rodrik (2007) and Bhalla (2007) agree that the evidence shows that growth is dependent on avoiding an overvalued exchange rate, but they also argue that undervaluation is helpful to growth.

On the other side, Berument and Pasaogullari (2003) show, by considering quarterly data of Turkey from 1987 to 2001, that the real depreciation of exchange rates is contractionary, causing detrimental effects on output. Another important finding is that devaluation is inflationary. Similar results were obtained by Erol and van Wijnbergen (1997), who found the real exchange rate appreciations to be contractionary for Turkey.

The nominal exchange rate is a statistically significant determinant of external debt as it increases the country's debt burden. When a country faces a high level of external debt to GDP, the lenders ask for a higher interest rate to compensate their risk against the inability of borrowers to pay.

Purchasing power parity (PPP) already reveals the relationship between real exchange rate and inflation since the logarithm of the real exchange rate (q_t) may be defined as the deviation from PPP:

$$q_t = s_t + p_t^* - p_t$$

where s_t denotes the logarithm of the nominal exchange rate (the domestic price of foreign currency) observed at time t , and p_t^* and p_t are the logarithms of the foreign and domestic price levels respectively. Due to this theory, it is naturally expected that inflation will affect the real exchange rate in the study.

External borrowing has both benefits and costs. The benefits that a country may have from borrowing foreign funds include purchasing advanced equipment and technology and investing in the essential projects private firms are unwilling to support (such as infrastructures). With better technology and improved infrastructure, the debtor country can raise the efficiency of the production process and perhaps reach self-sustainable economic growth. The cost of foreign borrowing is the interest payment on the debt. More future tax revenues must be raised to pay the principal and interest, or the given tax revenue must be diverted from other productive uses, which may hurt economic growth.

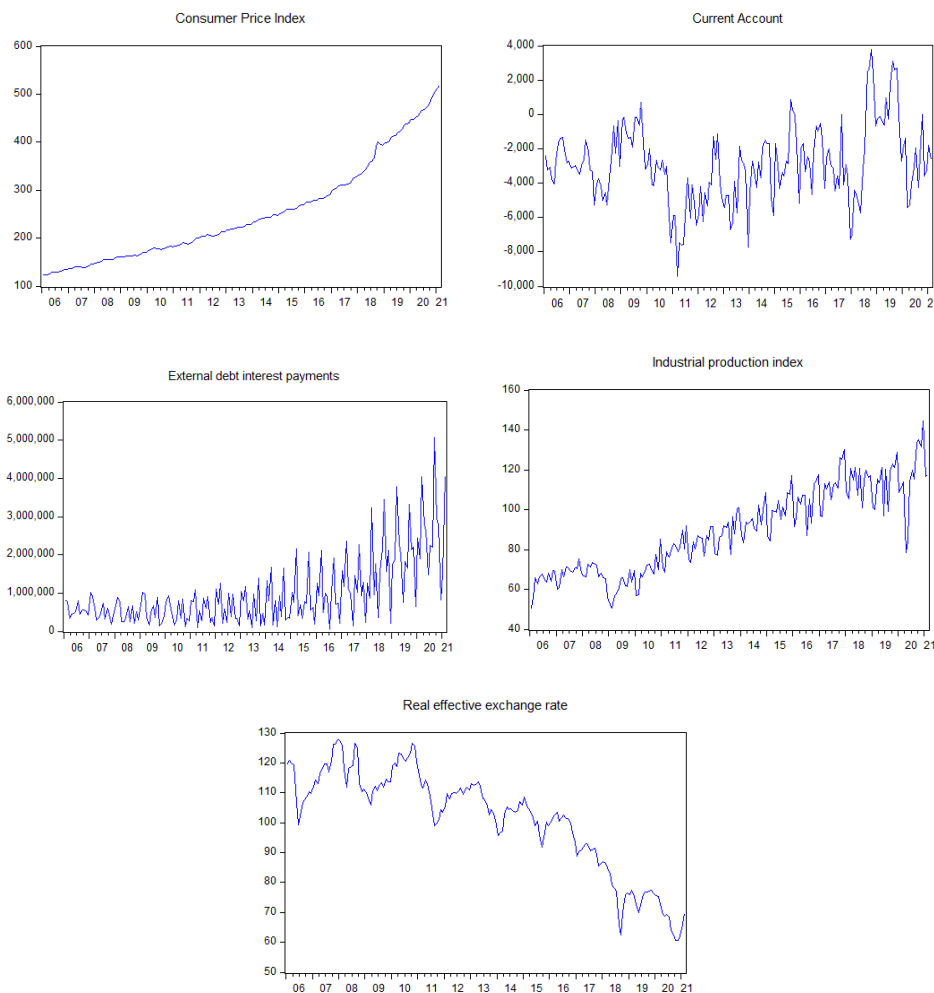

Because of these differential effects of borrowing, the net effect of foreign debt on economic growth is ambiguous in general, depending on the level of interest rate and how efficiently the funds are utilized. If the funds are efficiently utilized, and the interest rate on the debt is not high, then the foreign debt will likely stimulate economic growth. If the funds are largely wasted, or the interest rate on the debt is high, then foreign debt is likely to reduce the speed of economic growth. Also, foreign debt, particularly long-term debt, may increase a country's current capital stock and stimulate economic growth, while debt repayment may decrease the future capital stock and reduce future economic growth. For instance, Lin and Sosin (2001) found a negative relationship between foreign debt and the growth rate of per capita GDP on a total sample of 77 countries. However, Tchereni et al. (2013) examined the impact of external debt on economic growth in Malawi by using other macroeconomic control variables such as exchange rate, lending rate, inflation, and openness. The results show a statistically insignificant and negative relationship between foreign debt and economic growth for the case of Malawi.

Using cross-country analysis, Panth et al. (2006) analyzed Jamaica's experience on the relationship between public debt and productivity growth. The results indicate a significant and negative relationship between total public debt and productivity growth. The study also concluded that public investment had been crowded out by debt servicing, further adversely affecting productivity growth.

In his famous article Barro (1995) used data for around 100 countries from 1960 to 1990 to assess the effects of inflation on economic performance. If some country characteristics are held constant, then regression results indicate that the impact effects from an increase in average inflation by ten percentage points per year reduce the growth rate of real per capita GDP by 0.2-0.3 percentage points

per year. Mallik and Chowdhury (2001) examine the relationship between inflation and GDP growth for four South Asian countries (Bangladesh, India, Pakistan, and Sri Lanka). A comparison of empirical evidence is obtained from the cointegration and error correction models using annual data collected from the IMF International Financial Statistics. The authors find evidence of a long-run positive relationship between GDP growth rate and inflation for all four countries.

The figures below show the trends and movements for the period examined in this study. As shown, the consumer price index significantly increases year by year in Turkey, particularly accelerated after 2018. Turkish economy mostly experienced current account deficits, which are prominent in the last months of 2010 and the first quarter of 2011, reaching almost 10 billion dollars per month. Highly depreciation in the real exchange rate in August 2018 leads to a current account surplus for a couple of months. After volatility in exchange rates disappear, current account deficits continue to emerge in the Turkish economy. External debt interest payments show seasonality since debt payments have been made mostly in March and September each year. We can clearly say that external debt payments have risen after 2017. We observe from the figure that real effective exchange rates show a clear downward trend since 2010, whereas the industrial production index, which is used as a proxy for GDP growth in our analysis, presents an upward trend in the Turkish economy since the beginning of 2006 except 2008 global crisis period and 2020 Covid-19 pandemic that hits all over the world.

3. Data and Empirical Analysis

This paper investigates the dynamic relationships between current account, economic growth, real effective exchange rate, inflation, and interest payments on external debt based on the contemporaneous causal structure derived from DAGs. For this purpose, we employ time series Turkish data on current account (million US dollar), economic growth (proxied by industrial production index),

the real effective exchange rate (based on CPI), inflation (consumer prices), and interest payments on external debt for the period 2006M01 – 2021M03. All the variables are extracted from the electronic data delivery system of the Central Bank of Turkey and used in their natural logarithmic forms except for the current account variable.

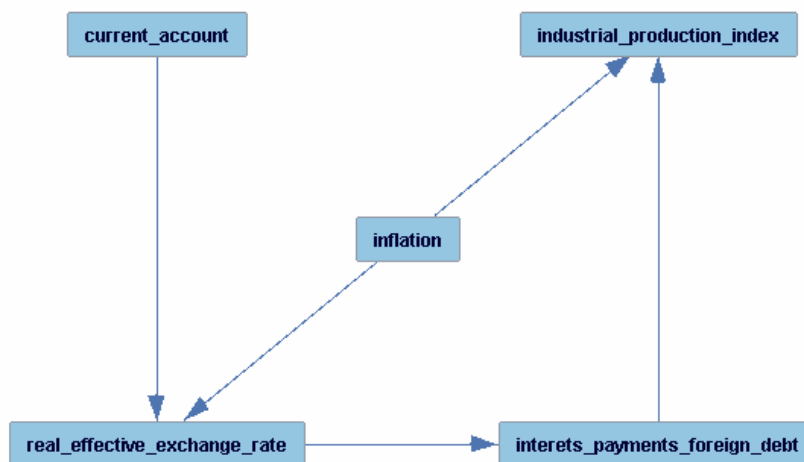

In the economics literature, the studies measuring and defining the parameters and structure of economic models have been based mostly on economic theory and intuitions of researchers. However, it can be stated that the theory is quite heterogeneous in this context, although most of the time, it cannot provide enough information to describe the causal structure between the variables that are the subject of the theory. In addition, since the statistical properties of the data theoretically determine the causal structure, the causal structure based on observational data cannot be determined by models based on the theory, and incorrect causal inferences can be made (Kwon ve Bessler, 2011). Therefore, instead of "deductive causality" arising from innate ideas (thought) or the mathematics of assumed behavior, "inductive causality", which is based on observational data and helps to create causal graphs from conditional independence between variables, can contribute to achieving consistent results in determining the relationships between variables (Li, Woodard ve Leatham, 2013 ve Benli, 2019).

DAGs, which are the most widely used in inductive causal inference, as an alternative and more comprehensive way of detecting causal relationships, was proposed by Pearl (1995 and 2000) and Spirtes et al. (2000) and have been the most widely used graphs in causal modeling since then. DAGs are simply arrow directed graphs of a picture representing the causal flows (or lack thereof) among a set of variables, and Spirtes et al. (2000) show that DAGs as they account for the effects of conditional interdependencies found in observational data. The PC algorithm, developed by Spirtes et al. (2000), is one of the powerful algorithms that can be used to build directed graphs of causal relationships using the concept of d-separation (Li et al., 2013). The PC algorithm and its extensions and all the other algorithms that can be used to produce DAGs patterns are available in TETRAD VI, which is the software program we employ in this study to identify DAGs.

The Monte Carlo simulations show that the PC algorithm, especially for small sample sizes (i.e., less than 100), may assign the directions of edges incorrectly and may make mistakes of edge exclusion/inclusion. Nevertheless, the performance of the algorithm can be improved by selecting higher significance levels (e.g., 0.1 for the sample size of 100 – 300, and 0.2 or 0.3 at sample sizes less than 100). Given our 183 time-series observations (2006M01 – 2021M03), we choose the 10 percent significance level for the analysis.

The resulting DAG pattern provided by the PC algorithm at the 10% significance level is presented in Figure 1.

Figure 1: Directed Graph at 10% Level (PC Algorithm)

Examining the pattern provided by the PC algorithm reveals that the main driving factors of real effective exchange rate are current account and inflation, whereas real effective exchange rate seems to have a directed effect on interest payments on external debt. The findings also imply that inflation and

foreign debt interest payments have directed and contemporaneous impacts on the industrial production index. Another significant result suggested by the pattern is the indirect effect of the current account on economic growth through its effect on the exchange rate and interest payments on external debt.

4. Conclusion

This study attempts to reveal the dynamic linkage patterns among current account, industrial production index, real effective exchange rate, inflation, and interest payments on external debt in Turkey for the period 2006M01 – 2021M03 applying an empirical framework based on DAGs. The empirical evidence suggests a contemporaneous causal flow from both current account and inflation to the real effective exchange rate. The results also indicate a contemporaneous causality running from real effective exchange rate to interest payments on external debt. In addition, according to the findings, inflation and foreign debt interest payments have directed contemporaneous impacts on economic growth, which is proxied by the industrial production index, while the current account has an indirect effect on growth via mediating factors of real effective exchange rate and interest payments on foreign debt.

Some policy implications could be drawn from these results. Firstly, efficient utilization is very important as foreign debt can have positive or negative effects on economic growth depending on how and where foreign debt has been used. Therefore, since high foreign debt levels may be associated with high interest rates, those external debt interest payments will be linked to low economic growth due to the crowding-out effect of public investment. As it is well-known, high inflation is detrimental to economic performance. As we already illustrated in this study, policy-makers should focus on lowering inflation in Turkey to reach an optimal and sustainable economic growth rate.

Özet: Günümüzde işletmeler artan rekabet ortamında her geçen gün faaliyetlerini geliştirerek yürütmek durumundadır. Özellikle işletmeler pazarlama faaliyetleri ile tüketici tercihlerini kendilerine doğru çevirebilmek ve tüketicileri etkilemek için yaratıcı teklifler üretmeleri gerekmektedir. Bu anlamda işletmelerin sıklıkla kullandıkları araçlar satış promosyonları ve fiyat indirimleri olmaktadır. İşletmeler, indirim ve promosyonların tasarlanmasında geçmişten günümüze kadar türlü biçimlerde farklı uygulamalar ile tüketicilerin karşısına çıkmaktadırlar. Bu çalışma, internet üzerinde işletmelerin uygulamaya koydukları promosyon ve fiyat indirimlerinin anlık satın alma eğiliminin internette anlık satın alma davranışı üzerindeki etkilerini tespit etmeyi amaçlamaktadır.

Anahtar Kelimeler: Promosyon, Fiyat İndirimleri, Çevrimiçi Anlık Satın Alma.

The Effects of Online Promotions and Price Discounts on Instant Purchase Behaviors on the Internet

Abstract: Today, businesses have to carry out their activities by developing them every day in an increasingly competitive environment. In particular, businesses need to create creative proposals to be able to translate consumer preferences towards them through marketing activities and influence consumers. In this sense, the tools that businesses often use are sales promotions and price reductions. Businesses face consumers with different applications in the design of discounts and promotions in various forms from the past to the present. This study aims to determine the effects of instant buying trends on instant buying behavior on the internet of promotions and price reductions that businesses implement on the internet.

Keywords: Promotion, Price Discounts, Online Instant Purchase.

1.GİRİŞ

Günümüzde yaşanan küreselleşme ile birlikte rekabetin artması sonucunda pazarda işletmelerin tüketicileri kendilerine çekerek sürdürülebilirliğinin sağlanabilmesi adına çeşitli stratejiler uygulanmaktadır. Özellikle internet kullanımının her geçen gün giderek artması ile birlikte işletmeler de rekabet üstünlüğü elde edebilmek için internet kanalını kullanmaya başlamışlardır. Rekabet ve piyasa koşulları gereği işletmeler internette fiyat indirimi ve satış promosyonları uygulamalarını sıklaştırmaya başlamıştır.

Fiyat indirimlerinin ve satış promosyonlarının kısa vadede satışları nispi oranda yükseltebilme ve tüketicide heyecan uyandırarak satın almayı özendirici unsurları barındırdığı için hem işletmeler hem de tüketiciler bakımından yararlı olabilmektedir.

Fiyat indirimleri ve satış promosyonlarının tüketicilerin düşünmek için harcadığı zamanı azaltmakla birlikte daha dürtüsel olan çevrimiçi tüketicilerin anlık satın alımlar yapmasına neden olur. Çevrimiçi tüketicilerinin dürtüselliklerinden yararlanmak ve anlık satın alımları özendirmek isteyen işletmeler fiyat indirimleri ve satış promosyonları sık sık uygulamaktadırlar.

Bu çalışmanın amacı internet üzerinde işletmelerin uygulamaya koydukları satış promosyonlarının ve fiyat indirimlerinin anlık satın alma eğiliminin internette anlık satın alma davranışı üzerindeki etkilerinin tespit edilmesidir. Bu amaçla çalışmada öncelikle literatür taraması yapılarak promosyon, fiyat indirimi ve çevrimiçi anlık satın alma kavramları irdelenmiştir. Daha sonra araştırmanın teorik modeli oluşturularak yapılan araştırma sonucunda bulgular tartışılmıştır.

2.KAVRAMSAL ÇERÇEVE

2.1.Promosyon

Promosyon faaliyetleri, tüketiciyi satın alma konusunda cesaretlendiren kısa dönemli ürüne ek değer katan tekniklerden oluşmaktadır. Promosyon diğer adı ile satış geliştirme çabaları; çok türlü biçimde oluşabilmektedir. Ürüne veya hizmete ek değer kazandıran bu faaliyetler tüketiciye yeni bir şeyler kazanma şansı, bedava ürün ve/veya hizmet, ödül kazanma hakkı vb. imkanlar vermektedir. Promosyon faaliyetleri, yeni müşteri kazanmak için yapılabileceği gibi mevcut müşterinin bağlılığını artırmak için de gerçekleştirilebilmektedir (Şekerkaya, 2010: 19).

Tüketicilerin satın alma kararlarını etkileyebilme noktasında promosyon metotları farklılık gösterebilmektedir. Satışları artırmak için aynı ürünün ikincisi hediye olarak verilebilirken, pazara yeni sürülen bir ürünün denenmesi amaçlı olarak tadım faaliyetleri yürütülebilir. Ayrıca, çekiliş ve yarışmalar ile tüketiciye ekstra yarar sağlayacak faaliyetler sunulabilir (İdemen, 2017:18).

Satıcılar, satış tutundurma uygulamaları bağlamında tüketicilere türlü fiyat promosyonları seçeneği verebilmektedirler. Bazı araştırmalar fiyat promosyonlarının tüketici satın alma davranışlarına karşı olumlu (Associates, 2000), bazılarının ise olumsuz sonuçlar verdiğini (Blattberg, Briesch & Fox, 1995) belirtmektedir.

2.2.Fiyat İndirimi

Fiyat, bir ürün veya hizmetin değerinin para ile ifade edilmesidir. Başka deyişle fiyat, arz ve talebe bağlı olarak şekillenmektedir.

Fiyat indirimi ise, tüketicileri daha yüksek oranda satın almaya teşvik etmek, peşin ödeme alışkanlığı kazandırmak ve araçların dağıtım kanalındaki verimliliklerini yükseltmek için liste fiyatı üzerinden yapılan ve türlü biçimlerde uygulanan teşvik edici bir satış taktiğidir (Kardeş, 1986: 208).

Fiyat indirimlerinde ürünün perakende fiyatından indirim yapılmakta ve indirim oranları etiketin üzerinde gösterilmektedir. Fiyat indirimleri, genellikle de tüketici tercihlerinde pahalı olan markalara yönelik satış teşvik etmektedir (Tenekecioğlu, 2005: 257).

2.3.Çevrimiçi Anlık Satın Alma

İnternetin yaygınlaşmasıyla birlikte e-ticaret uygulamalarının artması, tüketiciler arasında çevrimiçi anlık satın almayı da yaygınlaştırmıştır. İnternet ile beraber, tüketicilerin satın alma fırsatları yakalaması, ürün ve hizmetlere erişiminin ve satın alma kolaylığının artması satış hacmini de genişletmiştir. Bu yeni alışveriş biçimi, geleneksel mağaza içi satın alımlarına göre rahatlığı da artırmıştır (Eroglu, Machleit ve Davis, 2002: 177).

Çevrim içi anlık satın almayla alakalı araştırmalar 2000'lerin başından itibaren başlamakla birlikte yıllar içinde artan hızla büyümüştür. Bu alanda ilk çalışma Adelaar vd. (2003) tarafından gerçekleştirilmiştir. Yapılan çalışmada farklı bilgi sunum şekillerinin (metin, resimler ve video) internet ortamında anlık satın alma üzerindeki etkileri incelenmiştir (Floh ve Madlberger, 2013: 427).

3.ARAŞTIRMANIN METODOLOJİSİ

3.1.Araştırmanın Amacı

Bu araştırmanın amacı; İnternet üzerinden yapılan anlık satın alma davranışı üzerinde internet üzerinde uygulanan fiyat indirimi ve satış promosyonlarının etkisini ortaya koymaktır. Araştırmanın amacına ulaşmak için kolayda örneklem yöntemiyle İstanbul, Kocaeli ve Giresun illerinde yaşayan ve internet üzerinde alışveriş deneyimi olan tüketicilerden anket yöntemi ile veri toplanmıştır. Araştırma, Şubat-Mart 2021 tarihleri arasında kolayda örneklem yoluyla belirlenmiş kişilere çevrimiçi ankete davet edilerek gerçekleştirilmiştir.

3.2. Araştırmanın Örneklem ve Veri Toplama Yöntemi

Araştırmada kolayda örneklem yöntemiyle ulaşılan 388 kişiye anket uygulanmıştır. Kolay örnekleme yönteminde örneklem seçimi öznel olduğu için genelleme problemleri yaşanmaktadır (İslamoğlu ve Alıncık, 2016). Araştırmada zaman, maliyet kısıtlarından dolayı kolaylama örnekleme yöntemi seçilmiştir.

Araştırmada kullanılan anket formu iki bölümden oluşmaktadır. İlk bölümde demografik özellikleri hakkında sorular bulunmaktadır. İkinci bölümde katılımcıların çevrimiçi anlık satın alma davranışı ve anlık satın alma eğilimini etkileyen fiyat indirimleri ve promosyonlara yönelik sorular yer almaktadır. Araştırmada Likert ölçeğine dayalı olarak oluşturulan sorular Rook ve Fisher (1995), Weun, Jones ve Beatty (1997) Gilbert ve Jackaria (2002), Karbasivar ve Yarahmadi (2011), Tinne (2011) yapmış oldukları çalışmalardan yararlanılmıştır. Cevaplar 5'li Likert ölçeğinde alınmıştır (1 = Kesinlikle Katılmıyorum, 5 = Kesinlikle Katılıyorum). Anket hazırlandıktan sonra, 30 üniversite öğrencisi üzerinde test edilmiştir.

3.3. Araştırmanın Modeli ve Hipotezleri

Araştırma modelini ve araştırma modelindeki etkileri test etmek için PLS yapısal eşitlik modellemesi kullanılmıştır. Analizlerde SPSS 25 ve Smart-PLS 3.3.2 programı kullanılmıştır. Fiyat indirimleri ve promosyonlarla ilgili sorular Gilbert ve Jackaria (2002), Karbasivar ve Yarahmadi (2011) ve Tinne (2011)'nin çalışmalarından, çevrimiçi anlık satın almayla ilgili sorular Rook ve Fisher (1995)'in çalışmalarından uyarlanarak oluşturulmuştur. İnternette yapılan fiyat indirimlerinin İnternette anlık satın alma davranışına pozitif yönlü bir etki göstermesi beklenmektedir Buradan hareketle **H1** hipotezi geliştirilmiştir.

H1: İnternette yapılan fiyat indirimleri İnternette anlık satın alma davranışı üzerinde anlamlı ve pozitif etkisi vardır.

İnternette yapılan promosyonların İnternette anlık satın alma davranışına pozitif yönlü bir etki göstermesi beklenmektedir Buradan hareketle **H2** hipotezi geliştirilmiştir.

H2: İnternette yapılan promosyonların İnternette anlık satın alma davranışı üzerinde anlamlı ve pozitif etkisi vardır.

Şekil 1: Araştırmanın Teorik Modeli

4. ARAŞTIRMA BULGULARI

4.1. Demografik Bulgular

Ankete katılan cevaplayıcılar, %15,2'i 15-18 yaş, %68,0'i 19-35 yaş, %14,9'u 36-50 yaş, %1,8'i 51 yaş ve üzeri yaş aralığında bulunmaktadır. Ankete katılanların %63,9'u kadın, %36,1'i erkektir. Bunların %16,8'i evli iken, %83,2'i bekârdır. Cevaplayıcıların eğitim seviyeleri bakıldığında, %70,1 ile lisans ve önlisans, %19,3'ü Orta Öğretim-Lise, %6,4'ü Lisansüstü ve %4,1'i ilköğretim eğitim almışlardır. Ankete katılan cevaplayıcıların aylık gelir seviyeleri değerlendirildiğinde %25,5'i 0-2800TL, %43,8'i 1801-5600TL, %17,3'ü 5601-8400TL ve %13,4'ü 8400TL ve üzeri gelire sahiptir. Ankete katılanların %3,6'sı kamu

sektöründe ücretli, %24,2'si özel sektörde ücretli, %6,2'si Kendi İş-Serbest, %55,9'u öğrenci, %4,6'sı evhanımı ve %5,4'ü ise işsizdir.

Araştırmaya katılanların günlük ortalama internette geçirdikleri süreler incelendiğinde cevaplayıcıların %6,2'i günde 1 saatten az, %41,0'i günde 2-4 saat, %32,2'i günde 5-7 saat ve %20,6'ı günde 8 saat ve üzeri zaman geçirmektedirler. Yine cevaplayıcıların internetten alışveriş yapma sıklıklarına bakıldığında, %7,2'i Haftada 2 ve daha çok kez, %7,7'i haftada 1 kez, %20,9'u 15 günde 1 kez, %46,4'ü ayda 1 kez, %7,0'ı 6 ayda 1 kez ve %10,8'i Yılda 1 veya daha kez internetten alışveriş yapmaktadırlar.

4.2.PLS Yapısal Eşitlik Modellemesi ile Faktör Analizi ve Ölçüm Modelinin Test Edilmesi

PLS, küçük çaplı örneklerde, örneklemin normal dağılım göstermediği durumlarda, bağımlı değişkeni en yüksek seviyede açıklamaya yarayan ve ölçüm hatalarını baz alması yönlerinden güçlü bir yaklaşımdır(Hair vd,2014). Ölçüm modelinin kabul edilmesi için bazı koşulların sağlanması gerekir. Bunlar İndikatör Güvenilirliği, iç tutarlılık güvenilirliği Birleşme ve Ayrışma geçerliliğinin sağlanmasıdır. Ölçüm modeli testinde indikatör güvenilirliği için faktör yüklerinin 0.700 üzeri olması, iç tutarlılık güvenilirliğinde Cronbach alpha, rho_A ve Composite Reliability(CR)değerinin 0.700 üzerinde olması, birleşme geçerliliği analizinde AVE değerinin 0.500 üzerinde olması ve yine ayrışma geçerliliğinde Heterotrait-Monotrait Ratio (HTMT) değerinin 0.900 den az olması istenir. Bununla birlikte PLS ile analizde literatürde önerilen raporlanması gereken değerler araştırmanın genel durumu dikkate alınarak değerlendirilmelidir.(Sarstedt vd, 2017)

Aşağıda Tablo 1'de ölçüm modelinin analiz sonuçları sunulmuştur.

Tablo 1: Ölçüm Modelinin Sonuçları, Geçerlilik Ve Güvenilirliği

Gizil Değişkenler	Ölçek İndikatörleri	Ölçek İndikatörleri Faktör Yükleri	Cronbach's Alpha	rho_A	Composite Reliability	Average Variance Extracted (AVE)
Fiyat İndirimi	FYT1	0.827	0.844	0.864	0.888	0.614
	FYT2	0.769				
	FYT3	0.752				
	FYT4	0.753				
	FYT5	0.813				
Promosyon	PRO1	0.734	0.917	0.925	0.938	0.754
	PRO2	0.900				
	PRO3	0.907				
	PRO4	0.904				
	PRO5	0.884				
İnternette Anlık SatınAlma Davranışı	SAD1	0.688	0.882	0.886	0.907	0.551
	SAD2	0.692				
	SAD3	0.811				
	SAD4	0.819				
	SAD5	0.770				
	SAD6	0.762				
	SAD7	0.675				
	SAD8	0.703				

Tablo 1'de görüldüğü üzere indikatör güvenilirliği için değerlendirilen Faktör yüklerinin çoğu 0.700 değerinin üzerindedir. İnternette anlık satınalma davranışı gizil değişkenine ait SAD1,SAD2,SAD8 Değişkenlerine ait faktör yükleri ise 0.600 üzerindedir. Hair vd.(2014) göre ise 0.600 üzeri değerler kabul

edilebilmektedir. Buradan hareketle tüm gizil değişkenlere ait Faktör yükleri 0.600 ve üzerinde olduğundan modele dahil indikatörlerin güvenilir olduğu söylenebilir.

İç tutarlılık güvenilirliği için hesaplanan Cronbach's Alpha, rho_A ve Composite Reliability değerleri incelendiğinde 0.700 eşik değer üzerinde olduğu için modele dahil gizil değişkenlerin iç tutarlılık güvenilirliklerinin yeterli olduğu söylenebilir.

Tablo 2'de Birleşme Geçerliliği ölçen AVE değerleri incelendiğinde 0.500 eşik değerinin üzerinde olduğundan modeldeki gizil değişkenlerin birleşme geçerliliğini sağlandığı söylemek mümkündür.

Ayrışma geçerliliği için ise, Fornell ve Larcker ortaya attığı AVE değerlerinin karekökü, ilgili değişkenin diğer değişkenlerle olan korelasyonlarından daha büyük olması istenen bir yöntem kullanılmaktadır. Yine ayrışma ayrışma geçerliliğinin analizi için Heterotrait-Monotrait Ratio (HTMT) değerinin 0.900 referans değerinden düşük olması istenmektedir. (Sarstedt, vd., 2017:). Ayrışma geçerliliğine ilişkin sonuçlar Tablo 2'de sunulmuştur

Tablo 2: Ayrışma Geçerliliğinin Kontrolü İçin Fornell-Larcker Ve Heterotrait-Monotrait Ratio (HTMT) Kriter Analizi

Fornell-Larcker	Anlık Satın Alma Davr	Uygulanan İndirimi	Fiyat	Promosyon
Anlık Satın Alma Davranışı	0.742			
Uygulanan Fiyat İndirimi	0.627	0.783		
Promosyon	0.738	0.590		0.868
Heterotrait-Monotrait Ratio (HTMT)	Anlık Satın Alma Davranışı	Uygulanan İndirimi	Fiyat	Promosyon
Anlık Satın Alma Davranışı				
Uygulanan Fiyat İndirimi	0.699			
Promosyon	0.807	0.661		

Tablo 2'de Ayrışma geçerliliği için incelendiğinde Fornell-Larcker koyu yazılan AVE değerlerinin kareköklerinin değişkenler arası korelasyon katsayılarından büyük olduğundan Fornell-Larcker kriterinin sağlandığı görülmektedir. Ayrıca ayrışma geçerliliği için çapraz yükler analiz edilmiş. İndikatörlerin her birisinin ait olduğu değişkende en yüksek faktör yüküne sahip olduğu görülmüştür. Yine ayrışma geçerliliği için Heterotrait-Monotrait Ratio (HTMT) değerine bakılmış tüm sonuçların kritik değer olan 0.900 altında olduğu görülmüştür (Doğan, 2019). Ölçüm modelinin Ayrışma geçerliliğine sahip olduğu söylenebilir.

Yapılan analizler sonucunda Ölçüm modelinin iç tutarlılık ve birleşme güvenilirliğine sahip olduğu aynı zamanda ölçüm modelinin ayrışma ve birleşme geçerliliğine sahip olduğu ve ölçüm modelinin geçerli olarak kabul edilebilir olduğu söylenebilir.

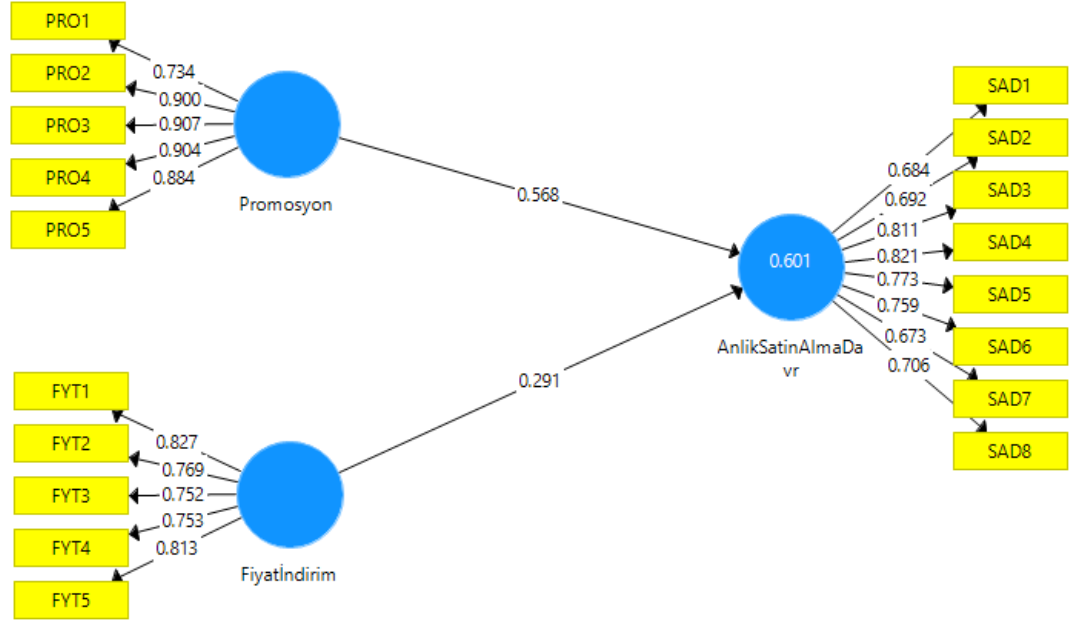

Model testine geçmeden önce Örneklem ile model arasındaki uyuma bakılmalıdır. Toplam örneklem için uygulanan modelin uyum indis değerleri; CMIN değeri: 739,012; NFI: 0,837; SRMR: 0,068 (Referans Değerler: NFI > 0.800; SRMR < 0.080 Karagöz, 2019) olarak görülmekte ve tüm uyum indisleri model ile örneklem arasında iyi bir uyumun olduğunu göstermektedir. İlişki analizine geçilmeden önce endojen değişkenlerin hemde egzogen değişkenleri ile arasında doğrusallık olmadığını kontrol etmek için hem indikatörlerin hemde değişkenlerin VIF değerlerine bakılmıştır. Fiyat İndirimi egzogen değişkeni (VIF: 1.533) ve Promosyon egzogen değişkeni (VIF: 1.533) olduğundan doğrusallık problemi olmadığı (VIF < 5.00 Doğan, 2019) görüldüğünden model testine geçilmiştir.

4.3. Yapısal Modelin Test Edilmesi

Aşağıda Şekil 2'de yapısal modelin analizi sunulmuştur. Araştırma modelindeki etkilerin test edilmesi ve anlamlılığı t değerleri üzerinden hesaplanır. Wong (2013) göre, t değeri 1,96 veya üzerinde ise %95 düzeyinde anlamlılık eğer t değeri 2,58 veya üstünde ise %99 düzeyinde anlamlılıktan söz edilmektedir.

SmartPLS'de t değerleri Bootstrapping işlemi sonrasında oluşmaktadır. Araştırma modeli test sonuçları Tablo 3'de verilmiştir.

Şekil 2: Yapısal Modelin Analizi

Tablo 3: Pls Yapısal Analiz Sonucu

Bağımlı Değişken: İnternette Anlık Satın Alma Davranışı								
Bağımsız Değişken	Std. Beta	Std. Hata	t değeri	Anlamlılık %99	f ²	R ²	Q ² Toplam	q ² Nispi
Fiyat İndirimi	0.291	0.045	6.483	0.000	0.138	0.601	0.320	0.042
Promosyon	0.568	0.047	12.143	0.000	0.527			0.139

Tablo 3 incelendiğinde, uygulanan fiyat indirimi ve promosyonların internet üzerinde anlık satın alma davranışı üzerinde anlamlı ve pozitif etkilerinin olduğu görülmektedir. Her iki değişkenin t değerleri incelendiğinde, iki değer de 2,58'in üzerinde olduğundan uygulanan fiyat indirimi ve promosyonların internet üzerinde anlık satın alma davranışı üzerindeki etkilerinin 0,01 düzeyinde anlamlı olduğu göstermektedir. Araştırma modeli üzerinde test edilen etkiler incelendiğinde uygulanan promosyonların uygulanan fiyat indirimlerine göre İnternette anlık satın alma davranışı üzerinde daha yüksek düzeyde bir etkiye sahip olduğu görülmektedir. Bunların yanı sıra, bağımsız değişkenlerin bağımlı değişkenin açıklama gücüne katkılarını belirlemek amacıyla f² değerleri incelenmiştir. f² değişkeni 0,02 ve üzerinde ise bağımsız değişkenin etkisinin küçük olduğu, 0,15 ve üzerinde ise orta düzeyde etki ve 0,35'in üzerinde ise büyük düzeyde etkiden söz edilmektedir (Doğan, 2019:101). Bu durumda, uygulanan fiyat indirimlerinin internette anlık satın alma davranışı açıklama gücü üzerindeki etkisinin orta düzeye yakın uygulanan promosyonların internette anlık satın alma davranışı açıklama gücü üzerindeki etkisinin büyük düzeyde olduğu anlaşılmaktadır. Ayrıca Tahmin gücü analizi yapılmıştır. Q² değerleri ilişki katsayılarının gözlenen bir endojen değişkeni ne kadar iyi tahmin ettiğini gösterir ve tahmini geçerliliği ölçmektedir Q² değeri sıfırdan büyük olması durumunda modelin tahmin gücüne sahip olduğundan bahsedilir. q² ise değişkenlerin nispi tahmin gücüdür. Formül: $q^2 = (Q^2_{dahil\ edilmiş} - Q^2_{çıkarılmış}) / (1 - Q^2_{dahil\ edilmiş})$ (Doğan, 2019:97). Analizde tüm Q² değerleri 0 dan büyük olduğundan model tahmin gücüne sahiptir. $q^2_{(promosyon)} = (0.320 - 0.210) / (1 - 0.210) = 0.139$ ve $q^2_{(fiyat\ indirimi)} = (0.320 - 0.290) / (1 - 0.290) = 0.042$ formül yardımıyla

hesaplanmıştır. Böylece yapılan Promosyon gizil değişkeninin kısmi tahmin gücünün (0.139) orta düzeye yakın, yapılan fiyat indirimleri gizil değişkenin kısmi tahmin gücünün küçük düzeyde olduğu görülmektedir.

Sonuç olarak, yapılan analizler neticesinde H1 (İnternette yapılan fiyat indirimlerinin İnternette anlık satın alma davranışı üzerinde anlamlı ve pozitif etkisi vardır) ve H2(İnternette yapılan promosyonların İnternette anlık satın alma davranışı üzerinde anlamlı ve pozitif etkisi vardır) hipotezleri desteklenmiştir

5.SONUÇ VE ÖNERİLER

Günümüzde işletmeler, geçmişten günümüze kadar gelen süreçte pazarda varlığını sürdürebilmek, potansiyel müşteriler oluşturmak ve mevcut müşterileri koruyabilmek, karlı satışlar yapmak, pazardan kendilerine pay alabilmek, stok fazlası ürünleri elden çıkarabilmek için türlü tutundurma faaliyetleri uygulayarak müşterileri kendilerine çekmeye çalışmaktadırlar.

Rekabet koşullarının artması ve işletmelerin sürekli birbirleriyle yarış halinde olması işletmelerin rakiplerinden farklılaşacak metotlar geliştirmesine sebebiyet vermiştir. İşletmeler bu rekabet şartlarında müşterilerini ellerinde tutabilmeleri ve ayakta kalabilmeleri için farklı stratejiler geliştirmeleri gerekmektedir.

İşletmelerin kullandıkları tutundurma faaliyetlerinden biri olan fiyat indirim ve promosyonları bu çalışmanın temelini oluşturmaktadır. Fiyat İndirim ve promosyonları günümüzde işletmeler tarafından sürekli uygulanan sıradan faaliyetler haline dönüşmüştür. Özellikle internet kullanımının her geçen gün giderek artması ile birlikte işletmeler de rekabet üstünlüğü elde edebilmek için bu tutundurma faaliyetini sıklıkla kullanmaktadırlar.

İnternet üzerinde işletmelerin uygulamaya koydukları promosyon ve fiyat indirimlerinin anlık satın alma eğiliminin internette anlık satın alma davranışı üzerindeki etkilerinin tespit edilmesine yönelik yapılan araştırma sonuçlarına göre H1 (İnternette yapılan fiyat indirimlerinin İnternette anlık satın alma davranışı üzerinde anlamlı ve pozitif etkisi olduğu) ve H2 (İnternette yapılan promosyonların İnternette anlık satın alma davranışı üzerinde anlamlı ve pozitif etkisi olduğu) hipotezleri desteklenmiştir

Bu çalışmada konunun tarafları olduğu düşünülen internet üzerinde alışveriş deneyimi olan tüketiciler üzerine uygulama gerçekleştirilmiş ancak zaman kısıtı nedeniyle araştırma İstanbul, Kocaeli ve Giresun illerinde yaşayan tüketiciler üzerinde yapılmıştır. Gelecekte daha geniş kapsamlı farklı bölgelerde ve illerde yaşayan tüketicileri kapsayacak benzer bir çalışma ile iller arasında internet üzerinde işletmelerin uygulamaya koydukları promosyon ve fiyat indirimlerinin anlık satın alma eğiliminin internette anlık satın alma davranışı üzerindeki etkileri tespit edilebilir. Ayrıca farklı değişkenler farklı değişkenlerin aracılığı eklenerek daha geniş bir örnekleme çalışmaları yapılabilir.

Özet: Kırsal kalkınma, kırsal kesime yönelik olarak yapılan ekonomik, sosyal ve kültürel çalışmaların tümünü kapsamaktadır. Kırsal kalkınma günümüzde pek çok ülkede, hükümetlerin üzerinde önemle durdukları öncelikli konular arasında yer almaktadır. Bu amaçla kırsal kalkınma politikaları çerçevesinde, kırsal alanlarda doğal kaynakların daha iyi değerlendirilmesi ve kırsal kesimdeki sosyoekonomik eşitsizliklerin giderilmesi için kırsal kalkınma projeleri ortaya konulmuştur. Kırsal kalkınma projelerinin uygulanmasında yerel yönetimler ve merkezi hükümetler arasında geçmişten günümüze farklılıklar yaşanmıştır. 2005 yılında Köy Hizmetleri Genel Müdürlüğü kapatılırken, aynı yıl Köy Altyapısının Desteklenmesi Projesi (KÖYDES) uygulamaya konulmuştur. 12.11.2012 tarihli 6360 sayılı 'On Dört İlde Büyükşehir Belediyesi ve Yirmi Yedi İlçe Kurulması ile Bazı Kanun ve Kanun Hükmünde Kararnamelerde Değişiklik Yapılmasına Dair Kanun' kırsal alan yönetimlerinde önemli değişiklikler getireceği öngörülerek hazırlanmıştır. 30.03.2014 tarihindeki yerel seçimlerden sonra büyükşehir belediyelerindeki kırsal alanlara hizmet götürme konusundaki karışıklıklar devam ederken; vergi, harç, içme, atık suyu kullanımı ve bazı konularda zorunluluklar 5 yıl sonrasına bırakılarak kanun uygulamaya konulmuştur. Büyükşehir belediyelerinin hizmet alanlarındaki kırsal alanlara nasıl müdahale edileceği düşünülürken, KÖYDES projesinin büyükşehir olmayan yerlerdeki uygulamalarının başarılı olduğu düşünülmüş ve büyükşehir belediyesi olan illerde 2017 yılında Kırsal Altyapısının Desteklenmesi Projesi (KİRDES) uygulamaya konulmuştur. Bu çalışmada, geçmişte uygulanan kırsal kalkınma projeleri, KÖYDES projesi, 2012 yılında hazırlanan ve 2014 yerel seçimlerinden sonra uygulamaya konulan 6360 sayılı yasa, KİRDES projesi, Kırsal Mahalle ve Kırsal Yerleşik Alan yönetmeliği gibi kırsal kalkınmada son yıllarda meydana gelen gelişmeler incelenmiş ve öneriler ortaya konulmuştur.

Anahtar Kelimeler: Kırsal Kalkınma, KÖYDES, KİRDES, Kırsal Mahalle, Kırsal Kalkınma Politikaları

Evaluation of Köydes and Kırdes Projects in terms of Rural Development

Abstract: Rural development includes all of the economic, social and cultural studies that are carried out for rural areas, and it is one of the priority issues that governments put emphasis on today. For this purpose, the framework of rural development policies and projects has been put forward in order to make better use of natural resources in rural areas and to eliminate socio-economic inequalities in rural areas. There have been differences between local governments and central governments in the manner of the implementation of rural development projects from past to present. While the General Directorate of Rural Services was closed in 2005, the Village Infrastructure Support Project (KÖYDES) was put into practice in the same year. In 2012, with the Metropolitan Municipality Law No. 6360, important changes were made in rural development services in the practices. After the 2014 local elections, while the confusion in metropolitan municipalities regarding the provision of services to rural areas continued, the area of application of the law was further expanded. In addition, regarding the consideration of how to intervene in the service areas of metropolitan municipalities in the rural areas, the applications of the KÖYDES project in non-metropolitan areas were successful, and the Rural Infrastructure Support Project (KİRDES) was put into practice in 2017 in the provinces that are metropolitan municipalities. In this study, rural development projects implemented in the past, the KÖYDES project, the law numbered 6360 implemented in 2012, the KİRDES project, and the recent developments in rural development were examined and recommendations were put forward.

Keywords: Rural Development, KÖYDES, KİRDES, Rural Neighborhood, Rural Development Policies

1.GİRİŞ

Kırsal alanlarla kentleşmenin yaşandığı alanlar birbiriyle kıyaslandığında, kırsal alanların sosyal, ekonomik ve kültürel anlamlarda olanaklar açısından geri kalmış durumda olduğunu söylemek mümkündür. Kırsal kalkınma, kırsal alanların içinde bulunduğu bu dezavantajlı durumun dengeye getirilmesi ve kırsal alanlarda yaşayan insanların en az kentsel alanlarda yaşayan kişiler kadar refaha kavuşturulmasını amaçlamaktadır.

Kırsal kalkınma strateji ve politikaları, dünyada geri kalmış toplum veya toplulukların tarımsal, ekonomik ve sosyo-kültürel alanlarda kendi kendilerine yardım ve dışarıdan destek yöntemi ile kalkınmalarını sağlamaktır. Nüfusun önemli bir kısmını oluşturan kırsal halkın yaşam düzeyini yükseltmek, kendine yeterli duruma getirmek ve üretim faaliyetlerine daha akılcı bir yaklaşımla katılmalarını sağlamak kırsal kalkınma çalışmalarının temel amaçlarından biridir (Gülçubuk, 1997). Kırsal kalkınma kavramı, 19.yüzyılın başlarında ortaya çıkmış ve uluslararası alanda duyulmaya başlanmıştır. 1980’li yıllardan sonra dünyada kırsal kalkınma yaklaşımlarında değişimler yaşanmıştır. Büyümeye dayalı politik öncelikler, yerini giderek toplumun tamamını kapsayan entegre kalkınma arayışlarına bırakmıştır. Günümüzde kalkınmanın temel amacı zenginliğin oluşturulması değil, zenginliğin iyi eğitim almış insan varlığıyla oluşturulması ve herkesin mutlu olabildiği bir yaşam alanı oluşturmaktır (Bahtiyar, 2015). Kırsal kalkınma konusunun son yıllarda giderek önemi anlaşılmış, bu alanda çok çeşitli bilim dallarından ortak çalışmalar yürütülmüş ve konuya strateji temelli yaklaşımlar getirilmiştir. Kırsal kalkınmanın en önemli odak konularından birisi de, kırsal alanların sosyo-ekonomik açıdan kalkındırılması olmuştur. Kırsal yerleşimlerin sosyal imkânlarının artırılması ve bunun getireceği ekonomik getiriler devletlerin öncelikli çabalarından olmuştur. Yönetimler, kırsal yerleşimlerde yaşam şartlarını iyileştiren projeler üretmeyi hedeflemişlerdir. Son yıllarda kırsal alanlarda uygulamaya konulan en kapsamlı projelerden birisi, Köylerin Altyapısının Desteklenmesi Projesi (KÖYDES)’dir. KÖYDES Projesi, 2005 yılından beri uygulanmakta, kırsal alanlara etkileri daha iyi tespit edilebilmektedir. Ancak, KÖYDES projesinin etkisiyle esinlenen Kırsal Altyapısının Desteklenmesi (KIRDES) projesi 2017 yılında uygulamaya konulmuştur ve etkinliğini ölçebilmek ise şu an için zor görünmektedir. KIRDES projesiyle ilgili etkin bir değerlendirme yapabilmek için, KIRDES projesini ortaya çıkaran nedenleri iyi bilmek gerekmektedir. Bu bakımdan KÖYDES projesindeki uygulamaların iyi bilinmesi ve kırsal alanlarda öncekinden farklı yaklaşımlar getiren 12.11.2012 tarihli 6360 sayılı ‘On Dört İlde Büyükşehir Belediyesi ve Yirmi Yedi İlçe Kurulması ile Bazı Kanun ve Kanun Hükmünde Kararnamelerde Değişiklik Yapılmasına Dair Kanun’ ve devamındaki düzenlemelerin daha iyi anlaşılması gerekmektedir. Böylece KÖYDES projesi, KIRDES projesi ve kırsal alanlara uygulanan yeni yaklaşımlar daha iyi anlaşılabilir olacaktır.

12.11.2012 tarihli 6360 sayılı ‘On Dört İlde Büyükşehir Belediyesi ve Yirmi Yedi İlçe Kurulması ile Bazı Kanun ve Kanun Hükmünde Kararnamelerde Değişiklik Yapılmasına Dair Kanun’un kırsal alanlara getireceği dezavantajlardan bazıları önceden tahmin edilebilmiştir. Buna göre önlemler alınmaya çalışılmıştır. İlave olarak, KÖYDES projesinin önceki dönemlerde başarılı olduğu düşüncesi merkezi yönetimin, Büyükşehir belediyesi olan yerlerde kırsal alanlarda hizmet götürmesinin yasanın getirdiği karmaşayı azaltabileceğini düşündürmüştür. Bu anlamda, merkezi yönetim tarafından KIRDES projesi ve yasaya ilave edilen ek maddeler ve sonrasında 15.04.2021 tarihli 31455 Sayılı Resmi Gazetede yayınlanan ‘Kırsal Mahalle ve Kırsal Yerleşik Alan Yönetmeliği’ ile kırsal alanlara hizmet götürmede etkinliğin artırılması için çalışmalar yapılmıştır.

Bu araştırmada, geçmişte uygulanan kırsal kalkınma projeleri, KÖYDES ve KIRDES projeleri, Kırsal Mahalle ve Kırsal Yerleşik Alan yönetmeliği gibi kırsal kalkınmada son yıllarda meydana gelen gelişmeler incelenmiş ve öneriler ortaya konulmuştur.

2. KÖYDES ve KIRDES ÖNCESİ KIRSAL KALKINMA EKSENLİ PROJELER

KÖYDES ve KIRDES’den önce Türkiye’de kırsal kalkınma eksenli geçmişte bazı projeler uygulanmıştır. Bunların bazıları kısa süreli başarılı olabilmişken, çoğunlukla kırsal kalkınmada yeterli alt yapıları olmadıklarından başarısız olmuşlardır (Gündüzöz, 2011). Bunlardan bazıları;

Merkez Köy Projesinde, nüfusu belli bir yoğunluğu sağlayan yörelerdeki köyler arasından merkezde bulunan bir köyün hizmet noktası olarak belirlenmesi ve geliştirilerek kırsal kalkınmanın sağlanması amaçlanmıştır.

Toplum (Köy) Kalkınma Projelerinde, kırsal kalkınmada halkın katılımı esas alınmıştır. Merkezi idarenin müdahalesini talep eden köylerin kendine yeterli hale getirilmesi ve halkın katılımının sağlanması amaçlanmıştır (Can, 2007).

Köy-kent Projesinde, kırsaldan kentlere göçü engellemek, kırsalda yaşamını sürdüren insanlara eğitim, sağlık, tarım, altyapı hizmetleri gibi hizmetler götürerek, buralardaki insanların ekonomik ve sosyal yönlerden kalkındırılmasını sağlamak amaçlanmıştır.

Örnek Köy Projesi, 1963-1965 yılları arasında İstanbul ve Ankara’da uygulanmış ve çevre köylerin merkez köy faaliyetlerinden etkilenmesi amaçlanmıştır.

Kırsal kalkınmada uygulanan diğer modeller ise; tarım-kent, çok yönlü kırsal alan planlaması, köye dönüş olarak sayılabilmektedir. Bunların yanında, bölgesel teşvik tedbirleri de geri kalmış yörelerde uygulanan bir kırsal kalkınma yöntemi olarak görülebilmektedir (Cirik 2011).

KÖYDES öncesi yapılardan Köy Hizmetleri Genel Müdürlüğünü unutmamak gerekir. Müdürlük, TOPRAK SU, TOPRAK-İSKAN ve YSE kuruluşlarının birleştirilmesi ile 1984 yılında kurulmuş ve 2005 yılında kapatılana kadar Tarım ve Köyişleri Bakanlığı'na bağlı olmuştur (Anonim 2008).

3. KÖY ALTYAPISININ DESTEKLENMESİ PROJESİ (KÖYDES) PROJESİ

2005 yılında başlayan Köylerin Alt Yapısının Desteklenmesi Projesi (KÖYDES) projesi, ilk zamanlarda İstanbul ve Kocaeli illeri haricinde, 79 ilde dar kapsamlı olarak uygulanmıştır. 2006 ve 2007 yıllarında, İçişleri Bakanlığı (Mahalli İdareler Genel Müdürlüğü), Maliye Bakanlığının katılımı ve Devlet Planlama Teşkilatı (DPT) koordinasyonda kapsamlı bir altyapı programına dönüştürülmüştür (Tekin 2016).

KÖYDES Projesi ile 2019 sayımına göre, Büyükşehir Belediyesi olmayan 51 ilde, 18.280 köyde, 4.794.923 nüfuslu bir alanda hizmet yürütülmektedir (Anonim 2021a). Projesinin amacı, köyler ve bağlı yerleşimlerin yol ve içme suyu eksikliklerinin, yörenin mülki idare amirleri liderliğinde, il özel idareleri ve köylere hizmet götürme birlikleri vasıtasıyla, yerel olanakları verimli şekilde değerlendirip kısa zamanda ve en az maliyetle çözebilmektir (Hartavi 2009). Yol ve içme suyu öncelikli olarak kırsal alt yapı eksikliği bulunan köylerin sorunlarının hızlı bir şekilde çözülmesi ve tarımsal alt yapının hazırlanması da projenin amaçlarındandır. Bugün gelinen noktada, proje ile kırsal alanlarda atık suyun bertaraf edilmesi, tarımsal sulamanın sağlanması, katı atığın toplanması gibi faaliyetler de gerçekleştirilmektedir.

KÖYDES'in önceki dönemlerde uygulanan kırsal kalkınma modellerinden önemli farklılıkları vardır. KÖYDES, köy altyapı çalışmalarının yapılabilmesi amacıyla ilk kez merkezi bütçeden doğrudan kaynak aktarılmasını, aktarılan kaynağın kalkınma projeleriyle ilişkili bakanlıkların yönlendirmesi veya müdahalesi olmadan doğrudan Köylere Hizmet Götürme Birlikleri vasıtasıyla, yerel ihtiyaçlara hemen ve yerinde tespitlerle kullanılmasına olanak vermektedir (Gündüzöz 2011). KÖYDES Projesi, Köylere Hizmet Götürme Birlikleri (KHGB) tarafından yürütülmektedir. KHGB'ler Merkez İlçede Vali Yardımcısı, ilçelerde Kaymakamların başkanlığında İl Genel Meclisi üyeleri ve Muhtarlardan seçimle oluşan Köylere Hizmet Götürme Birliği Encümeni tarafından bütçe olanakları kadar projeler uygulanmaktadır.

Ödenek merkez bütçeden aktarılmaktadır. 2020 yılında, KÖYDES Projesi ödeneğinin iller ve ilçeler bazında dağılımına, kullanılmasına, izlenmesine ve denetimine ilişkin usul ve esaslar hakkında kararın yürürlüğe konulmasına, 7197 sayılı 2020 Yılı Merkezi Yönetim Bütçe Kanununun 10'uncu maddesi gereğince karar verilmiştir (Anonim 2019a).

Maliye Bakanlığınca illere tahsis edilen ödenekler, illerde Valinin Başkanlığında Vali Yardımcısı, İl Genel Meclisi Başkanı, İl Özel İdaresi Genel Sekreteri ve İlçe Kaymakamlarından oluşan İl Tahsisat Komisyonu ile ilçeler ve sektörler yoluyla tahsis edilmektedir.

KÖYDES projesinin Sekretarya çalışmaları, İl Özel İdaresi Genel Sekreterliği personeli tarafından yürütülmektedir. Projelerin keşif özetlerinin hazırlanması, kontrollüğü çalışmaları ile geçici ve kesin kabullerinin yapılmasında yine İl Özel İdaresi Genel Sekreterliği çalışanları görev yapmaktadır.

KÖYDES projelerinin öncelik verdiği alanlar incelendiğinde (Anonim 2021b); *Köy İçme Suyu Projeleri için*; Su kaynağına sahip ancak şimdiye kadar su getirilememiş köylerin ve çeşmesi olan köylerin kapalı şebekeye kavuşturulması, cazibe yoluyla su temininin sağlanması (terfili sistemle içme suyu temini maliyetinin yüksek ve işletmeden kaynaklanan problem nedeniyle tercih edilmemesi), su kaynağı bulunmayan köyler için terfili sistem veya sondaj sistemi yoluyla su ulaştırılması ve önceki yıllarda su getirilen ama kaynaklarının kuruması veya debilerinin azalmasına bağlı içme suyu yetersiz kalan köylerin ihtiyaçlarının karşılanması amaçlanmaktadır.

Köy Yolları Projeleri için; Altyapısı yetersiz yolların altyapısının tamamlanması, altyapısı tamamlanan yolların stabilize malzeme ile kaplatılması, grup köy yollarının standartlarının geliştirilmesi, köy nüfusunun daha yoğun olduğu bölgeler, taşımali eğitim merkezlerinin olduğu yerler, önceki dönemlerde yapılan asfalt kaplama ve stabilize yollarda oluşan bozuklukların onarılması, öncelikleri göz önüne alınmaktadır.

4. 6360 SAYILI YASANIN KIRSAL ALANA GETİRDİKLERİ

12.11.2012 tarihli 6360 sayılı 'On Dört İlde Büyükşehir Belediyesi ve Yirmi Yedi İlçe Kurulması ile Bazı Kanun ve Kanun Hükmünde Kararnemelerde Değişiklik Yapılmasına Dair Kanun' hazırlanmıştır. 2012 yılı TÜİK istatistikleri incelendiğinde; Türkiye'de 2012 yılında, nüfusun %77,3'ünün il ve ilçe merkezlerde, %22,7'sinin ise belde ve köylerde yaşadığı görülmektedir. 30.04.2014 yerel seçimlerinden sonra yasanın uygulamaya konulmasıyla 16 bin 800 köy ve 1053 belde belediye sınırlarına eklenerek mahalle statüsüne dönüştürülmüştür. Türkiye'nin idari yapısı %52 oranında değişmiştir. 2016 yılına gelindiğinde ise il ve ilçe merkezlerindeki nüfus %92,30'a yükselmiş, belde ve köylerdeki nüfus ise %7,7'ye kadar düşmüştür. Bu yasal düzenlemenin, o zamanlar yerleşim yerlerine daha iyi hizmet getirmek amacıyla yapıldığı açıklanmıştır.

Yapılan düzenleme ile yeni kurulan ve sınırları genişleyen bütün büyükşehirlerde, köy ve belde belediyelerinin tüzel kişiliği kaldırılmıştır. Bu yerlerdeki köyler mahalleye dönüşmüş, belediyeler ise belde ismiyle mahalle olarak bağlı olunan ilçenin belediyesine katılmışlardır.

Görev ve sorumluluk alanları daha önce mülki sınırlara genişleyen ancak sınırları içindeki köy tüzel kişilikleri devam eden, İstanbul ve Kocaeli illerinde de köylerin tüzel kişilikleri kaldırılarak bağlı oldukları ilçeye mahalle olarak katılmışlardır. Belediyelerin yönetimlerinde bazı zorluklar bulunmaktadır. Bu zorlukların bazılarını daha iyi önlem alınabilirken, bazı konular halen tartışılmaktadır;

-Belediyelerin hizmet verdiği alan genişlemiştir. Belediyeler, kent yerleşimlerinden uzaklaştıkça daha uzak noktalara götürülecek hizmetin niteliğinin azalabileceği öngörülmektedir.

-İlçe belediyelerinin mali durumlarının yetersiz olduğu, önceliği ancak ilçe merkezlerindeki belediyelere verebilecekleri, kırsal yerleşime bütçe ayırmada zorluk çekileceği düşünülerek köy yerleşim yerlerine belediye hizmetlerini götürmelerinin zor olduğu düşünülmektedir.

-Mahalleye dönüşen, beldelere ait taşınır ve taşınmaz varlıklar, büyükşehir sınırları içerisinde ilçe belediyelerine devredilmiştir. Oldukça yaygın olan hizmetlerin götürülemeyeceği endişesine ilaveten hizmetlerin de zamanında ulaştırılmayacağı düşünülmektedir.

-Köy bütçesi konusu yasanın tartışılan konularındandır. Yasa ile köy bütçesinin kaldırılmasıyla, köylü devlet işbirliği ile yapılan çalışmaların verimliliğinin azalttığı endişesi var olmaktadır.

-Büyükşehir yasası ile birlikte köylerde yapılacak olan birçok hizmetin ya belediye personeli aracılığıyla ya da taşeron firmalara ihalesinin mümkün olabileceği düşünülmektedir. Köy bütçesi olmaksızın sadece belediyelerin getireceği hizmetle kısa vadede başarılı olamayacağı belirtilmektedir. 12.11.2012 tarihli 6360 sayılı 'On Dört İlde Büyükşehir Belediyesi ve Yirmi Yedi İlçe Kurulması ile Bazı Kanun ve Kanun Hükmünde Kararnemelerde Değişiklik Yapılmasına Dair Kanun'un 30 Mart 2014 yerel seçimlerinden sonra uygulanmasında bazı konular 5 yıl süreli ertelenmiştir.

-Tüzel kişiliği kaldırılarak ilçe belediyesine bağlanan köylerde, Emlak Vergisi ve 2464 sayılı Belediye Gelirleri Kanuna göre alınması gereken vergi, harç ve katılma payları 5 yıl süreyle alınmaması kararı alınmıştır ve bu sürenin başlangıcı 30 Mart 2014 tarihi olarak belirlenmiştir. Bu sürenin 31 Mart 2019 tarihi itibarıyla tamamlanması, uygulamada çözülmesi gereken bir konu olmuştur.

-Mahalleye dönüşen köylerde 5 yıl süreyle içme ve kullanma suları için alınacak ücret, en düşük tarifenin %25'ini geçmeyecek şekilde belirlenmiştir. Bu hüküm, görev ve sorumluluk alanları daha önce genişletilen büyükşehirlerde bulunan köylerde yaşayanlara da uygulanmıştır. Bu sürenin dolmasıyla köylerde suyun pahalı kullanılmasıyla ilgili sorun, çözülmesi gereken bir konu olmuştur.

-Kırsal nüfusun, temel hizmetlerinin karşılanamayacağına ilişkin bir takım endişelerin yanı sıra mali yükümlülüklerinin artacağı ve bu nedenlerle de kırsal alanların çekiciliğinin daha da azalacağı öngörülmüştür. Su ve atık su ücretleri, emlak vergisi, yapılacak inşaatlara ilişkin proje masrafları ve diğer mali yükümlülükler bunlardan birkaçı olarak sayılmıştır. Yasada, bu tür mali yükümlülüklerin 5 yıl sonraya yansıtılacağı belirtilmiştir. Ancak bu tür maliyetlerin gelir düzeyi düşük olan kırsal nüfusun yaşam standartlarını zorlayacağı düşünülmüştür (Ayyıldız vd. 2016).

Kanuna getirilen ek düzenleme ile köy iken mahalleye dönüşen yerlerde orman mevzuatına göre yaşayanların hakları korunmuştur. Mahalleye dönüşen köy, köy başlısı ve belediyelerce kullanılan mera, yaylak, kışlak gibi yerlerden bu mahalle sakinleri ve varsa diğer hak sahiplerinin, 4342 sayılı Mera Kanunu hükümleri çerçevesinde yararlanmaya devam edeceği belirtilmiştir.

Kanunda, Belde iken mahalleye dönüşen yerlerle ilgili bir düzenlemeye ise yer verilmemiştir. Kanunun bu eksikliği 27 Şubat 2014 tarihli ve 28926 sayılı Resmi Gazete'de yayımlanan 6525 sayılı Bazı Kanun ve Kanun Hükmünde Kararnamelerde Değişiklik Yapılması Hakkında Kanunun 28. Maddesinde düzenlenmiştir. Belde iken orman köylüsüne tanınan hak, sorumluluk ve imtiyazlardan yararlananların, mahalleye dönüştürülen beldelerde yaşayanlar için de bu hak, sorumluluk ve imtiyazlarının geçerli olacağı belirtilmiştir.

Tüzel kişiliği kaldırılan büyükşehir ilçe belediyelerine mahalle olarak bağlanan belde belediyeleri ve köylerin mevcut geçim kaynakları dikkate alınarak, büyükşehir belediyeleri ile büyükşehir ilçe belediyelerine tarım ve hayvancılığı desteklemek amacıyla her türlü faaliyet ve hizmet yapabilmeleri konusunda yeni bir görev ve yetki verilmiştir.

Büyükşehir ve büyükşehir ilçe belediyeleri görev alanları kapsamında yapılacak tarım ve hayvancılık faaliyetleri için yeni projeler üretebilecek, çiftçiyi destekleyecek faaliyetler ile modern üretim ve yetiştiricilik konusunda işbirlikleri ve projeler gerçekleştirebileceklerdir. Bu düzenlemeden sonra belediyeler tarım konusunda faaliyet gösteren birimler ve şirketler kurmuşlardır.

Tarım ve hayvancılık konusunda görev verilen belediyelerin büyükşehir belediyeleri ile büyükşehir ilçe belediyeleri olduğu, üzerinde durulması gereken bir konudur. Diğer belediyeler, 5393 sayılı Kanunun 14'üncü maddesi ile ilgili bendinde yer alan ekonomi ve ticaretin geliştirilmesi hizmetlerini yapmak amacıyla görev ve sorumluluk alanlarında hizmetler gerçekleştirmektedirler.

Mahalleye dönüşen köylerde, Ulusal Adres Bilgi Sistemine (UABS) kayıtlı veya uydu fotoğraflarıyla tespit edilen, entegre tesis niteliğinde olmayan tarım ve hayvancılık amaçlı yapılardaki işletmeler, mahalleye dönüşen köylerde oturanların ihtiyaçlarını karşılayan bakkal, manav, berber, fırın, kahve, lokanta, pansiyon, tanıtım ve teşhir büfeleri, yerleşim yeri halkı tarafından kurulan ve işletilen kooperatifler işyeri açma ve çalışma ruhsatı almış sayılmaktadır. Bunun için bu durumdaki yapıların ilgili belediyelerce gerekli tespitlerin yapılabilmesi için bu sisteme kaydedilmesi gerekmektedir. Sayılan binalar ile konutlar, 6360 sayılı Kanunun Resmi Gazete'de yayımlandığı 06.12.2012 tarihinde bitirilmeleri ve fen ve sanat

kuralları ile ilgili mevzuat hükümlerine uygun yapılmaları koşuluyla yapı ruhsatı almış sayılmışlardır.

Kırsal yerleşimlerin fen ve sanat kuralları ile mevzuat hükümlerine uygun yapıldığının Çevre ve Şehircilik Bakanlığı veya belediye ya da üniversiteler tarafından tespit edilmesi planlanmıştır.

İşletme ruhsatı ve yapı ruhsatı almış sayılan yapılar için, özel kanun hükümleri saklı kalınarak, elektrik, su ve benzeri kamu hizmetlerinden yararlandırılmaktadır. Mahalli idare birliklerinin tüzel kişiliği kaldırılmıştır. Atık su, katı atık gibi konularda görevleri ellerinden alınmıştır. Bu konularda kırsal alanlara hizmet götürme işinde yeni uygulamalara gidilmesi gereği ortaya çıkmıştır.

5. YATIRIM İZLEME ve KOORDİNASYON BAŞKANLIĞI'NIN (YİKOB) KURULMASI

YİKOB, 12/11/2012 tarih ve 6360 Sayılı Kanun ile yapılan düzenlemeyle 2014 yerel seçimler sonrasında yeni büyükşehir belediyeleri kurulmuş, sayıları 30'a çıkmış ve büyükşehir belediyesi sınırları il mülki sınırları olarak güncellenmiştir. Bu güncellemeyle büyükşehirlerde görev ve yetki ayrımları yeniden yapılmış, halkın ortak gereksinimlerini karşılamak için belediyelerin yetkileri artırılmış, il özel idareleri kapatılmış ve YİKOB kurulmuştur (Anonim 2021c).

Yatırım İzleme ve Koordinasyon Başkanlığı'nın (YİKOB) sevk ve idaresi, vali veya vali tarafından görevlendirilen vali yardımcısı tarafından yerine getirilmektedir. Valilik gerekli gördüğünde kadro, yer ve unvanlarına bakmaksızın ihtiyaca göre uzman, sözleşmeli personel ve memurları bu başkanlıklarda görevlendirme yetkisine sahiptir.

Yatırım İzleme ve Koordinasyon Başkanlığı (YİKOB), merkezi idare tarafından yapılan her türlü yardım ve desteğin koordinasyonu, denetimi ve izlenmesi ve acil durumlarda yerine getirilmesini sağlamakla görevlidir. İldeki kamu kurum ve kuruluşlarınca yürütülmesi gereken yatırım ve hizmetlerde gecikmeler yaşandığının tespit edilmesi ve bunun halkın sağlığı, huzur ve esenliği ile kamu düzeni ve güvenliğini olumsuz etkilediğinin vali veya ilgili bakanlığınca belirlenmesi durumunda, vali uygun süre vererek hizmet ve yatırımın gerçekleştirilmesini ister. Hizmet ve yatırımın verilen sürede gerçekleşmemesi durumunda, vali söz konusu yatırım ve hizmetin ildeki diğer kamu kurum ve kuruluşlarınca yerine getirilmesini isteyebilir ya da bu işlemleri yatırım izleme ve koordinasyon başkanlığı aracılığıyla da gerçekleştirebilir. Yapılan veya yapılacak harcamalar karşılığında tutarlar ilgili kurumun pay ve ödeneklerinden tahsis yapan kurum tarafından kesilerek, İçişleri Bakanlığı'na veya hizmeti yerine getiren diğer kamu kurum ve kuruluşuna gönderilir. Bu kapsamda, İçişleri Bakanlığı'na ve diğer genel bütçeli idarelere aktarılan tutarların bu kurumların bütçeleriyle ilişkilendirilmesi birinci fıkra hükümleri ile, diğer kamu kurum ve kuruluşlarına aktarılan tutarların bütçeleriyle ilişkilendirilmesi ise bu kurumların tabi olduğu mevzuat hükümleri ile gerçekleştirilir. Diğer genel bütçeli idarelere ilişkin bütçe işlemlerini yapmaya yine bu kurumların üst yöneticileri yetkilidir.

6. KIRSAL ALTYAPI DESTEKLEME PROJESİ (KIRDES)

İçişleri Bakanlığı ev sahipliğinde 19 Aralık 2017 tarihi itibarıyla İller İdaresi Genel Müdürlüğü koordinasyonunda başlatılmış olup, 2017 yılında İstanbul ve Kocaeli illeri hariç, 28 Büyükşehir Belediyesi kırsalında hizmet yürütülmüştür (Anonim 2020). Daha sonra, 2018 yılında İstanbul ili içinde ödenek ayrılmış ve kullanılmıştır.

Türkiye'de, büyükşehir yönetim sisteminin il sınırları ve belediye sınırları ile eşleştirilmesi sonucunda hizmet alanının genişlemesi durumu ortaya çıkmıştır. Bu, kırsal yerleşim alanlarının hizmete ulaşabilmesi konusunu gündeme getirmiştir. Bu kapsamda, sürdürülebilir kırsal kalkınma hedeflerine ulaşmak için üreticilerin oluşturduğu birliklerle, aile iştiraki işletmelerin üretim ve istihdam kapasitelerinin artırılması, hayat standartlarının yükseltilmesi, yoksulluğun engellenmesi, kırsal alanlarda var olan yerleşimlerin devamlılığının sağlanması hedeflenmektedir (Öner 2019).

KIRDES Projesi, 6360 sayılı Kanunla köylerin mahalle statüsüne dönüşmesiyle söz konusu kırsal alan büyükşehir belediyesi hizmet sorumluluğuna dahil olmuştur. KIRDES Projesi kapsamında merkezden gelen ödenek ile Büyükşehirlerde kırsal kesimde yer alan köy ve beldeden mahalleye dönüşen yerlerin yollarının yapımında öncelikli olarak kullanılacaktır.

2019-2023 yıllarını kapsayan 11. Kalkınma Planında kırsal kalkınma; sürdürülebilir kırsal kalkınma yaklaşımıyla, kırsaldaki işgücünün istihdam kapasitesinin artırılması, yaşam standartlarının artırılması, kırsaldaki yoksullukla mücadele ile yerel halkın düzenli ve yeter gelire kavuşturularak refahının artırılması ve nüfusun kırsal alanda tutundurulmasının sağlanması olarak ifade edilmiştir (Anonim 2019b).

11. Kalkınma Planı ile kırsal yerleşim alanları ve yerel yönetimlerin ilişkisi açısından öngördüğü politikalar ve tedbirler ise; kırsal yerleşimlerin yatırım ve hizmet eksikliklerinin giderilmesi, büyükşehirlerde kırsal mahalleye dönüşen yerleşimlerde KIRDES projesi başlatılması, KÖYDES projesinin devamının sağlanması, kırsal iskana yönelik kaynakların etkin kullanımında koordinasyon sağlanması, kırsalda yaşayan halkın yaşam standartlarının yükseltilmesi, kırsal alanda kapasite gelişimi, kırsal istatistiklerin iyileştirilmesi ile köy envanter bilgi sisteminin oluşturulması olarak sayılabilir (Öner 2020).

KIRDES projesi 2017 yılında başlatılan bir projedir ancak hem KÖYDES projesinin kırsal büyükşehir belediyesi olmayan kırsal alanlarda başarısının gittikçe artması, hem de kalkınma planlarında üzerinde önemle durulması ile projenin büyükşehir belediyesinin bulunduğu kırsal mahallelerde uygulanmasının önemi arttırılmıştır.

KIRDES projesi kapsamında harcamalar için, merkezi bütçeden ödenek ayrılmaktadır. Ödenek Yatırım İzleme ve Koordinasyon Başkanlıkları (YİKOB) tarafından kullanılmaktadır (Anonim 2019c).

Yatırım İzleme ve Koordinasyon Başkanlıkları (YİKOB), büyükşehirlerde kamu yatırımların uygulanmasında önemli rol oynamışlardır. Kamu adına uygulayıcı olmalarının yanında koordine eden, izleyen ve denetleyen görevler de üstlenmişlerdir. YİKOB kamu yatırımlarının hızlı, verimli ve etkin bir şekilde yapılması için çalışmakta ve amaçlanan politikaların yerelde iyi yönetim çalışmalarıyla yapılmasını desteklemektedir. Bu görevleri uygularken merkezi ve yerel kamu unsurları arasında uygulamaya dönük kaynak ve bilgi transferine ev sahipliği yapmaktadır.

KIRDES projesi kapsamındaki ödenek ile Beton, Köy içi parke ve sanat yapıları yapılmaktadır. Yollarda, sathi kaplama uygulanmamakta olup, çok zorlu hallerde sathi kaplama yol yapımı İçişleri Bakanlığının onayı ile yapılmaktadır. Nüfusu, trafik yoğunluğu ve ünite sayısı fazla olan grup yollarına öncelik verilmektedir.

Proje kapsamında; yeni yol açılmamakta, ham ve tesviye yolları stabilize yapılmamaktadır. Gönderilen ödenek kamulaştırma için kullanılmamakta, iş makinası ve araç gereç alınmamaktadır. Asfalt yollarda trafik güvenliğine ilişkin yatay ve dikey işaret ile levhaların yapılmasına ilişkin hususların ihale şartnamesine konulması karara bağlanmıştır.

Acil ihtiyaç durumunda, bakanlık onayı alınarak il ödeneğinin %25'ini geçmemek üzere diğer alt yapı (içme suyu, küçük ölçekli sulama ve atık su) ve sosyal donatıların (kamu binalarının yeniden kullanıma açılması, spor altyapısının oluşturulması, muhtarlık binası, taziye evi) yapımında kullanılabilir. Yapımı planlanan işlerin projelendirilmesi hizmet alımı kapsamında yapılabilir. İhtiyaç halinde yapılması planlanan işin yapım, projelendirme ve kontrollük hizmetleri diğer kamu kurum veya kuruluşlarına yaptırılabilir.

7. KIRSAL MAHALLE ve KIRSAL YERLEŞİK ALAN

Büyükşehir belediyelerinde kırsal alanlar konusu halen tartışma konusudur. 10.07.2004 tarihli ve 5216 sayılı Büyükşehir Belediyesi Kanununa 16.10.2020 tarihli 7254 sayılı 'Kamu Mali Yönetimi ve Kontrol

Kanunu ile Bazı Kanunlarda Değişiklik Yapılması Hakkında Kanun' ile eklenen Ek Madde 3 ile (Ek:RG-16/10/2020-7254/10 md.) bazı önemli kararlar alınmıştır.

Kanundan önce köy veya belde belediyesi iken Büyükşehir belediyesinin sınırları içinde mahalleye dönüşmüş yerleşimler; bağlı bulunan ilçe belediye meclisinin kararı ve teklifi üzerine büyükşehir belediye meclisinin en geç doksan gün içinde alacağı karar ile şehir merkezine uzaklığı, belediye hizmetlerine erişebilirliği, mevcut yapılaşma durumu, sosyo-ekonomik durumu gibi özellikleri incelenerek kırsal yerleşim özelliği taşıdıkları tespit edilirlerse kırsal mahalle kabul edilebilmektedir.

Belirlemenin mahalle düzeyinde yapılması esas alınmıştır. Ancak, tamamı kırsal mahalle olarak tespit edilmeyen diğer mahallelerde de on bin metrekareden az olmamak koşuluyla belirlenen alan kırsal yerleşik alan olarak ifade edilmektedir.

Kırsal mahalle veya kırsal yerleşik alan vasfı, kanunun yine aynı fıkrasında belirtilen usulle kaldırılabilir. Büyükşehir belediyeleri, kanunda belirtilen şekliyle ilçe belediyesinden gelen teklifi aynen veya değiştirerek kabul edebilmekte veya reddedebilmektedir. Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde; gelir vergisinden muaf esnaf ile basit usulde gelir vergisine tabi mükellefler tarafından bizzat işyeri olarak kullanılan bina, arsa ve araziler ile mesken amaçlı kullanılan binalar ve zirai istihsalde kullanılan bina, arsa ve araziler 29.07.1970 tarihli ve 1319 sayılı Emlak Vergisi Kanununa göre alınması gereken emlak vergisinden muaf tutulmaktadır. Bu yerlerde, ticari, sınai ve turistik faaliyetlerde kullanılan bina, arsa ve araziler için emlak vergisi %50 indirimli olarak uygulanmaktadır.

Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, 26.05.1981 tarihli ve 2464 sayılı Belediye Gelirleri Kanunu uyarınca alınması gereken bina inşaat harcı ile imarla ilgili harçlar alınmaz denilmektedir; anılan kanuna göre alınması gereken diğer vergi, harç ve harcamalara katılma payları %50 indirimli uygulanmaktadır.

Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, içme ve kullanma suları için alınacak ücret en düşük tarifenin işyerleri için %50'sini, konutlar için %25'ini geçmeyecek şekilde belirlenmektedir. 04.01.1961 tarihli ve 213 sayılı Vergi Usul Kanunu uyarınca bilanço esasına göre defter tutan mükellefler için kanunda belirtilen muafiyet ve indirimler uygulanmamaktadır.

10.07.2004 tarihli ve 5216 sayılı Büyükşehir Belediyesi Kanununa 16.10.2020 tarihinde 7254 sayılı 'Kamu Mali Yönetimi ve Kontrol Kanunu ile Bazı Kanunlarda Değişiklik Yapılması Hakkında Kanun'a Ek Madde 3 ile (Ek:RG-16/10/2020-7254/10 md.) yapılan düzenlemelerden 6 ay sonra, düzenlemelerin yeterince anlaşamadığı düşünülerek 15.04.2021 tarihli 31455 Sayılı Resmi Gazetede 'Kırsal Mahalle ve Kırsal Yerleşik Alan Yönetmeliği' yayınlanmıştır.

15.04.2021 tarihli 31455 Sayılı Resmi Gazetede Kırsal Mahalle ve Kırsal Yerleşik Alan Yönetmeliği, kırsal mahalle veya kırsal yerleşik alanı, bunların tespitine ilişkin işlemleri, bu yerlerde uygulanacak muafiyet ve indirimleri düzenlemek ve diğer hususların açıklanmasını sağlamak amacıyla yayınlanmıştır (Anonim 2021d). Kırsal mahalle tespiti yönetmeliğin 4. maddesinde; büyükşehir belediyeleri sınırları içinde olup 1984 yılı ve sonrasında köy veya belde belediyesi iken mahalleye dönüşen mahallelerde tespit edilir ifadesiyle düzenlenmiştir. İlgili maddede kırsal mahalle tespitinin yapılabilmesi için;

- Kırsal yerleşim özelliğinin devam edip etmemesi,
- Şehir merkezine olan uzaklık ve ulaştırma durumu,
- Belediyelerin yol, su, atık su, katı atık, toplu taşıma gibi hizmetlerinden en az birine erişebilme imkanına tam kapasitede ulaşabilip ulaşamaması,
- Mevcut yapılaşma durumunun kırsal niteliğinin devam edip etmemesi,
- İmar mevzuatı uyarınca yerleşik ve gelişme alanları içinde olup olmaması,

-Sosyo-ekonomik olarak; kırsal nüfus oranının yüksek olması, yüzölçümünün önemli bir kısmını tarım, orman, mera, yaylak ve kışlak arazilerinin oluşturması, tarımsal üretimin, hayvancılık ve orman faaliyetlerinin başlıca geçim kaynağı olarak tespit edilmiş olup olmaması, özelliklerinden bir veya daha fazlası ile benzer konular dikkate alınarak değerlendirilmektedir.

Kırsal yerleşik alan tespitinin ise yönetmeliğin 5. maddesine göre, mahalle düzeyinde yapılması esas alınmıştır. Bunun yanında, mahalle bütünlüğü içinde 4. maddede belirtilen şartları taşınamaması nedeniyle kırsal mahalle olarak tespit edilemeyen mahallelerdeki on bin metrekareden az olmayan alanlar, 4. maddede belirtilen ilkelerde ve şartlarda kırsal yerleşik alan olarak belirlenebilmektedir. Bununla beraber, kırsal yerleşik alanlar bir mahallenin veya birden fazla mahallenin bir kısmını içeren yerlerinde tespit edilebilmektedir.

Belediyelerce yapılacak işlemler yönetmeliğin 6. maddesinde düzenlenmiştir. Buna göre, kırsal mahalle veya kırsal yerleşik alan belirlemesi için önce ilgili ilçe belediye meclisince karar alınmaktadır. Teklifi içeren bu karar, gerekçeleri ile beraber büyükşehir belediye başkanlığına gönderilmektedir. İlçe belediye meclisinin kararının ve teklifinin büyükşehir belediye başkanlığı kayıtlarına intikal ettiği tarihten itibaren büyükşehir belediye meclisinin yapacağı ilk toplantıda karar ve teklif gündeme getirilmekte ve büyükşehir belediye meclisi, en geç doksan gün içinde kırsal mahalle veya kırsal yerleşik alan tespitine ilişkin kararını vermektedir.

Büyükşehir belediye meclisi belirtilen süre içinde karar almak zorundadır. Büyükşehir belediye meclisi, ilçe belediyesinden gelen teklifi aynen veya değiştirerek kabul etmekte ya da reddetmektedir. Büyükşehir belediye meclisi, ilçe belediyesinden gelen kırsal mahalle veya kırsal yerleşik alan teklifini değerlendirirken;

-Kırsal mahalle ile ilgili teklifi, mahallenin bitişiğindeki diğer mahalleler ile ekonomik ve sosyal bütünlüğün gerektirmesi halinde komşu mahallelerde kırsal yerleşik alan belirlemek suretiyle genişletme veya daraltma, ya da

-Bir mahalle içindeki kırsal yerleşik alanla ilgili teklifi, mahalle sınırlarına kadar genişletme, yönünde karar alabilmektedir.

Büyükşehir belediye meclisi, ilçe belediyesinden gelen kırsal mahalle veya kırsal yerleşik alan teklifini ilçe belediyesi sınırlarını kapsayacak veya aşacak şekilde değiştiremez, denilmektedir.

Kırsal mahalle veya kırsal yerleşik alan olarak tespit edilen yerler için bir süre kısıtlaması öngörülememektedir. İlçe belediyelerince kırsal mahalle veya kırsal yerleşik alan olarak tespit edilen yerlerin bu özelliklerinin kaybedildiğinin tespiti halinde, Kanunun Ek 3. maddesi uyarınca bu maddedeki usulle kırsal mahalle veya kırsal yerleşik alan niteliği kaldırılabilir.

Yönetmeliğin 7. maddesinde, kırsal mahalle veya kırsal yerleşik alan belirlenmesine ilişkin alınan büyükşehir belediye meclisi kararlarına belirlenen alanın koordinatları ekleneceği ve ilçe belediyesi meclisi ile büyükşehir belediyesi meclisinin kırsal mahalle veya kırsal yerleşik alanla ilgili kararları diğer meclis kararları gibi uygun yöntemlerle duyurulacağı belirtilmiştir.

Kırsal mahalle veya kırsal yerleşik alanın uygulama süresi başlangıcı ve sona ermesi yönetmeliğin 8. maddesinde, Kırsal mahalle veya kırsal yerleşik alanın ilanı sonrasında bunlarla ilgili uygulamalar, ilgili büyükşehir belediye meclisi kararının verildiği yılı takip eden takvim yılının başından itibaren başlar şeklinde düzenlenmiştir. Kırsal mahalle veya kırsal yerleşik alanlar ile ilgili uygulamalar, 6. maddedeki usule göre yapılacak çıkarılma işlemine ilişkin ilgili büyükşehir belediye meclisi kararının verildiği yılın sonuna kadar devam eder, denilmiştir.

Kırsal mahalle veya kırsal yerleşik alanlara tanınan muafiyetler, yönetmeliğin 9. maddesinde düzenlenmiştir. Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, gelir vergisinden muaf esnaf ile basit usulde gelir vergisine tabi mükellefler tarafından bizzat işyeri olarak kullanılan bina, arsa

ve araziler ile mesken amaçlı kullanılan binalar ve zirai istihsalde kullanılan bina, arsa ve araziler emlak vergisinden muaf tutulmuştur.

Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, 26/5/1981 tarihli ve 2464 sayılı Belediye Gelirleri Kanunu uyarınca alınması gereken bina inşaat harcı ile imarla ilgili harçlardan muaf tutulmuştur. Kırsal mahalle veya kırsal yerleşik alanlara tanınan indirimler yönetmeliğin 10. maddesinde, Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, ticari, sınai ve turistik faaliyetlerde kullanılan bina, arsa ve araziler için emlak vergisi %50 indirimli uygulanır, denilmektedir.

Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, 2464 sayılı Kanun uyarınca alınması gereken vergi, harç (bina inşaat harcı ile imarla ilgili harçlar hariç) ve harcamalara katılma payları %50 indirimli uygulanır, denilmektedir. Kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, içme ve kullanma suları için alınacak ücret; işyerleri için belirlenmiş olan en düşük tarifinin %50'sini, konutlar için belirlenmiş olan en düşük tarifinin %25'ini geçmeyecek şekilde belirlenmektedir.

Kırsal mahalle veya kırsal yerleşik alanlarda uygulanmayacak muafiyetler ve indirimler yönetmeliğin 11. maddesinde, 'kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde, 04.01.1961 tarihli ve 213 sayılı Vergi Usul Kanunu uyarınca bilanço esasına göre defter tutan (sadece hasılat defteri tutan yabancı nakliyat kurumları dâhil) mükellefler, 9. ve 10. maddelerde belirtilen muafiyet ve indirimlerden yararlanamazlar', denilmektedir.

Kırsal mahalle veya kırsal yerleşik alan uygulamasında muafiyet ve indirimlerin başlaması ve son bulmasında, 213 sayılı Vergi Usul Kanuna göre bilanço esasına göre defter tutma yükümlülüğünün başladığı ve son bulduğu tarihler dikkate alınır, denilmektedir.

Diğer hususlar yönetmeliğin 12. maddesinde düzenlenmiştir. Kanunun Ek 3. maddesinin beşinci fıkrası uyarınca kırsal mahalle veya kırsal yerleşik alan olarak belirlenen yerlerde uygulamanın yürürlüğe girmesinden sonra 12/11/2012 tarihli ve 6360 sayılı On Dört İlde Büyükşehir Belediyesi ve Yirmi Yedi İlçe Kurulması ile Bazı Kanun ve Kanun Hükmünde Kararnemelerde Değişiklik Yapılmasına Dair Kanun ile köy veya belde belediyesi iken tüzel kişiliği kaldırılarak mahalleye dönüştürülen yerlere, anılan Kanunun geçici 1. maddesinin on beşinci ve yirmi dokuzuncu fıkraları uyarınca tanınan muafiyet ve indirimler uygulanmaz, denilmektedir.

Kanunun Ek 3. maddesinin dördüncü fıkrası uyarınca 03.07.2005 tarihli ve 5393 sayılı Belediye Kanununun 12. maddesinin yedinci fıkrası ile 31.08.1956 tarihli ve 6831 sayılı Orman Kanununun Ek 17. maddesi hükümlerinden yararlanan yerler; kırsal mahalle veya kırsal yerleşik alan olarak belirlenmesi halinde Kanunun Ek 3. maddesi hükümlerine aykırı olmayan hak, sorumluluk ve imtiyazlardan faydalanmaya devam ederler, denilmektedir. Kanunun Ek 3. maddesinde belirtilen muafiyetler ve indirimler, ilgili mevzuat hükümlerine göre yürütülmektedir.

8. SONUÇ

KÖYDES projesinde, finansman ve uygulama modeli olarak benzersiz bir yapı geliştirilmiş, kırsal ve toplumsal kalkınma unsurları içinde en temel unsur olan fiziksel altyapının iyileştirilmesi temel amaç olarak belirlenmiştir. Projenin alt yapının iyileştirilmesine odaklanması doğru bir strateji olarak düşünülmektedir (Canpolat 2007).

KÖYDES projesinde, önceliğinin içme suyu ve yol olarak belirlenmesi, kırsal alanların kalkınması ve gelişmesi için doğru ve yerinde bir öncelik verme şeklinde nitelendirilebilir. Çünkü temel altyapı sorunları devam eden kırsal bir alanı kaldırmak için yapılacak her türlü sosyal ve ekonomik çabanın temel altyapı eksikliği sebebiyle istenilen sonuca ulaşamayacağı düşünülmektedir (Cirik 2011).

KÖYDES projesi, kırsal kalkınma çalışmalarına yerel yönetimlerin aktif katılımını sağlaması açısından da oldukça önemlidir. Kırsal alanda sorunların yerinde tespit edilmesi ve bu alanlara yerinde kaynak aktarımıyla hizmet sunmalarını sağlamasıyla kırsal kalkınma yaklaşımları içerisinde çok önemli bir yer tutmaktadır.

KİRDES projesi, kırsal alanlardaki altyapı ihtiyacına yanıt veremeyen Büyükşehirleşmenin olumsuz sonuçlarını gidermek için oluşturulmuştur. Çünkü, mevcut yapısıyla büyükşehirler kendi kırsal alanlarında bu ihtiyaçları giderme becerisinden ve kapasitesinden uzak bir çizgidedir. Bu nedenle de merkezi yönetim, kırsal alandaki mahallelere yönelik yatırımlar yapmıştır. Burada, diğer altı çizilmesi gereken husus, büyükşehir belediyeleri ve ilçe belediyelerinin siyasal kurumlar olduğu gerçeğinden hareketle, mülki idare amirlerinin ilgili sorunları yerinde tespit etme ve yatırımlardaki adaletsizliği giderme açısından bir araç olduğudur. Burada mülki idareye, muhtarların da bilgi ve ihtiyaç analizi konusunda yardım ettiği not edilmelidir (Çiner 2019).

KÖYDES projesinde, projenin uzun sürmüş olması ve illere aktarılan ödeneğin yıllar geçtikçe arttırılmış olması bir başarısı olarak yorumlanmaktadır. KİRDES projesinin ise KÖYDES projesinin başarılı olduğu düşüncesinden etkilenilerek hazırlanması ve daha çok yeni bir yaklaşım olmasına rağmen projeye ayrılan kaynağın yıldan yıla arttırılarak devam etmesi önemlidir. Bu açıdan bakıldığında KİRDES projesinin de uzun yıllar devam edebileceği düşünülmektedir.

Kırsal alanlardaki hizmetler, özellikle büyükşehir belediyesi olan yerlerde bazı sorunlar ortaya çıkarmaktadır. Bu da, kırsal alanlarda yeni arayışlara yöneltmektedir. 16.10.2020 tarihinde 7254 sayılı 'Kamu Mali Yönetimi ve Kontrol Kanunu ile Bazı Kanunlarda Değişiklik Yapılması Hakkında Kanunla getirilen düzenleme kırsal mahalle ve kırsal yerleşik alan gibi konulara tam açıklık getirememiştir. Nitekim, kırsal alanların statüsünün belirlenmesinde sorunlar yaşanmıştır. 15.04.2021 tarihli 31455 Sayılı Resmi Gazetede Kırsal Mahalle ve Kırsal Yerleşik Alan Yönetmeliği'nin uygulamadaki sorunlara çözüm getireceği belirtilmektedir.

Kırsal alanın bu sorunlarının giderilmesi yetkiler ayrımının iyi anlaşılabilmesi, kırsala kaliteli hizmet getirilebilmesi ve kırsal kalkınma politikalarının doğru ve planlı bir şekilde belirlenmesi ve uygulanması ile mümkün olabileceği iyi bilinmelidir.

Impact of Covid Pandemic on Foreign Exchange Reserves

Irena Nikolova¹

¹ New Bulgarian University, e-mail: inikolova@nbu.bg, ORCID: 0000-0002-1206-5886

Abstract: The foreign exchange reserves are part of the central bank tools for maintaining the stability of the national legal tender. Several issues are of great importance when analysing the foreign exchange reserves. Firstly, the structure and size of the reserves is determined by the monetary policy of the central bank. Secondly, the monetary policy is different in regards with the applied exchange rate arrangement in the country as the central bank plays a significant role in maintaining the selected exchange rate. These issues are considered when reviewing the impact of the pandemic on the foreign exchange reserves.

The aim of the paper is to review the role of the foreign exchange reserves in pandemic and to analyse the opportunities for their future implementation. The statistical methods are applied to assess the present situation compared to the pre-pandemic period, and the data is from the Bank for International Settlements and the International Monetary Fund databases. The conclusion is that the foreign exchange reserves are necessary for the central banks and governments, especially in times of crises and in pandemic. They are applied as a “buffer” for maintaining the stability of the domestic currency and the whole national financial system. Moreover, in recent years the role of the foreign exchange reserves is reviewed as an additional tool of the governments and central banks for introducing new digital currencies on the market.

Keywords: foreign exchange reserves, covid pandemic, currencies, central bank, exchange rate arrangements.

1. INTRODUCTION

The coronavirus pandemic has a tremendous impact over countries, their economies, and the way they function. It is expected that the influence will continue in future even if the disease is over. The financial markets and especially the foreign exchange one, are quite sensitive to the changes in the global environment. Usually, they are regarded as an indicator to the measures that the authorities and investors should consider. That rule was confirmed once more when the information about the instability in the healthcare system in China changed quickly in January 2020 and the lockdowns in Asia started. The so called “news effect” affected the markets and they reacted immediately, but without considering and even expecting the scale of the events.

In general, the real sector of the economy and some specific sectors were hit fiercely by the pandemic and some economies shrank by 25-40%. As stated in the Annual Report of the Bank for International Settlements (Bank for International Settlements, 2020) “the central banks acted as the first line of defense in order to stabilize the financial markets and the financial system and to preserve the flow of credit to firms and households”.

As for the currencies, their position on the markets was affected as well. There was a sharp currency depreciation for both the major and the emerging markets currencies. However, the currencies of the advanced economies restored quickly their stability on the market, while those of the developing and emerging market economies recovered slowly in April 2020 and later (OECD, 2020).

In times of crisis, the fiscal and foreign exchange reserves of a country are regarded as “buffers” for the stability of the financial system and the economy. Central banks are responsible for maintaining the stability of the national currency and in case of turbulence in the world economy and other external shocks, the foreign reserves are one of the tools for intervention on the markets.

The reserves do not exist independently from the external and internal environment of a country. Thus, not only the pandemic altered the view towards the reserves but also the influence of the related policies and the undertaken measures.

The external environment for the foreign exchange reserves include: 1. Risks and, 2. Governmental policies. The risks that are included in the Global Risks Report of the World Economic Forum represent to a certain extent the expected or emerging obstacles and threats in the external business climate (World Economic Forum, 2021). The five categories of global risks, such as economic, technological,

societal, environmental, and geopolitical, have signaled to the world the possible events and threats that we may encounter in future. And the pandemic is one of the societal risks that is analyzed in depth in the reports in recent years. But were we prepared for such a risk and threat? Well, the answer is No, due to the circumstances and the turbulence in the economic and social life worldwide.

Another factor in the external environment that affects the foreign exchange reserves are the governmental policies (e.g., healthcare, social, environmental, etc.). The pandemic had and still has an impact on other related policies and on the stability of the foreign exchange reserves. The lockdowns worldwide influenced different areas significantly, and predominantly the economic sectors related to the face-to-face communication such as sport (Borisov, 2019; Borisov, 2019a; Borisov, 2020) and tourism (Jarolímková and MIECAT Project Team, 2021; Vaníček, Šenková, and Jarolímková, 2021), where the opportunities for financing diminished sharply. The subsidies and governmental support were the main contributions for the affected sectors and it was considered as an opportunity to preserve them in times of pandemic. In such cases the fiscal policy (Nikolova and Angelov, 2021; Pancheva, 2015) and the balancing between economic growth and tax burden is an important tool for local and central governments.

Education is another crucial area that was affected by the pandemic as the student presence in the universities was limited and the student mobility from home countries and regions to foreign ones was blocked. Supplementary businesses as restaurants, real estate, rental, etc., were affected as well. Nevertheless, education has continued functioning successfully based on the digitalization, entrepreneurship, and the effective relationship between universities and businesses (Tekev, 2015; Tekev, 2015a; Tekev, 2003) and in combination with the corporate social responsibility (Stoichkova, 2019; Stoichkova, 2020). Another point that motivates the society and each one of us to change is the attitude for adapting to the circumstances (Karamelska, 2019) which the pandemic definitely showed to us all.

The internal environment for the foreign exchange reserves is related to the economic and financial policies of the central banks and the ministries of finance. The main purpose of those policies is to manage the reserves and to maintain the stability of the domestic currency and the financial system (Nikolova, 2019). Some specific risks may influence the foreign exchange reserves (Fisher and Lie, 2004) such as financial risks, liquidity risk, credit risk, (Petkova, 2007; Petkova, 2010), foreign exchange risk (Nikolova, 2018), etc. Thus, the rules for the internal policies are more predictable than the external ones and the authorities may influence the direction of the reserves-related policies.

The characteristics of the reserves are part from the internal environment as it is quite important to balance all the policies and to manage the amount of that specific tool. When analyzing the foreign exchange reserves, several issues have to be discussed, especially in terms of pandemic and the challenges that emerged: 1. Size, 2. structure (composition), and 3. Exchange rate arrangement.

Historically, countries maintained large reserves in order to guarantee the fixed exchange rate arrangements and the Bretton Wood system that existed in the 50s, 60s and early 70s. That was the mechanism for reconstructing and rebuilding the Western European economies in the post-war period and gold was one of the major elements of the reserves (Stoichkova, 2020a). Today the official reserves consist predominantly of foreign currencies and financial instruments denominated in a foreign currency, but gold is still part of the reserves along with the SDRs (International Monetary Fund, 2013).

The aim of the paper is to review the role of the foreign exchange reserves in pandemic and to analyse the opportunities for their future implementation. The statistical methods are applied to assess the present situation compared to the pre-pandemic period, and the data is from the Bank for International Settlements and the International Monetary Fund databases.

2. CHALLENGES FOR FOREIGN EXCHANGE RESERVES DURING PANDEMIC

Size of the foreign exchange reserves. The foreign exchange reserves are managed by the central banks, and their major role is to preserve and maintain the stability of the domestic currency. In that way the whole financial and banking system is guaranteed against both external and internal shocks or changes in the environment. For example, during the global financial and economic crisis, there was a rise in the

foreign exchange reserves in the countries, predominantly in the emerging and developing economies in Asia.

On the one hand, the reason for that is the instability in the world and attempt of the central banks to ensure enough resources for the post-crisis period. On the other hand, the increase is explained by the improvement of the credit rating and rise in confidence to the country by diminishing the costs for lending on the international markets. Thus, the overall price of the loan decreases as well (Romero, 2005).

One of the trends that was applicable and evident before the pandemic but continues during it, is the steady increase in the amount of the foreign exchange reserves worldwide (Fig. 1) by 4-6% per year including gold. At the beginning of the pandemic the amount of the reserves rose further in order to secure resources for the post-pandemic period of the countries like the global financial crisis situation as mentioned above.

In 1995 the total reserves in the world amounted 1,389,816 million US dollars, while in the fourth quarter of 2020 the reserves were 12,700,750 million US dollars. In other words, the official foreign exchange reserves for the last 25 years have increased dramatically. During the different quarters of 2020, the trend continued, and it is expected that during 2021 this attitude towards the reserves will be preserved by all types of economies (developed, developing and emerging markets).

Due to the Asian crisis in the 90s and then the global financial crisis, and the European debt crisis, the emerging markets and developing economies have taken measures towards the increase of the reserves. In the present situation where the pandemic is expected to cause a serious economic crisis in the post-pandemic period, it is not a surprise that central banks focused more on the reserves as a buffer.

Figure 1: Total Foreign Exchange Reserves in the world, 1995-2020 Q4

Source: International Monetary Fund Database, 2021

The currency (structure) composition of the foreign exchange reserves is related to the activities (trade, economic, etc.) of the country and relation of the domestic currency to other key currencies (Ito and McCauley, 2019). Thus, the trade and financial flows determine to a great extent the reserves structure.

According to the Bank for International Settlements (Bank for International Settlements, 2021) the major currencies that dominate the foreign exchange market are the US dollar, euro, Japanese yen, emerging market currencies, UK pound, Australian dollar, Canadian dollar, Swiss franc, etc. These are the currencies that participate actively in the composition of the reserves worldwide.

Figure 2 describes the currency composition worldwide and as shown the US dollar is the leading currency in the foreign exchange reserves with 59% share. However, there is a decreasing trend for the presence of the US dollar in the reserves in recent years. The reason for that are the increasing activities among the emerging markets and their attempt to avoid the exchange rates differences and additional costs when applying cross currency rates. For example, the share of the US dollar in the official reserves in the 90s and in the beginning of the 21st century was around 70% and above that.

The Chinese yuan (renminbi) with 2.25% share and the Japanese yen with 6% share in the world reserves have been enlarging steadily their presence in the currency composition of the foreign exchange reserves. That is explained with the intention of the central banks worldwide to continue diversification of their reserves in order to be less sensitive to the changes on the foreign exchange market to only one currency such as the US dollar.

Figure 2: Currencies Composition of Official Foreign Exchange Reserves, 2020 Q4

Source: International Monetary Fund Database, 2021

Another explanation for the change in the currency composition of the reserves are the exchange rate fluctuations of the domestic currency to the major world currencies. In case the domestic currency varies less or is fixed, then the central bank most probably will include it in the composition of the official reserves. The reasons are the following: 1. Costs from the exchange rate fluctuations are higher when the currency is volatile to the domestic one; 2. Foreign exchange risk increases in cases of more fluctuations on the market between the domestic and the foreign exchange currencies. Thus, central banks would prefer foreign currencies with less risk and costs in their foreign reserves rather than riskier ones.

Exchange rate arrangement and the foreign reserves. There are two major types of exchange rate arrangement that are classified by the International Monetary Fund (International Monetary Fund, 2020): fixed (pegged) and floating. When the types of exchange rate arrangements and foreign reserves are analysed in detail then it is obvious that central banks with a fixed exchange rate need the reserves in order to maintain the stability of domestic currency and the exchange rate itself.

However, there is one special case, and that is the currency board arrangement where the foreign reserves have to cover 100% at minimum the domestic currencies. In that case, the foreign reserves should consist predominantly of the selected reserve currency or basket of currencies.

For the floating exchange rate arrangement there is not a specific rule for maintaining particular quantity from specific currencies. Of course, countries that have adopted the floating exchange rate arrangement need reserves as well. The central banks in some cases have to intervene in order to

support the domestic currency and to preserve the stability of the financial system. Moreover, maintaining a huge size of foreign reserves presents the capability of preserving the selected exchange rate arrangement in order to meet the disbalances in the balance of payments of the country. And it guarantees the functioning of the money, capital and foreign exchange markets. (Sunner, 2017).

Several methods for measuring the foreign exchange reserves are applicable. For determining the optimal size of the reserves is used the rule of the Greenspan-Guidotti, by which the foreign reserves are a percentage of the short-term debt. According to that rule the ratio of the short-term debt to the foreign reserves should be 100% (Brussiere and Fratzschermay, 2002). Usually, countries maintain the largest share of their reserves in the currency in which they have the highest share of external debt (Cagoz, Sull, Wang and Dychala, 2019).

4. CONCLUSION

Foreign exchange reserves are necessary for the central banks and governments, especially in times of crises and in pandemic. They are applied as buffers for maintaining the stability of the national currency and the whole national financial system. Moreover, in recent years the role of the foreign exchange reserves is reviewed as a supplementary tool of the governments and central banks for introducing new digital currencies on the market.

Challenges for the central banks in managing the official foreign reserves during the pandemic can be summarized as follows:

- ✓ Difficulties in forecasting the external and in some cases the internal environment and in that way the risks and policies that will affect directly the reserves;
- ✓ The size of the reserves depends on the exchange rate arrangement and the economic and financial policies in a country;
- ✓ The more diversified in currency composition are the reserves, the less vulnerable to the environment they will be.

In fact, the central banks that maintain large size of a certain currency may influence the markets by selling or buying those amounts, affecting the exchange rate for that particular currency in the short run. The foreign exchange reserves and their role for the stability of the national currency is in focus for both the developing and developed countries due to the pandemic.

In times of crisis, only the well-managed foreign exchange reserves may prevent the turbulence against the national currency, because the external environment is difficult to forecast and the internal environment is the one the authorities should focus on in order to prevent the uncertainty.

Abstract: This study explores the long-run relationship between human capital and labor productivity in Turkey by utilizing an annual dataset of 1958-2014 and by implementing ARDL analysis. We identified that variables of human capital and labor productivity are stationary at first differences as a result of KPSS stationarity test. We conducted ARDL boundary test for cointegration analysis and ARDL boundary test findings reveal that human capital and labor productivity are co-integrated. In other words human capital and labor productivity move together in the long-run in Turkey. Moreover the long-run coefficient estimations point out that human capital has a positive and statistically significant impact on labor productivity in Turkey. More specifically, an increase in human capital level by 1% leads to an increase in labor productivity level by 2.016%. Finally the estimated model does not suffer from any problem in terms of autocorrelation, heteroscedasticity, and model specification.

Key Words: Labor Productivity, Human Capital, ARDL

1. INTRODUCTION

Health and Education expenditures are one of the foundations of human capital. It is possible to say that these expenditures have many effects on growth and labor productivity. In general, a higher human economy is favorably discussed over economic growth. In general, a higher human economy is favorably discussed over economic growth. Human capital investment for education has been a necessary resource for economic growth and full employment.

It focuses not on the level of human capital, but on the growth rate of human capital. The results obtained by working with the empirical have been interpreted according to developed, practice and underdeveloped economies. In developed economies, it is embedded in local economies. In underdeveloped economies, which are thought to benefit from technology in developing economies, it is protected from quality line(Papageorgiou,2003, 622) . human equipment can be analyzed in pleasing vehicles. from the analysis in the context of 1981-2002 on about 50 countries from different levels of development. In the analysis, positive positive effects are seen in terms of some situations outside of Turkey(Saygili et al.,2005, 25). This study tries to think about the economic growth of human capital. study; As a Cobb-Douglas production function of labor as the production enterprise of human and capital, at the beginning (Kartal et al. ,2017,175).

Relationships with these people relate to human relationships and relationships. When we focus on what is historically determined in human time and its control by war, it is predictable to thrive in the long run(Acemoğlu et. al. ,2014,875). Achene and Paksoy (2018, 96) has been investigated in Algeria and Turkey, which focuses on the economic growth of human capital. Autoregressive Distributed Latency (ARDL) model was used in the study. favorites of a long-term relationship.

In this study, human capital and labor productivity are emphasized in the long term. Some of the studies examined in the literature are summarized below.

2. DATA AND METHODOLOGY

This study examines the long-run relationship between human capital and labor productivity in Turkey by using an annual dataset for the period of 1958-2014. We employed Autoregressive Distributed Lag (ARDL) estimation method to perform our analyses. As an indicator of labor productivity (LABPROD), we utilize labor productivity per person employed in 2017 US\$ (converted to 2017 price level with updated 2011 PPPs), which is collected from The Conference Board. On the other hand as a proxy for the human capital endowment (HCCAPITAL) we use human capital index computed based on years of schooling and

returns to education, which is obtained from the Penn World Table. Also logarithmic forms of all variables are used in all analyses.

We estimated the ARDL model below in order to conduct co-integration analysis between HCCAPITAL and LABPROD variables:

$$\Delta LABPROD_t = \beta_0 + \alpha_0 LABPROD_{t-1} + \alpha_1 HCCAPITAL_{t-1} + \sum_{i=1}^p \theta_i \Delta LABPROD_{t-i} + \sum_{i=0}^q \gamma_i \Delta HCCAPITAL_{t-i} + \varepsilon_t \quad (1)$$

In the above equation, α_0 and α_1 stand for long-run coefficients; θ_i and γ_i are for short-run coefficients; Δ represents first degree difference operator; β_0 is constant term of the model, and ε_t is white noise error term of the model.

In co-integration test based on ARDL bound test, the null hypothesis of $H_0 : \alpha_0 = \alpha_1 = 0$ (i.e., there is no co-integration between HCCAPITAL and LABPROD variables) is tested against to the alternative hypothesis of $H_1 : \alpha_0 \neq \alpha_1 \neq 0$ (i.e., there is co-integration between HCCAPITAL and LABPROD variables). If the F-statistic value of ARDL boundary test is above the upper limit at a particular significance level, then H_1 hypothesis is accepted. On the other hand, if the F-statistic value is less than the lower limit at a particular significance level, then H_0 hypothesis is accepted. On the other hand any F-statistic value between the lower and upper limits means that we are in indecisive zone and thus no decision can be made.

Besides the following error correction model in order to obtain both short and long-term coefficients are implemented:

$$LABPROD_t = \delta_0 + \eta ECM_{t-1} + \sum_{i=1}^p \varphi_i \Delta LABPROD_{t-i} + \sum_{i=0}^q \vartheta_i \Delta HCCAPITAL_{t-i} + \varepsilon_t \quad (2)$$

In Equation 2 above, φ_i and ϑ_i show the dynamic short-term coefficients; ECM stands for error correction term; η represents the speed of adjustment. Meantime the speed of adjustment term η should have a negative sign and be statistically significant.

3. EMPIRICAL RESULTS

The findings of Kwiatkowski, Phillips, Schmidt, and Shin (KPSS) stationarity test, which claims stationarity of series in H_0 hypothesis and non-stationarity of series in H_1 hypothesis, are displayed in Table 1 for the case of “constant”.

Table 1: KPSS Stationarity Test

Variable	Model	LM-Stat.	Significance
HCCAPITAL in level	Constant	0.914788	Significant at %1,5,10 levels
HCCAPITAL in 1. diff.	Constant	0.129081	Not significant at %1,5,10 levels
LABPROD in level	Constant	0.966127	Significant at %1,5,10 levels
LABPROD in 1. diff.	Constant	0.179240	Not significant at %1,5,10 levels

KPSS stationarity test findings in Table1 reveal that HCCAPITAL and LABPROD variables are not stationary at levels but they are stationary at first differences. In other words both HCCAPITAL and LABPROD variables are integrated order one (i.e., I(1)). Owing to the fact that ARDL boundary test accepts any level of integration lower than I(2) and HCCAPITAL and LABPROD variables are I(1), ARDL boundary test can be conducted for co-integration analysis between HCCAPITAL and LABPROD variables.

Akaike criterion (AIC) is utilized to figure out the optimal lag lengths for the model in Equation 1. Figure 1 shows the findings for twenty distinct ARDL models and discloses that the best model in terms of optimal lag length is ARDL(1,0) for the model in Equation 1.

Figure 1: Optimal Lag Length Selection via AIC

ARDL bound test results are depicted in Table 2. Since F-statistic value of 11.29050 in Table 2 is higher than the all upper bound critical values, it can be expressed that the both variables are cointegrated and thus HCCAPITAL and LABPROD variables move together in the long-run in Turkey.

Table 2: Results for ARDL Bound Test

F-statistic	11.29050	Critical Values	
Significance		I(0) Lower Bound	I(1) Upper Bound
10%		3.02	3.51
5%		3.62	4.16
2.5%		4.18	4.79
1%		4.94	5.58

Estimation findings of long-run coefficients are given in Table 3 and these results imply that HCCAPITAL variable possesses a positive and statistically significant effect on LABPROD variable. This result is in parallel to the co-integration test results reported in Table 2. In regard to the long-run estimation findings, an increase in human capital by 1% results in an increase in labor productivity by 2.016%.

Table 3: Long-run Coefficients of ARDL(1,0) Model

Variable	Coefficient	t-statistic	Prob.
HCCAPITAL	2.016397	4.956820	0.0000
Constant	9.747071	24.317117	0.0000

Table 4 reports the estimation findings for short-run. As indicated by Table 4, short-run coefficient of HCCAPITAL variable is positive but not statistically significant. Also the ECM coefficient takes the anticipated negative sign and is statistically significant at 1% significance level. The diagnostic test results in Table 4 and CUSUM stability test in Figure 2 indicate that ARDL(1,0) model do not have any problem in terms of autocorrelation, heteroscedasticity, and model specification.

Table 4: Short-run Coefficients of ARDL(1,0) Model

	Coefficient	t-Statistic	Prob.
$\Delta HCCAPITAL_t$	0.151165	0.229391	0.8194
ECM_{t-1}	-0.079716	-3.529272	0.0009
$ECM = LABPROD - (2.0164 * HCCAPITAL + 9.7471)$			
Diagnostic Tests			
Tests	Test Value (Prob.)		
Breusch-Godfrey Serial Correlation LM Test	0.960548 (0.3895)		
Breusch-Pagan-Godfrey Heteroskedasticity Test	0.833449 (0.4402)		
Ramsey RESET Test	1.888501 (0.1753)		

Figure 2: CUSUM stability test

Conclusion

In this study we analyze the long-run interaction between human capital and labor productivity in Turkey by utilizing a yearly dataset of 1958-2014 and by employing ARDL estimation method.

Given the fact that our HCCAPITAL and LABPROD variables are stationary at first differences (i.e., I(1)) based on KPSS stationarity test, ARDL boundary test for cointegration analysis was conducted and ARDL boundary test results show that HCCAPITAL and LABPROD variables are co-integrated. In other words HCCAPITAL and LABPROD variables move together in the long-run.

According to the long-run coefficient estimations, there is a positive and statistically significant interaction between HCCAPITAL and LABPROD variables, and an increase in human capital level of Turkey by 1% leads to an increase in labor productivity level of Turkey by 2.016%. Meanwhile the

estimated model does not contain any problem in terms of autocorrelation, heteroscedasticity, and model specification.

Nonlinear Approach To The Analysis Of Fiscal Policy In the United States

Alenka Kavkler¹

¹ University of Maribor, Faculty of Economics and Business, Maribor, Slovenia,

e-mail: alenka.kavkler@um.si and EIPF – Economic Institute, Ljubljana, Slovenia:

Abstract: In this paper, we analyze the relationship between the primary surplus/deficit and debt for the United States of America. Temporary spending and temporary output are also added to the equation. We use annual data for the period between 1930 and 2019 obtained from Federal Reserve Bank. Nonlinear approach is applied using the smooth transition regression (STR) model which is a generalization of discrete switching models with a finite number of different regimes. In this way, we enable an infinite number of regimes with smooth transition between the two extreme regimes and allow for different values of the slope and threshold parameters. The slope parameter determines the speed of the transition between the extreme regimes while the threshold parameter specifies where the transition occurs. Several possible nonlinear smooth transition specifications are considered, including both logistic (LSTR) and exponential (ESTR) transition functions. Linearity is strongly rejected and the lagged debt variable (as a percentage of GDP) is chosen for the transition variable. The estimated nonlinear model passes the employed specification and diagnostic tests. Our analysis reveals the nonlinear relationship between the surplus/deficit and debt in the United States during the observed period. The sustainability of fiscal policy is also discussed in the paper.

Keywords: fiscal policy, nonlinear approach, smooth transition regression model, primary surplus.

How Work-Related Effects of COVID-19 Affect Employees' Withdrawal: A Moderated Mediation Model

Angeliki Tsameti¹

Kyriakos Tsamantouridis²

Victoria-Maria Bellou³

¹ University of Thessaly, atsameti@uth.gr, ORCID: 0000-0002-2741-2297

² University of Thessaly, tsamanto@uth.gr, ORCID: 0000-0003-2662-7146

³ University of Thessaly, vbellou@uth.gr, ORCID: 0000-0002-2151-8234

Abstract: The COVID-19 rapidly spread across the globe, causing a worldwide pandemic. The pandemic was followed by related legislation, policies, and the measures against COVID-19's spread in terms of operation (e.g. minimization of face-to-face interactions, service through internet or telephone), routines and workflows (e.g. rotating work schedules). This new setting seems to be adding stress and anxiety to employees.

Building upon the Conservation of Resources (COR) theory, we consider the pandemic-related changes at work as a significant stressor that diminish employee resources, that could urge them to find ways to protect their threatened resources. Under the circumstances, employees are highly likely to alter their attitude towards their organization. Thus, hereby we aim to investigate the work-related effects of covid on employees' withdrawal, investigating the mediating role of work engagement. Furthermore, during the pandemic, the severity, the fatality of and the susceptibility to disease can also create or intensify anxiety and fear may influence employees' working perspective. Thus, this study also aims to investigate the moderating effects of the feeling of fear towards COVID-19 both in the relationship between the work-related effects of covid on withdrawal and in the relationship between the work-related effects of covid on engagement.

The study took place in Greece. In particular, the sample of the present research consisted of 370 Greek employees who continued to work from organizational facilities during the pandemic. To access an extended pool of individuals, a self-reported online questionnaire was prepared. The link of this questionnaire was shared through digital media (i.e., social media and emails). Data tested through SPSS Process Macro, offered support to the hypothesized moderated mediation model. The contribution of this work is of both theoretical and practical significance. Regarding the former, this is obviously one of the first studies that investigate the impact of covid-related initiatives in the workplace on employee attitude toward their work. On a practical basis, the findings of this study offer advice to managers, as to how to further support employees and adjust the work setting.

Keywords: Work-Related COVID's effects, Work Engagement, Withdrawal, Moderated Mediation

European Green Deal policy for the Circular Economy: Opportunities and Challenges

Arta Kuci

Abstract: In December 2019, a European Green Deal was introduced to the EU and its community as a new development strategy by the European Commission (EC). The key goal of the European Green Deal is to reshape the EU into an ethical society with an efficient use of resources and a modern- competitive economy. The European Commission targets an absolute reduction of greenhouse gases net emissions by 2050 in all EU. Thus, one of the most important actions in implementing this new growth strategy “EGD” is to coordinate the industry for a circular and clean economy. To reach this, EC introduced the most advanced legislation follow-up package that EU's society and businesses can benefit from this green switch .This legislation package includes actions and steps with a connecting guideline of principal policies, starting from a very determined goal in eliminating emissions, as well as investments in related innovation and research in order to protect the natural environment of Europe. However, reaching the goal of being the first among other continents to be climate- neutral by 2050 is so far the biggest challenge, as well as the greatest opportunity for Europe. In reality, in order to implement such advanced goals, obstacles need to be addressed as well, in national and international level. Thus, this paper analysis the European Green Deal policy, the opportunities provided from EGD and in particular the challenges faced for reaching the targets of EGD.

Building Destination Image Through Events: The Impact Of Events On City Image

Arta Kuci

Abstract: Regions and cities are continuously branding and rebranding as a plan to gain a competitive position and stimulate visits, investments and economic advantages. The environment is actively in move and competition is becoming more and more powerful. In order for cities to distinct from each other, it is of great importance to create a good image of it. There are various products and strategies for building a destination image. However, cities are intensively adopting events as an approach of enhancing their image, encouraging municipal development and attracting investments and tourists. Thus, this paper addresses the impact and effect of events in branding, rebranding and building city image.

Differences on public debt between south and north euro area

Abstract: We study the short- run and the long-run relationship of investment, central government debt, savings, inflation, unemployment with growth in a panel of eight euro area countries, considered (i) Belgium, (ii) France, (iii) Germany (iv) Greece, (v) Italy, (vi) Netherlands (vii) Portugal and (viii) Spain using Error Correction Model (ECM) techniques. For the period expands from 1975 to 2016, we investigate the relationship of five macroeconomic variables, (i) foreign direct investment, (ii) central government debt, (iii) gross domestic savings (iv) inflation, (v) unemployment with gross domestic product adopting the heterogeneity and nonlinearity approaches. We find a negative (positive) long run relationship of debt and inflation (savings and unemployment) with growth in euro area south countries. However, in north euro area countries our results reveal a long run negative (positive) relationship between debt and unemployment (savings) with growth. We also observe statistically significant asymmetric effect between the negative and positive change of debt on growth only in euro area north countries.

Keywords: debt; euro area; euro area north; euro area south; non-linearity; heterogeneity.

Abstract: Environmental management systems are an important tool in policies and actions on environmental protection and the achievement of sustainable development goals. At the level of the European Union, the environmental management system - EMAS has imposed in the last 5 years, for 8 of the 11 activity sectors identified as priority, environmental performance indicators and parameters of excellence. These are found in the form of best management practices. The paper starts from the research of sectoral indicators and associated parameters of excellence for (i) production of electrical and electronic equipment (Decision 63 of 2019), car manufacturing (Decision 62 of 2019) and food and beverage manufacturing (Decision 1508 of 2017) and (ii) the tourism sector (Decision 611 of 2016), the retail trade sector (Decision 801 of 2015) and the agricultural sector (Decision 813 of 2018) and the tabular identification of those associated with waste management. In parallel, the specific regulations at the level of the European Union are studied for the categories of waste in connection with the activity carried out in these sectors and the requirements of the environmental management system are highlighted. The corroboration of the two results makes it possible to identify the best environmental management practices to achieve legal requirements in waste management.

Keywords: environmental management systems, waste management, environmental performance indicators, environmental excellence parameters, European directives

Local Government Investment in Bulgaria: A Case Study

Desislava Stoilova¹

¹ South-West University “Neofit Rilski”, Bulgaria, e-mail: dstoilova@swu.bg, ORCID: 0000-0001-6034-4225

Abstract: The academic literature reveals that well-designed public investments accelerate economic growth, create long-term economic and social benefits, as well as positive spillover effects in the economy. The main purpose of this paper is to study the dynamics of investment spending financed through the budgets of Bulgarian municipalities for the period 2000 - 2020. The methods used are descriptive and comparative analysis on the main indicators of investment activity at the local level. The results of the study show that despite the positive trend of dynamic growth of municipal investment expenditures, Bulgaria retains one of the most centralized models of financing and implementation of public investments within the European Union. The low share of local investments in the total investment activity of the public sector is a direct consequence of the relatively low degree of financial decentralization in the country. An important positive trend is the increase in the share of municipal investment expenditures provided by financial sources, controlled by the local governments, which is a precondition for enhancing the financial autonomy of municipalities and improving the efficiency of municipal financial management.

Keywords: local finance, local investment, financial decentralization, Bulgaria.

Challenges of the Coronavirus Crisis and HR Responses in Ghana

Abstract: The Severe Acute Respiratory Syndrome SARS-COV-2 known as COVID-19, has caused havoc to all facets of human life. The current paper discusses the challenges of the coronavirus crisis and the human resource responses in Ghana by using a desk review method to gather relevant information on the study. It was revealed that the pandemic affected all sectors of the economy with heavily impacted being hospitality and tourism, oil and gas, finance, agriculture, and services. Some government policies to alleviate the impact are slash on expenditures on goods and services, capital investment by approximately 0.3 percent of its GDP, Bank of Ghana (Central Bank) reduction of policy rate by 14.5, soft loans to support SMEs, insurance for frontline health professionals and other social strategies to help curb spread of the virus. The HR of individual companies also adopted the WHO protocols for the workplace to avoid interruption of work while protecting their workforce and customers. Following its second wave in January 2021, Ghana was the first African country to receive 600,000 doses of the AstraZeneca/Oxford WHO's global vaccine-sharing scheme COVAX for poor people in the world.

The Institutions-Finance-Growth Nexus: The Case Study of EU and European Transition Economies

Edib Smolo¹

¹Department of Economics and Management, International University of Sarajevo (IUS), Sarajevo, Bosnia and Herzegovina, edib.smolo@gmail.com

Abstract: AThis paper empirically investigates the impact of finance and institutions on economic growth using a panel data analysis covering 2002-2019 period and focusing on three country groups: European Union (EU) member countries, European transition economies, and the overall sample taking all countries together. In contrast to the prevailing view that suggest a positive impact of finance on growth, our findings indicate that finance either decreases growth or it is insignificant without evidence of non-linearity. Another finding that comes as a surprise is that institutions play no role in growth either directly or indirectly via finance in all our samples. Our findings, however, support the claim that the finance-growth nexus depends on financial development proxies and on the level of financial and institutional development within sample countries.

The Role of the Fiscal and Monetary Policies during the Covid-19 Crisis in Countries of High- and Lower income

Dr. Eszter Solt PhD¹

¹Budapest University of Technology and Economics, Faculty of Economic and Social Sciences, Department of Finance, solt.eszter@gtk.bme.hu, <https://orcid.org/0000-0002-2989-4656>

Abstract: Countries around the world are affected by coronavirus pandemic and struggle with the economic consequences of Covid-19. Based on macroeconomic data the paper analyzes how policy responses to the pandemic differ in countries of different income. It examines to what extent the macroeconomic state of an economy determines the use of the tools of fiscal and monetary policies and how economies had to change their policies to tackle the coronavirus crisis. Besides introducing the tools and measures, the research aims to answer whether recession triggered by pandemic differs from other, „normal” recessions. This paper focuses on what specific support will be necessary for countries of lower income.

Key Words: Covid-19, Recession, Fiscal and monetary policies

The Impact of Interest Rates on Reducing the Unemployment Rate in Kosovo

Fehmi Krasniqi¹

Hysni Terziu²

¹Mr. Sc. Business Administration

²Prof. Dr. Assoc

Abstract: The main purpose of this paper is to address and research interest rates and how they affect employment or job creation. Hence, what are the favourable interest rates for job creation, taking into account that in Kosovo the banking operation is that of commercial banks, whether local or foreign. What is the unemployment rate in Kosovo compared to the countries of the region and EU countries?

Through this paper are researched the changes that have occurred in recent years with fiscal policies in our country, as a country in transition. While, its basic objective includes the impact of interest rates on business development in Kosovo, as well as the impact of interest rates on the social and economic development of Kosovo. Are credit policies in Kosovo favourable for the development of local and foreign businesses operating in the country?

In the beginnings of banking operations in Kosovo, interest rates were very high. In 2010, for instance, interest rates were brought to the value of 13.97%, while in 2016 they reach the value of 7.22%. During the mentioned period, the interest value decreased by 0.96% or 48.32% for the period 2010-2016. but they generally remain high.

Regarding the issue of the unemployment rate in Kosovo, during the period 2001 - 2015, it has decreased by 42.38%, calculating that in 2001 it was 57.1%, while in 2015 it reached 32.9%, respectively the annual average of the unemployment rate. As well as unemployment reduction has been 2.57%.

Interest rates are reduced by 2 to 3% on an annual basis. Increase the repayment period of loans (long-term loans) for capital investments. Allow the waiting period (grace period) at the beginning of the investment and have variable payments based on business income. Reduce bureaucracies when taking loans. Reduce the demand for collateral from banks when taking loans. Reduce the business tax rate, stimulate the payment of the interest rate to 50%, and open a development bank.

Keywords: Credit policy reforms; The Republic of Kosovo; Countries of the region; EU countries; Interest rates; Unemployment rate; Gross domestic product GDP.

The Consumer Acceptance of the Digital Banking Services in Romania: An Empirical Investigation

Abstract: This paper explores the main factors that influence the consumer acceptance of digital banking services in Romania, focusing on students with both economic and non-economic backgrounds. The main purpose of this paper is to find the most significant advantages explaining the adoption of the technology in the frame of the FinTech emergence in Romania, analyzing the correlations between education and the methods of payment used on the daily basis. The digital infrastructure in Romania was highlighted, relating the data with digital skills development constraints and the associated risks. First, the financial services delivered by the banking sector were analyzed following the new transformations of the financial sector, including the COVID-19 context and the rearrangements of the banking sector by financial performance. Second, the research hypotheses were tested using a questionnaire distributed among students, as the main propagators of financial innovation. The results suggest that there is a strong correlation between financial knowledge and both the usage of digital banking services and the Fintech affinities. The cooperation between the customer and the financial institution was detailed to find the perceived value of technology-associated features for the overall performance of the banks, measuring monetary and non-monetary sacrifices in the way students access the financial services. The quality of the services and the accessibility were among the most mentioned characteristics which determined such cooperations, followed by the level of interests, the digitization level or the employees' kindness. The main finding suggests the evolving role of the financial technology for the new generation, beyond the rationale cost-centric determinants or the emotional sphere, which is strongly related to the employees' involvement with the company.

Abstract: Changing the sustainable consumption patterns of food are in the focus of sustainable consumption goals. Changing the attitudes, purchasing intentions and purchasing habits are vital for making changes. Young customers have specific awareness, and consumption motivations, therefore specific measurement scales are needed for measuring their sustainable food consumption behaviour. The research objective was to collect and categorise the sustainable consumption measurement scales which are related to sustainable food consumption. The validated measurement scales for sustainable food consumption of young customers are specified to certain areas of food consumption and have cultural specifications. There seems to be a lack of validated measurement scales for eastern European and Hungarian customers. The findings of the research can serve as a basis for further scale development for Hungarian young customers.

Key Words: Sustainable Consumption, Food, Young Customers, Measurement Scales

Financial Needs of Micro-enterprises in the Period Before and During the COVID-19 Crisis

Abstract: The economic crisis caused by the coronavirus COVID-19 has led to changes in companies' demand for funding and its objectives. Therefore, financial institutions need to develop new types and directions of financing offer. The aim of our study is to find out the preferred types of financial support for micro-enterprises, which is the largest share of SMEs in Latvia, based on the companies' previous experience and current financing practices. Research methods applied in the current paper are: analysis of scientific publications and previous conducted research results, survey of entrepreneurs. For survey data analysis there were used indicators of descriptive statistics, cross-tabulations and correlation analysis. Even before the current economic crisis, it was found that micro-enterprises had less access to external finance than other types of SMEs. In a survey of companies registered in Latvia, entrepreneurs were asked to disclose the funding used for their development and entrepreneurship. The aim of the survey was to find out to what extent companies had access to finance, whether they needed new or additional funding and for what purposes financial support was needed. The view on the availability of financing was revealed by 2511 companies, of which 1869 were micro-enterprises. 38% of all micro-enterprises indicated the need to obtain new or additional external financing for the performance of their activities or the realization of their intentions, while 47% of larger enterprises indicated the desire for additional financing. The lower need for external financing for micro-enterprises could to some extent be explained by the fact that a large proportion of them (64%) relied only on internal financing. During the COVID-19 period, companies have been looking for working capital to compensate for business disruptions caused by the loss of funds. However, this may not be enough to halt the economic downturn and further recovery. Thus, the availability and diversity of public financial support is important for businesses and for micro-enterprises in particular. Our task is to explore the availability of public financial support for micro-enterprises and the solutions offered, in order not only to overcome the difficulties caused by the negative effects of COVID-19, but also to promote their future development.

Keywords: Access to finance, COVID-19, Financial needs, Micro-enterprises, Public financial support.

Abstract: Work-based learning has been recognized as one of the most efficient preparation of competitive employers for the labor market. Academic researchers world-wide has examined several aspects related to work-based learning related to the employers, vocational education establishment management, students of vocational education involved in work-based learning, as well as other stake-holders. The aim of the paper is to examine the role of employer's motivation in involvement in work-based learning and providing training places and involvement of the trainees in the work-based learning. Research methods in the current research - analysis of scientific publications and previous conducted research results, analysis of cases in realization of work-based learning and indication of the challenges for employers. The case study results have indicated that in many situations personal attitude and interest of the vocational education school management plays an important role in successful realization of work-based learning. Results of the research have indicated that personal involvement of employers motivate them to suggest valuable ideas for realization of work-based learning and support for creation of good and creative employees for the national economy.

Abstract: The European educational projects are an approach aimed at optimizing intercultural education carried out within European pre-university education institutions, regardless of the subject or curricular areas involved. The dimension of experience conferred by European educational projects places intercultural education in everyday life, mobilizing the whole personality of individuals in the direction of ensuring a balanced development that allows openness to cultural otherness.

The starting point of this paper is the assumption that the proper identification of the particularities of existing funding programs as well as the correct knowledge of specific barriers will generate a high level of effective and sustainable European interaction between the institutional actors involved.

The general objective of this study is to identify the particularities and barriers in the implementation of European funded projects in the period 2007-2020 in order to improve access to available funding for the future and to increase their impact.

The research methods used in this study are focused mainly on the analysis of documents and case studies. In order to substantiate the described state of affairs as well as the proposed recommendations, primary documentation sources (interviews, case studies, monitoring reports) were used, as well as secondary documentation sources (the analysis of European legislation), together with two basic tools - questionnaire and focus group.

The conclusions highlight the fact that there are many deficiencies in the implementation of programs and implicitly of educational projects. Permanent and realistic monitoring at different levels in terms of relevance, effectiveness and efficiency, coherence and consistency and, in particular, in terms of sustainability can lead to an increase in the impact of these initiatives.

Keywords: financing programmes, educational projects, sustainability.

From Prosperity to Obscurity 150 Years of the Hungarian Milling Industry

Judit Beke¹

András Schlett²

¹Associate professor, Budapest Business School, Lisanyi. Endrene@uni-bge.hu , ORCID:
<https://orcid.org/0000-0002-1368-4400>

²Associate professor, Pázmány Péter Catholic University, Schlett.andras@jak.ppke.hu

Abstract: The aim of this study is to present the development of the Hungarian milling industry in the last 100 years. It examines the main factors affecting the Hungarian mill industry, the challenges facing the sector and analyses the responses to them. During this period, not only was the structure of economic production constantly changing, but the international agricultural market was also fundamentally transformed. From time to time, the market and logistics networks established in the previous decades were torn down, while new players also sought a place in world trade. The structure of this study is chronological: after a brief presentation of the 19th century boom of the Hungarian milling industry, a separate subchapter (2.) deals with the period between the two world wars, the changes in the period of socialism (3.), and finally with the specifics of the period following the 1989 regime change. It considers the directions, strengths and weaknesses of the Hungarian milling industry. The successes and failures of the responses to the different types of challenges provide many lessons for the present as well.

Abstract: Local governments are becoming more and more important during the pandemia of Covid-19. Academic researchers world-wide has examined several aspects related to work organization at local governments to have better involvement in solution of new challenges caused by new situation of work organization at municipalities in the situation of restricted presence and introduction of new approaches using digital solutions and remote work. The aim of the paper is to explore the new and innovative approaches in work organization to reach job satisfaction of the employees in municipalities considering changes in the work environment caused by restrictions of Covid-19 pandemics. Research methods in the current research - analysis of scientific publications and previous conducted research results, analysis of survey of municipality representatives in work organization in case of special restrictions caused by Covid-19. Most of the evaluations were realized on evaluation scale 1-10 to get deeper analysis of views of representatives in municipalities. The survey results were analyzed by indicators of descriptive statistics: indicators of central tendency or location (arithmetic mean, mode, median), by indicators of variability (range, standard deviation, standard error of mean); by cross-tabulations; testing of statistical hypotheses by t-test, chi-square, analysis of variance (ANOVA), correlation analysis. Results of the research have indicated that among local governments of Pieriga Region (Latvia) the restrictions provide changes in the work environment, and the form and frequency of communication.

Abstract: Experience shows that in modern years, organizations that have a good leader that companies frequently win in the competition and meet their goals quicker. Leadership is a crucial management role that seeks to optimize productivity and accomplish organizational objectives. Without a powerful (efficient) leader, no system would be of tremendous value in the effective management of businesses. Organizations with such a good leader determine their aims and priorities more accurately and address challenges more effectively. It is no doubt true that, we live in a VUCA (Volatile, Uncertainty, Complex and Ambiguous) World, therefore we need to manage our businesses through helping of management styles that are show us to identify key problems in a certain time. Management types refer to how a boss or administrator interacts with the workers and team members who report to them. The research paper delves into the principles of leadership and illustrates the necessary qualifications of a strong leader. The significance of leadership styles in preserving the long-term sustainability of a company's global competitive advantage has been investigated. In the meanwhile, leadership styles are critically evaluated in the context of Dyson's domestic appliances company. This company applies a variety kind of leadership styles that provide effective management of the businesses. Additively, this article shows us that how Dyson's company has been got the success compared to other companies which were located in different regions of the world by using multifarious effective leadership styles.

Azerbaycan Ekonomisi

Mehpara MALIKOVA¹

¹Azerbaycan Cumhuriyeti Devlet İstatistik Komitesi, mehpara.malikova@gmail.com

Özet: 18 Kasım 1991'de bağımsızlığını yeniden kazanan Azerbaycan Cumhuriyeti, 2010 yılına kadar uzun ve çeşitli bir geçiş dönemi yaşadı. Bu dönemde ekonomik gelişme birkaç döngüden geçti. Önce kriz (1992-1995), sonra toparlanma (1996-1997), yükseliş (1998-2008) ve son olarak durgunluk (2009'dan beri) veya daha doğrusu çift haneli ekonomik büyüme hızı, düşüş gözlemlendi. Ancak buna rağmen Azerbaycan ekonomisinin bağımsızlığını kazandığı son 20 yılda ortalama yıllık büyümesi, özellikle ikinci on yılda yaşanan hızlı büyümenin bir sonucu olarak bir bütün olarak olumlu sonuçlarla karakterize olmuştur.

1991 yılında bağımsızlığını kazandıktan sonra Azerbaycan Cumhuriyeti egemenlik haklarını kullanmaya ve ekonomik alanda bağımsız bir politika izlemeye başladı. Bu politikanın ana yönleri, çeşitli mülkiyet biçimleri, piyasa ekonomisine geçiş ve dünya ekonomisine entegrasyon temelinde oluşturulan ekonomik sistemdir.

Büyüme döneminin ana olayı, Azerbaycan'da petrol üretimini ve ihracatını artıracak altyapının oluşturulması ve dünya pazarına ulaştırılmasıydı. Temeli 2003 yılında atılan proje sayesinde ilk petrol 2006 yılında Bakü-Tiflis-Ceyhan (BTC) ana petrol ihracat boru hattıyla Ceyhan'a teslim edildi ve hızlı değişiklikler kaydedildi. GSYİH'nın büyümesiyle birlikte, devlet gelirlerinin büyümesinde önemli değişiklikler gözlenmeye başladı. Özellikle o yıllardaki bütçe gelirlerinin yatırım politikasının büyüme karşılığında genişletilmesi, GSYİH'nın yapısında önemli değişiklikler yapmıştır. Bu dönem Azerbaycan ekonomisine yüksek büyüme sağlamanın yanı sıra, uzun vadede de riskler oluşturuyordu. Bu risklerin başlıcası, petrol gelirlerinin etkin ve şeffaf bir şekilde yönetilmesiyle ilgiliydi.

Cumhurbaşkanı Haydar Aliyev'in devlet bağımsızlığının restorasyonundan sonraki kısa tarihsel süreçte ileri görüşlü politikası ve sıkı çalışması sonucunda, sosyo-ekonomik kalkınma ve entegrasyon alanında büyük başarılar elde edilmiştir. En büyük başarı, bu dönemde ülkemizde bağımsız bir devlet kurma sürecinde, temelde yeni bir ekonomik reform ve kalkınma modelinin - Azerbaycan modeli - ortaya çıkmasıdır.

Bakü-Novorossiysk ve Bakü-Supsa ihracat petrol boru hatları 1996 yılında işletmeye alınmış ve Azerbaycan petrolünü dünya pazarlarına ulaştırmak ve böylece ihracat rotalarını çeşitlendirmek için Bakü-Tiflis-Ceyhan ana ihracat petrol boru hattı Kararname'si 1999 yılında imzalanmıştır. Milli Liderimiz Haydar Aliyev tarafından 1999 yılında imzalanan Kararname, petrol sahalarının yabancı şirketlerle ortak geliştirilmesinden elde edilen petrol satışından elde edilen gelirlerin etkin bir şekilde yönetilmesini, bu fonların öncelikli alanların geliştirilmesinde kullanılmasını ve sosyo-ekonomik açıdan önemli projeler Petrol Fonu kuruldu. Şu anda, Vakfın bu alandaki faaliyetlerine ve şeffaflığın sağlanmasına uluslararası kuruluşlar tarafından çok değer verilmektedir.

Petrol ve gaz sektörü, ekonominin diğer sektörlerinin gelişiminde lokomotif bir rol oynamıştır. İyi düşünülmüş ekonomi politikası sonucunda makroekonomik istikrar sağlanmış ve sürdürülebilir ekonomik büyümenin temeli atılmış, ekonominin tüm sektörlerinde reformlar başlatılmış ve nüfusun yaşam standartlarının iyileştirilmesi için ciddi adımlar atılmıştır.

Bu aşamada izlenen ekonomi politikasının karakteristik özelliklerinden biri girişimciliğin gelişmesi, elverişli bir iş ve yatırım ortamı yaratarak yerli ve yabancı yatırımı çekmesi ve petrol dışı sektörün gelişmesidir. Hedeflenen tedbirler sonucunda Azerbaycan'da bir girişimci sınıfı oluşturulmuş ve ülkenin sosyo-ekonomik kalkınmasında özel sektörün rolü artmıştır.

Ekonomide mülkiyet çeşitliliğini sağlamak için alınan tedbirler, sürdürülebilir ekonomik kalkınmaya olumlu etki yapmıştır. Böylece, özelleştirme başladığında, özel sektörün GSYİH içindeki payı aslında % 10'un altındaydı, ancak şimdi payı % 85'e ulaştı.

Şu anda en önemli konulardan biri, ülkedeki iş ortamını iyileştirerek petrol dışı sektöre yabancı yatırım girişini artırmak ve kamu yatırımlarının özel yatırımı dışlamamasını sağlamaktır.

Anahtar Kelimeler: Azerbaycan ekonomisi, ekonomik büyüme, petrol sektörü, petrol dışı sektör

Azerbaijan Economy

Abstract: The Republic of Azerbaijan, which regained its independence on November 18, 1991, went through a long and varied transition period until 2010. During this period, economic development went through several cycles. First, the crisis (1992-1995), then the recovery (1996-1997), the rise (1998-2008) and finally the recession (since

2009), or rather the double-digit economic growth rate, declines were observed. However, despite this, the average annual growth of the Azerbaijani economy in the last 20 years, when it gained its independence, was characterized by positive results as a whole, especially as a result of the rapid growth experienced in the second decade.

After gaining its independence in 1991, the Republic of Azerbaijan began to exercise its sovereign rights and pursue an independent policy in the economic sphere. The main directions of this policy were the economic system established on the basis of various forms of ownership, transition to a market economy and integration with the world economy.

The main event of the growth period was the establishment of the infrastructure to increase oil production and exports in Azerbaijan and its delivery to the world market. Thanks to the project, the foundation of which was laid in 2003, the first oil was delivered to Ceyhan in 2006 through the Baku-Tbilisi-Ceyhan (BTC) main oil export pipeline, and rapid changes were recorded. With the growth of GDP, significant changes began to be observed in the growth of government revenues. In particular, the expansion of the investment policy of the budget revenues in those years in return for growth made significant changes in the structure of GDP. This period not only provided high growth for the Azerbaijani economy, but also posed long-term risks. The main risks were related to the effective and transparent management of oil revenues.

As a result of President Heydar Aliyev's forward-thinking policy and hard work in the short historical period after the restoration of state independence, great achievements have been achieved in the field of socio-economic development and integration. The greatest success was the emergence of a fundamentally new economic reform and development model - the Azerbaijan model - in the process of establishing an independent state in our country during this period.

The Baku-Novorossiysk and Baku-Supsa export oil pipelines were commissioned in 1996 and the Baku-Tbilisi-Ceyhan main export oil pipeline Decree was signed in 1999 in order to bring Azerbaijani oil to world markets and thus diversify export routes. The Decree signed by our National Leader Heydar Aliyev in 1999, the Oil Fund was established to effectively manage the revenues from oil sales obtained from joint development of oil fields with foreign companies, to use these funds in the development of priority areas, and for socio-economically important projects. Currently, the Foundation's activities in this field and ensuring transparency are highly valued by international organizations.

The oil and gas sector has played a driving role in the development of other sectors of the economy. As a result of a well thought-out economic policy, macroeconomic stability has been achieved and the foundation of sustainable economic growth has been laid, reforms have been initiated in all sectors of the economy and serious steps have been taken to improve the living standards of the population.

One of the characteristics of the economic policy followed at this stage is the development of entrepreneurship, attracting domestic and foreign investment by creating a favorable business and investment environment, and the development of the non-oil sector. As a result of the targeted measures, an entrepreneurial class has been established in Azerbaijan and the role of the private sector in the socio-economic development of the country has increased.

The measures taken to ensure the diversity of property in the economy have had a positive impact on sustainable economic development. Thus, when privatization began, the private sector's share of GDP was actually less than 10%, but now its share has reached 85%.

One of the most important issues at the moment is to increase the inflow of foreign investment into the non-oil sector by improving the business climate in the country and to ensure that public investments do not exclude private investment.

Keywords: Azerbaijan economy, economic growth, oil sector, non-oil sector

Issues of Civil Aviation in Albania during the pandemic

Miljana Xhakolli

Abstract: The COVID-19 pandemic has had a large impact on civil aviation, particularly commercial passenger airline operations. The combination of travel restrictions; state and local mandates to stay at home, shelter-in-place, and self-quarantine after travel from certain areas; and public concerns over the risk of contracting COVID-19 from travel-related activities has resulted in a significant decrease in air travel demand since March 2020. Passenger air travel is not expected to return to 2019 levels until 2024 at the earliest.

The EU has also worked to coordinate travel restrictions, although much remains to be done. Most Member States have introduced temporary internal border controls and measures restricting free movement across the EU at some point during the pandemic. At EU level, they agreed on 17 March 2020 to restrict all non-essential travel to the EU for a specific period. This restriction has been extended a number of times

The pandemic has hit hard not only companies but also many air passengers, whose flights have been cancelled and/or who no longer wish or are no longer allowed to travel to certain countries or regions.

On this article it's going to be analyzed the case of Tirana International Airport as the only airport active at the moment in Albania . A number of voluntary measures have been implemented at airports even in Tirana International Airport , aboard aircraft, and at air traffic control facilities to mitigate COVID-19 transmission, including signage and other public education efforts; social distancing cues; shields and barriers at ticketing counters, TSA checkpoints, and gates; stepped-up cleaning and disinfection of high-touch surfaces; increased airflow and filtration; and protocols to identify and isolate ill passengers and aviation workers.

Additional precautions, such as pre-board health screenings and temperature checks are being debated but remain controversial. While actions taken have resulted in some recovery in air travel demand, airline ridership remains well below historical levels and will likely remain low until COVID-19 is well contained and flyers have sustained confidence in effective contagious disease mitigation measures implemented for air travel. And still there are a lot of issue on "no touch" policy from the staff ,keeping social distancing , adopting the Package Travel Directive from Air passenger rights in Regulation 261/2004, which gives them rights in the event of cancellations etj .

Key words: travel, public budget, family budget, industries, pandemic time, airports,security.

Current Issues Regarding the Insurance of Agricultural Corps in Bulgaria

Pavlina Dimitrova¹

¹Assoc. Prof. and PhD in the Department of Economics and Finance, University of Agribusiness and Rural Development, Bulgaria, E-mail : pdimitrova@uard.bg

Abstract: Agriculture insurance is of great importance for farmers not only in Bulgaria but all over the world. Natural forces are unpredictable, and unpredictability is associated with the concept of risk. Risk accompanies a person's entire life and is defined as a future uncertain event leading to adverse effects on property, life or human health. There is a deviation between the expected result and the result of future actions in an indefinite period. Due to the existence of risk in agriculture, it is necessary to protect the farmers' product. In this article the author aims to study the trends in agriculture insurance in Bulgaria. The tasks for achieving the goal will be related to the analysis of the covered risks, the insured objects, the insurance premiums. The scientific methods that will be used are analysis, synthesis, induction, deduction, statistical observation. The scientific hypothesis is that the total amount of insured objects reduce for the studied 4 years due to complex reasons.

Key Words: Insurance, Agricultural crops, Risk

Some aspects of the Bulgarian anti-crisis policy against COVID-19, with emphasis on the fiscal policy

Ass. Prof., PhD student Vesela Angelova¹

Ass. Prof., PhD student Petar Petkov²

¹ University of Agribusiness and Rural Development, Faculty of Economics and Management, Department of „Economics and Finance“, vangelova@uard.bg

² University of Agribusiness and Rural Development, Faculty of Economics and Management, Department of „Economics and Finance“, ppetkov@uard.bg

Abstract: The global COVID economic recess is not an exotic and short-lived period of human history, but a part of evolution towards a post-COVID economy. The current endogenous, conventional and neoclassical economy will remain in the past.

An economic policy, founded on the minimization of upkeep through exploitation of the outdated and labor-intensive production systems, will have catastrophic results. Only large and constant investments in scientific and technological advancement will lead to the successful restructure of the GDP in a way which aligns with the new global economy.

The current anti-crisis fiscal aid obviously doesn't have the desired positive effect. According to us, anti-crisis relief policies should be focused mainly on dealing with these problems with accentuation on fiscal policy.

Key words: COVID-19, fiscal system, economic crisis

Doğrudan Yabancı ve Yurt İçi Özel Yatırımlar Türkiye’deki Enerji Güvensizliğini Uzun Dönemde Arttırıyor mu? 1980-2018 Dönemi İçin Ampirik Bir İnceleme

Araş. Gör. Dr. Alper KARASOY¹

¹ Afyon Kocatepe Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İktisat Bölümü, akarasoy@aku.edu.tr, ORCID: 0000-0001-9447-3375 (<https://orcid.org/0000-0001-9447-3375>):

Özet: Ampirik literatürde doğrudan yabancı yatırımların (DYY) ve yurt içi özel yatırımların (YİÖY) çevresel sürdürülebilirliğe olan etkileri, çeşitli yaklaşımlar çerçevesinde araştırılmış olmasına rağmen bu yatırımların enerji güvenliğine olan etkisi henüz ayrıntılı bir biçimde incelenmemiştir. Bu çalışmada Türkiye’deki DYY ve YİÖY’ün enerji güvenliğine olan etkisi 1980-2018 dönemi için incelenerek, ampirik literatürde yer alan bu eksiklik giderilmeye çalışılmıştır. Bu kapsamda iki farklı model ileri sürülmüş ve öncelikle bu modellerde kullanılan değişkenlerin (DYY, YİÖY ve enerji güvenliği riski) kaçınıcı dereceden durağan oldukları birim kök testleriyle incelenmiştir. Devamında modellerdeki değişkenlerin koentegre olup olmadıkları, eş-bütünleşme testleriyle sınanmıştır. Elde edilen bulgular, her iki modelde de kullanılan değişkenlerin uzun dönemde birlikte hareket ettiğini göstermiştir. Son olarak da modellerdeki bağımsız değişkenlerin (DYY ve YİÖY) uzun dönem katsayıları, dinamik sıradan en küçük kareler (DOLS) ve tam değiştirilmiş sıradan en küçük kareler (FMOLS) yöntemleriyle tahmin edilmiştir. Tahmin sonuçları hem DYY’nin hem de YİÖY’ün uzun dönemde enerji güvenliği riskini arttırdığını göstermiştir. Başka bir ifadeyle iki yatırım göstergesi de Türkiye’nin enerji güvensizliğini uzun dönemde arttırmaktadır. Ayrıca DYY’nin enerji güvenliği üzerindeki olumsuz etkisinin -YİÖY’ün olumsuz etkisine kıyasla- çok daha düşük bir seviyede olduğu da gözlenmiştir. Bu bulgular, DYY ve özellikle de YİÖY’ün Türkiye’deki enerji güvenliği problemini anlamlı olarak etkilediğini göstermektedir. Türkiye’deki enerji güvenliği sorunu politika koyucuları tarafından ele alınırken DYY ve YİÖY’ün etkileri göz ardı edilmemelidir.

Anahtar Kelimeler: Doğrudan Yabancı Yatırımlar, Yurt İçi Özel Yatırımlar, Enerji Güvenliği, Türkiye, Zaman Serisi Analizi.

Bir Aile Şirketi Ne Zaman Anonim Şirket Olur?

Dr. Öğretim Üyesi Esra Durceylan ¹

¹Sabancı Üniversitesi, Sanat ve Sosyal Bilimler Fakültesi, Ekonomi Programı,
esra.kaygusuz@sabanciuniv.edu, ORCID: 0000-0001-5126-3909

Özet: Bir firmanın organizasyonel yapısı, firma sahibinin ve varsa hissedarların gelirlerini , gelirlerinin nasıl vergilendirileceğini, aldıkları riskleri, firmanın büyüme ve yaşam süresini etkiler. Bu nedenle çok önemli bir karardır. Genel olarak literatürde organizasyonel yapı seçimi üç ana başlıkta açıklanır. Bunlar organizasyonel yapıya bağlı olarak ödenen vergi payının farklı olması, sınırlı sorumluluklar ve firmaların sahibi ve yöneticisi arasındaki ahlaki problemler olarak sıralanır. Ampirik literatürde ahlaki problemlerin firma organizasyonel seçimine etkisinin diğer iki etkene kıyasla kısıtlı olduğu savunulmuştur (Cavalluzzo ve Geczy (2003)).

Bu çalışmada ahlaki tehlikenin varlığı kabul edilerek, firma verimliliklerindeki farkın organizasyonel seçimi etkilediği gösterilmiştir. Firmalar düşük verimlilikte aile şirketi olurken yüksek verimlilikte anonim şirket (corporation) olmayı seçmişlerdir.

Farklı organizasyonel yapılar seçebilen, verimlilikleri ile birbirinden ayrılan firmaların dinamik endüstriyel modellemesi yapılmıştır. Her dönem sektöre girecek potansiyel firmalar aile şirketi ya da anonim şirket olma kararı verirler. Dönem sonunda ise marketten çıkış yapmamış firmalar bir sonraki dönem organizasyonel yapıları hakkında kararlar verirler. Aile şirketlerinin firma sahibi kapital sahibi yatırımcıdır, aynı zamanda şirketin yöneticiliğini de üstlenir. Anonim şirketler ise firma sahibi ve yöneticiden oluşur. Yöneticilerin gayretleri gözlemlenemez. Bu nedenle de ahlaki problemler mevcuttur. Ahlaki problemleri çözmek için firma sahibi yöneticisine dinamik kontratlar sunar. Modelde bu iki organizasyonel yapı arasındaki ödünleşimin bir kaç nedeni vardır. Birincisi, yatırımcı ajanların kapitali var iken yönetme becerileri yönetici ajanlara göre daha azdır. İkincisi, anonim şirket yapısında firma sahibi, yöneticinin çabasını gözlemleyemez. Bu nedenle aile şirketinde olmayan ahlaki tehlike problemleri vardır.

Yapılan numerik analizler göstermektedir ki verimliliğin düşük olduğu firmalarda aile şirketi olmak anonim şirket olmaktan daha değerlidir. Aile şirketi olarak alınan risk ve daha az yönetsel yeteneklere sahip olmanın yarattığı değer kaybı anonim şirkette ahlaki tehlikenin yarattığı değer kaybindan daha azdır. Verimlilik arttıkça anonim şirketi olmanın toplam değer fonksiyonu aile şirketi olmanın değer fonksiyonundan çok daha hızlı artar. Bu nedenle yüksek verimli firmalar anonim şirket olmayı tercih ederler.

Anahtar Kelimeler: Anonim şirket, ahlaki tehlike, verimlilik

Türkiye’de Kamu Sendikalarının Sosyal Medyada Paydaşlarıyla Etkileşimi: Twitter Örneği

Dr. Öğr. Üyesi Fatih GÜRSES¹ İbrahim ÇELİK² Erkan SUVEYDAS³

¹Bursa Uludağ Üniversitesi, İnegöl İşletme Fakültesi, Yönetim Bilişim Sistemleri Bölümü,
fatihgurses@uludag.edu.tr, ORCID: 0000-0001-9922-8571

²Bursa Uludağ Üniversitesi, Sosyal Bilimler Enstitüsü, Yönetim Bilişim Sistemleri Yüksek Lisans Öğrencisi,
ibrcecik@gmail.com, ORCID: 0000-0003-4293-1519

³Bursa Uludağ Üniversitesi, Sosyal Bilimler Enstitüsü, Yönetim Bilişim Sistemleri Yüksek Lisans Öğrencisi,
suveydas@uludag.edu.tr, ORCID: 0000-0002-8781-9144

Özet: Sendikalar özellikle demokratik ülkelerin vazgeçilmezi kabul edilen örgütlerdir. Öte yandan, uluslararası hukuk bağlamında da sendikal hakların temel bir insan hakkı olduğu (İnsan Hakları Evrensel Bildirgesi, m.23/4) kabul edilmektedir. Sendikalar, ücret artış talebi, iş güvencesi, iş güvenliği, işçi sağlığı, emeklilik ve sosyal haklar gibi pek çok alanda çalışanların haklarının güvence altına alınması ve çalışma koşullarının iyileştirilmesi gibi işlevleri bulunan örgütlü yapılardır. O halde, gücünü örgütlü bir topluluk olmaya borçlu olan sendikaların, paydaşlarıyla olan etkileşiminin de kuvvetli olması, etkili bir sendikacılık için çok gerekli bir unsur olarak karşımıza çıkmaktadır.

Öte yandan, bilişim teknolojilerinin, internetin ve özellikle de günümüzde sosyal medyanın tüm dünyada kişisel ve kurumsal düzeyde kullanımının yaygınlaşmasının her alanda olduğu gibi sendikacılık ve sendikal faaliyetler üzerinde de bir yansıması olduğu ifade edilebilir. Sosyal medya, etkileşimli web anlamına gelen web 2.0 olgusunun önemli bir boyutunu oluşturmaktadır ve bu niteliğiyle sendikalar açısından sendika-paydaş etkileşimi bağlamında ilave katkı sunma potansiyeli bulunmaktadır. Geline durumda sendikaların sosyal medya platformları üzerinden paydaşlarıyla olan etkileşiminin, araştırmaya değer bir konu haline aldığını ifade edebilmek mümkündür.

Çalışmada Türkiye’de kamu sendikacılığı perspektifinden sosyal medyada sendika-paydaş etkileşimi araştırma konusu edilmiştir. Araştırmada sendikaların kendilerini ifade etme noktasında en uygun sosyal medya platformu olduğu düşünülen “Twitter” uygulaması, inceleme nesnesi kabul edilmiş ve ilgili literatürde yer alan bir ölçme aracı yardımıyla sendikaların paydaşlarıyla olan etkileşim düzeyinin belirlenebilmesi amaçlanmıştır. Söz konusu ölçme aracı popülerlik, bağlılık ve yayılma etkinliği gibi alt boyutları bulunan ve söz konusu alt boyutların toplamından hareketle de paydaşlarla olan etkileşim düzeyinin belirlendiği bir araçtır.

Bu bağlamda, araştırma kapsamında Türkiye’de en çok üyeye sahip ilk üç kamu sendikası konfederasyonunun (KESK, Memur-Sen ve Türkiye Kamu-Sen) kurumsal Twitter hesapları ilgili ölçme aracı vasıtasıyla incelemeye tabi tutulmuştur. Araştırmanın bulgularına göre sendika konfederasyonlarının paydaşlarıyla etkileşim ortalaması 5,46’dır. Analize dahil edilen sendika konfederasyonları içerisinde en yüksek etkileşim düzeyine sahip olan sendika 8,2 ile Memur-Sen iken; Memur-Sen’i sırasıyla 6,63 ile KESK ve 1,54 ile de Türkiye Kamu-Sen takip etmektedir. Bulgular göstermektedir ki, araştırmaya dahil edilen sendikaların paydaşlarıyla olan etkileşim düzeyleri oldukça düşüktür.

Anahtar Kelimeler: Kamu Sendikacılığı, Sendika-Paydaş Etkileşimi, Sosyal Medya, Twitter, Türkiye.

Role of Agility For Logistics Functions Efficiency

Dr. Gonca Reyhan AKKARTAL¹

¹Medipol University / Business and Administrative Sciences Faculty, Logistics Management Department,
gonca.akkartal@medipol.edu.tr. ORCID:00 00.000.151.168.434

Abstract: The logistics sector, which is developing rapidly in the world, is constantly undergoing changes and transformations with the global changes. These changes necessitate realizing the product flow at an optimal level with an agile and flexible structure in many sectors, especially in food, health, textile, and electronics and automotive. In order to identify and realize opportunities in logistics, where competition makes itself felt a lot, and as a result, to increase the level of customer service, all internal and external logistics functions, including supply logistics, production logistics and shipping logistics, need to be transformed into an agile structure that can adapt to instant changes. The aim of this study is to examine the contributions of agility to increase efficiency in transportation and warehouse management, one of the main functions of logistics.

Key Words: Logistics Management, Supply Chain, Agility

Özet: Dünyada hızla gelişmekte olan lojistik sektörü, yaşanan küresel değişimlerle birlikte sürekli olarak değişim ve dönüşümlere uğramaktadır. Bu değişimler başta gıda, sağlık, tekstil, elektronik ve otomotiv olmak üzere bir çok sektörde ürün akışını optimal düzeyde ve çevik ve esnek bir yapıyla gerçekleştirmeyi gerektirmektedir. Rekabetin çokça kendini hissettirdiği lojistik fırsatları tanımlamak ve gerçekleştirmek ve bunun sonucunda müşteri hizmet düzeyini artırmak için tedarik lojistiği, üretim lojistiği ve sevkiyat lojistiği olmak üzere içsel ve dışsal bütün lojistik fonksiyonlarının anlık değişimlere adapta olacak şekilde çevik bir yapıya yönelik dönüşmesi gerekmektedir. Bu çalışmanın amacı, çevikliğin lojistiğin temel fonksiyonlarından taşımacılık ve depo yönetimi konularında verimliliği artırmadaki katkılarını irdelemektir.

Anahtar kelimeler: Lojistik Yönetimi, Tedarik Zinciri, Çeviklik

Dijital Dönüşüm Kapsamında Girişimci Pazarlamanın Geleceği

Dr.Öğr.Üyesi Hasan Selçuk Eti¹

Öğr.Gör.Nazlı Çağıl Küçüköksel²

Özet: Günümüzde teknoloji alanında yaşanan hızlı gelişmeler dijital dönüşümün yanı sıra girişimcilik ve pazarlama alanlarında da birçok değişime neden olmuştur. Zamanla değişen toplumsal ihtiyaçlara olabilecek en iyi şekilde yanıt verebilmek amacıyla modern teknolojinin bilgi ve iletişim alanında sunduğu imkanlardan faydalanmak şeklinde tanımlanan dijital dönüşüm, girişimcilik ve pazarlama alanlarında da büyük etkiye sahiptir. Bu çalışmanın amacı, dijital dönüşümün girişimcilik ve pazarlama üzerindeki etkilerini genel bir perspektif ile ortaya koymaktır. Bu bakımdan çalışma kapsamında, dijital dönüşüm teknolojisinin şimdiye kadar girişimcilik ve pazarlama arasındaki ince nüanstır meydana gelmiş olan girişimci pazarlama alanında nasıl uygulandığına ve gelecekte ne şekilde kullanılacağına ilişkin bilgilere yer verilmektedir. Girişimci pazarlama açısından bakıldığında dijital çağın ve dijital dönüşümün pozitif yönleri olduğu gibi bazı olumsuz yönlerinin de bulunduğu söylenmelidir. Girişimci pazarlamanın geleceği açısından, bahsi geçen olumlu ve olumsuz yönlerin yansımaları önem teşkil edecektir.

Anahtar Kelimeler: Girişimcilik, Girişimci Pazarlama, Dijital Dönüşüm

The Future Of Entrepreneurial Marketing Within The Scope Of Digital Transformation

Abstract: Today, rapid developments in technology have caused many changes in entrepreneurship and marketing as well as digital transformation. Digital transformation, which is defined as taking advantage of the opportunities offered by modern technology in the field of information and communication in order to respond to the changing social needs in the best possible way, has a great impact on entrepreneurship and marketing. The purpose of this study is to reveal the effects of digital transformation on entrepreneurship and marketing with a general perspective. In this respect, the scope of the study includes information on how digital transformation technology is applied in the field of entrepreneurial marketing, which has been formed from the fine nuance between entrepreneurship and marketing, and how it will be used in the future. From the point of view of entrepreneurial marketing, it should be said that the digital age and digital transformation have positive aspects as well as some negative aspects. For the future of entrepreneurial marketing, the reflections of the aforementioned positive and negative aspects will be important.

Keywords: Entrepreneurship, Entrepreneurial Marketing, Digital Transformation

Finans, Bankacılık ve Sigortacılık Bölümü Öğrencilerinin Akademik Başarı ile İşsizlik Kaygıları Arasındaki İlişkinin İncelenmesi

Öğr. Gör. Dr. Koray ÇETİNCELİ¹

Öğr. Gör. Dr. Perihan TÜZÜN²

¹Isparta Uygulamalı Bilimler Üniversitesi / Isparta MYO, Finans, Bankacılık ve Sigortacılık,
koraycetinceli@isparta.edu.tr, ORCID: 0000-0002-3745-0545

²Isparta Uygulamalı Bilimler Üniversitesi / Isparta MYO, Finans, Bankacılık ve Sigortacılık,
perihantuzun@isparta.edu.tr, ORCID: 0000-0003-3245-2100

Özet: İşsizlik oranlarının yükselmesi, ekonomik konjonktürdeki dalgalanmalar, uzaktan eğitimin devam ediyor olması, finans sektöründeki hızlı dijitalleşme gibi sebeplerin bir araya gelmesi ile günümüzde henüz işgücüne katılmamış olan bireylerin işsizlik kaygısını derinden yaşadıkları düşünülmektedir. Özellikle yükseköğretimde uzmanlaşmanın ilk adımı olan eğitimlerini almakta olan öğrenciler için büyük bir endişe kaynağı olarak ortaya çıkmakta, zaman zaman psikolojik ve beraberinde fiziksel birtakım rahatsızlıklara yol açabilmektedir. Ancak üniversite öğrencilerinin, eğitimleri devam ederken, mezun olabilmeleri için almakta oldukları derslere odaklanmaları işsizlik kaygılarını en azından bir süre erteleyebildikleri düşünülmektedir.

Bu çalışmanın amacı hem önlisans hem de lisans düzeyinde okumakta olan üniversite öğrencilerinin akademik başarıları ile işsizlik kaygıları arasında bir ilişki olup olmadığının değerlendirilmesidir. Çalışma gerçekleştirilirken, Süleyman Demirel Üniversitesi İİBF Finans Bankacılık ve Sigortacılık bölümü öğrencileri ile, Isparta Uygulamalı Bilimler Üniversitesi Isparta MYO'nda okumakta olan Finans, Bankacılık ve Sigortacılık öğrencilerinden anket yöntemi ile veriler elde edilmiştir. Lisans ve Önlisans toplam 260 öğrenciden toplanan anket yanıtları SPSS istatistik programı ile analize tabi tutulacak ve sonuçlar değerlendirilecektir.

Anahtar Kelimeler: İşsizlik kaygısı, Akademik başarı, Bankacılık, Sigortacılık, Üniversite öğrencileri

Parasal Aktarım Mekanizmasında Varlık Fiyatlarının Rolü: Türkiye’den Bulgular

Dr. Öğretim Üyesi. M. Ozan YILDIRIM¹

¹Pamukkale Üniversitesi, İİBF, İktisat Bölümü, moyildirim@pau.edu.tr, ORCID: 0000-0001-7982-4181

Özet: Bu çalışmada, Türkiye ekonomisindeki parasal aktarım mekanizmasında konut ve hisse senedi gibi varlık fiyatlarının rolü 2011:1-2021:3 dönemi için aylık veriler kullanılarak Yapısal VAR modeli yardımıyla analiz edilmektedir. Kullanılan yapısal VAR modeli, kısa ve uzun vadeli kısıtlamaların bir bileşiminden oluşmakta ve para politikası ile varlık fiyatları arasında eşzamanlı etkileşime izin vermektedir. Çalışmanın bulgularına göre faiz oranı şokları Türkiye’de konut fiyatları üzerinde anlamlı bir etkiye sahiptir ve faiz oranındaki artış konut fiyatlarını azaltmaktadır. Faiz oranları da sistematik olarak konut fiyatı şokuna tepki vermektedir. Bu bulgu, konut fiyatlarının Türkiye’deki para politikası aktarım mekanizmasında önemli bir rol oynadığını göstermektedir. Çalışmada ayrıca, para politikası şoklarının hisse senedi fiyatları üzerinde anlamlı bir etki yaratmadığı görülmektedir. Varyans ayrıştırma sonuçları, konut fiyatları şoklarının iktisadi aktivite ve enflasyon gibi makroekonomik değişkenlerin dalgalanmasında hisse senetleri fiyatlarından daha önemli rol oynadığını göstermektedir. Bu bulgular ışığında, Türkiye ekonomisinde konut fiyatlarının, hisse senetleri fiyatlarına kıyasla, parasal aktarım mekanizmasının yürütülmesinde daha etkili olduğu ortaya konulmaktadır.

Anahtar Kelimeler: Parasal Aktarım Mekanizması, Konut Fiyatları, Hisse Senedi Fiyatı, Yapısal VAR

Salgın Sürecinde Çalışanların Örgütsel Destek Algıları, Covid 19 Korkuları ve Duygusal Tükenmişlikleri

Dr. Öğr. Üyesi Nilüfer SERİNİKLİ¹

¹Trakya Üniversitesi / Uzunköprü Uygulamalı Bilimler Yüksekokulu, Yönetim Bilişim Sistemleri,
nserinikli@hotmail.com, ORCID: 0000-0002-1075-2252

Özet: Araştırmanın amacı, covid 19 salgın sürecinde çalışanların covid 19 korkusu, duygusal tükenmişlik ve örgütsel destek algılarının demografik özelliklere göre farklılık gösterip göstermediğini test etmektir. Bu amaç doğrultusunda Türkiye'nin farklı illerinde faaliyet gösteren 15 kooperatif birliği çalışanlarına anket gönderilmiştir. Araştırmaya 15 kooperatif birliğinden, 8 kooperatif birliği katılmış ve 200 anket dönüşü olmuştur. Dolayısıyla, araştırmanın örneklemini 200 kişiden oluşmaktadır.

Araştırma sonucunda toplanan verilerin analizinde SPSS 25.0 paket programı kullanılmıştır. Ölçeklerin yapısal geçerliliğinin analizi için keşfedici faktör analizi, güvenilirliklerinin analizi için Cronbach Alpha testi yapılmıştır. Elde edilen verilerin normal dağılıma uygun olup olmadıkları Kolmogorov-Smirnov testi ile test edilmiş ve verilerin normal dağılmadığı sonucuna ulaşılmıştır. Buna göre araştırmada non-parametrik testlerden yararlanılmıştır. Değişkenlerin birbirleri ile olan ilişkilerini test etmek için spearman korelasyon analizi yapılmıştır. Ayrıca, algılanan örgütsel destek, duygusal tükenmişlik ve covid 19 korkusunun demografik özelliklere göre farklılık gösterip göstermediğini test etmek için Kruskal-Wallis H ve Mann-Whitney U testi kullanılmıştır.

Araştırmanın sonucunda, salgın sürecinde kooperatif çalışanlarının örgütsel destek algıları ve covid 19 korku düzeylerinin ortalamasının üzerinde değer aldığı, duygusal tükenmişlik düzeylerinin ise ortalamasının altında değer aldığı saptanmıştır. Korelasyon analizi sonucuna göre, covid 19 korkusu ile algılanan örgütsel destek ve duygusal tükenmişlik arasında pozitif yönde anlamlı bir ilişki olduğu tespit edilmiştir. Kooperatif çalışanlarının örgütsel destek algıları ile duygusal tükenmişlik düzeyleri arasında negatif ve anlamlı bir ilişki olduğu saptanmıştır. Buna göre, çalışanlarda örgütsel destek algısı arttıkça duygusal tükenmişlik düzeyleri azalacaktır. Yapılan Kruskal-Wallis H testi sonucuna göre, kooperatif çalışanlarının covid 19 korkusu ve duygusal tükenmişlikleri cinsiyete göre anlamlı bir farklılığın olmadığı, ancak çalışanların örgütsel destek algılarının cinsiyete göre farklılık olduğu tespit edilmiştir. Mann-Whitney U testi sonuçlarına göre, algılanan örgütsel destek, duygusal tükenmişlik ve covid 19 korkusu yaş gruplarına ve görev pozisyonlarına göre farklılık olmadığı tespit edilmiştir. Araştırmanın diğer bir sonucuna göre ise, kooperatif çalışanların covid 19 korkusunun eğitim durumlarına göre farklılık olmadığı, duygusal tükenmişlik ve örgütsel destek algılarının eğitim durumlarına göre farklılık olduğu sonucuna ulaşılmıştır.

Anahtar Kelimeler: Algılanan Örgütsel Destek, Covid 19 Korkusu, Duygusal Tükenmişlik, Kooperatif Çalışanları.

Assessing the Impacts of Education and R&D Expenditures on the International Competitiveness: The Case of Turkey*

Oguzhan Ozcelebi¹

Elif Arslan²

¹ Prof.Dr., Department of Economics, Istanbul University, Istanbul, Turkey

² Institute of Social Sciences, Istanbul University, Istanbul, Turkey

Abstract: This study examines the impacts of education and R&D expenditures on the international competitiveness for the case of Turkey. In this vein, the effects of both expenditures on the bilateral real exchange rate of the country are evaluated and firstly it is determined whether the related series have nonlinear effects. Based on this, the causality analysis carried out has been expanded in line with possible asymmetric effects. With the Hatemi-J (2012) test, it was found that the increase and decrease in education and R&D expenditures may not have symmetrical effects. Moreover, it was revealed that both expenditures cause effects on the bilateral real exchange rate, which may differ throughout the observation period.

Keywords: Education Expenditures; R&D Expenditures; Asymmetric Causality.

Eğitim ve Ar-Ge Harcamalarının Uluslararası Rekabet Edebilirlik Üzerindeki Etkilerinin Değerlendirilmesi: Türkiye Örneği

Özet: Bu çalışmada, eğitim ve ARGE harcamalarının uluslararası rekabetçilik seviyesi üzerine olan etkisi Türkiye örneği üzerinden incelenmektedir. Bu çerçevede, her iki harcamanın ülkenin ikili reel döviz kuru üzerine olan etkileri değerlendirilmekte olup öncelikle ilgili serilerin doğrusal olmayan etkiler barındırıp barındırmadığı tespit edilmiştir. Buradan hareketle gerçekleştirilen nedensellik analizi olası asimetrik etkiler doğrultusunda genişletilmiştir. Hatemi-J (2012) testi ile eğitim ve ARGE harcamalarındaki artış ve azalışların simetrik etkiler barındırmayabileceği bulgusuna ulaşılmıştır. Ayrıca, her iki harcamanın ikili reel döviz kuru üzerinde gözlem boyunca farklılaşabilen etkilere neden olduğunu ortaya konulmuştur.

Anahtar Kelimeler: Eğitim Harcamaları ARGE Harcamaları, Asimetrik Nedensellik.

* This study was carried out within the scope of Istanbul University BAP Project SYL-2020-35457 / Bu çalışma SYL-2020-35457no'lu İstanbul Üniversitesi BAP projesi kapsamında gerçekleştirilmiştir.

Türkiye-Yunanistan Sınırdaki Mülteci Krizinin Söylem Analizi Bağlamında Değerlendirilmesi: Hürriyet ve Kathimerini Gazetelerinin Karşılaştırmalı Örneği

Dr. Öğretim Üyesi Ramazan Çelik¹

Nesrin Nezir Köse²

¹Trakya Üniversitesi / Edirne Sosyal Bilimler Meslek Yüksekokulu, ramazancelik@trakya.edu.tr, ORCID: 0000- 0002-6957-5297

²Trakya Üniversitesi/Yüksek Lisans Öğrencisi, nnezirkose@trakya.edu.tr, ORCID: 000-0002-0473-9131

Özet: Dünya genelinde son yıllarda artan ekonomik krizler, siyasi sorunlar, iç savaşlar, etnik ve dini çatışmalarla birlikte ortaya çıkan insan haklarına saldırılar kendi ülkelerini terk edip başka ülkelere göç eden insanların sayısında da artış göstermiştir. Türkiye, uluslararası göç konusunda Avrupa'ya açılan kapılarda stratejik öneme sahip bir ülke konumundadır. Özellikle son on yılda ülkede artan sığınmacı hareketleri ulusal ve uluslararası basın kuruluşlarında sık sık yer bulmaktadır. 28 Şubat 2020 tarihinde Türkiye'nin Avrupa'ya karadan ve denizden sınır kapılarının açıldığını ve sınırı geçmek isteyenleri durdurmayacakları haberleri üzerine, Suriye sınırından ve Türkiye'nin çeşitli illerinden Avrupa'ya gitmek isteyen mülteciler sınır kapılarına akın etti. Bu süreç 26 Mart 2020'de simge olarak kabul edilen Edirne-Pazarkule sınır kapısında yaklaşık 10 bin kişinin toplandığı kamp alanının boşaltılması ile sona erdi. Geçen bu 28 günlük sürecin ilk 15 günü ulusal ve uluslararası medyada büyük yankı uyandırdı. Mülteci krizinin Hürriyet ve Kathimerini gazeteleri bağlamında ilk kez ele alınmış olması bu çalışmayı özel kılmaktadır. Bu çalışma Hürriyet ve Kathimerini gazetelerinin 29 Şubat - 15 Mart 2020 tarihleri arasında uluslararası çapta yankı uyandıran Türkiye-Yunanistan arasındaki mülteci krizi ile alakalı haberlerinde kullandıkları görsel ve başlıkların Van Dijk'in eleştirel söylem analizi kapsamında karşılaştırmalı incelemesini ele almaktadır. İncelenen gazetelerin, haber metnini üretirken, ülke çıkarlarını gözeterek görsel ve metin içeriklerini nasıl farklılaştırdıkları değerlendirilmektedir. Ayrıca haberin tarafsızlığının, haberi üreten gazetenin lehine değişim gösterdiği ve kamuoyu oluştururken de aynı konu üzerinde farklı söylemler geliştirdiği gözlemlenmektedir.

Anahtar Kelimeler: Mülteci Sorunu, Hürriyet, Kathimerini, Söylem Analizi

Social Security and Household Labor Supply

Dr. Öğr. Üyesi Remzi Kaygusuz¹

¹Sabancı University, Faculty of Arts and Social Sciences, rkaygusuz@sabanciuniv.edu,

ORCID: 0000-0002-0424-3363

Abstract: This paper quantitatively evaluates the macroeconomic consequences of eliminating the Pay-As-You-Go system in US using a general equilibrium model. Agents are heterogeneous in terms of their age, skills, gender, and marital status. Households make saving and labor supply decisions. The labor supply decision of a household includes decisions along both intensive and extensive margins of labor supply. Changes in social security rules potentially affect the labor force participation of secondary earners in married households. There is a representative firm that hires capital and labor to produce the consumption good. The benchmark economy is calibrated to match the gender pay gap, the labor force participation of married women across different education groups, and the structural of marital sorting observed in the US economy. Elimination of the Pay-As-You-Go system results in substantial increases in output and employment. In particular, output increases by about 6%, and aggregate employment increases by 3.9%. The paper shows that the married females increase their participation by about 4.7%. Hence, the paper finds that reforming the social security system has significant consequences on the female labor supply that should not be overlooked.

Keywords: Pay-As-You-Go Social Security, Household Labor Supply, Female Labor Force Participation.

Dalgacık Dönüşümü Temelli Yeni Bir Kantil Birim Kök Testi Önerisi

Prof. Dr. Selahattin Güriş¹

Özet: Zaman ve frekans alanı bilgisini bir araya getirerek değişkenler hakkında daha fazla bilgi sağlayan dalgacıklar; mühendislik ve tıp gibi farklı alanların ardından ekonometri alanında - özellikle birim kök literatüründe - giderek popüler hale gelen bir yaklaşım olmuştur. Daha iyi güç ve boyut özelliklerine sahip birim kök testi arayışları devam ederken bu testlerin büyük çoğunluğu zaman alanı ve normallik varsayımına dayanan en küçük kareler (EKK) tahmincisi için geliştirilmiştir. Ekonomik ve finansal serilerde görülen çarpıklık, yapısal kırılma ve diğer gözlemlerden önemli derece farklılaşan gözlemler olarak tanımlanan aşırı değerlerin bir sonucu olarak uygulamada normallik varsayımı çoğu durumda sağlanamamaktadır. Böyle bir durumda kantil tahmincisi EKK tahmincisine göre daha dirençli sonuçlar vermektedir. Kantil tahmincisine dayanan birim kök sınaması her bir kantil için t istatistiği ile yapılabileceği gibi kantil Kolmogorov-Smirnov (QKS) istatistiği ile kantiller için genel bir sınama yapmakta mümkündür. Tüm bu eksikliklerden yola çıkılarak bu çalışmada kesikli dalgacık dönüşümüne dayalı yeni bir kantil birim kök testi önerilmektedir. Önerilen bu test QKS istatistiğine dayanmaktadır. Dalgacık dönüşümü, testlerin asimptotik dağılımlarını etkilemediğinden önerilen testin asimptotik dağılımı kantil genişletilmiş Dickey-Fuller (ADF) testinde olduğu gibi ADF ve standart normal dağılımların ağırlıklı toplamlarına eşittir. Çalışma kapsamında önerilen dalgacık dönüşümü temelli kantil birim kök testinin kritik değerleri farklı dalgacık filtreleri için bootstrap yöntemi ile elde edilerek güç ve boyut özellikleri sunulmuştur.

Türkiye’de Kamu Bankalarının Kurumsal Gelişimi ve Finansal İstikrara Etkisi: Z-Skor Analizi

Asst.Prof.Dr.Serkan VARSAK¹

¹ Department of Economics, Bilecik Seyh Edebali University, Bilecik, Turkey, email:
serkan.varsak@bilecik.edu.tr, ORCID: 0000-0002-5894-1490

Özet: Son dönemde Türkiye Ekonomisinde finans piyasalarında kamu bankaların kurumsal gelişimi hızla artmaktadır. Ayrıca finans piyasalarında ve dolayısıyla bankacılık sektöründe kamu bankalarının artan payı, beraberinde kamu bankacılık faaliyetlerinin finansal sistem ve finansal istikrar üzerindeki etkisini arttırmıştır. Buradan hareketle çalışmamızda Türk Bankacılık Sektöründe kamu bankalarının; seçili rasyolarının (aktif büyüklükleri, faiz dışı gelir/toplam gelir, krediler/toplam varlıklar ve duran varlıklar/toplam varlıklar) 2002-2020 yılları arası dönemde Türkiye ekonomisinde finansal istikrar (Enflasyon, büyüme ve politika faiz oranı) üzerinde ki etkisi araştırılmıştır. İlgili bankalara ait seçili rasyoların Z-skor analizi ile finansal risk düzeyleri hesaplanmış ve performans testleri yapılmıştır. Z-skor analizinden elde edilen bulgular finansal istikrar göstergeleri ile ARDL sınır testi yaklaşımı temelinde incelenmiştir.

Özet: Finansal istikrar genel itibariyle finansal piyasaların negatif şoklar karşısında gösterdiği direnç olarak tanımlanabilir. Bu kapsamda özellikle son çeyrek yüzyılda Türkiye’de finans piyasalarında halka arz olmuş bankaların seçili rasyolarda artan büyüklüğü ve finansal istikrara etkisi yadsınamaz bir hâl almıştır. Bu çalışmada, özellikle Borsa İstanbul (Bist)’a kote olmuş bankaların; seçili rasyolarının (aktif büyüklükleri, faiz dışı gelir/toplam gelir, krediler/toplam varlıklar ve duran varlıklar/toplam varlıklar) 2002-2020 yılları arası dönemde Türkiye ekonomisinde finansal istikrar (Enflasyon, büyüme ve politika faiz oranı) üzerinde ki etkisi araştırılmıştır. İlgili bankalara ait seçili rasyoların Z-skor analizi ile finansal risk düzeyleri hesaplanmış ve performans testleri yapılmıştır. Z-skor analizinden elde edilen bulgular finansal istikrar göstergeleri ile ARDL sınır testi yaklaşımı temelinde incelenmiştir.

Twin Deficit, Current Account Targeting or Ricardian Equivalence? Fresh Evidence From Fourier Toda-Yamamoto Causality Analysis

Dr. Sinem Pinar Gürel¹

¹Pamukkale University, Faculty of Business Administration and Economics, Department of Economics, pguirel@pau.edu.tr, ORCID: 0000-0002-5088-4575

Abstract: This study examines the causal relationships between current account deficit and fiscal deficit, known as twin deficit hypothesis with taking into account the structural shifts. There is a controversy about the direction, or even the existence of the causal linkages between current account deficit and fiscal deficit in the literature. According to the Mundell-Fleming framework there exists a uni-directional causal relationship from fiscal deficit to current account deficit. Increases in the fiscal deficit will cause an upward pressure on interest rates, causing appreciation of exchange rate and result in a deterioration (increase) in current account deficit. Keynesian framework also states an uni-directional causal relationship from fiscal deficit to current account deficit. According to current account targeting framework, the direction of the causal relationship is from current account deficit to fiscal deficit. Furthermore, Ricardian Equivalence suggests that there is no causal relationship between these two variables. The aim of this study is to determine the direction of this causal linkages with emphasizing the importance of the structural shifts for highly indebted European countries; Portugal, Italy, Ireland, Greece and, Spain. To investigate the importance of the structural shifts in these causal linkages Toda- Yamamoto and Fourier Toda Yamamoto causality tests are employed. Using traditional approach, the empirical findings indicate an evidence for unidirectional causality from fiscal deficit to current account deficit, in line with the current account targeting framework in Greece and Ireland. However, if structural shifts in the causal relationship taken into account, the current account targeting does not hold and Ricardian equivalence holds (no causal relationship between fiscal deficit and current account deficit) for Greece and Ireland. The results from Fourier Toda Yamamoto revealed that considering the structural shifts, has not a substantial effect on the empirical results for Italy, Portugal and Spain. Additionally, the Twin deficit relationship holds only for Spain while Ricardian equivalence holds for Italy and Portugal.

Özet: İşletmeler genellikle değişime hazırlıksız yakalanabilmekte, değişim yönetimi uygulamalarını gerçekleştirmede geç kalabilmekte olduğundan çoğu kez kriz zamanlarında bu yöndeki karar ve uygulamalarında aceleci davranmakta ve sonuca odaklanmaktadır. Ancak yaşanan hızlı değişimler sebebiyle işletmelerin varlıklarını sürdürebilmeleri için zorunlu hale gelen değişimin yönetilebilmesi aslında bir sonuç değil, proaktif bir yaklaşım ile ele alınması gereken uzun ve dinamik bir süreçtir. Bu çalışma; organizasyonları en çok hangi faktörlerin değişime zorladığını, işletmelerin hangi değişim yönetimi tekniklerini uyguladıklarını, değişim yönetimi uygulanırken çalışanların dirençlerinin neler olduğunu, bu tepkilerin üstesinden gelebilmek için yöneticilerin hangi tedbirleri aldığını incelemeyi ve değişim yönetiminin örgütsel performansı nasıl etkilediğini ortaya koyabilmeyi amaçlamaktadır. Değişim yönetiminden sorumlu ve daha fazla ilişkili olmaları sebebiyle İzmir İli Kemalpaşa organize sanayi bölgesindeki işletmelerin üst ve orta düzey yöneticilerine ulaşmak hedeflenmiştir. Bu bölgede beş yıldan uzun süredir faaliyet gösteren 60 işletmede görevli 150 üst ve orta düzey yöneticiye İŞKUR sorumlu iş ve meslek danışmanları aracılığıyla mail ve telefon yoluyla anket formu gönderilmiştir. Değişim yönetimi kapsamında başarı, çevre, teknoloji, yapı, strateji, performans, direnç, önlem ve teknik gibi birçok değişkenin ele alındığı anket çalışmasına geri dönüş gerçekleştirilen 110 anketten 100 tanesi değerlendirme için uygun bulunmuştur. Sonuç olarak yöneticilerin değişime uyum sağlamak amacıyla kullanılan değişim yönetimi teknikleri hakkında kapsamlı bir şekilde bilgi sahibi olmadıkları tespit edilmiştir. Bunun yanı sıra değişim sürecinde iş görenlerin değişime karşı gösterdiği direncin önemli olduğu ancak bu direncin işletme performansını anlamlı bir seviyede etkilemediği sonucuna ulaşılmıştır. Çalışmanın bu alanda yapılan benzer araştırmalarla kıyaslanması sürecinde özellikle teknik, teknoloji ve önlem boyutlarında daha fazla araştırma yapılmasına ihtiyaç duyulduğu tespit edilmiştir. Ayrıca rekabetçi ve teknolojik değişimin yüksek olduğu çevrede, işletmelerin varlığını devam ettirebilmesi için organizasyon yapısında ve özellikle stratejisinde uyguladığı değişim yönetiminin işletme performansını olumlu yönde etkilediği ortaya konulmuştur.

Risk ve Belirsizlik Altında Karar Verme Davranışı ve Nöroekonomi

Şehnaz BAKIR YİĞİTBAŞ¹

¹ Doç. Dr. Çanakkale Onsekiz Mart Üniversitesi, Ayvacık Meslek Yüksekokulu, Finans-Bankacılık ve Sigortacılık Bölümü, sehnazbakir@comu.edu.tr, ORCID: 0000-0002-5541-2462

Özet: Nöroekonomi, ekonomik kararların sinirsel temellerini belirlemek amacıyla nörobilimsel ölçü araçlarını kullanan disiplinler arası bir alan olarak kabul edilmektedir. Bu çalışmada ekonomik karar verme mekanizması nörobilim açısından incelenmektedir. Rasyonel kararların beynin mantık kısmında alınıp alınmadığı, risk ve belirsizlik ortamında verilen kararların beynin hangi kısımlarını harekete geçirdiği yapılan deneyler çerçevesinde analiz edilmektedir. İlk olarak beynin işlevleri ve iktisadi karar verme süreci üzerindeki etkisi ele alınmaktadır. İkinci olarak, ekonomi teorisinde risk ve belirsizlik altında karar verme sürecini inceleyen “beklenen fayda teorisi”nin anomalileri ve bu anomalileri ortaya çıkaran deneylerin sonuçlarına yer verilmektedir. Son olarak, risk ve belirsizlik altında karar verme süreci nöroekonomi çerçevesinde deneysel örneklerle incelenmektedir. Çalışmanın amacı, karar verme sürecinde duyguların güçlü bir etkiye sahip olup olmadığını ortaya koymaktır. Tüm yapılan deneylerde insanların kararlarında sistematik hatalar yaptığı, risk ve belirsizlik altında beynin evrimsel olarak daha yaşlı kısmının harekete geçtiği bulgularına ulaşılmıştır. Sonuçlar belirsizlikten kaçınma için herhangi bir özel açıklamayı açıkça desteklemese de, açık olan şu ki; insanlar belirsizliğe karşı anında olumsuz bir duygusal tepki vermektedirler.

Anahtar Kelimeler: nöroekonomi, davranışsal İktisat, karar verme

Neuroeconomics, Decision-Making Behavior under Risk and Uncertainty

Abstract: Neuroeconomics is an interdisciplinary field that uses neuroscientific measurement tools to determine the neural basis of economic decisions. In this study, economic decision making mechanism is examined in terms of neuroscience. Many experiments have been conducted on whether rational decisions are made in the logic part of the brain, and which parts of the brain are activated by decisions made in an environment of risk and uncertainty. In this study, analysis is made within the framework of these experiments. First, the functions of the brain and its effect on the economic decision-making process are discussed. Secondly, the anomalies of the "expected utility theory" that examines the decision-making process under risk and uncertainty in economic theory and the results of the experiments that reveal these anomalies are included. Finally, the decision-making process under risk and uncertainty is examined with empirical examples within the framework of neuroeconomics. The aim of the study is to reveal whether emotions have a strong influence in the decision-making process. In all experiments, it has been found that humans make systematic mistakes in their decisions, and that the evolutionarily older part of the brain is activated under risk and uncertainty. While the results do not explicitly support any specific explanation for uncertainty avoidance, what is clear is that people have an immediate negative emotional response to uncertainty.

Key Words: neuroscience, behavioral economics, decision making

Stagflasyonun Ortaya Çıkmasında İktisat Politikalarının Rolü ve Çözüm Önerileri

Şehnaz BAKIR YİĞİTBAŞ¹

¹ Doç. Dr. Çanakkale Onsekiz Mart Üniversitesi, Ayvacık Meslek Yüksekokulu, Finans-Bankacılık ve Sigortacılık Bölümü, sehnazbakir@comu.edu.tr, ORCID: 0000-0002-5541-2462

Özet: Stagflasyon, durgun ekonomik büyüme, yüksek enflasyon ve yüksek işsizliğin bir arada görüldüğü iktisadi bir durumdur. Bu çalışma stagflasyonun ortaya çıkmasında önemli rol oynayan iktisat politikası uygulamalarına dikkat çekmektedir. Çalışmanın amacı, birbiriyle çelişen sıkılaştırıcı/genişletici para ve maliye politikaları uygulamalarının stagflasyon sorununun ortaya çıkmasında ya da bu sorunun daha da artmasındaki rolünü ülke örnekleriyle ortaya koymaktır. Hükümetlerin enflasyonla mücadele etmesi ve sıkı para politikası uygulaması gerekirken seçmenlerin desteğini kaybetmemek için faiz oranlarını düşürmeye yönelik genişletici para politikası uygulamaları stagflasyon sorunun çözümünü zorlaştırmaktadır. Phillips-eğrisinde ifade edilen işsizlik ve enflasyon arasındaki trade-off ilişkisinin stagflasyonda geçerli olmaması iktisat politikası seçiminde zorluklara yol açmaktadır. Çalışmanın temel bulgusu, stagflasyonla mücadelede önceliğin enflasyon sorunu çözümüne verilmesi gerektiği ancak sıkılaştırıcı iktisat politikalarının üretimde sert daralmalara ve işsizlikte kalıcı sorunlara yol açmaması için en optimal seçim olan “policy mix” uygulamasına başvurulmasıdır.

Anahtar Kelimeler: stagflasyon, enflasyon, işsizlik, para politikası

The Role of Economic Policies in the Emergence of Stagflation and Solution Proposals

Abstract: Stagflation is an economic situation where stagnant economic growth, high inflation and high unemployment are seen together. This study draws attention to the economic policy practices that play an important role in the emergence of stagflation. The aim of the study is to reveal the role of the conflicting tightening / expansionary monetary and fiscal policies in the emergence of the stagflation problem or in the further increase of this problem with country examples. While governments should fight inflation and implement tight monetary policy, expansionary monetary policy practices aimed at lowering interest rates in order not to lose the support of voters make it difficult to solve the problem of stagflation. The fact that the trade-off relationship between unemployment and inflation expressed in the Phillips-curve is not valid in stagflation causes difficulties in the choice of economic policy. The main finding of the study is that the priority should be given to the solution of inflation problem in the fight against stagflation, but the most optimal choice is "policy mix" applications in order to prevent hard contractions in production and permanent problems in unemployment.

Key Words: stagflation, inflation, unemployment, money policy
